Brooks Canaday for Northeastern University

Course Descriptions 2024-2025

Table of Contents

Course Descriptions	7
Accounting (ACCT)	7
Accounting - CPS (ACC)	14
Advanced Manufacturing Systems - CPS (AVM)	17
African American Studies (AFAM)	19
Africana Studies (AFCS)	19
African Studies (AFRS)	25
American Sign Language (AMSL)	26
Analytics - CPS (ALY)	28
Anthropology (ANTH)	33
Anthropology - CPS (ANT)	38
Applied Logistics - CPS (APL)	39
Arabic (ARAB)	40
Architecture (ARCH)	41
Army ROTC (ARMY)	49
Art - CPS (ART)	51
Art - Design (ARTG)	52
Art - Fundamentals (ARTF)	60
Art - General (ARTE)	63
Art - History (ARTH)	65
Art - Media Arts (ARTD)	67
Art - Studio (ARTS)	71
Arts Administration and Cultural Entrepreneurship (AACE)	72
Asian Studies (ASNS)	74
Behavioral Neuroscience (BNSC)	75
Biochemistry (BIOC)	76
Bioengineering (BIOE)	77
Bioinformatics (BINF)	85
Biology (BIOL)	88
Biology - CPS (BIO)	99
Biotechnology (BIOT)	101
Biotechnology - CPS (BTC)	108
Business Administration (BUSN)	110
Cardiopulmonary and Exercise Science (EXSC)	116
Chemical Engineering (CHME)	118
Chemistry - CPS (CHM)	128
Chemistry and Chemical Biology (CHEM)	129
Chinese (CHNS)	144
Civil and Environmental Engineering (CIVE)	146
Co-op/Experiential Education in Arts, Media, and Design (EEAM)	163

Co-op/Experiential Education in Business (EEBA)	164
Co-op/Experiential Education in Science (EESC)	166
Co-op/Experiential Education in Social Sciences and Humanities (EESH)	167
Commerce and Economic Development - CPS (CED)	168
Communication Studies (COMM)	171
Communication Studies - CPS (CMN)	185
Communication Studies - CPS Specialty (CMMN)	189
Computer Engineering Technology - CPS (CET)	189
Computer Science (CS)	191
Computer Systems Engineering (CSYE)	212
Construction Management - CPS (CMG)	216
Cooperative Education (COOP)	216
Cooperative Education - CPS (COP)	217
Cooperative/Experiential Education (EXED)	218
Corporate Innovation (INNO)	218
Counseling and Applied Educational Psychology (CAEP)	223
Creative Technologies (CRTE)	238
Criminal Justice (CRIM)	239
Criminal Justice - CPS (CJS)	250
Culture (CLTR)	250
Cybersecurity (CY)	254
Data Analytics (DA)	259
Data Architecture Management (DAMG)	259
Data Science (DS)	262
Deaf Studies (DEAF)	266
Digital Media - CPS (DGM)	267
Digital Transformation (DGTR)	273
Earth and Environmental Sciences (ENVR)	277
Earth Sciences - CPS (ESC)	288
Ecology, Evolution, and Marine Biology (EEMB)	289
Economics (ECON)	297
Economics - CPS (ECN)	310
Economics - CPS Specialty (ECNM)	311
Education (EDUC)	311
Education - CPS (EDU)	312
Electrical and Computer Engineering (EECE)	329
Electrical Engineering Technology - CPS (EET)	352
Energy Systems (ENSY)	354
Engineering Cooperative Education (ENCP)	356
Engineering Interdisciplinary (ENGR)	357
Engineering Leadership (ENLR)	359
Engineering Management (EMGT)	360
English (ENGL)	361

English - CPS (ENG)	377
English as a Second Language - CPS Specialty (ESLG)	380
English as Second Language - CPS (ESL)	380
English Writing (ENGW)	380
Enterprise Artificial Intelligence (EAI)	383
Entrepreneurship and Innovation (ENTR)	385
Environmental Studies (ENVS)	389
Extended Realities (EXRE)	390
Finance - CPS (FIN)	391
Finance and Insurance (FINA)	393
First-Year Seminar (FSEM)	404
French (FRNH)	405
Game Design (GAME)	407
Game Science and Design (GSND)	410
General Engineering (GE)	414
General Engineering Technology - CPS (GET)	417
General Studies (GENS)	419
Geographic Information Systems - CPS (GIS)	420
German (GRMN)	422
Global Studies - CPS (GST)	423
Global Studies (GBST)	429
Health Informatics (HINF)	429
Health Management - CPS (HMG)	433
Health Science (HSCL)	435
Health Science - CPS (HSC)	439
Health Science - Interdisciplinary (HLTH)	440
Hebrew (HBRW)	446
History (HIST)	447
History - CPS (HST)	461
History - CPS Specialty (HSTY)	462
Homeland Security - CPS (HLS)	462
Honors Program (HONR)	464
Human Resources Management (HRMG)	465
Human Resources Management - CPS (HRM)	467
Human Services (HUSV)	470
Human Services - CPS (HSV)	473
Industrial Engineering (IE)	475
Information Science (IS)	483
Information Systems Program (INFO)	485
Information Technology - CPS (ITC)	491
Insurance - CPS (INS)	500
Interdisciplinary Studies - CPS (INT)	502
Interdisciplinary Studies in Arts, Media, and Design (INAM)	504

Interdisciplinary Studies in Science (INSC)	512
Interdisciplinary Studies in Social Sciences and Humanities (INSH)	513
Interdisciplinary Studies - Mills College at Northeastern (INMI)	519
Interdisciplinary Studies - Office of the Provost (INPR)	522
International Affairs (INTL)	524
International Business (INTB)	530
Interpreting (INTP)	534
Italian (ITLN)	536
Japanese (JPNS)	538
Jewish Studies (JWSS)	539
Journalism (JRNL)	541
Korean (KORE)	549
Landscape Architecture (LARC)	550
Latin American and Caribbean Studies (LACS)	553
Law (for Non-Law School Students) (LW)	553
Law (LAW)	562
Law and Policy - CPS (LWP)	588
Law and Public Policy (LPSC)	592
Leadership Studies - CPS (LDR)	594
Legal Studies (LS)	600
Liberal Studies - CPS (LST)	603
Linguistics (LING)	604
Management (MGMT)	608
Management - CPS (MGT)	611
Management Information Systems (MISM)	614
Management Science (MGSC)	617
Managerial Economics (MECN)	619
Marketing (MKTG)	619
Marketing - CPS (MKT)	626
Materials Engineering (MATL)	628
Mathematics (MATH)	629
Mathematics - CPS (MTH)	646
Mathematics - CPS Specialty (MATM)	648
Mechanical and Industrial Engineering (MEIE)	649
Mechanical Engineering (ME)	650
Mechanical Engineering Technology - CPS (MET)	662
Media and Screen Studies (MSCR)	664
Medical Sciences (MSCI)	670

Course Descriptions

Accounting (ACCT)

Courses

ACCT 1201. Financial Accounting and Reporting. (4 Hours)

Covers the basic concepts underlying financial statements and the accounting principles followed in the preparation of the balance sheet, the income statement, and the statement of cash flows. Offers students an opportunity to become familiar with accounting terminology and methods designed to enable them to interpret, analyze, and evaluate published corporate financial reports. Wherever appropriate, the course relates current economic, business, and global events to accounting issues. Analyzes how financial reporting concepts affect the behavior of investors, creditors, and other external users. Emphasizes the importance of ethics in financial reporting.

ACCT 1209. Financial Accounting and Reporting. (4 Hours)

Does not count as credit for business majors. Counts as ACCT 1201 for business minors only. Requires second-semester-freshman standing or above.

ACCT 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACCT 2301. Profit Analysis for Managers and Advisors. (4 Hours)

Focuses on the development and analysis of information for managerial decision making within the firm. Students take a managerial or advisory perspective to conduct cost and profit analyses that support the strategic goals of an organization to manage firm profitability. Topics include#costing products, services, and customers; understanding cost behavior; cost-volume-profit analysis; relevant cost analysis for decision making; budgeting; variance analysis; and performance evaluation. Covers key knowledge and tasks that managers, consultants, and advisors need to understand to help a business run successfully.

Prerequisite(s): ACCT 1201 with a minimum grade of D- or ACCT 1209 with a minimum grade of D- or ACCT 1202 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

ACCT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACCT 3304. Business Law and Professional Ethics. (4 Hours)

Covers business law, professional code of conduct, and the importance of ethical behavior in today's business environment. Examines legal aspects of commercial transactions and business relationships. Specifically, laws relating to contracts and sale of goods under the Uniform Commercial Code, agency law, and product liability law are discussed. May not be used as an accounting concentration elective.

Prerequisite(s): ACCT 2301 with a minimum grade of D- or ACCT 2302 with a minimum grade of D-

ACCT 3401. Financial Reporting and Analysis 1. (4 Hours)

Examines financial reporting concepts, emphasizing the link between them and financial statements. Focuses on both the preparation and interpretation of financial statements, with students also being introduced to basic tools in financial statement analysis, such as ratio and accounting analysis. Gives students the opportunity to understand how management decisions can influence reported income, asset, and liability values, and the importance of ethics when making accounting choices. Offers students the tools necessary to analyze the impact of alternative reporting decisions on financial statements. In addition to accounting majors, this course is ideal for students who wish to pursue careers in corporate finance, investment banking, investment management, or consulting.

Prerequisite(s): (ACCT 2301 with a minimum grade of D- or ACCT 2302 with a minimum grade of D-)

ACCT 3402. Financial Reporting and Financial Statement Analysis. (4 Hours)

Focuses on the analysis, interpretation, reformulation, and prediction of financial data, including profitability analysis, operating versus nonoperating performance evaluation, credit analysis, reformulation of financial statements, forecasting of financial statements, analysis of intercorporate investments, cash flow analysis, accounting-based equity valuation, cash-based equity valuation, assessment of earnings quality and earnings management, and the assessment of intangible assets. Emphasizes the analysis and application of financial statement information for investment, credit, and management decisions, including advisory and consulting services. Considerable importance is placed on evaluation, interpretation, and use of accounting data for decision making. Such knowledge will enable one to participate in and manage important business decisions.

Prerequisite(s): ACCT 2301 (may be taken concurrently) with a minimum grade of D- or ACCT 2302 (may be taken concurrently) with a minimum grade of D-

ACCT 3403. Advisory Services and Emerging Accounting Systems. (4 Hours)

Provides an understanding of accounting information systems, with an emphasis on the role of technology and risk analysis. Information is critical for the effective and efficient management of any organization. Addresses concepts and applications relating to the design, analysis, and implementation of accounting systems. Examines the role of e-commerce and Internet-based technologies, including their implications for ethics and privacy, throughout the course.

Prerequisite(s): ACCT 2301 with a minimum grade of D- or ACCT 2302 with a minimum grade of D-

ACCT 3416. Strategic Cost Analysis for Decision Making. (4 Hours)

Develops understanding of the critical role of cost measurement and management in business decisions and in managing a firm's profitability. Focuses on the strategic use of cost information for planning and control, as well as costing products, services, and customers. Emphasizes the role of management accountants as integral members of decision-making teams and as consultants to senior management. Studies alternate ways of measuring costs to meet different management objectives, the role of budgeting as a planning and management tool, the use of cost analysis as a control tool to help management meet short- and long-term profit objectives, and the importance of ethics in achieving all of these objectives. In addition to accounting majors, this course is ideal for students who wish to pursue a career in finance, general management, operations management, supply chain management, or entrepreneurship.

Prerequisite(s): ACCT 2301 with a minimum grade of D-

ACCT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACCT 4412. Auditing and Other Assurance Services. (4 Hours)

Focuses on issues relevant to the public accounting profession and to internal auditors and managers in private or governmental organizations. Topics include legal liability and ethics, business and audit risk assessment, fraud detection and prevention procedures, planning of audit engagements, audit reports, other assurance services and reports, and the effect of information technology on the audit process. Offers students the opportunity to think critically about issues facing the auditing profession.

Prerequisite(s): ACCT 3401 with a minimum grade of D-

ACCT 4414. Income Tax Determination and Planning. (4 Hours)

Provides a basic understanding of the structure of the federal income tax system. Taxes can have a significant impact on the viability of a number of personal finance and business decisions. Focuses on the individual taxpayer but also considers the implications for other entities. Tax return projects, research cases, and planning projects help demonstrate the potential impact of taxes on decision making.

Prerequisite(s): ACCT 2301 with a minimum grade of D-

ACCT 4501. Financial Reporting and Analysis 2. (4 Hours)

Continues ACCT 3401 with a more extensive study of financial statements and the financial reporting rules underlying them. Advanced topics include bonds, pensions, leases, earnings per share, and earnings management. Introduces more advanced financial statement analysis tools. Offers students an opportunity to continue to gain the ethical awareness and the knowledge necessary to analyze the impact of alternative reporting decisions on financial statements.

Prerequisite(s): ACCT 3401 with a minimum grade of D-

ACCT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACCT 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times for a maximum of 8 semester hours.

ACCT 5201. Foundations of Financial Reporting and Analysis 1. (3 Hours)

Covers the preparation and interpretation of financial statements. Focuses on the accounting for revenue and accounts receivable, cash, inventory, fixed and intangible assets, and investments. This is the first of a two-course sequence. Department permission required.

ACCT 5202. Foundations of Assurance Services. (3 Hours)

Studies the foundations of financial statement auditing. Focuses on the economic importance of auditing and factors relevant to an external auditing professional—audit planning, risk analysis, internal controls, and substantive testing. Includes the report and opinion of the auditor to management and stakeholders. Considers the ethical and legal responsibilities of the auditor. Department permission required.

ACCT 5203. Foundations of Income Tax Determination and Planning. (3 Hours)

Studies the foundations of the structure of the federal income tax system. Focuses on the individual taxpayer but also considers the implications for other entities. Demonstrates the potential impact of taxes on decision making using tax return projects, research cases, and planning projects. Department permission required.

ACCT 5204. Foundations of Financial Reporting and Analysis 2. (3 Hours)

Continues ACCT 5201 with a more extensive study of financial statements and the financial reporting rules underlying them. Advanced topics include bonds, pensions, leases, earnings per share, and earnings management. Introduces more advanced financial statement analysis tools. Offers students an opportunity to continue to develop the ethical awareness and obtain the knowledge necessary to analyze the impact of alternative reporting decisions on financial statements. Department permission required.

Prerequisite(s): ACCT 5201 with a minimum grade of C-

ACCT 5220. Data Analytics for Advisory Services. (4 Hours)

Covers how data analytics is used to address business problems in the advisory services field. Examines how to master, test, analyze, and present data using Excel, Tableau, and SQL, among other data analytics tools. Emphasizes how to apply data analytics skills to managerial analytics, financial statement analytics, and tax analytics through advisory-type projects and labs.

Prerequisite(s): ACCT 2301 with a minimum grade of D- or ACCT 2302 with a minimum grade of D- or ACCT 6207 with a minimum grade of C

ACCT 5230. Federal Tax Issues and Analysis. (3 Hours)

Gives a broad examination of tax authority as it guides action on tax issues including personal and business decisions. Examines the tax structure with a specific focus on the income and expenses for individual taxpayers. Emphasizes property transactions (including the calculation of basis, gain/loss, and the resulting tax treatment). Also incorporates tax planning and research related to these issues. Students who do not meet course prerequisites or restrictions may seek permission of instructor.

ACCT 5232. Estate and Gift Taxation. (3 Hours)

Focuses on the study of the taxes common to the transfer of property and wealth. Topics include gift tax deductions and exclusions, estate valuation, state tax deductions and exemptions, and tax rates. Also explores planning opportunities for these wealth transfer taxes. Students who do not meet course prerequisites or restrictions may seek permission of instructor.

Prerequisite(s): ACCT 5230 (may be taken concurrently) with a minimum grade of D- or ACCT 5230 (may be taken concurrently) with a minimum grade of C- (Graduate) or ACCT 6230 (may be taken concurrently) with a minimum grade of C-

ACCT 5255. Forensic Accounting. (3 Hours)

Offers an overview of occupational fraud and the methodology of fraud examination (i.e., obtaining documentary evidence, interviewing witnesses and potential suspects, writing investigative reports, testifying to findings, and forensic document examination). Offers students an opportunity to learn how to detect the most common types of occupational fraud, determining how each type of fraud is committed, and implementing prevention strategies. Students who do not meet course prerequisites or restrictions may seek permission of instructor.

ACCT 5256. Internal Auditing. (3 Hours)

Offers an overview of the internal audit function and explores the duties and responsibilities of the internal auditor. Offers students an opportunity to learn about the planning and organizing of an internal audit department and its coordination with an outside auditor as well as to learn to analyze how the design of an internal control auditing process can reduce risk exposure and enhance internal controls. Students who do not meet course prerequisites or restrictions may seek permission of instructor.

ACCT 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

ACCT 6200. Financial Reporting and Managerial Decision Making 1. (3 Hours)

Offers the first of a two-course sequence that focuses on the acquisition, measurement, and management of firm resources. Business managers make strategic decisions about the acquisition and use of a variety of firm resources. Helps enable students to understand and utilize critical information in corporate financial reports to improve business decision making. Offers students the opportunity to learn contemporary methods of financial reporting and analysis used by internal decision makers and external capital providers. Required course for co-op MBA/part-time MBA.

ACCT 6201. Financial Reporting and Managerial Decision Making 2. (1.5 Hours)

Continues ACCT 6200, offering the second of a two-course sequence that focuses on the acquisition, measurement, and management of firm resources. Critical to the effective planning, implementation, and management of successful business strategies is the ability to measure and manage the commitment and utilization of entity resources. Focuses on contemporary methods and frameworks used in the process of measuring, analyzing, and allocating firm resources to achieve strategic and operating objectives. Required course for co-op MBA/part-time MBA.

Prerequisite(s): ACCT 6200 with a minimum grade of C-

ACCT 6203. Business Entity Taxation. (3 Hours)

Provides an in-depth look at the structure of the federal income tax system as it relates to different taxable entities. Emphasizes tax compliance, planning, and research as they impact the decision-making process for corporation and flow-through entities. Also examines the implications of wealth transfer taxes.

ACCT 6204. Financial Reporting for Integrated Multinational Enterprises. (3 Hours)

Presents and discusses financial reporting practices for diversified, international business entities. In today's global business environment, many corporations operate diverse economic activities and often conduct those activities across geographic boundaries. Examines accounting and disclosure standards in the United States that are relevant to presenting consolidated financial statements. Also analyzes accounting and disclosure standards in other countries and those developed by international bodies with respect to their effects on reporting entities and the financial markets.

Prerequisite(s): ACCT 6203 with a minimum grade of C-

ACCT 6205. Auditing in a Big Data Environment. (3 Hours)

Intended for students with a prior course in assurance services and/or auditing. Focuses on the coverage of current significant issues in the assurance services and big data environment. Topics include the impact of technology on the audit process, client risk assessment and statistical data analysis, other assurance services and nonattestation engagements, and the use of complex decision aids. Emphasis is also on contemporary ethical and legal issues confronting the public accounting profession. Offer students the opportunity to think critically about a number of significant issues facing the auditing profession and also introduces impact of big data, the audit judgment, and decision-making process through the completion of a variety of audit cases.

ACCT 6207. Contemporary and Emerging Issues in Financial Reporting. (3 Hours)

Focuses on the theoretical concepts of accounting with an examination of standards issued by various professional organizations including the FASB, SEC, and AICPA. Also examines emerging issues in corporate, governmental, and nonprofit financial reporting. Real-world cases are used to illustrate and discuss the complex financial reporting process and ethical issues confronted by the business community and accounting profession.

ACCT 6216. Financial Reporting for Governments and Nonprofit Entities. (2 Hours)

Covers business issues and financial reporting standards for state and local governments within the United States, as well as for nonprofit organizations. These organizations make up a large and growing share of the economy, and so it is important to consider whether the funds entrusted to them by taxpayers and donors are being used effectively. These entities have unique ways of reporting their financial results, based on their specific business purposes and the needs of their constituents. The course discusses these reporting methods and the use of the resulting financial reports in evaluating performance within the government and nonprofit contexts.

ACCT 6217. Corporate Governance, Ethics, and Financial Reporting. (3 Hours)

Deals with issues related to corporate governance and audit committee mechanisms in preventing financial reporting disasters and in providing high-quality financial reports to global capital markets. Emphasizes the role of the board of directors and its committees, management, shareholders, external auditors, and internal auditors in developing sound ethical practices and a good corporate governance culture. Examines efforts by legislative and regulatory bodies and the accounting profession in improving financial reporting transparency and auditor independence.

ACCT 6220. Corporate Financial Reporting and Decision Making 1. (3 Hours)

Examines the development of financial reports including their underlying concepts and measurement theories. Corporate financial reporting is a dynamic process in which information is provided to internal and external decision makers to assist them in the effective allocation of economic resources. Examines the legal, economic, and political processes that influence the financial reporting process.

ACCT 6221. Corporate Financial Reporting and Decision Making 2. (6 Hours)

Continues ACCT 6220. Examines corporate financial reporting in the decision-making process. Emphasis is on the economic consequences of alternative financial reporting practices. Provides students with the ability to understand and utilize critical information contained in corporate financial reports to improve business decision making.

Prerequisite(s): ACCT 6220 with a minimum grade of C-

ACCT 6222. Corporate and Governmental/Nonprofit Financial Reporting and Decision Making. (6 Hours)

Continues the study of corporate financial reporting, covering specialized topics that assume knowledge of the accounting principles covered in the first two courses. Topics include corporate reporting as equity instruments, executive compensation, reporting of fund flows, and reporting and disclosures for corporations engaged in diverse economic activities and those operating across geographic boundaries. Examines accounting and disclosure standards in the United States and in other countries, as well as standards developed by international bodies. Covers financial reporting models used by governmental and nonprofit entities.

Prerequisite(s): ACCT 6221 with a minimum grade of C-

ACCT 6223. Audit and Other Assurance Services. (6 Hours)

Introduces the attest function and its application to financial statement opinion audits and other assurance services common in today's professional environment. Emphasizes a risk-based approach to audit planning, the internal control structure, and the control environment; the design of test of controls, substantive tests, and the resultant audit report. Topics include audit sampling, audit evidence, audit procedures, workpaper preparation, the impact of information technology on the audit process, and the auditor's responsibility to detect fraud. A primary focus is the auditor's legal and ethical responsibilities. Emphasis is also on operational audits, compliance audits, reviews, compilation, and other attestation services.

Prerequisite(s): ACCT 6221 with a minimum grade of C-

ACCT 6224. Taxation of Individuals and Business Entities. (6 Hours)

Introduces the principles of taxation including income and expenses, tax accounting methods, and the tax implications of property transactions (including the calculation of basis as well as gains and losses). Emphasizes tax compliance, planning, and research as they impact the decision-making process for individuals, corporations, and flow-through entities.

Prerequisite(s): ACCT 6221 with a minimum grade of C-

ACCT 6226. Strategic Cost Management. (3 Hours)

Examines the strategic decisions that managers need to make concerning the acquisition, measurement, and management of firm resources. Focuses on the strategic use of cost information for planning and controlling, and the use of cost analysis in making critical business decisions.

Prerequisite(s): ACCT 6221 with a minimum grade of C-

ACCT 6227. Accounting for Business Combinations. (3 Hours)

Examines the conceptual and practical aspects of business combinations. Topics include mergers and acquisitions, purchase accounting, cost vs. equity method, and accounting for intercompany transactions between a parent company and its subsidiaries.

Prerequisite(s): ACCT 6221 with a minimum grade of C-

ACCT 6228. Contemporary Issues in Accounting Theory. (3 Hours)

Offers a capstone course on the theoretical concepts of accounting, with a focus on standards issued by various professional organizations including the FASB, SEC, and AICPA. Examines emerging issues in financial reporting. Real-world cases are utilized to illustrate the complex financial reporting issues confronted by the business community and accounting profession.

Prerequisite(s): ACCT 6221 with a minimum grade of C-

ACCT 6229. Accounting for Foreign Currency Transactions. (1 Hour)

Examines the accounting and reporting issues facing multinational enterprises operating in foreign countries. Business transactions that are denominated in foreign currency may result in risk for the entity as a result of fluctuations in exchange rates. This course evaluates risk management techniques by use of forward exchange contracts and other financial derivatives. Covers reporting issues dealing with the translation of foreign entities financial statements into U.S. dollars and appropriate remeasurement techniques.

ACCT 6231. Corporations and Shareholders. (3 Hours)

Provides an in-depth study of the tax issues related to the corporate form and the corresponding tax implications for its shareholders. Given the importance of corporations in the federal income tax system, an understanding of the tax issues related to this type of business is essential for tax professionals. Topics include capital formation and structure, the operations of the corporation, distributions, dividends and redemptions, sales and liquidations, and taxable and tax-free reorganizations.

Prerequisite(s): ACCT 6230 with a minimum grade of C- or ACCT 5230 with a minimum grade of D- or ACCT 5230 with a minimum grade of C- (Graduate)

ACCT 6235. Partners and Partnerships. (3 Hours)

Provides an in-depth study of the tax issues related to one of the central flow-through entities, the partnership. The increasing popularity of flow-through entities as an organizational form has made an understanding of the tax issues related to this type of entity an important area of study for tax professionals. Topics include capital formation, operations, transactions between the partner and the partnership, distributions, sales of partnership interests, and liquidation of the partnership.

Prerequisite(s): ACCT 6230 with a minimum grade of C- or ACCT 5230 with a minimum grade of D- or ACCT 5230 with a minimum grade of C- (Graduate)

ACCT 6239. State and Local Taxation. (3 Hours)

Addresses the most common types of taxes imposed by state and local governments. Examines state and local income, sales, excise, property, and city taxes. Emphasis is on the underlying principles governing the application of each type of tax and the interrelationships where they exist.

Prerequisite(s): ACCT 6230 with a minimum grade of C- or ACCT 5230 with a minimum grade of D- or ACCT 5230 with a minimum grade of C- (Graduate)

ACCT 6240. International Taxation: Inbound Transactions. (3 Hours)

Addresses the taxation of foreign individuals or corporations receiving income from sources, or conducting business, in the United States. With the globalization of the economy, a greater number of taxpayers must consider the impact of international taxation. Topics include the sourcing of income, taxation of passive income, taxation of income connected to a U.S. trade or business, branch-level taxes, issues of foreign-owned U.S. corporations, income tax treaties, and transfer pricing.

Prerequisite(s): ACCT 6231 with a minimum grade of C- ; ACCT 6235 with a minimum grade of C-

ACCT 6241. International Taxation: Outbound Transactions. (3 Hours)

Examines the federal taxation of U.S. individuals receiving income from sources or conducting business in foreign jurisdictions. An increase in the number of U.S. individuals and corporations operating in other countries has enhanced the importance of an understanding of international transactions for tax professionals. Examines sourcing of income, allocation and apportionment of deductions, foreign tax credits, taxation of U.S. citizens and residents abroad, controlled federal corporations, passive foreign investment companies, foreign currency translations and transactions, and special entities.

Prerequisite(s): ACCT 6231 with a minimum grade of C- ; ACCT 6235 with a minimum grade of C-

ACCT 6243. Advanced Flow-Through Entities. (3 Hours)

Offers an in-depth look at the tax consequences of businesses formed as flow-through entities (including partnerships, S corporations, and LLCs). Discusses allocation rules, liability sharing rules, disguised sales rules, partnership debt workouts, the S corporation election, and tax treatment of shareholders in an S corporation.

Prerequisite(s): ACCT 6231 with a minimum grade of C- ; ACCT 6235 with a minimum grade of C-

ACCT 6248. Income Taxation of Trusts and Estates. (3 Hours)

Examines the general rules for the taxation of estates and trusts. Topics include trusts that distribute current income only, grantor trusts, irrevocable trusts, charitable vehicles, income in respect of a decedent, estates and trusts that may accumulate income or may distribute corpus, and treatments of excess distributions and beneficiaries.

Prerequisite(s): ACCT 6232 with a minimum grade of C-

ACCT 6250. Financial Planning for Insurance. (3 Hours)

Surveys insurance products used for financial planning. Topics include life, accident, health, disability, long-term care, homeowner, auto, and personal liability, with emphasis on personal risk management and the use of insurance products in the financial planning process.

Prerequisite(s): ACCT 5232 with a minimum grade of C-

ACCT 6253. Ethics in the Accounting Profession. (3 Hours)

Focuses on the roles and ethical responsibilities in the accounting, auditing, and tax professions. Also covers ethical behavior by management as well as the legal guidelines that apply in a business setting.

ACCT 6254. Accounting Research and Communication. (3 Hours)

Requires students to research and analyze auditing issues by using quantitative and/or qualitative research methods. Offers students an opportunity to learn how to more effectively communicate those findings in a professional format.

ACCT 6264. Planning for Estate Tax Issues. (3 Hours)

Examines advanced strategies for maximizing personal goals (including probate avoidance, tax minimization, and asset protection) related to property passed from one generation to another. Emphasizes trust vs. will planning and other vehicles for estate planning; the principles of estate taxation; the impact of employee benefits, trusts, and their taxations; and life insurance policies and associated annuities.

ACCT 6265. Tax Accounting for Income Taxes. (3 Hours)

Investigates the reporting of uncertain positions and accounting treatment accorded current and deferred income tax liabilities and expenses. Topics include accounting for uncertain tax positions, accounting methods and periods (particularly in cases where the accounting and tax records differ), special elections available to taxpayers, installment reporting, inventory methods, long-term contract accounting, and cash vs. accrual reporting.

ACCT 6272. Financial Statement Preparation and Analysis. (2.25 Hours)

Offers students an opportunity to understand how to prepare corporate financial reports and utilize critical information in these reports to improve business decision making. Introduces contemporary methods of financial statement analysis used by internal decision makers and external capital providers.

ACCT 6273. Identifying Strategic Implications in Accounting Data. (2.25 Hours)

Focuses on developing and analyzing accounting information to identify strategic implications and, using that information, to make effective decisions in various business functions that must work together for overall strategic success. Introduces key management accounting concepts and techniques, including the impact of different cost behaviors, activity-based costing, evaluating profitability of products and customers, flexible budgeting, and variance analysis. Offers students an opportunity to learn to use the data they develop to think objectively about the business, to ascertain why a situation occurs, to identify the implications of data for management decisions, and to use the data to discover strategically important opportunities and challenges.

Prerequisite(s): ACCT 6272 with a minimum grade of C-

ACCT 6280. Planning and Budgeting for Innovation. (3 Hours)

Covers the fundamental methods by which the financial successes and failures of business enterprises are measured and reported to management and external capital providers. Offers students an opportunity to become proficient at analyzing financial statement information in order to assess the effects of business decision making on firm performance. Addresses analytics focusing on the identification of capital to fund innovation initiatives in conjunction with metrics to measure the potential value associated with new product and service offerings. Seeks to help students understand how management decisions and innovation initiatives affect enterprise financial statements and shareholder perceptions of value creation.

ACCT 6292. Tax Research, Practice, and Ethics. (3 Hours)

Offers students an opportunity to develop and refine their tax research skills through practical exercises. Covers the creation of various sources of tax authority. Exposes students to the procedures used in dealing with the Internal Revenue Service (IRS), with an emphasis on practitioner responsibilities. Reviews the organization of the IRS, filing requirements, appeal procedures, civil/criminal statutes, assessments, and protests. Includes a study of the value and moral judgments inherent in the field of taxation, including client confidentiality, disclosure of false or misleading information, and advice counter to the law or public good.

ACCT 6318. Analyzing Accounting Data for Strategic Decision Making. (2 Hours)

Highlights managerial decisions affecting a company's performance in generating revenues, controlling costs, and producing profits. Begins with a brief review of financial accounting, then focuses on the development and use of information, especially financial information, for managerial decisions related to the firm's planning—operations—control cycle.

ACCT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACCT 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Accounting - CPS (ACC)**Courses****ACC 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACC 2100. Financial Accounting. (3 Hours)

Examines the development, objective, and purpose of financial statements. Emphasizes the preparation, analysis, and use of these statements to make operating, financial, and investment decisions. Covers the underlying methods, concepts, principles, and measurement theories. Topics include understanding the operating cycle, receivables, inventories, plant and equipment, intangible assets, liabilities, bonds, ownership, and stockholders' equity. Special topics include the mathematics of present value theory, calculations, and applications.

ACC 2200. Managerial Accounting. (3 Hours)

Examines the fundamental tools and principles of managerial accounting for decision-making purposes, including planning and control. Covers cost determination, assignment, definition, and behavior. Requires students to prepare management accounting reports and statements for internal decision-making purposes, including the preparation of budgets and contribution margin statements. Topics include job order, process costing, activity-based costing (ABC), inventory techniques, variance analysis, CVP analysis, and budgeting.

ACC 2300. Cost Accounting. (3 Hours)

Examines the concepts and methodologies useful to understand a cost accounting system for business decision-making, cost control, and performance assessment. Studies cost analysis and explores statistical methods in measuring cost behavior, overhead, and fixed costs. Introduces capital budgeting techniques for equipment replacement and long-term asset management given the relevant range of productive capacity. Compares and analyzes decentralization, segment, and divisional management accounting. Topics include marginal cost relevancy, make-or buy decisions, multiple product cost assignment and production methods, joint costs and by-products, responsibility accounting, activity-based costing, just-in-time cost systems, economic value added, residual income, the balance scorecard, and return on investment techniques.

ACC 3201. Financial Reporting and Analysis 1. (3 Hours)

Examines in greater depth the foundational principles, concepts, and measurement theories relating to financial reporting and stewardship. Focuses on the objectives of financial statements for various users such as lenders, investors, and various stakeholder groups. Emphasizes the accounting conceptual framework, including the guidance and standards promulgated by various standards-setting and regulatory bodies. Topics include the measurement, valuation, and disclosure of receivables, inventories, tangible and intangible assets, depreciation methods, revenue-recognition principles, and required footnotes.

Prerequisite(s): ACC 2100 with a minimum grade of D-

ACC 3202. Financial Reporting and Analysis 2. (3 Hours)

Continues the examination in greater depth of the foundational principles, concepts, and measurement theories relating to financial reporting and stewardship. Focuses on the objectives of financial statements for various users such as lenders, investors, and various stakeholder groups. Emphasizes the accounting conceptual framework, including the guidance and standards promulgated by various standards-setting and regulatory bodies. Topics include the measurement, valuation, and disclosure of liabilities, bond obligations, retirement obligations, reconciliation of deferred taxes and required tax disclosures, various corporate ownership interests, stock options, accounting changes, statement of cash flows, and required footnotes.

Prerequisite(s): ACC 3201 with a minimum grade of D-

ACC 3330. Principles of Auditing. (3 Hours)

Examines audit principles, concepts, and standards relevant to the attest function. Explores the objectives of audited financial statements performed by certified public accountants in compliance with AICPA auditing standards, PCAOB standards and guidelines, and SEC rules and regulations for publicly held companies. Also explores the objectives of audited financial statements and other lower-level services (such as reviews and compilations) performed for privately held nonpublic companies. Topics include ethical and legal liabilities of the auditor, including the independence and skepticism requirement, internal control, audit evidence, audit procedures, audit compliance and substantive testing, statistical sampling, transaction cycle testing, and the role of the audited reports on the efficiency of capital markets.

Prerequisite(s): ACC 3202 with a minimum grade of D-

ACC 3410. Principles of Taxation. (3 Hours)

Covers the objectives and principles of taxation, including the economic policy underlying various tax systems—property, consumption, value added, federal, and state income tax regimes. Explores the marginal tax structure and studies the component parts of the tax accounting equation in full, including the definitions and terminology described in the U.S. tax code. Emphasizes the tax compliance responsibilities and tax accounting methods and required reporting obligations for individuals, corporations, and various pass-through entities such as partnerships and subchapter S corporations.

Prerequisite(s): ACC 3201 with a minimum grade of D-

ACC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACC 4320. Financial Statement Analysis. (3 Hours)

Explores the process, tools, principles, and concepts of financial reporting, financial statement analysis, and valuation used by investors and analysts. Covers analysis of financial information and firm-specific data, emphasizing the structure of financial statements. Focuses on use of this data for equity and debt valuation as part of security analysis and portfolio management. Studies analysis of individual investments, focusing on pricing shares of stock and creating valuation models and specific criteria used in lending decisions. Topics include models of intrinsic value; comparison of accrual accounting and discounted cash flow approaches to valuation; analysis of firm profitability, growth, risk analysis, and value generation; and assessment of accounting quality, forecasting earnings and cash flows, pro forma analysis for strategy and planning, and study of nonfinancial metrics.

Prerequisite(s): (ACC 3202 with a minimum grade of D- or ACC 4307 with a minimum grade of D-); FIN 3310 with a minimum grade of D- ; ACC 3410 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

ACC 4410. Advanced Taxation. (3 Hours)

Continues the study of taxation, including tax-planning strategies, the tax legislative process, tax controversies and litigation, the hierarchy of tax authorities, and tax research and writing techniques. Emphasizes the tax-planning techniques and opportunities for individuals and businesses to avoid or minimize the present value of tax liabilities through property acquisitions; exchanges and dispositions; deferred and installment sales; corporate reorganizations; liquidations; and other pass-through entity structures such as limited liability companies, trusts, estates, and personal holding companies. Integrates the analysis of legislative motives to provide incentives to promote desired economic and social behavior and to exact penalties to discourage undesirable economic and social activity.

Prerequisite(s): ACC 3410 with a minimum grade of D-

ACC 4420. Advanced Accounting. (3 Hours)

Covers Securities and Exchange Commission reporting requirements, including segment and interim reporting requirements for large publicly held companies. Focuses on the equity method of accounting for investments; consolidations of financial information and consolidated reporting requirements for activities subsequent to the date of acquisition; consolidated financial statements as they pertain to outside ownership, intercompany asset transactions, and ownership patterns and income taxes; and intercompany debt, consolidated statement of cash flows, and other multi-entity issues. Other related matters covered include multinational accounting for foreign currency transactions and financial instruments, including the currency translation of foreign entity financial statements. Special advanced topics include accounting for partnerships, estates and trusts, fund accounting, bankruptcy liquidations and reorganizations, and accounting for governmental units and not-for-profit entities.

Prerequisite(s): (ACC 3202 with a minimum grade of D- or ACC 4307 with a minimum grade of D-); ACC 3410 with a minimum grade of D-

ACC 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

ACC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ACC 6210. Forensic Accounting Principles. (3 Hours)

Seeks to provide students with a broad conceptual overview of the field of forensic accounting, the key internal controls required to deter/detect frauds or abuse, and the newly enacted corporate governance laws. Covers the roles, responsibilities, and requirements of a forensic accountant; basic legal and fraud examination theory; ethics in business; identifying the major types of cash, payroll, and other financial fraud schemes; detailed examination of the proper required internal audit controls (transaction authorization, segregation of duties, supervision, adequate documentation and records, physical safeguards, independent verification); and accounting/auditing standards and corporate governance needed to comply with the AICPA, SAS, CFE, government regulations, and Sarbanes-Oxley 2002 legislation. Discusses actual fraud cases to highlight the impact of auditing and forensic accounting on businesses and our society.

ACC 6220. Dissecting Financial Statements. (3 Hours)

Offers students an opportunity to learn how to review, detect, and investigate possible financial statement concerns of publicly and privately held businesses, as well as nonprofit organizations and family businesses. Financial records of the companies studied span a variety of industries. Topics include legal elements of financial statement fraud, management's and auditor's responsibilities, improper revenue/sales recognition, inadequate disclosure of related-party transactions, improper asset valuation, improper deferral of costs and expenses, financial statement red flags, and inadequacies in management's discussion and analysis. Addresses such factors as off-balance-sheet activity, liquidity, financial performance indicators, unreported intangibles, and lease auditing. Typical cases could include WorldCom, Enron, Rite Aid, Crazy Eddie, and ESM Government Securities.

ACC 6230. Investigative Accounting and Fraud Examination. (3 Hours)

Offers students an opportunity to learn how to identify and investigate accounting frauds and irregularities. Includes the in-depth review of sophisticated fraud schemes; how fraudulent conduct can be deterred; how allegations of fraud should be investigated and resolved; the recovery of assets; methods of writing effective reports; complying with SAS 82 and other fraud standards; and recent antiterrorist and money-laundering regulations, including the Patriot Act of 2002. Sessions are interactive, with students working through actual cases, developing investigative strategies, and seeking to prove how the fraud was committed. Topics covered include acts of skimming, cash larceny, check tampering, register disbursement schemes, billing schemes, payroll and expense reimbursement schemes, improper accounting of inventory and other assets, corruption, bribery, conflicts of interest, security fraud, and insurance fraud.

Prerequisite(s): ACC 6210 with a minimum grade of C- or ACC 6220 with a minimum grade of C-

ACC 6240. Litigation Support. (3 Hours)

Covers the litigation process and civil and criminal statutes used to prosecute white-collar crimes. Offers students the opportunity to learn the appropriate analytical tools to quantify values for future earnings or damages resulting from fraud, breach of contract, or insurance disputes and to perform business valuations, including those arising from hostile situations such as divorce. Topics covered include how to assist in obtaining documentation necessary to support or refute a claim, assist in the examination for discovery, formulate questions to be asked regarding the financial evidence, review an opposing expert's damages report and report on both the strengths and weaknesses of the positions taken, assist with settlement discussions and negotiations, and provide assistance at trial in testimony or with cross-examination.

ACC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Advanced Manufacturing Systems - CPS (AVM)**AVM 1100. Fundamental Measurement Analysis. (3 Hours)**

Covers Measurement System Analysis (MSA), which is of critical importance to manufacturing. Its proper utilization allows companies to identify quality and production issues and to prioritize and to address them accordingly. Introduces fundamentals of measurement systems, statistical concepts, sources of variation, measurement strategies, and planning. Reviews and explores measurement system variability and techniques. Discusses linearity, repeatability, reproducibility, and production capability using Gage repeatability & reproducibility (R&R), process capability (Cp), and process capability index (Cpk).

AVM 1150. Fundamentals of Manufacturing Systems. (3 Hours)

Introduces the basic elements of manufacturing process including planning, operations, materials supply, quality control, process integration, and environmental compliance. Discusses advanced and micro-manufacturing methods including 3-D printing and other additive manufacturing methods. Evaluates design for manufacturing methods, computer integration, automation and robotics, as well as Industrial IoT, in technical and business aspects.

AVM 1200. Fundamentals of Safety, Health, and Environmental Issues. (3 Hours)

Offers a comprehensive overview of health and safety issues as they relate to the environment and the workplace. Introduces students to the scientific and technical foundations of the subject, including environmental pollutants and biological, chemical, and physical agents. Policy decisions and safety regulations provide a solid basis for students to recognize hazards at the workplace and in the environment. Offers students an opportunity to become familiar with standard workplace policies, procedures, and guidelines. Covers personal protection, recording, and accident investigation procedures. Subjects are presented and discussed based on historic examples such as the Bhopal gas leak, the Chernobyl explosion, and others.

AVM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AVM 2200. Composite Materials and Applications. (3 Hours)

Provides a comprehensive training covering fundamental principles, technologies, and applications of composite materials. Offers students an opportunity to gain an understanding of strengthening mechanisms in fiber, particle, metal-matrix, ceramic-matrix, carbon-carbon, and hybrid composites and to learn how to calculate elastic modulus, critical fiber length, and other parameters. Discusses design considerations of aramid-reinforced composites, such as Kevlar, and other composite materials in terms of their applications. Reviews applications of composite materials in aviation, defense, sports, and advanced manufacturing.

AVM 2250. Materials Performance and Applications. (3 Hours)

Offers students an opportunity to obtain a fundamental understanding of relationships of materials composition, structure, treatment, and performance. Relates these topics to manufacturing processes used to achieve targeted performance characteristics. Emphasizes materials characterization, data collection, processing, and analysis. Incorporates failure analysis into the discussion and reviews in terms of product performance, durability, and cost. Evaluates advanced surface engineering and design methods for improving product performance. Reviews materials performance in aerospace, robotics, and semiconductor industries.

AVM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AVM 3000. Materials Processing. (3 Hours)

Offers students an opportunity to learn the fundamental principles of materials processing. Discusses a variety of ferrous and nonferrous metals, alloys, ceramics, and plastics in terms of processing methods, technologies, and manufacturability. Considers microstructural changes related to product performance and specifications. Uses phase diagrams and isothermal transformational diagrams to explain materials transformations and properties. Evaluates thermal, mechanical, composite, joining, surface engineering, and other processing methods from the point of view of applications, scalability, and cost.

AVM 3100. Nondestructive Testing. (3 Hours)

Reviews and discusses fundamental principles of nondestructive testing (NDT) in-depth. NDT methods are an essential part of today's advanced inspection processes due to their efficiency, speed, and cost-effectiveness. Introduces radiation, optical, electromagnetic, acoustic, and other methods of NDT. Reviews manufacturing, materials, and medical applications. Presents recent advances in portable NDT equipment in terms of their use in manufacturing, quality control, and systems.

Prerequisite(s): MET 3300 with a minimum grade of D

AVM 3500. Business Operations and Supply Chain. (3 Hours)

Offers a look at real-world challenges faced in supply chain management. Explores gathering market data on an industry and creating a should cost model. Offers students an opportunity to gain exposure to pricing indices and realize risks that can impact businesses on a day-to-day basis. Uses tools such as SWOT analyses and Porter's Five Forces to promote strategic thinking. Expands into business continuity planning and scenario planning. Witnesses the importance of planning ahead on communication, backup plans, and safety stocks. Students are introduced to supply chain KPIs, prepared for negotiations, and participate in negotiations. Finally, offers students an opportunity to learn the business impacts of choosing to select a new vendor to add to an organization.

Prerequisite(s): MGT 2220 with a minimum grade of D-

AVM 4100. Mechatronics. (3 Hours)

Introduces students to design and other requirements of essence to advanced manufacturing engineers. Provides essential multidisciplinary information in mechanical, electrical, and computer engineering, as well as in electronics and in materials. Discusses sensors, actuators, and computer control systems and integration in view of application in different industries. Reviews robotics, automation, intelligent devices, and cloud integration as essential components of the next industrial revolution.

Prerequisite(s): MET 2000 with a minimum grade of D- ; (EET 3100 with a minimum grade of D- or EET 3300 with a minimum grade of D-)

AVM 4150. Automation 1. (3 Hours)

Offers an overview of the important concepts of industrial automation: analog/digital; input/output; continuous, synchronous, and asynchronous processes; components and hardware; process and machine systems; and automated machinery. Offers students an opportunity to gain thorough knowledge of the internals of a Programmable Logic Circuit (PLC), as well as an opportunity to create simple programs for a set of control requirements. Requires students to undertake a project to design a control scheme, program the same on PLC simulation software, and test the operation of that program.

Prerequisite(s): EET 3300 with a minimum grade of D-

AVM 4160. Automation 2. (3 Hours)

Continues AVM 4150. Presents an overview of the important concepts of industrial automation: analog/digital; input/output; continuous, synchronous, and asynchronous processes; components and hardware; process and machine systems; and automated machinery. Examines the internals of a programmable logic circuit and how to create simple programs for a set of control requirements. Requires students to undertake a project to design a control scheme, program the same on PLC simulation software, and test the operation of that program.

Prerequisite(s): AVM 4150 with a minimum grade of D-

AVM 4250. Hydraulics and Pneumatics. (3 Hours)

Examines energy transmission based on hydraulics and pneumatics. Introduces basic fluid dynamics and offers students an opportunity to gain basic knowledge of functionality and design of pumps, motors, cylinders, and valves. Studies calculation methods for hydraulic/pneumatic components and systems, as well as basic system principles for control of position, velocity and speed, force and torque, and power. Emphasizes measurement methods in hydraulic and pneumatic systems.

Prerequisite(s): MTH 2105 with a minimum grade of D- ; PHY 1200 with a minimum grade of D-

AVM 4300. Advanced Manufacturing and Additive Processes. (3 Hours)

Provides a comprehensive overview of manufacturing approaches and technologies used in today's industry, including one of the fastest-growing areas—additive manufacturing (AM). Offers students an opportunity to understand the fundamentals of AM and 3-D printing, the key AM processes, including technologies based on material extrusion, vat photopolymerization, powder bed fusion, and binder and material jetting. Focuses on benefits of rapid prototyping and its application to aerospace, automotive, consumer good business, and healthcare. Includes important design and fabrication considerations.

Prerequisite(s): AVM 1150 with a minimum grade of D

African American Studies (AFAM)

Courses

AFAM 1135. John Coltrane and the History of Jazz in the United States. (4 Hours)

Studies the development and history of jazz in the United States through the life of John Coltrane, who was frequently considered one of the greatest musicians of all time. Considers his impact on the genre and mode of jazz music, including his advanced and innovative conceptions (melodic, rhythmic, and harmonic) and other stylistic contributions to African-American creative improvisation that also changed music across the globe. Emphasizes his impact on jazz and other improvisational music and expressive art forms. Also covers his spiritual legacy, which focused on using music for the improvement of humanity.

AFAM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AFAM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AFAM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AFAM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Africana Studies (AFCS)

Courses

AFCS 1101. Introduction to African American and Africana Studies. (4 Hours)

Explores the broad interdisciplinary spectrum of African American and Africana studies. Provides an introductory overview of the field and offers an opportunity to identify areas for more specific focus.

Attribute(s): NUpath Difference/Diversity

AFCS 1113. Black Popular Culture. (4 Hours)

Surveys U.S. and international Black popular culture from the mid-1950s to the present through music, movies, music videos, and other forms of multimedia, paying close attention to social commentary, political critique, economic inference, cultural formation, explications of religious and spiritual beliefs, and the like. Discusses and ponders issues of representation, identity, values, and aesthetics. Offers students an opportunity to rethink and reexamine the intent, impact, and circulation of Black popular culture as a method and means of expression and communication.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 1140. Introduction to African-American History. (4 Hours)

Surveys the development of African Americans in the United States from their African background to the present. Covers medieval and early modern societies in West and Central Africa; the transatlantic slave trade; the evolution of slavery from the colonial period through the Civil War; free blacks; Reconstruction; migration; civil rights; and black nationalism. Considers gender relations throughout the entire period and emphasizes how an historical perspective helps to inform discussions of contemporary issues.

AFCS 1225. Gender, Race, and Medicine. (4 Hours)

Examines the basic tenets of "scientific objectivity" and foundational scientific ideas about race, sex, and gender and what these have meant for marginalized groups in society, particularly when they seek medical care. Introduces feminist science theories and contemporary as well as historical examples to trace the evolution of "scientific truth" and its impact on the U.S. cultural landscape. Offers students the opportunity to question assumptions about science and view the scientific process as a site for critical analysis.

Attribute(s): NUpath Difference/Diversity

AFCS 1261. Global Caribbean. (4 Hours)

Focuses on the culture and history of Caribbean societies in global perspective. Explores Caribbean creativity and resilience across English, French, and Spanish linguistic and political spheres with examples from literature, art, music, food, technology, and performance. Considers the global reach of Caribbean diasporas, highlighting the long local histories of Caribbean communities in Boston. Follows four key themes—indigeneity, blackness, diaspora, and creolization—to understand this unique point of entry for the study of race, gender, and sexuality in the Americas.

AFCS 1270. Introduction to Global Health. (4 Hours)

Introduces global health in the context of an interdependent and globalized world focusing on four main areas of analysis: infrastructure of global health; diseases; populations; and terms, concepts, and theories. While the focus is on lower-income countries, the course examines issues in a broader global context, underscoring the interconnections between global health disparities and global health policy response. Applies case studies describing interventions to improve healthcare in resource-poor settings in sub-Saharan Africa and elsewhere to help illuminate the actors, diseases, populations, and principles and frameworks for the design of effective global health interventions.

Attribute(s): NUpath Societies/Institutions

AFCS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

AFCS 2270. Race, Ethnicity, and Inequality. (4 Hours)

Focuses on the social construction of race and ethnicity and the nature of dominant/minority relations in the United States. Emphasizes the peculiar evolution of race relations in U.S. history, the political and economic conditions that have transformed race relations, and the nature of contemporary racial and ethnic relations in the United States. Topics include immigration, ethnic and racial identity, discrimination, and race-based policies (e.g., residential restrictive codes, Jim Crow segregation). Offers students an opportunity to develop a critical lens from which to observe and interpret contemporary debates over structural racism.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 2296. Early African-American Literature. (4 Hours)

Surveys the development and range of black American writers, emphasizing poetry and prose from early colonial times to the Civil War. ENGL 2296 and AFM 2296 are cross-listed.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 2318. New England Stories: Storytelling and the African American Experience. (4 Hours)

Delves into the fascinating stories of African Americans who have called New England home, from the seventeenth century up to the present. Discusses themes such as freedom and slavery, migration, and civil rights. Introduces an interdisciplinary framework for understanding Black identity formation, activism, and cultural as well as intellectual traditions amid the long struggle for justice.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 2325. Black Feminist Studies. (4 Hours)

Invites students to study the history and contemporary landscape of Black feminist scholarship. Covers a range of disciplines and historical periods to introduce students to important texts and theoretical developments in this vast and interdisciplinary field.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 2330. Afro-Latin American Studies. (4 Hours)

Introduces the history of Afro-Latin America and of Black identities particular to this region. Frameworks such as transnational migration and diaspora provide an entry to the specific histories of African-descended people in the countries in the region known as Latin America and contemporary interpretations and revisions of that history. Covers topics including the history of slavery in the Americas; the Haitian Revolution; debates about "racial democracy"; and the relationship between gender, race, and empire. Explores the relationship between scholarship and struggle, social analysis, and social transformation.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 2337. African American History Before 1900. (4 Hours)

Traces the presence of African-descended people in North America. Emphasizes the historical and cultural links between Africa and North America that have shaped the Black experience in the United States. Explores and analyzes the institution of slavery, the role of free Black communities, the Civil War and emancipation, and Black leadership and protest during the Reconstruction era. Introduces students to the historian's craft, theoretical debates concerning race and gender, and the persistence of the past in the present.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 2355. Race, Identity, Social Change, and Empowerment. (4 Hours)

Examines racism, racial identity, and theories of social change and racial empowerment primarily within the U.S. context. Highlights different ways in which racism and racial privilege have been experienced by different racial communities, more specifically at the micro-, meso-, and macro-levels. Offers students an opportunity to learn ways to promote racial empowerment and equity. Using theory from primarily psychology and sociology, the course investigates the impact of social systems and institutions on individual-level and group experiences of racism. Investigates students' own racial identities, a deeper understanding of institutional inequalities and intersectionality, and practical skills in leadership and community building that can promote positive social change and racial equality.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity

AFCS 2380. Black Families and Incarceration. (4 Hours)

Focuses on how the Black family functions, both interpersonally and as a social unit within a carceral state. Introduces the diverse institutional, cultural, and historical issues relating to past and present circumstances from the effects of slavery and colonization on the Black family structure. Explores policies and practices within carceral institutions dealing with childhood, motherhood, and fatherhood. Assesses the social and psychological harms of incarceration on Black children and their families.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity

AFCS 2390. Africa and the World in Early Times. (4 Hours)

Addresses the place of Africa in the world, from human evolution to the establishment of large-scale iron-making societies. Examines debates on the evolution of man in Africa and migrations to other regions. Traces the formation and spread of language groups, the rise of agriculture, formation of family and political structures, and patterns of trade up to 1000 C.E.

AFCS 2410. Possession, Sacrifice, and Divination in African Diasporic Religions. (4 Hours)

Examines religious thought and rituals and the Diaspora in a comparative context. Topics include traditional religions, Islam, Christianity, and Judaism in Africa, and the Diaspora. Emphasizes the transformation of religions practiced in Africa when African captives were forced into the three slave trades affecting the continent of Africa: trans-Saharan, Indian Ocean, and transatlantic.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 2455. American Women Writers. (4 Hours)

Surveys the diversity of American women's writing to ask what it means to describe writers as disparate as Phillis Wheatley, Edith Wharton, Toni Morrison, and Alison Bechdel as part of the same 'tradition.' With attention to all genres of American women's writing, introduces issues of race, genre and gender; literary identification; canons; the politics of recuperation; silence and masquerade; gender and sexuality; intersectionality; sexual and literary politics, compulsory heterosexuality, and more.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 2600. Issues in Race, Science, and Technology. (4 Hours)

Examines the social impact of diverse forms of technological development and application that will have sweeping effects on the everyday lives of individuals, groups, governments, and societies in the twenty-first century. The global, transforming effects of technology as it affects communities of color in the United States and internationally are explored in three main areas: the computer, DNA, and quantum revolutions. Topics include the digital divide, minority media ownership, human cloning, the "dot.com" phenomenon, race and cultural representations in cyberspace, and biopiracy. Lectures, class discussions, fieldwork, and interaction with leaders in these various fields are integral elements of the course.

AFCS 2618. Community Psychology. (4 Hours)

Seeks to familiarize students with some of the topics, theories, and research methods employed by psychologists and other social scientists working in the area of community psychology. Community psychologists study people in their social contexts, emphasizing the mutual influences that individuals and communities have upon each other. Rather than attempt to understand and treat problems at the individual level, research in community psychology aims to offer practical solutions to social problems. Focuses on race, gender, and class. Offers students an opportunity to focus on a particular community, which they may utilize for data collection, and to develop survey instruments/interview schedules; collect data; and analyze and interpret the findings with a qualitative design, if necessary.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 2619. Race and Religion in Film. (4 Hours)

Explores how relationships between historical and contemporary representations of African Americans, other persons of the African Diaspora, and the continent of Africa have been presented in film in relation to religious themes. An interdisciplinary study in how race and religion are represented in ways that reflect and actively contribute to "real world" faith beliefs, experiences, and actions. Critically examines how representations of "the Other" compared to "the chosen" relate to the intersectionality of race, religion, class, national origin, gender, sex, and sexuality. Provides a framework for ethical analysis of how societal institutionalized systems of power influence beliefs about racialized identities and religion.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 2690. Boston in Literature. (4 Hours)

Explores the various ways in which the city of Boston and its environs are represented in literature and other media. Each semester, the course focuses on a different aspect of Boston in literature, such as representations of Boston's different communities, different historical eras, particular genres or concepts associated with the city, and so forth. Offers students an opportunity to build upon their readings about the city by experiencing independent site visits, class field trips, guest speakers, and other activities. In addition to a culminating group or individual research project about Boston, students may also have the opportunity to participate in a community-based reading project. AFAM 2690 and ENGL 2690 are cross-listed.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture

AFCS 2900. Swahili, Culture, and Politics in Kenya. (4 Hours)

Introduces and immerses students in Kenyan African culture, the Swahili language and politics, and studies their impact on the everyday life of the local population. Offers students an opportunity to learn Swahili, which is the national language of Kenya; its use in a context of varied indigenous languages; and cultural dynamics. Exposes students to the major issues that characterize everyday life in rural and urban settings through visits to and stays in the rural areas and transect walks in villages and urban communities. Students visit projects run by community-based organizations, observing the everyday life of ordinary Kenyans and attending formal and informal classes and settings on Swahili language, culture, and the local politics.

Attribute(s): NUpath Integration Experience

AFCS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

AFCS 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

AFCS 3120. Race, Crime, and Justice. (4 Hours)

Provides students with an overview of the role and treatment of racial/ethnic minorities in the criminal justice system. Covers historical and theoretical frameworks for understanding the relationship between race, crime, and criminal justice. In so doing, students become familiar with trends and patterns in criminal offending by racial/ethnic minorities, as well as system response to such behavior.

Attribute(s): NUpath Difference/Diversity

AFCS 3210. Black Abolition Studies: Carcerality, Liberation, and Resistance. (4 Hours)

Analyzes how Black people have resisted carcerality in social and political organizing from the 16th century to the present. Explores historical understandings of abolition as the end of slavery and the current abolition project of ending prisons, policing, and other institutions that are shaped by the legacy of slavery. Offers students an opportunity to critically analyze and engage contemporary social movements and political discourse in their everyday lives. Topics include the Haitian Revolution, maroon communities, 19th-century slavery abolitionists, anti-lynching organizing, chain gangs, Black political prisoners, contemporary carceral abolition, and abolitionist texts and films.

Attribute(s): NUpath Difference/Diversity

AFCS 3305. Beyond the Binary: Race, Sex, and Science. (4 Hours)

Considers how gender, race, and sexuality have been treated in science, focusing primarily on the 19th and 20th centuries. Examines the history of ideas about gender, race, and sexuality as reflected in fields such as biology, psychology, endocrinology, and neuroscience. Discusses contraceptive and reproductive technologies, pharmaceutical trials, the gendering of scientific professions, and recent studies that use algorithmic predictions of sex or sexual orientation. Uses close reading techniques and discussions to advance student expertise.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 3323. Race, Inequality, and the Law. (4 Hours)

Examines the relationship between and material impact of race, public policies, and the administration of justice in the United States. Explores the ways the American legal system and political institutions have constructed and reinvented racial categories and their legal and social implications over time. Emphasizes the legacy of this legal history by examining how race and racial inequities intersect with contemporary public policy and social justice issues, including educational equity, employment discrimination, policing, and technology.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 3404. African American Rhetorical Traditions. (4 Hours)

Examines and organizes the ways that African Americans have historically maintained their humanity and negotiated freedom through discourse. Explores various discursive practices of African American discourse communities—such as the enslaved, abolitionists, feminists, nationalist/revolutionaries, and entertainers—to engage discussions about freedom, access to democracy, racial uplift, gender equity, and the discursive and recursive nature of racial identity. Studies historical contexts and current sociopolitical dynamics emphasizing the Black Jeremiad, civil rights rhetoric, the Black Power Movement, Black Feminist Thought, and Hip-Hop.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 3424. Epidemiology of Pandemic Diseases and Health Disparities in the African Diaspora. (4 Hours)

Examines the epidemiology and determinants of diseases and the public health practice among continental African peoples and African-derived populations in the Americas and elsewhere in the African Diaspora. Emphasizes such epidemic diseases as malaria, yellow fever, tuberculosis, smallpox, the current AIDS pandemic, obesity, and cancer. The course also aims to critically address the breadth of factors behind these pandemics, such as socioeconomic, political, health system, behavioral, and genetic. A cross-cutting theme throughout the course is the entrenched health disparities in society.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 3512. Religion, Race, and Politics. (4 Hours)

Engages the intersections of religion, race, and political power through cultural history, ethnography, and lived religions. Explores the social and cultural categories of our historical and contemporary worlds. Examines how some peoples' histories have been centered, while others' histories have been marginalized. Explores religion as a social category that reproduces existing relations of power while alternatively supporting social revolution and change. Class engagements are centered on theories of power, understandings of difference, and changes in social structures over time, from the colonial period to the present (1500s–2000s).

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 3664. Black Poetry and the Spoken Word. (4 Hours)

Focuses on the black poet's place in the history of American poetry. Considers black poetry as both written words and spoken words.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

AFCS 3900. Gender and Black World Literatures. (4 Hours)

Explores different aspects of the literary and cultural productions of black women throughout history. Examines writing by women in the United States—like Octavia Butler, Zora Neale Hurston, and Toni Morrison—in addition to writing by women across the global African diaspora—like Chimamanda Adichie and Jamaica Kincaid. Students may also engage with theories such as Black feminism, womanism, or intersectionality; consider issues of genre such as the novel, poetry, or science fiction; and explore key themes such as class, sexuality, and disability. AFRS 3900, WMNS 3900, and ENGL 3900 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 3990. Elective. (1-4 Hours)

Offers elective credit for course taken at other academic institutions.

AFCS 4526. Afro-Asian Relations in the Americas. (4 Hours)

Examines the comparative racialization of Blacks and Asians in the Americas and relations between these communities. Introduces sociological theories of race/ethnicity, a chronology of Afro-Asian relations in the United States, and the impact of 1970s deindustrialization and post-1965 Asian immigration. Covers the internationalism of Black and Asian leaders (e.g., W.E.B. du Bois and Mao Tse-Tung) in the developing nations and the overlapping Civil Rights, Black Power, and Asian American movements.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFCS 4588. Literature in Context. (4 Hours)

Places writers in the context of a special theme or specific geographic location; for example, students might discuss a group of writers influenced by their commitment to revolution or radical thinking, or in the context of a geographical national or regional setting (ie. Black France, Haiti and the Dominican Republic, Francophone West Africa).

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFCS 4700. Capstone. (4 Hours)

Offers students the opportunity to prepare a professional research project under the close supervision of a scholar interested in students' particular research areas.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

AFCS 4939. Community Health, Culture, and Development in Kenya. (4 Hours)

Introduces the community health and development arena in Kenya. Community development has been presented as the panacea to many of Africa's problems, including leadership, democracy, conflict, disease, and poverty. Through teaching, research, and action, the course seeks to expose and sensitize students to the global and local debate on poverty, primary healthcare, and community development. Offers students an opportunity to gain hands-on experiences in some of the major determinants and solutions to poverty and disease by interacting with community stakeholders and organizations in a variety of cultural, rural, and urban settings and through visits to, and participating in, projects run by community-based organizations.

Attribute(s): NUpath Integration Experience

AFCS 4973. Topics in African American Studies. (4 Hours)

Offers focused analysis of a special topic in African American studies. Course content may vary from term to term. May be repeated up to three times.

AFCS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

AFCS 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

AFCS 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

AFCS 5001. Special Topics in Race and the Law. (4 Hours)

Explores the various questions, relationships, and connections between the law and racial issues and concepts. Each offering focuses on a special topic such as reparations, civil rights, gender, or the environment and energy policies. May be repeated up to three times for a maximum of 16 credits.

AFCS 5544. Seminar in Black Leadership. (4 Hours)

Offers students an opportunity to conduct in-depth studies of significant black leaders—male and female—in a wide range of fields. Focuses on black leadership in the political arena as elected officials; leaders of pressure groups; leaders of protest organizations, black nationalist organizations, and feminist/womanist groups; and as advisers to political parties and presidential administrations.

AFCS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

African Studies (AFRS)**Courses****AFRS 1101. Introduction to African Studies. (4 Hours)**

Uses a multidisciplinary approach to offer an introduction and overview of the geographical, demographic, socioeconomic, and political conditions of the African continent, emphasizing sub-Saharan Africa. Africa, "the cradle of humankind," is a vast, complex continent of diverse peoples that has fascinated observers and evoked multiple images. Topical areas of interest range from ethnic relations, politics, colonial experience, and international relations to religion, environment, health, economic development, gender, culture, and literature. Course materials aim to provide contemporary African perspectives and analyses that offer students an opportunity to acquire and interpret broad knowledge about the continent.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

AFRS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AFRS 2392. African Diaspora. (4 Hours)

Explores the creation and transformation of the African Diaspora—connections among communities of African descent in either Africa, the Americas, Europe, and/or Asia—from 1500 to the present. Emphasizes connections among themes of migration, identity, and popular culture with a special focus on 20th- and 21st-century contributions.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

AFRS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AFRS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AFRS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AFRS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

American Sign Language (AMSL)

Courses

AMSL 1101. Elementary ASL 1. (4 Hours)

Introduces students to American Sign Language (ASL). Students develop expressive and receptive competence in using ASL to fulfill various social functions (such as introductions, explanations of personal history, and descriptions of simple narratives). Additional topics include the use of signing space and further use of nonmanual components including facial expression and body postures.

AMSL 1102. Elementary ASL 2. (4 Hours)

Continues AMSL 1101. Continues development of expressive and receptive competence in using American Sign Language to fulfill various social functions (such as introductions, explanations of personal history, and descriptions of simple narratives). Emphasizes further development of receptive and expressive skills, finger spelling, vocabulary building, grammatical structures; encourages more extensive use of nonmanual behaviors, classifiers, body postures, and signing space. Students are also introduced to regional and ethnic sign variations and political and educational institutions of the Deaf community.

Prerequisite(s): AMSL 1101 with a minimum grade of D-

AMSL 1511. ASL Classifiers. (4 Hours)

Seeks to improve understanding of and use of ASL classifiers, including appropriate nonmanual grammatical features and other nonmanual markers. Discusses classifier hand shapes and how movement, location, and orientation of classifiers affect meaning in ASL. Covers eight types of ASL classifiers: semantic, instrumental, descriptive, locative, plural, body part, sport, and elemental. Offers students an opportunity to build on existing classifier vocabulary and eventually use an expanded range of classifiers to express narratives.

Prerequisite(s): AMSL 1101 with a minimum grade of D-

AMSL 1512. ASL Numbers and Fingerspelling. (4 Hours)

Offers students an opportunity to improve receptive and expressive skills in the specific areas of ASL fingerspelling and ASL numbers. Includes a brief history of fingerspelling. Focuses on strategies for understanding fingerspelling/word phrases and number recognition; recognizing number patterns (e.g., ordinal and cardinal numbers, height, age, time); and additional strategies for understanding and using numbers and fingerspelling in context. Uses drills to improve speed, clarity, and fluency skills.

Prerequisite(s): AMSL 1102 with a minimum grade of C-

AMSL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AMSL 2101. Intermediate ASL 1. (4 Hours)

Continues the student's development of expressive and receptive competence in using American Sign Language to fulfill various communicative functions, such as making and responding to inquiries, constructing and comprehending narratives, and engaging in debates. Students also continue to expand their ASL lexicon.

Prerequisite(s): AMLS 1102 with a minimum grade of C ; DEAF 1500 (may be taken concurrently) with a minimum grade of C

AMSL 2102. Intermediate ASL 2. (4 Hours)

Continues AMLS 2101. Emphasizes further development of receptive and expressive skills, finger spelling, vocabulary building, grammatical structures; encourages more extensive use of nonmanual behaviors, classifiers, body postures, and signing space. Continues exposure to regional and ethnic sign variations and political and educational institutions of Deaf people. Offers intensive practice involving expressive and receptive skills in storytelling and dialogue. Introduces language forms used in American Sign Language poetry and the features of culture as they are displayed in art.

Prerequisite(s): AMLS 2101 with a minimum grade of D-

AMSL 2900. Specialized Instruction in ASL. (1-4 Hours)

Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings (e.g., media, medical, legal, mental health), or it might be focused on specific conversational nuances of the language. May be repeated without limit.

AMSL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AMSL 3101. Advanced ASL 1. (4 Hours)

Focuses on continued development of syntactic competence in American Sign Language with particular attention to the use of ASL in formal discourse. Also focuses on lexical semantics and semantic equivalents for multiple meaning English lexical items.

Prerequisite(s): AMLS 2102 with a minimum grade of D-

AMSL 3102. Advanced ASL 2. (4 Hours)

Continues AMLS 3101. Focuses on further development and refinement of American Sign Language competence in various discourse settings, predominantly formal and consultative. Continues development of lexical semantics and uses individual diagnostic assessment of ASL competence to determine individual competency goals.

Prerequisite(s): AMLS 3101 with a minimum grade of D-

AMSL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AMSL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AMSL 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major requirements in certain situations. Priority is given to American Sign Language majors and to juniors and seniors. May be repeated without limit.

AMSL 5901. Gallaudet University Program. (20 Hours)

Offers students an opportunity to study at an officially bilingual university, with American Sign Language and English used for instruction and by the university.

Analytics - CPS (ALY)

Courses

ALY 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ALY 2010. Probability Theory and Introductory Statistics. (3 Hours)

Introduces statistics for data analytics from an analysis-of-data viewpoint. Topics include frequency distributions; measures of location; mean, median, mode; measures of dispersion; variance; graphic presentation; elementary probability; populations and samples; sampling distributions; categorical data; regression and correlation; and analysis of variance. Explores the use of statistical software in data analysis. Emphasizes hands-on application of probability and statistics in SPSS.

Prerequisite(s): MTH 1100 with a minimum grade of D- or MTH 1200 with a minimum grade of D- or MTH 2100 with a minimum grade of D-

ALY 2100. Introduction to Programming for Data Analytics. (3 Hours)

Offers a hands-on first programming course for those with no prior programming experience. Covers basic programming logic and syntax with Python. Students apply Python packages mostly used on data analytics. Offers students an opportunity to learn how to code on the most used language in the job market.

Prerequisite(s): (MTH 2400 with a minimum grade of D- or PHL 2310 with a minimum grade of D-); ITC 2300 with a minimum grade of D-

ALY 3015. Intermediate Statistics for Data Analytics. (3 Hours)

Expands upon the earlier introduced statistical approaches. Emphasizes more advanced analysis and multivariate methods. The goal is to provide students with the fundamental data management, review, reengineering, and exploration skills as necessary data analytical competencies.

Prerequisite(s): ALY 2010 with a minimum grade of D-

ALY 3040. Data Mining. (3 Hours)

Introduces the theories and tools for data mining techniques such as rule-based learning, decision trees, clustering, and association-rule mining. Also covers interpretation of the mined patterns using visualization techniques. Offers students an opportunity to gain the knowledge and experience to apply modern data-mining techniques for effective large-scale data pattern recognition and insight discovery. Introduces data analysis software—student teams evaluate, analyze, and report data for the methods used and insights discovered during case studies.

Prerequisite(s): ALY 2100 with a minimum grade of D- ; ALY 3015 with a minimum grade of D-

ALY 3070. Communication and Visualization for Data Analytics. (3 Hours)

Offers an interdisciplinary examination of design concepts and cognitive and communication theories that support effective practices for data visualization and communication. Considers the relationship between information and audience and studies effective techniques in the written, spoken, and visual communication of complex quantitative information. Project-based activities offer students opportunities to apply these techniques in a manner that makes data understandable, compelling, and actionable. Introduces R and Python visualization packages.

Prerequisite(s): ALY 2100 with a minimum grade of D- ; ALY 3015 with a minimum grade of D-

ALY 3110. Big Data and Web Mining. (3 Hours)

Offers students an opportunity to work with very large data sets and to learn how to write code to search the World Wide Web for publicly available data in a methodical and automated manner.

Prerequisite(s): ALY 2100 with a minimum grade of D- ; ALY 3015 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

ALY 4000. Analytics Using R. (3 Hours)

Offers an overview of analytics concepts and practices across a diverse range of organizational contexts. Introduces data structure and management using R and SQL R packages. Leverages big data using Hadoop, Spark, and R scripting. Engages students in discussions on analytics careers and their ethical considerations. Introduces the basics of business strategies for big data analytics through a final project.

Prerequisite(s): ALY 2010 with a minimum grade of D- ; ITC 2300 with a minimum grade of D-

ALY 4020. Predictive Analytics Using R and Python. (3 Hours)

Introduces the end-to-end data-driven predictive modeling approach in R, Python, KNIME and WEKA with applications and case studies. Includes all the data and modeling steps in a full modeling cycle (training, validation and testing), exploratory data analysis and data cleansing, commonly applied modeling techniques such as SVM, random forest and ensemble models; introduces neural networks using TensorFlow.

Prerequisite(s): (ALY 2100 with a minimum grade of D- ; ALY 3015 with a minimum grade of D-) or ALY 3040 with a minimum grade of D-

ALY 4850. Analytics Capstone. (3 Hours)

Offers an advanced practicum in the development and delivery of data analysis for strategic decision making in organizations. Students apply the principles and tools of analytics to a comprehensive real-world problem or project within a sponsoring organization. Expects students to present analytical insights and recommendations for successful implementation of their capstone project.

Prerequisite(s): ALY 3040 with a minimum grade of D- ; ALY 3070 with a minimum grade of D- ; ALY 4000 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ALY 5000. Introduction to Analytics. (2.25 Hours)

Offers an overview of analytics concepts and practices across a diverse range of industries and organizational contexts. Provides a hands-on introduction to statistics, data management, and the R scripting language. Technical projects based on introductory statistics and the R language offer students an opportunity to understand and apply the theories, practices, and application of analytics to real-world problems. An initial exploration of data sets illustrates how fundamental data analysis can impact decision making at both the strategic and operational level. Students research case studies to examine careers and professional opportunities in both for-profit and nonprofit industry segments.

ALY 5010. Probability Theory and Introductory Statistics. (2.25 Hours)

Introduces statistics for business analytics from an analysis-of-data viewpoint. Topics include frequency distributions; measures of location; mean, median, mode; measures of dispersion, variance, graphic presentation; elementary probability; populations and samples; sampling distributions; and categorical data. Includes a preliminary introduction to regression and correlation. Uses statistical software (for data analysis during analytic project assignments) to provide a hands-on experience to observe how probability and statistics, scripting, and basic data management impact decision making at all levels within a corporation.

ALY 5015. Intermediate Analytics. (2.25 Hours)

Builds on the foundation provided in ALY 6000 and ALY 6010 by exploring at greater depth the tools of data correction and recoding, as well as those of statistics and R. Offers students an opportunity to learn to discern and validate meaningful and statistically significant patterns in data through sound applications of the scientific method. Emphasizes initial mastery of correlation and regression, ANOVA, GLM, and logistic regression. Introduces the more advanced techniques of multivariable regression and nonparametric statistics and sampling. The goal of this course is to offer students an opportunity to master the fundamental skills of data management, analysis, and communication, which are the core data analytical competencies required of today's analytic professionals.

ALY 5030. Data Warehousing and SQL. (2.25 Hours)

Focuses on the management, mining, and interpretation of patterns in large databases. Offers students an opportunity to learn how organizations construct data warehouses from operational databases, about different data warehouse architectures, how to build a data warehouse, and how to structure databases for efficient data mining. Discusses relational databases and Structured Query Language (SQL) for the fundamentals in data modeling, database management, and SQL queries. Introduces other modern database systems such as NoSQL (non SQL) and column-based databases.

ALY 5040. Data Mining Applications. (2.25 Hours)

Introduces the theories and tools for intensive data analysis methods and data mining techniques such as rule-based learning, decision trees, clustering, and association-rule mining. Also covers interpretation of the mined patterns using visualization techniques. Offers students an opportunity to gain the knowledge and experience to apply modern data-mining techniques for effective large-scale data pattern recognition and insight discovery. Introduces data analysis software; student teams evaluate, analyze, and report data for the methods used and insights discovered during case studies.

ALY 5050. Introduction to Enterprise Analytics. (2.25 Hours)

Introduces advanced specific analysis techniques—including forecasting, simulation, linear programming, regressive modeling, and optimization—as well as the Python programming language. The more advanced mathematical, statistical, and presentation functions within the R library packages are heavily utilized. Emphasizes enterprise data analytics, which is the extensive use of data, statistical, and quantitative analysis; exploratory and predictive models; and fact-based decision making to drive business strategies and actions. Course projects embrace marketing, retail, financial, and human resources analytics, as well as familiarize students with general industry practices. Emphasizes end-to-end analytic development skills, including data management, data engineering, analytics modeling, and strategy development. Offers students hands-on opportunities to apply quantitative techniques in strategic business decision making.

ALY 5070. Communication and Visualization for Data Analytics. (2.25 Hours)

Offers an interdisciplinary examination of design concepts and cognitive and communication theories that support effective practices for data visualization and communication. Considers the relationship between information and audience and studies effective techniques in the written, spoken, and visual communication of complex quantitative information. Project-based activities offer students opportunities to apply these techniques in a manner that makes data understandable, compelling, and actionable. Introduces R Shiny, Tableau and R in the lab sessions as the tool for data visualization.

ALY 5110. Data Management and Big Data. (2.25 Hours)

Designed to provide the student with the core concepts of data collection and management. Topics include systems for collecting data and implications for practice; types of data (textual, quantitative, qualitative, etc.); and storing data with privacy and security issues in mind. Offers students an opportunity to obtain a high-level understanding of big data technologies for data accessibility, efficiency, and security of data management at scale, including big data storage and computing technologies and big data analytics applications. Students create a working system for data acquisition and management using publicly available data sets and evaluate traditional data warehouse platforms as well as cloud-based big data storage and computing technologies. Azure is also introduced and used in the lab sessions.

ALY 6000. Introduction to Analytics. (3 Hours)

Offers an overview of analytics concepts and practices across a diverse range of industries and organizational contexts. Provides a hands-on introduction to statistics, data management, and the R scripting language. Technical projects based on introductory statistics and the R language offer students an opportunity to understand and apply the theories, practices, and application of analytics to real-world problems. An initial exploration of data sets illustrates how fundamental data analysis can impact decision making at both the strategic and operational level. Students research case studies to examine careers and professional opportunities in both for-profit and nonprofit industry segments.

ALY 6010. Probability Theory and Introductory Statistics. (3 Hours)

Introduces statistics for business analytics from an analysis-of-data viewpoint. Topics include frequency distributions; measures of location; mean, median, mode; measures of dispersion, variance, graphic presentation; elementary probability; populations and samples; sampling distributions; and categorical data. Includes a preliminary introduction to regression and correlation. Uses statistical software (for data analysis during analytic project assignments) to provide a hands-on experience to observe how probability and statistics, scripting, and basic data management impact decision making at all levels within a corporation.

Prerequisite(s): ALY 6000 (may be taken concurrently) with a minimum grade of C-

ALY 6015. Intermediate Analytics. (3 Hours)

Builds on the foundation provided in ALY 6000 and ALY 6010 by exploring at greater depth the tools of data correction and recoding, as well as those of statistics and R. Offers students an opportunity to learn to discern and validate meaningful and statistically significant patterns in data through sound applications of the scientific method. Emphasizes initial mastery of correlation and regression, ANOVA, GLM, and logistic regression. Introduces the more advanced techniques of multivariable regression and nonparametric statistics and sampling. The goal of this course is to offer students an opportunity to master the fundamental skills of data management, analysis, and communication, which are the core data analytical competencies required of today's analytic professionals.

Prerequisite(s): ALY 6000 with a minimum grade of C- ; ALY 6010 with a minimum grade of C-

ALY 6020. Predictive Analytics. (3 Hours)

Introduces the end-to-end, data-driven statistical and predictive modeling approach with applications and case studies. Includes all the data and modeling steps in a full modeling cycle, including data ETL process, exploratory data analysis, and data cleansing for outlier imputation and data normalization. Commonly applied modeling techniques such as k-nearest neighbors, GLM, random forest, neural networks, and Naive Bayes are heavily utilized and explained using advanced visualization techniques and simplified mathematical derivations to enhance understanding. Predictive analytic modeling steps such as model training, validation, and testing are widely utilized, as are tools and languages for data processing, analysis, and modeling.

Prerequisite(s): ALY 6015 with a minimum grade of C- ; ALY 6070 with a minimum grade of C-

ALY 6030. Data Warehousing and SQL. (3 Hours)

Focuses on the management, mining, and interpretation of patterns in large databases. Offers students an opportunity to learn how organizations construct data warehouses from operational databases, about different data warehouse architectures, how to build a data warehouse, and how to structure databases for efficient data mining. Discusses relational databases and Structured Query Language (SQL) for the fundamentals in data modeling, database management, and SQL queries. Introduces other modern database systems such as NoSQL (non SQL) and column-based databases.

Prerequisite(s): ALY 6000 with a minimum grade of C- ; ALY 6015 with a minimum grade of C-

ALY 6040. Data Mining Applications. (3 Hours)

Introduces the theories and tools for intensive data analysis methods and data mining techniques such as rule-based learning, decision trees, clustering, and association-rule mining. Also covers interpretation of the mined patterns using visualization techniques. Offers students an opportunity to gain the knowledge and experience to apply modern data-mining techniques for effective large-scale data pattern recognition and insight discovery. Introduces data analysis software; student teams evaluate, analyze, and report data for the methods used and insights discovered during case studies.

Prerequisite(s): (ALY 6000 with a minimum grade of C- ; ALY 6010 with a minimum grade of C-) or (EAI 6000 with a minimum grade of C- ; EAI 6010 with a minimum grade of C-)

ALY 6050. Introduction to Enterprise Analytics. (3 Hours)

Introduces advanced specific analysis techniques—including forecasting, simulation, linear programming, regressive modeling, and optimization—as well as the Python programming language. The more advanced mathematical, statistical, and presentation functions within the R library packages are heavily utilized. Emphasizes enterprise data analytics, which is the extensive use of data, statistical, and quantitative analysis; exploratory and predictive models; and fact-based decision making to drive business strategies and actions. Course projects embrace marketing, retail, financial, and human resources analytics, as well as familiarize students with general industry practices. Emphasizes end-to-end analytic development skills, including data management, data engineering, analytics modeling, and strategy development. Offers students hands-on opportunities to apply quantitative techniques in strategic business decision making.

Prerequisite(s): ALY 6000 with a minimum grade of C- ; ALY 6010 with a minimum grade of C-

ALY 6060. Decision Support and Business Intelligence. (3 Hours)

Introduces current and emerging business analytical concepts and information technologies to support decision making and business intelligence. Commercial decision support systems in various application areas are introduced and discussed using case studies, including CRM (customer relationship management) for customer management, web analytics applications, sales force management systems, etc. Introduces business intelligence technology and applications, such as OLAP (Online Analytical Processing), OBIEE (Oracle Business Intelligence Enterprise Edition), and IBM Cognos. Offers students an opportunity to gain hands-on experience using business intelligence tools, including Tableau or QlikView.

ALY 6070. Communication and Visualization for Data Analytics. (3 Hours)

Offers an interdisciplinary examination of design concepts and cognitive and communication theories that support effective practices for data visualization and communication. Considers the relationship between information and audience and studies effective techniques in the written, spoken, and visual communication of complex quantitative information. Project-based activities offer students opportunities to apply these techniques in a manner that makes data understandable, compelling, and actionable. Introduces R Shiny, Tableau and R in the lab sessions as the tool for data visualization.

Prerequisite(s): ALY 6000 with a minimum grade of C- ; ALY 6010 with a minimum grade of C-

ALY 6080. Integrated Experiential Learning. (3 Hours)

Offers a practicum in the development and delivery of predictive data analysis for strategic decision making in organizations. Offers students an opportunity to apply the principles and tools of analytics to real-world problems in business organizations and to develop and present analytical insights and recommendations for successful implementation of their capstone project.

Prerequisite(s): ALY 6015 with a minimum grade of C- ; ALY 6050 with a minimum grade of C- ; ALY 6070 with a minimum grade of C-.

ALY 6110. Data Management and Big Data. (3 Hours)

Designed to provide the student with the core concepts of data collection and management. Topics include systems for collecting data and implications for practice; types of data (textual, quantitative, qualitative, etc.); and storing data with privacy and security issues in mind. Offers students an opportunity to obtain a high-level understanding of big data technologies for data accessibility, efficiency, and security of data management at scale, including big data storage and computing technologies and big data analytics applications. Students create a working system for data acquisition and management using publicly available data sets and evaluate traditional data warehouse platforms as well as cloud-based big data storage and computing technologies. Azure is also introduced and used in the lab sessions.

Prerequisite(s): (ALY 6000 with a minimum grade of C- ; ALY 6010 with a minimum grade of C-) or (EAI 6000 with a minimum grade of C- ; EAI 6010 with a minimum grade of C-)

ALY 6120. Leadership in Analytics. (3 Hours)

Covers analytical leadership principles for the structure and dynamics of organizations, combining relevant research to offer students an opportunity to deepen their understanding of effective change in business analytical decision making.

ALY 6130. Risk Management for Analytics. (3 Hours)

Seeks to provide a conceptual overview of analytic risk management. Offers students an opportunity to evaluate and analyze financial, technical, and other business risk-assessment and risk-modeling techniques and tools.

ALY 6140. Python and Analytics Systems Technology. (3 Hours)

Presents a selection of analytics systems technologies that are deployed in lab sessions throughout the course. A multitude of analytics systems technologies are used for different purposes to describe data numerically and graphically, for data visualization, file systems (HFS) for a large data mart, applications of structured query language, and filtering and transforming to ingest the data through scripting languages. Focused primarily on Python, topics covered include the differences between R and Python, data ingestion, data manipulation, visualization, and predictive analytics using common Python libraries.

ALY 6150. Healthcare/Pharmaceutical Data and Applications. (3 Hours)

Introduces a selection of healthcare/pharmaceutical data used for a variety of purposes, and its specific application in data-driven business decision making. Healthcare/Pharmaceutical data is collected as part of Medicare and Medicaid databases and as mandated by the PPACA (Patient and Affordable Care Act) and the PPSA (Physicians Payment Sunshine Act). Data is available in the form of medical records, social networks, outcomes databases, syndicated data reports, epidemiological data, demographic data, analyst information, RD Pipeline Database, market data, and online journals and newsletters. Organizations, corporations, and companies use these varieties of data for a host of different reasons - to better profile and segment customers, to answer performance questions, and to identify and capture key opportunities.

Prerequisite(s): (ALY 6000 (may be taken concurrently) with a minimum grade of C- ; ALY 6010 with a minimum grade of C-) or (EAI 6000 with a minimum grade of C- ; EAI 6010 with a minimum grade of C-)

ALY 6160. Business Intelligence in Healthcare/Pharmaceutical. (3 Hours)

Focuses on the use of and interplay between secondary data, primary market research, competitive intelligence, and forecasting within healthcare/pharmaceutical organizations. Introduces excellence in analytics on the pathway to market and launch planning. Discusses the approach and contribution of competitive intelligence as a critical component to the success of creating business insight. Also discusses excellence in forecasting and how the different business intelligence components of data, primary market research, and competitive intelligence shape sales and demand forecasts.

Prerequisite(s): ALY 6000 (may be taken concurrently) with a minimum grade of C- ; ALY 6010 with a minimum grade of C-

ALY 6980. Capstone. (3 Hours)

Offers an advanced practicum in the development and delivery of predictive data analysis for strategic decision making in organizations. Students apply the principles and tools of analytics to a comprehensive real-world problem or project within a sponsoring organization. Expects students to present analytical insights and recommendations for successful implementation of their capstone project and their individual project proposal.

Prerequisite(s): ALY 6080 with a minimum grade of C- ; ALY 6040 with a minimum grade of C- ; ((ALY 6110 with a minimum grade of C- ; ALY 6020 with a minimum grade of C-) or (ALY 6060 with a minimum grade of C- ; ALY 6120 with a minimum grade of C-) or (EAI 6000 with a minimum grade of C- ; EAI 6010 with a minimum grade of C-)); ALY 6000 with a minimum grade of C- ; ALY 6010 with a minimum grade of C- ; ALY 6015 with a minimum grade of C- ; ALY 6050 with a minimum grade of C- ; ALY 6070 with a minimum grade of C-

ALY 6983. Topics. (3 Hours)

Discusses contemporary topics in analytics for a rotating variety of industries (nonprofit and for-profit).

Prerequisite(s): ALY 6000 with a minimum grade of C- ; ALY 6010 with a minimum grade of C-

ALY 6995. Project. (1-4 Hours)

Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field.

Anthropology (ANTH)**Courses****ANTH 1000. Anthropology at Northeastern. (1 Hour)**

Intended for first-year students in the College of Social Sciences and Humanities. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

ANTH 1101. Peoples and Cultures. (4 Hours)

Surveys basic concepts in cultural anthropology by looking at a range of societies and the issues they face in a globalizing world. Examines the manner in which cultures adapt to, reject, or modify all of the changes they face. These changes impact everything from traditional family structure, to religion, gender, all the way to patterns of joking and concepts of beauty the world over.

Attribute(s): NUpath Interpreting Culture

ANTH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ANTH 2302. Gender and Sexuality: A Cross-Cultural Perspective. (4 Hours)

Explores concepts of "sex" and "gender" in a cross-cultural framework as they pertain to social status, work, the body, intersexuality, third or alternative genders, and intersectionality. Problematizes normative assumptions about femininity and masculinity; the relations between men and women; and the meanings and implications of being a woman, man, or an other-gendered person. Examines how social constructions of gender contribute and interact with other systems of categorization and structures of inequality such as race, class, and ethnicity.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or SOCL 1101 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ANTH 2305. Global Markets and Local Culture. (4 Hours)

Examines selected topics in the socioeconomic transformation of other cultures, including urbanization, industrialization, globalization, commodity production, and international labor migration. Focuses on the impact of global capitalist development on contemporary developing and postcolonial societies as well as local responses and/or resistances to those changes.

Attribute(s): NUpath Interpreting Culture

ANTH 2315. Religion and Modernity. (4 Hours)

Introduces a cross-cultural, comparative perspective on religious practice and belief. Explores theoretical definitions of and methodological approaches to the study of religion, as well as more specific concepts of ritual, myth, healing, and identity. Select case studies allow for an in-depth look at the unique formations of a few religious practices and groups.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ANTH 2485. Environment, Technology, and Society. (4 Hours)

Focuses on the connections between the development of modern nation-states and the control of nature. Explores the role human societies play in such events as climate change, tsunamis, and droughts. Studies how industrialization and the process of science and technology development are related to our transforming environmental conditions, as well as how the social sciences, the sciences, and engineering are transforming to address these issues. Draws on social theory, environmental history, anthropology, sociology, art, design, and open-source technologies to investigate theoretically and methodologically the sources, experiences of, and solutions for environmental health questions.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ANTH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ANTH 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

ANTH 3100. Gender, Social Justice, and Transnational Activism. (4 Hours)

Introduces key issues, themes, and debates in feminist transnational theory, practice, and activism in contemporary contexts and how it has changed under socioeconomic, political, and cultural processes of globalization. Examines differences among women relating to race, class, sexuality, national identity, and political economy in reckoning with possibilities for sustainable social justice. Students interrogate the relationship between the local and global; the production of knowledge in different regional spaces; the pragmatics of political mobilization; the varying contours of "social justice"; and other key issues. Offers students an opportunity to discuss the impact of globalization, neoliberalism, and state and intimate violence on gendered politics and relations and to contend with the politics of difference, to debate its challenges, and to imagine possible futures for transnational gender justice.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ANTH 3200. Cities in Global Context. (4 Hours)

Examines the roots of the urbanization process, major ways of thinking about it, and the development of world cities and megacities. The twenty-first century will be a century in which urbanism is a central problem and opportunity. Considers the economic, political, cultural, and environmental dimensions of urbanism across the globe. Includes specific case studies from around the world. Encourages students to develop a knowledge of particular cities in order to examine the key themes of the course. INTL 3200, ANTH 3200, and SOCL 3200 are cross-listed.

ANTH 3410. Ethnographic Field Experience. (4 Hours)

Offers students an opportunity to experience fieldwork while studying current ethnographic methods and theory and to design a semester-long ethnographic field research project. Field sites may include public and outdoor spaces, online communities, cultural centers, schools, immigrant neighborhoods, sports organizations, social service agencies, nonprofit groups, religious institutions, etc.

Prerequisite(s): ANTH 1101 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Integration Experience

ANTH 3417. Political Anthropology. (4 Hours)

Examines the anthropology of politics, focusing on the anthropology of the state. Studies the history of political anthropology with its roots in British structural-formalism and contextualizes it within the anthropology of Africa and witchcraft. Explores the linkages between the nation and the state, using classic works of Benedict Anderson on nationalism, before commencing an in-depth study of the problems of the state, classical theories of the state and statecraft, and how these ideas are traced to contemporary ethnographies of politics. Students interested in the study of resistance, displacement, social exclusion, citizenship, state violence, and communities may find this course relevant to their interests.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ANTH 3418. Wired/Unwired: Cybercultures and Technopolitics. (4 Hours)

Explores the impacts of technology and new media on politics, society, and culture. Emphasizes the socioeconomic and political frameworks within which technologies are embedded as well as the role of technology and the Internet in contemporary political and cultural movements. Topics may include the political and cultural effects of the census, the radio, and the camera; the history of the Internet; virtual worlds and communities; online politics and activism; as well as blogging, gaming, and social networking.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture

ANTH 3421. Foundations of Anthropological Theory. (4 Hours)

Introduces the foundations of anthropological theory. Examines recurring themes surrounding structure and agency, culture and power, and the tension between the individual and society. Addresses these questions by returning to anthropology's Enlightenment roots, early evolutionary thought, classic and contemporary theories, as well as ongoing critiques of the discipline. Explores different schools of thought, including functionalism, structural functionalism, symbolism, interpretivism, and more recent theoretical developments that address history, political economy, reflexivity, poststructuralism, and feminism, as well as transnational/global and activist approaches. Requires prior completion of two ANTH courses numbered 1000 or above.

Prerequisite(s): ANTH 1101 with a minimum grade of D-

ANTH 3441. Medical Anthropology. (4 Hours)

Examines core concepts of medicine as a cultural system, then moves to anthropology of the body as it has been understood and shaped within healing systems. Medical anthropology is a subfield of anthropology that uses the four-field approach to examine cultural concepts and experiences of health, illness, treatment, and power cross-culturally. Emphasizes history and construction of biomedicine. Surveys traditional Chinese medicine, Ayurvedic medicine, Voudon, Mayan curanderos, and other folk healing systems around the world. Explores medical pluralism, the common practice of seeking out and utilizing more than one therapeutic treatment style at one time; structural violence; and how healing systems interact with broader political and social systems globally.

Prerequisite(s): ANTH 1101 with a minimum grade of C or SOCL 1101 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ANTH 3442. Anthropology of Law. (4 Hours)

Examines the institutions, history, and practices of modern law, including the contradictions of liberal law, its co-emergence with narratives of "the primitive" and "the civilized", its relationship to Christianity and science, and its most pervasive myths and cultural assumptions. No prior knowledge of law is required.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or SOCL 1101 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ANTH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ANTH 4100. Making Anthropology Public. (4 Hours)

Reflects on the social, economic, ecological, and cultural value of anthropology as a field, as well as an experiential learning space for transforming anthropological research into material understandable by the general public. Offers students an opportunity to learn methodologies across visual, collaborative, and engaged anthropologies, as well as to study the ethical considerations and specific skills necessary to communicate effectively in a variety of modalities.

Prerequisite(s): ANTH 1101 with a minimum grade of B-

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Integration Experience

ANTH 4200. Anthropology of Rural America. (4 Hours)

Considers how rural areas are socially, geographically, and culturally constructed by political, social, and racialized forces through both isolationist and extractive practices. Confronts rurality as a political image, showing how it takes on both meanings of belonging and otherness depending on its context and usage. Explores the theoretical concept of rurality and its relationship to colonialism; regional case studies; and intersectional issues of gender, sexuality, race, class, and social inequality. Offers students an opportunity to explore essential topics in and related to the anthropology of rural studies.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture

ANTH 4210. Anthropology of Eastern Europe. (4 Hours)

Explores the societies, cultures, and politics of Eastern Europe, focusing on social upheaval and cultural change after the fall of state socialism. Examines themes including capitalist transition, European integration, ethnic and religious conflict, nation-building, and state contestation, maintaining a focus on the everyday realities of Eastern Europeans. Covers key theoretical debates about East-West geopolitical polarity, drawing on decolonial and postcolonial perspectives to challenge representations of Eastern Europe as transitional, peripheral, or backwards.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ANTH 4220. South Asian Diasporas. (4 Hours)

Seeks to provide an understanding of South Asians as one of the largest migrant communities globally, coming from India, Pakistan, Bangladesh, Nepal, Myanmar, Bhutan, and Sri Lanka. Concentrates on the diaspora as a heterogeneous group comprising multiple nationalities, religions, castes, classes, languages, and genders. Examines the history, opportunities, and challenges of South Asian mobility and migration. Draws from texts in sociocultural anthropology, Asian American studies, history, and transnational feminist studies to trace the emergence of a new global regime on migration and citizenship through the unprecedented mobility of South Asians in the 20th and 21st centuries.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ANTH 4350. Ethnography of Southeast Asia. (4 Hours)

Offers a seminar on the societies and cultures of Southeast Asia. Uses an interdisciplinary approach to this diverse and dynamic geopolitical region, with readings from anthropology, history, political science, and literature. Covers the major political and cultural changes that have shaped Southeast Asia in relation to the world—from the age of colonial expansion, to the rise of nation-states, to the present global era. Examines central questions in the ethnography of Southeast Asia, emphasizing the postcolonial legacies of Southeast Asia, states and violence, culture and mobility, and pressing contemporary issues in globalizing Southeast Asia. ANTH 4350 and INTL 4350 are cross-listed.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ANTH 4410. Neoliberalism in Asia. (4 Hours)

Introduces key definitions and theories of neoliberalism and situates these ideas through Asian experiences of neoliberalism. Emphasizes the relationship between neoliberal processes and state-led development, as well as the relationship between neoliberal thought and bottom-up societal changes. Combines films, theoretical readings, and ethnography to explore hallmarks of anthropological analyses of neoliberalism in debates over cultural agency, locality, values, and politics in East, South, and Southeast Asian countries. Critically examines topics such as English-language dominance in the Asian region, the rise of plastic surgery, youth unemployment and political consciousness, and real estate speculation in Asian megacities.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ANTH 4500. Latin American Society and Development. (4 Hours)

Explores the processes of social, economic, and cultural change in Latin America. While concentrating on the present, traces class formation, agrarian structures, ethnic identity, ceremonial organization, gender roles, and political conflict since the colonial era in a range of countries. Emphasizes the relationship of communities and national political and economic systems. May emphasize Central America and Mexico or countries in South America through case studies. ANTH 4500 and INTL 4500 are cross-listed.

Prerequisite(s): (SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ANTH 4510. Anthropology of Africa. (4 Hours)

Explores Africa's changing place in the world. Studies the history of Africa and explores the role of ethnography in the making of colonial Africa and the cultural transformations and continuities produced by the emergence of African cities during and after colonialism. Studies postcolonial Africa to critically and comparatively engage with contemporary issues facing African societies. Considers the efflorescence of new cultural forms of music, art, film, and literature, in conjunction with new sources of identity such as nationality, religion, ethnicity, consumption, and migration. AFRS 4510, ANTH 4510 and INTL 4510 are cross-listed.

Prerequisite(s): (ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ANTH 4515. Culture and Politics in Modern India. (4 Hours)

Introduces the histories, cultures, and peoples of India. Seeks to convey a sense of how knowledge has been constructed about the region and how the subcontinent has been shaped by its engagements with the world through such processes as colonization, state building, and globalization. Uses readings, films, and class discussions to examine themes and topics that include Orientalism, postcolonialism, caste and community, gender and sexualities, conflict and violence, development and resistance, and transnational structures and processes. Critically evaluates some commonly held assumptions, including classical understandings of tradition and modernity, cohesion and conflict, and nation and identity. ANTH 4515 and INTL 4515 are cross-listed.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions, NUpath Writing Intensive

ANTH 4520. Chinese Society and Culture. (4 Hours)

Introduces students to changes in society and economy in contemporary China. Examines changes in family, gender relations, rural life, work, and international relations. Draws on literature from a range of disciplines including sociology, political science, anthropology, and economics.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ANTH 4580. Special Topics in Anthropology. (4 Hours)

Designed as a specialized themes course for students with prior experience in anthropology and/or sociology. Offers unique opportunities—visiting guests, special thematic interests—which are not part of the regular curriculum. May be repeated without limit.

ANTH 4600. Senior Seminar. (4 Hours)

Designed to deal with anthropological theory and work with students who are asked to apply these theories to some of their own work. Content may vary.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ANTH 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

ANTH 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): ANTH 4970 with a minimum grade of D-

ANTH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ANTH 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Anthropology - CPS (ANT)**Courses****ANT 1150. Cultural Anthropology. (3 Hours)**

Investigates the field of cultural anthropology. Covers a range of societies in terms of such sociocultural institutions as kinship, gender relations, economics, politics, and religion. Examines important political and economic processes, such as colonialism and development, affecting cultures around the world.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ANT 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ANT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ANT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ANT 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

ANT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Applied Logistics - CPS (APL)**Courses****APL 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

APL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

APL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

APL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

APL 6000. Foundations of Applied Logistics Execution. (3 Hours)

Introduces students to the tactics of logistics and distribution. Explores application of fundamentals in the context of modern consumer expectations: endless shelf, immediate access, expanded notion of the last mile that includes delivery anywhere.

APL 6010. Warehouse Management. (3 Hours)

Introduces students to all aspects of warehouse management, from physical design to automation decisions to using data for capacity planning and optimization.

APL 6020. Freight Management. (3 Hours)

Introduces students to all aspects of freight management, carrier selection and management, rates, billing, decision analysis, rules, regulations, and transportation management systems. Emphasizes data use for optimization.

APL 6030. ERP Systems for Inventory Management. (3 Hours)

Covers the basics of enterprise resource planning (ERP) systems and inventory management, with hands-on tactics of product visibility for day-to-day operations. Focuses on inventory management technology and the organizational structure needed to support different channel networks in logistics.

APL 6050. Supplier Management. (3 Hours)

Covers tactics in managing suppliers for the day-to-day operations, including supplier appraisal, price and contract negotiations, supplier audits, supplier quality and delivery, and e-procurement.

APL 6100. Advanced Technology in Logistics and Distribution. (3 Hours)

Explores the latest technology development and how it applies to logistics and distribution science. Introduces concepts of emerging technologies and their use and purpose. Topics include the Internet-of-things (IoT) and its application in logistics, integrating IoT and cloud computing, machine learning applications, and the issues and challenges with new technology adoption.

Prerequisite(s): APL 6000 with a minimum grade of C- ; APL 6030 with a minimum grade of C-

APL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

APL 6980. Applied Logistics Capstone. (3 Hours)

Offers students, working as individuals or in groups, an opportunity to design and carry out an interdisciplinary project with real-world clients. Studies how to apply strategic frameworks and best practices to help organizations improve logistics operations. Emphasizes the role of digital transformation and applied analytics, as well as the ability of digital technologies to help solve disruptions in distribution and warehousing networks.

APL 6983. Special Topics. (3 Hours)

Offers students an opportunity to apply knowledge and skills gained through their master's program to work on challenging short-term special topics under faculty supervision. Students complete a project/research in which they examine a relevant problem of practice in logistics and supply chain, conduct research, analyze data, and present their findings. Topics may vary from semester to semester.

Arabic (ARAB)**Courses****ARAB 1101. Elementary Arabic 1. (4 Hours)**

Designed for students with very little or no prior knowledge of Modern Standard Arabic. Provides a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Uses practical vocabulary drawn from realistic situations, and aims at good pronunciation and ease in response. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with various audio-visual resources.

ARAB 1102. Elementary Arabic 2. (4 Hours)

Continues ARAB 1101. Reviews and continues the study of grammar and basic language skills. Offers progressively more intensive practice in oral and written communication. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with various audio-visual resources.

Prerequisite(s): ARAB 1101 with a minimum grade of C- or ARAB 1301 with a minimum grade of C-

ARAB 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARAB 2101. Intermediate Arabic 1. (4 Hours)

Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from current standard Arabic materials.

Prerequisite(s): ARAB 1102 with a minimum grade of C- or ARAB 1302 with a minimum grade of C-

ARAB 2102. Intermediate Arabic 2. (4 Hours)

Builds on ARAB 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from current standard Arabic materials.

Prerequisite(s): (ARAB 2101 with a minimum grade of C- or ARAB 2301 with a minimum grade of C-)

ARAB 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARAB 3101. Advanced Arabic 1. (4 Hours)

Continues development of vocabulary. Offers students an opportunity to further develop grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): ARAB 2102 with a minimum grade of C- or ARAB 2302 with a minimum grade of C-

ARAB 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARAB 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARAB 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

ARAB 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Architecture (ARCH)**COURSES****ARCH 1000. Architecture at Northeastern. (1 Hour)**

Introduces students pursuing a major in the School of Architecture to the intellectual and extracurricular opportunities within the school and within the College of Arts, Media and Design. Exposes students to the cultural vibrancy of Boston with the goal of building networks to facilitate the creation of a vibrant and supportive learning community.

ARCH 1110. Fundamental Architectural Representation. (4 Hours)

Introduces students to architectural representation as a form of documentation, experimentation, and communication through a series of exercises in orthographic, axonometric, and perspectival projection as well as physical and digital modeling. Supports the development of an iterative design methodology by introducing students to the tools of representation. Includes theoretical lectures and workshops in analog and digital media.

Attribute(s): NUpath Creative Express/Innov

ARCH 1120. Fundamental Architectural Design. (6 Hours)

Introduces architectural design. Examines a number of approaches to spatial organization, massing, and envelope articulation through the analysis of pertinent case studies as well as through a series of fast-paced design exercises. Offers students an opportunity to develop a single design through a series of design studies that deal with issues of site planning, program, user input, and collective negotiation. Requires a portfolio demonstrating the student's representational abilities and iterative design process.

Prerequisite(s): ARCH 1110 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov, NUpath Natural/Designed World

ARCH 1310. Buildings and Cities, A Global History. (4 Hours)

Introduces students to architecture, as understood through buildings, cities, and landscapes from antiquity to the present. Studies important monuments in the global history of architecture, as well as tools for analyzing the built environment. Considers buildings in relation to their political, social, economic, and cultural context, and as expressions of diversity in human societies and cultural perspectives. Topics include the language of architecture, architectural drawings, the classical orders, the problem of ornament, construction techniques, materials, site, and the role of the patron. Develops students' eye for composition in two and three dimensions, aesthetic discrimination of detail, ability to see buildings as part of a larger social and cultural fabric, and critical judgment in speaking and writing.

Corequisite(s): ARCH 1311

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ARCH 1311. Recitation for ARCH 1310. (0 Hours)

Offers a small-group discussion format to cover material in ARCH 1310.

ARCH 1450. Understanding Design. (4 Hours)

Introduces undergraduates at all levels to the importance of design thinking as a method of critical inquiry and creative expression. Class meetings include lectures and discussions on the power of design thinking to shape diverse facets of the natural and built environment—from cities and landscapes, to buildings and interiors, to the scale of the human body. In addition to class presentations, hands-on workshops introduce students to a range of tools and tactics for working creatively and iteratively through design and prototyping.

Attribute(s): NUpath Difference/Diversity, NUpath Creative Express/Innov

ARCH 1453. Designing the American City: Civic Aspirations and Urban Form. (4 Hours)

Offers an interpretative look at the characteristic patterns of settlement and attitudes towards cities and urban life that are identified with American urbanization. Fosters a critical understanding of the cultural aspirations, processes, policies, planning, and design actions, which have influenced American urbanization, while introducing visual and analytic skills necessary for its interpretation.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ARCH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARCH 2130. Site, Space, Program. (6 Hours)

Studies how to analyze, draw, and model the built environment. Students engage in issues of program, composition, type, and material. Offers students the opportunity to think conceptually about architectural design.

Prerequisite(s): ARCH 1120 with a minimum grade of D-

ARCH 2140. Urban Housing. (6 Hours)

Studies how to analyze, model, and intervene in the city. Offers students an opportunity to engage in urban analysis, urban massing strategies, and architectural design of urban housing.

Prerequisite(s): ARCH 2130 with a minimum grade of D-

ARCH 2240. Architectonic Systems. (4 Hours)

Introduces construction techniques and precise material realization of buildings as an integral part of architectural design thinking and processes. Uses historical and contemporary architectural precedents to explore the spatial and tectonic interrelationships of the primary constructional systems of wood, masonry, concrete, and steel. Uses a diverse mixture of student learning methods, including in-class lectures and student exercises; group discussions and guest lectures; textbook reading; and the production of construction models, drawings, and diagrams.

Prerequisite(s): ARCH 1110 with a minimum grade of D- or ARCH 2260 with a minimum grade of D- or ARCH 6100 (may be taken concurrently) with a minimum grade of C-

Attribute(s): NUpath Creative Express/Innov, NUpath Natural/Designed World

ARCH 2260. Introduction to Building Systems. (4 Hours)

Introduces fundamentals of building technology and explores technology as means and manifestation of architecture in the world. Using a systems approach, studies the interactions among natural forces, material properties, technological capabilities, and human cultural values and the ways these relationships give rise to architecture. Considers a series of physical principles—including gravity, moisture, heat, light, and air—to reveal specific architectural possibilities and material responses. Explores the ways design shapes the interaction of materials and forces to provide for human safety, shelter, comfort, and delight through a combination of hands-on workshops, seminal readings, and design exercises.

Attribute(s): NUpath Natural/Designed World

ARCH 2310. History of Chinese Architecture. (4 Hours)

Covers the development of the built environment in China from prehistory to the nineteenth century. Emphasizes technological transformation, structural and stylistic evolution, cultural exchange, and ideological engagement.

Prerequisite(s): ARCH 1310 with a minimum grade of D- or HIST 1250 with a minimum grade of D- or ASNS 1150 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture, NUpath Writing Intensive

ARCH 2320. Modern Chinese Architecture. (4 Hours)

Covers the development of the built environment in China from 1840 to the present. Emphasizes educational and professional shifts in architectural practice, political engagement in the design process, structural and technological transformation, conceptual background, and global impact.

Prerequisite(s): ARCH 1320 with a minimum grade of D- or HIST 1250 with a minimum grade of D- or ASNS 1150 with a minimum grade of D-
Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions, NUpath Writing Intensive

ARCH 2330. Architecture and the City in the Nineteenth Century. (4 Hours)

Focuses on the history and theory of architecture and urban design in the nineteenth century. Emphasizes European architecture and urbanism and the ways in which European approaches to design shaped and were shaped by sustained cultural, political, and economic exchange with the Americas, Africa, and Asia. Major topics include the birth of the modern city and urban planning, capitalism and industrialization, new building typologies, infrastructure, urban parks and early suburbs, and new materials and technologies.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or graduate program admission

Corequisite(s): ARCH 2331

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions, NUpath Writing Intensive

ARCH 2331. Recitation for ARCH 2330. (0 Hours)

Offers a small-group discussion format to cover material in ARCH 2330.

Corequisite(s): ARCH 2330

ARCH 2335. Architecture and Politics. (4 Hours)

Draws on examples from the late 19th century to the present to study how governments have sought to use buildings and public spaces to advance political ideals. Considers a range of building projects (public buildings, housing, public spaces, infrastructure) advanced by liberal democracies as well as those designed for authoritarian regimes. Focuses on individual projects and the political circumstances tied to their making. Also considers the afterlife of projects associated with discredited regimes—especially those of Nazi Germany and Fascist Italy—as well as the ways in which private individuals, corporations, and other agencies have worked in tandem or in opposition to official narratives. Theoretical and critical texts that explore the dynamic between physical environment and political power help frame class discussion at key moments.

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ARCH 2340. Modern Architecture. (4 Hours)

Considers the forms and principles—as well as the sources for and development of—architecture and urbanism during the twentieth century. Explores the paradoxes within what has broadly been termed modernism, including the tension between historicism and innovation; between universal principles and regional expressions; between industry and craft; and between the utopian vision of planners and the role of individual will.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or graduate program admission

Corequisite(s): ARCH 2341

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions, NUpath Writing Intensive

ARCH 2341. Recitation for ARCH 2340. (0 Hours)

Offers a small-group discussion format to cover material in ARCH 2340.

Corequisite(s): ARCH 2340

ARCH 2345. Contemporary Architecture. (4 Hours)

Expose students to a range of critical architectural practices and key theoretical frameworks from roughly 1990 through the present. Situates architectural production and discourse within a broader context of technological, cultural, and social processes, emphasizing the reciprocal exchange between architecture and its larger cultural and social context. Investigates the idea of the “contemporary” as both a temporal and conceptual notion, as well as the idea of a “critical” architecture and its relationship to both a historical avant-garde and “mainstream” architectural culture.

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ARCH 2355. Architecture Conservation: Intervention, Transformation, and Reuse. (4 Hours)

Examines how architecture and urban design respond to the challenges of intervening in already built environments, whether in the form of adaptation, extension, conservation, radical transformation, or sustainable reuse. Discusses cultural, social, as well as energy-efficiency-related topics. Includes a critical introduction to the key concepts of architectural intervention, followed by some exemplary design cases, and a special focus on recent and contemporary practices. Architecture deals with time, duration, change, and resilience. Places, not unlike palimpsests, retain multiple traces of former uses. Architects work with locations that inevitably contain a diversity of references and preexisting conditions. Students work on a "curatorial project," that is, a conceptual proposal for an ephemeral intervention in an existing site.

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ARCH 2370. Topics in Architectural History. (4 Hours)

Covers a variety of topics in architectural history and theory. Taught by faculty according to their interests and expertise. May be repeated twice.

Attribute(s): NUpath Writing Intensive

ARCH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

ARCH 2991. Research in Architecture. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

ARCH 3170. Architecture, Infrastructure, and the City. (6 Hours)

Offers a studio course addressing the architectural and urbanistic consequences at the intersection of large-scale infrastructure and the contemporary city. Focuses on how to integrate buildings and neighborhoods with highways, rail lines, storm water management, bus, bike, parking, rivers, watersheds, and industrial networks.

Prerequisite(s): ARCH 2140 with a minimum grade of D-

ARCH 3210. Environmental Systems. (4 Hours)

Explores the interaction of environmental, physical, and energy systems in architecture. Offers students an opportunity to learn the fundamentals of building science as design opportunities to create particular conditions of light and shadow; provide shelter from heat, cold, and rain; and incorporate systems that provide for water, electricity, and sanitation. Course revolves around a series of workshops, labs, and design exercises.

Prerequisite(s): ARCH 2240 with a minimum grade of D- or CIVE 2260 with a minimum grade of D-

Corequisite(s): ARCH 3211

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

ARCH 3211. Recitation for ARCH 3210. (0 Hours)

Offers a small-group discussion format to cover material in ARCH 3210 and provide opportunities for hands-on and creative work, both individually and in teams.

Corequisite(s): ARCH 3210

ARCH 3351. Architecture Topics Abroad: Theory. (1-4 Hours)

Explores, defines, and analyzes the embodied time within urban artifacts (ruins, buildings, urban landscape and space, infrastructure) of a historic context. Focuses on the architecture and urban artifacts that are the consequence of the evolutionary forces of urban civilization over long durations of time rather than focusing on iconographic examples of architecture and urbanism produced within a specific moment in history. Students engage in theoretical readings, group discussions, site visits, analyses of evolutionary urban artifacts, writing, and drawings. Assigned readings cover a broad range of theories about analyzing and interpreting the urban context and its history. These readings are complemented by both required writing assignments and site visits to many urban artifacts, buildings, and spaces. May be repeated without limit.

Attribute(s): NUpath Interpreting Culture

ARCH 3352. Architecture Topics Abroad: Drawing. (4 Hours)

Examines and engages historic architecture and urbanism through freehand drawing. Offers students an opportunity to learn how to draw in freehand like an architect—drawing in a creative, interpretive, precise, and analytical manner—as well as to learn about the history and cultural context of the great architectural monuments and urban spaces that they are analyzing and drawing, including major architectural monuments. Studies new skills of drawing, the conventions of architectural representation, and the cultural history of the built environment. May be repeated without limit.

Attribute(s): NUpath Creative Express/Innov

ARCH 3370. Advanced Topics in Architectural History. (4 Hours)

Covers a variety of topics in architectural history and theory in depth. Requires students to develop a research project. Topics complement the mission of the department, the college, and the university. Taught by faculty according to their interests and expertise. Please consult department for current offerings.

Attribute(s): NUpath Writing Intensive

ARCH 3450. Advanced Architectural Communication. (4 Hours)

Builds on CAD (computer-aided design) skills to develop ability to model in three dimensions and develop surfaces and lighting. Also addresses strategies in design communication for effective presentation of digital material.

Prerequisite(s): (ARCH 1110 with a minimum grade of D- ; ARCH 1120 with a minimum grade of D- ; ARCH 2130 with a minimum grade of D-) or graduate program admission

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

ARCH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

ARCH 4850. Urban and Architectural History Abroad. (4 Hours)

Offers an on-site study of architecture and urban history conducted abroad. Instructors accompany students to visit and lecture about the most significant sites in the history of architecture, art, and urban development of a specific country. In comparison to a traditional on-campus course, the number of examples covered is smaller; however, each example is discussed in much greater detail. Encourages students to discover problems and aspects in art, architecture, and urbanism that have not been raised before, something only possible through direct survey and observation. Offers students an opportunity to obtain a real sense of architectural research without neglecting the basics of the field. Interactions with practicing architects, city planners, policymakers, preservationists, museum professionals, and artists are integral parts of this course.

Attribute(s): NUpath Interpreting Culture

ARCH 4960. Architectural Studies Capstone. (4 Hours)

Offers students an opportunity to deeply explore topics related to architecture and the built environment. Students complete a semester-long intensive research and writing capstone project. Offered in the final year of the BS in Architectural Studies program.

Attribute(s): NUpath Capstone Experience

ARCH 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

ARCH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

ARCH 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

ARCH 5115. Option Studio. (6 Hours)

Offers an upper-level design studio that covers new studio topics, content, and studio instructors each semester. The studio instructors offer topical content that best aligns with their research and practice expertise, which provides students with the latest concepts in architectural design, theory, and research on a consistently updated and rotating basis. Students select their top choices of studio topics and instructors, giving them more flexibility in the areas for which they would like to focus their education. May be repeated twice for credit.

Prerequisite(s): ARCH 3170 with a minimum grade of D- or graduate program admission

ARCH 5120. Comprehensive Design Studio. (6 Hours)

Focuses on the materials and making of architecture. Considers architectural connections at all scales, from the nut and bolt to the scale of a door or window to the scale of the whole building and the city. Grounds design proposals upon a tectonic strategy, unlike traditional design studios that produce a schematic design before considering constructional ideas.

Prerequisite(s): ARCH 5110 with a minimum grade of C- or ARCH 5110 with a minimum grade of D- or ARCH 5115 with a minimum grade of C- or ARCH 5115 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience

ARCH 5140. Capstone Studio. (6 Hours)

Offers students an opportunity to propose design contributions to the built environment that are responsive to social, cultural, and environmental contexts at multiple scales, drawing on a student's full architectural education experience. The topic of the studio is determined by the studio professor each semester and is organized around consistent and essential studio parameters and outcomes.

Attribute(s): NUpath Capstone Experience

ARCH 5210. Environmental Systems. (4 Hours)

Explores the ways in which architectural form can create particular conditions of light and shadow; provide shelter from heat, cold, and rain; and incorporate systems that provide for water, electricity, and sanitation. Provides a series of simple and straightforward small-scale design projects.

Corequisite(s): ARCH 5211

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

ARCH 5211. Recitation for ARCH 5210. (0 Hours)

Offers a small-group discussion format to cover material in ARCH 5210.

Corequisite(s): ARCH 5210

ARCH 5220. Integrated Building Systems. (4 Hours)

Studies how to integrate into students' building designs all the environmental and tectonic systems that they have covered in previous architecture courses.

Prerequisite(s): ARCH 3210 with a minimum grade of D- or ARCH 5210 with a minimum grade of D- or ARCH 5210 with a minimum grade of C- (Graduate)

ARCH 5230. Structural Systems. (4 Hours)

Introduces the fundamental concepts of structural analysis and design for architecture. Examines the nature of forces and their effects on different types of structural elements; the structural properties of shapes and materials; and the selection, analysis, and design of efficient structural systems that resist the loads acting upon them. Uses historical and contemporary examples to illustrate how the changing context of architectural ideas drives structural form and the selection of structural systems. Includes field trips and student presentations of structural models and diagrams. Restricted to students in the architecture BS program and to students in the three-year MArch program.

Prerequisite(s): ((PHYS 1151 with a minimum grade of D- or PHYS 1141 with a minimum grade of D-); (MATH 1341 with a minimum grade of D- or MATH 1241 with a minimum grade of D-); ARCH 2240 with a minimum grade of D-) or graduate program admission

Corequisite(s): ARCH 5231

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Natural/Designed World

ARCH 5231. Recitation for ARCH 5230. (0 Hours)

Provides a small-group discussion format to cover examples from the material in ARCH 5230.

Corequisite(s): ARCH 5230

ARCH 5310. Design Tactics and Operations. (4 Hours)

Encourages students to develop the connections between critical attitudes and techniques in design, through important historical texts. Offers a kind of "great books" approach to the integration of design and history, introducing the writings and seminal designs of Alberti, Palladio, Wright, Le Corbusier, Semper, Sitte, Rowe, Colquhoun, Moneo, Koolhaas, Rossi, Frampton, Venturi and Scott Brown, Scarpa, and Lynch.

ARCH 5312. Mapping and Building Health. (4 Hours)

Introduces students to historical and contemporary frameworks linking the built and natural environment to health outcomes. Examines analog (field documentation) and digital (GIS) spatial mapping techniques for identifying risks and opportunities for health. Offers students an opportunity to engage in interdisciplinary creative problem solving for real-world scenarios and to write essays on selected topics.

ARCH 5330. Theories of Architecture and Urbanism. (4 Hours)

Exposees students to a range of critical practices and key theoretical frameworks within modern and contemporary architecture and urbanism. Studies architectural production and discourse within a broader context of technological, cultural, and social processes. Emphasizes the reciprocal exchange between architecture and its larger cultural and social context.

ARCH 5340. Architectural and Urban Histories. (4 Hours)

Explores key buildings, figures, and concepts in architectural history. Designed to familiarize students with a range of materials related to the built environment, with a particular emphasis on approaches and frameworks for analyzing such material. Focusing on the local built environment, students visit buildings and landscapes in person to develop visual analytical skills. Materials and in-class discussions provide additional context and frameworks for the study of the buildings and spaces that are the primary focus of the course.

ARCH 5430. Introduction to Professional Practice in Architecture. (4 Hours)

Focuses on how architectural practice occurs and must be understood within a larger social context, and seeks to make sense of this broader social contract from the perspective of professional design practice. Investigates normative and critical professional practices through selected readings and individual field research. Discusses the dynamic, diverse, and complex interests and objectives from the constellation of participants that bring a building to completion, especially in an urban environment. Develops project case studies that provide examples of excellent design results achieved through the application of expert professional practices.

ARCH 5530. Innovative Models in Real Estate Development and Design. (4 Hours)

Addresses advanced topics in real estate development and finance and examines innovative models of practice in real estate development available to design professionals. Studies a set of advanced analytical tools and techniques for evaluating the cash flows and economic returns of real estate investment and development. Introduces advanced methods of financing real estate and the structure of capital markets involved in property assets. Uses the case instruction method and includes active, discussion-oriented learning.

Attribute(s): NUpath Capstone Experience

ARCH 5850. Architecture Topics Abroad: History. (4 Hours)

Studies the city as a site of creativity and innovation, with a special focus on particular cases of study. Introduces the contemporary city from a historical, social, and economic perspective, followed by presentations on examples of creativity and innovation in the fields of architecture and urban design.

ARCH 6100. Graduate Skills Studio. (6 Hours)

Presents students new to architecture with the fundamentals of three-dimensional thinking and spatial representation with a series of increasingly complex assignments. Offers students an opportunity to learn a wide variety of graphical software tools and then use these tools to complete their assignments. Covers freehand sketching and physical model building skills. This intensive course is taught as a hands-on design studio (with ample studio access outside class meetings).

ARCH 6115. Urban Architecture Studio. (6 Hours)

Engages students with a series of design interventions to improve our public realm. Touches on decarbonization and adaptive reuse topics at the scale of the human, material, building, and urban networks. Explores these ideas by offering students projects in small, underutilized city-owned land to test collaborative programming and microinfrastructure shaped by communities' needs and desires.

ARCH 6200. Graduate Studio 1: Architectural Design. (6 Hours)

Focuses on a series of increasingly complex assignments that emphasize the fundamentals of architectural design. Offers students an opportunity to propose and test proposals through an iterative process using a wide variety of tools and media, including design software, physical models, and freehand sketches. Explores spatial definition, the orchestration of a spatial sequence, modulation of natural light, and responsiveness to existing conditions (whether natural or man-made). Taught as a hands-on design studio (with ample studio access outside class meetings).

ARCH 6330. Seminar in Modern Architecture. (4 Hours)

Examines the state of architecture and urbanism in the two decades leading up to 2000. Explores contemporary issues in architectural theory and urban design. Examines a broad range of ideas affecting contemporary developments in architectural practice. Engages cultural and historical forces as well as contemporary criticism to define the nature of modernism, late modernism, postmodernism, and deconstruction. Case studies, analysis of theoretical models, and application of methods of history provide students with support for their own design work in studio and co-op experiences.

ARCH 6340. Graduate Topics in Architecture. (4 Hours)

Explores focused research topics relevant to the graduate program curriculum. The professor presents his or her research related to a particular urban, architectural, or technical topic. This exposes the students to methods of research and topics in current and ongoing research in the field. The students have an opportunity to engage in related and parallel research projects during the course of the semester. May be repeated without limit.

ARCH 6430. Case Studies 1. (4 Hours)

Focuses on how architectural practice occurs and must be understood within a larger social context. The cultures-interests and objectives-of the constellation of participants in the bringing of a building to completion are dynamic, diverse, and complex, especially in an urban environment. Seeks to make sense of this broader social contract from within the perspective of professional design practice. As one of many participants in the process of bringing a building to completion, students review the roles, responsibilities, and interests of each contributor. Our task is to understand the obligations and constraints that constitute these relationships. Examines the products of design as manifestations of these relationships and situates them within a discourse of value-determined actions. Investigates normative and critical professional practices through selected readings and individual field research. Develops project case studies that provide examples of excellent design results achieved through the application of expert professional practices.

ARCH 6440. Case Studies 2. (4 Hours)

Continues ARCH 6430. Builds on the understanding of professional practice developed in the previous course and investigates the array of "artful ways in which some practitioners deal competently with the indeterminacies and value conflicts of practice." These indeterminacies, uncertainties, and value conflicts are part of a rapidly changing, dynamic world. There is an unprecedented need for flexible and responsive practices that can bridge the gap between traditional professional techniques and these situations. Requires core competencies that are not mismatched with the changing situations of practice. Requires new skills as well as traditional analytic techniques to respond adequately to these unique conditions of work. Through a closer examination and development of an in-depth project case study, students speculate on possible approaches to a revised and restructured model of professional knowledge and guidelines for reflective practice that can sustain a culture of design excellence.

Prerequisite(s): ARCH 6430 with a minimum grade of C-

ARCH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARCH 7120. Integration Studio. (6 Hours)

Focuses on building systems, their detailing, assembly, and integration to achieve architectural expression and measurable performance over time. Offers students an opportunity to draw on the full range of their prior architectural education to produce a design that synthesizes specific criteria to build sustainable and culturally valuable environments for generations of human use.

Corequisite(s): ARCH 7220

ARCH 7130. Master's Research Studio. (6 Hours)

Offers the research portion of a two-part graduate project focused on the complex issues facing the postindustrial landscape of the contemporary city. Examines in detail the design elements of everyday building types, such as office buildings, labs, parking garages, and retail spaces, with an eye toward creating new prototypes for urban architecture that are informed by the realities of contemporary market forces. Provides the foundation for the more speculative design proposals of ARCH 7140. May be repeated without limit.

ARCH 7140. Master's Degree Project. (6 Hours)

Offers the second of a two-part degree project focused on manipulating contemporary market-driven building types. Seeks to invent new variations and hybrids from the existing store of urban building types to address new challenges, such as irregular sites, new adjacencies, and other unmet demands in cities. Based on research, analysis, and modeling of different types done in the first semester, offers students an opportunity to propose synthetic solutions to the complex problems of postindustrial development, housing, and identity facing the contemporary city. May be repeated without limit.

ARCH 7220. Integrated Building Systems. (4 Hours)

Explores the theories and practices of integrating building systems to create high-performing, long-lasting, and humane architecture. Uses readings and case studies to critically examine how the architectural order and logics derived from ecosystems, materials, and human uses express the systemic nature of buildings. Offers students an opportunity to synthesize their prior knowledge of construction systems, environmental systems, and structural systems to consider buildings as an integrated system of systems. Engages students with multiple forms of modeling, representation, and specification through which the speculative process of design anticipates the physical processes of construction, occupancy, and change.

ARCH 7430. Topics In Research Methods in Architectural Design. (4 Hours)

Focuses on contemporary research strategies and ethics in architecture, landscape, and urbanism. Presents an overview of social science, public engagement, and spatial analytics methods for design with an eye toward developing integrated analysis, visualization, and conceptualization skills for collaborative and individual project development. Themes include ecological, economic, and social resiliency in urban environments. Offers students an opportunity to formulate original approaches to design thinking and research. May be repeated five times for a maximum of 24 semester hours.

ARCH 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

ARCH 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Army ROTC (ARMY)**ARMY 1101. Introduction to the Army and Critical Thinking. (1 Hour)**

Introduces cadets to the Army and the Profession of Arms. Examines the Army profession and what it means to be a professional in the U.S. Army. Offers students an opportunity to develop basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a complete understanding of the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also have an opportunity to learn how resiliency and fitness support their development as an Army leader. Includes a leadership laboratory where cadets conduct practical applications of their military science curriculum.

ARMY 1102. Introduction to the Profession of Arms. (1 Hour)

Introduces cadets to the personal challenges and competencies that are critical for effective leadership. Offers cadets an opportunity to learn how the personal development of life skills such as critical thinking, time management, goal setting, and stress management relate to leadership and the Army profession; to learn the basics of the communications process; and the importance for leaders to develop the essential skills to effectively communicate in the Army. Includes a leadership laboratory where cadets conduct practical applications of their military science curriculum.

ARMY 1112. Introduction to the Profession of Arms Lab. (0 Hours)

Accompanies ARMY 1102. Introduces basic soldier skills and introduces squad-level tactical operations in Leadership Lab. Students also participate in physical fitness training three days per week.

ARMY 2201. Leadership and Decision Making. (3 Hours)

Focuses on leadership and decision making. Seeks to add depth to the cadets' understanding of the Adaptability Army Learning Area. Outcomes are demonstrated through critical and creative thinking and the ability to apply troop leading procedures (TLP) to apply innovative solutions to problems. The Army profession is also stressed through leadership forums and a leadership self-assessment. Requires students to apply their knowledge outside the classroom in a hands-on performance-oriented environment during leadership labs and other field activities (team-building exercises, leadership development exercises).

ARMY 2202. Army Doctrine and Team Development. (3 Hours)

Focuses on Army doctrine and team development. Begins the journey to understand and demonstrate competencies as they relate to Army doctrine, Army values, teamwork, and warrior ethos. Stresses their relationship to the law of land warfare and philosophy of military service. Covers the ability to lead and follow through team-building exercises in small units up to squad level. Requires students to apply their knowledge outside the classroom in a hands-on performance-oriented environment during leadership labs and other field activities (team-building exercises, leadership development exercises).

ARMY 2212. Army Doctrine and Team Development Lab. (0 Hours)

Accompanies ARMY 2202. Introduces basic soldier skills and squad-level tactical operations in leadership lab. Includes participation in physical fitness training.

ARMY 3301. Training Management and the Warfighting Functions. (4 Hours)

Focuses on training management and the warfighting functions. Constitutes an academically challenging course where the cadet is required to study, practice, and apply the fundamentals of training management and how the Army operates through the warfighting functions. At the conclusion of this course, the successful cadet should be capable of planning, preparing, and executing training for a squad conducting small-unit tactics. Requires students to apply their knowledge and leadership competencies outside the classroom in a hands-on performance-oriented environment during leadership labs and other field activities (team-building exercises, leadership development exercises). Requires prior completion of ARMY 1101, ARMY 1102, ARMY 2201, and ARMY 2202 or equivalent military experience.

ARMY 3302. Applied Leadership in Small Unit Operations. (4 Hours)

Focuses on applied leadership in small-unit operations. Constitutes an academically challenging course where the cadet is required to study, practice, and apply the fundamentals of direct-level leadership and small-unit tactics at the platoon level. At the conclusion of this course, the successful cadet should be capable of planning, coordinating, navigating, motivating, and leading a platoon in the execution of a mission. Seeks to prepare the cadet for the ROTC Cadet Leader Course (CLC), which the cadet attends in the summer at Fort Knox, KY. Requires students to apply their knowledge and leadership competencies outside the classroom in a hands-on performance-oriented environment during leadership labs and other field activities (team-building exercises, leadership development exercises). Requires prior completion of ARMY 1101, ARMY 1102, ARMY 2201, and ARMY 2202 or equivalent military experience.

ARMY 3312. Applied Leadership in Small Unit Operations Lab. (0 Hours)

Accompanies ARMY 3302. Introduces basic soldier skills and introduces squad-level tactical operations in leadership lab. Includes participation in physical fitness training.

ARMY 3513. American Military History Lab. (0 Hours)

Offers a leadership lab introducing basic soldier skills and squad-level tactical operations.

ARMY 4011. The Army Officer. (4 Hours)

Focuses on development of the Army officer. Constitutes an academically challenging course where the cadet has an opportunity to develop knowledge, skills, and abilities to plan resources and assess training at the small-unit level and to learn about Army programs that support counseling subordinates and evaluating performance, values, and ethics; career planning; and legal responsibilities. At the conclusion of this course, the successful cadet should be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field-grade officer level. Requires students to apply and refine their leadership competencies as they develop and plan outside the classroom in hands-on performance-oriented environments during leadership labs and other field activities (team-building exercises, leadership development exercises).

ARMY 4012. Mission Command and the Company Grade Officer. (4 Hours)

Offers cadets an opportunity to develop knowledge, skills, and abilities required of junior officers pertaining to the Army in unified land operations and company-grade officer roles and responsibilities. Includes small-group assignments, briefings, case studies, practical exercises, and an oral practicum. The oral practicum explores the cadet's knowledge of preparation for the 20 Army warfighting challenges covered throughout the advanced course. Seeks to assist the cadet in preparing for the BOLCB course and is a mandatory requirement for commissioning. Requires students to apply and refine their leadership competencies as they develop and plan outside the classroom in hands-on performance-oriented environments during leadership labs and other field activities (team-building exercises, leadership development exercises).

ARMY 4411. The Army Officer Lab. (0 Hours)

Introduces basic soldier skills and squad-level tactical operations in leadership lab. Includes participation in physical fitness training.

ARMY 4412. Mission Command and the Company Grade Officer Lab. (0 Hours)

Introduces basic soldier skills and squad-level tactical operations in leadership lab. Includes participation in physical fitness training.

Art - CPS (ART)**ART 1145. American Cinema. (3 Hours)**

Explores the uniquely distinguishing characteristics of American cinema. Covers camera angles, lighting, editing, sound, acting, narrative structure, and construction of point of view. Analyzes such recurring concerns of American cinema as the individual and community, issues of masculinity and violence, urban alienation, uprootedness, and adolescence.

Attribute(s): NUpath Interpreting Culture

ART 1200. Digital Photography. (3 Hours)

Designed to acquaint the beginner with the use of digital tools to manipulate and create digital imagery. Offers students an opportunity to learn to create a 360-degree panoramic photograph, digital slideshows, photographs for the web, and advanced techniques for negative scanning and advanced RAW file manipulation. Requires weekly assignments, demonstrations, hands-on experience, and a final portfolio. Students must supply their own 4-megapixel or greater camera. Intended as an entry-level course for visual artists and amateur photographers who wish to learn to express themselves using digital imaging.

Attribute(s): NUpath Creative Express/Innov

ART 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ART 2000. Typography: Communicating Content with Form. (3 Hours)

Offers students an opportunity to obtain an understanding of effects produced by fonts and typographic techniques used in contemporary visual design. Uses computer-based graphic design software to present a historical overview of typography and to explore formal qualities of characters and typefaces through applied projects. Seeks to guide students' understanding of how successful graphic design that includes letters and words depends on clear and appropriate typography to express and communicate information.

Attribute(s): NUpath Creative Express/Innov

ART 2100. Foundation in Visual Communication. (3 Hours)

Offers students an opportunity to gain knowledge of the fundamental elements of 2D design in order to explore the concept of pictorial order and to understand the principles of organization and formal elements of 2D design as communication tools.

Attribute(s): NUpath Creative Express/Innov

ART 2200. Fundamentals of Graphics and Publishing Production. (3 Hours)

Introduces the terminology, concepts, and applications of computer graphic software, including vector-based, raster-based, page layout, and PDF (Portable Document Format) creation programs. Offers students an opportunity to design, develop, and produce a variety of communication projects using a combination of industry-standard production tools.

Prerequisite(s): ART 2000 with a minimum grade of D-

ART 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ART 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ART 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

ART 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

ART 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ART 4995. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience.

ART 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Art - Design (ARTG)**COURSES****ARTG 1001. Design Perspectives: An Introduction to Design in the World. (2 Hours)**

Introduces students to a range of perspectives and points of view on design as a human activity. Explores a mix of theories, principles, practices, and histories that constitute various understandings of design across cultures. Through illustrative case studies, examines impacts, influences, accomplishments, consequences, possibilities, and limits of design in the world. Investigates what it means to develop a personal design practice.

Corequisite(s): ARTG 1002

ARTG 1002. Seminar for Design Perspectives. (2 Hours)

Offers a small-group discussion format to cover material in ARTG 1001 and provides opportunities for the application of course topics.

Corequisite(s): ARTG 1001

ARTG 1250. Design Process Context and Systems. (4 Hours)

Explores common design practices, principles, and vocabularies, introducing the design process as a method of inquiry and problem solving through studio projects. Emphasizes the importance of an awareness of audience and context in the creation of meaningful communications and experiences. Explores the practice of design as an iterative process, offering students an opportunity to obtain an understanding of the value of systems thinking and the importance of feedback and exchange as a means for assessing the quality of design's effectiveness in helping users achieve their goals.

Attribute(s): NUpath Creative Express/Innov

ARTG 1270. Design: Process + Practices. (2 Hours)

Introduces students to a range of design practices demonstrated through case studies, activities in lecture and workshop, and presentations by design practitioners.

Corequisite(s): ARTG 1271

ARTG 1271. Studio for Design: Process + Practices. (2 Hours)

Explores common design practices, principles, and vocabularies, introducing the design process as a method of inquiry and problem solving through studio projects in the areas of graphic, information, interaction, and experience design. Emphasizes the importance of an awareness of audience and context in the creation of meaningful communications and experiences. Explores the practice of design as an iterative process, fostering an understanding of the value of systems thinking and the importance of feedback and exchange as a means for assessing the quality of design's effectiveness in helping participants achieve their goals.

Corequisite(s): ARTG 1270

ARTG 1290. Typographic Systems. (2 Hours)

Covers typography as a core element of graphic design. Examines typography's history, development, and contemporary state. Studies typography principles and how to apply them in different contexts and formats. Introduces the cultural meaning of and diversity of typography and the importance of research while engaging with it. Through appreciation, curiosity, engagement, and discipline, initiates an intellectual investigation and practice of what it means to work with typography and apply typography in different disciplines.

Prerequisite(s): ARTF 1122 with a minimum grade of D-

Corequisite(s): ARTG 1291

ARTG 1291. Studio for Typographic Systems. (2 Hours)

Introduces letterforms in visual communication. Studies typography as a form in terms of its function and explores visual principles affecting the organization and access of typographic information. Explores how to organize words and phrases to create clear meanings. Introduces the use of the typographic grid and issues of hierarchy and legibility through assigned projects, readings, and lectures. Includes the historical evolution of typefaces and their classification as a rational system. Guides students in the application of typography as the basis of organizing and expressive principle of graphic design.

Corequisite(s): ARTG 1290

ARTG 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTG 2242. Information Design Principles. (4 Hours)

Introduces foundational concepts, methods, and procedures for the creation of data-rich information graphics. Investigates and implements visual systems and information structures such as maps, graphs, infographics, charts, and diagrams. Explores conceptual and visual solutions, and the creative process of organizing, visualizing, and communicating information. Examines design solutions that make complex information easier to understand and use. Course experiences include: analysis of design case studies and other critical readings, lectures, class discussions, and individual in-studio design work.

Prerequisite(s): ARTF 1122 with a minimum grade of D-

ARTG 2250. Typography 1. (4 Hours)

Introduces typography as the basis of graphic design and visual communication. Guides students through an understanding of letterforms, words, sentences, and text as both image and information. Studies form, context, and visual meaning. Introduces use of the typographic grid and issues of hierarchy and legibility through assigned projects, readings, and lectures. Includes the historical evolution of typefaces and their classification as a rational system.

Prerequisite(s): ARTF 1122 with a minimum grade of D-

Corequisite(s): ARTG 2251

Attribute(s): NUpath Creative Express/Innov

ARTG 2251. Type Tools. (1 Hour)

Offers students an opportunity to acquire technical software skills used in typesetting, such as Adobe InDesign, in this introductory lab.

Corequisite(s): ARTG 2250

ARTG 2252. Graphic Design Principles. (4 Hours)

Introduces foundational graphic design principles, processes, and methods for creating meaning within function, content, and context. Covers graphic form and vocabulary. Uses typography; language; image; symbolism; and visual principles of composition, hierarchy, rhythm, balance, scale, texture, pattern, grid, value, and color to create effective visual communication. Analyzes design case studies and offers critical readings, lectures, class discussions, and individual in-studio design work.

Prerequisite(s): ARTF 1122 with a minimum grade of D-

ARTG 2260. Programming Basics. (4 Hours)

Exposes students to basic programming design for user interfaces. Offers students an opportunity to become familiar with the logical elements of programming languages. Through lectures, hands-on in-class exercises, and modular projects, explores Web-based design and programming solutions for managing interaction and animation.

ARTG 2262. Prototyping with Code. (2 Hours)

Introduces students to creative coding and algorithmic thinking through creative projects. Students prototype projects by starting with preproduction exercises like flowcharts and pseudocode before proceeding to writing modular code, then testing and debugging, and finally writing reflection documentation. Introduces multiple programming platforms that can be used for the completion of coursework, allowing students flexibility in coding their project visions. Lecture sessions combine topical lectures with live coding and code walks of example code.

Corequisite(s): ARTG 2263

ARTG 2263. Lab for ARTG 2262. (2 Hours)

Introduces students to creative coding and algorithmic thinking through creative projects. Lab sessions consist of team-based code walks, activities, and problem solving. Students can use different software platforms to complete creative coding projects.

Corequisite(s): ARTG 2262

ARTG 2290. Fashion and Wearable Technologies. (4 Hours)

Introduces key social, environmental, and technical challenges underpinning sustainable innovation in the fashion, wearable technology, and smart textiles industries. Examines inclusive design and circular economy principles and uses them as a framework within which to analyze complex socio-technical networks of production, use and disposal of fashion, wearable technology, and smart textile products, and their impacts on health and wellbeing, society and the planet. Presents the opportunity to gain firsthand experience of the complex nature of today's open, dynamic, and networked problems through a site visit, case studies, and a series of practical activities. Instills understanding of creative intelligence and innovation as a field of practice.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ARTG 2400. Interaction Design Principles. (4 Hours)

Introduces foundational interaction design principles, processes, and tools for creating physical and screen-based interfaces. Uses design research methods, stakeholder identification, problem framing, information structuring, low- to high-fidelity prototyping techniques, iterative development, assessment strategies, and usability testing to construct design proposals for interactive artifacts. Analyzes design case studies and offers critical readings, instructor and guest lectures, class discussions, and individual and collaborative in-studio design work.

Prerequisite(s): ARTF 2223 with a minimum grade of D-

ARTG 2401. Interaction Design Principles Tools. (1 Hour)

Introduces skills and software used in designing and developing Web-based interactive environments. Explores Web-page scripting and tagging, CSS-based design coding, options for front- and back-end page design connections, and alternative technologies.

Prerequisite(s): ARTG 2400 (may be taken concurrently) with a minimum grade of D-

ARTG 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTG 3100. Physical and Digital Fabrication. (4 Hours)

Explores interdisciplinary projects and themes in immersive media and physical making by fabricating novel artifacts and experiences. Students form groups to create design solutions to wicked problems. Student teams follow a hackathon model to explore multiple ideas quickly. By engaging in critique and studio practice, offers students an opportunity to demonstrate and grow their technical skills.

Prerequisite(s): ARCH 2260 with a minimum grade of D- or ARTD 2000 with a minimum grade of D- or ARTF 1124 with a minimum grade of D- or ARTG 2260 with a minimum grade of D- or CS 2510 with a minimum grade of D- or GE 1502 with a minimum grade of D-

ARTG 3250. Physical Computing. (4 Hours)

Explores the communication between the physical world and the interactive, computer-based interface. Examines the potential of reactive analog and digital devices embedded within the physical realm. Offers students an opportunity to use simple kit sensors and indicators designed to enable student teams to create interfaces triggered by gesture, bodily movement, physical forces, and other tangible actions. Concludes with discussions of more complex interactive devices, the relationship between physical computing and robotics, and possible future directions.

Prerequisite(s): ARTG 2400 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov

ARTG 3350. Typography 2. (4 Hours)

Continues ARTG 2250, exploring structures and hierarchies through increasing typographic complexity. Investigates meaning, legibility, and readability with an emphasis on voice, organization, sequence, and the typographic grid.

Prerequisite(s): (ARTG 1290 with a minimum grade of D- ; ARTG 1291 with a minimum grade of D-) or ARTG 2250 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ARTG 3400. Topics In Interaction Design Inquiry. (4 Hours)

Focuses on a specific intermediate-level topic of timely relevance to the domain of interaction design. May be repeated up to two times for a maximum of 12 semester hours. Topics vary each semester.

Prerequisite(s): ARTG 2400 with a minimum grade of D-

ARTG 3444. Topics in Information Design Inquiry. (4 Hours)

Focuses on a specific intermediate-level topic of timely relevance to the domain of information design. May be repeated up to two times for a maximum of 12 SH.

Prerequisite(s): ARTG 2242 with a minimum grade of D-

ARTG 3450. Graphic Design 2. (4 Hours)

Explores the conceptual potential inherent in the merging of words/text with images/symbols to achieve a level of communication that exceeds the sum of visual and verbal components. Examining how the relationship of verbal and visual content can enhance meaning and comprehension, students identify a social issue of personal relevance and create a visual campaign targeting a core audience. Through a process including projects, readings, and lectures/discussions, students research, frame concepts, explore visual decisions, and determine appropriate deliverables.

Prerequisite(s): ARTG 2252 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ARTG 3451. Information Design 1. (4 Hours)

Introduces basic concepts, methods, and procedures of information design with a focus on mapping information. Students investigate visual systems and information structures such as maps, graphs, charts, and diagrams. Emphasizes the creative process of organizing, visualizing, and communicating data by making complex information easier to understand and use.

Prerequisite(s): ARTG 3350 with a minimum grade of D-

ARTG 3452. Topics In Graphic Design Inquiry. (4 Hours)

Focuses on a specific intermediate-level topic of timely relevance to the domain of graphic design. May be repeated up to two times for a maximum of 12 semester hours.

Prerequisite(s): ARTG 2252 with a minimum grade of D-

ARTG 3460. Identity and Brand Design. (4 Hours)

Addresses the origins, significance, and consequence of identity and branding expressions, in diverse media, in terms of personal, cultural, and commercial values. Using design research and studio methods, a series of exercises explores expressions of individual and collective identity. Offers students an opportunity to work in teams to develop branding projects in a process designed to increase their capacity to create effective brand expressions and analyze semiotic significance and cultural and economic value. Critique of work and presentation of concepts of identity and brand seek to sharpen students' skills and challenge their ideas about brand. External critique seeks to create valuable tests of bias and assumptions, while principles of managing attention and trust seek to build the ability to function as a brand steward in actual practice.

Prerequisite(s): ARTG 2250 with a minimum grade of D-

ARTG 3462. Experience Design Principles. (4 Hours)

Introduces foundational experience design principles, processes, and methods for understanding and creating conditions and interventions that impact people's experiences. Uses design research methods, stakeholder identification, visual synthesis of research findings, and problem framing as means to understand the motivations, behaviors, and values of audiences and participants. Develops scenarios and prototypes to construct design proposals informing people's relationships and experiences with products, environments, and services. Analyzes design case studies and offers critical readings, lectures, class discussions, and individual in-studio design work.

Prerequisite(s): ARTG 1250 with a minimum grade of D- or ARTF 2223 with a minimum grade of D-

ARTG 3463. Experience Design 2. (4 Hours)

Continues ARTG 3462 processes and strategies for creating compelling human-centered experiences. Offers students an opportunity to use design processes from multiple disciplines to develop real-world solutions.

Prerequisite(s): ARTG 3462 with a minimum grade of D- or ARTG 3465 with a minimum grade of D-

ARTG 3464. Topics In Experience Design Inquiry. (4 Hours)

Focuses on a specific intermediate-level topic of timely relevance to the domain of experience design. May be repeated up to two times for a maximum of 12 semester hours.

Prerequisite(s): ARTG 3462 with a minimum grade of D-

ARTG 3700. Interaction Design 2: Mobile. (4 Hours)

Explores user-centered interface design for information exchanges using handheld and mobile devices. Studies the potentials for leveraging both the social and locative possibilities of mobile devices through research, discussions, and project assignments.

Prerequisite(s): ARTG 2400 with a minimum grade of D-

ARTG 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTG 4550. Design Degree Project. (4 Hours)

Encompasses the proposal and execution of a comprehensive project in graphic, interaction, or experience design. Guides students in practical, hands-on implementation of contemporary design methods, as individuals or small interdisciplinary teams. Offers students an opportunity to develop an actionable design proposal and complete a polished project using appropriate design methods, as well as the opportunity to deepen understanding of the ways of knowing through design practice. Serves as a culmination to the undergraduate program.

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov

ARTG 4554. Typography 3. (4 Hours)

Offers an advanced course exploring a variety of typographical solutions, including expressive formal and complex content-based projects.

Prerequisite(s): ARTG 3350 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ARTG 4555. Graphic Design Synthesis. (4 Hours)

Offers students experience in the design of identity, information, persuasive messaging, and publication projects. Focuses on cross-platform (print, digital, and three-dimensional) manifestations—all based on a single area of content.

Prerequisite(s): ARTG 3450 with a minimum grade of D- ; ARTG 3350 with a minimum grade of D-

ARTG 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTG 5000. Topics in Design. (1-4 Hours)

Explores a variety of key topics in design, including historical and cultural models. Taught by faculty on topics related to their research and expertise. May be repeated three times for a maximum of 16 semester hours.

ARTG 5100. Information Design Studio 1: Principles. (4 Hours)

Explores the theories and practices of information design through studio projects. Investigates visual systems and information structures such as maps, timelines, charts, and diagrams. Emphasizes the creative process of organizing, visualizing, and communicating data by seeking to make complex information easier to understand and use. Requires graduate standing or permission of program coordinator or instructor.

ARTG 5110. Information Design History. (4 Hours)

Investigates the history of visualization practices across disciplines and in relation to technology developments. Critically examines seminal visualizations in social, cultural, and technological contexts by means of discussions and writing activities in a seminar format. Requires graduate standing or permission of program coordinator or instructor.

ARTG 5120. Research Methods for Design. (4 Hours)

Examines qualitative and quantitative research methods pertinent to design. Through discussion and writing activities, offers students an opportunity to investigate varied inquiry toward the development of researchable questions, argument formation, and assessment methodologies. Students who do not meet course restrictions may seek permission of instructor.

ARTG 5130. Visual Communication for Information Design. (4 Hours)

Explores graphic and typographic theory, principles, and practices. Introduces students to visual communication design with a primary focus on typography as the fundamental means of conveying content. Readings locate design and typography within the larger history of visual art and writing development. Covers methods of organizing content through hierarchy and spatial organization of grid structures. Considers relationships between positive and negative space, depth perception, transparency, and color theory. Requires graduate standing or permission of program coordinator or instructor.

ARTG 5150. Information Visualization Principles and Practices. (3 Hours)

Introduces information visualization from theoretical and practical perspectives. Defines the information visualization domain and advances principles and methods for the effective visual representation of data. Contextualizes the field from a historical perspective. Presents the perceptual and cognitive tasks enabled by visualizations. Studies an extensive range of visualization models. Illustrates good and bad practices in visualization with real-world examples. Introduces concepts in computer programming in an information visualization context.

ARTG 5151. Information Design Critique Seminar. (1 Hour)

Requires students to present their work in design critique sessions to peers, faculty, and guests. Through these critiques, offers students an opportunity to improve their projects based on feedback, learn how to present their work effectively, and articulate design problems in verbal discourse. Can only be taken in conjunction with ARTG 5150.

Prerequisite(s): ARTG 5150 (may be taken concurrently) with a minimum grade of C or ARTG 5150 (may be taken concurrently) with a minimum grade of C

ARTG 5310. Visual Cognition. (4 Hours)

Introduces human visual cognition as it applies to information design and visualization. Focuses on perception, attention, pattern recognition, information acquisition, memory, and creation of mental models. Explores reasoning, cognition, decision making, and problem solving in relation to visual artifacts. Students who do not meet course restrictions may seek permission of instructor or program coordinator.

ARTG 5320. Statistics for Design. (4 Hours)

Offers design students an opportunity to obtain the necessary skills to collect, summarize, analyze, and interpret data. Introduces concepts and methods in statistical reasoning and analysis. Topics include data mining, comparison, assessment, and delivery. Students who do not meet course restrictions may seek permission of instructor or program coordinator.

ARTG 5330. Visualization Technologies 1: Fundamentals. (4 Hours)

Introduces programming languages that allow computational analysis and digital delivery of dynamic information. Examines implications of environmental and personal sensor data sources, mobile collection and analysis of data, real-time networked data sets, and social use of shared data visualization tools. Students who do not meet course restrictions may seek permission of instructor or program coordinator. May be repeated once.

ARTG 5430. Visualization Technologies 2: Advanced Practices. (4 Hours)

Builds on the foundational skills acquired in ARTG 5330. Introduces students to intermediate- to advanced-level topics in web-based interactive visualization. Focuses on building greater proficiency in working with d3 and related JavaScript libraries and on acquiring knowledge of best practices and common patterns in data visualization problem solving. Through lectures, workshops, and a final project, offers students an opportunity to learn to effectively deploy their data visualization skills to explore and extract understanding from data in a critical and productive way.

Prerequisite(s): ARTG 5330 with a minimum grade of C- or ARTG 5330 with a minimum grade of D-

ARTG 5600. Experience Design Studio 1: Principles. (4 Hours)

Offers students hands-on project development of systems, artifacts, communication, environments, or service offerings with a focus on the unique personal experience of the audience exposed to the project. Experience design is a holistic approach to design that investigates the human experience in specific situations to improve its quality, given an understanding of human goals, needs, and desires. This course provides a context for a cohesive experience through interaction, movement, and understanding, which builds on previous knowledge of audiences and applications. Presents students with design methods and processes for experience design by developing a semester-long project. Offers students an opportunity to develop competency in tools used to create the various elements that create the context for experiences in specific situations and events including interaction, artifact, and environment design. Understanding a design process and knowledge of studio critique practices is recommended.

ARTG 5610. Design Systems. (4 Hours)

Explores a systems-based perspective on our environment by addressing questions that are fundamental to design practice: What is a system, and what are the different types? How do we observe, analyze, and represent systems? What interactions can we have with systems and what are the different types of interaction? Explores structures and processes for the design of systemic relationships between people, artifacts, environments, and activities. Systems may be physical, virtual, social, or a combination. Through discussion, writing, diagramming, and project exercises, offers students an opportunity to learn principles of systems theory and explore the connection between design methods and systems thinking. Students who do not meet course restrictions may seek permission of instructor or program coordinator.

ARTG 5620. Notational Systems for Experience. (4 Hours)

Examines theoretical foundations, concepts, and methods of visual notational systems used in the effective analysis and communication of existing experiences and in the envisioning of conditions for future experiences. Notational systems are sets of graphic signs and codes that denote or prescribe specific actions, forces, operations, events, or performances that occur over time. Students engage with concepts and models through readings, discussion, case study analyses, and speculative design projects. Evaluates the role that notational systems play in documenting, analyzing, and understanding the human goals, actions, behaviors, and perceptions key to experience and assesses their value in designing for agency and new experiences. Students who do not meet course restrictions may seek permission of instructor or program coordinator.

ARTG 5640. Prototyping for Experience Design. (4 Hours)

Explores tools, technologies, and processes to create prototypes of artifacts, environments, and interactive systems for experience design projects. Offers students the opportunity to learn, use, experiment with, and test prototypes using a wide range of state-of-the-art prototyping technologies to further their understanding of multiple strategies and techniques of prototyping for experience design. Tools and techniques change over time but typically include laser cutting, 3D printing, CNC machining, electronics prototyping, augmented reality, machine tools and 2D forming, fast prototyping, and hand tools.

ARTG 5710. Design for Dignity. (4 Hours)

Explores the ethical dimensions of design practice through design projects. This studio course addresses design problems with a focus on the concept of dignity as a central principle of human-centered design. Uses readings and in-class activities to study human value systems, dignity as a principle, and service design as a process of deliberation. Offers students an opportunity to practice applying these perspectives, models, and theories to create compelling design projects as well as to develop competencies in collective participation in community.

ARTG 5910. Human-Centered Design. (4 Hours)

Introduces human-centered design and associated ways of thinking and working. Human-centered design places people at the center and can be used to develop many types of interventions. Aims to foster understanding of people's lived experiences and identify their needs and pain points through extensive user research, iterative testing, and close interaction with the intended audience and relevant stakeholders. That understanding informs and gives direction to the design process and decisions made along the way to ensure that the final intervention benefits its intended users.

ARTG 6100. Information Design Studio 2: Dynamic Mapping and Models. (4 Hours)

Continues the exploration of data representations in a variety of media. Focuses on interactive and time-based techniques. Emphasizes computational methods of data collection, manipulation, and encoding. Requires graduate standing or permission of program coordinator or instructor. May be repeated once.

Prerequisite(s): ARTG 5100 with a minimum grade of D- or ARTG 5100 with a minimum grade of C- (Graduate)

ARTG 6110. Information Design Theory and Critical Thinking. (4 Hours)

Examines various theoretical models of information visualization and delivery systems. Evaluates the concepts and effectiveness of the models through discussions and writing activities. Students who do not meet course prerequisites or restrictions may seek permission of program coordinator or instructor.

Prerequisite(s): ARTG 5100 with a minimum grade of C-

ARTG 6310. Design for Behavior and Experience. (4 Hours)

Examines the potential of interfaces as mediators between information and users. Explores iterative prototyping and research methods to analyze patterns of behavior and implications of interface on effective communication. Utilizes observation, empathy, ethnography, and participatory design methods to offer students an opportunity to increase their understanding of audiences' and stakeholders' motivations and expectations. Requires graduate standing or permission of program coordinator or instructor.

ARTG 6330. Information Design Mapping Strategies. (4 Hours)

Examines the relationships between content and context through mapping methods. Emphasizes the impact of geographic information systems, evolving technologies, community mapping tools, globalization, and delivery systems. Undergraduate students may seek permission of instructor.

ARTG 6460. Human-Centered AI. (4 Hours)

Explores the foundations of human-centered AI. Examines the critical processes underpinning AI development and deployment and applies user-centered design principles to AI-driven products and services. Investigates methodologies for integrating human perspectives into AI systems and strategies for fostering collaboration between AI technologies and human users. Analyzes the ethical implications of AI applications in various organizational contexts using case studies showcasing the diverse uses of AI across business processes and products. Offers students an opportunity to engage in hands-on projects to design AI solutions tailored to human needs and that use AI systems responsibly to prioritize human values and well-being. Critically assesses the societal impacts of human-centered AI adoption.

ARTG 6555. Graphic Design Synthesis. (4 Hours)

This course has been designed for graduate students in the Information Design and Visualization program. It builds on skills obtained in the ARTG 5100 Information Design Studio: Principles course. The course is intended to give the students experience in the design of identity, information, and publication projects, as well as focus on cross-platform (print, digital, and three-dimensional) manifestations – all based on a single area of content. Its scope reflects the multi-faceted components that comprise real-world comprehensive design projects. Through additional research and readings, students are to perform at high level, and demonstrate how the readings of theoretical material reflect in their projects. Information and Design Visualization graduate students, or permission of the teacher.

ARTG 6600. Experience Design Studio 2: Group and Interpersonal. (4 Hours)

Offers students an opportunity to learn a human-centered design perspective and to develop experience design competency in the complex context of interpersonal and group interactions. Experience design is a holistic approach that investigates the human experience in specific situations in order to improve its quality. Students study the person-to-person aspect of human-centered design through readings and in-class activities, as well as practice applying its perspectives, models, and theories to the project process. Students are asked to participate in class discussions and create compelling experience design projects to address the needs, desires, fears, and aspirations of their audience.

Prerequisite(s): ARTG 5600 with a minimum grade of C-

ARTG 6700. Design Studio 3: Synthesis. (4 Hours)

Extends the exploration of design principles and methods by starting the development of a design master thesis. Examines how to develop effective design interventions capable of enriching human experience in specific situations, sites, and in the context of comprehensive activities. Emphasizes a systems perspective in both research and design development—the relationships between diverse participant groups and communities as well as the complex implications and interrelations of interventions at multiple scales and dimensions. Continues the exploration of theories of information design and visualization. Offers students an opportunity to prototype functioning applications that advance their thesis projects.

Prerequisite(s): ARTG 6100 with a minimum grade of C- or ARTG 6600 with a minimum grade of C-

ARTG 7100. Critical Design and Research Seminar. (4 Hours)

Examines emerging research and critical practices in design. Provides conceptual frameworks to formalize and iterate on students' thesis topics. Presents and frames qualitative research methods for application in thesis research. Offers students an opportunity to develop the visual and verbal expression of the thesis through writing, discussion, presentation, and critique, resulting in a thesis proposal document and in a public presentation for faculty feedback.

ARTG 7890. Thesis. (4 Hours)

Requires students to individually complete an original project as a summative learning experience. Types of projects may range from collaborative group projects to self-initiated bodies of work that might include image-based evidence or writing and that demonstrate fluency in combining code, data, and design. Encourages students to present and demonstrate their work at festivals, conferences, exhibitions, etc.

Prerequisite(s): ARTG 6100 with a minimum grade of C-

ARTG 7910. Design Project and Exhibition. (4 Hours)

Offers students an opportunity to focus on the design of pieces, artifacts, and experiences for the thesis exhibition. Includes planning and design of the exhibit. Situates the thesis contributions to design as project-based discipline. Discusses and reflects on the design process at the crossroads of methodological, systematic iteration, and creative exploration.

Prerequisite(s): ARTG 7990 (may be taken concurrently) with a minimum grade of B-

ARTG 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

ARTG 7990. Thesis. (4,8 Hours)

Offers students support in developing and producing the written component of a design thesis that integrates and applies their accumulated knowledge. Encourages student participation within a practice and research community consisting of classmates, advisor(s), and external professionals. Restricted to students in experience design and Information design and visualization.

ARTG 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers students continuing thesis supervision by members of the department.

Art - Fundamentals (ARTF)**ARTF 1000. Art and Design at Northeastern. (1 Hour)**

Introduces students to the intellectual and extracurricular opportunities within the Department of Art + Design and the College of Arts, Media and Design. Exposes students to the cultural vibrancy of Boston with the goal of building networks that facilitate a supportive learning community. Familiarizes students with their major and introduces them to the resources at the university and across the city to help them succeed academically. Provides grounding in the culture and values of the university community and seeks to help students develop interpersonal skills.

ARTF 1120. Observational Drawing. (4 Hours)

Focuses on developing an understanding of the structure of object and figure through freehand drawing. Offers students an opportunity to explore a wide range of materials, including wash, charcoal, and pencil.

Attribute(s): NUpath Creative Express/Innov

ARTF 1121. Conceptual Drawing. (4 Hours)

Seeks to expand the student's knowledge and skills through a mark-making process. Offers students an opportunity to begin to understand the relationship between form and meaning while relating the drawing process to broader concepts of communication.

Attribute(s): NUpath Creative Express/Innov

ARTF 1122. Color and Composition. (4 Hours)

Offers an opportunity to discover and research basic principles, language, and concepts inherent in two-dimensional visual systems. Offers students an opportunity to learn to think critically, analyze, and apply basic principles to design and art projects. In a studio workshop setting, three primary phases explore art, design, and photography.

Attribute(s): NUpath Creative Express/Innov

ARTF 1123. Color and Composition Tools. (1 Hour)

Introduces skills and software, such as Adobe Photoshop and Illustrator, used in creating and manipulating pixel- and vector-based images, in a technology workshop format.

Prerequisite(s): ARTF 1122 (may be taken concurrently) with a minimum grade of D-

ARTF 1124. Form and Structure. (4 Hours)

Explores three-dimensional form. Examines principles including mass, volume, line, plane, and texture. Introduces basic materials and structure through constructing models and prototypes. Presents sequential exercises with simple eye/hand skills and form recognition. Explores complex projects that require an understanding of context, content, and developing original forms.

Corequisite(s): ARTF 1125

ARTF 1125. Form and Structure Tools. (1 Hour)

Introduces skills and software used in creating 3D forms with the computer. Explores basics of 3D modeling, surfacing, lighting, and rendering in this technology workshop.

Corequisite(s): ARTF 1124

ARTF 1200. Representational Drawing. (2 Hours)

Introduces the fundamental tools and techniques of representational drawing as a means of rendering 3D objects and spaces in the physical environment onto a 2D surface. Structured exercises offer students an opportunity to practice the act of seeing and drawing utilizing the techniques of positive and negative space, formal one- and two-point perspective, observed perspective, organizational lines, sighting, and value.

ARTF 1210. Abstract Drawing. (2 Hours)

Introduces the fundamental tools and techniques of conceptual drawing to represent abstract concepts and information. Applies contemporary art and design practices to explore physical mark making and to better understand the relationship between form and content.

ARTF 1220. Elements of Visual Composition. (2 Hours)

Introduces the fundamental principles and materials of 2D art and design. Emphasizes visual concepts of balance, rhythm, pattern, emphasis, contrast, unity, movement, line, shape/form, space, value, color, and texture. Studio experimentation offers students an opportunity to practice composition and color theory as it applies to 2D art and design.

ARTF 1221. Elements of Visual Composition Tools. (0 Hours)

Introduces 2D art and design software including Adobe Photoshop, Adobe Illustrator, and Adobe InDesign.

Prerequisite(s): ARTF 1220 (may be taken concurrently) with a minimum grade of D-

ARTF 1230. Making with Form and Materials. (2 Hours)

Introduces concepts, processes, and studio practice in 3D making. Examines the elements and principles of 3D making, including mass, volume, line, plane, and texture. Hands-on experimentation offers students an opportunity to develop skills to define 3D form, express ideas through it, and solve visual problems. Students experiment with additive, subtractive, and substitutive material processes while leveraging both traditional craft techniques and digital fabrication. Focuses on developing a practical understanding of the relationship between material, form, function, aesthetic and context, and a vocabulary to successfully articulate concepts and insights during discussions and critiques.

Corequisite(s): ARTF 1231

ARTF 1231. Making with Form and Materials Tools. (0 Hours)

Introduces a range of tools and industry-standard software for creating 3D forms and making. Offers students an opportunity to learn about file setup and safe operation of basic wood shop tools, CNC laser cutters, and 3D printers. Focuses on the unique affordance of each tool to enable students to creatively experiment with these processes. Covers the basics of 3D modeling and vector drawing and making.

Corequisite(s): ARTF 1230

ARTF 1240. Making with Video, Sound, and Animation. (2 Hours)

Introduces the fundamental tools and techniques of lens-based and time-based art and design principles and materials. Applies visual principles of movement, point of view, time, repetition, sequencing, sound, and space to create video and film compositions.

Corequisite(s): ARTF 1241

ARTF 1241. Making with Video, Sound, and Animation Tools. (0 Hours)

Focuses on developing an understanding of, and dexterity with, movement- and time-based media and software—including After Effects—to create motion graphics, short animations, video, and montage-style films.

Corequisite(s): ARTF 1240

ARTF 1250. Designing Interactive Experiences. (2 Hours)

Introduces the language, concepts, and processes of interactive experience as a compelling medium to communicate meaning. Examines how variables within the environment can change how we inhabit an experience physically, conceptually, and emotionally and affect or provoke responses. Hands-on experimentation offers students an opportunity to learn using one or more forms of rapid prototyping. Studies historical and contemporary examples of art and design projects designed as exchanges or experiences. Incorporates visual and nonvisual mapping techniques as a means to understand the present.

Corequisite(s): ARTF 1251

ARTF 1251. Designing Interactive Experiences Tools. (0 Hours)

Introduces wireframing and industry-standard tools and software for creating basic web-based content using HTML and CSS. Offers students an opportunity to create a portfolio website for showcasing projects created in ARTF 1250.

Corequisite(s): ARTF 1250

ARTF 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTF 2220. Movement and Time. (4 Hours)

Explores time-based art and design in an introductory lecture/studio format. Introduces formal, narrative, and alternative concepts for creative time-based communication. Assignments investigate video, animation, and a mixture of media in a screen based context.

Corequisite(s): ARTF 2221

Attribute(s): NUpath Creative Express/Innov

ARTF 2221. Movement and Time Tools. (1 Hour)

Introduces skills and software used in animating 2D and 3D images, graphics, and forms. Explores the basics of key framing, layering, parenting, 3D modeling, surfacing, and rigging in this technology workshop.

Corequisite(s): ARTF 2220

ARTF 2223. Experience and Interaction. (4 Hours)

Explores the language of interactive experience as a compelling medium to communicate meaning. Examines how variables within the environment can change how we inhabit an experience physically, conceptually, and emotionally. Studies historical and contemporary examples of art and design projects designed as exchanges or experiences. Incorporates drawing as a means to understand the present and project potential future experiences.

Corequisite(s): ARTF 2224

Attribute(s): NUpath Creative Express/Innov

ARTF 2224. Experience and Interaction Tools. (1 Hour)

Introduces skills and software used in creating basic Web-based content. This technology workshop introduces software using HTML and style sheets such as Adobe Dreamweaver.

Corequisite(s): ARTF 2223

ARTF 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTF 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTF 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Art - General (ARTE)**ARTE 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTE 2301. The Graphic Novel. (4 Hours)

Explores the word-and-image medium of comics as a narrative form. Focuses on the contemporary phenomenon of the so-called graphic novel. What are the preoccupations of today's graphic novels? How does their storytelling work? Some work in translation is included, but the course largely concentrates on the American tradition, focusing on fiction, memoir, and nonfiction reporting and adaptation. Offers students an opportunity to learn practices of reading—and making—comics. Emphasizes the formal language, or grammar, of comics in order to interpret its narrative procedure and possibilities.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

ARTE 2500. Art and Design Abroad: Studio. (4 Hours)

Offers an intensive studio course taken abroad and taught by an art and design faculty member. Exposure to regional artists, history, culture, museums, architecture, and physical geography provide focus of study and creative exploration. May be repeated without limit.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

ARTE 2501. Art and Design Abroad: History. (4 Hours)

Offers an intensive history course taken abroad and taught by an art history, design, or art faculty member. Exposure to regional and international artists, history, culture, museums, landscape architecture, galleries, material culture, and architecture provide a rich context for studying the history of art and design. Offers students an opportunity to understand narrative and visual components through detailed hands-on workshops and detailed creation of artistic formats, including design, text essays, photographic essays, temporary exhibitions, video art projections, and live performances as artifacts. May be repeated without limit.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

ARTE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTE 2991. Research in Art and Design. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

ARTE 3901. Art and Design Special Topics. (4 Hours)

Offers an art and design course in which format and content are determined by the instructor. May be repeated up to five times.

ARTE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTE 4901. Special Topics in Art and Design Studio. (4 Hours)

Offers an art and design studio in which format and content are determined by the instructor. May be repeated up to five times.

ARTE 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated up to five times.

ARTE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTE 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ARTE 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated up to five times.

Attribute(s): NUpath Integration Experience

ARTE 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

ARTE 5901. Special Topics in Art and Design Studio. (4 Hours)

Offers an opportunity for the intensive study of specialized themes in areas of research in studio and aesthetics related to art and design. Instructor determines format and content. May be repeated up to five times.

ARTE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTE 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ARTE 6976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times.

ARTE 6984. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision. May be repeated up to four times.

ARTE 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

ARTE 7990. Thesis. (4 Hours)

Offers the candidate, working with a thesis advisor, an opportunity to continue to complete the research project defined and proposed in ARTE 7100. The research is carried out in an independent manner, with periodic presentations to the thesis committee. These presentations define the benchmarks for determination of successful progress in the project. The ultimate result is an exhibition, screening, performance, or other form of public display or presentation, together with a thesis paper or written corollary.

Prerequisite(s): ARTE 7100 with a minimum grade of C-

ARTE 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continued work on the thesis project.

Prerequisite(s): ARTE 7990 with a minimum grade of C-

Art - History (ARTH)

COURSES**ARTH 1001. Visual Intelligence. (2 Hours)**

Examines via interdisciplinary lectures how image technologies and techniques of perception endemic to visual art, popular culture and digital media shape how visual culture is understood within an expanding knowledge economy. Introduces analytical skills of observation and methods of contextual analysis (materialism, semiotics, feminisms, LGBTQ studies, queer theory, theories of decolonization and disability studies), in order for students to develop compelling interpretations of visual phenomena within a shifting global context. Visual Intelligence explains how visual studies connects to the fields of law, design, publishing, curating, conservation, and other areas of knowledge production.

Corequisite(s): ARTH 1002

Attribute(s): NUpath Interpreting Culture

ARTH 1002. Seminar in Visual Intelligence. (2 Hours)

Accompanies ARTH 1001. Fosters in-depth discussion, allows for hands-on workshops and facilitates visits to area museums and cultural organizations. Emphasizes the ways digital image technologies are socially constructed and are based on earlier paradigms of classification and differentiation. Seminar meetings demonstrate how to critically read a range of images (e.g. texts, films, videogames, memes, artworks) by paying attention to the ways meaning is often shaped by identitarian formations such as race, gender, sexual orientation, class, and ability. Investigates how diverse perspectives enhance the ability to create, while introducing students to creative professionals who actively use visual intelligence in their dynamic careers.

Corequisite(s): ARTH 1001

ARTH 1100. Interactive Media and Society. (4 Hours)

Offers a critical historical survey of interactive media from analog to digital techniques and from physical to virtual spaces. Examines the social, ethical, and cultural impact of interactive media. Concludes with a study of current issues and directions in interactive media. Through weekly lectures, research projects, and critical analyses, offers students an opportunity to consider current and historical aspects of interactive media and design.

ARTH 1110. Global Art and Design History: Ancient to Medieval. (4 Hours)

Investigates the history of painting, sculpture, design, and related arts through a study of masterpieces from prehistoric times to the end of the Middle Ages. Offers students an opportunity to become familiar with specific works, styles, and terminology of art and design and to develop an ability to communicate about the visual arts.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ARTH 1111. Global Art and Design History: Renaissance to Modern. (4 Hours)

Explores the evolving history of visual art and architecture from 1300 through the 20th century. Combines integrated modules and activities together with observation and analysis of art and architecture, with the goal of interpreting cultures and understanding societies. Offers students an opportunity to learn specific works, styles, and specialized terminology, thereby developing an ability to communicate about the visual arts.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ARTH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTH 2200. Topics in Design History. (4 Hours)

Explores various design history topics through pioneering designers whose work has influenced contemporary design culture. Instructor determines format and content.

ARTH 2210. Modern Art and Design History. (4 Hours)

Surveys modernist movements from early to mid-20th century. Emphasizes the reciprocal evolution of art and design within cultural and social contexts.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions, NUpath Writing Intensive

ARTH 2211. Contemporary Art and Design History. (4 Hours)

Offers a study of contemporary culture in an art and design survey from mid-twentieth century to present. Presents a thematic approach to late-modern and postmodernist movements, focusing on interrelationships among media.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

ARTH 2212. Survey of the Still and Moving Image. (4 Hours)

Examines the history of still and moving images in relationship to other artistic, documentary, and journalistic practices.

ARTH 2215. History of Graphic Design. (4 Hours)

Follows a chronological survey of graphic design from 4000 BC to the beginning of the 21st century, emphasizing work from 1880 to 2000, and the relationship of that work to other visual arts and design disciplines. Demonstrates how graphic design has responded to (and affected) international, social, political, and technological developments since 1450. Traces developments in the areas of typography and publication, persuasion, identity, information, and theory.

ARTH 2311. The Science of Art, the Art of Science. (4 Hours)

Explores the intersection of science and the arts as both ways of 'knowing', and how, during their development they have shared many techniques and approaches. Considers areas such as botany, anatomy, cartography, engineering, perspective and ecology relation to both science and art, arguing that observation, imagination, and invention were fundamental to both pursuits. Investigates the cultural conditions at the heart of the common cultural trope, "Renaissance Man". Focuses on two components of observation, drawing and writing, both important techniques of the early modern artist and scientist.

Attribute(s): NUpath Interpreting Culture

ARTH 2312. Revolutionary Design and Propaganda in Eastern Europe. (4 Hours)

Introduce students to significant and influential movements in Eastern European art and design history, such as Suprematism, Constructivism, Productivism, Socialist Realism and Nonconformist art, and explores both the ways in which art was instrumentalized by the Soviet state and the ways in which artists reacted against that instrumentalization in later years. By analyzing posters, costume and set designs, socialist realist paintings, and performances, and creating them themselves, students understand the ways in which artists sought to become producers and create work that perfectly embodied the burgeoning socialist state, and later used coded language to create work that reacted against that increasingly failing state.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

ARTH 2313. Global Networks in Early Modern Art and Visual Culture. (4 Hours)

Presents case studies exploring histories, interpretations, and reception of diverse global art, design, architecture, and visual culture and their embeddedness in circuits of global trade, migrations, pilgrimage, exile, colonialism, and the movements of diasporas before 1900. Considers the role of the artist and artisan and types of creative agency in the construction and maintenance of empires, in ritual practice, and in Indigenous resistance. Emphasizes intermixed image cultures produced by intercultural contact and tracks the movement of materials and visual culture around the globe. Describes and critiques the agency of global visual cultures to reflect and produce identities. Examines and compares the cultural and social functions of art and its ties to global goods and resources and art materials.

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ARTH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTH 3000. Topics in Visual Studies. (4 Hours)

Explores a variety of topics in visual studies, including historical and cultural models. Taught by faculty according to their research interests and expertise. May be repeated up to six times.

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ARTH 3211. Performance Art. (4 Hours)

Examines the development and significance of performance art globally, from its prehistory in the early 20th century, to its heyday in the 1960s and 1970s, through to the present day. Examines the history and theory of performance art and engages with the genre through making and reflecting on students' experiences of knowing the artwork "from the inside".

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture, NUpath Writing Intensive

ARTH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTH 4000. Topics in Visual Studies. (4 Hours)

Explores a variety of advanced topics in visual studies, including historical and cultural models. Taught by faculty according to their research interests and expertise. May be repeated five times.

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

ARTH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTH 5600. Landscape and Ecology in Visual Culture. (4 Hours)

Offers critical and historical approaches to landscape, nature, ecology, and human subjectivity in art, design, and visual culture up to the present day, drawn from the interdisciplinary environmental humanities. Ecocritical art history is a growing field that examines and critiques the agency of creative visual production to represent, narrate, innovate, and transform our relationship to the natural world.

ARTH 6211. Advanced Performance Art. (4 Hours)

Focuses on the history and theory of performance art from the early 20th century to the present day. Engages students in self-directed research on a performance artist and related performance theories and application of that research to a performance of their own. Students evaluate and analyze their own work in relation to historical works of performance and offer evidence-based support for their production.

ARTH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTH 6976. Directed Study. (1-4 Hours)

Offers directed study of a specific topic not normally contained in the regular course offerings but within the area of competence of a faculty member. May be repeated without limit.

Art - Media Arts (ARTD)**COURSES****ARTD 1001. Media Art, Culture, and Social Justice. (2 Hours)**

Introduces a wide range of perspectives on and practices of media art and social justice. Exposes students to key concepts, lineages, controversies, and consequences of media practices that expose injustice and seek to build a more equitable and sustainable world. Positions media arts as an intersectional and interdisciplinary practice connecting racial, gender, technological, and spatial/environmental justice. Also serves as an introduction to this dynamic and growing field of professional practice, with illustrative case studies that include interdisciplinary creative work by CAMD faculty as well as leading international practitioners.

Corequisite(s): ARTD 1002

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

ARTD 1002. Seminar for ARTD 1001. (2 Hours)

Accompanies ARTD 1001. Discusses and directly applies ideas and practices. Offers students an opportunity to articulate their own positions on critical issues by participating in a range of engaging in-class and research activities.

Corequisite(s): ARTD 1001

ARTD 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTD 2000. Introduction to Immersive Media. (4 Hours)

Introduces three forms of immersive media—augmented reality, 360 video, and virtual reality—through engagement in content creation, the fundamentals of software tools, development methodologies, and production techniques. Offers students an opportunity to produce basic immersive sequences, read literature, play games, and experience contemporary projects that highlight the uniqueness of immersive media.

ARTD 2100. Narrative Basics. (4 Hours)

Explores narrative sequence and story development in a variety of story architectures and media combinations, including text, video, music, audio, and design. Uses lectures, in-class workshops, and collaborative projects to expose students to the critical role of narrative in society and interactive media, including games. Offers students an opportunity to develop an interactive media design document over the second half of the semester.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

ARTD 2340. Introduction to Computational Creative Practice. (4 Hours)

Examines concepts of computational creative practices, focusing on the use of computational processes for the creation of interactive and generative experiences. Includes computational procedures and concepts for creative purposes such as automation, recursion, and data processing. Students use data and mathematical procedures to generate images, express ideas, and create meaning. Offers students an opportunity to gain practice-based experience with the benefits and limitations of using computational processes; make creative computational projects using code and/or other media such as photography, video, performance installation, etc.; and reflect on what computers can and cannot do well.

ARTD 2360. Introduction to Photography. (4 Hours)

Introduces creative photography, exploring techniques and processes starting with the basic principles of camera controls, lens and lens functions, digital image presentation basics, as well as photographic seeing and visual thinking. Evaluates and expands technical and conceptual knowledge of the medium. Beyond the technical foundation of digital image making, analyzes various theories and understanding of ways of seeing photographically. Culminates in a final project and presentation designed to demonstrate the importance of technical expertise, editing, sequence, layout, and presentation of ideas.

Corequisite(s): ARTD 2361

ARTD 2361. Photo Tools. (1 Hour)

Introduces students to the creative possibilities of photographic image editing and management with Adobe Bridge, Camera Raw, and Photoshop. Offers students an opportunity to establish a professional digital workflow, acquire industry-standard creative techniques for photographic image editing, and gain an understanding of the importance of high-quality postproduction output.

Corequisite(s): ARTD 2360

ARTD 2370. Animation Basics. (4 Hours)

Offers an introductory studio course that explores the creative potential of animation. Exposes students to a variety of traditional animation processes and techniques through lectures, demonstrations, and hands-on assignments. Provides an historical survey of animation art through the twentieth century. Emphasizes using the computer to develop concepts creatively while learning the fundamental skills of constructing animated images and forms.

Prerequisite(s): ARTF 2220 with a minimum grade of D-

Corequisite(s): ARTD 2371

Attribute(s): NUpath Creative Express/Innov

ARTD 2371. Animation Tools. (1 Hour)

Introduces intermediate skills and software used in creating 3D animation. Explores modeling, surfacing, lighting, key framing, and rigging in this technology workshop.

Corequisite(s): ARTD 2370

ARTD 2380. Video Basics. (4 Hours)

Offers an introductory exploration into the moving image as an art form. Covers the fundamental technical and aesthetic aspects of contemporary video production. Emphasizes personal, experimental works from an individual point of view. Analysis of projects is directed toward the development of a personal voice.

Prerequisite(s): ARTF 2220 with a minimum grade of D-

Corequisite(s): ARTD 2381

ARTD 2381. Video Tools. (1 Hour)

Introduces intermediate skills and software used in capturing, manipulating, and editing video and audio in this technology workshop.

Corequisite(s): ARTD 2380

ARTD 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTD 3000. Topics in Media Arts. (1-4 Hours)

Explores a variety of intermediate-level thematic topics in media arts, including photography, video arts, animation, immersive media, and computational media. Taught by faculty according to their research interests and expertise. Students who do not meet course restrictions may seek permission of instructor or program coordinator. May be repeated three times for a maximum of 16 semester hours.

Prerequisite(s): ARTD 2000 with a minimum grade of C or ARTD 2360 with a minimum grade of C or ARTD 2370 with a minimum grade of C or ARTD 2380 with a minimum grade of C

ARTD 3460. Photography: Concept + Process. (4 Hours)

Explores how process informs concept and vice versa, with a focus on making and photographic practice. Emphasizes creative projects, readings on contemporary photography, and the responses and presentations on the ideas brought forth by our investigations. Constructive critiques, which include investigation of the nuances of the medium and its uses, encourage confidence of creative abilities, vision, and independent thinking. Students use photographic concepts and creative techniques for the development, coordination, and completion of a final photographic body of work. Considers the politics of representation and contextual references and seeks to answer: Who is it of? Who is it for? What does it do? Who does it serve? This is an intermediate photography seminar.

Prerequisite(s): ARTD 2350 with a minimum grade of D- or ARTD 2360 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ARTD 3470. Animation 1. (4 Hours)

Introduces the fundamentals of three-dimensional computer animation. Class lectures and demonstrations are followed by substantial hands-on exploration. Students gain fundamental skills for modeling, surfacing, and animating. Projects progress from creating simple geometric objects to realistic organic characters. Basic systems for animating are introduced and explored.

Prerequisite(s): ARTD 2370 with a minimum grade of D-

ARTD 3471. Virtual Environment Design. (4 Hours)

Utilizes elements of story and game play in the design of both 2D and 3D environments, integrating architecture, landscape, and set dressing. Introduces real-time procedurally generated terrain and flora, asset optimization, and nonlinear path finding. Explores content ranging from historically accurate and contemporary hyperrealistic to stylized and fanciful.

Prerequisite(s): ARTF 1120 with a minimum grade of D- ; ARTD 2370 with a minimum grade of D-

ARTD 3472. Character Design for Animation. (4 Hours)

Focuses on the development of characters as they relate to game design and animation. Explores, through treatments and synopsis, theme-based character back story, rationale, and visual design. Integrates learning objectives of both 2D and 3D, optimized rigging, movement study, and accessory and prop design.

Prerequisite(s): ARTF 1120 with a minimum grade of D- ; ARTD 2370 with a minimum grade of D-

ARTD 3473. Animation for Games. (4 Hours)

Explores all areas of 3D game asset creation—animation, modeling, shading, effects, and their integration. Working in small groups, students have an opportunity to learn how to construct animated assets that work efficiently within a game programming environment. Encourages students to specialize in at least one area of asset creation.

Prerequisite(s): ARTD 3470 with a minimum grade of D-

ARTD 3480. Video: Sound and Image. (4 Hours)

Continues the study of video as an art form. Focuses on the dynamic relationship between sound and the moving image. Begins with audio exercises exploring various aspects of sound design that are integrated into an in-depth video production. Emphasizes the production of innovative video art with powerful visual imagery, complex editing rhythms, and creative sound design.

Prerequisite(s): ARTD 2380 with a minimum grade of D- or MSCR 1230 with a minimum grade of D-

ARTD 3485. Experimental Video. (4 Hours)

Constitutes an advanced video production and analysis course. Emphasizes the development of personal vision and building a working knowledge of contemporary experimental video art techniques. Offers students an opportunity to expand conceptual ideas and visual language skills by interrogating concepts of time, movement, light, and space within their exploratory working process. Visual research and discussion supplement the studio work.

Prerequisite(s): ARTD 2380 with a minimum grade of D- or MSCR 1230 with a minimum grade of D-

ARTD 3490. Data Art and Hacktivism. (4 Hours)

Explores the practices and politics of data collection and processing for creative and critical output. Studies how to collect online data with and without APIs and how to process textual data using Natural Language Processing techniques. Examines the practices currently used in social web technologies by making creative projects. Addresses the ethical issues of data collection and privacy, as well as the practical, technical, and social problems that can arise during the processing of social data.

ARTD 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTD 4530. Media Arts Degree Project. (4 Hours)

Offers students an opportunity to develop a refined, process-driven media art project that combines personal vision, research, and scholarship. Centers on the creation of a comprehensive capstone project that highlights a specific area of interest and supplements a body of work that has been accumulated through the media arts curriculum. The course structure is based on weekly goals and reviews that are partially determined by the specific and unique aesthetic and technical demands of an individual student's capstone project. A well-planned project statement serves as the method for contextualizing and articulating the unique goals of the capstone project. This advanced studio course provides preparation for graduating students in their careers as professional artists and creative practitioners.

Attribute(s): NUpath Capstone Experience

ARTD 4565. Photography: Visual Strategies + Context. (4 Hours)

Emphasizes combining students' personal aesthetic choices with refined technical skills in this advanced photography seminar. Students integrate personal vision, historical research, and well-defined concepts in their work. Through lectures on contemporary topics and artist studio and museum visits, students situate their own ideas and processes to historical and cultural forces. Focuses on the relevance of contemporary models in which the still image is used, specifically interdisciplinary approaches.

Prerequisite(s): ARTD 3460 with a minimum grade of D-

ARTD 4570. Animation 2. (4 Hours)

Continues ARTD 3470. Focuses on seamless integration of animated three-dimensional models with digital photographic backgrounds. Continued emphasis on building comprehensive modeling, surfacing, and animation skills. Students develop original content based on course objectives. Complex systems for creating realistic movement are introduced. Exposes students to compositing and animation processes through lectures, demonstrations, and hands-on assignments.

Prerequisite(s): ARTD 3470 with a minimum grade of D-

ARTD 4575. Animation 3. (4 Hours)

Continues ARTD 4570. Focuses on building comprehensive modeling, animation, and compositing skills in this advanced studio course. Students explore creating special effects through seamless mixture of computer-generated imagery and digital video footage. Advanced compositing and lighting techniques are introduced and explored. Students create original characters using organic modeling and surfacing techniques. Exposes students to animation and compositing processes through lectures, demonstrations, and hands-on assignments.

Prerequisite(s): ARTD 4570 with a minimum grade of D-

ARTD 4660. Studio Photography. (4 Hours)

Examines studio practices and lighting techniques. Offers students an opportunity to obtain a thorough understanding and working knowledge of contemporary practice in the photography studio. Includes comprehensive exercises and assignments with various types of lighting equipment.

Prerequisite(s): ARTD 2360 with a minimum grade of D-

ARTD 4661. Photography: Experimental Processes. (4 Hours)

Offers a studio/lab course in which students study the history of photographic processes and contemporary approaches of the medium while creating their own photographs in the darkroom. Explores 19-century techniques such as camera obscura, photograms, cyanotypes, tintypes, kallitypes, cliché verre, and others. Investigates the use of analog film photography and digital photography in combination with alternative processes. The structure of the course is designed to present exciting ways of thinking about technical questions, materials, subject matter, and aesthetic approaches through experimentation.

Prerequisite(s): ARTD 2350 with a minimum grade of D- or ARTD 2360 with a minimum grade of D-

ARTD 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTD 6490. Advanced Data Art and Hacktivism. (4 Hours)

Explores the practices and politics of data collection and processing for creative and critical output. Practices how to collect online data with and without APIs and how to process textual data using natural language processing techniques. Engages students in self-directed research using the current social web data collection technologies and application of that research to a creative output. Examines the legal and ethical issues involved in data collection, in addition to the practical, technical, and social problems that can arise during the processing of social data.

Art - Studio (ARTS)**COURSES****ARTS 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTS 2340. Painting Basics. (4 Hours)

Presents an introductory studio course in the fundamental techniques of painting. Formal problems in the study of color, light, space systems, form, and composition establish the foundation for more individual creative expression. Uses critiques and slide lectures as needed.

Attribute(s): NUpath Creative Express/Innov

ARTS 2341. Figure Drawing. (4 Hours)

Focuses on developing the student's awareness of the structure of the figure as well as the emotive qualities of "figuration." Students draw from a model in each class. They also develop drawings based on the political and social concerns of contemporary culture and the role of gender as seen through "image."

Attribute(s): NUpath Creative Express/Innov

ARTS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTS 3000. Topics in Studio Arts. (4 Hours)

Explores studio arts topics, supporting work in all studio arts disciplines. Examines current discourse in the field and draws on instructor expertise. Students develop original creative projects in response to the topic, informed by critical readings, instructor and guest lectures, examination of other artists' works, and class discussions. Emphasizes skill development and strategies for self-directed studio arts production including experimentation, planning, iteration, revision, and critique of creative work. May be repeated up to five times.

Prerequisite(s): ARTF 1120 with a minimum grade of D- or ARTF 1121 with a minimum grade of D- or ARTF 1122 with a minimum grade of D-

ARTS 3449. Drawing in Mixed Media. (4 Hours)

Offers an upper-level course designed for students who want to explore the ever-changing discipline of drawing, which has now become a medium that stands on its own. Explores a range of media for generating drawings, including traditional techniques and computer-based media. Emphasizes open-ended application and interpretation of drawing as a medium. Requires students to attend lectures and exhibitions and keep a journal.

ARTS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ARTS 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Arts Administration and Cultural Entrepreneurship (AACE)**Courses****AACE 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AACE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AACE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AACE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

AACE 6000. Arts and Culture Organizational Leadership. (3 Hours)

Offers an overview and introduction to leadership knowledge areas, tools, and skills sets for the arts and culture sector. Key topics include issues and challenges in the management of arts-oriented organizations, leadership characteristics and techniques for arts and culture teams, balancing organizational priorities with artistic vision and values, board formation and management, audience outreach, and operational practices. Focuses on the administration of people and processes to communicate mission; realize goals; and effectively manage the creative resources, human resources, and financial challenges of nonprofit arts and cultural organizations.

AACE 6010. Planning for Arts and Cultural Organizations. (3 Hours)

Offers an overview and introduction to knowledge areas and primary skills sets for planning, launching, and sustaining arts and cultural organizations. Key topics include evaluating opportunities in the arts and culture sector; building effective vision, mission, and values for arts and culture initiatives in balance with civic and community contexts; smart approaches to arts and culture funding; developing sustainable and flexible strategic plans; and planning challenges for the contemporary strategic arts organization.

AACE 6020. Experiential Study in Arts Administration. (3 Hours)

Offers students an opportunity to learn best practices in arts project management, including how to assess and scope a project, develop a timeline with clear action items and goals, relay needs and expectations to clients, research materials to assist in the process, and measure and deliver project results. Faculty coach students to cultivate professional skill sets, build competency around key areas of student interest, and bridge theory with practice. Students receive feedback from their project sponsor, review lessons learned, and incorporate suggestions to improve and further develop their career plans. Seeks to support the development of business communication skills, project and client management skills, and frameworks for analysis.

AACE 6110. Information Technology for Arts and Cultural Organizations. (3 Hours)

Offers nontechnical students an opportunity to obtain a clear and current understanding of key information technology (IT) concepts set in the context of arts and cultural organizations and to empower them to make decisions that map technology to strategy. Covers how to identify technical terms, stakeholders, and issues; evaluate IT challenges; apply best-practice frameworks; and identify business needs and compare technical solutions in order to minimize cost and maximize strategic alignment. Combines readings, casework, video lectures, screen casts, guest videos, and a hands-on approach to researching solutions and leading change. Includes both group and individual deliverables that students synthesize to create and present a final project.

AACE 6120. Advocacy and the Arts. (3 Hours)

Seeks to equip future arts leaders with the competence, power, and commitment to act in the interest of creative resilience—and creativity—for the collective good. Offers students an opportunity to learn how to both advocate for the arts and advocate through the arts. Each module presents a specific challenge faced by artists and arts institutions and compels students to identify and articulate creative solutions to overcome this challenge. Exposes students to diverse knowledge sources—including theoretical and practical literature, organizational and project case studies, and guest presentations by arts leaders in the Boston area—to help prepare students for this important work.

AACE 6200. Programming and Community Engagement for Cultural Entrepreneurs. (3 Hours)

Examines the role and tools of the cultural entrepreneur and investigates practical and tactical approaches centered around real-world examples. Topics include how cultural entrepreneurs turn new ideas into concrete initiatives and how they communicate with and learn from their audiences and communities to assess and evaluate the implementation of cultural endeavors. Offers students an opportunity to create their own cultural initiative from the ground up. Through modules covering mission and vision, program evaluation, community engagement, and basic resource management, the successful student should finish the course with a real project “in a box,” ready to launch.

AACE 6210. Building Value Through Cultural Enterprise. (3 Hours)

Examines the question of value through the lens of cultural institutions big and small. Explores examples from real-world case studies. Focuses on areas of value, ways to measure impact on both qualitative and quantitative levels, and how to demonstrate that impact to a variety of audiences from our daily visitors to our federal government. Value in the cultural sector is a critical question that institutions and individuals working in this area must answer on a regular basis for themselves, their constituents, and their supporters.

AACE 6220. Innovative Approaches to Audience Engagement. (3 Hours)

Investigates the philosophy, methods, and application of a wide spectrum of audience engagement strategies. Utilizes provided materials, inquiry-based research practices, and experiential study to introduce students to the various interpretations and outcomes of effective audience engagement, particularly as it relates to an arts organization’s mission, vision, and values. Drawing directly from their course work and research, students are paired with an arts organization to design a creative audience engagement strategy that both aligns with the organization’s mission and supports a new visionary initiative.

AACE 6300. Fundraising in the Arts. (3 Hours)

Offers advanced study of fundraising and resource development within the arts and cultural sector. Designed to help students develop the knowledge and skills required to create and increase various revenue streams. Covers fundraising ethics, grant writing, sponsorship proposals, pitching, stakeholder and volunteer engagement, storytelling, and other skills necessary to support fundraising goals. When applicable, students are encouraged to use this course to explore and apply fundraising fundamentals for their organization, startup, or creative practice.

AACE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Asian Studies (ASNS)

Courses

ASNS 1150. East Asian Studies. (4 Hours)

Seeks to provide an understanding of the constituent characteristics that originally linked East Asia as a region and the nature of the transformations that have occurred in the region over the last two thousand years. Concentrates on China and Japan, and addresses Korea and Vietnam where possible. Also seeks to provide students with effective interdisciplinary analytical skills as well as historical, ethical, cultural diversity, and aesthetic perspectives. ASNS 1150 and HIST 1150 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ASNS 1246. World War II in the Pacific. (4 Hours)

Studies World War II, the most devastating war in history, which began in Asia and had a great long-term impact there. Using historical and literary texts, examines the causes, decisive battles, and lingering significance of the conflict on both sides of the Pacific.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ASNS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ASNS 2245. Introduction to Asian American Studies. (4 Hours)

Seeks to provide an understanding of the major concepts, historical narratives, and analytical approaches in the field of Asian American studies. Concentrates on the experiences of migrants and descendants from China, Japan, India, Korea, the Philippines, and Southeast Asia. Offers students an opportunity to obtain interdisciplinary analytical skills, including approaches in history, anthropology, sociology, critical ethnic studies, American studies, cultural studies, and media studies.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ASNS 2290. Asian American Politics. (4 Hours)

Explores the political developments that gave rise to the term "Asian America" in the 1960s and investigates theoretical questions about the complexities and pluralities of the contemporary Asian American experience. Examines Asian American political participation around current issues such as immigration and migration patterns, intragroup coalitions, racial stereotypes, data disaggregation, political representation, voting patterns, policy preferences, and more. Considers the role of American political institutions—including federal, state, and local governments—and how public policies at all levels shape the political lives of Asian Americans in the United States.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ASNS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ASNS 3100. Asian American Cinemas. (4 Hours)

Introduces the multiple and complex histories of Asian American cinema, from its genesis as radical independent filmmaking to its development across commercial industries and new digital media. Concentrates on a range of creative productions, from documentary and narrative features to experimental, avant-garde, and short video. Offers students an opportunity to obtain the skills to analyze the institutional processes and historical contexts of Asian American cinema and the genres, techniques, and aesthetics of Asian American filmmakers.

Prerequisite(s): ENGW 1102 with a minimum grade of C- or ENGW 1111 with a minimum grade of C- or ENGW 1113 with a minimum grade of C- or ENGW 1114 with a minimum grade of C-

Attribute(s): NUpath Difference/Diversity, NUpath Integration Experience, NUpath Interpreting Culture

ASNS 3485. China: Governance and Foreign Policy. (4 Hours)

Focuses on China's political system and the major issues confronted: leadership recruitment and succession, economic policies and development, class and class struggle, political culture and socialization, human rights, civil society, the media, and both internal and external security concerns. Examines how ideology, development, culture, and the pursuit of China's national interest affect governance.

Prerequisite(s): POLS 1155 with a minimum grade of D-

ASNS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ASNS 4220. South Asian Diasporas. (4 Hours)

Seeks to provide an understanding of South Asians as one of the largest migrant communities globally, coming from India, Pakistan, Bangladesh, Nepal, Myanmar, Bhutan, and Sri Lanka. Concentrates on the diaspora as a heterogeneous group comprising multiple nationalities, religions, castes, classes, languages, and genders. Examines the history, opportunities, and challenges of South Asian mobility and migration. Draws from texts in sociocultural anthropology, Asian American studies, history, and transnational feminist studies to trace the emergence of a new global regime on migration and citizenship through the unprecedented mobility of South Asians in the 20th and 21st centuries.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ASNS 4900. Asian Studies Capstone Directed Study. (4 Hours)

Offers independent intensive reading and writing on key interdisciplinary issues in Asian studies under the direction of faculty members in Asian studies on a topic chosen in consultation with the instructor.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ASNS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ASNS 4992. Directed Study. (1-4 Hours)

Offers students an opportunity for special readings and research in asian studies. May be repeated without limit.

Behavioral Neuroscience (BNSC)

Courses

BNSC 1000. Behavioral Neuroscience at Northeastern. (1 Hour)

Introduces first-year and new transfer students to the major and the field of behavioral neuroscience and to the professional and academic resources available to students at Northeastern University. Acquaints students with their faculty, advisors, and fellow students; provides an initial orientation to undergraduate research, cooperative education, study abroad, and other experiential learning options; familiarizes students with academic support resources and leadership opportunities; provides grounding in the culture and values of the university community –in short, familiarizes students with all skills needed to become a successful university student.

BNSC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BNSC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BNSC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BNSC 4900. Behavioral Neuroscience Capstone. (1 Hour)

Designed as an integrative capstone experience for behavioral neuroscience students who are also enrolled in approved research courses where they conduct original research under the direction of an approved mentor. Students gain experience in writing a research proposal, conducting the proposed research, producing a research report, and presenting their work. Students engage in solving novel problems while reflecting on and integrating their prior learning in the discipline. Requires writing with revision and oral presentation. Offers students an opportunity to refine reflection and communication skills through formal and informal presentations, discussions, and critique.

Prerequisite(s): (BIOL 4991 (may be taken concurrently) with a minimum grade of D- or BNSC 4991 (may be taken concurrently) with a minimum grade of D- or BNSC 4994 (may be taken concurrently) with a minimum grade of D- or PSYC 4991 (may be taken concurrently) with a minimum grade of D-); (ENGW 3307 with a minimum grade of C or ENGW 3315 with a minimum grade of C or ENGW 3302 with a minimum grade of C)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

BNSC 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

BNSC 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

BNSC 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. Requires a 3.500 GPA. May be repeated without limit.

Prerequisite(s): BNSC 4970 with a minimum grade of D- or BNSC 4991 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

BNSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BNSC 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

BNSC 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

Biochemistry (BIOC)**Courses****BIOC 1000. Biochemistry at Northeastern. (1 Hour)**

Introduces first-year students to the major and the field of biochemistry and to the professional and academic resources available to students at Northeastern University. Acquaints students with their faculty, advisors, and fellow students; provides an initial orientation to undergraduate research, cooperative education, and other experiential learning options; helps develop the academic skills necessary to succeed; provides grounding in the culture and values of the university community; and assists in interpersonal skill development—in short, familiarizes students with the resources and skills needed to become a successful university student.

BIOC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOC 4900. Biochemistry Capstone. (1 Hour)

Designed for students who are also enrolled in approved 4-semester-hour research courses in which they each conduct original experimental work under the direction of an approved mentor. Requires reflection by students on their various educational experiences, extensive research of scientific questions related to these experiences (with the research itself carried out in the approved research course), and development of an original research report. Required components include writing with revision and a major oral presentation. Offers students an opportunity to hone reflection and communication skills through formal and informal presentations, class discussion, and critique. Requires concurrent registration in BIOC 4991, BIOC 4994, BIOL 4991, CHEM 4991, or other 4-SH research course approved by the Biochemistry Director.

Prerequisite(s): (BIOC 4991 (may be taken concurrently) with a minimum grade of D- or BIOC 4994 (may be taken concurrently) with a minimum grade of D- or BIOL 4991 (may be taken concurrently) with a minimum grade of D- or CHEM 4991 (may be taken concurrently) with a minimum grade of D-); (ENGW 3302 with a minimum grade of C or ENGW 3307 with a minimum grade of C or ENGW 3315 with a minimum grade of C)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

BIOC 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field. Requires dean's office approval. Can be combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project.

BIOC 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. Requires Dean's office approval.

Prerequisite(s): (BIOC 4970 with a minimum grade of D- or BIOC 4991 with a minimum grade of D- or BIOL 4970 with a minimum grade of D- or BIOL 4991 with a minimum grade of D- or CHEM 4750 with a minimum grade of D- or CHEM 4901 with a minimum grade of D- or CHEM 4970 with a minimum grade of D-); (ENGW 3302 with a minimum grade of C or ENGW 3307 with a minimum grade of C or ENGW 3315 with a minimum grade of C)

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

BIOC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOC 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit. Cannot be a paid experience.

Attribute(s): NUpath Integration Experience

BIOC 4994. Internship. (4 Hours)

Offers an opportunity for students who have completed a co-op to undertake an unpaid internship. May be repeated twice for credit.

Attribute(s): NUpath Integration Experience

BIOC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Bioengineering (BIOE)

Courses

BIOE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOE 2350. Biomechanics. (4 Hours)

Designed to acquaint students with concepts of stress, strain, and constitutive laws as applied to problems in biomechanics. Introduces rigid body and deformable body mechanics. Focuses on basic foundations of solid mechanics using vectors and tensors. Illustrative examples from tissue and cell biomechanics are given where appropriate.

Prerequisite(s): (MATH 1252 with a minimum grade of D- or MATH 1342 with a minimum grade of D-); (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-)

BIOE 2355. Quantitative Physiology for Bioengineers. (4 Hours)

Introduces engineering and science students to core knowledge and understanding of physiological systems and processes. Focuses on quantitative analysis of human physiological systems. Topics include the physical and chemical foundations of physiology; coupled forces and flows; electrical, mechanical, and chemical potentials and their conjugated fluxes; and the physiology of excitable tissue. Examines cell structure, function, and homeostasis with a particular focus on membrane transport, osmotic pressure, cell signaling, and cellular energetics.

Prerequisite(s): MATH 2341 (may be taken concurrently) with a minimum grade of D- ; (CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D- or CHEM 1217 with a minimum grade of D-); (PHYS 1155 (may be taken concurrently) with a minimum grade of D- or PHYS 1165 (may be taken concurrently) with a minimum grade of D- or PHYS 1175 (may be taken concurrently) with a minimum grade of D-)

BIOE 2365. Bioengineering Measurement, Experimentation, and Statistics. (4 Hours)

Introduces the fundamentals of biomedical data acquisition and statistical analysis. Engineering statistics topics include descriptive statistics, probability distributions, hypothesis testing, analysis of variance, and experiment design. Applies these statistical topics by analyzing data obtained from laboratory exercises in BIOE 2366. Laboratory exercise topics include cell culture, mechanical testing, modeling medical imaging data, 3D printing, and bioprinting. Emphasizes using MATLAB software to analyze data on the computer.

Prerequisite(s): (BIOL 1107 (may be taken concurrently) with a minimum grade of D- or BIOL 1111 (may be taken concurrently) with a minimum grade of D- or BIOL 1115 (may be taken concurrently) with a minimum grade of D-); (MATH 1252 (may be taken concurrently) with a minimum grade of D- or MATH 1342 (may be taken concurrently) with a minimum grade of D-); (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Corequisite(s): BIOE 2366

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

BIOE 2366. Lab for BIOE 2365. (1 Hour)

Offers associated laboratory exercises for BIOE 2365. Requires lab reports from all students.

Corequisite(s): BIOE 2365

BIOE 2949. Introductory Directed Research in Bioengineering. (4 Hours)

Offers an opportunity to pursue project and other independent inquiry opportunities under faculty supervision for first- and second-year students. The course is initiated with a student-developed proposal, including expected learning outcomes and research products, which is approved by a faculty member in the department. Permission of instructor required.

BIOE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOE 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors. May be repeated up to nine times.

BIOE 3210. Bioelectricity. (4 Hours)

Discusses principles of electrical circuit theory and analysis methods for understanding and designing biomedical devices and biological sensors. Covers basic circuit components, network analysis methods, RC and RL circuits, AC circuit analysis, equivalent circuits, biopotential amplifiers, and biopotential electrodes. Introduces biosensing, biosignal processing, and operating principles of electrically active cells and tissues.

Prerequisite(s): (MATH 2321 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-); (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-)

BIOE 3310. Transport and Fluids for Bioengineers. (4 Hours)

Covers the fundamental principles of processes and systems in which mass, energy, and momentum are transported in typical biological problems. Emphasizes momentum transport for incompressible and compressible fluids (fluid flow) and energy transport. The methods taught are relevant to the analysis of physiological systems, processing, and separation of biological materials.

Prerequisite(s): BIOE 2350 with a minimum grade of D- ; BIOE 2355 with a minimum grade of D- ; (MATH 2321 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-)

BIOE 3380. Biomolecular Dynamics and Control. (4 Hours)

Focuses on the principles of thermodynamics and kinetics applied to the analysis and design of biomolecular systems. Covers foundational topics—such as mass and energy balances, chemical equilibria, and enzyme kinetics—in a biological context. Introduces the role of feedback and feed-forward control in biomolecular networks, emphasizing basic analytical and computational methods, including the use of MATLAB, for analyzing how these regulatory structures affect the dynamics of small-scale, prototypical networks.

Prerequisite(s): (MATH 2321 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-); BIOE 2355 with a minimum grade of D-

BIOE 3410. Experimental Laboratory Methods. (4 Hours)

Offers advanced bioengineering laboratory exercises with emphasis on techniques central to molecular, cellular, and tissue engineering. Laboratory exercise topics include PCR and qPCR, protein chemistry, bioconjugation, enzyme kinetics and enzyme-substrate interactions, polymers, surface modification, 3D bioprinting, fluorescence microscopy, and image analysis. Students build on previous courses by applying experimental design concepts, including sample size selection for statistical power, repeats vs. replicates, experimental treatments and groupings for ANOVA and mixed model analysis, and designing a robust standard curve, to research questions. Students apply MATLAB, microscopy imaging software, and molecular visualization and docking software to analyze experimental data. Requires in-class participation and written lab assignments and reports from all students.

Prerequisite(s): BIOE 2365 with a minimum grade of D- ; BIOE 2366 with a minimum grade of D-

BIOE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOE 4790. Capstone Design 1. (4 Hours)

Offers the first in a two-course sequence of capstone design. Introduces principles of engineering design and applies them to the design of bioengineered devices. Topics consist of ethics, cost engineering, research methods, intellectual property, technical report writing, and FDA design control—including inputs, outputs, verification, validation, and design history files. Students are formed into teams and paired with a faculty advisor and supporter. Project support can be departmental, industrial, or external. Students defend a preliminary design project proposal in written and oral form before a faculty jury.

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

BIOE 4792. Capstone Design 2. (4 Hours)

Continues BIOE 4790. Offers students an opportunity to apply design principles to create a device or process to solve a relevant bioengineering problem. Teams develop, construct, and evaluate prototypes under real-world fiscal, regulatory, and safety conditions. Progress is monitored through a series of oral presentations in design gate review meetings. The design process is documented in a design history file that is reviewed throughout the course. Requires students to complete a working prototype or simulation, as appropriate, and a final written report.

Prerequisite(s): BIOE 4790 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

BIOE 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

BIOE 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): BIOE 4970 with a minimum grade of D-

BIOE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOE 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

Attribute(s): NUpath Integration Experience

BIOE 4992. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department under a chosen topic. Course content depends on instructor. May be repeated without limit.

BIOE 5060. Special Topics in Bioengineering. (4 Hours)

Focuses on topics of timely interest to students of science and engineering. Topic varies from semester to semester. When appropriate, the course takes advantage of unique opportunities afforded by visiting faculty and guests. May be repeated once.

BIOE 5115. Dynamical Systems in Biological Engineering. (4 Hours)

Introduces the theoretical analysis and modeling of dynamical systems in biology, ranging from molecular to population applications. Topics include difference and differential equation models, with basic theory including nondimensionalization, steady states, linearization, stability, eigenvalues, global behavior, singular perturbations, multistability, hysteresis, cooperativity, periodic solutions, excitable systems, bifurcations; and an introduction to spatial (PDE) models. Develops all concepts in the context of concrete biological applications, such as gene regulation; chemical reaction networks and stoichiometry; drug models and PK/PD; receptor/ligand interactions; synthetic constructs; action potential generation; enzymatic reactions; population interactions; epidemiology; epigenetic phenomena, including differentiation and transport; chemotaxis; and diffusion.

Prerequisite(s): MATH 2341 with a minimum grade of D- or graduate program admission

BIOE 5235. Biomedical Imaging. (4 Hours)

Presents the foundations of modern medical imaging, including imaging principles, imaging mathematics, imaging physics, and image-generation techniques. Includes X-ray, ultrasound, computed tomography, and magnetic resonance imaging.

Prerequisite(s): BIOE 3210 with a minimum grade of D- or graduate program admission

BIOE 5250. Regulatory and Quality Aspects of Medical Device Design. (4 Hours)

Covers engineering design challenges intrinsic to the development of biomedical devices, including clinical evaluation, manufacture, and testing of medical devices and the constraints that FDA regulations place on these processes. Topics include quality systems, design control, cybersecurity concerns, the role of standards in global device regulation, and the design process. Students are asked to form teams and to carry out a semester-long conceptual design project to develop a design overview, design plan, design input specifications, and verification test procedures for a novel medical device.

BIOE 5410. Molecular Bioengineering. (4 Hours)

Introduces the fundamentals of molecular structure and function that underpin engineering of biological macromolecules. Builds on this base with the application of design concepts for molecules and methods of structural and functional analyses and strategies for design and redesign of therapeutic molecules. Projects seek to provide students with experience in conceptual design to create strategies to address significant health concerns.

Prerequisite(s): ((BIOL 1111 with a minimum grade of D- or BIOL 1115 with a minimum grade of D-); MATH 1342 with a minimum grade of D-) or graduate program admission

BIOE 5411. Applied Molecular Bioengineering. (4 Hours)

Examines the fundamentals of molecular structure and function within cellular systems, and studies how to build tools based on those fundamental principles for manipulating or analyzing biological systems. Covers a range of topics including chemical structure of biological macromolecules; central dogma; tools to synthesize, perturb, and analyze biological macromolecules; as well as more applied topics including gene therapies and vaccine development. Emphasizes design principles of molecular bioengineering, developing familiarity with publicly available molecular biology software and databases, as well as science communication.

BIOE 5420. Cellular Engineering. (4 Hours)

Analyzes the techniques that form the foundation of molecular cell engineering, including recombinant DNA, cloning and genomics, prokaryotic and eukaryotic gene regulation and single-cell gene expression, structure, dynamics of gene regulatory networks, metabolism and cellular energetics, cell structure, cytoskeleton and cellular motors, synthetic gene circuits, and metabolic engineering.

Prerequisite(s): BIOE 2355 (may be taken concurrently) with a minimum grade of D- or graduate program admission

BIOE 5430. Principles and Applications of Tissue Engineering. (4 Hours)

Applies the principles of biology and biomedical engineering to the creation of artificial organs for transplantation, basic research, or drug development. Requires integration of knowledge of organic chemistry, cell biology, genetics, mechanics, biomaterials, nanotechnology, and transport processes to create functional organs. Reviews basic cell culture techniques, structure function relationships, cellular communication, natural and artificial biomaterials, and the basic equations governing cell survival and tissue organization.

Prerequisite(s): BIOE 2355 (may be taken concurrently) with a minimum grade of D- or graduate program admission

BIOE 5440. The Cell as a Machine. (4 Hours)

Introduces the key roles that physical forces, the extracellular matrix, and cytoskeletal structure play in the development of human diseases. The cell is viewed as an engineering system that is capable of sensing physical cues from its environment, integrating such information from different mechano-sensors, and responding to changes in its external environment in a coherent manner. Uses mathematical and computational models to explain how cells sense and respond to physical cues.

Prerequisite(s): ((BIOE 3380 with a minimum grade of D- ; BIOE 2350 with a minimum grade of D-) or ME 2355 with a minimum grade of D-) or graduate program admission

BIOE 5450. Stem Cell Engineering. (4 Hours)

Covers engineering principles and approaches in stem cell research and their application in tissue engineering and regenerative medicine. Emphasizes recent technology and engineering tools used to understand and manipulate stem cells. Topics covered include embryonic and adult stem cell biology fundamentals; quantitative modeling of stem cell signaling; genetic/biochemical/biophysical/biomechanical/biomaterials tools to control stem cell fate and differentiation; epigenetic editing and cellular reprogramming; engineering biomimetic and bioreactor environments to develop stem-cell-based therapies; and various applications in tissue development, diseases, and regeneration.

Prerequisite(s): (BIOE 5420 with a minimum grade of C- or BIOE 5420 with a minimum grade of D-); (BIOE 5430 with a minimum grade of C- or BIOE 5430 with a minimum grade of D-)

BIOE 5510. Bioengineering Products/Technology Commercialization. (4 Hours)

Focuses on the translation and commercialization of bioengineering products and technology. Offers students an opportunity to gain essential entrepreneurship skills through studying and exercising the key elements and processes in establishing and launching a biotechnology startup. Examines how to assess bioengineering product and technology opportunities, evaluate the technology's market potential, navigate the landscape of intellectual property protection and FDA regulation for bioengineering products, form a biotechnology startup company, write a business plan, and pitch startups to prospective investors. Covers fundamentals of engineering economics.

BIOE 5630. Physiological Fluid Mechanics. (4 Hours)

Analyzes biofluids and their mechanics, including cardiovascular fluid mechanics. Examples are taken from biotechnology processes and physiologic applications, including the cardiovascular, respiratory, ocular, renal, musculoskeletal, and gastrointestinal systems. Topics include dimensional analysis, particle kinematics in Eulerian and Lagrangian reference frames, constitutive equations and Newtonian/non-Newtonian biofluid models, flow and wave propagation in flexible tubes, and oscillatory and pulsatile flows.

Prerequisite(s): (BIOE 3310 with a minimum grade of D- or ME 3475 with a minimum grade of D- or ME 3480 with a minimum grade of D-) or graduate program admission

BIOE 5640. Computational Biomechanics. (4 Hours)

Identifies and reviews the fundamental conservation principles that govern structural mechanics and fluid dynamics in biological systems. Discusses the following numerical analysis techniques: parameter estimation, finite difference, numerical integration, and finite element methods. By combining conservation laws with numerical analyses techniques, develops approaches to describe the physiological function of various biological systems, allowing for a system of equations to be used to describe a biological problem and solve this system numerically to predict its behavior.

BIOE 5648. Biomedical Optics. (4 Hours)

Covers biomedical optics and discusses the theory and practice of biological and medical applications of lasers. Topics covered include fundamentals of light propagation in biological tissues; light-matter interactions such as elastic and inelastic scattering; fluorescence and phosphorescence; diagnostic imaging techniques such as confocal fluorescence microscopy, diffuse optical tomography, and optical coherence tomography; and therapeutic interventional techniques, including photodynamic therapy, laser thermal therapies, and fluorescence-guided surgeries. EECE 5648 and BIOE 5648 are cross-listed.

Prerequisite(s): BIOE 3210 with a minimum grade of D- or EECE 2150 with a minimum grade of D- or graduate program admission

BIOE 5650. Multiscale Biomechanics. (4 Hours)

Seeks to help students develop and apply scaling laws and continuum mechanics to biomechanical phenomena at different length scales starting from a single molecule, moving up to the cellular and tissue levels. Topics include structure of tissues and the molecular basis for macroscopic properties; chemical and electrical effects on mechanical behavior; cell mechanics, motility, and adhesion; biomembranes; biomolecular mechanics and molecular motors; and experimental methods for probing structures at the tissue, cellular, and molecular levels.

Prerequisite(s): (BIOE 2355 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-) or graduate program admission

BIOE 5660. Integrative Mechanobiology. (4 Hours)

Introduces integrative approaches to mechanobiology, from molecular and cell behavior to multicellular, tissue, and organ environments. Covers mechanical basis of life, cytoskeletal forces and structure, rheological properties of cells, mechanobiology technologies and models, mechanics of cancer, embryogenic development and stem cells, and aging. Discusses critical issues facing mechanobiology for solving medical and health problems.

Prerequisite(s): BIOE 2350 with a minimum grade of D- or graduate program admission

BIOE 5710. Experimental Systems and Synthetic Bioengineering. (4 Hours)

Introduces experimental aspects of systems and synthetic bioengineering. Offers students an opportunity to learn how to plan and execute quantitative experiments, how to apply engineering principles to design laboratory research and to interpret data, and how to design and implement synthetic genetic or enzymatic circuits. Through team projects, explores techniques in nucleic acid, protein, and genetic engineering; quantitative measurements at the single-cell level and beyond; design and applications of synthetic circuits; and discusses ethical considerations.

Prerequisite(s): BIOE 2355 with a minimum grade of D- or graduate program admission

BIOE 5720. Physical Bioengineering. (4 Hours)

Covers biopolymer conformations, cell membrane mechanics, chemical reaction kinetics and applications to polymerization and molecular motors, electric fields, and action potential propagation. Recent years have seen a tremendous growth in the use of ideas and methods from physical science and engineering to obtain a better understanding of biological phenomena and for applications of that understanding to societal needs, ranging from health to agriculture. Underlying these efforts are principles from statistical physics that establish the framework for this increasingly popular part of bioengineering.

Prerequisite(s): BIOE 2365 with a minimum grade of D- or BIOE 3380 with a minimum grade of D- or graduate program admission

BIOE 5750. Modeling and Inference in Bioengineering. (4 Hours)

Develops a set of statistical tools to address poorly posed inverse problems. Interpreting complex and partial information is a routine task in research as well as in our daily lives. Such tasks include estimating quantitative properties of a biological system from indirect noisy measurements, responding to fluctuating environmental signals, or breaking encrypted messages. Common to these diverse questions is a need to construct a predictive model from partial data. Draws on examples from primary literature in biology to study text recognition, trait mapping, sequence alignment, decoding cryptographs, processing of chemoattractive signals to find food, and survival strategies of bacteria in unpredictable environments.

Prerequisite(s): ((MATH 2321 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-); (BIOE 2365 with a minimum grade of D- or (CHME 3315 with a minimum grade of D- ; CHME 4315 with a minimum grade of D-))) or graduate program admission

BIOE 5760. Method and Logic in Systems Biology and Bioengineering. (4 Hours)

Emphasizes difficulties that lie at the interface of theory and experiment in bioengineering and systems biology. Covers stem cell engineering, directed differentiation, engineering biological circuits, cooperativity, robust adaptation, kinetic proofreading, signal transduction and information processing in biological systems, network analysis, dynamical systems, and biological design principles. This course is based on reading and discussing primary literature that exemplifies approaches that have revealed new concepts and principles governing biological systems. Each week, students read and discuss two important papers. The instructor provides relevant background and frames the examined papers in the context of the field and their time period as the basis for class discussion.

BIOE 5800. Systems, Signals, and Controls for Bioengineers. (4 Hours)

Explores the concept of systems and transfer functions to allow engineers to break down a complex system into simpler systems and to combine simpler modules to form complex functions. Presents a set of analytical tools and focuses on applying frequency-domain analyses (e.g., Fourier, Laplace, and Z transforms) to simplify continuous and discrete-time systems and gain insights regarding their stability and frequency responses. Offers students an opportunity to understand, characterize, and combine analog and digital signals produced by electronic and biological circuits, as well as design controllers to achieve desired biosystem behavior. Using this knowledge, students design filters and controllers, both in the analog and digital forms, and measure and manipulate complex real-world bioengineering systems (including image processing for 2D signals).

Prerequisite(s): BIOE 3210 with a minimum grade of D- or graduate program admission

BIOE 5810. Design of Biomedical Instrumentation. (4 Hours)

Investigates the principles of biology and engineering underlying the design and use of biomedical instrumentation. Topics include design of a broad range of instrumentation and monitoring devices, sensors, and integrated systems. Graduate students interested in taking this course should have completed an equivalent introductory circuits course.

Prerequisite(s): (BIOE 2365 with a minimum grade of D- ; BIOE 3210 with a minimum grade of D-) or graduate program admission

BIOE 5820. Biomaterials. (4 Hours)

Offers a broad overview of the field of biomaterials (materials used in medical devices that interact with living tissues). Introductory lectures cover biomaterials and their translation from the laboratory to the medical marketplace. Discusses important biomaterials terminology and concepts. Emphasizes material structure-property-function-testing relationships and discusses specific materials used in medical devices and drug delivery. Concludes with introductions to topics in the field, such as biomaterials-tissue interactions, tissue engineering, and regulatory requirements. Considers principles of device design as related to the selection and application of biomaterials.

Prerequisite(s): (CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D- or CHEM 1217 with a minimum grade of D-) or graduate program admission

BIOE 5850. Design of Implants. (4 Hours)

Uses an interdisciplinary approach to evaluate how a team designs medical implants to meet unmet clinical needs. Covers biomaterials, interfacial phenomena/surface science, phenomena/surface science, the lymphatic system, immune response, aging, mechanical factors, sterilization methods, and human factors. Presents exogenous factors, including intellectual property, regulatory requirements, affordability, product liability, and bioethics. The class is divided into teams that design proprietary medical devices using a unit processes/case study approach presented by experts with firsthand experience in meeting unmet market needs.

Prerequisite(s): BIOE 5820 (may be taken concurrently) with a minimum grade of D- or BIOE 5820 (may be taken concurrently) with a minimum grade of C- (Graduate)

BIOE 5860. Engineering Approaches to Precision Medicine I. (4 Hours)

Covers the field of biomedical data science. Teams of students undertake projects solicited from biomedical PIs in broad areas of biomedical research, using datasets and developing a project work plan. Studies how to estimate a patient's state of health using their health data and to use modeling and machine learning methods to project that health state to make personalized predictions. Includes lectures on physiology, medicine, and engineering principles (probability, machine learning) relevant to each project; faculty mentors assist student projects with challenges. Requires project updates to the class at regular intervals so that teams gain experience with presenting.

Prerequisite(s): MATH 2341 with a minimum grade of D- or MATH 2331 with a minimum grade of D- or graduate program admission

BIOE 5870. Engineering Approaches to Precision Medicine II. (4 Hours)

Applies core knowledge of biomedical data science methods developed in BIOE 5860 to students' research projects under the mentorship of biomedical and engineering PIs. Research projects originate from clinical research and are designed to train students in understanding how to mathematically and computationally define and estimate a patient's state of health and how to use modeling and machine learning methods to make personalized predictions. Successfully making predictions in advance allows physicians to intervene early to help the patient.

Prerequisite(s): BIOE 5860 with a minimum grade of C-

BIOE 5880. Computational Methods in Systems Bioengineering. (4 Hours)

Introduces students to the use of computational methods in studies of systems biology, computational bioengineering, and data science and their extended utilities in a wide variety of applications in science and engineering. Covers basic elements of numerical methods and algorithms for solving different types of differential equations, running simulations, and performing optimization and data analysis. Emphasizes the concept and principle of each algorithm and its usage in R programming in the context of real-world applications in systems biology, bioinformatics, computational biology, and data science.

Prerequisite(s): BIOE 3380 with a minimum grade of D- or graduate program admission

BIOE 6000. Principles of Bioengineering. (1 Hour)

Covers the fundamentals of bioengineering research topics and methodology for master's-level bioengineering students. Internal and external speakers discuss general topics in bioengineering, including the medical device qualification and regulatory environment, tissue engineering, cell engineering, mechanobiology, drug delivery, bioimaging, neuromotor control, and effective design of experiments. Each student is expected to read, critically evaluate, and present research in a peer-reviewed bioengineering journal article.

BIOE 6100. Medical Physiology. (4 Hours)

Designed to provide bioengineering students with a working knowledge of the integrated behavior of organs and systems in the human body. As such, the student is provided with a comprehensive and intense immersion in each physiological subsystem with the expectation that he or she display knowledge of each at the level equivalent to that of a second-year medical student following his or her exposure to physiology. The specific subsystems covered are muscle physiology, cardiovascular physiology with ECG interpretation, pulmonary physiology with gas exchange mechanics and ventilation/perfusion, renal physiology and water balance, regulation of pH, gastrointestinal physiology, temperature regulation and energy balance, endocrine systems, and reproductive systems. The course does not cover neurophysiology.

BIOE 6200. Mathematical Methods in Bioengineering. (4 Hours)

Offers an overview of quantitative techniques that students will encounter in their research, providing a language and a foundation for more specialized study. Introduces basic concepts from linear algebra, ordinary and partial differential equations, transforms, function approximation, probability, statistics, and numerical computation, illustrated by applications in biology and medicine.

BIOE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOE 7000. Principles of Bioengineering. (4 Hours)

Designed to introduce new graduate bioengineering students to the fundamentals of bioengineering research topics and methodology. Includes outside speakers to discuss general topics in bioengineering. Examples of course topics include the medical device qualification and regulatory environment, tissue engineering, cell engineering, mechanobiology, drug delivery, bioimaging, neuromotor control, effective design of experiments, writing research proposals for the National Institutes of Health (NIH) and how to evaluate and write a peer-reviewed journal article, etc. Expects students to read, critically evaluate, and present the research in a bioengineering journal article. Students are then expected to extend their article into a hypothesis-driven proposal in NIH format with an oral defense of the proposal.

BIOE 7374. Special Topics in Bioengineering. (4 Hours)

Offers topics of current interest in bioengineering. May be repeated up to nine times.

BIOE 7390. Seminar. (0 Hours)

Presents topics of an advanced nature by faculty, outside speakers, and students in the graduate program. May be repeated without limit.

BIOE 7391. Student Seminar. (0 Hours)

Offers students an opportunity to practice clear and concise oral communication of research to an audience of people with a variety of skills and differing expertise. This is an essential skill for anyone seeking a career in scientific research and beyond. It differs from communicating research to a group meeting or a conference presentation, which is comprised of audiences of fellow specialists who are already familiar with the field and its specialized terminology. Students instead present to a diverse, interdisciplinary group of peers (i.e., the Department of Bioengineering and other members of the Northeastern community). Maybe be repeated once.

BIOE 7945. Master's Project. (4 Hours)

Offers analytical and/or experimental work leading to a written report and a final short presentation by the end of the semester.

BIOE 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOE 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated twice for up to 12 semester hours.

BIOE 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

BIOE 7990. Thesis. (4 Hours)

Offers analytical, research, and/or experimental work conducted under the auspices of the department. May be repeated once.

BIOE 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues thesis work conducted under the supervision of a departmental faculty.

BIOE 8960. Exam Preparation—Doctoral. (0 Hours)

Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision. Intended for students who have completed all required PhD course work and have not yet achieved PhD candidacy; students who have not completed all required PhD course work are not allowed to register for this course. May be repeated once.

BIOE 8986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

BIOE 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

BIOE 9986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated up to nine times.

BIOE 9990. Dissertation Term 1. (0 Hours)

Offers theoretical and/or experimental work conducted under the auspices of the department.

Prerequisite(s): BIOE 9000 with a minimum grade of S

BIOE 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): BIOE 9990 with a minimum grade of S

BIOE 9996. Dissertation Continuation. (0 Hours)

Offers continued dissertation work conducted under the supervision of a departmental faculty member.

Prerequisite(s): BIOE 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Bioinformatics (BINF)**Courses****BINF 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BINF 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BINF 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BINF 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BINF 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned', and incorporate suggestions from this review to improve and further develop their career development and professional plan. May be repeated twice.

BINF 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated twice.

BINF 6062. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BINF 6200. Bioinformatics Programming. (4 Hours)

Focuses on the fundamental programming skills required in the bioinformatics industry. Focuses on Python and R as the main programming language used. Topics include string operations, file manipulation, regular expressions, object-oriented programming, data structures, testing, program design, and implementation. Includes substantial out-of-classroom assignments.

BINF 6201. Introduction to Bioinformatics Using RNA Sequencing. (4 Hours)

Introduces RNA-Seq, a commonly used method for analyzing gene expression. Offers students an opportunity to obtain hands-on experience processing and analyzing high-throughput sequencing data, as well as exposure to NGS and RNA-Seq processes, applications, and terminology.

BINF 6250. Algorithmic Foundations in Bioinformatics. (3 Hours)

Explores algorithmic principles in the context of bioinformatics. Through a dynamic and comprehensive journey encompassing sequence alignment, genome assembly, phylogenetics, hidden Markov models, and predictive analyses in protein and RNA structures, delves into the core techniques essential for deciphering biological data. Uses lectures, hands-on sessions, and case studies to offer students an opportunity to obtain a rich understanding of how algorithms drive insights into evolutionary relationships, genetic patterns, and molecular structures.

Prerequisite(s): BINF 6200 with a minimum grade of C- or BINF 6200 with a minimum grade of C-

BINF 6308. Bioinformatics Computational Methods 1. (4 Hours)

Offers the first semester of a two-semester sequence on the use of computers in bioinformatics research. Offers students an opportunity to work with current methods and computational algorithms used in contemporary sequence analysis. Teaches practical skills necessary to manage and mine the vast biological information being generated and housed in public databases. Emphasizes the use of Python as the primary computer language and requires students to learn and understand basic computer logic and syntax, including an introduction to scalars, arrays, hashes, decision statements, loops, subroutines, references, and regular expressions. A focus on fundamental skills, including the command line interface found in the Linux operating system, is designed to prepare students for second-semester applications.

BINF 6309. Bioinformatics Computational Methods 2. (4 Hours)

Designed to build upon the core topics covered in BINF 6308, i.e., use of the computer as a tool for bioinformatics research. Builds upon the Python language fundamentals covered during the first semester but requires students to apply these fundamentals to a semester-long project. The project includes protein family analysis, multiple sequence analysis, phylogeny, and protein structure analysis. Additionally, students have an opportunity to learn to build, load, connect, and query custom MySQL databases, and parse command line flags.

Prerequisite(s): BINF 6308 with a minimum grade of C- or BINF 6308 with a minimum grade of C- or BIOL 6308 with a minimum grade of C-

BINF 6310. Introduction to Computational Methods in Bioinformatics. (4 Hours)

Focuses on the core bioinformatics skill set and knowledge base necessary to conduct exploratory data analysis of large-scale biological data. Offers students an opportunity to work with the latest computational approaches in the context of real-world data and to obtain practical skills necessary to access, manage, and mine the vast biological information housed in public repositories. Presents core computational skills. Introduces DevOps concepts including version control, using Linux, as well as introductory CLI Logic and syntax related to pipeline development. Reviews basic molecular biology concepts and techniques necessary for contemporary bioinformatics analytical approaches. Examines similarities and differences among applications of next-generation sequencing and third-generation sequencing platforms. Covers sequence similarity analysis methods and related biological file formats.

Prerequisite(s): BINF 6200 (may be taken concurrently) with a minimum grade of C- or BINF 6200 (may be taken concurrently) with a minimum grade of C- or DS 2500 with a minimum grade of C-

BINF 6400. Genomics in Bioinformatics. (4 Hours)

Introduces the field of genomics. With the completion of the Human Genome Project several years ago, there has been an explosion of genetic data collected. Focuses on the bioinformatics tools necessary to analyze large-scale genomic data. Covers topics such as phylogenetic trees, molecular evolution, gene expression profiling, heterogeneous genomic data, as well as next-generation sequencing (NGS) data.

Prerequisite(s): ((BINF 6200 with a minimum grade of C- or BINF 6200 with a minimum grade of C-); (BINF 6310 with a minimum grade of C- or BINF 6310 with a minimum grade of C-)) or ((BINF 6308 with a minimum grade of C- or BINF 6308 with a minimum grade of C-); (BINF 6309 with a minimum grade of C- or BINF 6309 with a minimum grade of C-))

BINF 6420. Omics in Bioinformatics. (4 Hours)

Focuses on some of the omics, other than genomics and proteomics, in relation to the bioinformatic tools that exist to analyze data. Provides a brief background on each field of study and then focuses on the current bioinformatics tools used. Topics include transcriptomics (transcription and gene expression), metabolomics (metabolism), glycomics (carbohydrates), lipomics (lipids), and phenomics (phenotypic data). Does not cover genomics and proteomics.

Prerequisite(s): ((BINF 6310 with a minimum grade of C- or BINF 6310 with a minimum grade of C-); (BINF 6200 with a minimum grade of C- or BINF 6200 with a minimum grade of C-)) or ((BINF 6308 with a minimum grade of C- or BINF 6308 with a minimum grade of C-); (BINF 6309 with a minimum grade of C- or BINF 6309 with a minimum grade of C-))

BINF 6430. Transcriptomics in Bioinformatics. (4 Hours)

Introduces the study of the complete RNA transcriptome, otherwise known as "transcriptomics." Covers the molecular genetics that underlie RNA and its various sequencing protocols (e.g., RNA-seq, ATAC-seq, and scRNA-seq), data preprocessing, transcriptome assembly, differential gene expression, and gene set enrichment analysis. Throughout the course and in collaboration with our academic partners, students take part in experiential learning by processing and analyzing various real-world RNA-seq datasets, including bulk RNA and single-cell sequencing.

Prerequisite(s): ((BINF 6310 with a minimum grade of C- or BINF 6310 with a minimum grade of C-); (BINF 6200 with a minimum grade of C- or BINF 6200 with a minimum grade of C-)) or ((BINF 6308 with a minimum grade of C- or BINF 6308 with a minimum grade of C-); (BINF 6309 with a minimum grade of C- or BINF 6309 with a minimum grade of C-))

BINF 6500. Professional Development for Co-op. (0 Hours)

Introduces the cooperative education program. Offers students an opportunity to develop job-search and career-management skills; to assess their workplace skills, interests, and values and to discuss how they impact personal career choices; to prepare a professional resumé; and to learn proper interviewing techniques. Explores career paths, choices, professional behaviors, work culture, and career decision making.

BINF 6900. Pre-Co-op Experience. (0 Hours)

Offers students an opportunity to gain necessary skills and practical experience in order to prepare for graduate co-op.

BINF 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

BINF 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BINF 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

BINF 6965. Co-op Work Experience Abroad. (0 Hours)

Offers eligible students an opportunity for work experience abroad. May be repeated without limit.

BINF 7700. Bioinformatics Research Directions. (4 Hours)

Delves into the foundations of research planning and implementation in bioinformatics. Offers students an opportunity to learn experimental design and organization of the research process, as well as to develop the skills and techniques for writing, communication, and presentation of research work. Students work with a faculty member to design and conduct a short research project in the faculty member's area of research, present to different audiences, and construct a proposal for continuing their research.

Prerequisite(s): (BINF 6200 with a minimum grade of C- or BINF 6200 with a minimum grade of C-); (BINF 6310 with a minimum grade of C- or BINF 6310 with a minimum grade of C-); MATH 7340 with a minimum grade of C-

Biology (BIOL)**Courses****BIOL 1000. Biology at Northeastern. (1 Hour)**

Introduces first-year students to the major and the field of biology and to the professional and academic resources available to students at Northeastern University; acquaints students with their faculty, advisors, and fellow students; provides an initial orientation to undergraduate research, cooperative education, and other experiential learning options; helps develop the academic skills necessary to succeed; provides grounding in the culture and values of the university community; and assists in interpersonal skill development—in short, familiarizes students with the resources and skills needed to become a successful university student.

BIOL 1107. Foundations of Biology. (4 Hours)

Introduces evolutionary principles, cellular structure and function, genetic transmission, energy pathways, and physiology. Covers current topics in biology and evaluates and discusses current scientific literature. Explores the interdisciplinary nature of biology. Offers students an opportunity to prepare for the topical inquiries in biology courses.

Corequisite(s): BIOL 1108

BIOL 1108. Lab for BIOL 1107. (1 Hour)

Accompanies BIOL1107. Includes various lab experiments that emphasize evolutionary principles, cellular structure and function, genetic transmission, energy pathways, and physiology.

Corequisite(s): BIOL 1107

BIOL 1111. General Biology 1. (4 Hours)

Explores basic principles of biology with a focus on those features shared by all living organisms and seen through the lens of evolutionary theory. Through lectures, readings and discussion, offers students an opportunity to understand how the scientific method has been and is used to address biological questions. Central topics include recent advances in cell anatomy and physiology, including the interplay between organelles, membrane transport, and cell-signaling; energy transfer through cells and through the biosphere; cellular reproduction and cancer; heredity and human genetic disorders; and protein synthesis and biotechnology. Explores the societal implications of such topics as biopharmaceuticals, ocean acidification, climate change, human diseases, epigenetics, cancer, and cloning.

Attribute(s): NUpath Natural/Designed World

BIOL 1112. Lab for BIOL 1111. (1 Hour)

Accompanies BIOL 1111. Offers students an opportunity to collect quantitative data through hands-on experimentation as well as simulations. Data is analyzed statistically and presented in written form.

Prerequisite(s): BIOL 1111 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

BIOL 1113. General Biology 2. (4 Hours)

Continues BIOL 1111. Examines the evolution of structural and functional diversity of organisms; the integrative biology of multicellular organisms; and ecological relationships at the population, community, and ecosystem levels.

Prerequisite(s): BIOL 1101 with a minimum grade of D- or BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

BIOL 1114. Lab for BIOL 1113. (1 Hour)

Accompanies BIOL 1113. Covers topics from the course through various experiments.

Prerequisite(s): BIOL 1113 (may be taken concurrently) with a minimum grade of D-

BIOL 1141. Microbes and Society. (4 Hours)

Introduces the unseen world of microorganisms. Students analyze how the growth and behavior of this diverse group of organisms affect many aspects of human society including agriculture and food preparation; drug development and manufacture; liquid and solid waste management; genetic engineering; geochemical cycles; and health and disease.

Attribute(s): NUpath Natural/Designed World

BIOL 1143. Biology and Society. (4 Hours)

Offers an overview of how biology weaves its way across a broad spectrum of complex societal issues. Introduces students to the biological mechanisms and processes responsible for genetic inheritance, energy transfer, evolution, and population dynamics, providing a framework within which students may critically interpret and discuss important biological information provided in public forums. Seeks to empower students to make informed choices at the policy and personal levels. Offers students an opportunity to acquire an understanding of the basic principles of biology and apply the scientific process to the analysis of contemporary issues. Using a thematic approach, covers a wide range of issues including the reemergence of plagues, biological weapons and security, the environment, and human health and wellness.

Attribute(s): NUpath Natural/Designed World

BIOL 1147. The Human Organism. (4 Hours)

Introduces the structure and function of the human body. Emphasizes the principles of biological and physical science as they relate to life processes in health and disease.

Attribute(s): NUpath Natural/Designed World

BIOL 1149. Biology of Human Reproduction. (4 Hours)

Studies sexual and reproductive function in the human male and female, that is, sexual development, coitus, fertilization, pregnancy, birth, and lactation. Discusses the methods of controlling fertility and sexually transmitted diseases. Analyzes factors affecting reproduction and sexuality in human population.

Attribute(s): NUpath Natural/Designed World

BIOL 1153. Human Genome Editing: Science and Ethics. (4 Hours)

Designed to familiarize students with the basic process of human genome editing, including an overview of emerging technologies that enable this process. Explores both sides of the ongoing ethical debate, including the potential benefits and limitations of human genome editing, and ramifications for this clinical practice on society. Introduces the methodology for genetic editing, a historical overview of the science and clinical practice of gene editing, and a synopsis of the current regulatory status. Discusses the ethical implications of the utilization of genome editing in humans. Offers students an opportunity to evaluate the utilization of genetic editing to eradicate genetically inherited diseases, the potential to create designer babies, and the socioeconomic impacts of gene editing.

Attribute(s): NUpath Ethical Reasoning, NUpath Natural/Designed World

BIOL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOL 2217. Integrated Anatomy and Physiology 1. (4 Hours)

Introduces students to integrated human anatomy and physiology. Focuses on structure and function of cells and tissues. Presents the anatomy and physiology of skin, bones, muscles, blood, and the nervous system.

Corequisite(s): BIOL 2218

Attribute(s): NUpath Natural/Designed World

BIOL 2218. Lab for BIOL 2217. (1 Hour)

Accompanies BIOL 2217. Covers topics from the course through various experiments.

Corequisite(s): BIOL 2217

BIOL 2219. Integrated Anatomy and Physiology 2. (4 Hours)

Continues BIOL 2217. Presents the structure and function of the human endocrine, reproductive, cardiovascular, respiratory, urinary, and digestive systems as well as the regulation of metabolism and body temperature.

Prerequisite(s): BIOL 1117 with a minimum grade of D- or BIOL 2217 with a minimum grade of D-

Corequisite(s): BIOL 2220

Attribute(s): NUpath Natural/Designed World

BIOL 2220. Lab for BIOL 2219. (1 Hour)

Accompanies BIOL 2219. Covers topics from the course through various experiments.

Corequisite(s): BIOL 2219

Attribute(s): NUpath Analyzing/Using Data

BIOL 2221. Foundations of Microbiology. (4 Hours)

Focuses on how to identify, control, and live with bacteria and viruses. Emphasizes the mechanisms of disease production, natural host defense systems, and medical interventions.

Corequisite(s): BIOL 2222

BIOL 2222. Lab for BIOL 2221. (1 Hour)

Accompanies BIOL 2221. Covers topics from the course through various experiments.

Corequisite(s): BIOL 2221

BIOL 2299. Inquiries in Biological Sciences. (4 Hours)

Focuses on the latest developments in the field. Offers students an opportunity to explore both scientific practice and progress through readings, discussion, and projects and to expand and deepen their understanding of fundamental biological principles.

Prerequisite(s): BIOL 1101 with a minimum grade of D- or BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

BIOL 2301. Genetics and Molecular Biology. (4 Hours)

Focuses on mechanisms of inheritance, gene-genome structure and function, and developmental genetics and evolution. Examples are drawn from the broad spectrum of plants, animals, fungi, bacteria, and viruses. Topics and analytical approaches include transmission genetics, molecular biology and gene regulation, DNA molecular methods, quantitative and population genetics, bioinformatics, genomics, and proteomics.

Prerequisite(s): (BIOL 1103 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or BIOL 1115 with a minimum grade of D- or BIOL 2297 with a minimum grade of D- or BIOL 2299 with a minimum grade of D- or EEMB 1105 with a minimum grade of D- or EEMB 2290 with a minimum grade of D- or ENVR 2400 with a minimum grade of D- or EEMB 2400 with a minimum grade of D-); (CHEM 1211 with a minimum grade of D- or CHEM 1217 with a minimum grade of D- or CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D-)

Attribute(s): NUpath Natural/Designed World

BIOL 2302. Lab for BIOL 2301. (1 Hour)

Accompanies BIOL 2301. Reinforces and extends concepts presented and practiced in the accompanying lecture course through the application of scientific investigation methods and data analysis.

Prerequisite(s): BIOL 2301 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

BIOL 2307. Research Exploration in Biology. (4 Hours)

Introduces basic biological lab skills including lab safety, chemical handling, pipetting, and media preparation. Also introduces the fundamentals of experimental design, data analysis, and scientific communication. Provides an opportunity to explore authentic, current research questions in an immersive laboratory research experience. Coursework consists of team-based projects in which student groups design and execute biological experiments under the mentorship of Northeastern faculty and graduate students. Offers an opportunity to develop a research presentation and present experimental outcomes to fellow students, faculty, and staff.

Prerequisite(s): BIOL 2299 with a minimum grade of C-

BIOL 2309. Biology Project Lab. (4 Hours)

Offers an inquiry-based, intensive laboratory experience in which students have an opportunity to design and conduct independent research projects, applying approaches and techniques used in cell and molecular biology. Offers students an opportunity to present their results in professional formats.

Prerequisite(s): BIOL 2301 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov, NUpath Writing Intensive

BIOL 2327. Human Parasitology. (4 Hours)

Examines the general biology, life cycles, modes of transmission, and pathogenesis of major parasites on global human health. Explores a number of important diseases, along with the diverse protozoans, worms, and arthropods responsible for them.

Prerequisite(s): BIOL 1101 with a minimum grade of D- or BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or BIOL 1115 with a minimum grade of D-

BIOL 2329. Bioethics. (4 Hours)

Offers students an opportunity to explore ethical issues arising from biological research and emerging technologies, to learn to identify and critically analyze potential ethical implications of biological research, and to evaluate theory-based arguments while respectfully engaging with a diversity of perspectives. Using their knowledge of basic cellular and molecular science as a foundation, students have an opportunity to gain a deeper understanding of the biology of genome editing and other molecular and cellular biology-based technologies. Examines the history and ethical dialogue around genome editing as an in-depth example of an emerging technology with wide-ranging applications. Studies additional technologies with respect to research progress, international perspectives, and potential implications in the areas of security, environmental protection, and personal health.

Prerequisite(s): BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or BIOL 2299 with a minimum grade of D-

Attribute(s): NUpath Ethical Reasoning

BIOL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOL 2991. Research in Biology. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated seven times.

BIOL 3401. Comparative Vertebrate Anatomy. (4 Hours)

Examines the morphology and phylogeny of the vertebrates.

Prerequisite(s): BIOL 1103 with a minimum grade of D- or BIOL 1113 with a minimum grade of D- or BIOL 2297 with a minimum grade of D- or BIOL 2299 with a minimum grade of D- or ENVR 2290 with a minimum grade of D- or EEMB 2290 with a minimum grade of D-

BIOL 3405. Neurobiology. (4 Hours)

Introduces the cellular and molecular functioning of the nervous system, the organization of neurons into circuits, the processing of information, and the generation of motor output.

Prerequisite(s): BIOL 1103 with a minimum grade of D- or BIOL 1113 with a minimum grade of D- or BIOL 2297 with a minimum grade of D- or BIOL 2299 with a minimum grade of D- or ENVR 2290 with a minimum grade of D- or EEMB 2290 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

BIOL 3409. Current Topics in Biology. (4 Hours)

Examines selected topics in biology. Topics vary each semester. May be repeated without limit.

Prerequisite(s): BIOL 2301 with a minimum grade of D

BIOL 3411. Current Topics in Cell and Molecular Biology. (4 Hours)

Examines selected topics in cell and molecular biology. Topics vary each semester. May be repeated without limit.

Prerequisite(s): BIOL 2301 with a minimum grade of D-

BIOL 3413. Current Topics in Organismal and Population Biology. (4 Hours)

Examines selected topics in organismal and population biology. Topics vary each semester. May be repeated without limit.

Prerequisite(s): BIOL 1113 with a minimum grade of D- or BIOL 1115 with a minimum grade of D- or BIOL 2299 with a minimum grade of D- or EEMB 2400 with a minimum grade of D-

BIOL 3415. Current Topics in Behavioral Neuroscience. (4 Hours)

Examines selected topics in behavioral neuroscience. Topics vary each semester.

Prerequisite(s): BIOL 2301 with a minimum grade of D-

BIOL 3419. Engaging with Genomics: Ethics Law and Policy. (4 Hours)

Focuses on the recent developments in human genetics and how they shape, and are shaped by, society. Topics include several of the most important social and legal aspects of genomic research, including the impact of new technologies on reproduction and kinship, gene editing and enhancement, genetic privacy, race and genomics, and the effects of gene patenting on research and pharmaceutical development. Explores questions related to the responsible conduct of genetic testing and research in human populations, practices of eugenics, rights of stakeholders during genetic testing, the patenting of human genes, and how concepts of race are being used in genetic research and in direct-to-consumer genomics.

Prerequisite(s): BIOL 2301 with a minimum grade of D-

BIOL 3421. Microbiology. (4 Hours)

Introduces morphological, ecological, and biochemical consideration of representative groups of bacteria. Introduces virology and microbial genetics; host-parasite relationships, prokaryotes of medical significance; and physical and chemical controls of microbial growth.

Prerequisite(s): BIOL 2301 with a minimum grade of D-

Corequisite(s): BIOL 3422

Attribute(s): NUpath Writing Intensive

BIOL 3422. Lab for BIOL 3421. (1 Hour)

Accompanies BIOL 3421. Covers topics from the course through various experiments.

Corequisite(s): BIOL 3421

BIOL 3423. Animal Models in Biomedical Research. (4 Hours)

Seeks to familiarize students with the use of animal models in research. Emphasizes specific animal models for physiology through a detailed survey of popular and alternative animal model systems. Covers legislation; ethics; the 3Rs (replacement, reduction, and refinement of animals used in research); and the current principles that guide animal research; as well as study design and statistical analysis and animal model selection. Includes reading assignments from media reports and primary scientific literature. Requires a final report in the form of a formal protocol detailing the use of animal models, including animal model selection, description of methodology, and application of statistics to animal modeling.

Prerequisite(s): BIOL 2301 with a minimum grade of D-

BIOL 3601. Neural Systems and Behavior. (4 Hours)

Reviews major experimental approaches and key concepts used in behavioral neurobiology. Begins with a look at its history. Topics covered include spatial orientation and sensory guidance, neuronal control of motor output, neuronal processing of sensory information, sensorimotor integration, neuromodulation, circadian rhythms and biological clocks, behavioral physiology of large-scale navigation, neurobiology of communication, and cellular mechanisms of learning and memory.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

BIOL 3603. Mammalian Systems Physiology. (4 Hours)

Designed to familiarize students with fundamental principles in mammalian physiology. Emphasizes major organ systems integration. Where applicable, explores and uses human physiology to reinforce principles in physiology and build upon these principles by analyzing how major organ systems effectively network for proper organismal function. Initially covers the physiological principles of energy and metabolism in mammals, including human adaptation for basic energy requirements, and then delves into basics of membrane transport. Evaluates roles for organ systems integration in the respiratory, cardiovascular, gastrointestinal, hemopoietic, renal, and reproductive systems.

Prerequisite(s): BIOL 2301 (may be taken concurrently) with a minimum grade of D-

BIOL 3605. Developmental Neurobiology. (4 Hours)

Covers the cellular, molecular, and genetic processes that guide neural development. Focuses on how nerve cells are generated, patterned, and connected with one another to regulate animal behavior. Topics include cell differentiation, tissue patterning, neural plasticity, and cognitive development.

Prerequisite(s): BIOL 2301 (may be taken concurrently) with a minimum grade of D-

BIOL 3607. Current Trends in Reproductive Sciences. (4 Hours)

Introduces current trends in the field of reproductive sciences, spanning basic human reproduction, infertility, and potential horizons in medicine. Surveys topics in basic research that have the most promise to make an impact in the field of women's health. Emphasizes human health but includes animal models in the analysis.

Prerequisite(s): BIOL 2301 (may be taken concurrently) with a minimum grade of D-

BIOL 3611. Biochemistry. (4 Hours)

Covers structure and function of biomolecules, central concepts of bioenergetics and thermodynamics, enzyme kinetics and regulation, and metabolic pathways.

Prerequisite(s): BIOL 2301 with a minimum grade of D- ; (CHEM 2313 with a minimum grade of D- or CHEM 2317 with a minimum grade of D-)

Corequisite(s): BIOL 3612

BIOL 3612. Lab for BIOL 3611. (1 Hour)

Accompanies BIOL 3611. Covers topics from the course through various experiments.

Corequisite(s): BIOL 3611

BIOL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOL 4701. Biology Capstone. (4 Hours)

Integrates and assesses the concepts and skills obtained from the entire biology curriculum, including experiential and classroom-based components. Requires reflection by students on their various educational experiences, extensive research of scientific questions related to these experiences, and development of an original research proposal. Offers students an opportunity to hone communication skills through formal and informal presentations, class discussion, and critique.

Prerequisite(s): ENGW 3307 with a minimum grade of C or ENGW 3315 with a minimum grade of C or ENGW 3302 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

BIOL 4705. Neurobiology of Cognitive Decline. (4 Hours)

Introduces the neuroanatomical and cognitive sequelae of brain aging and neurodegenerative disease. Covers molecular and cellular processes that damage neurons, animal models, and brain imaging. Explores higher-level manifestations of damage to, for example, memory, language, and reward systems.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

BIOL 4707. Cell and Molecular Biology. (4 Hours)

Integrates molecular biology and biochemistry in the cellular context. Focuses on the organization and function of eukaryotic cells, including the regulation of nuclear structure and gene expression, signal transduction, protein synthesis and growth, cellular energetics, the cytoskeleton and cell motility, cell division, and cell death. Emphasizes the scientific methodologies and approaches that underlie discovery in cell biology.

Prerequisite(s): BIOL 2323 with a minimum grade of D- or BIOL 3611 with a minimum grade of D-

BIOL 4709. Neurobiology of Learning and Memory. (4 Hours)

Explores the neurobiology of learning and memory from the level of the synapse up to the neural systems underlying emergent mnemonic function. Topics include the synaptic mechanisms underlying neural plasticity; the molecular basis of mnemonic processes; and the neural circuits serving distinct memory systems. In addition to lecture-based material, students utilize primary research and review articles from the current scientific literature to evaluate data and develop hypotheses via oral presentations and active discussions in the classroom. The overarching goal of the course is to provide a neurobiological perspective on how information is encoded, consolidated, and later retrieved and the significance of dysfunction in these processes associated with neurologic deficits and disease.

Prerequisite(s): PSYC 3458 with a minimum grade of D- or BIOL 3405 with a minimum grade of D-

BIOL 4900. Biology Research Capstone. (1 Hour)

Offers a capstone experience for biology majors who are concurrently registered for BIOL 4991 or BIOL 4994, in which they are conducting original research under the guidance of an approved mentor. Students conduct a literature search, write a research proposal, conduct the proposed research (in the context of the concurrent 4-SH research course), orally present the research, and produce a final research report. Requires students to reflect on and integrate their prior learning, participate in peer feedback, and revise their work in response to peer and instructor feedback.

Prerequisite(s): (ENGW 3307 with a minimum grade of D- or ENGW 3315 with a minimum grade of D-); (BIOL 4991 (may be taken concurrently) with a minimum grade of D- or BIOL 4994 (may be taken concurrently) with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

BIOL 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

BIOL 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field.

Prerequisite(s): ENGW 3307 with a minimum grade of D- ; (BIOL 4970 with a minimum grade of D- or BIOL 4991 with a minimum grade of D- or BIOL 4992 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

BIOL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOL 4991. Research. (4 Hours)

Offers independent laboratory research work on a chosen topic under the direction of members of the department. Course content depends on instructor. May be repeated without limit.

Attribute(s): NUpath Integration Experience

BIOL 4994. Internship. (4 Hours)

Offers students an opportunity for internship work.

Attribute(s): NUpath Integration Experience

BIOL 5100. Biology Colloquium. (1 Hour)

Offers a series of colloquia in biological research by invited experts on current topics. May be repeated without limit.

BIOL 5301. Clinical Embryology. (4 Hours)

Designed to familiarize students with core biological processes associated with fertilization and early embryogenesis in humans, with an emphasis on clinical relevance. Covers fundamental aspects of female fertility and embryo development, including hormonal control of ovarian follicle growth and ovulation, fertilization, preimplantation embryonic development, implantation, and postimplantation embryonic development through gastrulation. Examines current parameters for determining egg and embryo quality. Additionally, discusses evolving stem-cell-based strategies for the treatment of female reproductive failure.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5306. Biological Clocks. (4 Hours)

Examines the expression of endogenously generated twenty-four-hour (circadian) rhythms in eukaryotic life, emphasizing theoretical foundations as well as current research strategies for understanding how biological clocks work. Presents analytic principles essential for understanding biological rhythmicity in any organism at any level of organization. Emphasizes strategies used to understand the concrete mechanisms underlying biological rhythmicity.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5535. Expanding Frontiers: Vector-Borne Diseases. (4 Hours)

Explores the biology of vectors and vector-borne infectious diseases. The World Health Organization estimates that about one-fifth of all infectious diseases are caused by vector-borne diseases. Vectors discussed include mosquitoes; ticks; Plasmodium; trypanosomes; Lyme disease-causing bacteria; and arboviruses such as dengue, yellow fever, West Nile, and Zika. Examines the development, metabolism, behavior, and symbiotic relationships—including the vector-host-pathogen relationships—through a student-generated literature review and a research proposal. Thoroughly reviews treatments and prevention strategies ranging from vaccination, pre- and postexposure prophylaxis, antimicrobial intervention, management of sequelae, and vector-control strategies. Discusses each topic from the perspective of historical and modern research.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5539. Advances in Genome Editing. (4 Hours)

Analyzes the scientific literature to investigate the rapidly changing field of genome editing and identify the implications for biological sciences. Explores developments in genome editing along with the clinical and experimental applications of these tools. Life sciences have been revolutionized by the emergence of technologies that enable precise alterations in DNA sequences, cells, model organisms, and even humans.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5541. Endocrinology. (4 Hours)

Explores the endocrine regulation of physiological systems, emphasizing current research. Lectures provide background, followed by analysis of primary literature and case studies. Topics include growth, reproduction, nutrient utilization, stress, and environmental endocrine disruption. Emphasizes humans but includes material on other animals, including invertebrates.

Prerequisite(s): BIOL 2319 with a minimum grade of D- or BIOL 2323 with a minimum grade of D- or BIOL 3405 with a minimum grade of D- or BIOL 3611 with a minimum grade of D- or BIOL 4707 with a minimum grade of D- or graduate program admission

BIOL 5543. Stem Cells and Regeneration. (4 Hours)

Explores the biological basis of embryonic, adult, and induced pluripotent stem cells toward an understanding of their roles in development, homeostasis, and regeneration, as well as their therapeutic potential. The study of stem cells is a rapidly advancing area in biology and biomedicine. Although the biological basis of stem cells is a major focus, the course aims to put this knowledge into a biomedical context.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5549. Inventions in Microbial Biotechnology. (4 Hours)

Offers readings and seminar-style discussion from the current literature on important inventions and practical applications in biotechnology, with a focus on microbiome and antibiotic discovery, emphasizing new concepts.

BIOL 5573. Medical Microbiology. (4 Hours)

Emphasizes host-parasite interactions: virulence, toxins, natural flora, and immunological responses; characteristics of the common bacterial, rickettsial, and protozoal infections in humans; and epidemiology, pathology, vaccines, and chemotherapy.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5581. Biological Imaging. (4 Hours)

Illustrates imaging principles and techniques and their application to biological problems. Topics vary and may include microscopic and macroscopic approaches in areas such as cellular and neurobiology, ecology, and biochemistry.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5583. Immunology. (4 Hours)

Provides an overview of the structure and function of genes, proteins, and cells involved in the generation of the immune response. Emphasis is on molecular immunology and immunogenetics.

Prerequisite(s): BIOL 2323 with a minimum grade of D- or BIOL 3611 with a minimum grade of D- or graduate program admission

BIOL 5585. Evolution. (4 Hours)

Discusses history of evolutionary theory and lines of evidence. Emphasis is on mechanisms of speciation. Introduces and discusses current evolutionary topics.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5587. Comparative Neurobiology. (4 Hours)

Presents a cellular approach to structure and function of the nervous system. Topics include neuronal anatomy, phylogeny of nervous systems, electrophysiology of membrane conductances, synaptic transmission, integration in nerve cells, neuronal networks, sensory systems, motor systems, sensory-motor integration, development and regeneration of neuronal connectivity, and fundamentals of neurotechnology for biomedics. Focuses on the development of these concepts from the primary research literature. A term project involves the design of a simple nervous system for a hypothetical animal.

Attribute(s): NUpath Creative Express/Innov

BIOL 5591. Advanced Genomics. (4 Hours)

Intended for those familiar with the basics of genetics, molecular and cellular biology, and biochemistry, all of which are required to appreciate the beauty, power, and importance of modern genomic approaches. Introduces the latest sequencing methods, array technology, genomic databases, whole genome analysis, functional genomics, and more.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5593. Cell and Molecular Biology of Aging. (4 Hours)

Covers the recent scientific discoveries that have transformed our understanding of the process of aging. Examines in-depth the current understanding of the molecular mechanisms that control life span in model organisms, including yeast, worms, flies, and mice. Discusses dietary interventions and pharmacological approaches that extend the life span and delay the onset of age-related diseases. Covers potential applications of the new science of aging to improve human health. Requires students to read, discuss, present, and report on primary research papers from the literature.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Writing Intensive

BIOL 5595. Cell and Molecular Neuroscience. (4 Hours)

Combines molecular biology, cell biology, pharmacology, and genetics to address the fundamental molecular properties of neurons and neuronal networks. At its core, the principles that govern the communication between cells of the nervous system are determined by their molecular components. The molecular landscape defines the individual properties of a neuron and the function of neuronal networks as a whole. Focuses on neuronal signaling through the function of ion channels and receptors, supramolecular mechanisms like synaptic transmission and axonal transport, and the molecular mechanisms that underlie biological networks and neural coding of information. Uses the fundamental understanding of molecular networks as a framework to explore the mechanisms that underlie neurological diseases and disorders. Discusses current treatments and therapies that rely on modulating neuronal signaling through molecular interactions.

Prerequisite(s): (BIOL 2301 with a minimum grade of D- ; (PSYC 3458 with a minimum grade of D- or BIOL 3405 with a minimum grade of D-)) or graduate program admission

BIOL 5597. Immunotherapies of Cancer and Infectious Disease. (4 Hours)

Describes the basic principles and the current promises and disappointments with immunotherapies of cancer. Provides a historical overview of the main barriers between tumors and antitumor killer cells. The unifying focus of the lectures is the role of immunological and physiological negative regulators, i.e., "brakes" of anti-tumor immune response. A significant part of the course is dedicated to the retrospective evaluation of the last three decades of the immunological and biochemical studies that culminated in identification of the "chief of tumor defense operations," i.e., a hypoxia-adenosinergic pathway in the tumor microenvironment.

Prerequisite(s): BIOL 2301 with a minimum grade of D- or graduate program admission

BIOL 5601. Multidisciplinary Approaches in Motor Control. (4 Hours)

Studies the field of human motor control, or motor neuroscience. Offers students an opportunity to obtain a fundamental understanding of the processes underlying the acquisition and control of sensorimotor behavior. The systems approach connects a variety of disciplines ranging from neurophysiology, to engineering, to neurorehabilitation. Reviews a selection of approaches with emphasis on motor learning. Focuses on early behavioral approaches, more recent neurophysiological and imaging approaches, and rehabilitation. Discusses selected representative papers, including seminal historical papers and more recent studies reflecting the current discussion in the field.

Prerequisite(s): (BIOL 2301 with a minimum grade of D- ; (PSYC 3458 with a minimum grade of D- or BIOL 3405 with a minimum grade of D-)) or graduate program admission

BIOL 5821. Cell and Gene Therapies. (4 Hours)

Presents a comprehensive overview of the most recent clinical approaches in treating previously known incurable diseases. Focuses on an introduction to cell and gene therapy, how gene therapies are developed to treat some rare and genetic diseases, different modalities of in vivo and ex vivo gene therapy (cell therapy), the delivery of genetic materials to the cells, limitations, and more. Offers students an opportunity to learn about CAR T-cell therapy, different types of viruses (AAVs and retroviruses), nanoparticles, CRISPR-Cas9, RNA interference(RNAi), and many more tools in this fast-paced field.

BIOL 6299. Molecular Cell Biology for Biotechnology. (3 Hours)

Integrates biochemistry and molecular biology in the cellular context. Includes the organization and replication of genomes, principles and methods for genetic manipulation, the regulation of gene expression, and the structure and function of organelles. Emphasizes protein synthesis, including translation, post-translational modifications, and translocations of proteins within the cells and secretion.

BIOL 6300. Biochemistry. (4 Hours)

Studies the structure and function of biomolecules, with an emphasis on proteins; enzyme catalysis; and cellular metabolism, with an emphasis on bioenergetics and carbohydrate/lipid.

BIOL 6301. Molecular Cell Biology. (4 Hours)

Integrates biochemistry and molecular biology in the cellular context. Emphasizes the organization and replication of genomes, the regulation of gene expression, the structure and function of organelles, and the mechanisms of signal transduction.

Prerequisite(s): BIOL 6300 with a minimum grade of C-

BIOL 6303. Neurobiology and Behavior. (4 Hours)

Provides a comprehensive overview of behavioral neurobiology, emphasizing a neuroethological approach. Fosters a contemporary understanding of the historical development of the behavioral sciences, the major ethological and neurobiological concepts, and the principal mechanisms that govern behavior in animals and humans.

BIOL 6381. Ethics in Biological Research. (2 Hours)

Discusses ethical issues relevant to research in the biological sciences. Requires student presentations.

BIOL 6401. Research Methods and Critical Analysis in Molecular Cell Biology. (4 Hours)

Encompasses biochemical and cell biological approaches to understanding cell structure and function, including membranes, organelles, vesicle trafficking, cytoskeleton, cell cycle, and signaling. Structured activities integrate critical analysis of recently published literature and methods. Offers students an opportunity to prepare for the professional practice of molecular cell biology.

BIOL 6405. Prokaryotic Cell and Molecular Biology. (4 Hours)

Provides in-depth discussion about fundamentally important cellular processes in prokaryotic systems—such as replication, transcription, and translation—and the corresponding regulatory mechanisms. Also discusses molecular mechanisms of gene regulation and bacterial pathogenesis, using selected examples and mechanisms of prokaryotic cell signaling, and advanced and high-throughput techniques used in prokaryotic molecular and cell biology.

BIOL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOL 7399. Research Problem Solving, Ethics, and Communication Skills. (4 Hours)

Focuses on research problem-solving skills, including formulation of hypotheses; experimental design, execution, and analysis; and research ethics. Offers instruction in scientific writing, including daily record keeping, grants and papers, and oral communication skills. Discusses the use and misuse of statistics and discusses responsibility to the public. Requires permission of instructor for those students not enrolled in biology.

BIOL 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOL 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

BIOL 7990. Thesis. (1-4 Hours)

Offers thesis supervision by members of the department. May be repeated without limit.

BIOL 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continuing thesis supervision by members of the department.

BIOL 8420. Biological Lab Rotation 1. (4 Hours)

Offers experience in biology research in a faculty research laboratory. Intended only for students who have not yet chosen a lab in which to carry out dissertation/thesis work.

BIOL 8421. Biological Lab Rotation 2. (4 Hours)

Offers a second semester of research experience in a different laboratory than that for BIOL 8420. Intended only for students who have not yet chosen a lab in which to carry out thesis work.

BIOL 8960. Exam Preparation—Doctoral. (0 Hours)

Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision.

BIOL 8982. Readings. (1-4 Hours)

Offers readings from current literature on an area of interest to students and faculty. May be repeated without limit.

BIOL 8984. Research. (1-4 Hours)

Focuses on research methods and their application to a specific problem under the direction of a graduate faculty member. May be repeated without limit.

BIOL 8986. Research. (0 Hours)

Offers the student the opportunity to conduct full-time research. May be repeated without limit.

BIOL 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

BIOL 9984. Research. (1-4 Hours)

Focuses on research methods and their application to a specific problem under the direction of a graduate faculty member. May be repeated without limit.

BIOL 9990. Dissertation Term 1. (0 Hours)

Offers theoretical and experimental research for the PhD degree.

Prerequisite(s): BIOL 9000 with a minimum grade of S

BIOL 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): BIOL 9990 with a minimum grade of S

BIOL 9996. Dissertation Continuation. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): BIOL 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Biology - CPS (BIO)

Courses

BIO 1050. Medical Terminology. (3 Hours)

Offers students an opportunity to explore the language of medicine, learning about the importance of word structure in medical fields. A command of medical terminology is fundamental for anyone who aspires to work in the healthcare field. Examines the fundamentals of word analysis and construction, including root words, prefixes, and suffixes, all in the context of the anatomy and physiology of human body systems and healthcare systems. Seeks to provide the fundamentals of science and medicine through reading, writing, listening, and speaking exercises focusing on technical terms used in medical terminology.

BIO 1100. Principles of Biology 1. (3 Hours)

Introduces a variety of biological concepts. Surveys plant and animal characteristics by comparing cell structure and function. Examines specific elements of structure, function, and natural history. Specific topics include cytology, histology, physiology, genetics, cellular respiration, and botany.

Corequisite(s): BIO 1101

Attribute(s): NUpath Natural/Designed World

BIO 1101. Lab for BIO 1100. (1 Hour)

Accompanies BIO 1100. Studies the specialization of animal cells and ecological succession. Offers students an opportunity to learn about proper experimental design and the limits of experimentation. Includes observing the structure and function of unicellular organisms and the characteristics of biological molecules, measuring aerobic and anaerobic respiration rates, observing cellular reproduction, and genetic analysis of plants and animals.

Corequisite(s): BIO 1100

BIO 1200. Principles of Biology 2. (3 Hours)

Covers the major evolutionary trends leading to complex life forms. Surveys organisms beginning with unicellular algae and leading to basic animal structure and function. Describes the anatomy of each body system as well as physiological processes such as hormonal control, nerve impulse transmission, muscular contraction, and the immune response.

Prerequisite(s): BIO 1100 with a minimum grade of D- ; BIO 1101 with a minimum grade of D-

Corequisite(s): BIO 1201

Attribute(s): NUpath Natural/Designed World

BIO 1201. Lab for BIO 1200. (1 Hour)

Accompanies BIO 1200. Uses prepared slides and preserved specimens to study the Prostitia and animal kingdoms. Studies the appendicular and axial bones, muscles, blood vessels, urogenital anatomy, and the nervous system.

Prerequisite(s): BIO 1100 with a minimum grade of D- ; BIO 1101 with a minimum grade of D-

Corequisite(s): BIO 1200

BIO 1600. Human Anatomy and Physiology 1. (3 Hours)

Provides an overview of anatomic terminology and organization of the body. Presents the structure and function of cells and tissues. Includes the anatomy and physiology of the integumentary and musculoskeletal systems, joint structure and function, and the nervous and endocrine systems, including special senses.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 1601

Attribute(s): NUpath Natural/Designed World

BIO 1601. Lab for BIO 1600. (1 Hour)

Accompanies BIO 1600. Covers a range of topics from the course.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 1600

BIO 1700. Human Anatomy and Physiology 2. (3 Hours)

Covers the structure and function of the cardiovascular system (including the properties of blood, the lymphatic system, and immunity) and the respiratory, digestive, and urogenital systems.

Prerequisite(s): BIO 1600 with a minimum grade of D- ; BIO 1601 with a minimum grade of D-

Corequisite(s): BIO 1701

Attribute(s): NUpath Natural/Designed World

BIO 1701. Lab for BIO 1700. (1 Hour)

Accompanies BIO 1700. Covers a range of topics from the course.

Prerequisite(s): BIO 1600 with a minimum grade of D- ; BIO 1601 with a minimum grade of D-

Corequisite(s): BIO 1700

BIO 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIO 2100. Microbiology. (3 Hours)

Emphasizes the close relationship between the development of technology and science. Compares prokaryotic and eukaryotic cellular morphology and physiology, including bioenergetics, carbohydrate metabolism, and cellular nutrition and growth. Studies viral replication, microbial genetics, bacterial taxonomy, and evolution. Discusses the principles of epidemiology and public health related to food, water, and sewage microbiology and the role of microbes in fermentation and industrial and environmental microbiology.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 2101

BIO 2101. Lab for BIO 2100. (1 Hour)

Accompanies BIO 2100.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 2100

BIO 2300. Cell Biology. (3 Hours)

Introduces the chemical composition and structure of cells and organelles. Focuses on transport processes, cell cycle and cell death, and cytoskeleton and matrix. Includes cellular control systems, including cellular energy supply, action of chemical messengers and regulators, cellular principles of respiration, and photosynthesis.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

BIO 2500. Genetics and Molecular Biology. (3 Hours)

Covers a detailed analysis of the biochemical mechanisms that control the maintenance, expression, and evolution of prokaryotic and eukaryotic genomes. Topics covered in lectures and readings of relevant literature include gene regulation, DNA replication, genetic recombination, and mRNA translation. Emphasizes the logic of experimental design and data analysis.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 2501

BIO 2501. Lab for BIO 2500. (1 Hour)

Accompanies BIO 2500.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 2500

BIO 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIO 3100. Biochemistry. (3 Hours)

Covers the fundamental chemistry of biomolecules such as proteins, enzymes, lipids, carbohydrates, and nucleotides. Studies important molecular structures and their role in metabolic cycles. Introduces metabolism and catabolic and anabolic pathways of carbohydrates, lipids, proteins, and nucleotide metabolism. Discusses the importance of nutrition and how it affects metabolic pathways, genetic disorders, and mechanisms of action of various drugs that affect these pathways.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 3101

Attribute(s): NUpath Writing Intensive

BIO 3101. Lab for BIO 3100. (1 Hour)

Accompanies BIO 3100. Introduces modern research techniques used in biochemistry. Topics include purification and characterization of proteins, kinetic properties of enzymes, isolation of high-molecular-weight DNA, and protein separation; DNA mapping; spectrophotometry; peptide mapping and sequencing; enzyme kinetics; and extraction, separation, and isolation techniques.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BIO 3100

BIO 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIO 4215. Human Parasitology. (3 Hours)

Examines the general biology, life cycles, modes of transmission, and pathogenesis of major parasites on global human health. Explores a number of important diseases, along with the diverse protozoans, worms, and arthropods responsible for them.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

BIO 4955. Project. (1-4 Hours)

Offers students an opportunity to prepare a discipline-specific project. May be repeated without limit.

BIO 4983. Topics. (1-4 Hours)

Covers special topics in biology. May be repeated without limit.

BIO 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIO 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIO 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Biotechnology (BIOT)

Courses

BIOT 5120. Foundations in Biotechnology. (3 Hours)

Provides an interdisciplinary, state-of-the-art introduction to biotechnology. Covers the molecular foundations of biotechnology, molecular microbiology, receptor pharmacology, drug development processes, biotech process development and scale-up, drug approval and regulatory affairs, genomics, microarray analysis, proteomics, computational biology, molecular modeling, analytical biotechnology, and bioterrorism and biotechnology.

BIOT 5145. Biotechnology Lab Skills. (1 Hour)

Introduces selected key skills and techniques central to life sciences research. Combines hands-on training in basic laboratory skills with lecture and live demonstration. Laboratory exercises highlight the importance of precision/accuracy in dispensation of liquids and in the preparation of solutions and standards, documentation and record keeping, and maintaining a safe and sterile work environment while performing scientific research.

BIOT 5219. The Biotechnology Enterprise. (2 Hours)

Exposees students to the business of biotech from scientific discovery startup through its product launch and subsequent organizational and scientific pipeline growth. Topics include scientific discovery, biotech-related funding and organizational structures, regulatory and clinical trial considerations, biotech alliances, patient access, ethics and compliance, and commercialization and growth while meeting unmet patient or consumer needs in this highly regulated industry. Although the focus is on the highest regulated standards in biopharma, the course also touches upon various aspects of other biotechnology domains.

BIOT 5220. The Role of Patents in the Biotechnology Industry, Past and Future. (1 Hour)

Covers the basics of patenting and the application of patents to the biotechnology industry, including the controversial area of gene patents.

BIOT 5225. Managing and Leading a Biotechnology Company. (3 Hours)

Covers managing projects and personnel in a technology-based organization Such activities are best carried out by those who combine the technical knowledge of their industry with the insight into the best practices for working with groups of highly educated, and often very experienced people. The biotechnology industry is strongly dependent on the concept that knowledge is always shared and ownership is collective. As the fundamental organizational mantra is teamwork, the principles of managing in this environment are key to achieving important goals. How to accomplish this and make decisions that drive innovation and success have common threads with other technology based industries, but with the added complexity of the scientific challenges facing the biotechnology industry. Restricted to students in the Bouvé College of Health Sciences and in the College of Science or by permission of the program office.

Prerequisite(s): BIOT 5219 with a minimum grade of C-

BIOT 5227. Launching Your Science: Biotechnology Entrepreneurship. (3 Hours)

Focuses on the essential startup elements that lead to pitching your science to investors and funding your biopharmaceutical enterprise. Exposes students to the basics of establishing an unmet patient need and matching that to a scientific discovery or biotechnology platform, analyzing the marketplace from a scientific perspective, determining a draft regulatory pathway and product development plan through a target product profile (TPP), appropriately sizing and hiring your early stage management team, and assessing the financial needs and risks for appropriate exit strategies. Students produce a baseline pitch deck as the culminating project for the course.

Prerequisite(s): BIOT 5219 with a minimum grade of C-

BIOT 5228. Planning and Executing Biotechnology Projects. (3 Hours)

Introduces the concepts, principles, and practices of project planning and execution. Emphasizes biotechnology sectors including human health, environment, and agri-food biotechnology. Explores the importance of managing projects and project teams in situations unique to the biotechnology industry including research and development, contract research, and technology transfer. Covers project management systems, tools, and professional codes of conduct and ethics. Requires application of course concepts to a relevant project, emphasizing development of professional skills in effective teamwork, leadership, and managing projects.

Prerequisite(s): BIOT 5219 with a minimum grade of C- or BIOT 5219 with a minimum grade of C- or BIOT 5219 with a minimum grade of C-

BIOT 5330. Drug Safety and Immunogenicity. (3 Hours)

Introduces the fundamental molecular interactions involved in immunological responses as well as in measuring and testing in a research and regulated environment. Other drug-safety-related topics include adventitious agents (viruses, microorganisms, mycoplasma) and risk factors such as product-related substances (aggregates and post-translationally modified variants), endotoxins, DNA, host-cell proteins, process contaminants such as antibiotics, and the means of testing and removing these through validated processes.

BIOT 5340. Introduction to Biotherapeutic Approvals. (3 Hours)

Introduces students to biologics. The class of drugs referred to as biologics or biotherapeutics, proteins drugs, makes up a large portion of the drugs in development and on the market today. Focuses on considerations for approval for such drugs. Offers students an opportunity to learn how to be able to describe and explain both biologics and biosimilars.

BIOT 5400. Scientific Information Management for Biotechnology Managers. (3 Hours)

Introduces biotechnology students to scientific information management specifically related to the biotechnology field. Covers an introduction to data sciences, its history, and how it is relevant to biotech today. Offers students an opportunity to obtain the background needed to assess and use modern data management capabilities such as "the cloud," big data, etc. Covers recent developments in origination of data, metadata, data models, data management, and organization and storage of data in biotechnology.

BIOT 5401. Scientific Communication and Problem Solving in Biotechnology. (3 Hours)

Provides an in-depth examination of the principles and practices of scientific writing, academic integrity, literature analysis, and scientific problem solving. Focuses on effective communication of scientific ideas through various writing genres, including research articles, presentations, and proposals. Explores ethical considerations and best practices in scientific research, including issues related to plagiarism, data falsification, Good Documentation Practice (GDP), and authorship. Emphasizes critical skills in literature analysis and data presentation, including the evaluation and presentation of novel data sets and research articles and the effective integration of scientific literature into writing.

BIOT 5500. Concepts in Regulatory Science. (3 Hours)

Introduces the science that supports regulatory affairs in the biopharmaceutical industry. Focuses on the methods and instruments used to characterize the processes and products of biotechnology including the production, separation, purification, characterization, and formulation of biologics; the pharmacokinetics of proteins; chemical and biological equivalencies of biogenerics; stability testing; high throughput assays; cell system expression; variants; method validation; and quality control.

BIOT 5560. Bioprocess Fundamentals. (3 Hours)

Focuses on the fundamental principles and elements in the process of manufacturing biopharmaceuticals. Covers kinetics of enzymatic reactions; selected microbial and cell metabolism and relevant control mechanisms; kinetics of cell growth, cell death, substrate consumption, and product formation; mathematical modeling and representation of bioprocesses; examples of industrial bioprocesses to illustrate types and operations of upstream and downstream unit operations and mass transfers in fermentation systems—the affecting factors and the impact on process development and scale-up. Also includes an overview of economic considerations. Emphasizes bioprocesses for recombinant protein production.

BIOT 5621. Protein Principles in Biotechnology. (3 Hours)

Discusses the fundamentals in structural biology and biochemistry in drug design and applied biotechnology with special focus on protein chemistry. Explores the nature, structure, and function of proteins in the context of analytical analysis, molecular medicine, and drug discovery. Emphasizes bioinformatics and computational systems biology. Specifically investigates the analysis of ongoing research projects, case studies, and practical concepts of biotechnology.

BIOT 5630. Cell Culture Applications for Biopharmaceuticals. (2 Hours)

Covers principles and concepts in mammalian and other cell culture processes for biopharmaceutical manufacturing with the goal of providing a solid foundation in biopharmaceutical production. Topics include cell line development for protein expression; batch, fed-batch, and perfusion processes; media development; bioreactor operations; impeller designs; bioprocessing, including scale up and scale down; and advancements in cell culture techniques. Emphasizes quality assurance within a current good manufacturing practices environment and examines the entire bioprocessing workflow.

BIOT 5631. Cell Culture Processes for Biopharmaceutical Production. (3 Hours)

Covers the principles and concepts involved in the development of mammalian and other types of cell culture processes for the manufacturing of biopharmaceutical products such as monoclonal antibodies and recombinant proteins. Topics include protein expression and clone generation, batch and perfusion processes and media development, bioreactor operations and scale-up, and innovations in cell culture processes. Regulatory concepts include quality assurance in a cGMP environment.

BIOT 5635. Downstream Processes for Biopharmaceutical Production. (3 Hours)

Addresses the development of recombinant protein purification processes in biotechnology. Provides an overview of the scientific principles, engineering strategies, and unit operations facilities involved in scalable protein purification processes. Also discusses viral clearance and inactivation strategies; cGMP considerations; and technological advances to improve effectiveness and efficiency, such as membrane-based disposable systems.

BIOT 5640. Drug Product Processes for Biopharmaceuticals. (3 Hours)

Introduces patient-focused drug product design for parenteral biopharmaceuticals. Explores the building of product knowledge through preformulation and formulation development, including lyophilization, to meet the target product profile for stability and during use. This expanding knowledge is applied to support of manufacturing processes and containers. Applies Quality-by-Design-based approaches to product development and discusses concepts related to Good Manufacturing Practice manufacturing. Culminates in a group project where teams address industrylike multifaceted problems bridging content from across the materials.

Prerequisite(s): BIOT 5621 with a minimum grade of C- or BIOT 5621 with a minimum grade of C- or CHEM 5620 with a minimum grade of C- or CHEM 5620 with a minimum grade of C-

BIOT 5700. Molecular Interactions of Proteins in Biopharmaceutical Formulations. (3 Hours)

Offers an up-to-date survey and review of the research and understanding of the molecular interactions of proteins in biopharmaceutical formulations, including both liquid and solid formats, during the process of drug product manufacturing. Focuses on protein-protein interactions, protein-excipients (e.g., stabilizers, surfactants) interactions, and protein at interface surfaces interactions that are critical and impactful on the stability and integrity of therapeutic proteins of interest. Emphasizes understanding the mechanistic aspect of the interactions; the approaches, methods, and techniques employed to study these phenomena; and measures considered to modulate such interactions to enhance the performance of the biopharmaceutical formulations. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): (BIOT 5621 with a minimum grade of C- or BIOT 5621 with a minimum grade of C-) or (CHEM 5620 with a minimum grade of C- or CHEM 5620 with a minimum grade of C-)

BIOT 5750. Molecular Approaches in Biotechnology. (3 Hours)

Discusses applications of concepts in molecular biology and biochemistry. Focuses on understanding the theory behind common techniques used in biotechnology. Topics include principles and methods for genetic manipulation, gene expression, nucleic acid sequencing, microarrays, and epigenomics. Emphasizes molecular signaling pathways, as well as primer and guide RNA design. Offers students an opportunity to practice proposal writing and other professional skills.

BIOT 5800. Gene Therapies. (2 Hours)

Provides an overview of specific gene therapy applications and diseases that are, or may be, a target of gene therapies. Includes case study analysis of gene therapies with publicly available information, as well as tools for proper identification of gene targets in disease states.

BIOT 5810. Cutting-Edge Applications in Molecular Biotechnology. (3 Hours)

Introduces the uses of molecular biology in a biotechnology setting. Includes a brief review of the basics and then dives into state-of-the-art molecular biology applications used in biotechnology today. These applications include stability and expression of cloned gene products, gene cloning strategies, transgenic species, mutation creation and analysis, DNA fingerprinting, PCR technology, microarray technology, gene probes, gene targeting, gene therapy, stem cell technology, antisense RNA, CAR T-cell therapy, RNA interference, and CRISPR/Cas9.

BIOT 5820. Cellular Therapies. (2 Hours)

The ever-changing landscape of the biotechnology field requires constant training. This course is designed to familiarize participants with some of the most cutting-edge topics available in molecular biology today: stem cells, RNA interference, CRISPR/CAS9, CAR T-cells, gene therapy, and more. Offers participants an opportunity to learn the theory behind these new technologies, how they are done, and their power in scientific discovery and treatment.

BIOT 5830. Regulatory Landscape of Cell and Gene Therapies. (2 Hours)

Introduces the current state of regulatory approvals for cell and gene therapies. Focuses on the scientific and technical considerations for approval for such drugs in the United States, in Europe, and in other key global markets. Explores the scientific challenges in the context of regulatory approval of these products, as well as how the process differs from traditional biotherapeutic product approvals. Examines how these regulatory pathways are evolving with a specific focus on quality, efficacy, and safety throughout the product life cycle (manufacturing through commercialization).

BIOT 5840. Cell and Gene Therapy Lab. (3 Hours)

Introduces selected key skills and techniques central to cell and gene therapy research. Combines hands-on training in cell and gene therapy skills with lecture and demonstration. Laboratory exercises highlight the current technical skills needed in the cell and gene therapy field, such as cell culture, siRNA, CRISPR/Cas9, stem cells, gene therapy, and editing, etc.

BIOT 5850. Higher-Order Structure Analytics. (3 Hours)

Offers a comprehensive look at various aspects of higher-order protein structures in biotherapeutics and their implications on biological drug design. Focuses heavily on protein aggregation, a type of HOS, and analysis of those aggregates including functional implications. Topics include a review of protein structure, protein aggregation, functional aspects, and techniques to reduce HOS using protein expression and purification strategies, protein folding in disease, macromolecular crystallography, nuclear magnetic resonance, analytical ultracentrifugation, circular dichroism, light scattering, electron spin labelling, cryo-EM, WAXS, and HDX-MS. Highlights experimental design and application to the biotechnology industry in identifying and reducing HOS.

BIOT 5910. Vaccines and Immunization. (3 Hours)

Emphasizes the importance of using vaccines in order to prevent the spread of infectious diseases and viruses. Discusses the evolution of vaccines throughout medical history (e.g., smallpox, polio), emphasizing lessons learned so they can be adapted to development of new and novel vaccines. Explains the molecular mechanism of how vaccines, such as vaccines that use attenuated virus to more novel vaccines that use mRNA, elicit an immune response. Examines the importance of immunization in the context of the immune system.

BIOT 5920. Foundations in Vaccine Regulatory Science. (3 Hours)

Explores the science behind how regulatory pathways were developed and how vaccines were approved for human use. The pathway for vaccine approvals by national regulatory authorities has been well established for decades. The SARS-CoV-2 pandemic created an immediate need to create new vaccines, which also created a new need for the regulatory approval of these vaccines. Examines how SARS-CoV-2 vaccines caused an increased interest in the regulatory science behind vaccine regulatory approval, specifically exploring the use of emergency use authorization (EUA) in getting SARS-CoV-2 vaccines to market. Discusses how the use of EUAs changed the regulatory science landscape of vaccines.

BIOT 5930. Molecular Tools for Vaccine Design. (3 Hours)

Discusses the molecular tools used for vaccine design and development, including the experimental tools used for attenuated whole-organism vaccines, purified macromolecule vaccines, and DNA or mRNA vaccines. Emphasizes vector design and development and specifically the challenges associated with vaccine design and development. Also studies computational tools that aid vaccine development.

BIOT 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned', and incorporate suggestions from this review to improve and further develop their career development and professional plan. May be repeated twice.

BIOT 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

BIOT 6100. Agricultural Biotechnology. (3 Hours)

Explores the key agricultural biotechnology (agritech) principles and methods that are used in industry today; serves as a foundational course exposing students, briefly, to all aspects of agritech. Topics covered include gene transfer and genetic modification; cloning; plant biotechnology, animal science, food and ecological biotechnology; consumer concerns; safety testing; and other issues related to agritech.

BIOT 6214. Experimental Design and Biostatistics. (2 Hours)

Explores the principles of experimental design and statistical analysis. Emphasizes research in the molecular and biological sciences and biotechnology. Topics include probability theory, sampling hypothesis formulation and testing, and parametric and nonparametric statistical methods.

BIOT 6290. Foundation in Quality for Biotechnology. (3 Hours)

Presents concepts, tools, and techniques for real-world, on-the-job application of quality that is practical for a wide range of organizations. Offers an insight into the mindset of quality, along with an overview of the concepts, principles, processes, and activities involved in quality assurance, quality control, and regulatory compliance within the life sciences Industry. Emphasizes understanding the business of biotech; the remit of global regulatory agencies; principles and processes for establishing and enforcing regulation and guidance; quality management systems, operations, and compliance; quality leadership; quality planning; and careers in the quality profession. Includes presentations from a variety of industry experts.

BIOT 6300. Pharmaceutical Microbiology. (3 Hours)

Studies those microorganisms associated with the manufacture of pharmaceuticals, including biopharmaceuticals. Focuses on how to exclude microorganisms, such as exotoxins and endotoxins, from pharmaceutical processes to produce a sterile product. Considers how products react to microorganism contamination and methods of disinfection. Discusses pharmaceutical microbiology as related to clean rooms and controlled environments and methods and specifications related to microorganisms based on the United States Pharmacopeia guidelines. Lastly, discusses facility monitoring, specifically EM/critical utility testing, process monitoring, and maintenance throughout with an emphasis on what regulators expect to see in terms of data.

BIOT 6310. CGMP Statutes and Regulation. (3 Hours)

Focuses on the laws and regulations related to pharmaceuticals manufacture and administration. Discusses an overview of laws and regulations and provides guidance in the context of why they exist, their evolution, and implementation. Specifically focuses on the laws and regulations around good manufacturing practices (GMP), postapproval safety concerns, regulation of manufacture, violations and enforcement, and what to expect during an inspection from a regulatory body. Surveys the laws and regulations on a global level focusing on specific examples related to the United States, Europe, Asia, and other regulatory agencies.

BIOT 6320. Design and Development of Biopharmaceuticals. (3 Hours)

Focuses on the production and processes related to the design and development of pharmaceuticals, especially biopharmaceuticals. Discusses the implementation of a quality management system plan including document processes, procedures, metrics, reporting, and responsibilities aligned with pharmaceutical and biotechnology companies' business objectives. Emphasizes signaling problems (continual improvement plans), transparency, validation, and team cooperation/dynamics. Topics may include data management, product quality, and quality instruments. Specifically discusses the International Council for Harmonisation Q10 guidelines.

BIOT 6340. Sterile Manufacturing Operations. (3 Hours)

Discusses the importance of sterile operations in producing drug products, as part of good manufacturing practice (GMP). Emphasizes sterile manufacturing operations for all drugs.

BIOT 6500. Professional Development for Co-op. (0 Hours)

Introduces the cooperative education program. Offers students an opportunity to develop job-search and career-management skills; to assess their workplace skills, interests, and values and to discuss how they impact personal career choices; to prepare a professional resumé; and to learn proper interviewing techniques. Explores career paths, choices, professional behaviors, work culture, and career decision making.

BIOT 6600. Agents of Bioterrorism. (3 Hours)

Examines the probable weapons of biowarfare—including biological, chemical, and nuclear weapons—from several perspectives. Offers fundamental information on the biology and mechanism of action of the most important potential agents of terror and an introduction to the role of government. Topics include biological impact, detection and recognition, epidemiology, and treatment. Evaluates potential dangers and effectiveness and investigates strategies for defense against attacks by such weapons. Discusses the bioethical challenges of anti-bioterror research. Also offers students an opportunity to develop skills in scientific literacy and writing.

BIOT 6610. Biosecurity and Bioterrorism. (3 Hours)

Examines the national and international political, legal, and policy dimensions of response to threats of bioterrorism and resurging epidemics. Explores how the interagency community works at local, tribal, state, national, and international levels to meet these growing challenges. Resurging epidemics are now gaining national attention in a way not seen for generations. These threats join the long-standing challenges of potential domestic and foreign state-sponsored biowarfare attacks and the growing awareness of the threat of bioterrorism.

BIOT 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

BIOT 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

BIOT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BIOT 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

BIOT 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

BIOT 6980. Biotechnology Capstone. (2 Hours)

Offers students an opportunity to integrate and apply the skills learned in earlier courses to an independent project supervised by a faculty mentor. The goals of the capstone are to develop skills in communicating the results of independent projects; increase student awareness of research in biotechnology outside of their own work; demonstrate a familiarity with the literature background to their work, including a working knowledge of literature searching; and provide an opportunity to reflect on individual progress toward a career in biotechnology.

BIOT 7001. Managing Innovation in Biotechnology. (3 Hours)

Offers students an opportunity to apply their curricular learnings in an applied project setting. Working with a project sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Course topics include the biotechnology innovation process, the assessment of market opportunities, the development of business models and risk management. Emphasizes development of professional skills, effective teamwork, and managing projects that involve uncertainty.

Prerequisite(s): (BIOT 5219 with a minimum grade of C- or BIOT 5219 with a minimum grade of C- or BIOT 5219 with a minimum grade of C-); BIOT 6500 with a minimum grade of C-

BIOT 7245. Biotechnology Applications Laboratory. (3 Hours)

Presents a laboratory course in biotechnology with a focus on cutting-edge instrumentation that is currently used in the field. Directs special attention at the practical aspects of laboratory work in this field, for example, techniques in sample preparation, procedures for protein analysis, and new bioinformatic approaches. Focuses on the emerging field of chemiproteomics, which is the study of the interaction of small molecules with the proteome, that is, the full complement of proteins expressed in an individual cell or organism. Exposes the student to hands-on experience with modern instrumentation, such as mass spectrometry and high performance liquid chromatography.

BIOT 7246. Molecular Technologies Practicum. (3 Hours)

Introduces regional core facilities and covers specialized, state-of-the-art biotechnology techniques. Laboratory modules are taught on-site at—and in collaboration with—industry partner organizations. Students practice essential laboratory techniques while also studying research organizations within the biotechnology ecosystem (e.g., industry, research institutes). Combines hands-on training in advanced molecular technologies and applications of in vivo and in vitro models with lecture, demonstration, and data analysis. Offers students an opportunity to examine and practice skills in bioinformatics and techniques in recombinant DNA technology and to build foundational skills in experimental and disease models.

BIOT 7250. Advanced Biotechnology Applications Laboratory. (3 Hours)

Focuses on advanced biological and bioprocess engineering concepts. Uses industrial-scale systems and technology platforms. Offers students an opportunity to learn lab techniques used in manufacturing and production of biotherapeutic products (protein-based drugs such as monoclonal antibodies) and cell and gene therapies. Offers hands-on experience with industrial-scale bioreactors, protein purification systems, and mass spectrometry. Emphasizes understanding critical process parameters (CPPs) and critical quality attributes (CQAs) in drug production.

BIOT 7983. Special Topics in Biotechnology. (1-4 Hours)

Presents selected topics of current importance in biotechnology. May be repeated five times for a maximum of 6 total semester hours.

Biotechnology - CPS (BTC)

Courses

BTC 1300. Introduction to Biotechnology. (3 Hours)

Introduces the integrated science of genomics, proteomics, and bioinformatics using a case study, hands-on, problem-solving approach. Offers students an opportunity to practice accessing and using online databases to engage in real-time discoveries using the same approach current scientists use in their own research. Focuses on the process of doing genomic analysis and thinking from a genomics perspective. Uses integrated multimedia and web resources to introduce new technologies and to allow students to research and analyze real genomics data.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BTC 1301

BTC 1301. Lab for BTC 1300. (1 Hour)

Accompanies BTC 1300. Designed to introduce cutting-edge skills and techniques used in research labs and biopharmaceutical companies. Offers students an opportunity to learn the theoretical background of a technique in the lecture portion of the course and to be able to practice the techniques in the lab—to learn to read and write protocols; to accurately and precisely measure liquids and solids; to prepare solutions and media; to keep a virtual lab notebook, all while working in a safe and aseptic lab setting; and to learn how to perform electrophoresis, protein quantification, DNA extraction, and the basic use of a bioreactor.

Prerequisite(s): BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

Corequisite(s): BTC 1300

BTC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BTC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BTC 3210. Immunology. (4 Hours)

Discusses biological, chemical, and physical attributes of antigens and antibodies, together with their serological interactions.

Prerequisite(s): BIO 1100 with a minimum grade of D- ; BIO 1101 with a minimum grade of D- ; BIO 1200 with a minimum grade of D- ; BIO 1201 with a minimum grade of D-

BTC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BTC 4300. Biotechnology and Pharmaceutical Processing. (3 Hours)

Focuses on the fundamental principles and elements in the process of manufacturing biopharmaceuticals using current good manufacturing practices (CGMPs). Covers kinetics of enzymatic reactions; selected microbial and cell metabolism and relevant control mechanisms; kinetics of cell growth, cell death, substrate consumption, and product formation; mathematical modeling and representation of bioprocesses; and examples of industrial bioprocesses to illustrate types and operations of upstream and downstream unit operations and mass transfers in fermentation systems. Emphasizes bioprocesses for recombinant protein production. Explores in-depth selected methods, techniques, and instruments used in biotechnology.

Prerequisite(s): BTC 1300 with a minimum grade of D- ; BIO 2300 with a minimum grade of D-

Corequisite(s): BTC 4301

BTC 4301. Lab for BTC 4300. (1 Hour)

Accompanies BTC 4300. Offers students an opportunity to learn important technical and safety concepts relevant to biotechnology and pharmaceutical processing while gaining hands-on experiences in a modern laboratory. Employs upstream equipment (e.g., cell culture vessels and sonication device); covers downstream operations (e.g., centrifuge and chromatography columns) and analytical tools (e.g., sensors, spectrophotometer, gel electrophoresis) for studying cell metabolism; recovering and separating cell components (e.g., organelles, DNA, proteins); purifying the target product (e.g., recombinant green fluorescent protein); and analyzing the efficacy of process steps through mass balancing.

Prerequisite(s): BTC 1301 with a minimum grade of D ; BIO 2300 with a minimum grade of D

Corequisite(s): BTC 4300

BTC 4450. Quality Control and Validation Issues. (3 Hours)

Introduces the regulations and guidelines affecting the development, production, registration, and sale of medical devices, diagnostics, pharmaceuticals, and biotechnology products worldwide. Focuses on why regulations are necessary, ethical considerations, and international standards. Offers practical instruction in the basics of quality control and process/facility validation for the biotechnology industry. Reviews appropriate regulations, including personnel and process flow, environmental and water testing, sterility testing, and incoming material and in-process testing. Other topics include the establishment of a master validation plan; description of facility, equipment, and process validations; and cleaning validations.

Prerequisite(s): BTC 1300 with a minimum grade of D- ; (MTH 2300 with a minimum grade of D- or MTH 2310 with a minimum grade of D- or MTH 3300 with a minimum grade of D-)

BTC 4850. Biotechnology Senior Project. (3 Hours)

Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field.

Prerequisite(s): BIO 2300 with a minimum grade of D- ; BIO 2500 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

BTC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BTC 5210. Human Experimentation: Methodological Issues Fundamentals. (3 Hours)

Explores issues related to human experimentation, including scientific, technical, and methodological issues and the ethical, clinical, and financial repercussions of clinical trial studies. Covers how effective study designs can mitigate the common limitations and problems of clinical trials. Considers ethical issues, such as selective reporting of clinical research, informed consent, and protection of research participants in domestic and international clinical trials. Offers students an opportunity to develop and study statistical modeling and methodologies utilized in constructing clinical study designs.

BTC 6210. Human Experimentation: Methodological Issues Fundamentals. (4 Hours)

Explores issues related to human experimentation, including scientific, technical, and methodological issues and the ethical, clinical, and financial repercussions of clinical trial studies. Covers how effective study designs can mitigate the common limitations and problems of clinical trials. Considers ethical issues, such as selective reporting of clinical research, informed consent, and protection of research participants in domestic and international clinical trials. Offers students an opportunity to develop and study statistical modeling and methodologies utilized in constructing clinical study designs.

BTC 6211. Validation and Auditing of Clinical Trial Information. (4 Hours)

Presents a comprehensive overview of the management of quality assurance in clinical trials, Good Clinical Practices (GCP), and management of audit outcomes, as well as current issues and trends in the validation and auditing of clinical studies.

Prerequisite(s): BTC 6210 with a minimum grade of C- ; (RGA 6000 with a minimum grade of C- or RGA 6001 with a minimum grade of C-)

BTC 6213. Clinical Trial Design Optimization and Problem Solving. (4 Hours)

Discusses quantitative data analysis in creating dynamic drug-disease models, strategic market models, trial simulation models, and integrated financial models, which enable key variable analysis in clinical trial developments in real time. This integrated approach allows all decisions in the design to optimize value against both scientific and business criteria simultaneously and continuously. Offers students an opportunity to learn to take a complete view of the development process at the outset—across time, across the portfolio, and at all levels in the organization. This allows for greater insight into a drug's potential early in the process and leads to a more focused program for promising compounds, including an optimized clinical trial design. It also allows for earlier cessation of unpromising clinical trials, saving time and funds.

Prerequisite(s): (BTC 6210 with a minimum grade of C- ; RGA 6000 with a minimum grade of C-) or RGA 6001 with a minimum grade of C-

BTC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Business Administration (BUSN)

Courses

BUSN 1101. Applied Business Fundamentals. (4 Hours)

Blends theoretical principles with real-life application. Introduces the fundamentals of launching, growing, and managing a business venture in today's dynamic and increasingly global environment. Examines concepts within multiple academic disciplines and from multiple perspectives—including marketing, technology, finance, accounting, information systems, people, and culture—and then applies them to new ventures within varied types of organizations. Offers students an opportunity to develop an entrepreneurial skill set and mind-set through the development of the critical thinking, innovative decision making, problem solving, and team building needed for any business, large or small.

Attribute(s): NUpath Difference/Diversity

BUSN 1102. Personal Skill Development for Business. (1 Hour)

Offers first-year students in the D'Amore-McKim School of Business (DMSB) an opportunity to achieve a better understanding of themselves as students and as future professionals. Explores self-analysis, leadership traits and styles, diversity and cultural awareness, professionalism, emotional intelligence, and ethics. Encourages students to draw connections among classroom education, extracurricular activities, and practical experiences and to identify how each component fits into the pursuit of their individual goals.

BUSN 1103. Professional Development for Business Co-op. (1 Hour)

Introduces students to the Cooperative Education Program and provides them with an opportunity to develop job-search and career-management skills. Offers students an opportunity to perform assessments of their workplace skills, interests, and values and discuss how they impact personal career choices. Students also have an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, professional behaviors, work culture, and career decision making. Familiarizes students with workplace issues relative to their field of study and teaches them to use myNEU in the job-search and referral process. Presents co-op policies, procedures, and expectations of the Department of Cooperative Education and co-op employers.

BUSN 1106. Essentials of Business. (2 Hours)

Examines, in a "business boot camp" approach, how to cultivate a business mindset and develop critical business skills. Focuses on five major objectives: collaborating in teams, improving presentation and writing skills, fostering critical and entrepreneurial thinking, identifying the value of the interaction between different business disciplines, and introducing the critical business skills that are covered in more depth in students' future coursework.

Corequisite(s): PHIL 1106

BUSN 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BUSN 2963. Topics. (1,2 Hours)

Offers undergraduate students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

BUSN 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BUSN 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

BUSN 3110. The Consulting Environment. (4 Hours)

Seeks to provide students with a framework and the fundamentals that allow them to understand the field of consulting in addition to a way of thinking for jobs in the consulting and other highly competitive careers. Focuses on the analysis of complex business situations using caselets and cases and provides frameworks as the basis for analysis and critical thinking in pressure situations. In addition, various articles, white papers, business case studies, and other consulting practices are shared with the students enrolled in the course as well as professionals with industry experience providing insights as visiting guest speakers.

BUSN 3501. Impact of AI on Business. (4 Hours)

Examines the impact of artificial intelligence on the core pillars of business—finance, sales, marketing, operations, engineering, and entrepreneurship. Offers students an opportunity to obtain a holistic understanding of how AI is reshaping these critical business domains and fostering the next wave of innovation. Discusses new business models, changes in go-to-market strategies for businesses, and the impact of AI-driven predictive analytics on finance. Explores new business possibilities enabled by AI and new approaches for using AI to complete traditional business activities.

Prerequisite(s): FINA 2201 with a minimum grade of D- or INNO 2301 (may be taken concurrently) with a minimum grade of D- or MKTG 2201 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

BUSN 3944. Junior/Senior Internship. (1 Hour)

Offers students an opportunity for internship work. May be repeated up to two times.

BUSN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BUSN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BUSN 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times for a maximum of 8 semester hours.

BUSN 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

BUSN 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

BUSN 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned', and incorporate suggestions from this review to improve and further develop their career development and professional plan.

BUSN 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner. May be repeated two times.

BUSN 6200. Career Management. (0 Hours)

Required for the Co-op MBA program. Begins with an introduction to the career planning process and to the services of the MBA Career Center. Topics include résumé writing, videotaped practice interviewing, job search strategies, interview preparation, salary negotiation, marketing communication, and visa issues for international students seeking employment in the United States. May include additional topics depending on student interest. Requires admission to co-op MBA program. May be repeated once.

BUSN 6203. Strategic Sustainability. (1 Hour)

Introduces tools and frameworks for analyzing a firm's sustainability and facilitating its strategic sustainability transformation. Examines what strategic sustainability is and why it is important; the drivers of strategic sustainability; measurement of strategic sustainability; and implementation of environmental, social, and governance strategic sustainability. Studies the three dimensions (environmental, social, and governance) of strategic sustainability and the use of concepts and frameworks for assessing strategic sustainability. Offers students an opportunity to analyze and provide recommendations on how to implement a firm's strategic sustainability.

BUSN 6296. Introduction to Data Storytelling and Visualization for Business. (1 Hour)

Studies the skills required to effectively tell stories with data to drive business decisions. Covers data analysis, interpretation, and visualization techniques. Emphasizes understanding audience perspectives and mastering business presentation techniques. Offers students an opportunity to cultivate the ability to communicate complex data findings in a simple, concise, and influential manner to both technical and nontechnical audiences, thereby fostering data-driven decision making.

BUSN 6297. Leading Business Transformation. (1 Hour)

Studies the mindset, skill set, and tool set needed to make relevant changes in the way businesses and organizations operate. Examines the four dimensions of business changes: work processes, organization structure, digital transformation, and cultural transformation. Focuses on leading and driving business value. Applies to any level and business function.

BUSN 6298. Supply Chain Impact on Reaching Net Zero. (1 Hour)

Introduces the global supply chain ecosystem, as well as the scope and impact of supply chain on the net zero goals. Defines the hurdles to change including customer choice, technology limitations, and investment. Discusses solutions required to create the massive improvement necessary to meet targets and explore sourcing objectives, total cost analysis, supplier innovation, and risk-mitigation topics.

BUSN 6299. Building Profitable and Sustainable Online Experiences. (1 Hour)

Offers a rigorous introduction to the craft of using data, behavioral science, and machine learning to create highly personalized and engaging app experiences that make users happy. Focuses on free-to-play apps and presents case studies covering personalization systems with proven lift in engagement, retention, and monetization.

BUSN 6324. Predictive Analytics for Managers. (1 Hour)

Presents the concepts of correlation and simple linear regression analysis as well as multiple regression analysis. Offers students an opportunity to build multiple regression models and use them in forecasting and analyzing data. Exposes students to nonlinear regression models, reading and analyzing output tables, and using statistical software tools.

BUSN 6343. Sharing Economy, Crowdsourcing, and Digital Business Transformation. (1 Hour)

Explores how a highly connected world driven by technological advances fuels a digital transformation centered around networks, crowds, and markets. Covers network effects and 'rich-get-richer' phenomena; business models and strategies for multisided markets and platforms; crowdsourcing and online labor markets; sharing economy; and new ways organizations become innovative by tapping into expertise outside firms' boundaries. Discusses business cases from industries including Uber/Lyft, Airbnb, Kickstarter, Amazon's Mechanical Turk, Upwork, Etsy, eBay, InnoCentive, and TopCoder. Explicitly addresses possible negative consequences. Explores critical risks such as bias and inequality due to deregulation, social and algorithm-based discrimination, and an overall critique of growth-based business models. Offers students an opportunity to hone their skills to spearhead game-changing digital initiatives to learn how to manage others in the wake of disruptive changes.

BUSN 6344. The Fintech Revolution. (1 Hour)

Uses case studies and illustrations to explore the key major innovations that are revolutionizing and driving opportunities in fintech. Topics may include payments: payment processing, transfers, rewards; blockchain: digital currency, smart contracts, DLT, trading; investments: Robo Advisors, investment management; planning: retirement planning, education planning; lending: crowdfunding, P-2-P lending, alternative money-raising platforms; insurance: underwriting, comparison platforms; big data and analytics: AI and big data solutions, alternative data; security: cybersecurity, authentication, encryption. Also discusses business models and opportunities in fintech, including the evolution of fintech and the current state of the art; case studies of successful business models in fintech startups; key things that differentiate a successful fintech company; and best practices and tips when working on a fintech idea.

BUSN 6351. Experiential Education. (1-3 Hours)

Consists of various experiential learning opportunities that are approved by the faculty of the D'Amore-McKim School of Business for full-time MBA students. May be repeated five times for a maximum of six semester hours.

BUSN 6352. Python for Business Analytics. (1 Hour)

Introduces a detailed overview of Python programming for data mining and prediction in a business context in order to tackle modern-day data analysis problems. This course is appropriate for students who wish to learn and apply Python tools to business analysis.

BUSN 6363. Social Impact of Business. (2 Hours)

Explores how business practices affect society and how society affects business practices. Addresses topics such as social impact investing, sustainable supply chains, corporate social responsibility, social entrepreneurship, and global perspectives on corporate citizenship. Business and society have never been more intertwined. Executives are increasingly called upon to consider the larger societal impacts of their decisions and at the same time find themselves subject to demands from multiple societal stakeholders that include customers, suppliers, employees, governments, and interest groups, among others.

BUSN 6365. Business Analytics. (3 Hours)

Provides an overview of data collection, organization, analysis, interpretation, and presentation techniques used by contemporary organizations. Students use multiple software tools to collect, prepare, manage, analyze, evaluate, understand, critique, visualize, and present data sets of various types. Offers students an opportunity to obtain essential skills, tools, and techniques required to understand data sets, both large and small, from sources internal and external to an organization. This understanding can then be used to support datacentric decision making and create a measurable improvement in business performance. Businesses run on data, and employees at all levels must know how to properly use and interpret data to support their roles within a company.

BUSN 6366. International Corporate Governance and Strategic Thinking. (1 Hour)

Introduces key concepts in strategic corporate governance. Offers students an opportunity to use these concepts to understand the different economic, social, and political contexts across advanced industrial and emerging economies. Describes key aspects of corporate governance systems in a number of different countries and analyzes the strengths and weaknesses of these systems in comparison. Examines the importance of social and political factors in shaping different models of firm organization across countries and how new governance practices and institutional norms develop in response to changes in the real world of business management.

BUSN 6370. Digital Money. (1 Hour)

Considers the evolution and significance of digital currencies and payment systems; government responses in the form of central bank digital currencies (CBDCs); the ensuing competition with private stablecoins and cryptocurrencies; and the strategic impact of the rise of digital currency on enterprises and on their interactions with regulators, suppliers, and customers. Explores key issues such as digital money, policy implications, government concerns over digital money, the possible launch of CBDCs, and business and societal implications.

BUSN 6374. Creating Shared Value as a Way of Life. (1 Hour)

Designed to empower students with a holistic toolkit to make "creating shared value" a way of life as a social innovator, entrepreneur, and strategist who is prepared to tackle the challenges of the 21st century. Offers students an opportunity to be exposed to and practice the concepts of business policy by assuming the role of a strategist analyzing the strategic context of a company/venture at a point in time.

BUSN 6375. Designing 21st-Century Business Organizations. (1 Hour)

Addresses the question: What is the most effective organizational design (or designs) for meeting the challenges of the 21st century? Describes a process for designing an organization, along with some of the key challenges associated with organizational design. Reviews the design options available historically, as well as designs that are more popular in recent years. Asks students to justify their own conclusions about which organizational design is best suited to meet the requirements and challenges facing business organizations today.

BUSN 6376. The Business Case for Social and Economic Justice. (1 Hour)

Examines how strategic business decisions are made and governing policies established in today's changing corporate environment. Discusses whether it is advisable for CEOs to "take a stand" on behalf of their company and their employees when fundamental shared values and a company's purpose or mission are at stake. After a grounding in business governance theory and history, students debate whether CEOs should speak openly on controversial public issues. One can make the case that a CEO taking a position on one side of a public issue is a significant strategic risk. Conversely, stakeholders are increasingly demanding that business leaders publicly take positions and change business practices to align with those values.

BUSN 6377. Learning from Crisis:Toward Sustainability and Resilience. (1 Hour)

Highlights the importance of public-private sector interconnections and systemic partnerships within communities to promote resilience and enable progress toward sustainable development, such as those promoted by the United Nations Sustainable Development Goals (UN SDGs). Covers the nexus between resilience, sustainable development, and the impact of crises on societies and multinational corporations. Includes both conceptual material and examples. Includes a case study competition where students are presented with a challenge scenario and then asked to provide a presentation where they think creatively about how firms and communities can have a reciprocal relationship toward sustainable development and resilience.

BUSN 6378. Effective Business Storytelling. (1 Hour)

Examines the art and science behind effective storytelling in a business context. Explores the role and criticality of storytelling to achieve business objectives. Introduces students to the key elements of a good story and the finite story types that exist. Challenges assumptions about storytelling—what it is, its role in business, and the skills storytellers need. Provides a wide range of written and spoken examples and exercises. Offers students ample opportunities to practice and critique storytelling in a variety of contexts, from the quotidian to the difficult.

BUSN 6379. Entrepreneurial Ecosystems. (1 Hour)

Examines the development, growth strategies, and stewardship of entrepreneurial ecosystems and “startup communities.” Defines and measures ecosystems. Studies the ways that governments, corporations, and community groups attempt to shape ecosystem development. Surveys leading authorities in the field and looks at real-world examples of success and partial success from several different perspectives.

BUSN 6380. Predictive Modeling for Business. (1 Hour)

Introduces students to selected principles and techniques of predictive analytics through a case study approach, with a focus on classification models. Topics covered include the fundamental properties of supervised machine learning methods; common applications of supervised learning models in business contexts; and the implementation and interpretation of two popular classification models, logistic regression and random forest. The open-source software environment R is used to perform analysis for course assignments.

BUSN 6381. Business Applications of Natural Language Analytics. (1 Hour)

Surveys the applications within business of Natural Language Analytics (NLA), including Natural Language Processing (NLP), Understanding (NLU), and Generation (NLG). Over the past decade, NLA has experienced exponential improvements in capabilities and applications to various areas within marketing, supply chain, finance, and public policy. Offers students the opportunity to learn how to wrangle and analyze text data (NLP), apply foundational models to gain understanding of data contained within text (NLU), and have the opportunity to work with tools that allow them to auto-generate language (NLG). Applications will showcase document classification, sentiment analysis, content generation, chat bot design, and question/answer. All applications will be showcased in R.

BUSN 6382. Real Options. (1 Hour)

Introduces the concept of real options, offers theoretical underpinnings for the method, and broadly covers option pricing methods. Examines the use of real options in making financial decisions for capital budgeting decisions, helping to maximize shareholder value. Explores methods such as net present value, or NPV, and internal rate of return, or IRR, to evaluate the feasibility of projects. Examines several applications in project valuation using MS Excel.

BUSN 6383. Blockchain and Decentralized Finance. (1 Hour)

Introduces the fundamental building blocks of blockchain technology, as well as its application in cryptocurrencies and, in particular, decentralized finance. Covers the fundamentals of cryptography, such as hash functions and digital signatures. Emphasizes three major DeFi applications: stablecoins, lending platforms, and exchanges.

BUSN 6384. Marketing in the Metaverse. (1 Hour)

Explores how firms are using metaverses for marketing purposes to enhance marketing strategy and to create value for customers in virtual worlds through marketing experiences similar to what a brand does in real life. Examines current trends, drivers, and barriers to the use of metaverses for marketing purposes. Studies how a metaverse can help in marketing activities—marketing strategy, advertising, and customer relationships—and how established firms have started engaging in marketing in a metaverse—Nike launching “Nikeland,” a metaverse game where people can interact with the brand.

BUSN 6386. Crafting Your Personal Strategy. (1 Hour)

Examines the application of strategy frameworks and practices for crafting individual professional strategies. Applies concepts of mindfulness and strategic thinking to formulate strategic actions to create a pathway toward personal vision within a professional world. Offers students an opportunity to define and identify their personal vision, match their vision to external and internal environments, and formulate their personal strategy for a market entry.

BUSN 6387. Job Is Easy, People Are Not. (1 Hour)

Explores the complex challenges of becoming leaders and managing people. Studies 10 essential smart (not soft) skills that are vital for personal and professional development. Fosters insight in how to develop and apply these skills in various aspects of life, how to self-correct, and how to help others adjust their behaviors to become better professionals.

BUSN 6389. Leading Global Virtual Innovation Teams. (1 Hour)

Examines what it means to lead a global virtual team as well as to learn how to develop and practice their unique leadership approaches to remote collective work. Addresses a series of unprecedented challenges of leading a virtual team and introduces and practices the solutions for challenges based on leading-edge scientific research and well-tested industrial practices. Adopts extensive experiential learning approaches in conjunction with the case study method to help students understand the core concepts and competencies that transform students' virtual leadership capabilities.

BUSN 6390. Overview of Blockchain, Cryptocurrencies, NFTs, and Decentralized Finance. (1 Hour)

Presents an overview of blockchain technology; cryptocurrencies; nonfungible tokens; and decentralized finance, or DeFi. Explores the fundamentals of blockchain technology including its history, underlying principles, and use cases. Covers various cryptocurrencies, such as bitcoin and ethereum, and their functions, such as digital transactions, smart contracts, and tokenization. Delves into the world of NFTs including their creation, ownership, and marketplaces. Concludes with an overview of DeFi and its impact on traditional finance, lending and borrowing, and decentralized exchanges.

BUSN 6402. Stakeholder Values and Societal Challenges in Business. (2 Hours)

Examines how to analyze the impact that societal challenges have in business decision making. Focuses on the challenges that companies face when embracing and empowering goals to add value to their shareholders and stakeholders while "doing good." Examines the increasingly complex relations between businesses with outsized power and reach and governments in developed and emerging economies. Studies the implications of firm-level and government-level decision making and the impact on the specific communities where decisions are enacted. Studies the roles played by for-profit entities, not-for-profit entities, nongovernmental organizations, and government agencies in exploring, understanding, and achieving progress with these challenges.

BUSN 6945. Washington Campus Seminar. (3 Hours)

Offers a weeklong educational residency in Washington, D.C., where students meet with members of Congress, current and former executive branch officials, senior civil servants, business executives, lobbyists, representatives of the media, and special-interest groups. Offers students an opportunity to understand how Washington works, how legislative and regulatory changes impact their business futures, and what new business opportunities may evolve as the result of federal policy priorities and decisions. The residency seeks to offer unparalleled insight into the process of government, with the goal of enabling top business leaders to contribute ethically and effectively to the policy debate, influence policy outcomes, and leverage their understanding of policy trends to developing new business opportunities.

BUSN 6950. MBA Skills Workshop. (0 Hours)

Continues the full-time MBA orientation program. Offers students an opportunity to develop the management skills necessary to become effective managers, including communication skills, qualitative and quantitative business analysis, and ethics and values.

BUSN 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

BUSN 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

BUSN 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

BUSN 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated up to five times.

BUSN 6970. Professional Projects. (0 Hours)

Offers graduate students an opportunity to participate in flexible, professional work experiences through micro-internships, an alternative to a traditional corporate residency or co-op. Students demonstrate and enhance their career readiness competencies, explore career paths, and expand their network. These project-centered experiences are primarily remote, involve 10 to 40 hours of work, and are deadline driven as opposed to set during specific hours. May be repeated five times.

BUSN 6976. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times.

BUSN 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Cardiopulmonary and Exercise Science (EXSC)**Courses****EXSC 1120. Introduction to Exercise, Fitness, and Health. (4 Hours)**

Explores the fundamental role of exercise and fitness in health. Introduces principles of exercise and various components of fitness and wellness. Discusses the development of basic exercise prescription for cardiorespiratory endurance, muscular strength, and endurance and flexibility and provides hands-on experiences of measuring these components. Includes discussions on a wide range of topics, including advances and innovations in health and fitness and practices that lead to more healthful living.

EXSC 2991. Research in Exercise Science. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

EXSC 4500. Exercise Physiology 1. (4 Hours)

Introduces exercise physiology. Covers the muscular, neuromuscular, cardiovascular, ventilatory, endocrine, and metabolic responses to acute exercise and the physiological adaptations to chronic exercise and physical activity. Basic concepts related to physical fitness, body composition, weight control, and training principles are discussed.

EXSC 4501. Lab for EXSC 4500. (1 Hour)

Accompanies EXSC 4500. Offers experiments in the exercise physiology laboratory that introduce concepts related to the lecture content of the course and include techniques such as strength testing, ergometry, graded exercise testing, indirect calorimetry, and body composition assessment.

EXSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EXSC 5200. Cardiopulmonary Physiology. (3 Hours)

Offers students an opportunity to gain an understanding of physiological principles of the cardiopulmonary system. Covers the structure and functional operation and regulation of the cardiopulmonary system, disease-associated physiological changes and cardiopulmonary dysfunction, and exercise-induced acute responses and physiological adaptations of the system and their applications to chronic cardiopulmonary diseases. Integrates knowledge of exercise and physical activity with cardiopulmonary health and fitness, as well as cardiopulmonary disease prevention and treatment.

Prerequisite(s): ((BIOL 2217 with a minimum grade of C- ; BIOL 2219 with a minimum grade of C-) or EXSC 4500 with a minimum grade of C-) or graduate program admission

EXSC 5210. Physical Activity and Exercise: Prescription, Measurement, and Testing. (3 Hours)

Studies the general principles of physical activity and exercise prescription, measurement, and testing. Offers students an opportunity to learn the fundamental concepts and techniques to measure physical activity, exercise, and related testing procedures through a hands-on approach. Topics include the use of questionnaires and activity monitors to measure physical activity; measurement of body composition, fitness, muscular strength, and endurance; and clinical exercise testing. The fundamental concepts of exercise prescription and use of measurement techniques taught in this course are applicable to careers in physical therapy, exercise physiology, and as a physician assistant. Requires prior completion of EXSC 4500 or equivalent undergraduate course or permission of instructor.

EXSC 5220. Advanced Exercise Physiology. (3 Hours)

Covers the advanced study of concepts, principles, and research in the field of exercise physiology. Discusses advanced concepts in the muscular/neuromuscular, cardiovascular, ventilatory, endocrine, and metabolic responses to exercise and exercise training. Specific study of the physiological control mechanisms regulating these systems are also addressed during periods of rest, acute exercise, and following chronic exercise training.

Prerequisite(s): EXSC 4500 with a minimum grade of D- or graduate program admission

EXSC 5230. Physical Activity and Exercise: Effects on Musculoskeletal Health and Disease. (3 Hours)

Seeks to provide a foundation for understanding the benefits of physical activity and exercise and the detrimental effects of physical inactivity and sedentary behavior on musculoskeletal health. Studies the function/dysfunction of the musculoskeletal systems resulting in common/uncommon disorders and the prevalence, etiology, and benefits of physical activity/exercise. Students apply previously learned exercise physiology principles, such as exercise prescription and neural and motor control adaptations, to physical activity and exercise. Discusses key physiological mechanisms underlying common/uncommon musculoskeletal disorders. Examines the preventive and beneficial effects of physical activity and exercise endorsed by the American College of Sports Medicine. Restricted to graduate students in exercise science and to undergraduate students minoring in exercise science.

Prerequisite(s): EXSC 4500 with a minimum grade of D- or graduate program admission

EXSC 5240. Clinical Nutrition Applications in Health and Disease. (3,4 Hours)

Prepares health professionals to effectively communicate principles of diet and nutrition to their clients and the public. Covers public health promotion strategies, techniques used to teach diet and nutrition, and behavioral theories used in diet and nutrition intervention. Emphasizes clinical applications for the treatment of weight disorders, diabetes, cardiovascular disease, eating disorders, and nutrition in the life cycle.

EXSC 5976. Directed Study. (1-4 Hours)

Offers independent course work under the direction of members of the department on chosen topics. Requires submission of a written proposal to the program adviser prior to the intended semester. May be repeated without limit.

EXSC 6202. Electrocardiography, Clinical Assessment, and Prescription. (3 Hours)

Focuses on the identification and management of chronic diseases. Offers students an opportunity to learn skills to interpret EKGs. Topics include cardiac electrophysiology, lead systems, dysrhythmia recognition and treatment, axis, infarction, ischemia, hypertrophy, and the effects of cardiovascular drugs and exercise on the EKG. Through case studies, students interpret exercise test results, prescribe exercise, and evaluate exercise programs for clinical conditions such as cardiovascular disease, pulmonary conditions, and metabolic diseases.

EXSC 6300. Internship in Exercise Science. (3 Hours)

Offers students an opportunity to obtain practical experience and to synthesize, integrate, and apply skills and knowledge learned in the exercise science curriculum in a professional environment. Field experiences are an important part of graduate education programs in exercise science. The student is expected to complete a minimum of 300 hours of supervised experience in a research or practice setting. May be repeated once.

Prerequisite(s): (EXSC 5200 with a minimum grade of D- or EXSC 5200 with a minimum grade of C- (Graduate)); (EXSC 5210 with a minimum grade of D- or EXSC 5210 with a minimum grade of C- (Graduate)); (EXSC 5220 with a minimum grade of D- or EXSC 5220 with a minimum grade of C- (Graduate))

EXSC 6400. Applied Research Methods. (3 Hours)

Studies how to conduct scientific research in exercise science. Offers students an opportunity to propose a research project and design appropriate methodology to complete the project. Includes discussions on developing research hypotheses, comparing study designs, selecting appropriate statistical analyses, and managing data collection. Incorporates interpretation of published research to support the proposed research. Students present their own research plans through scientific writing.

EXSC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EXSC 6966. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience. May be repeated four times.

EXSC 7991. Thesis 2. (3 Hours)

Continues EXSC 7990.

Prerequisite(s): EXSC 7990 with a minimum grade of C-

Chemical Engineering (CHME)

Courses

CHME 1983. Special Topics in Chemical Engineering. (4 Hours)

Focuses on topics related to chemical engineering to be selected by instructor. May be repeated up to three times.

CHME 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHME 2204. History of Fluid Mechanics. (4 Hours)

Traces the development of fluid mechanics from its antiquity to the present. Considers and emphasizes the impact of various cultures to contributions in the field, including Egyptian, Greek, Chinese, Arabic, and modern European cultures. Covers fluid properties, measurements, and equipment through the discoveries and applications of these cultures. Follows the role of fluid mechanics in modernizing the world through contributions by Archimedes, da Vinci, Newton, Bernoulli, Prandtl, and others.

CHME 2308. Conservation Principles in Chemical Engineering. (4 Hours)

Examines the applications of fundamental laws of mass and energy conservation to chemical and physical processes. Emphasizes material and energy balances on chemical processes. Offers students an opportunity to develop skills in applying chemistry, physics, and mathematics to identify and solve chemical engineering problems.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-

CHME 2310. Transport Processes 1. (4 Hours)

Covers the fundamentals of transport of incompressible and compressible fluids (fluid flow) along with energy transport. Concepts are continued in CHME 3312 with emphasis on heat transport. The methods taught are relevant to the analysis of engineering processes in a number of industries, including chemical, pharmaceutical, food, energy, biotechnology, and materials.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; CHME 2308 with a minimum grade of D- ; MATH 2341 (may be taken concurrently) with a minimum grade of D-

CHME 2320. Chemical Engineering Thermodynamics. (4 Hours)

Covers the first and second laws of thermodynamics and their application to batch and flow systems, heat effects in chemicals, and physical properties/real fluids. Applies basic principles and mathematical relations to the analysis and solution of engineering problems.

Prerequisite(s): CHME 2308 with a minimum grade of D- ; MATH 2321 with a minimum grade of D-

CHME 2322. Chemical Engineering Thermodynamics 1 Abroad. (4 Hours)

Covers the first and second laws of thermodynamics and their application to batch and flow systems, heat effects in chemicals, and physical properties/real fluids. Applies basic principles and mathematical relations to the analysis and solution of engineering problems. Taught abroad.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; CHME 2308 with a minimum grade of D-

CHME 2949. Introductory Directed Research in Chemical Engineering. (4 Hours)

Offers first- and second-year students an opportunity to pursue project and other independent inquiry opportunities under faculty supervision. The course is initiated with a student-developed proposal, including expected learning outcomes and research products, which is approved by a faculty member in the department. Requires permission of instructor.

CHME 2983. Special Topics in Chemical Engineering. (4 Hours)

Focuses on topics related to chemical engineering to be selected by instructor. May be repeated up to three times.

CHME 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHME 2991. Research in Chemical Engineering. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated four times.

CHME 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors. May be repeated up to nine times.

CHME 3305. Chemical Engineering Laboratory. (4 Hours)

Offers students an opportunity to obtain hands-on laboratory experience and to develop safety, teamwork, problem-solving, organizational, technical writing, and oral presentation skills. Focuses on the discovery of fundamental momentum, heat, and mass transport principles. Those fundamentals are used to develop and design engineering solutions through experiments in the context of the current fields of chemical engineering. Emphasizes the hazards associated with these chemical engineering experiments and the materials handled during laboratory.

Prerequisite(s): CHME 2310 with a minimum grade of D- ; (CHME 2320 with a minimum grade of D- or CHME 2322 with a minimum grade of D-); (ENGW 3302 (may be taken concurrently) with a minimum grade of D- or ENGW 3315 (may be taken concurrently) with a minimum grade of D-)

Corequisite(s): CHME 3306

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

CHME 3306. Recitation for CHME 3305. (0 Hours)

Accompanies CHME 3305. Discusses laboratory safety, experimental design and design of experiments (DOE), data analysis, data presentation, and report-writing strategies.

Corequisite(s): CHME 3305

CHME 3312. Transport Processes 2. (4 Hours)

Continues CHME 2310. Presents the fundamentals and applications of energy transport, mass transport, and simultaneous energy/mass transport. The methods taught are relevant to the analysis of engineering processes in a number of industries, including chemical, pharmaceutical, food, energy, biotechnology, and materials.

Prerequisite(s): CHME 2310 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-

CHME 3315. Chemical Engineering Experimental Design 1. (4 Hours)

Offers students an opportunity to obtain hands-on laboratory experience and to develop safety, teamwork, problem-solving, organizational, technical writing, and oral presentation skills. Focuses on fundamental momentum transport principles and skills to develop and design engineering solutions through experiments in the context of the current fields of chemical engineering. Emphasizes the hazards associated with those chemical engineering experiments.

Prerequisite(s): CHME 2310 with a minimum grade of D- ; (ENGW 3302 (may be taken concurrently) with a minimum grade of D- or ENGW 3315 (may be taken concurrently) with a minimum grade of D-)

Corequisite(s): CHME 3316

Attribute(s): NUpath Analyzing/Using Data

CHME 3316. Recitation for CHME 3315. (0 Hours)

Accompanies CHME 3315. Presents discussions related to laboratory safety, experimental design, data analysis, data presentation, and report writing strategies.

Corequisite(s): CHME 3315

CHME 3322. Chemical Thermodynamics. (4 Hours)

Covers thermodynamic properties of mixtures; fugacity and the fugacity coefficients from equations of state for gaseous mixtures; liquid phase fugacities and activity coefficients for liquid mixtures; phase equilibria; the equilibrium constant for homogeneous gas-phase reactions; and extension of theory to handle simultaneous, heterogeneous, and solution reactions.

Prerequisite(s): CHME 2320 with a minimum grade of D- or CHME 2322 with a minimum grade of D-

CHME 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHME 4315. Chemical Engineering Experimental Design 2. (4 Hours)

Offers students an opportunity to obtain hands-on laboratory experience and to develop safety, teamwork, problem-solving, organizational, technical writing, and oral presentation skills. Focuses on the discovery of fundamental heat and mass transport principles. Those fundamentals are used to develop and design engineering solutions through experiments in the context of the current fields of chemical engineering. Focuses on the hazards associated with these chemical engineering experiments and the materials handled during laboratory.

Prerequisite(s): (CHME 3312 (may be taken concurrently) with a minimum grade of D- ; (CHME 3315 with a minimum grade of D- or CS 2510 with a minimum grade of D-)); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1101 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Corequisite(s): CHME 4316

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

CHME 4316. Recitation for CHME 4315. (0 Hours)

Accompanies CHME 4315. Presents discussions related to laboratory safety, experimental design, data analysis, data presentation, and report writing strategies.

Corequisite(s): CHME 4315

CHME 4510. Chemical Engineering Kinetics. (4 Hours)

Covers fundamental theories of the rate of chemical change in homogeneous reacting systems, integral and differential analysis of kinetic data; design of batch and continuous-flow chemical reactors; and an introduction to heterogeneous reactions and reactor design.

Prerequisite(s): CHME 3312 with a minimum grade of D- ; CHME 3322 with a minimum grade of D-

CHME 4512. Chemical Engineering Process Control. (4 Hours)

Covers Laplace transform and its use in solving ordinary differential equations; modeling liquid-level, temperature, and composition dynamics; linearization of nonlinear systems; first- and second-order system transfer functions; and PID control; computer simulation of open- and closed-loop systems; control system stability; and feed-forward and cascade control.

Prerequisite(s): CHME 3312 with a minimum grade of D- ; CHME 3322 with a minimum grade of D-

CHME 4625. Chemical Process Safety Abroad. (4 Hours)

Introduces important technical fundamentals as applied to chemical process safety internationally. Demonstrates good chemical process safety practice through chemical plant visits, visiting experts, and video presentations in the international setting in which the course is offered.

Prerequisite(s): CHME 2320 (may be taken concurrently) with a minimum grade of D- or CHME 2322 (may be taken concurrently) with a minimum grade of D-

CHME 4626. Special Topics in Process Safety Abroad. (4 Hours)

Covers special topics unique to the host country as related to chemical process safety. Includes chemical plant visits, review of specialized testing methods used in process safety, as well as national and international compliance requirements.

Prerequisite(s): CHME 2322 (may be taken concurrently) with a minimum grade of D- or CHME 2320 (may be taken concurrently) with a minimum grade of D-

CHME 4701. Separations and Process Analysis. (4 Hours)

Focuses on the design of a chemical process with a particular emphasis on separation technologies. Topics include computer simulation of steady-state processing conditions, selecting process operations, reactor design, preparing flow sheets and stream tables, and evaluating the economics of a chemical process design.

Prerequisite(s): CHME 3312 with a minimum grade of D- ; CHME 3322 with a minimum grade of D- ; CHME 4510 (may be taken concurrently) with a minimum grade of D-

CHME 4703. Chemical Process Design Capstone. (4 Hours)

Offers students an opportunity to participate in an open-ended, project-based design course where teams design innovative solutions of a comprehensive chemical process. Considers public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Students apply engineering knowledge from their undergraduate academic studies to design a chemical process that handles mass and energy balances. Requires proof of concept data from prototypes, experiments, or simulations of the process to show the design is feasible and that use of the data improves the design. Team presentations, in multiple formats, are shared with the chemical engineering community for feedback and evaluation. Requires multiple progress reports, submitted by the team, which results in the final design report at the end of the semester.

Prerequisite(s): (CHME 3305 with a minimum grade of D- or CHME 4315 with a minimum grade of D-); CHME 4701 with a minimum grade of D- ; (CHME 4512 (may be taken concurrently) with a minimum grade of D- or PHYS 3600 (may be taken concurrently) with a minimum grade of D-)

Corequisite(s): CHME 4705

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

CHME 4705. Recitation for CHME 4703. (0 Hours)

Accompanies CHME 4703. Provides a common meeting platform for all students in individual sections of CHME 4703 to meet on a weekly basis. Guest speakers and common lectures will be delivered during this recitation.

Corequisite(s): CHME 4703

CHME 4983. Special Topics in Chemical Engineering. (4 Hours)

Focuses on topics related to chemical engineering to be selected by instructor. May be repeated up to three times.

CHME 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHME 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to two times.

Prerequisite(s): CHME 2311 with a minimum grade of D- or CHME 3315 with a minimum grade of D-

Attribute(s): NUpath Integration Experience

CHME 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Prerequisite(s): CHME 2311 with a minimum grade of D-

CHME 5101. Fundamentals of Chemical Engineering Analysis. (4 Hours)

Offers graduate students from undergraduate studies outside of traditional chemical engineering an opportunity to obtain a practical understanding of the core principles behind the chemical engineering discipline. Topics include vector and tensor calculus, continuum mechanics and thermodynamics, macroscopic and microscopic analyses of mass, momentum, and energy conservation; the fundamental principles of processes in which mass, energy, and momentum are transported; consequences of the Second Law of Thermodynamics, the principles governing phase and chemical reaction equilibrium; the fundamental theories of chemical reaction kinetics and reactor design; and the mathematical formulation and solution of the underlying equations involved in all these topics.

CHME 5105. Materials Characterization Techniques. (4 Hours)

Covers the fundamentals and applications of materials characterization techniques. Major techniques include electron microscopy imaging, microbeam analysis, diffraction techniques, and near-field scanning probe techniques. Offers students an opportunity to learn transmission electron microscopy, scanning electronmicroscopy, electron and X-ray beam analysis, scanning tunneling microscopy, atomic force microscopy, and scanning near-field optical microscopy. Covers the applications of these techniques on both solid-state materials, such as metal and ceramics, and soft materials and biomaterials, such as polymers and nanostructured materials. Incorporates lab sessions on scanning electron microscopy and microanalysis.

CHME 5137. Computational Modeling in Chemical Engineering. (4 Hours)

Builds on chemical engineering fundamentals to introduce computer programming to allow simulation of physical, chemical, and biological systems. Covers numerical experiments (e.g., Monte Carlo, global sensitivity analysis) to analyze the significance of parameters and model assumptions. Offers students an opportunity to work on a research or design project throughout the course.

Prerequisite(s): (CHME 3312 with a minimum grade of D- ; CHME 3322 with a minimum grade of D-) or graduate program admission

CHME 5160. Drug Delivery: Engineering Analysis. (4 Hours)

Focuses on engineering analysis of drug delivery systems, demonstrating the application of classic engineering principles to a nontraditional field for chemical engineers. Presents quantitative analysis of transport of a drug through the body and its control by physical and chemical drug and drug delivery device properties. Emphasizes the influence of biological tissue composition and structure on these processes.

CHME 5179. Complex Fluids and Everyday Materials. (4 Hours)

Introduces intra- and intermolecular forces and moves on to material deformation in response to external stress, including polymeric elasticity. Covers topics in colloidal science and biological physics: the microscopic origins of suspension stability and biological self-assembly. Additional topics include "molecular gastronomy," personal care and cleaning products, active materials, and experimental techniques. Studies of complex fluids and soft materials are highly interdisciplinary. Many everyday materials are combinations of the three phases of matter—solid, liquid, and gas—with unique material properties. "Complex fluids" and "soft matter" refer to suspensions, emulsions, foams, and gels, which include personal care items, household cleaners, and even food. Nearly all biological material can be described as a soft material.

CHME 5185. Design of Experiments and Ethical Research (DOEER). (4 Hours)

Designed to provide a comprehensive approach to introducing interdisciplinary biochemical engineering research and design of experiments. Through immersion in a collaborative classroom, offers students an opportunity to develop the thought processes, skills, and strategies required for originating and performing high-impact research that broadens scientific knowledge. Emphasizes design of experiments, statistics, and considerations in conducting ethical research. Topics include case studies in conflict of interest, bioethics, laboratory safety, scientific misconduct, authorship and publication, literature and peer review, data visualization and integrity, statistical analysis, and contemporary issues. Students complete online and training modules in laboratory safety and apply their knowledge as they study applications for experiments, including power analysis and rigor, to design scientific aims with peer review. Meets NIH for RCR.

CHME 5510. Fundamentals in Process Safety Engineering. (4 Hours)

Introduces the basic concepts in process safety engineering as applied to the process industries as well as various terms and lexicon. Reviews the fundamentals involved in the prediction of scenarios and covers the assumptions involved as well as the range of these predictions. Emphasizes toxicology, industrial hygiene, sources models, toxic releases, and dispersion models, as well as fire and explosion prevention.

CHME 5515. Process Safety Engineering for Biotechnology and Pharmaceutical Industries. (4 Hours)

Examines process safety engineering considerations for the biotechnology and pharmaceutical industries. Considers clean-in-place methods, the handling of flammables within the production area, the keeping of material in pipes and vessels, basic ventilation requirements, how to handle flammable and reactive chemicals, the process safety involved in spray dryers, and how to assess hazards by hazard analysis techniques.

CHME 5520. Process Safety Engineering—Chemical Reactivity, Reliefs, and Hazards Analysis. (4 Hours)

Reviews chemical reactivity hazards. Introduces relief methods and sizing estimation to prevent overpressurization vessel damage. Covers methods of hazards identification and risk assessment. Offers students an opportunity to obtain the ability to lead hazards analysis in any organization at any level.

CHME 5621. Electrochemical Engineering. (4 Hours)

Introduces fundamental concepts of electrochemical thermodynamics, kinetics, and mass transport and places them in context for applications such as batteries, fuel cells, and electrochemical sensors. Additional topics include porous electrode theory, cyclic voltammetry, Pourbaix diagrams, and the structure of the electrochemical double layer.

Prerequisite(s): (MATH 2321 with a minimum grade of C- ; MATH 2341 with a minimum grade of C-) or graduate program admission

CHME 5630. Biochemical Engineering. (4 Hours)

Focuses on topics relevant to the design of cell culture processes for the production of pharmaceuticals. Topics include an overview of prokaryotic vs. eukaryotic cells; enzyme kinetics; overview of cellular processes (DNA replication, transcription, translation, primary metabolism, and regulation of protein synthesis at the transcriptional, posttranslational, and metabolic levels); overview of genetic engineering methods (for bacteria, mammalian, and plant cells); kinetics of cell growth (growth models, growth kinetic parameters); kinetics of product formation; bioreactor design and optimum operating conditions; scale-up; and overview of product recovery and purification methods.

Prerequisite(s): CHME 3312 with a minimum grade of D- or (BIOE 3310 with a minimum grade of D- ; BIOE 3380 with a minimum grade of D-) or graduate program admission

CHME 5631. Biomaterials Principles and Applications. (4 Hours)

Offers a broad overview of the field of biomaterials (materials used in medical devices that interact with living tissues). Begins with introductory lectures on biomaterials and their translation from the laboratory to the medical marketplace and progresses to discussions of important biomaterials terminology and concepts. Basic materials science lectures then emphasize material structure-property-function-testing relationships. Concludes with introductions to topics in the field such as biomaterials-tissue interactions, tissue engineering, regulatory requirements, etc. Considers principles of device design as related to the selection and application of biomaterials throughout this course.

CHME 5632. Advanced Topics in Biomaterials. (4 Hours)

Addresses several important topics in biomaterials, specifically, materials used in medical devices that communicate with living tissues. Topics that may be addressed include biomaterials: past, present, and future; tissue engineering: scope, status, promise, challenges; biomaterials-tissue interactions; regulated medical device design, fabrication, and testing; strategies for translating medical products from concept to the marketplace; and medical device disasters. Some topics are covered in more depth than others depending on their value and interest to the students.

CHME 5642. Photochemistry Fundamentals and Applications. (3 Hours)

Describes fundamental science of light-activated chemistry and photochemistry applications. Topics include organic and inorganic photochemistry and their applications in solar energy, solar fuels, photocatalysis, bioimaging, photochemotherapy, pigments, and photonics.

Prerequisite(s): (CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D-) or graduate program admission

CHME 5643. Photochemistry Lab. (1 Hour)

Offers the opportunity to conduct a photochemistry experiment using electronic absorption spectroscopy.

Prerequisite(s): (CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D-) or graduate program admission

CHME 5649. Numerical Strategies and Data Analytics for Chemical Sciences. (4 Hours)

Introduces a broad range of numerical methods for solving large-scale, data-driven problems that arise in chemical engineering, chemistry, biochemistry, and other chemical sciences. Offers students an opportunity to obtain a detailed understanding of the derivation, analysis, and use of these numerical methods and learn how these lay the foundations to machine learning techniques. Topics include numerical programming logic, linear and nonlinear algebraic equations, polynomial fitting, numerical calculus, optimization techniques, and large-scale data analysis. Applies to a broad field of chemical and biochemical sciences, where large-scale multivariate data analyses and pattern extraction are key components.

Prerequisite(s): ((MATH 1341 with a minimum grade of D- ; MATH 1342 with a minimum grade of D-) or (MATH 2321 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-)) or graduate program admission

CHME 5683. Introduction to Polymer Science. (4 Hours)

Introduces basic concepts of polymers and polymer properties. Covers macromolecular structure from both theoretical and experimental viewpoints, polymerization processes and kinetics, polymer/solvent thermodynamics, crosslinking and network dynamics, thermal and phase behavior of polymers, viscoelasticity and mechanical behavior, diffusion in polymers, and selected advanced topics. Designed for both undergraduate and graduate students. No prior knowledge of polymers is required.

CHME 5699. Special Topics in Chemical Engineering. (4 Hours)

Focuses on topics related to chemical engineering to be selected by the instructor. May be repeated up to two times.

CHME 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times for a maximum of 4 total semester hours.

CHME 5984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CHME 6310. Python for Chemical Engineers. (2 Hours)

Introduces chemical engineers to the Python programming language and how it can be applied to solve disciplinary problems, including those from material and energy balances, thermodynamics, transport, and kinetics. Covers linear algebra, calculus, differential equations, working with datasets, data visualization, and regression.

CHME 6320. Numerical and Statistical Methods for Chemical Engineering. (4 Hours)

Focuses on the numerical and statistical mathematical methods often utilized by chemical engineers for solving problems and working with data. Includes methods to solve linear, non-linear, and sets of linear ordinary differential equations; solve partial differential equations; create graphs of data and apply appropriate statistical tests; and perform curve regression and evaluate fit. Introduces advanced mathematical techniques including vector calculus, Monte Carlo simulations, optimization methods, and machine learning.

CHME 6390. Professional Development and Communication Essentials. (0 Hours)

Explores topics related to building advanced careers in chemical engineering. Focuses on strategies for academic success, communication, and networking. Offers students an opportunity to build a sense of cohort community and to learn about ongoing research projects in the Department of Chemical Engineering, professional workplace behaviors, and ethical conduct in a research environment.

CHME 6410. Chemical Engineering Research Methods. (2 Hours)

Introduces research skills required to perform research in chemical engineering. Covers topics related to research skill development, such as literature search, research ethics, design of experiments, data processing, graph making, scientific critical analysis and effective scientific communication, both written and oral.

CHME 6420. Engineering for Chemical Sustainability. (2 Hours)

Discusses the rationale and approaches for integrating sustainability into the design of chemical products and processes. Emphasizes technical and design practice and measuring the impacts of products and processes in business, environmental, and social contexts. Introduces students to methods used in green chemical engineering, particularly as applied to reaction engineering, management of the nitrogen and carbon cycles, and decarbonization.

CHME 6430. Chemical Engineering for Biosystems and Biomaterials. (2 Hours)

Applies chemical engineering principles to biosystems and biomaterials, including biomedical and biological systems. Foundations of chemical engineering, including transport phenomena, thermodynamics, and kinetics, are discussed in the context of bio-phenomena.

CHME 6610. Computational Programs in Process Safety for Relief and Scenario Modeling. (4 Hours)

Focuses on the use of process safety software that is available to perform hazard analysis, relief and flare system evaluation, and scenario analysis. The software may include use of Process Safety Office (ioMosaic), Aspen Process Simulator (Aspen Technologies), and FLACS (Flame Acceleration Simulator by GexCon). These programs are dedicated to predicting relief sizing for vessels and processes; flare system sizing; chemical reactivity analysis; and dispersion modeling, should a release occur, and its damage potential either as an explosive or toxic cloud.

CHME 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHME 7262. Special Topics in Process Safety. (4 Hours)

Covers topics of interest to the staff member conducting this class for advanced study. Current topics relevant in process safety are considered, such as a focus on layers of protection analysis, qualitative risk analysis, and specific process safety challenges. Process safety challenges from industrial settings may also serve as problems tackled in the course. A student may not take more than one special topics course with any one instructor.

CHME 7320. Chemical Engineering Mathematics. (4 Hours)

Focuses on the formulation and solutions of problems involving advanced calculus as they arise in chemical engineering systems. Covers ordinary differential equations, series solutions, and complex variables. Also studies applications involving Laplace transforms, partial differential equations, matrix operations, vectors and tensors, and optimization methods. Emphasis is on methods for formulating the problems.

Prerequisite(s): (CHME 4510 with a minimum grade of C- or CHME 5101 with a minimum grade of B- or CHME 5101 with a minimum grade of B-) or graduate program admission

CHME 7330. Chemical Engineering Thermodynamics. (4 Hours)

Offers a graduate-level introduction to the fundamental principles relating molecular structure and bulk material properties. Begins with classical thermodynamics laws that govern macroscopic conservation, equilibrium stability, and irreversible processes, including open processes, multicomponent phase equilibrium, and reaction equilibrium. Introduces relationships between microscopic states and macroscopic properties, applied to understand systems such as non ideal fluids, crystalline solids, polymers, and electrolytes. Statistical thermodynamics concepts may also be applied through the use of analytical theory and computational molecular modeling.

Prerequisite(s): (CHME 3322 with a minimum grade of C- or CHME 5101 with a minimum grade of B- or CHME 5101 with a minimum grade of B-) or graduate program admission

CHME 7340. Chemical Engineering Kinetics. (4 Hours)

Covers fundamental theories of the rate of chemical change in homogeneous reacting systems, integral and differential analysis of kinetic data. Examines the theoretical foundations for the analysis of elementary chemical reaction rates. Comprises analysis and modeling of batch and ideal flow reactors, axial and radial dispersion in flow tubular reactors, and design principles of gas solid catalytic reactors. Builds on undergraduate chemical engineering kinetics concepts. Requires proficiency in calculus and differential equations.

Prerequisite(s): (CHME 4510 with a minimum grade of C- or CHME 5101 with a minimum grade of B- or CHME 5101 with a minimum grade of B-) or graduate program admission

CHME 7350. Transport Phenomena. (4 Hours)

Explores analytical and approximate solutions of equations of momentum, energy, and mass transport and their analogies. Covers heat and mass transfer at a fluid-solid interface. Introduces creeping, potential, and boundary layer flows. Examines macroscopic balances for isothermal systems and interphase transport of multicomponent systems.

Prerequisite(s): (CHME 3312 with a minimum grade of C- or CHME 5101 with a minimum grade of B- or CHME 5101 with a minimum grade of B-) or graduate program admission

CHME 7390. Seminar. (0 Hours)

Presents topics of an advanced nature by staff, outside speakers, and students in the graduate program. All seminars by outside speakers must be attended by all full-time graduate students; all other seminars must be attended when required by the instructor. May be repeated without limit.

CHME 7391. Professional Development and Communication in Chemical Engineering 1. (1 Hour)

Focuses on communication and integrates tightly with the graduate seminar series (CHME 7390). Offers students an opportunity to learn how to articulate scientific accomplishments to the scientific community, write high-quality manuscript outlines, develop proposals for graduate fellowships, give high-quality short and long seminar presentations, and critique and peer-review research manuscripts and proposals. Students also have an opportunity to learn about ongoing research projects in the Department of Chemical Engineering, professional workplace behaviors, and ethical conduct in a research environment. This is the first of four required courses (CHME 7392, 7393, and 7394).

CHME 7392. Professional Development and Communication in Chemical Engineering 2. (1 Hour)

Focuses on communication and integrates tightly with the graduate seminar series (CHME 7390). Offers students an opportunity to learn how to give high-quality short and long seminar presentations, write a high-quality research proposal, assemble all the components of a research proposal, and develop research strategies to realize their own research projects.

CHME 7393. Professional Development and Communication in Chemical Engineering 3. (1 Hour)

Focuses on communication and integrates tightly with the graduate seminar series (CHME 7390). Offers students an opportunity to write and submit high-quality graduate fellowship proposals, develop high-quality outlines of research proposals related to their dissertation proposal, critique and peer-review publications and proposals, and learn about the latest development in ongoing research in the Department of Chemical Engineering.

CHME 7394. Professional Development and Communication in Chemical Engineering 4. (1 Hour)

Focuses on communication and integrates tightly with the graduate seminar series (CHME 7390). All PhD students that have successfully completed their closed-door proposal defense give a 25-minute public podium presentation of their research. Students prepare a two-page detailed abstract and a presentation, attend and critique presentations given by their peers, and also submit the final version of a research or review article.

CHME 7395. Mentoring in Chemical Engineering. (1 Hour)

Offers graduate students an opportunity to connect theoretical concepts learned in the classroom to real-life innovations, identify the conceptual framework of existing technological innovations, identify the conceptual aspects of their own research activities, propose innovative strategies to connect them to real-life applications, and to learn the basics of mentoring to be able to transfer their knowledge and expertise to their peers or to undergraduate students. Students may attend workshops on effective teaching and mentoring and mentor undergraduate students under the supervision of experienced academic and/or industrial mentors.

CHME 7600. Pharmaceutical Engineering I. (4 Hours)

Introduces the fundamental principles of chemical engineering as applied to biopharmaceutical manufacturing. Emphasizes quantitative problem solving. Covers conservation principles (mass and energy balances), kinetics (enzyme kinetics and cell growth kinetics), and heat transfer (sterilization, reactor heat management). Focuses on bioprocess economics and upstream unit operations, principally bioreactor design. The application of computer programming and numerical methods to solve these problems is interwoven throughout the course. This is the first of a two-semester course series.

CHME 7601. Pharmaceutical Engineering II. (4 Hours)

Continues a two-semester course series to introduce the fundamental principles of chemical engineering as applied to biopharmaceutical manufacturing, with an emphasis on quantitative problem solving. Covers critical aspects of fluid flow (e.g., pipe/pump sizing, centrifugation); mass transfer (diafiltration, oxygen sparging, membrane fouling); and thermodynamics (partitioning of analytes in chromatography). Focuses on downstream separation unit operations within biopharmaceutical production. Applies computer programming and numerical methods to solve these problems.

Prerequisite(s): CHME 7600 with a minimum grade of C-

CHME 7602. Pharmaceutical Engineering Laboratory. (2 Hours)

Offers students an opportunity to apply and reinforce the theory they have learned in their pharmaceutical engineering coursework in a hands-on laboratory setting by producing and purifying a recombinant protein from cell culture. In a series of lab modules, teams of students set up, operate, and analyze bioreactors for bacterial and mammalian cell culture, as well as harvest and lyse cells, and finally purify and analyze protein using state-of-the-art filtration and chromatography processes. Requires submission of interim laboratory reports, documentation of experimental work, and a final report and presentation with a detailed proposal for how to improve upon the results obtained.

Prerequisite(s): CHME 7601 (may be taken concurrently) with a minimum grade of C-

CHME 7901. Journal Club in Chemical Engineering. (1 Hour)

Offers students an opportunity to critically read, interpret, and present published data; to discuss the strengths and weaknesses of publications; and to interpret and critically evaluate published scientific data in a student-led journal club that cover topics related to chemical engineering. May be repeated up to seven times for a maximum of 8 SH.

CHME 7945. Master's Project. (4 Hours)

Offers students an opportunity for individual effort consisting of laboratory and/or computational investigation, analysis of results, and preparation of a definitive report as part of an advanced research project in an area of chemical engineering determined by the student and their advisor.

CHME 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHME 7973. Special Topics in Chemical Engineering. (1-4 Hours)

Focuses on topics related to chemical engineering to be selected by the instructor. May be repeated up to seven times for a maximum of thirty two semester hours.

CHME 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times for a maximum of 4 semester hours.

CHME 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

CHME 7990. Thesis. (4 Hours)

Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. First-year students must attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Successful completion of the seminar program is required. May be repeated once.

CHME 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues thesis work conducted under the supervision of a departmental faculty.

CHME 8960. Candidacy Preparation—Doctoral. (0 Hours)

Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision. Intended for students who have completed all required PhD course work and have not yet achieved PhD candidacy; students who have not completed all required PhD course work are not allowed to register for this course. May be repeated once.

CHME 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CHME 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

CHME 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

CHME 9984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CHME 9986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

CHME 9990. Dissertation Term 1. (0 Hours)

Offers theoretical and experimental work conducted under the supervision of a departmental faculty.

Prerequisite(s): CHME 9000 with a minimum grade of S

CHME 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): CHME 9990 with a minimum grade of S

CHME 9996. Dissertation Continuation. (0 Hours)

Continues thesis work conducted under the supervision of a departmental faculty. May be repeated up to eleven times.

Prerequisite(s): CHME 9990 with a minimum grade of S or Dissertation Check with a score of REQ

Chemistry - CPS (CHM)

Courses

CHM 1100. General Chemistry 1. (3 Hours)

Introduces the principles of chemistry. Topics include basic principles and definitions, stoichiometry, chemical equilibrium, moles, gas laws, atomic structure, periodic relationships, and chemical bonding.

Corequisite(s): CHM 1101

Attribute(s): NUpath Natural/Designed World

CHM 1101. Lab for CHM 1100. (1 Hour)

Accompanies CHM 1100. Covers a range of topics from the course.

Corequisite(s): CHM 1100

CHM 1200. General Chemistry 2. (3 Hours)

Studies the principles of chemical equilibrium and the rates and mechanisms of chemical reactions. Covers solutions, chemical kinetics, chemical equilibria, chemical thermodynamics, and electrochemistry.

Prerequisite(s): CHM 1100 with a minimum grade of D- ; CHM 1101 with a minimum grade of D-

Corequisite(s): CHM 1201

Attribute(s): NUpath Natural/Designed World

CHM 1201. Lab for CHM 1200. (1 Hour)

Accompanies CHM 1200. Covers a range of topics from the course, such as measurements of heat transfer, rate and equilibrium constants, acid-base reactions, the properties and uses of buffer systems, and the effects of temperature and catalysts.

Prerequisite(s): CHM 1100 with a minimum grade of D- ; CHM 1101 with a minimum grade of D-

Corequisite(s): CHM 1200

CHM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHM 2110. Organic Chemistry 1. (3 Hours)

Introduces nomenclature, synthesis, molecular structure and bonding, and reaction mechanisms. Includes chemistry of hydrocarbons and their functional derivatives, stereochemical relationships and nucleophilic substitutions, and elimination reactions.

Prerequisite(s): CHM 1200 with a minimum grade of D- ; CHM 1201 with a minimum grade of D-

Corequisite(s): CHM 2111

CHM 2111. Lab for CHM 2110. (1 Hour)

Accompanies CHM 2110. Introduces basic laboratory techniques, such as distillation, crystallization, extraction, chromatography, characterization by physical methods, and measurement of optical rotation, which serve as the foundation for the synthesis, purification, and characterization of products from microscale syntheses.

Prerequisite(s): CHM 1200 with a minimum grade of D- ; CHM 1201 with a minimum grade of D-

Corequisite(s): CHM 2110

CHM 2200. Organic Chemistry 2. (3 Hours)

Continues CHM 2110. Focuses on additional functional group chemistry, including alcohols, ethers, carbonyl compounds, amines, and the molecules of nature. Introduces spectroscopic methods for structural identification.

Prerequisite(s): CHM 2110 with a minimum grade of D- ; CHM 2111 with a minimum grade of D-

Corequisite(s): CHM 2201

CHM 2201. Lab for CHM 2200. (1 Hour)

Accompanies CHM 2200. Applies basic laboratory techniques from CHM 2111 to chemical reactions of alcohols, ethers, carbonyl compounds, carbohydrates, and amines. Introduces basic laboratory techniques and instruments for the structural analysis of organic molecules.

Prerequisite(s): CHM 2110 with a minimum grade of D- ; CHM 2111 with a minimum grade of D-

Corequisite(s): CHM 2200

CHM 2300. Analytical Chemistry. (3 Hours)

Introduces the principles and practices in the field of analytical chemistry. Focuses on development of a quantitative understanding of homogeneous and heterogeneous equilibria phenomena as applied to acid-base and complexometric titrations, rudimentary separations, optical spectroscopy, electrochemistry, and statistics.

Prerequisite(s): CHM 1200 with a minimum grade of D- ; CHM 1201 with a minimum grade of D-

Corequisite(s): CHM 2301

Attribute(s): NUpath Writing Intensive

CHM 2301. Lab for CHM 2300. (1 Hour)

Accompanies CHM 2300. Offers students an opportunity to obtain hands-on experience in lab experiments in analytical methods, such as silver chloride gravimetry, complexometric titrations, acid-base titrations, UV-Vis spectroscopy, cyclic voltammetry, Karl Fischer coulometry, and modern chromatography.

Prerequisite(s): CHM 1200 with a minimum grade of D- ; CHM 1201 with a minimum grade of D-

Corequisite(s): CHM 2300

CHM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Chemistry and Chemical Biology (CHEM)

Courses

CHEM 1000. Chemistry/Chemical Biology at Northeastern. (1 Hour)

Intended for freshmen in the College of Science. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

CHEM 1001. Connecting Chemistry. (1 Hour)

Offers first-year chemistry majors an opportunity to connect with the broad field of chemistry in a seminar format with faculty and alumni speakers. Emphasizes how the classroom experience, the laboratory program, and co-op lead to a diverse set of careers. Introduces students to current research in the chemical sciences and related fields.

CHEM 1101. General Chemistry for Health Sciences. (4 Hours)

Provides a one-semester introduction to general chemistry for the health sciences. Covers the fundamentals of elements and atoms; ionic and molecular structure; chemical reactions and their stoichiometry, energetics, rates, and equilibria; and the properties of matter as gases, liquids, solids, and solutions. Other topics include acids and bases, and nuclear chemistry. Applications to the health sciences are included throughout.

Corequisite(s): CHEM 1102, CHEM 1103

Attribute(s): NUpath Natural/Designed World

CHEM 1102. Lab for CHEM 1101. (1 Hour)

Accompanies CHEM 1101. Covers a range of topics from the course, such as qualitative and quantitative analysis and the characteristics of chemical and physical processes. Includes measurements of heat transfer, rate and equilibrium constants, and the effects of temperature and catalysts. Emphasis is on aqueous acid-base reactions and the properties and uses of buffer systems.

Corequisite(s): CHEM 1101, CHEM 1103

CHEM 1103. Recitation for CHEM 1101. (0 Hours)

Accompanies CHEM 1101. Covers various topics from the course.

Corequisite(s): CHEM 1101, CHEM 1102

CHEM 1117. Chemical Perspectives on Green Energy: Emerging Technologies and Opportunities. (4 Hours)

Introduces the chemical principles behind everyday energy sources in the 21st century, including both classic and emergent sources. Examines critical questions concerning the demand for energy and the environmental impact of fuel consumption. Emphasizes the role that chemistry plays in the search for, and emergence of, renewable energy sources, such as biofuels, wind energy, and advanced battery technology. Offers students an opportunity to develop knowledge concerning evaluation of the efficiency of technologies and their impact on current global climate and to gain an appreciation of the sociopolitical debates surrounding traditional and emergent energy technologies. High school chemistry strongly recommended.

Attribute(s): NUpath Natural/Designed World

CHEM 1151. General Chemistry for Engineers. (4 Hours)

Corresponds to one semester of study in important areas of modern chemistry, such as details of the gaseous, liquid, and solid states of matter; intra- and intermolecular forces; and phase diagrams. Presents the energetics and spontaneity of chemical reactions in the context of chemical thermodynamics, while their extent and speed is discussed through topics in chemical equilibria and kinetics. Aspects of electrochemical energy storage and work are considered in relation to batteries, fuel, and electrolytic cells.

Corequisite(s): CHEM 1153

Attribute(s): NUpath Natural/Designed World

CHEM 1153. Recitation for CHEM 1151. (0 Hours)

Accompanies CHEM 1151. Offers a weekly sixty-five-minute drill/discussion session conducted by chemistry faculty or graduate teaching assistants. Discusses the homework assignments of CHEM 1151 in detail with emphasis on student participation.

Corequisite(s): CHEM 1151

CHEM 1161. General Chemistry for Science Majors. (4 Hours)

Introduces the principles of chemistry, focusing on the particulate nature of matter and its interactions and reactions that form the basis for the underlying molecular dynamics of living systems. Presents basic concepts of chemical bonding and intermolecular interactions for molecules and molecules' behavior in aqueous solutions with examples from biologically relevant molecules. Introduces kinetics and chemical thermodynamics with examples from biological systems. Offers students an opportunity to obtain a framework for understanding the chemical basis for different methods for separating and purifying biological compounds.

Corequisite(s): CHEM 1162, CHEM 1163

Attribute(s): NUpath Natural/Designed World

CHEM 1162. Lab for CHEM 1161. (1 Hour)

Accompanies CHEM 1161. Introduces basic laboratory techniques. Covers a range of topics including qualitative and quantitative analysis and the characteristics of chemical and physical processes.

Corequisite(s): CHEM 1161, CHEM 1163

CHEM 1163. Recitation for CHEM 1161. (0 Hours)

Accompanies CHEM 1161. Covers various topics from the course. Offers students an opportunity to work interactively with instructors and other students to learn and apply the knowledge acquired in lecture.

Corequisite(s): CHEM 1161, CHEM 1162

CHEM 1211. General Chemistry 1. (4 Hours)

Introduces the principles of chemistry, focusing on the states and structure of matter and chemical stoichiometry. Presents basic concepts and definitions, moles, gas laws, atomic structure, periodic properties and chemical bonding, all within a contextual framework.

Corequisite(s): CHEM 1212, CHEM 1213

Attribute(s): NUpath Natural/Designed World

CHEM 1212. Lab for CHEM 1211. (1 Hour)

Accompanies CHEM 1211. Covers a range of topics from the course including qualitative and quantitative analysis and the characteristics of chemical and physical processes.

Corequisite(s): CHEM 1211, CHEM 1213

CHEM 1213. Recitation for CHEM 1211. (0 Hours)

Accompanies CHEM 1211. Covers various topics from the course.

Corequisite(s): CHEM 1211, CHEM 1212

CHEM 1214. General Chemistry 2. (4 Hours)

Continues CHEM 1211. Introduces the principles of chemical equilibrium, the rates and mechanisms of chemical reactions, and energy considerations in chemical transformations. Covers solutions, chemical kinetics, chemical equilibria, chemical thermodynamics, electrochemistry, and chemistry of the representative elements. Such contextual themes as energy resources, smog formation, and acid rain illustrate the principles discussed.

Prerequisite(s): CHEM 1211 with a minimum grade of D

Corequisite(s): CHEM 1215, CHEM 1216

Attribute(s): NUpath Natural/Designed World

CHEM 1215. Lab for CHEM 1214. (1 Hour)

Accompanies CHEM 1214. Covers a range of topics from the course, such as measurements of heat transfer, rate and equilibrium constants, and the effects of temperature and catalysts. Particular attention is paid to aqueous acid-base reactions and to the properties and uses of buffer systems. Quantitative analysis of chemical and physical systems is emphasized throughout.

Corequisite(s): CHEM 1214, CHEM 1216

CHEM 1216. Recitation for CHEM 1214. (0 Hours)

Accompanies CHEM 1214. Covers various topics from the course.

Corequisite(s): CHEM 1214, CHEM 1215

CHEM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHEM 2117. Chemistry in Culture. (4 Hours)

Offers an examination of the social, cultural, and historical implications associated with the field of chemistry. Builds on a basic understanding of chemistry to explain the important role of the field of chemistry in historical and current events. May be offered as part of a study abroad program with a focus on the culture and history of the host country. May be repeated three times.

Prerequisite(s): CHEM 1161 with a minimum grade of C- ; CHEM 1162 with a minimum grade of C-

CHEM 2161. Concepts in Chemistry. (4 Hours)

Explores basic concepts of thermodynamics; electrochemistry; and nuclear, supramolecular, and solid-state chemistry in the context of modern materials. Emphasizes connecting the particulate nature of matter to the properties of substances and patterns of chemical reactivity.

Prerequisite(s): (CHEM 1161 with a minimum grade of C-)

Corequisite(s): CHEM 2162, CHEM 2163

Attribute(s): NUpath Writing Intensive

CHEM 2162. Lab for CHEM 2161. (1 Hour)

Accompanies CHEM 2161. Offers hands-on exploration of the basic concepts of electrochemistry and of nuclear, supramolecular, and solid-state chemistry.

Corequisite(s): CHEM 2161, CHEM 2163

CHEM 2163. Recitation for CHEM 2161. (0 Hours)

Accompanies CHEM 2161. Covers various topics from the course. Offers students an opportunity to work interactively with instructors and other students to learn and apply the knowledge acquired in lecture.

Corequisite(s): CHEM 2161, CHEM 2162

CHEM 2311. Organic Chemistry 1. (4 Hours)

Introduces nomenclature, preparation, properties, stereochemistry, and reactions of common organic compounds. Presents correlations between the structure of organic compounds and their physical and chemical properties, and mechanistic interpretation of organic reactions. Includes chemistry of hydrocarbons and their functional derivatives.

Prerequisite(s): CHEM 1151 with a minimum grade of D or CHEM 1214 with a minimum grade of D or CHEM 1220 with a minimum grade of D or CHEM 1161 with a minimum grade of D

Corequisite(s): CHEM 2312

CHEM 2312. Lab for CHEM 2311. (1 Hour)

Accompanies CHEM 2311. Introduces basic laboratory techniques, such as distillation, crystallization, extraction, chromatography, characterization by physical methods, and measurement of optical rotation. These techniques serve as the foundation for the synthesis, purification, and characterization of products from microscale syntheses integrated with CHEM 2311.

Corequisite(s): CHEM 2311

CHEM 2313. Organic Chemistry 2. (4 Hours)

Continues CHEM 2311. Focuses on additional functional group chemistry including alcohols, ethers, carbonyl compounds, and amines, and also examines chemistry relevant to molecules of nature. Introduces spectroscopic methods for structural identification.

Prerequisite(s): CHEM 2311 with a minimum grade of D or CHEM 2315 with a minimum grade of D

Corequisite(s): CHEM 2314

CHEM 2314. Lab for CHEM 2313. (1 Hour)

Accompanies CHEM 2313. Basic laboratory techniques from CHEM 2312 are applied to chemical reactions of alcohols, ethers, carbonyl compounds, carbohydrates, and amines. Introduces basic laboratory techniques including infrared (IR) spectroscopy and nuclear magnetic resonance (NMR) spectrometry as analytical methods for characterization of organic molecules.

Corequisite(s): CHEM 2313

CHEM 2315. Organic Chemistry 1 for Chemistry Majors. (4 Hours)

Reviews the basics of bonding and thermodynamics of organic compounds as well as conformational and stereochemical considerations. Presents the structure, nomenclature, and reactivity of hydrocarbons and their functional derivatives. Highlights key reaction mechanisms, providing an introduction to the methodology of organic synthesis.

Prerequisite(s): CHEM 1161 with a minimum grade of C- or CHEM 1214 with a minimum grade of C- or CHEM 1220 with a minimum grade of C-

Corequisite(s): CHEM 2316, CHEM 2324

CHEM 2316. Lab for CHEM 2315. (2 Hours)

Accompanies CHEM 2315. Introduces basic laboratory techniques, such as distillation, crystallization, extraction, chromatography, characterization by physical methods, and measurement of optical rotation. These techniques serve as the foundation for the synthesis, purification, and characterization of products from microscale syntheses integrated with CHEM 2315.

Corequisite(s): CHEM 2315, CHEM 2324

CHEM 2317. Organic Chemistry 2 for Chemistry Majors. (4 Hours)

Continues CHEM 2315. Extends the study of functional groups commonly found in organic compounds, further emphasizing conceptual mastery of the relationship between structure and reactivity. Introduces structural identification of organic compounds using contemporary spectroscopic methods such as IR, MS, and NMR. Other topics include structure and reactivity of conjugated and aromatic systems, the chemistry of ethers and epoxides, and the chemistry of carbonyl-containing compounds including aldehydes, ketones, carboxylic acids, and carboxylic acid derivatives. Offers students an opportunity to develop skills in planning multistep syntheses using the retrosynthesis approach and proposing mechanisms for chemical transformations.

Prerequisite(s): CHEM 2311 with a minimum grade of C- or CHEM 2315 with a minimum grade of C-

Corequisite(s): CHEM 2318, CHEM 2325

Attribute(s): NUpath Creative Express/Innov

CHEM 2318. Lab for CHEM 2317. (2 Hours)

Accompanies CHEM 2317. Introduces basic laboratory techniques including infrared (IR) spectroscopy and nuclear magnetic resonance (NMR) spectrometry as analytical methods for characterization of organic molecules. These methods serve as the basis for characterization of products from microscale syntheses.

Corequisite(s): CHEM 2317, CHEM 2325

CHEM 2319. Recitation for CHEM 2311. (0 Hours)

Offers students opportunities to work interactively with instructors and other students to learn and apply the understandings acquired in lab and lecture.

Corequisite(s): CHEM 2311

CHEM 2320. Recitation for CHEM 2313. (0 Hours)

Offers students opportunities to work interactively with instructors and other students to learn and apply the understandings acquired in lab and lecture.

Corequisite(s): CHEM 2313

CHEM 2321. Analytical Chemistry. (4 Hours)

Introduces the principles and practices in the field of analytical chemistry. Focuses on development of a quantitative understanding of homogeneous and heterogeneous equilibria phenomena as applied to acid-base and complexometric titrations, rudimentary separations, optical spectroscopy, electrochemistry, and statistics.

Prerequisite(s): (CHEM 1151 with a minimum grade of C- or CHEM 1214 with a minimum grade of C- or CHEM 1220 with a minimum grade of C- or CHEM 1161 with a minimum grade of C-); (CHEM 2311 with a minimum grade of C- or CHEM 2315 with a minimum grade of C-)

Corequisite(s): CHEM 2322, CHEM 2323

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

CHEM 2322. Lab for CHEM 2321. (1 Hour)

Accompanies CHEM 2321. Lab experiments provide hands-on experience in the analytical methods introduced in CHEM 2321, specifically, silver chloride gravimetry, complexometric titrations, acid-base titrations, UV-vis spectroscopy, cyclic voltammetry, Karl Fischer coulometry, and modern chromatographic methods.

Corequisite(s): CHEM 2321, CHEM 2323

CHEM 2323. Recitation for CHEM 2321. (0 Hours)

Accompanies CHEM 2321 and CHEM 2322. Covers various topics from the course. Offers students an opportunity to work interactively with instructors and other students to learn and apply the knowledge acquired in lecture and lab.

Corequisite(s): CHEM 2321, CHEM 2322

CHEM 2324. Recitation for CHEM 2315. (0 Hours)

Accompanies CHEM 2315 and CHEM 2316. Offers students an opportunity to work interactively with instructors and other students to learn and apply the knowledge acquired in lab and lecture.

Corequisite(s): CHEM 2315, CHEM 2316

CHEM 2325. Recitation for CHEM 2317. (0 Hours)

Accompanies CHEM 2317 and CHEM 2318. Offers students an opportunity to work interactively with instructors and other students to learn and apply the knowledge acquired in lab and lecture.

Corequisite(s): CHEM 2317, CHEM 2318

CHEM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHEM 2991. Research in Chemistry and Chemical Biology. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated seven times.

CHEM 3100. Cosmetic Chemistry: Design and Innovation. (4 Hours)

Surveys the chemical principles (composition/structure) underlying the design of personal care products. Discusses fundamental knowledge of emulsion chemistry, reaction kinetics/dynamics, formulation design/testing, and stability assessments, as they relate to material selection. Emphasizes first identifying then assembling appropriate ingredient lists that create products (creams, serums, cleansers, hair colorants) to meet the regulatory and quality control standards set by the industry.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-

Corequisite(s): CHEM 3101

CHEM 3101. Lab for CHEM 3100. (1 Hour)

Accompanies CHEM 3100. Focuses on the design of cosmetic products in a project-based lab. Students work in teams randomly assigned at the start of the semester to execute each lab. The design process associated with each lab includes strategy and concept generation, estimation, and prototyping. Emphasizes the development of creative designs that are motivated by content learned through the lecture. Includes a significant communication component as students present ideas in class. Students also write a publication-quality final paper, which they will be encouraged to submit to a conference or journal as part of their final project presentations in the lecture.

Corequisite(s): CHEM 3100

CHEM 3331. Bioanalytical Chemistry. (4 Hours)

Offers students an opportunity to obtain a broad familiarity with bioanalytical chemistry at the undergraduate level. After reviewing basic principles of analytical chemistry, the course covers biomolecular analysis by modern methods, including chromatography, electrophoresis, mass spectrometry, and immunohistochemistry. Studies genomics, proteomics, biosensors, bioassays, and protein/DNA sequencing. Exposes students to technical literature and modern applications in biochemistry, molecular biology, and chemistry.

Prerequisite(s): (CHEM 1151 with a minimum grade of C- or CHEM 1161 with a minimum grade of C- or CHEM 1214 with a minimum grade of C- or CHEM 1220 with a minimum grade of C-); (CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-); (CHEM 2321 with a minimum grade of C- or BIOL 3611 with a minimum grade of C-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Corequisite(s): CHEM 3332

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

CHEM 3332. Lab for CHEM 3331. (1 Hour)

Accompanies CHEM 3331. Offers students an opportunity to apply modern analytical instrumentation to a selection of relevant applications as they relate to research and development labs in the biotechnology and pharmaceutical industry.

Corequisite(s): CHEM 3331

CHEM 3401. Chemical Thermodynamics and Kinetics. (4 Hours)

Traces the development of chemical thermodynamics through the three major laws of thermodynamics. These are applied to thermochemistry, chemical reaction and phase equilibria, and the physical behavior of multicomponent systems. Emphasizes quantitative interpretation of physical measurements.

Prerequisite(s): (MATH 1252 with a minimum grade of C- or MATH 1342 with a minimum grade of C-); (CHEM 1214 with a minimum grade of C- or CHEM 1151 with a minimum grade of C- or CHEM 1161 with a minimum grade of C-); (PHYS 1151 with a minimum grade of C- or PHYS 1161 with a minimum grade of C-)

Corequisite(s): CHEM 3402

CHEM 3402. Lab for CHEM 3401. (1 Hour)

Accompanies CHEM 3401. Demonstrates the measurement of selected physical chemical phenomena presented in CHEM 3401, introducing experimental protocol and methods of data analysis. Experiments include investigations of gas nonideality and critical phenomena, electrochemical measurement of equilibrium, construction of phase diagrams, and bomb and differential scanning calorimetry.

Corequisite(s): CHEM 3401

CHEM 3403. Quantum Chemistry and Spectroscopy. (4 Hours)

Studies the theory of quantum chemistry with applications to spectroscopy. Presents some simple quantum mechanical (QM) models, including the particle in a box, rigid rotor, and harmonic oscillator, followed by treatments of electrons in atoms and molecules. Microwave, infrared, Raman, NMR, ESR, atomic absorption, atomic emission, and UV-Vis spectroscopy are discussed in detail.

Prerequisite(s): (CHEM 3401 with a minimum grade of C- or CHEM 3421 with a minimum grade of C- or CHEM 3431 with a minimum grade of C- or CHME 3322 with a minimum grade of C-); MATH 1342 with a minimum grade of C- ; (PHYS 1155 with a minimum grade of C- or PHYS 1165 with a minimum grade of C-)

Corequisite(s): CHEM 3404

CHEM 3404. Lab for CHEM 3403. (1 Hour)

Accompanies CHEM 3403. Explores the principles covered in CHEM 3403 by laboratory experimentation. Experiments include measurement of reaction kinetics, such as excited state dynamics, measurement of gas transport properties, atomic and molecular absorption and emission spectroscopy, infrared spectroscopy of molecular vibrations, and selected applications of fluorimetry.

Corequisite(s): CHEM 3403

CHEM 3410. Environmental Geochemistry. (4 Hours)

Offers students who wish to work in the geosciences or environmental science and engineering fields, including on the land, in freshwater, or the oceans, an opportunity to understand the geochemical principles that shape the natural and managed environment. Seeks to provide a context for understanding the natural elemental cycles and environmental problems through studies in atmospheric, terrestrial, freshwater, and marine geochemistry. Topics include fundamental geochemical principles; environmental mineralogy; organic and isotope geochemistry; the global carbon, nitrogen, and phosphorous cycles; atmospheric pollution; environmental photochemistry; and human-natural climate change feedbacks.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1214 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

CHEM 3431. Physical Chemistry. (4 Hours)

Offers an in-depth survey of physical chemistry. Emphasizes applications in modern research, including examples from biochemistry. Topics include the laws of thermodynamics and their molecular interpretation; equilibrium in chemical and biochemical systems; molecular transport; kinetics, including complex enzyme mechanisms; and an introduction to spectroscopy and the underlying concepts of quantum chemistry.

Prerequisite(s): ((CHEM 1214 with a minimum grade of C- or CHEM 1220 with a minimum grade of C-) or (CHEM 1151 with a minimum grade of C- or CHEM 1161 with a minimum grade of C-)); (MATH 1252 with a minimum grade of C- or MATH 1342 with a minimum grade of C-); (PHYS 1147 with a minimum grade of C- or PHYS 1155 with a minimum grade of C- or PHYS 1165 with a minimum grade of C- or PHYS 1175 with a minimum grade of C-)

Corequisite(s): CHEM 3432

CHEM 3432. Lab for CHEM 3431. (1 Hour)

Accompanies CHEM 3431. Covers practical skills in physical chemistry with an emphasis on current practice in chemistry, biochemistry, and pharmaceutical science. Introduces both ab initio and biological molecular modeling, differential scanning calorimetry, polymer characterization, protein unfolding and protein/ligand binding, electronic absorption spectroscopy, and synthesis of nanoparticles or quantum dots.

Corequisite(s): CHEM 3431

CHEM 3501. Inorganic Chemistry. (4 Hours)

Presents the following topics: basic concepts of molecular topologies, coordination compounds, coordination chemistry, isomerism, electron-transfer reactions, substitution reactions, molecular rearrangements and reactions at ligands, and biochemical applications.

Prerequisite(s): (CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-); (CHEM 2321 with a minimum grade of C- or CHEM 2331 with a minimum grade of C- or CHEM 3331 with a minimum grade of C-)

Corequisite(s): CHEM 3502, CHEM 3503

Attribute(s): NUpath Writing Intensive

CHEM 3502. Lab for CHEM 3501. (1 Hour)

Offers a laboratory course in inorganic chemistry with experiments and projects that track with the topics discussed in CHEM 3501. Designed to provide laboratory experience with the synthesis of coordination compounds and with the instrumental methods used to characterize them.

Corequisite(s): CHEM 3501, CHEM 3503

CHEM 3503. Recitation for CHEM 3501. (0 Hours)

Offers students additional opportunities to work interactively with instructors and other students to learn and apply the concepts presented in CHEM 3501.

Corequisite(s): CHEM 3501, CHEM 3502

CHEM 3505. Introduction to Bioinorganic Chemistry. (4 Hours)

Explores basic concepts of molecular topologies, coordination compounds, coordination chemistry, isomerism, electron-transfer reactions, substitution reactions, molecular rearrangements, and reactions at ligands in the context of metal-based drugs, imaging agents, and metalloenzymes.

Prerequisite(s): (CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-); (CHEM 2321 with a minimum grade of C- or CHEM 2331 with a minimum grade of C- or CHEM 3331 with a minimum grade of C-)

Corequisite(s): CHEM 3506, CHEM 3507

Attribute(s): NUpath Writing Intensive

CHEM 3506. Lab for CHEM 3505. (1 Hour)

Offers a laboratory course in inorganic chemistry with experiments and projects that track with the topics discussed in CHEM 3505. Designed for students who have mastered basic laboratory techniques in general and organic chemistry. Introduces new synthetic techniques and applies modern analytical characterization tools not previously used in other laboratory courses (such as CHEM 3522 and CHEM 3532).

Corequisite(s): CHEM 3505, CHEM 3507

CHEM 3507. Recitation for CHEM 3505. (0 Hours)

Offers students additional opportunities to work interactively with instructors and other students to learn and apply the concepts presented in CHEM 3505.

Corequisite(s): CHEM 3505, CHEM 3506

CHEM 3531. Chemical Synthesis Characterization. (1 Hour)

Introduces advanced techniques in chemical synthesis and characterization applicable to organic, inorganic, and organometallic compounds. Techniques used include working under inert atmosphere, working with liquefied gases, and handling moisture-sensitive reagents, NMR, IR, and UV-vis spectroscopy.

Prerequisite(s): (CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-); (CHEM 2321 with a minimum grade of C- or CHEM 3331 with a minimum grade of C-)

Corequisite(s): CHEM 3532

CHEM 3532. Chemical Synthesis Characterization Lab. (4 Hours)

Acompanies CHEM 3531. Covers topics from the course through various experiments.

Corequisite(s): CHEM 3531

CHEM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHEM 4456. Organic Chemistry 3: Organic Chemistry of Drug Design and Development. (4 Hours)

Studies how to apply principles of organic chemistry, and related areas of chemistry, to the design, preparation, and use of biologically active organic compounds. Explores translational chemical science in the discovery, design, and development of biologically active compounds for medical purposes, using techniques gained in organic reaction mechanisms and synthesis. Evaluates methods to incorporate specific chemical features into organic compounds to meet specific biological and biomedical criteria. Offers students an opportunity to develop problem-solving skills that extend beyond synthetic organic chemistry to a wide range of chemical disciplines.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-

CHEM 4457. Lab for CHEM 4456. (1 Hour)

Accompanies CHEM 4456. Integrates elements of experimental design, organic synthesis, isolation and characterization of organic compounds, and interpretation of experimental observations. Students, working in small groups, evaluate a multistep synthesis of a compound developed for clinical trials as an anticancer agent, conducting the synthetic sequence, completing each reaction, characterizing the products, and interpreting and reporting the results. A final report in the form of an American Chemical Society (ACS) manuscript summarizes each group's efforts.

Corequisite(s): CHEM 4456

CHEM 4628. Introduction to Spectroscopy of Organic Compounds. (4 Hours)

Examines the application of modern spectroscopic techniques to the structural elucidation of small organic molecules. Emphasizes the use of H and C NMR spectroscopy supplemented with information from infrared spectroscopy and mass spectrometry. Explores both the practical and nonmathematical theoretical aspects of 1D and 2D NMR experiments. Topics include the chemical shift, coupling constants, the nuclear Overhauser effect and relaxation, and 2D homonuclear and heteronuclear correlation. Designed for chemists who do not have an extensive math or physics background; no prior knowledge of NMR spectroscopy is assumed.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-

Corequisite(s): CHEM 4629

CHEM 4629. Identification of Organic Compounds. (2 Hours)

Introduces the use of the nuclear magnetic resonance (NMR) spectrometer and basic NMR experiments. Determines the identity of unknown organic compounds by the use of mass spectrometry, infrared spectroscopy, and 1D and 2D nuclear magnetic resonance spectroscopy.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-

Corequisite(s): CHEM 4628

CHEM 4750. Senior Research. (4 Hours)

Conducts original experimental work under the direction of members of the department on a project. Introduces experimental design based on literature and a variety of techniques depending upon the individual project.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CHEM 4901. Undergraduate Research. (4 Hours)

Conducts original research under the direction of members of the department. May be repeated without limit.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C- or CHEM 2321 with a minimum grade of C-

Attribute(s): NUpath Integration Experience

CHEM 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

Attribute(s): NUpath Capstone Experience

CHEM 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): CHEM 4970 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CHEM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHEM 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

Attribute(s): NUpath Integration Experience

CHEM 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

CHEM 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

CHEM 5501. Chemical Safety in the Research Laboratory. (1 Hour)

Covers the material needed to complete successfully all the online safety training that is required for our graduate students, best practices for the safe execution of common chemical laboratory procedures, advanced procedures, as well as incidents from the recent literature. Includes discussions of case studies on topics relevant for the safe and effective use of chemicals and other materials in a research laboratory environment. Undergraduates may enroll with permission of the instructor. May be repeated two times.

CHEM 5550. Introduction to Glycobiology and Glycoprotein Analysis. (3 Hours)

Covers the background and methods used for glycoprotein characterization. Offers students an opportunity to obtain the background needed to assess the analytical steps necessary for development of glycoprotein drugs. Analyzes regulatory issues behind glycoprotein drug development. Covers recent developments in analytical and regulatory sciences.

CHEM 5599. Introduction to Research Skills and Ethics in Chemistry. (0 Hours)

Seeks to prepare students for success in CHEM 5600 and in CHEM 7730. May be repeated once. Must be taken in consecutive semesters before registration into CHEM 5600 and CHEM 7730.

CHEM 5600. Research Skills and Ethics in Chemistry. (3 Hours)

Discusses ethics in science. Topics include documentation of work in your laboratory notebook, safety in a chemistry research laboratory, principles of experimental design, online computer searching to access chemical literature, reading and writing technical journal articles, preparation and delivery of an effective oral presentation, and preparation of a competitive research proposal.

Prerequisite(s): CHEM 5599 with a minimum grade of S

CHEM 5610. Polymer Chemistry. (3 Hours)

Discusses the synthesis and analysis of polymer materials. Covers mechanisms and kinetics of condensation/chain-growth polymerization reactions and strategies leading to well-defined polymer architectures and compositions, including living polymerizations (free radical, cationic, anionic), catalytic approaches, and postpolymerization functionalization. Discusses correlation of chemical composition and structure to physical properties and applications.

Prerequisite(s): ((CHEM 2317 with a minimum grade of C- or CHEM 2313 with a minimum grade of C-); (CHEM 3401 (may be taken concurrently) with a minimum grade of C- or CHEM 3421 (may be taken concurrently) with a minimum grade of C- or CHEM 3431 (may be taken concurrently) with a minimum grade of C-)) or graduate program admission

CHEM 5611. Analytical Separations. (3 Hours)

Describes the theory and practice of separating the components of complex mixtures in the gas and liquid phase. Also includes methods to enhance separation efficiency and detection sensitivity. Covers thin-layer, gas, and high-performance liquid chromatography (HPLC) and recently developed techniques based on HPLC including capillary and membrane-based separation, and capillary electrophoresis.

CHEM 5612. Principles of Mass Spectrometry. (3 Hours)

Describes the theory and practice of ion separation in electrostatic and magnetic fields and their subsequent detection. Topics include basic principles of ion trajectories in electrostatic and magnetic fields, design and operation of inlet systems and electron impact ionization, and mass spectra of organic compounds.

CHEM 5613. Optical Methods of Analysis. (3 Hours)

Describes the application of optical spectroscopy to qualitative and quantitative analysis. Includes the principles and application of emission, absorption, scattering and fluorescence spectroscopies, spectrometer design, elementary optics, and modern detection technologies.

CHEM 5614. Electroanalytical Chemistry. (3 Hours)

Describes the theory of electrode processes and modern electroanalytical experiments. Topics include the nature of the electrode-solution interface (double layer models), mass transfer (diffusion, migration, and convection), types of electrodes, reference electrodes, junction potentials, kinetics of electrode reactions, controlled potential methods (cyclic voltammetry, chronoamperometry), chronocoulometry and square wave voltammetry, and controlled current methods (chronopotentiometry).

CHEM 5617. Protein Mass Spectrometry Laboratory. (3 Hours)

Offers students an opportunity to develop an appreciation of the appropriate choice of mass spectrometer for a particular application.

CHEM 5620. Protein Chemistry. (3 Hours)

Describes proteins (what they are, where they come from, and how they work) in the context of analytical analysis and molecular medicine. Discusses the chemical properties of proteins, protein synthesis, and the genetic origins of globular proteins in solution, membrane proteins, and fibrous proteins. Covers the physical intra- and intermolecular interactions that proteins undergo along with descriptions of protein conformation and methods of structural determination. Explores protein folding as well as protein degradation and enzymatic activity. Highlights protein purification and biophysical characterization in relation to protein analysis, drug design, and optimization.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C- or graduate program admission

CHEM 5621. Principles of Chemical Biology. (3 Hours)

Explores the use of natural and unnatural small-molecule chemical tools to probe macromolecules, including affinity labeling and click chemistry. Covers nucleic acid sequencing technologies and solid-phase synthesis of nucleic acids and peptides. Discusses in-vitro selection techniques, aptamers, and quantitative issues in library construction. Uses molecular visualization software tools to investigate structures of macromolecules. Intended for graduate and advanced undergraduate students.

Prerequisite(s): ((CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-); (CHEM 2321 with a minimum grade of C- or CHEM 2331 with a minimum grade of C- or CHEM 3331 with a minimum grade of C-); (CHEM 3401 (may be taken concurrently) with a minimum grade of C- or CHEM 3421 (may be taken concurrently) with a minimum grade of C- or CHEM 3431 (may be taken concurrently) with a minimum grade of C-)) or graduate program admission

CHEM 5622. Lab for CHEM 5621. (1 Hour)

Accompanies CHEM 5621. Complements and reinforces the concepts from CHEM 5621 with emphasis on fundamental techniques. Offers an opportunity to complete independent projects in modern chemical biology research.

Prerequisite(s): ((CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-); (CHEM 2321 with a minimum grade of C- or CHEM 2331 with a minimum grade of C- or CHEM 3331 with a minimum grade of C-); (CHEM 3401 (may be taken concurrently) with a minimum grade of C- or CHEM 3421 (may be taken concurrently) with a minimum grade of C- or CHEM 3431 (may be taken concurrently) with a minimum grade of C-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)) or graduate program admission

Attribute(s): NUpath Writing Intensive

CHEM 5625. Chemistry and Design of Protein Pharmaceuticals. (3 Hours)

Covers the chemical transformations and protein engineering approaches to protein pharmaceuticals. Describes protein posttranslational modifications, such as oxidation, glycosylation, formation of isoaspartic acid, and disulfide. Then discusses bioconjugate chemistry, including those involved in antibody-drug conjugate and PEGylation. Finally, explores various protein engineering approaches, such as quality by design (QbD), to optimize the stability, immunogenicity, activity, and production of protein pharmaceuticals. Discusses the underlying chemical principles and enzymatic mechanisms as well.

Prerequisite(s): (CHEM 2317 with a minimum grade of C- or CHEM 2313 with a minimum grade of C- or graduate program admission); (CHEM 5620 (may be taken concurrently) with a minimum grade of C- or CHEM 5620 (may be taken concurrently) with a minimum grade of C- or CHEM 5621 (may be taken concurrently) with a minimum grade of C- or CHEM 5621 (may be taken concurrently) with a minimum grade of C-)

CHEM 5626. Organic Synthesis 1. (3 Hours)

Surveys types of organic reactions including stereochemistry, influence of structure and medium, mechanistic aspects, and synthetic applications.

CHEM 5627. Mechanistic and Physical Organic Chemistry. (3 Hours)

Surveys foundational concepts of physical organic chemistry, including thermodynamics, kinetics, and solvent and isotope effects. Treats structure/reactivity relationships in the context of how they can be used in understanding and predicting organic chemistry mechanisms. Topics include conformational analysis, molecular orbital theory, aromaticity, orbital symmetry, and how they are applied to understanding organic and organometallic reactions such as aldol, pericyclic, and other stereoselective reactions. Discusses reaction mechanisms that involve intermediates, including anions, cations, radicals, and carbenes.

CHEM 5628. Principles of Spectroscopy of Organic Compounds. (3 Hours)

Studies how to determine organic structure based on proton and carbon nuclear magnetic resonance spectra, with additional information from mass and infrared spectra and elemental analysis. Presents descriptive theory of nuclear magnetic resonance experiments and applications of advanced techniques to structure determination. Includes relaxation, nuclear Overhauser effect, polarization transfer, and correlation in various one- and two-dimensional experiments. Requires graduate students to have one year of organic chemistry or equivalent.

Prerequisite(s): CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C- or graduate program admission

CHEM 5630. Nucleic Acid Chemistry. (3 Hours)

Offers a broadband introduction to the field of nucleic acid chemistry. Nucleic acids are vital for biology, but their roles have been greatly expanded beyond storage of genetic information. The breadth of utility of nucleic acids stems from a precise understanding of their structures, modern means to synthesize and modify them, and the ability for nucleic acids to engage with varieties of enzymes/proteins and other synthetic/biological systems. Foundational topics include nucleic acid structure, physicochemical properties, syntheses of nucleosides/nucleotides/oligonucleotides, chemical modification of nucleic acids, methods to manipulate and analyze nucleic acids (e.g., PCR, sequencing, and electrophoresis). Advanced topics include nucleic acid therapeutics (e.g., siRNA, antisense technology, CRISPR, and aptamers); DNA damage and repair; and DNA for materials science (e.g., DNA nanotechnology).

CHEM 5636. Statistical Thermodynamics. (3 Hours)

Briefly reviews classical thermodynamics before undertaking detailed coverage of statistical thermodynamics, including probability theory, the Boltzmann distribution, partition functions, ensembles, and statistically derived thermodynamic functions. Reconsiders the basic concepts of statistical thermodynamics from the modern viewpoint of information theory. Presents practical applications of the theory to problems of contemporary interest, including polymers and biopolymers, nanoscale systems, molecular modeling, and bioinformatics.

Prerequisite(s): CHEM 3401 with a minimum grade of C- or CHEM 3421 with a minimum grade of C- or CHEM 3431 with a minimum grade of C- or graduate program admission

CHEM 5638. Molecular Modeling. (3 Hours)

Introduces molecular modeling methods that are basic tools in the study of macromolecules. Is structured partly as a practical laboratory using a popular molecular modeling suite, and also aims to elucidate the underlying physical principles upon which molecular mechanics is based. These principles are presented in supplemental lectures or in laboratory workshops.

CHEM 5640. Biopolymeric Materials. (3 Hours)

Examines the structure, properties, and processing of biomaterials, the forms of matter that are produced by or interact with biological systems. One of the pillars of biomedical engineering is to use naturally derived and synthetic biomaterials to treat, augment, or replace human tissues.

CHEM 5641. Computational Chemistry. (3 Hours)

Introduces basic concepts, methods, techniques, and recent advances in computational chemistry and their relevance to experimental characterizations such as spectroscopy. Topics include electronic structure theory (wave function theory and density functional theory), principles of molecular dynamics simulations, multiscale modeling, machine learning, and quantum computing relevant to computational chemistry. Builds a theoretical foundation for students to properly choose computational methods to solve common research problems in chemistry, biochemistry, and materials science. Also introduces the field of research in computational chemistry. Suitable for advanced undergraduate students and graduate students who plan to conduct research in the field of computational chemistry or plan to utilize computational techniques to complement experimental research in the molecular sciences.

CHEM 5642. Photochemistry Fundamentals and Applications. (3 Hours)

Describes fundamental science of light-activated chemistry and photochemistry applications. Topics include organic and inorganic photochemistry and their applications in solar energy, solar fuels, photocatalysis, bioimaging, photochemotherapy, pigments, and photonics.

Prerequisite(s): (CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D-) or graduate program admission

CHEM 5643. Plastics Sustainability and Circular Economy: A Chemical Perspective. (3 Hours)

Explores the measures taken by both academia and industry to address plastic pollution and to integrate these materials into circular economy systems. Examines plastic pollution from a chemical perspective by delving into the properties of polymers and their composites at the molecular level, aiming to understand the root causes of this pervasive problem. Offers students an opportunity to obtain a deeper understanding of the challenges posed by plastic pollution and the innovative solutions being developed to combat it.

CHEM 5648. Chemical Principles and Application of Drug Metabolism and Pharmacokinetics. (3 Hours)

Offers students an opportunity to obtain a comprehensive grounding in the chemistry of drug metabolism and pharmacokinetics (DMPK) and its application to drug design and optimization. Multiple rounds of chemical synthesis and testing are usually required to discover new drugs with the appropriate balance of properties such as potency and selectivity, efficacy in preclinical models of disease, safety, and pharmacokinetics. Introduces students to modern tools and concepts utilized to screen for favorable DMPK properties, as well as methods to predict human PK from in vitro and preclinical data. Examines the linkage between drug levels in the body, pharmacodynamic response (PK/PD), and drug-drug interactions in the context of the iterative process of chemical drug synthesis.

CHEM 5649. Numerical Strategies and Data Analytics for Chemical Sciences. (4 Hours)

Introduces a broad range of numerical methods for solving large-scale, data-driven problems that arise in chemical engineering, chemistry, biochemistry, and other chemical sciences. Offers students an opportunity to obtain a detailed understanding of the derivation, analysis, and use of these numerical methods and learn how these lay the foundations to machine learning techniques. Topics include numerical programming logic, linear and nonlinear algebraic equations, polynomial fitting, numerical calculus, optimization techniques, and large-scale data analysis. Applies to a broad field of chemical and biochemical sciences, where large-scale multivariate data analyses and pattern extraction are key components.

Prerequisite(s): ((MATH 1341 with a minimum grade of D- ; MATH 1342 with a minimum grade of D-) or (MATH 2321 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-)) or graduate program admission

CHEM 5651. Materials Chemistry of Renewable Energy. (3 Hours)

Studies renewable energy in terms of photovoltaics, photoelectrochemistry, fuel cells, batteries, and capacitors. Focuses on the aspects of each component and their relationships to one another.

Prerequisite(s): ((CHEM 2313 with a minimum grade of C- or CHEM 2317 with a minimum grade of C-); CHEM 3403 with a minimum grade of C-) or graduate program admission

CHEM 5653. Electrochemistry of Renewable Energy Devices. (1 Hour)

Presents the electrochemistry of renewable energy, an extremely interdisciplinary science encompassing sensors, surface technology, materials science, microsystems technology, nanotechnology, energy storage, and conversion. Offers hands-on experience with characterization of energy storage and conversion devices. Emphasizes photovoltaics and batteries.

Prerequisite(s): CHEM 5614 with a minimum grade of C+ or CHEM 5614 with a minimum grade of C+ or CHEM 5651 with a minimum grade of C+ or CHEM 5651 with a minimum grade of C+

CHEM 5655. Molecular Symmetry and Group Theory. (3 Hours)

Covers symmetry operations; point groups and classification of molecules into point groups; as well as matrix representation of symmetry operations, orthogonality theorem, and its use in determining irreducible representation spanned by a basis. Studies decomposition of reducible representation and direct products, characters and character tables, and reviews quantum mechanics. Also covers infrared and Raman spectroscopy, normal modes of vibrations, determining symmetry of vibrations, the role of symmetry in selection rules, LCAO MO theory, Hückel method, electronic spectroscopy, and vibronic spectroscopy and symmetry.

CHEM 5660. Analytical Biochemistry. (3 Hours)

Covers the analysis of biological molecules, which include nucleic acids, proteins, carbohydrates, lipids, and metabolites. Discusses isolation, characterization, and quantification of these molecules.

CHEM 5670. Global Biogeochemistry. (4 Hours)

Examines the biological, chemical, and physical interactions that shape our global environment. These interactions combine in the global biogeochemical cycles. Industrial emission of gases, use of fertilizers and plastics, and the expansion of cities are altering the biogeochemical cycling of the elements carbon, nitrogen, and phosphorus at rates unprecedented in the geological record. Uses lectures and the latest update to Chapter 6, "Carbon and Other Biogeochemical Cycles," of the International Panel on Climate Change report to explore the main interactions between human activity, biogeochemical change, and climate. Discusses primary literature to delve deeper into these interactions.

Attribute(s): NUpath Natural/Designed World

CHEM 5672. Organic Synthesis 2. (3 Hours)

Continues CHEM 5626. Surveys types of organic reactions including stereochemistry, influence of structure and medium, mechanistic aspects, and synthetic applications.

Prerequisite(s): CHEM 5626 with a minimum grade of C- or CHEM 5626 with a minimum grade of D

CHEM 5676. Bioorganic Chemistry. (3 Hours)

Covers host guest complexation by crown ethers, cryptands, podands, spherands, and so forth; molecular recognition including self-replication; peptide and protein structure; coenzymes and metals in bioorganic chemistry; nucleic acid structure; interaction of DNA with proteins and small molecules including DNA-targeted drug design; catalytic RNA; and catalytic antibodies.

Prerequisite(s): (CHEM 5626 with a minimum grade of C- ; CHEM 5627 with a minimum grade of C-) or graduate program admission

CHEM 5688. Principles of Nuclear Magnetic Resonance. (3 Hours)

Presents the physical principles underlying magnetic resonance spectroscopy, including Fourier transform theory, classical and quantum-mechanical treatments of spin angular momentum, the Bloch equations, and spin relaxation. Covers fundamental concepts in time domain magnetic resonance methods, including pulse sequences, selective pulses, phase cycling, coherence pathways, field gradients, and nonuniform sampling. Surveys the NMR methods most commonly applied to chemical structural analysis, including pure shift NMR; 2D correlation (COSY, DQF-COSY, TOCSY, HSQC, HMBC) methods; and cross-relaxation (NOESY, ROESY) methods.

CHEM 5904. Seminar. (1 Hour)

Focuses on oral reports by master of science and PlusOne participants on current research topics in chemistry and chemical biology. May be repeated up to two times.

CHEM 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

CHEM 5984. Research. (1-6 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to three times for up to 6 total credits.

CHEM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHEM 7710. Laboratory Rotations in Chemistry and Chemical Biology. (0 Hours)

Offers an opportunity for students to gain exposure to research laboratories in the department to help them choose a thesis advisor and project.

CHEM 7750. Advanced Problem Solving. (3 Hours)

Designed to provide skills necessary to lead advanced problem-solving case studies. Faculty mentors in one of three thematic areas chosen from organic and medicinal chemistry, physical and materials chemistry, or analytical and biological chemistry assign casework to students for presentation and analysis in group sessions. Students are required to provide rational solutions to complex problems derived from the contemporary literature and engage in dialogue with faculty mentors to justify their analysis. The faculty mentors assign grades to reflect intellectual maturity and ability of the students to display creative, independent thinking. Full-time PhD students who have successfully completed qualifying examinations only.

CHEM 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHEM 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

CHEM 7990. Thesis. (1-4 Hours)

Offers thesis supervision by members of the department. May be repeated without limit.

CHEM 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continuing thesis supervision by members of the department.

CHEM 8504. Graduate Seminar. (1 Hour)

Focuses on oral reports by the participants on current research topics in chemistry and chemical biology. May be repeated without limit.

CHEM 8960. Exam Preparation—Doctoral. (0 Hours)

Offers the student the opportunity to prepare for and take the PhD qualifying exams (cumulative exams).

CHEM 8984. Research. (1-6 Hours)

Offers the chance to conduct original research, written thesis thereon, or to the establishment of doctoral candidacy. May be repeated without limit.

CHEM 8986. Research. (0 Hours)

Offers the student the opportunity to conduct full-time research for the master's degree. May be repeated without limit.

CHEM 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

CHEM 9984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CHEM 9986. Research. (0 Hours)

Offers the student the opportunity to conduct full-time research for the PhD. May be repeated without limit.

CHEM 9990. Dissertation Term 1. (0 Hours)

Offers the student the opportunity to conduct theoretical and experimental research for the PhD degree. Open to chemical biology students.

Prerequisite(s): CHEM 9000 with a minimum grade of S

CHEM 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): CHEM 9990 with a minimum grade of S

CHEM 9996. Dissertation Continuation. (0 Hours)

Offers dissertation supervision by members of the department. Open to chemical biology students.

Prerequisite(s): CHEM 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Chinese (CHNS)**Courses****CHNS 1101. Elementary Chinese 1. (4 Hours)**

Designed for students who have very little or no prior knowledge of Chinese. Provides a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Each lesson incorporates helpful information about daily life in China and the varied cultures within the world of Chinese speakers. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources. Focuses on Mandarin Chinese; students who wish to speak another dialect of Chinese should consult instructor for proper placement.

CHNS 1102. Elementary Chinese 2. (4 Hours)

Continues CHNS 1101. Reviews and continues the study of grammar and basic language skills. Offers progressively more intensive practice in oral and written communication. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

Prerequisite(s): CHNS 1101 with a minimum grade of C- or CHNS 1301 with a minimum grade of C-

CHNS 1944. Cultural Engagement: Dialogue of Civilizations. (4 Hours)

Engages students on-site with the culture(s) of Chinese-speaking regions and/or communities. Emphasizes the complexity, transnationalism, and interdisciplinary nature of culture(s). Employs a range of methodological approaches to describe and analyze how cultural practices, objects, texts, and meanings are created, distributed, and exchanged within particular social groups or geographic areas. Explores questions of cultural identity, meaning, representation, policy formations, and ideologies. In addition to regular in-class lectures and activities, offers students an opportunity to engage in a dialogue with members of the local communities about their perspectives on relevant cultural topics and everyday experiences. May be repeated once. Conducted in English.

CHNS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHNS 2101. Intermediate Chinese 1. (4 Hours)

Seeks to consolidate the foundation built in elementary Chinese courses. Offers students an opportunity to develop higher oral proficiency, as well as reading and writing skills. Requires students to perform various tasks, such as describing, comparing, and narrating, in culturally appropriate ways.

Prerequisite(s): CHNS 1102 with a minimum grade of C- or CHNS 1302 with a minimum grade of C-

CHNS 2102. Intermediate Chinese 2. (4 Hours)

Emphasizes vocabulary building and mastery of fine points of grammar through written compositions, prepared oral reports, and reading and discussions of material from everyday life to situate language learning in authentic contexts.

Prerequisite(s): CHNS 2101 with a minimum grade of C- or CHNS 2301 with a minimum grade of C- or CHNS 1502 with a minimum grade of C-

CHNS 2301. Intermediate Chinese Immersion 1. (4 Hours)

Designed for students who are in a Chinese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

CHNS 2302. Intermediate Chinese Immersion 2. (4 Hours)

Designed for students who are in a Chinese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

CHNS 2900. Specialized Instruction in Chinese. (1-4 Hours)

Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated up to four times.

CHNS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHNS 3101. Advanced Chinese 1. (4 Hours)

Stresses the fundamentals of Chinese to promote effective self-expression through speaking and writing and to explore the idiomatic aspects of the language. Through progressive class discussions and oral and written commentaries, students analyze a contemporary Chinese novel or a Chinese cultural reader, screenplay, or collection of short stories. The course strives, first, to help students read and comprehend modern Chinese writing with confidence and to be able to talk and write about it in good Chinese; and second, to provide preparation for advanced courses.

Prerequisite(s): CHNS 2102 with a minimum grade of D- or CHNS 2302 with a minimum grade of D-

CHNS 3102. Advanced Chinese 2. (4 Hours)

Continues CHNS 3101. Designed to enhance and reinforce the practical language and communication skills that students employ when they are abroad. Offers students an opportunity to participate in service-learning experiences.

Prerequisite(s): CHNS 3101 with a minimum grade of C- or CHNS 3301 with a minimum grade of C-

CHNS 3301. Advanced Chinese Immersion 1. (4 Hours)

Designed for students who are in a Chinese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

CHNS 3302. Advanced Chinese Immersion 2. (4 Hours)

Designed for students who are in a Chinese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

CHNS 3800. Special Topics in Chinese. (1-4 Hours)

Focuses on a unique aspect of the Chinese language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

CHNS 3900. Specialized Instruction in Chinese. (4 Hours)

Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. May be repeated up to four times.

CHNS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHNS 4800. Special Topics in Chinese. (1-4 Hours)

Focuses on a unique aspect of the Chinese language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Topics focus on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

CHNS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CHNS 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

CHNS 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Civil and Environmental Engineering (CIVE)**Courses****CIVE 1200. How Cities Work: Experiencing Urban Infrastructure. (4 Hours)**

Explores the networks that underpin the very existence of cities: our urban infrastructure. Designed as a grand tour of the engineering marvels that exist beneath our feet but whose operation is critical to urban dwellers, using Boston as our guide. Offers students an opportunity to study a new infrastructure system, first by learning and discussing the engineering principles behind its design and operation, and then by experiencing our local infrastructure through visits to local operation centers, city officials, and private contractors that manage and maintain them. Topics include transportation, energy, telecommunications, water and wastewater, food processing and distribution, and waste management. Explores how our infrastructure is interconnected and how this leads both to resilience and to fragility in the face of natural and anthropogenic disruptions.

Attribute(s): NUpath Natural/Designed World

CIVE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CIVE 2221. Statics and Solid Mechanics. (4 Hours)

Connects fundamentals of Newtonian physics to the stresses and deformations in solids. Introduces properties of areas and volumes (centroidal axes, moments of inertia); equilibrium of particles and rigid bodies in two and three dimensions; analysis of internal forces in trusses and simple frames; shear and moment diagrams in beams; computation of stresses induced by axial force, moment, shear, and torque; and mechanical properties of materials.

Prerequisite(s): (MATH 1342 with a minimum grade of D- ; (PHYS 1151 (may be taken concurrently) with a minimum grade of D- or PHYS 1161 (may be taken concurrently) with a minimum grade of D-)) or (PHYS 1141 (may be taken concurrently) with a minimum grade of D- ; MATH 1241 with a minimum grade of D-)

Corequisite(s): CIVE 2222

CIVE 2222. Recitation for CIVE 2221. (0 Hours)

Accompanies CIVE 2221. Covers problem solving and topics related to the course.

Corequisite(s): CIVE 2221

CIVE 2260. Materials for the Built Environment. (4 Hours)

Introduces the physical, mechanical, and chemical properties of materials of importance to civil engineers. Offers an overview of the ways in which these properties affect the material selection process, material behavior, and the design process.

Prerequisite(s): (CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-); MATH 1342 with a minimum grade of D- ; (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D-)

Corequisite(s): CIVE 2261

CIVE 2261. Lab for CIVE 2260. (1 Hour)

Involves the use of standard lab test methods and equipment to determine properties of materials common to civil engineering practice. Also introduces students to land surveying, site layout, and the measurement of distance, elevation, and direction.

Corequisite(s): CIVE 2260

Attribute(s): NUpath Analyzing/Using Data

CIVE 2300. Environmental Measurements in Natural and Engineered Systems. (2 Hours)

Presents the theory and application of field and laboratory methods for measurement of water and air quality parameters, soil properties, and environmental processes. Introduces the complexities and challenges associated with characterization and measurements of environmental processes in natural and engineered systems. Emphasizes data analysis, report writing, development of problem-solving skills, and teamwork using real-life laboratory and field experiments and class projects.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-

Corequisite(s): CIVE 2301

CIVE 2301. Lab for CIVE 2300. (2 Hours)

Accompanies CIVE 2300. Covers topics from that course through various experiments. Includes a project.

Corequisite(s): CIVE 2300

CIVE 2320. Structural Analysis. (4 Hours)

Connects fundamentals from CIVE 2221 to analyze stresses, strains, strength, forces, and displacements in regular structures and structural members such as trusses, beams, frames, and arches. Covers shear stresses in beams; combined stress analysis (bars with axial load plus shear and bending); introduction to buckling; influence lines (application to statically determinate systems); computation of deflections (statically determinate systems); and analysis of indeterminate structures using virtual work and the flexibility method. Introduces applications to sensing and monitoring of civil structures using the flexibility method and moment distribution.

Prerequisite(s): CIVE 2221 with a minimum grade of D-

Corequisite(s): CIVE 2321

CIVE 2321. Recitation for CIVE 2320. (0 Hours)

Accompanies CIVE 2320. Covers problem solving and topics related to the course.

Corequisite(s): CIVE 2320

CIVE 2324. Concrete Structure Design. (4 Hours)

Presents the mechanical properties of concrete and steel reinforcement. Discusses the design of reinforced concrete structures for various loading conditions and covers the design of common reinforced concrete structural elements. Examines behavior and design of reinforced concrete beams, one-way slab systems, footings, and short columns based on latest ACI-318 code.

Prerequisite(s): CIVE 2221 with a minimum grade of D-

CIVE 2331. Fluid Mechanics and Hydraulics. (4 Hours)

Introduces the principles of fluid mechanics and the applications in basic hydraulic engineering systems. Topics include properties of fluids; pressure and force on surfaces and submerged bodies; continuity, momentum, and energy conservation principles; dimensional analysis and hydraulic similitude; flow in closed conduits; steady flow in pipe networks; unsteady flow in pipes; flow in open channels; hydraulic machines; and hydraulic structures. The laboratory component includes demonstrations and experiments to show the applicability of fluid mechanics and hydraulics principles.

Prerequisite(s): CIVE 2221 with a minimum grade of D-

CIVE 2334. Environmental Engineering: Principles, Technology, and Sustainability. (4 Hours)

Focuses on the protection and management of the environment and the engineering methods to control environmental quality problems. Topics include assessment of environmental quality, introduction to water and wastewater treatment technologies, air pollution control technologies, solid waste management, and global atmospheric change.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-

CIVE 2335. Environmental Engineering Chemistry. (4 Hours)

Covers chemistry principles required for describing chemical processing of elements in natural systems, the distribution of pollutants in the environment, and chemical use in engineered treatment systems. Focuses on equilibrium thermodynamics and equilibria for acid-base, gas-water, precipitation-dissolution, metal complexation, oxidation-reduction, and sorption reactions. Discusses specific applications to pollutant reactions in surface waters, ground waters, soils, drinking water treatment, wastewater treatment, and the atmosphere.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-

CIVE 2340. Geotechnical Engineering. (4 Hours)

Focuses on the formation, composition, and classification of soil for engineering purposes; soil-water phase relations; water in soil; seepage; stresses in soil; consolidation theory; strength properties of soils; and the basics of geoenvironmental engineering.

Prerequisite(s): CIVE 2221 with a minimum grade of D- or CIVE 2260 with a minimum grade of D-

Corequisite(s): CIVE 2341

CIVE 2341. Lab for CIVE 2340. (1 Hour)

Accompanies CIVE 2340. Introduces standard laboratory procedures for characterizing the physical, hydraulic, and mechanical properties of soils as well as data reduction and analysis methods for various test methods. Laboratory methods and determinations include moisture content, Atterberg limits, permeability, compaction, consolidation, and direct shear. Includes the use of computer-based data acquisition systems and measurement transducers.

Corequisite(s): CIVE 2340

CIVE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CIVE 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors. May be repeated up to nine times.

CIVE 3335. Environmental Engineering Chemistry and Chemical Technologies. (4 Hours)

Covers chemistry principles required for describing chemical processing of elements in natural systems, distribution of pollutants in the environment, and chemical use in engineered treatment systems. Focuses on equilibria and reaction kinetics for acid-base, gas-water, precipitation-dissolution, metal complexation, oxidation-reduction, and sorption reactions. Discusses specific applications to pollutant reactions in surface waters, ground waters, soils, drinking water treatment, wastewater treatment, and the atmosphere. Performs laboratory demonstrations and design of chemical treatment technologies for water quality improvement.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-

CIVE 3425. Steel Structure Design. (4 Hours)

Presents the design of steel structures for various loading conditions, including design of different types of frame structures that include steel members subjected to tension, compression, bending, and combinations of loading, and design of connections. Establishes the fundamentals of the behavior and the principles of creative design of steel structures using the latest load and resistance factor design (LRFD) specification of the American Institute for Steel Construction.

Prerequisite(s): CIVE 2320 with a minimum grade of D-

CIVE 3430. Engineering Microbiology and Ecology. (4 Hours)

Introduces the importance of microorganisms and plants to the natural and built environments and evidence-based decision making for complex systems constrained and defined by multiple metrics. Seeks to provide a fundamental understanding of microorganisms (metabolisms, growth, genetics, resource requirements, and niche) and their role in the global ecosystem (element cycling, energy flows, food webs). Examines the role of plants and microbes in both engineered and natural environmental systems and bidirectional interactions between the natural and the built environments. Framed around a series of case studies that highlight the challenges of and strategies for engineering in the earth system context, such as microbially mediated infrastructure corrosion; ecological effects of nutrient pollution; bioaccumulation; green infrastructure and remediation (constructed wetlands, bioremediation); and wastewater treatment.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-

CIVE 3435. Environmental Pollution: Fate and Transport. (4 Hours)

Provides a systematic approach to analyzing the fate and transport of pollutants within natural systems. Equilibrium modeling and reactive transport modeling are used to assess the predominant processes that control the movement and persistence of pollutants in water, soil, and air. Topics include mass transfer across multiple phases; physical, chemical, and biological transformations of substances; transport processes (diffusion, dispersion, advection, interphase mass transport); eutrophication of lakes; conventional pollutants in rivers and estuaries; groundwater contamination; and atmospheric deposition.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1214 with a minimum grade of D-

CIVE 3464. Probability and Engineering Economy for Civil Engineering. (4 Hours)

Introduces engineering probability and statistics, as well as engineering economic analysis for project or design evaluation. Case studies are used to illustrate the integration of these areas in the design/system analysis process. Topics in engineering probability and statistics include descriptive statistics, expected value of random variables, and hypotheses testing. Statistical process control and sampling methods are introduced. Reliability methods for the analysis and improvement of system/design performance are discussed. Also covers fundamental concepts of time value of money and economic evaluation of alternatives, including the effects of depreciation and taxes.

Prerequisite(s): MATH 2321 with a minimum grade of D-

CIVE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CIVE 4534. Water Treatment Systems Design. (3 Hours)

Continues CIVE 2334. Concentrates on unit operations; unit processes; and related fundamental design of physical, chemical, and biological water and wastewater treatment systems, using both lectures and laboratory instruction. Topics include aeration systems, activated sludge, fixed-film biological treatment, gas transfer, reaction kinetics, reactor modeling, coagulation, flocculation, sedimentation, filtration, and subsurface disposal system design. Includes project component.

Prerequisite(s): (CIVE 2331 with a minimum grade of D- or CHME 2310 with a minimum grade of D-); CIVE 2334 with a minimum grade of D-

Corequisite(s): CIVE 4535

CIVE 4535. Lab for CIVE 4534. (1 Hour)

Accompanies CIVE 4534. Covers topics from the course through various experiments.

Corequisite(s): CIVE 4534

CIVE 4540. Resource Recovery and Waste Treatment Technologies Abroad. (4 Hours)

Examines different aspects relative to municipal and industrial solid waste, with a special focus on material recovery. Covers chemical-physical characterization of waste, source reduction and toxicity, recycling and selection of different fractions, resource and energy recovery (e.g., composting, anaerobic digestion, combustion to energy), and analysis and preliminary design of treatment disposal options. Through design projects, offers students an opportunity to apply lessons learned to the U.S. context. Taught in a study-abroad format in a European nation.

CIVE 4541. Waste Management and Policy Abroad. (4 Hours)

Explores how the country visited manages the recovery and treatment of both industrial and municipal solid waste. Emphasizes waste generated in mining and other industrial activities (e.g., refinery, military). Examines multifaceted aspects, including governance; science/engineering; and health, social, and policy. Offers students an opportunity to interact with local experts and to visit key sights. Encourages students to think about possible policy lessons for the United States. Taught abroad.

CIVE 4542. Foundation Engineering and Design. (4 Hours)

Focuses on subsurface field investigation, soil-bearing capacity determination, settlement estimation, design of shallow foundations and pile foundations, and design of retaining walls. Includes project component.

Prerequisite(s): CIVE 2340 with a minimum grade of D- ; (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

CIVE 4554. Highway Design. (4 Hours)

Concentrates on highway design including route selection, geometric design, foundation and pavement design, drainage design, and construction issues. Analyzes highway traffic including traffic flow fundamentals and capacity and level of service analysis for freeways and rural highways. Covers the environmental impact and public review process for highway construction. Includes project component.

Prerequisite(s): CIVE 2261 with a minimum grade of D- ; (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

CIVE 4566. Design for Sustainable Transportation: Netherlands. (4 Hours)

Examines how the design of Dutch transportation infrastructure promotes travel by foot, bicycle, and public transportation as opposed to private automobile and how it promotes urban livability and traffic safety. Topics include bicycling infrastructure planning and design; Vision Zero traffic safety principles and design treatments for safe roads, intersections, and crossings; and high-quality transit service planning and design. Through design projects, offers students an opportunity to apply lessons learned to the U.S. context. Taught in a study-abroad format in the Netherlands.

CIVE 4567. Planning and Policy for Sustainable Urban Transportation: Netherlands. (4 Hours)

Examines urban transportation planning practices and policies in the Netherlands that promote travel by bicycling, public transportation, and foot and help prevent urban mobility from degrading urban livability. Topics include land-use planning at the site, neighborhood, and regional scale; transit- and bicycle-oriented development, including both land-use and transportation infrastructure planning and policies for large-scale urban expansions; and traffic-circulation planning and policies to promote safety, prevent roads from becoming barriers to walking, cycling, or transit, and to create car-free and car-lite zones. Taught in study-abroad format in the Netherlands.

CIVE 4575. Construction Management. (3 Hours)

Surveys the construction industry and tasks that must be addressed by construction management including resource allocation, construction environment, organization, contracts, funding, cash flow, productivity, conceptual and detailed cost estimating, labor relations, network planning and scheduling, construction accounting, and project control.

CIVE 4765. Senior Design Project—Environmental. (5 Hours)

Using teams, students design a civil engineering project that primarily involves the environmental subdiscipline. Design teams are advised by a faculty member and engineering practitioners. Lectures cover supplemental technical background specific to the project, as well as cross-disciplinary aspects of project development, value engineering, aesthetics, and constructability. Integrates project design with further development of student communications skills; students present the design to practicing engineers and interested parties such as community groups.

Prerequisite(s): (CIVE 5536 with a minimum grade of D- or CIVE 4534 with a minimum grade of D-); (ENGW 3301 with a minimum grade of C or ENGW 3302 with a minimum grade of C or ENGW 3315 with a minimum grade of C or ENGL 3301 with a minimum grade of C or ENGL 3302 with a minimum grade of C or ENGL 3315 with a minimum grade of C)

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

CIVE 4767. Senior Design Project—Structural. (5 Hours)

Using teams, students design a civil engineering project that primarily involves the structural subdiscipline. Design teams are advised by a faculty member and engineering practitioners. Lectures cover supplemental technical background specific to the project, as well as cross-disciplinary aspects of project development, value engineering, aesthetics, and constructability. Integrates project design with further development of student communications skills; students present the design to practicing engineers and interested parties such as community groups.

Prerequisite(s): (((CIVE 2324 with a minimum grade of D- ; CIVE 3425 with a minimum grade of D-) or (CIVE 2324 with a minimum grade of D- ; CIVE 5522 with a minimum grade of D-) or (CIVE 3425 with a minimum grade of D- ; CIVE 5522 with a minimum grade of D-)) or ((CIVE 2324 with a minimum grade of D- or CIVE 3425 with a minimum grade of D-); CIVE 4542 with a minimum grade of D- ; CS 3000 with a minimum grade of D-)); (ENGL 3301 with a minimum grade of C or ENGL 3302 with a minimum grade of C or ENGW 3301 with a minimum grade of C or ENGW 3302 with a minimum grade of C or ENGW 3315 with a minimum grade of C)

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

CIVE 4768. Senior Design Project—Transportation. (5 Hours)

Using teams, students design a civil engineering project that primarily involves the transportation subdiscipline. Design teams are advised by a faculty member and engineering practitioners. Lectures cover supplemental technical background specific to the project, as well as cross-disciplinary aspects of project development, value engineering, aesthetics, and constructability. Integrates project design with further development of student communications skills; students present the design to practicing engineers and interested parties such as community groups.

Prerequisite(s): CIVE 4554 with a minimum grade of D- ; (ENGL 3301 with a minimum grade of C or ENGW 3301 with a minimum grade of C or ENGL 3302 with a minimum grade of C or ENGW 3302 with a minimum grade of C or ENGW 3315 with a minimum grade of C); (CIVE 5373 with a minimum grade of D- or CIVE 5376 with a minimum grade of D- or CS 3000 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

CIVE 4777. Climate Hazards and Resilient Cities Abroad. (4 Hours)

Focuses on the science of “global weirding”—unprecedented changes in weather caused by global warming and natural climate variability. Introduces the physical-science basis of climate, computer models of the earth system, statistical tools for the analysis of climate model, and remote sensor data. Also introduces the concept of urban resilience, focusing on preventing natural hazards from turning into catastrophic disasters in densely populated and vulnerable regions. Examines multifaceted aspects of resilience, including governance, emergency response, infrastructural, informational, social, and policy aspects. Encourages students to consider the science, engineering, and policy challenges in transforming vulnerable urban and coastal regions to climate-resilient cities and to examine how societies can learn from each other by comparing Boston with the country visited. Taught abroad.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

CIVE 4778. Climate Adaptation and Policy Abroad. (4 Hours)

Explores how the country visited plans to adapt to climate change and natural hazards and how that country participates in international climate and emissions negotiations, within the context of its history and culture. Focuses on how an emerging economy adjusts to the reality of climate change/extremes and how citizens may drive decisions and policy. Incorporates topics from climate change, environmental sciences, civil and chemical engineering, remote sensing, social sciences, electrical engineering, computer science, and the management sciences. Encourages students to think about possible policy lessons for the United States. Offers students an opportunity to visit key sights. Culminates with a mock “climate change war game,” simulating an event in which international negotiators meet to formulate treaties on climate change adaptation and mitigation. Taught abroad.

Attribute(s): NUpath Natural/Designed World

CIVE 4780. Timber and Masonry Structures: Technology and Design Abroad. (4 Hours)

Examines mechanical properties of wood, stress grades, and working stresses as well as effects of strength-reducing characteristics, moisture content, and duration of loading and causes of wood deterioration in a study-abroad format in a European nation. Topics include glued-laminated timber and plywood, behavior and design of beams, beam-columns, and connections. Introduces the design of timber elements and structures. Offers students an opportunity to learn about the design of masonry elements and structures with a multitude of materials (concrete, mortar, and timber) and the design of masonry elements and structures.

Prerequisite(s): CIVE 2221 with a minimum grade of D- or ME 2350 with a minimum grade of D- or ARCH 2240 with a minimum grade of D-

Corequisite(s): CIVE 4781

Attribute(s): NUpath Natural/Designed World

CIVE 4781. Introduction to Preservation and Restoration of Historic Buildings, Technology, and Policies Abroad. (4 Hours)

Examines multifaceted aspects of building preservation in a study-abroad format in a European nation. Students, organized in groups, study either a particular building or architectural style and examine traditional and modern technologies, policies, regulations, and social aspects needed for the restoration of existing buildings with historical value. Building technologies may include energy efficiency, ventilation, and thermal comfort. Requires a report assessing the status of an existing building and proposing solutions for its preservation. Features guest speakers from Italian academia, local industry partners, and engineering professionals during technical visits and special seminars. Students participate in the selection of a special assignment topic for the final report.

Corequisite(s): CIVE 4780

CIVE 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

CIVE 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): CIVE 4970 with a minimum grade of D-

CIVE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CIVE 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated two times.

Attribute(s): NUpath Integration Experience

CIVE 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

CIVE 5100. Equity in Engineering. (4 Hours)

Explores how problems that are commonly defined in technical terms can be deeply socially embedded. Using case studies, evaluates how engineering solutions and policies can disproportionately affect people's exposure to harms. Topics include environmental justice, community-based approaches, and the social environment. Offers students an opportunity to enhance their understanding of potential engineering impacts on communities and improve their ability to work with diverse groups.

CIVE 5150. Climate and Atmospheric Change. (4 Hours)

Offers an in-depth view of the processes that drive change in Earth's climate system. Examines the modern climate system and how and why climate changes through time. Introduces the tools used to explore past climates and changes, and explores the long-term and short-term controls on the climate system. Also introduces the application of climate models to develop future climate projections. Offers students an opportunity to obtain hands-on experience analyzing and interpreting climate data and model output.

Prerequisite(s): ENVR 1200 with a minimum grade of D- or ENVR 2200 with a minimum grade of D- or (PHYS 1151 with a minimum grade of D- ; PHYS 1152 with a minimum grade of D- ; PHYS 1153 with a minimum grade of D-) or graduate program admission

CIVE 5221. Construction Project Control and Organization. (2 Hours)

Overviews the organization of construction firms at the general corporate level and the project level. Covers cost, schedule, budget, and financial control of projects. Also examines the flow of information between parties to the project.

Prerequisite(s): CIVE 4575 with a minimum grade of D- or CIVE 7220 with a minimum grade of C-

CIVE 5231. Alternative Project Delivery Systems in Construction. (2 Hours)

Offers a comprehensive overview of alternative construction project delivery systems in the public and private sectors; project life cycle including project development, schedule, cost and risk management, quality assurance/quality control, project management, and project closeout; innovative financing strategies including contractor financing, franchises, and super turnkey. Focuses on the analysis of design/bid/build execution compared to design/build and construction management systems of delivery. Examines international projects, contracts, and partnering options—for example JVs and alliances—as vehicles to ensure the meeting of project objectives. Uses case studies to identify and practice the management skills required for successful D/B project execution including effective communication, negotiations, and team building.

Prerequisite(s): CIVE 4575 with a minimum grade of D- or CIVE 7220 with a minimum grade of C-

CIVE 5232. Leading and Constructing Global Megaprojects. (2 Hours)

Studies global trends in managing megaprojects; distinctions between managing megaprojects and smaller construction projects; and strategic planning, governance, financing mechanisms, leadership dynamics, and project delivery methods specifically tailored for mega-construction projects.

Prerequisite(s): CIVE 4575 with a minimum grade of D- or graduate program admission

CIVE 5250. Organic Pollutants in the Environment. (4 Hours)

Introduces principles that govern the fate and transport of organic chemicals released to the environment. Topics include chemical structure and thermodynamic properties and how they predict physical processes that control the distribution of contaminants between the atmosphere, fresh and marine surface waters, groundwater, soils, sediments, and biota. Introduces models and methods for predicting fate and transport of organic contaminants within and between environmental media, including molecular diffusion, transport across boundaries, and box models. Explores concepts linking environmental chemistry with ecotoxicology, including bioaccumulation, food web models, and risk assessment. Uses case studies and real-world scenarios to illustrate concepts.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1211 with a minimum grade of D- or graduate program admission

CIVE 5255. Tools and Techniques of Environmental Health. (4 Hours)

Introduces basic concepts of environmental health sciences, methods used to study the interface of health and the environment, the health impacts of various environmental processes and exposures, and public health approaches to controlling or eliminating environmental health risks. Covers basic environmental health principles, such as exposure assessment, environmental toxicology, environmental epidemiology, and risk assessment. Also covers specific environmental health issues including toxic exposures from chemicals used in plastics, food production, and everyday household products; water and air pollution; climate change; and other environmental drivers of disease.

CIVE 5260. Environmental Fluid Mechanics. (4 Hours)

Focuses on fundamentals of fluid mechanics, but with application to the natural and built environment based on transport and dispersion phenomena. Reviews theory necessary for an understanding of environmental fluid flows and methods of observation, including acoustic Doppler current profiles, profiling towers, and modeling, including large eddy simulation (LES).

CIVE 5261. Dynamic Modeling for Environmental Investment and Policymaking. (4 Hours)

Introduces the theory, methods, and tools of dynamic modeling for policy and investment decision making, emphasizing environmental issues. Makes use of state-of-the-art computing methods to translate theory and concepts into executable models and offers extensive hands-on modeling experience. Topics include management of discrete flows (e.g., models of traffic systems); discounting, intertemporal optimization (e.g., models of resource extraction); dynamic games (e.g., models for adaptive management); and treatment of risk, uncertainty, novelty, and complexity (e.g., for investment and policymaking).

CIVE 5271. Solid and Hazardous Waste Management. (4 Hours)

Introduce various aspects of integrated solid waste management system and hazardous waste management practices. Includes both engineering principles as well as socioeconomic and regulatory issues surrounding solid and hazardous waste management. Provides sufficient background to enable the student to understand, evaluate, and critique the design of and the decisions in various waste management alternatives.

CIVE 5275. Life Cycle Assessment of Materials, Products, and Infrastructure. (4 Hours)

Covers the conceptual and mathematical basis of life cycle assessment (LCA), including engineering models of industrial energy use and emissions and environmental science models of fate and transport, exposure, and toxicology. LCA is a widely used systems-modeling method for quantifying the emissions and environmental/health implications of a product over its life cycle, from manufacturing to use to disposal. This guides design, technology decisions, and policy on topics ranging from consumer products to green buildings to large-scale energy technologies. Presents Monte Carlo simulation, structural path analysis, and model sensitivity analysis for the industrial network structure that underlies LCA modeling. Offers students an opportunity to receive hands-on training for open-source LCA software packages and then carry out independent group projects for real clients in industry and government.

CIVE 5280. Remote Sensing of the Environment. (4 Hours)

Introduces remote sensing techniques, including obtaining, visualizing, and analyzing satellite data. Examines physical processes, methods, and data products used in satellite remote sensing of the Earth's environment. Topics include active and passive remote sensing methods based on fundamentals of electromagnetic radiation, concepts used to develop data products from the remotely sensed measurements, and a suite of satellite data products to investigate current and past conditions of the Earth's terrestrial and ocean surfaces. Uses geographic information systems (GIS) and student-developed programs to view and interpret satellite data. Knowledge of GIS, R, and Python is preferred.

CIVE 5281. Coastal Dynamics and Design. (4 Hours)

Introduces the basic theory of the forcing and response of the built and natural coastal environment, including hurricanes and extratropical storms, wind waves, astronomical tides, storm surges, currents, fluid-structure interactions, sediment transport, and morphological changes. Seeks to provide an overview of the physical processes and the functional design of coastal works, including anthropogenic and natural and nature-based features. Uses examples and case studies to illustrate the theory and the interdependence of water motion and coastal morphology. Emphasizes the challenges of extreme events and natural hazards in the coastal environment. Requires prior completion of one semester of fluid mechanics or equivalent.

Prerequisite(s): CIVE 2331 with a minimum grade of D- or EEMB 3120 with a minimum grade of D- or graduate program admission

CIVE 5300. Environmental Sampling and Analysis. (2 Hours)

Introduces the theory, application, methodology, and instrumentation used in planning, sampling, and analyzing the environmental contaminants in air, water, and soils. Emphasizes instrument selection and quality control, including documentation, calibration, data analysis and interpretation, and sample management.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D- or graduate program admission

Corequisite(s): CIVE 5301

CIVE 5301. Lab for CIVE 5300. (2 Hours)

Accompanies CIVE 5300. Covers topics from the course through various experiments. Includes a team project.

Corequisite(s): CIVE 5300

CIVE 5363. Climate Science, Engineering Adaptation, and Policy. (4 Hours)

Offers an evidence-based glimpse of what has been called a clear and present danger to mankind. Analyzes case studies from the magic of the butterfly effect in chaos theory to the deep challenges in physics, biogeochemistry, and data sciences. Covers topics from experimental design to satellite-based remote sensing, all the way to the design and operations of next-generation hydraulic infrastructures, transportation systems, smart grids, and communication networks, including the impacts on coastal or inland cities, the resilience to weather hazards, and the sustainability of water-energy-food resources. Includes policy issues and risk-informed trade-offs in renewable energy, environmental regulations, and emissions control. Graduate students are required to complete a mandatory class project.

CIVE 5365. Climate Technologies for Decarbonization, Mitigation, and Adaptation. (4 Hours)

Presents the major engineering technologies and large-scale infrastructure changes needed to address global climate change. Examines multiple strategies for proposed engineering solutions, including mitigation of emissions (demand reduction and decarbonization), adaptation to climate change, carbon capture and storage (negative emissions), and geoengineering. Covers engineering and design fundamentals, technical feasibility for scale-up, and economic implications, informed by cutting-edge scientific and technical reports for each technology. Concludes with a holistic consideration of engineering costs, speed, effectiveness, and ethics in prioritizing investments in climate technologies.

CIVE 5366. Air Quality Engineering and Science. (4 Hours)

Introduces the fundamentals of atmospheric composition; their sources, properties, and chemistry in the atmosphere; and their effects on human health and the environment. Covers the history of the discovery of chemicals, the evolution of the earth's atmosphere, and the structure and composition of the present-day atmosphere. Discusses science of major air pollution issues on an urban through global scale, including urban outdoor air pollution, indoor air pollution, acid deposition, stratospheric ozone depletion, air pollution transport across political boundaries, and global climate change, as well as energy solutions to air pollution and global warming.

CIVE 5368. Air Quality Management. (4 Hours)

Explores engineering theory and practice related to air resources management. Focuses on modeling dispersion and reactions for atmospheric pollutants and on analysis of systems for controlling gaseous and particulate emissions including dry collection, wet collection, absorption, and catalytic processes. Also addresses biological and chemical aspects of air pollution including toxicological issues, physiological effects of aerosols, analysis of organic and inorganic constituents of the atmosphere, and rationale for establishing air quality criteria and standards. Requires one semester of undergraduate chemistry.

CIVE 5369. Atmospheric Boundary Layer Flows. (4 Hours)

Covers the fundamentals of atmospheric boundary layer turbulence; its dependence on surface properties; and its relevance for environmental engineering, hydrology, and climate change. Introduces the concepts of Reynolds decomposition into mean flow and turbulence statistics. Delves into similarity theories and surface exchange schemes, turbulence closure models, thermal stratification effects, and spectral properties of turbulence. Focuses on the distinct behavior of airflow in the ABL as a function of height above the surface and measurement methods and numerical simulations, including the eddy covariance technique and large eddy simulation.

Prerequisite(s): (CIVE 2331 with a minimum grade of D- ; MATH 2321 with a minimum grade of D- ; PHYS 1161 with a minimum grade of D-) or graduate program admission

CIVE 5373. Transportation Systems: Analysis and Planning. (4 Hours)

Discusses urban transportation planning and engineering for modes other than highway. Covers travel demand forecasting for both the short and long term including impact analysis methods, simple elasticity models, and the four-step model system of trip generation, trip distribution, modal split, and network assignment. Introduces transit service analysis and design. Other topics include capacity, service, and engineering design basics for different travel modes, such as bus, airport, rail, and bicycle. Considers the environmental impact, economic evaluation, and financial impact of different modes of transportation.

CIVE 5376. Traffic Engineering and Sustainable Urban Street Design. (4 Hours)

Covers street and intersection design for meeting societal needs related to traffic capacity, level of service, safety, walkability, bikeability, and the quality of public space. Intersection analysis and design topics include traffic flow theory and measurement; capacity; queuing and delay for both vehicles and pedestrians; and signal timing plan design, including design for pedestrian crossings. Street design topics include street functions; speed control; street and intersection layout; bicycling facilities, including bike lanes and separated bike paths; and pedestrian facilities, including sidewalks and crossings. Offers students an opportunity to practice with standard design manuals and intersection analysis software.

CIVE 5520. Structural Systems. (4 Hours)

Covers the design of structural systems. Includes the major aspects of structural behavior and design (loads, load paths, structural system concepts, analysis, member and connection design, and structural detailing). Discusses typical structural building materials along with a brief introduction to less conventional materials. Emphasizes wood and masonry design. Also presents structural principles behind some innovative structural systems. Utilizes current professional practice with a focus on approximate hand methods of structural analysis. Requires one semester of undergraduate structural analysis.

Prerequisite(s): CIVE 2320 with a minimum grade of D- or graduate program admission

CIVE 5522. Structural Systems Modeling. (4 Hours)

Continues CIVE 2320. Covers analysis of indeterminate structural systems using matrix methods. Studies how to implement matrix analysis of indeterminate structures using both flexibility and stiffness approaches. Serves as an introduction to the finite element method.

Prerequisite(s): (CIVE 2320 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-) or graduate program admission

CIVE 5524. Vibration-Based Structural Health Monitoring. (4 Hours)

Explores the theory and implementation of modern techniques for monitoring the health of structural systems using vibration signals. Includes an introduction to system identification, finite element model updating, novelty-based change detection, and techniques for the localization and quantification of damage induced by extreme events or progressive deterioration.

Prerequisite(s): (CIVE 2320 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-) or graduate program admission

CIVE 5525. Prestressed Concrete Design. (4 Hours)

Introduces analysis and flexural design of prestressed concrete members, allowable stress in concrete and steel, pre- and posttensioned concrete beams, strength evaluation, and prestressed concrete bridge design. Requires one semester of undergraduate concrete design or one semester of undergraduate structural analysis.

CIVE 5527. Sustainable Rehabilitation of Structures. (4 Hours)

Explores the benefits of reusing existing structures to mitigate increased CO₂e production, freshwater use, and demolition waste associated with new construction. Examines tools used to evaluate existing buildings and materials, including the concept of embodied carbon and structural investigation and condition assessments. Focuses on the repair, rehabilitation, and retrofit requirements based on review of existing drawings, historical building codes and references, and modern building codes. Discusses classifying project scope, working within project constraints, and the building industry's response to climate change. Includes aspects of structural behavior and strengthening such as new and existing loads, connections and detailing, the use of modern and salvaged materials, and designing for resiliency.

Prerequisite(s): (CIVE 2324 with a minimum grade of D- or CIVE 3425 with a minimum grade of D-) or graduate program admission

CIVE 5536. Hydrologic and Hydraulic Design. (4 Hours)

Introduces principles of engineering hydrology. Covers the hydrologic cycle, rainfall and flood frequency analysis, rainfall intensity-duration-frequency relationships, rainfall-runoff processes, hydrologic flood routing, and culvert/channel hydraulics. Utilizes these concepts in design applications of civil infrastructure such as stormwater detention basins, drainage pipes, culverts, etc. Uses hydrologic and hydraulic modeling software such as HEC-HMS and HEC-RAS. Includes project component.

Prerequisite(s): (CIVE 2331 with a minimum grade of D- ; (ENGL 1111 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C)) or graduate program admission

Attribute(s): NUpath Writing Intensive

CIVE 5670. Global Biogeochemistry. (4 Hours)

Examines the biological, chemical, and physical interactions that shape our global environment. These interactions combine in the global biogeochemical cycles. Industrial emission of gases, use of fertilizers and plastics, and the expansion of cities are altering the biogeochemical cycling of the elements carbon, nitrogen, and phosphorus at rates unprecedented in the geological record. Uses lectures and the latest update to Chapter 6, "Carbon and Other Biogeochemical Cycles," of the International Panel on Climate Change report to explore the main interactions between human activity, biogeochemical change, and climate. Discusses primary literature to delve deeper into these interactions.

Attribute(s): NUpath Natural/Designed World

CIVE 5699. Special Topics in Civil Engineering. (1-4 Hours)

Offered when the need for a special topic is evident to faculty and students. Topics are initiated by appropriate faculty members and discipline committee and approved by the department. May be repeated up to two times for up to 12 total credits.

CIVE 5984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CIVE 6566. Sustainable Urban Transportation: Netherlands. (4 Hours)

Examines how Dutch communities and their transportation systems are planned and designed to promote ABC (all-but-car) transportation, traffic safety, and livability. Topics include design of urban bicycling infrastructure for the mainstream population; planning and service design for high-quality public transportation; urban planning in support of transit, bicycle, and foot transportation, including both suburban development and urban redevelopment; and Vision Zero/Systematic Safety policy and design for traffic safety and its application to urban areas. Taught in study-abroad format in the Netherlands.

CIVE 6777. Climate Hazards and Resilient Cities Abroad. (4 Hours)

Combines the science, engineering, economic, social, and policy aspects of how cities can prepare themselves for climate change and natural hazards. Focuses on the science of unprecedented changes in weather caused by global warming and natural climate variability. Introduces the physical-science basis of climate, computer models and statistical tools, and remote sensor data. Introduces the concept of urban resilience, focusing on preventing natural hazards from turning into catastrophic disasters in densely populated regions. Examines resilience, including governance, emergency response, infrastructural, informational, social, and policy aspects. Encourages students to consider the science, engineering, and policy challenges in transforming vulnerable urban and coastal regions to climate-resilient cities and to examine how societies can learn from each other by comparing Boston with the country visited. Taught abroad.

CIVE 6778. Climate Adaptation and Policy Abroad. (4 Hours)

Explores how the country visited plans to adapt to climate change and natural hazards and how it chooses to participate in international climate and emissions negotiations. Focuses on how an emerging economy adjusts to the reality of climate change/extremes and how the will of citizens may drive decisions and policy. Incorporates topics from climate change, environmental sciences, civil and chemical engineering, remote sensing, social sciences, electrical engineering, computer science, and the management sciences. Encourages students to think about possible policy lessons for the United States. Culminates with a mock climate change war game, simulating an event in which international negotiators meet to formulate treaties on climate change adaptation and mitigation. Taught abroad.

CIVE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CIVE 7001. Research Methods For Civil and Environmental Engineering. (2 Hours)

Introduces incoming research-oriented graduate students in civil and environmental engineering to best practices and useful tools and techniques in conducting and communicating scientific research. Course topics include reviewing and summarizing literature, proposal writing, planning and conducting research, scientific writing and communication, and careers in research. Class sessions mix short lectures (from course instructors and guests), class discussions, and peer- and group-based activities. Offers instruction about effective research practices across the broad field of civil and environmental engineering to lay the groundwork for successful research experiences at Northeastern and in students' future careers.

CIVE 7002. Programming and Data Science for Civil and Environmental Engineering. (2 Hours)

Introduces research-oriented graduate students in civil and environmental engineering to best practices and useful tools and techniques in computer programming and data science across the discipline. Course topics include basic programming in python/R, data acquisition and management, design of experiments and common statistical tests, and data visualization and figure design. Class sessions will be a mix of short lectures (from course instructors and guests), class discussions, and peer- and group-based activities. Offers instruction in effective data science practices across the broad field of civil and environmental engineering to lay the groundwork for successful research experiences at Northeastern and in students' future careers.

CIVE 7100. Time Series and Geospatial Data Sciences. (4 Hours)

Offers an interdisciplinary course covering the fundamentals of time series and spatial statistics with applications in engineering, science, and business. Introduces analysis and forecasting methods for time series, spatial, and spatiotemporal data. Discusses classical time or frequency domain methods, as well as recent techniques motivated from computer science, physics, statistics, or engineering. Case studies relate to ongoing research and to real-world examples. A demo project is selected by the instructor based on discussion with individual students. A computer-based final project can be tailored to student interests in environmental engineering, sustainability sciences, security threat assessments, social sciences, business, or management science and finance. Requires undergraduate probability and statistics (CIVE 3464 or equivalent); background in programming languages such as MATLAB or R helpful but not required.

CIVE 7110. Critical Infrastructure Resilience. (4 Hours)

Introduces the concept of resilience by exploring engineering concepts and perspectives to offer students an opportunity to develop the ability to be prepared for and adapt to challenging situations and scenarios—e.g., globalization, climate change, security threats, and natural disasters—on critical infrastructures and key resources. Topics include application of tools for infrastructure modeling and risk assessment; identification of natural and man-made hazards; management of disaster risks and communications; resilience design; and future challenges, policy, and novel approaches to advance resilience. Explores application to real-life examples through group projects. Requires one semester of undergraduate statistics.

CIVE 7150. Data-Driven Decision Support for Civil and Environmental Engineering. (4 Hours)

Presents supervised and unsupervised methods for dealing with large data sets and their application to support decision making in various civil and environmental engineering areas. Focuses on predictive models and methods for knowledge mining. Discusses applications from the transportation, urban mobility, and infrastructure maintenance domains. Topics include classification: linear regression, logistic regression, K-NN, and other classifiers; dimensionality reduction; clustering: K-means, hierarchical clustering, Gaussian mixture models, density-based clustering; model validation; and text mining. Demonstrates the applicability and underlying principles of the various methods through case studies with extensive data sets. Applications include classification of pavement distress images; mobility patterns; real-time transportation demand prediction; and text mining from reports. Background in probability and statistics and familiarity with Python/R recommended.

CIVE 7151. Urban Informatics and Processing. (4 Hours)

Offers a comprehensive review of urban informatics in civil and infrastructure engineering research. Discusses the usage of these data and offers students hands-on opportunities to extensively analyze, comprehend, and visualize five types of data sets: construction and infrastructure development; urban mobility and traffic; sensors in built environments; geosocial networks; and social media. Provides extensive data sets for practices. Python is the main platform for analysis and visualization.

CIVE 7155. Dynamics and Control of Infrastructure Systems. (4 Hours)

Introduces the fundamentals of modeling, optimization, and control of dynamic and automated infrastructure systems. The future of infrastructure engineering will be increasingly automated: building automation systems, autonomous vehicles, smart-grids, and responsive pollution controls. Emphasizes linear systems, including continuous and discrete-time systems, but also presents elementary concepts in nonlinear systems. Additional topics include stability, observers, optimal control, system identification, and cyber-physical system architectures. Offers students an opportunity to acquire practical and theoretical knowledge of control technologies and to apply these modern tools to a semester-long project in their area of interest and to develop the analytical, numerical, and conceptual methods necessary for careers in the emerging field of automated infrastructure systems.

Prerequisite(s): MATH 2341 with a minimum grade of D- or graduate program admission

CIVE 7220. Construction Management. (4 Hours)

Presents all aspects of construction management, with emphasis on cost and schedule. Provides conceptual and detailed cost estimates and network-based scheduling techniques (CPM and PERT). Covers project cash flow and finances. Requires one semester of undergraduate probability and statistics.

CIVE 7230. Legal Aspects of Civil Engineering. (4 Hours)

Overviews the U.S. legal system and the theories necessary for the comprehension of business and contractual liabilities. Discusses various types of contracts, forms of business ownership, claims and disputes, and environmental law.

CIVE 7240. Construction Equipment and Modeling. (4 Hours)

Focuses on the selection and application of earthmoving equipment. Topics include equipment production systems and cost analysis, simulation modeling of equipment operations, statistical aspects of computer simulation, and risk analysis fundamentals. Requires one semester of construction management or one semester of undergraduate soil mechanics.

CIVE 7250. Environmental Chemistry. (4 Hours)

Examines applications of chemistry to environmental engineering. Covers properties of water and pollutants, acid-base reactions, pH, alkalinity, equilibrium chemistry, chemical kinetics, chemical thermodynamics, coordination chemistry, precipitation-dissolution reactions, surface chemistry, adsorption-desorption, redox reactions, and organic chemistry as it relates to the environment. Includes relevant laboratory exercises such as colorimetry, gravimetric, and electrochemical methods; atomic absorption spectrophotometry; and ion and gas chromatography. Requires one semester of undergraduate chemistry.

CIVE 7251. Environmental Biological Processes. (4 Hours)

Examines microbiology with emphasis on biological processes in environmental engineering applications. Topics include cell structure, morphology, cell nutrition and growth, energy transfer and utilization, aerobic and anaerobic microbial metabolism, biological wastewater process theory and modeling, biological nutrients removal, and disinfection of relevant microorganisms. Includes relevant laboratory exercises of treatment parameters used to monitor the biological processes, such as BOD, TOC, COD, gravimetric methods, and dissolved oxygen. Also covers enzyme kinetics and evaluation of kinetic coefficients for biotreatment. Requires one semester of undergraduate chemistry or one semester of undergraduate biology.

CIVE 7255. Environmental Physical/Chemical Processes. (4 Hours)

Examines the processes of physical and chemical phenomena related to water quality and water treatment within environmental engineering. Presents the use of fundamental theory, mathematical description, and applied knowledge of these processes and how they are used to characterize water quality in natural systems (lakes, rivers) and to predict performance in engineered systems (water treatment systems). Uses a mass balance and reaction kinetics approach to derive analysis and design equations for water treatment unit operations. Covers physical and chemical processes, including reaction kinetics, flow regimes, dissolved solute removal, particulate removal, phase transfer processes, and redox processes. Includes laboratory demonstrations. Basic knowledge of water quality, environmental chemistry, and differential equations preferred.

CIVE 7260. Hydrologic Modeling. (4 Hours)

Covers the vertical and lateral fluxes and stores of water within the terrestrial hydrologic cycle such as precipitation (rain and snow); infiltration; runoff; snowmelt; evapotranspiration; streamflow; groundwater recharge/discharge; and surface (snowpack, lakes, rivers) and subsurface (soil moisture and groundwater) storages. Individual simulation models are developed to represent key processes within the hydrologic cycle. Process models are then integrated to approximate the hydrologic cycle of a watershed. Covers model parameterization, calibration, validation, and uncertainty (model parameters and forcings). Knowledge of geographic information systems and programming is recommended.

CIVE 7278. Air Quality Modeling and Forecasting. (4 Hours)

Provides the fundamentals of numerical modeling of urban, regional, and global air quality. Covers the chemistry, physics, and transport required for the understanding, development, application, and evaluation of air quality models. Reviews the history and current status of air quality modeling and forecasting and provides students with hands-on computer practice. Discusses different computer modeling techniques for solving major atmospheric processes used in current air quality models.

Prerequisite(s): CIVE 5366 with a minimum grade of C- ; CIVE 7272 with a minimum grade of C-

CIVE 7279. Advanced Air Quality. (4 Hours)

Describes in detail the sources, formation, distribution, dynamics, transport, and removal of air pollutants, the interaction of atmospheric chemistry and climate, the radiative and climatic effects of gases and particles, and the formulation of chemical transport models for the atmosphere. Reviews important publications in leading journals.

Prerequisite(s): CIVE 5366 with a minimum grade of C- ; CIVE 7278 with a minimum grade of C-

CIVE 7281. Coastal and Nearshore Hydrodynamics. (4 Hours)

Presents the basic principles and theories of coastal and nearshore hydrodynamics as well as related engineering applications, including water waves, wave transformation and breaking, wave-induced nearshore circulation, wave setup, wave run-up, fluid vegetation interaction, wave-current interaction, storm surges, tide and wind-driven circulation, and tidal inlet hydraulics. Previous study of graduate-level mathematics is strongly recommended.

Prerequisite(s): (CIVE 5281 with a minimum grade of C- or CIVE 5281 with a minimum grade of C-) or (EEMB 5516 with a minimum grade of C- or EEMB 5516 with a minimum grade of C-)

CIVE 7282. Coastal and Hydraulic Modeling. (4 Hours)

Introduces the numerical methods for solving the partial differential equations that govern coastal and riverine processes relevant to coastal and hydraulic engineering, including both energy- and momentum-based models for wave generation and propagation, nearshore non-linear wave transformation, coastal and estuarine circulation, storm surges, riverine flows, fluid-structure interaction, and sediment transport. Emphasizes the finite-difference method, while other commonly-used numerical methods for coastal and hydraulic engineering applications are discussed and compared. Uses examples and case studies of open-source models to illustrate applications of numerical modeling to solve real-world problems.

Prerequisite(s): CIVE 5281 with a minimum grade of C- or CIVE 5281 with a minimum grade of C- or CHME 7350 with a minimum grade of C-

CIVE 7301. Advanced Soil Mechanics. (4 Hours)

Studies characterization of soils, soil mineralogy and chemistry, stresses within a soil mass, basic porous media flow principles, effective stress principle, compaction, drained and undrained stress-strain-strength concepts, and consolidation theory and its application. Requires one semester of undergraduate soil mechanics.

CIVE 7302. Advanced Foundation Engineering. (4 Hours)

Focuses on bearing-capacity and settlement analysis of conventional shallow foundations and combined footings; mat design; lateral earth pressure theory and application to retaining wall design, braced excavations, sheet pile wall design, and slurry trench walls; bearing-capacity design and analysis for deep foundations; and laterally loaded piles, friction piles, and pile-driven analysis. Requires one semester of undergraduate soil mechanics.

CIVE 7311. Soil and Foundation Dynamics. (4 Hours)

Considers dynamic loads, blast vibrations and monitoring, dynamic response of single-mass, multi degree-of-freedom systems, design of machine foundations, dynamic soil properties, ground response analysis, liquefaction, and seismic analysis of slopes and dams. Requires one semester of undergraduate statics.

CIVE 7312. Earthquake Engineering. (4 Hours)

Studies plate tectonics, seismology, faults and characteristics, ground motions, seismic hazard analysis, dynamic response of single degree-of-freedom system, response spectrum, site effects, and seismic design considerations for buildings, bridges, and earth-retaining structures. Requires one semester of undergraduate statics.

CIVE 7313. Ground Improvement. (4 Hours)

Addresses how problematic groundwater conditions, low shear strength, high compressibility, and the need for remediation can be resolved through ground improvement, which is the application of innovative technologies and construction techniques designed to improve the engineering properties of the existing soil and rock at a site. Emphasizes specific, well-established, and emerging ground improvement technologies, including their applications, design, construction/implementation, and quality control.

Prerequisite(s): CIVE 7301 with a minimum grade of C-

CIVE 7330. Advanced Structural Analysis. (4 Hours)

Explores modern methods of structural analysis, matrix formulation of flexibility and stiffness methods, and analysis of structures with material and geometric nonlinearities. Also introduces energy methods. Requires CIVE 5522 or one semester undergraduate matrix structural analysis.

CIVE 7331. Structural Dynamics. (4 Hours)

Examines single and multi degree-of-freedom systems subjected to arbitrary dynamic loads. Topics include convolution and frequency domain solutions, introduction to analytical dynamics, damping models, modal analysis of classically damped systems, and state-space formulation. Requires one semester of undergraduate structural analysis.

CIVE 7340. Seismic Analysis and Design. (4 Hours)

Considers the response of linear systems to coherent and incoherent support motion, nonlinear response, the concept of ductility, inelastic response spectra, soil-structure interaction, random vibration theory, development of seismic codes, and characterizations of earthquakes for design.

Prerequisite(s): CIVE 7331 with a minimum grade of C-

CIVE 7341. Structural Reliability. (4 Hours)

Examines applications of probability theory and random variables for determining the reliability of structures. Includes the following topics: formulation of reliability for structural components and systems; first-order second-moment method, first- and second-order reliability methods, and simulation methods; analysis of model uncertainty and Bayesian parameter estimation technique; load and resistance models and bases for probabilistic structural codes; and time-dependent reliability methods. Assumes no prior knowledge of probability theory.

CIVE 7342. System Identification. (4 Hours)

Studies methods for identifying the fundamental characteristics of structures. Includes topics in linear algebra (singular value and QR decomposition, pseudoinversion, and so on); input-output relationships for linear time-invariant systems; frequency response functions; signal processing fundamentals; realization theory; the eigensystem realization algorithm; use of observers in identification; and introduction to out-only system identification.

CIVE 7350. Behavior of Concrete Structures. (4 Hours)

Considers flexural mechanics of reinforced concrete cross sections and members; combined bending, axial, and shear loads; advanced topics in shear, torsion, and connection design; and application of plastic analysis to reinforced concrete frames, their behavior under cyclic loading, and response of structures under seismic actions. Requires one semester of undergraduate concrete design.

CIVE 7351. Behavior of Steel Structures. (4 Hours)

Studies the behavior and design of steel structural systems, including structural stability; advanced topics in mechanics and design of structural steel members, including combined axial, flexure, and shear loads; composite steel/concrete beam and column behavior and design; plate girders; and advanced topics in connection design. Requires one semester of undergraduate steel design.

CIVE 7354. Wind Engineering. (4 Hours)

Covers atmospheric circulation, atmospheric boundary layer winds, bluff-body aerodynamics, introduction to random vibration theory, response of structures to fluctuating wind loads, aeroelastic phenomena, wind-tunnel and full-scale testing, nonsynoptic winds (hurricanes, tornadoes, etc.), wind-load standards, and design applications.

CIVE 7355. Advanced Bridge Design. (4 Hours)

Studies the behavior and design of prestressed concrete bridges. Includes conceptual design, flexural design, shear design, and torsional design of prestressed elements. Analyzes indeterminate prestressed structures and design for prestressed concrete bridges, including material properties, loads, reinforcement, structural analysis, temperature effects, and construction methods. Covers solid slab, T-beam, and box girders. Final projects include complete designs for a simple supported girder bridge and a continuous girder bridge using load factor and resistance design (LFRD) specifications.

Prerequisite(s): CIVE 5525 with a minimum grade of C-

CIVE 7357. Advanced Structural Mechanics. (4 Hours)

Covers stress and strain analysis of structural components, including beams and plates subject to bending, shear, tension, and compression, as well as nonsymmetric geometry and loading cases. Considers the derivation and analysis of elastic instabilities of structural components, including the lateral, torsional, and lateral-torsional buckling of beams and the inelastic yielding and concentrated plasticity of beam components. Includes 3D stress and strain analysis for elastic and inelastic continua as related to advanced structural problems. Introduces variational methods. Requires one semester of graduate structural analysis.

CIVE 7380. Performance Models and Simulation of Transportation Networks. (4 Hours)

Reviews concepts and methods for the analysis of the performance of complex transportation systems and approaches for planning, design, monitoring, and management and control of traffic flows over complex transportation networks. Topics include deterministic and probabilistic models, elements of queuing theory, network optimization algorithms, and simulation. Includes applications in traffic flow modeling, capacity analysis of diverse transportation facilities, level of service and estimation of delays, optimal design of transportation network services, and traffic assignment on congested networks.

CIVE 7381. Transportation Demand Forecasting and Model Estimation. (4 Hours)

Studies methods used for model estimation, model building, and interpretation of results. Emphasizes travel demand forecasting, including trip generation, distribution, model choice, and route choice. Topics include aggregate and disaggregate models, including discrete choice (binary and multinomial logit and extensions), model building and statistical testing, aggregation, sampling, and sample design. Demonstrates the applicability and underlying principles of the various models through case studies with focus on practical aspects and interpretation. Bases main methodological approaches on econometric methods, mainly on regression modeling and maximum likelihood estimation. Uses general and specialized software tools for data analysis and model estimation. While the focus is on estimating transportation demand models, the methods are applicable to a broad class of applications in engineering, marketing, etc.

CIVE 7382. Advanced Traffic Control and Simulation. (4 Hours)

Covers analysis and design of traffic signal control, including actuated control, coordinated control, transit signal priority, and signal control schemes for better accommodating pedestrians and bicycles. Includes the study of traffic microsimulation for urban street networks, including modeling techniques and simulation-based evaluation, and intersection performance models. Offers students an opportunity to practice with standard microsimulation software, including coding traffic signal control logic.

CIVE 7383. Sediment Transport and Applications. (4 Hours)

Builds on the fundamentals of fluid mechanics and nearshore hydrodynamics to explore the deceptively simple, yet universally complex, problem of sediment transport: how to describe and predict sand movement under water. Explores this question via simple one-line models and complex 3D models of sediment transport; the lab and field experiments underpinning these models; the particular challenge of mixed media transport, including the issues associated with different sediment grain sizes; the structure and importance of turbulence closure models; and coastal resilience and coastal community issues reliant on sediment transport physics.

Prerequisite(s): CIVE 7281 with a minimum grade of C-

CIVE 7385. Public Transportation. (4 Hours)

Studies the analysis, planning, and operational design of urban public transportation systems. Topics include service planning and scheduling; service reliability and operational control; automated systems for location, fare collection, and passenger counting; service performance measurement; rail system operations and design; data collection; ridership estimation; demand forecasting; pricing; and coordinated transit and land-use planning. Introduces supporting mathematical methods in optimization, random processes, and statistical sampling. Requires knowledge of probability theory.

CIVE 7387. Design Aspects of Roadway Safety. (4 Hours)

Concentrates on roadway design features that affect safety, including system users and design elements. Topics include crash causation and countermeasures, statistical procedures for crash analysis, and geometric design improvements for roads and intersections. Analyzes crash data, including both intersecting and nonintersecting locations. Presents concepts, including design, to create a safer transportation system while addressing specific high-crash locations.

CIVE 7388. Special Topics in Civil Engineering. (4 Hours)

Offered when the need for a special topic is evident to faculty and students. The course is initiated by the appropriate faculty members and discipline committee and approved by the department. May be repeated without limit.

CIVE 7392. Special Topics in Environmental Engineering. (4 Hours)

Offered when the need for a special topic is evident to faculty and students. The course is initiated by the appropriate faculty members and discipline committee and approved by the department. May be repeated without limit.

CIVE 7400. Seminar. (0 Hours)

Presents topics of an advanced nature by staff, outside speakers, and students in the graduate program. This course must be attended every semester by all full-time graduate students in the Department of Civil and Environmental Engineering. Environmental engineering students permitted. May be repeated without limit.

CIVE 7945. Master's Project. (4 Hours)

Offers students an opportunity for individual effort consisting of laboratory, literature and/or computational investigation, analysis of results, and preparation of a definitive report as part of an advanced research project in an area of civil engineering determined by the student and their advisor.

CIVE 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CIVE 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

CIVE 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

CIVE 7990. Thesis. (4 Hours)

Offers analytical and/or experimental research conducted by arrangement with and under the supervision of the department. May be repeated once.

CIVE 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continued thesis work conducted under the supervision of a departmental faculty.

CIVE 8960. Exam Preparation—Doctoral. (0 Hours)

Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision. Intended for students who have completed all required PhD course work and have not yet achieved PhD candidacy; students who have not completed all required PhD course work are not allowed to register for this course. May be repeated once.

CIVE 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CIVE 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

CIVE 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

CIVE 9984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CIVE 9986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

CIVE 9990. Dissertation Term 1. (0 Hours)

Offers analytical and/or experimental research conducted by arrangement with and under the supervision of the department. Open to full-time students only. Requires PhD candidacy in civil engineering or in interdisciplinary engineering.

Prerequisite(s): CIVE 9000 with a minimum grade of S

CIVE 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): CIVE 9990 with a minimum grade of S

CIVE 9996. Dissertation Continuation. (0 Hours)

Offers continued thesis work conducted under the supervision of a departmental faculty.

Prerequisite(s): CIVE 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Co-op/Experiential Education in Arts, Media, and Design (EEAM)**Courses****EEAM 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEAM 2000. Professional Development for Co-op. (1 Hour)

Introduces students to the Cooperative Education Program and provides them with an opportunity to develop job-search and career-management skills. Offers students an opportunity to perform assessments of their workplace skills, interests, and values and discuss how they impact personal career choices. Students also have an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, professional behaviors, work culture, and career decision making. Familiarizes students with workplace issues relative to their field of study and teaches them to use myNEU in the job-search and referral process. Presents co-op policies, procedures, and expectations of the Department of Cooperative Education and co-op employers.

EEAM 2010. Internship for Career Decision Making. (1 Hour)

Offers students an opportunity to gain experience in a field they would like to explore and receive internship credit. Students complete a one-hundred-hour internship during the semester, which they obtain prior to the course. Students attend group meetings and individual appointments with the instructor, maintain a weekly journal, and complete an evaluation of their internship experience.

EEAM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEAM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEAM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEAM 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

EEAM 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

EEAM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEAM 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

EEAM 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

Co-op/Experiential Education in Business (EEBA)

Courses

EEBA 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEBA 2945. Internship Experience. (0 Hours)

Offers an opportunity for employment-based experiential learning and fosters the integration of knowledge and skills across contexts through course activities. May be repeated up to three times.

Attribute(s): NUpath Integration Experience

EEBA 2948. Internship Experience Abroad. (0 Hours)

Offers an opportunity for employment-based experiential learning and fosters the integration of knowledge and skills across contexts through course activities. May be repeated up to three times.

Attribute(s): NUpath Integration Experience

EEBA 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEBA 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEBA 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEBA 6401. Experiential Business Decision Making. (1-3 Hours)

Offers guided instruction about problem identification, problem-solving skills, and working as a team to meet the needs of internal and external stakeholders. The instructor and selected industry experts work with student teams through lectures, question-and-answer sessions, and team feedback sessions to offer real-world feedback. Offers students an opportunity to leverage skills and thinking through an immersive experience; develop observations and reflections of complex situations or challenges; frame the challenges, drawing on concepts, observed patterns, and experiences; synthesize insights into a creative solution; and apply the learnings to new situations. May be repeated six times for a maximum of 10 semester credits.

EEBA 6402. EXPO Challenge: Sustainability. (2 Hours)

Provides a project-based experiential learning opportunity for students to leverage insights on stakeholder values and societal challenges in business. Offers students an opportunity to explore and apply best practices in environmental sustainability to impact societal challenges associated with climate change. Students work in teams to bring their experience and newly learned skills to solve a real sustainability-related business problem. Includes guidance and feedback from industry experts and peers through interviews, case studies, question-and-answer sessions, and team feedback sessions.

EEBA 6403. EXPO Challenge: Diversity, Equity, and Inclusion. (2 Hours)

Provides a project-based experiential learning opportunity for students to leverage insights on stakeholder values and societal challenges in business. Offers students an opportunity to explore and apply best practices in promoting diverse, equitable, and inclusive workplaces. Students work in teams to bring their experience and newly learned skills to solve a real DEI-related business problem. Includes guidance and feedback from industry experts and peers through interviews, case studies, question-and-answer sessions, and team feedback sessions.

EEBA 6404. Key Developments in Environmental, Social, and Governance Investing. (2 Hours)

Offers students a hands-on opportunity to research and compare environmental, social, governance, and non-ESG portfolios while hearing from industry experts along the way. Exposes students to how and why investors engage in ESG investing and how to analyze the performance and risk of such investing. Covers what rating firms are, what global financial resources are committed to ESG investing, the regulatory landscape, and the ongoing challenges that ESG investing poses. Emphasizes the tenets of this type of investing from multiple perspectives, including portfolio managers, institutional investors, retail investors, trade groups, regulators, and political factions.

EEBA 6405. Persuasive Sales, Personal and Professional. (1 Hour)

Introduces selling and the industry of B2B professional selling. Focuses on sales skills that span any function. Covers selling roles and mastery of key selling and presenting skills. Emphasizes heightening persuasive selling skills needed personally and professionally to achieve success. Examines the use of negotiation to achieve the best possible outcomes. Engages in hands-on exercises and real-world simulations to hone sales skills across a range of different scenarios.

EEBA 6406. Managing Operational Disruption in Healthcare. (1 Hour)

Studies the current and ever-changing healthcare environment and potential disruptions to healthcare organizations. Covers skills needed for problem identification, problem solving, and operational execution within the organization. Offers students an opportunity to leverage skills and thinking through a highly experiential, immersive experience; develop observations and reflections of complex situations or challenges; frame the challenges, drawing on concepts, observed patterns, and experiences; synthesize insights into a creative solution; and apply the learnings to new situations.

EEBA 6407. Brand Development and Advertising Application. (1 Hour)

Explores the landscape of brand building amid ever-evolving marketing communication platforms. Utilizes inquiry-based research practices and experiential study culminating in a project to delve into the art of brand development and advertising. Offers students an opportunity to apply key concepts such as positioning, targeting, creativity, media mix, and integrated brand promotion strategies. Emphasizes responding to the challenges and opportunities presented by modern marketing trends.

EEBA 6408. Innovation Behaviors. (2 Hours)

Focuses on the behaviors that either enable or inhibit innovation. Emphasizes demystifying the ideation process and offering specific practices that have been shown to support creativity and innovation. Includes concepts that effective innovators use to bring good ideas to life, such as tactics of influence and persuasion, optimizing team innovation and learning, and leadership practices focused on innovation. Offers students an opportunity to develop a proposed innovation idea and implementation plan for a real-world problem. Includes evaluation by an industry expert.

EEBA 6409. Strategy: Successful Internationalization. (2 Hours)

Offers concepts, frameworks, and information useful for analyzing a company's international strategy and helping it create and capture value. Integrates and extends ideas presented in functional courses to provide a comprehensive overview of top managers' strategic decisions and is organized around key strategic decisions to enhance comprehension of strategy. Explains the logic for recommending one course of action over others and the conditions under which it is likely to be more successful. Engages students with a real client, providing them with valuable exposure to authentic strategic situations encountered in the real world.

EEBA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Co-op/Experiential Education in Science (EESC)**Courses****EESC 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESC 2000. Professional Development for Co-op. (1 Hour)

Introduces students to the Cooperative Education Program and provides them with an opportunity to develop job-search and career-management skills. Offers students an opportunity to perform assessments of their workplace skills, interests, and values and discuss how they impact personal career choices. Students also have an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, professional behaviors, work culture, and career decision making. Familiarizes students with workplace issues relative to their field of study and teaches them to use myNEU in the job-search and referral process. Presents co-op policies, procedures, and expectations of the Department of Cooperative Education and co-op employers.

EESC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESC 3000. Values, Ethics, and Professionalism in the Sciences. (4 Hours)

Designed to help students pursuing a science education to begin developing a coherent professional identity. Students examine, articulate, and defend their professional values and use concurrent reflection exercises to create action steps to reach multiple long-term professional goals. Examines ethical dilemmas in science fields in-depth. Offers students an opportunity to learn and utilize theoretical ethical frameworks to discuss a series of case studies and overlay existing ethical codes established by their fields' governing organizations. Students create novel case studies based on real-world events and extrapolate these ethical conversations into the "big ethical and moral issues" facing their fields in the near future (genetic engineering, energy production, etc.). Focuses on the value of lifelong learning through reflective practice, mentorship, professional organizations and conferences, and leadership opportunities in the field.

Attribute(s): NUpath Ethical Reasoning

EESC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESC 6400. Pre-co-op Work Experience. (0 Hours)

Offers students an opportunity to gain necessary skills and practical experience in order to prepare for graduate co-op.

EESC 6500. Professional Development for Co-op. (0 Hours)

Introduces the cooperative education program. Offers students an opportunity to develop job-search and career-management skills; to assess their workplace skills, interests, and values and to discuss how they impact personal career choices; to prepare a professional resumé; and to learn proper interviewing techniques. Explores career paths, choices, professional behaviors, work culture, and career decision making. May be repeated up to five times.

EESC 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated up to eight times.

EESC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESC 6964. Co-op Work Experience. (0 Hours)

Offers eligible students an opportunity for work experience. May be repeated twice.

EESC 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated twice.

EESC 9700. Dissertation Fieldwork. (0 Hours)

Offers students an opportunity to pursue experiential research outside the classroom and outside the university.

EESC 9701. Dissertation Fieldwork - Half-Time. (0 Hours)

Offers students an opportunity to pursue experiential research outside the classroom and outside the university.

Co-op/Experiential Education in Social Sciences and Humanities (EESH)**Courses****EESH 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESH 2000. Professional Development for Co-op. (1 Hour)

Introduces students to the Cooperative Education Program and provides them with an opportunity to develop job-search and career-management skills. Offers students an opportunity to perform assessments of their workplace skills, interests, and values and discuss how they impact personal career choices. Students also have an opportunity to prepare a professional-style resumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, professional behaviors, work culture, and career decision making. Familiarizes students with workplace issues relative to their field of study and teaches them to use myNEU in the job-search and referral process. Presents co-op policies, procedures, and expectations of the Department of Cooperative Education and co-op employers.

EESH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESH 2994. Internship. (1 Hour)

Offers an opportunity to document internship work. May be repeated without limit.

EESH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EESH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Commerce and Economic Development - CPS (CED)

Courses

CED 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CED 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CED 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CED 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CED 5010. Applied Microeconomic Theory 1. (2.25 Hours)

Covers decision theory, theory of the firm, and consumer behavior; introduction to general equilibrium theory and welfare economics; game theory, including extensive form solution concepts, bargaining, and repeated games; and information economics, contract theory, and mechanism design.

CED 5020. Applied Macroeconomic Theory 1. (2.25 Hours)

Surveys the policy and practice of macroeconomics, exploring the link between economic theory and current economic policy. Introduces students to the variables used for macroeconomic analysis, such as national output, unemployment, interest rates, government debt, and inflation. Emphasizes the tools used for analyzing current macroeconomic policies, such as fiscal policy and monetary policy.

CED 5030. Mathematical Methods for Economics 1. (2.25 Hours)

Covers applications of mathematics to economics: functions, simultaneous equations; linear models and matrix algebra; determinants, inverse matrix, Cramer's rule; differentiation and optimization of functions of one or more variables; quadratic forms, characteristic roots and vectors, constrained optimization; and interpretation of the Lagrange multiplier. Applies techniques to examples from the theory of the firm and consumer behavior.

CED 5040. Applied Econometrics. (2.25 Hours)

Studies statistical tools used to estimate economic relationships. Discusses the linear regression model. Introduces topics relevant to the analysis of economic data, including instrumental variables, discrete choice modeling, panel data analysis, and program evaluation.

CED 5050. Commerce and Economic Development. (2.25 Hours)

Explores introductory material in economics, finance, and mathematics relevant for graduate studies. Covers basic concepts of micro- and macroeconomics, statistics, optimization, and market basics.

CED 6010. Applied Microeconomic Theory 1. (3 Hours)

Covers decision theory, theory of the firm, and consumer behavior; introduction to general equilibrium theory and welfare economics; game theory, including extensive form solution concepts, bargaining, and repeated games; and information economics, contract theory, and mechanism design.

Prerequisite(s): CED 6050 with a minimum grade of C-

CED 6011. Applied Microeconomic Theory 2. (3 Hours)

Offers a deep exploration into game theory, including extensive form solution concepts, bargaining, repeated games, information economics, contract theory, and mechanism design.

Prerequisite(s): CED 6010 with a minimum grade of C-

CED 6020. Applied Macroeconomic Theory 1. (3 Hours)

Develops a coherent framework for analyzing the determination of macroeconomic variables such as national output, unemployment, interest rates, government debt, and inflation. Explores the link between economic theory and current economic policy. Offers students an opportunity to learn the tools to analyze current macroeconomic policies.

Prerequisite(s): CED 6050 with a minimum grade of C-

CED 6021. Applied Macroeconomic Theory 2. (3 Hours)

Exposes students to the skills needed for interpreting macroeconomic data and macroeconomic policy. The course is designed to provide a link between economic theory and current economic policy and to provide students with the tools to analyze current macroeconomic policies.

Prerequisite(s): CED 6020 with a minimum grade of C-

CED 6030. Mathematical Methods for Economics 1. (3 Hours)

Covers applications of mathematics to economics: functions, simultaneous equations; linear models and matrix algebra; determinants, inverse matrix, Cramer's rule; differentiation and optimization of functions of one or more variables; quadratic forms, characteristic roots and vectors, constrained optimization; and interpretation of the Lagrange multiplier. Applies techniques to examples from the theory of the firm and consumer behavior.

CED 6031. Mathematical Methods for Economics 2. (3 Hours)

Explores applications of mathematics to economics: differentiation and optimization of functions of one or more variables; quadratic forms, characteristic roots and vectors, constrained optimization; interpretation of the Lagrange multiplier. Applies techniques to examples from the theory of the firm and consumer behavior.

Prerequisite(s): CED 6030 with a minimum grade of C-

CED 6040. Applied Econometrics 1. (3 Hours)

Studies statistical tools used to estimate economic relationships. Discusses the linear regression model. Introduces topics relevant to the analysis of economic data, including instrumental variables, discrete choice modeling, panel data analysis, and program evaluation.

Prerequisite(s): CED 6030 with a minimum grade of C-

CED 6041. Applied Econometrics II. (3 Hours)

Focuses on specific topics in instrumental variables, discrete choice modeling, panel data analysis, program evaluation, and empirical strategies for applied micro research. The purpose of this course is to provide students with a solid foundation in econometric techniques with a focus on techniques that are commonly used in applied economics. Seeks to help students understand issues in connecting data, statistics, and economic theory and to read and precisely understand the econometrics typically used in empirical research for practical and academic purposes. These tools are of practical use to any student who plans on confronting data in their academic and professional work.

Prerequisite(s): CED 6030 with a minimum grade of C- ; CED 6040 with a minimum grade of C-

CED 6050. Commerce and Economic Development. (3 Hours)

Explores introductory material in economics, finance, and mathematics relevant for graduate studies. Covers basic concepts of micro- and macroeconomics, statistics, optimization, and market basics.

CED 6051. Open Economy Macroeconomic Analysis. (3 Hours)

Examines key issues in open economy macroeconomics, including the foreign exchange market, international monetary arrangements, the balance of payments and current account imbalances, national income accounting, the effectiveness of monetary and fiscal policies in open economies, the determinants of exchange rate changes, and the economics of monetary integration.

Prerequisite(s): CED 6050 with a minimum grade of C-

CED 6070. Economics of Human Capital. (3 Hours)

Focuses on an economic analysis of the labor market, the labor force, and workers' wages and earnings. Includes other topics such as the demand for labor by businesses and industries; wage inequality and its determinants; the changing occupational and industrial structure; the economic impact of unions; and the influence of related labor market institutions and relevant public policies, including minimum wages, wage subsidies, and earned income tax credits. Aims to help early stage entrepreneurs to understand issues of human labor.

CED 6090. Cultural Economic Development. (3 Hours)

Examines the role of markets in art, culture, and entertainment in economic development. Includes topics such as the role of the creative economy in attracting tourists and industry and in driving economic growth and the strategic impact of a creative export sector. Explores additional topics such as an analysis of the economics of historic preservation and tourism—for example, rehabilitating historical buildings, funding museums and symphony orchestras, and encouraging traditional arts and tourist activities—to lead job growth and spur economic vitality.

CED 6110. Law and Economics. (3 Hours)

Addresses topics such as property rights, regulation, income distribution applied to health and safety, the environment, the legal services and insurance industries, and zoning and land use. Includes additional topics such as new digital information products, international piracy, and intellectual property protections and related issues.

CED 6120. Environmental Economics. (3 Hours)

Analyzes efficient allocation of environmental resources and the impact on commerce and economic development. Includes additional topics such as the negative impact of economic activities on air and water with consideration of effective public policy. Explores current issues—such as global warming, habitat and species protection, etc.—and requires consideration of worldwide approaches and solutions to international problems.

CED 6130. Sustainable Economic Development. (3 Hours)

Addresses the economics of balancing development and environmental impacts in the context of meeting current and future human needs while protecting the environment. Considers challenges and strategies in both developed and developing economies. Beginning with the market failure resulting from not including environmental impacts in cost calculations, this course explores the competing models of economic development, the environment, and population growth.

CED 6140. Economics of E-Commerce. (3 Hours)

Uses theory and analysis of traditional industries to help understand the growth and future of electronic commerce. Includes relevant topics from industrial organization, including monopoly pricing, price discrimination, product differentiation, barriers to entry, network externalities, and search and first-mover advantages. Discusses a number of e-industries, including extensions and applications of the underlying economics, drawing analogies to previous technological revolutions, bubbles in asset markets, and the macroeconomic effects of the Internet.

CED 6210. Managerial Finance. (3 Hours)

Offers knowledge and tools to make informed investment and financing decisions. Topics include capital markets, advanced capital budgeting, decision making under uncertainty, asset pricing models, contingent claims models, capital structure, dividend policy, mergers, restructuring and corporate control, and exchange rate systems and international finance.

CED 6220. International Finance. (3 Hours)

Studies the international financial and monetary system, emphasizing currency markets. Examines market instruments and techniques, including synthetic and derivative securities and their application to management of currency risk in international trade and finance.

CED 6230. Quantitative Methods. (3 Hours)

Explores the development, testing, and application of multiple regression models in financial, economic, and business analysis and forecasting. Course material includes statistical concepts, probability concepts, probability distributions, sampling, hypothesis testing, time series analysis, and multifactor models. Topics are organized around the requirements of the "quantitative methods" portion of the CFA Level I exam.

CED 6240. Financial Ethics. (3 Hours)

Studies ethical problems in business and finance and lays the foundations for decisions involving ethical issues. Topics include ethical concepts, including personal integrity, financial industry ethical norms, and company loyalty and responsibility conflicts as they impact decision processes in the functional areas of finance. Organizes topics around the requirements of the ethics portion of the CFA Level I exam.

CED 6250. Derivatives and Alternative Investments. (3 Hours)

Introduces the mechanics of derivatives markets and types of available derivatives investments. Examines the fundamentals of the future markets, hedging strategies using futures, the market of SWAPS, and the mechanics of the options markets. Topics are organized around the requirements of the "derivatives" portion of the CFA Level I exam.

CED 6910. Capstone: Master's Project. (4 Hours)

Offers students, working in individuals and groups, an opportunity to design and carry out an interdisciplinary economic policy analysis comparable to those performed for a government or nonprofit agency. Projects can be done with real-world clients and utilize experience learned from co-op or experiential learning projects.

Prerequisite(s): CED 6010 with a minimum grade of C- ; CED 6020 with a minimum grade of C- ; CED 6030 with a minimum grade of C- ; CED 6040 with a minimum grade of C- ; CED 6050 with a minimum grade of C-

CED 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CED 6983. Special Topics. (1-4 Hours)

Covers special topics within the realm of Commerce and Economic Development.

CED 6995. Project. (1-4 Hours)

Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Communication Studies (COMM)

Courses

COMM 1000. Communication Studies at Northeastern. (1 Hour)

Designed to provide a unique opportunity to engage faculty, professional staff, and peer mentors in small group discussions. Introduces students to the College of Arts, Media and Design. Offers students an opportunity to learn about the communication studies major and to explore the different areas of emphasis offered by the department. As part of the course, students are expected to prepare a detailed plan of study and are introduced to the co-op program and meet their academic co-op advisor.

COMM 1101. Introduction to Communication Studies. (4 Hours)

Surveys the field of communication studies. Covers major theories and methodological approaches in communication studies and situates communication within larger social, political, and economic institutions. Exposes students to ways of ethical reasoning across communication contexts, including organizational communication, social media, intercultural communication, mass media, and interpersonal communication.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

COMM 1112. Public Speaking. (4 Hours)

Develops skills in public communication. Topics include choosing and researching a topic, organizing and delivering a speech, handling speech anxiety, listening critically, and adapting language to an audience. Offers the opportunity for students to present a series of speeches and receive advice and criticism from an audience.

Attribute(s): NUpath Creative Express/Innov

COMM 1113. Business and Professional Speaking. (4 Hours)

Designed to assist students in developing advanced public speaking and presentational skills for professional and leadership positions. Covers fundamentals such as audience, speech objectives and structure, and effective delivery. Emphasizes the production and successful interaction with electronic and traditional supportive media. Offers students an opportunity to develop their presentational skills in a variety of settings and realistic business tasks.

Attribute(s): NUpath Creative Express/Innov

COMM 1120. Principles of Argumentation. (4 Hours)

Considers how the theories and techniques of argumentation can be used to understand and promote differing points of view, explore ideas and alternatives, and convince others of the need to change or act. Starts with the principles of formal logic and introduces students to truth tables and diagramming techniques. Continues to discuss informal logic and modern argumentation theory, including argumentative reconstruction, argument structures, argument schemes and critical questions, as well as informal fallacies. Concludes with a discussion of the effective use of reasoning in society from a logical, dialectical, and rhetorical point of view.

Attribute(s): NUpath Formal/Quant Reasoning

COMM 1125. Science, Communication, and Society. (4 Hours)

Introduces the major areas of research analyzing the role of communication and the media in shaping debates over science, technology, and the environment. Focuses on what U.S. National Academies calls the “science of science communication” to offer students an opportunity to acquire the knowledge necessary to assess the interplay between science, engineering, and society, including the implications for strategic communication, public engagement, personal decisions, and career choices. Examines the scientific, social, and communication dimensions of debates over climate change, evolution, human genetic engineering, childhood vaccination, food biotechnology, and other case studies. Covers how to find, discuss, evaluate, and use expert sources of information; to formulate research questions and expectations; to think effectively about professional situations and choices; and to write evidence-based, persuasive papers and essays.

Attribute(s): NUpath Societies/Institutions

COMM 1131. Sex, Relationships, and Communication. (4 Hours)

Focuses on communication within the context of close relationships. Topics covered include the role of communication in interpersonal attraction, relationship development, relationship maintenance, and relationship dissolution. Examines how communication impacts relationship quality and commitment. Offers students an opportunity to apply what they learn in the course to their personal and professional lives.

Attribute(s): NUpath Societies/Institutions

COMM 1210. Persuasion and Rhetoric. (4 Hours)

Seeks to teach students to be more astute receivers and producers of persuasive messages by learning how to dissect them. Examines both classical and contemporary theories of persuasion, after which students consider “persuasion in action”—how persuasion is used in everyday language, nonverbal communication, sales techniques, politics, and propaganda. Ethical issues in persuasion are addressed throughout the course.

Attribute(s): NUpath Interpreting Culture

COMM 1225. Communication Theory. (4 Hours)

Explores communicative and cultural practice from a wide variety of theoretical perspectives. Considers a wide range of cultural practices, texts, and artifacts, including popular culture (television shows, movies, and video games); social media and online content; as well as organizational communication (press releases) and interpersonal interactions (conversations between romantic partners). Communication theory is based on two premises: Our cultural assumptions inform and shape our ability to communicate; and communication is the process through which culture is created, modified, and challenged.

Attribute(s): NUpath Interpreting Culture

COMM 1231. Principles of Organizational Communication. (4 Hours)

Surveys the communication process in complex organizations. Topics include the evolution of organizational communication, communication networks, information management, and communication climate. Analyzes case studies and teaches how to improve the quality of communication in an organization.

Attribute(s): NUpath Interpreting Culture

COMM 1255. Communication in a Digital Age. (4 Hours)

Covers digital communication's history, technical basis ("protocol" and the "Web"), communicative effects, commercial applications, culture, and societal interactions. Digital communication is central to contemporary life and is (consequently) often taken for granted, which this course seeks to remedy. Applies practical skills relative to theories about collaboration and cultural production and engagement with and analyses of online cultures. Offers students an opportunity to become effective online communicators—using practical exercises such as email filtering, online collaboration, and writing in a Web markup format—and to make use of critical thinking to understand and engage with issues such as online privacy, gender and racial bias, and marketplace credibility and fraud.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

COMM 1331. Legal Argumentation, Advocacy, and Citizenship. (4 Hours)

Seeks to train students in effective civic engagement by studying legal argumentation, while preparing students for careers in which persuasive skills are critical to success. Offers students an opportunity to study historical documents to understand the processes of argumentation and to develop arguments by performing detailed research about contemporary issues.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

COMM 1412. Social Movement Communication. (4 Hours)

Examines the communication strategies (including rhetorical messaging, public advocacy, grassroots organizing, fund-raising, and media outreach) of historical and contemporary social movement and activist organizations. Social movements considered may include immigration protests, AIDS activism, environmental advocacy, disability movements, racial justice, and feminism.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

COMM 1450. Sound Production for Digital Media. (4 Hours)

Designed to prepare students to work with audio in modern media settings. Introduces the process of planning, preparing, producing, and evaluating audio production styles and techniques. Through a series of discussions, screenings, homework, and in-class exercises, offers students an opportunity to gain the skills needed to produce successful audio recordings. Exposes students to the elements and terminology of audio production as they record, mix, and produce their own original projects.

Attribute(s): NUpath Creative Express/Innov

COMM 1511. Communication and Storytelling. (4 Hours)

Engages students in the discovery of varied and culturally diverse texts in the literary genres of poetry, prose, and drama. Students focus on analyzing an author's meaning and communicating that meaning to an audience through interpretive performance.

Attribute(s): NUpath Creative Express/Innov

COMM 1600. Communication Ethics. (4 Hours)

Focuses on ethical principles, issues, and dilemmas in communication. Covers professional codes as well as personal, interpersonal, small group, organizational, and societal factors affecting ethical mediated communication. Designed to stimulate the moral imagination, reveal ethical issues inherent in communication, and provide resources for making and defending choices on ethical grounds.

Attribute(s): NUpath Ethical Reasoning

COMM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

COMM 2100. Elements of Debate. (4 Hours)

Introduces the principles and skills of effective argument. Topics include the process of advocacy, how to develop an argument through reasoning, the psychology of argument, and motivational techniques of argumentation. Combines theory and practice in argument through individual presentations and team debates.

Attribute(s): NUpath Creative Express/Innov

COMM 2105. Social Networks. (4 Hours)

Applies network science theories and methods to understand the connectivity and complexity in the world around us on different scales, ranging from small groups to whole societies. Applies network theories, data collection methods, and visual-analytic analyses to map, measure, understand, and influence a wide range of online and offline social phenomena, including friendships and romantic relationships, professional networks, social media, social influence and marketing, diffusion and viral media, recommender systems, and collective action. Offers students an opportunity to learn to use computational tools to gather and analyze network data, derive data-supported insights, and develop effective network interventions.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

COMM 2110. Sports, Media, and Communication. (4 Hours)

Addresses the interdependent links between sports and communication. Sports communication is an emerging area within communication studies and journalism programs. Examines the symbiotic relationship between sports and media, as well as how communication affects team culture, player-coach dynamics, crises in sport, race and gender issues, international relationships, and fandom. Requires students to analyze cases and address both pragmatic and ethical factors related to these cases.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

COMM 2131. Dark Side of Interpersonal Communication. (4 Hours)

Offers students an opportunity to learn about some of the communicative challenges people face in starting, maintaining, and terminating close relationships. The "dark side" is a metaphor used to describe areas of interpersonal and relational communication that are underexplored or "lying in the shadows"; destructive or dysfunctional; and/or poorly understood or often misinterpreted. The dark side perspective acknowledges that while relationships are often a source of joy and satisfaction, they can also elicit feelings of uncertainty, frustration, and pain. Studies the ways in which communication can influence (and possibly resolve) turmoil in close relationships.

Attribute(s): NUpath Difference/Diversity

COMM 2135. Sex and Interpersonal Communication. (4 Hours)

Explores communication theories and concepts as they relate to the interpersonal study of sex, sexuality, and romance. Offers students an opportunity to understand and articulate individual values, assumptions, and paradigms regarding sexuality and how these fit into current research and theory (as demonstrated through in-class discussions, activities, and the opinion paper assignment). Considers how competing communication perspectives can be contrasted, compared, and/or synthesized for a stronger literacy related to sex, sexuality, and sexual identities in an effort to procure an understanding of how communication research and theory can be utilized in academic, personal, and professional settings. Also focuses on sexual health.

Attribute(s): NUpath Difference/Diversity

COMM 2200. Visual Communication. (4 Hours)

Analyzes the ways that visual materials impact our daily lives using readings, examples, and discussion. Visual material floods our daily lives, whether we are actively consuming it or it is thrust upon us. As consumers of these images, and especially as communication scholars, we need to think critically about these visual materials and how they shape our perceptions of ourselves and the world around us. Focuses on several methods for critically researching visuals and applies these methods to examine and discuss several kinds of visuals, including photography, film/television, advertisements, arts, and urban spaces. Designed to improve students' critical understanding of the visual, in its various forms, for communication.

Attribute(s): NUpath Interpreting Culture

COMM 2300. Risk Communication. (4 Hours)

Offers a broad overview of the psychological, social, and communication processes involved in risk perception to better understand how communication influences the way we think about and respond to risk. Cigarette pack warnings, weather advisories, nutrition labels, and town hall meetings are among the many examples of risk communication in daily life. We live in a modern "risk society"—preoccupied with assessing, debating, preventing, and managing potential hazards to our health and safety. Offers students an opportunity to learn how these processes inform the development of effective risk-communication strategies, including institutional risk assessment, stakeholder participation, and formal messaging. Designed to help students both construct and critique risk-communication techniques in the context of contemporary social issues (e.g., texting and driving, pollution, terrorism).

Attribute(s): NUpath Societies/Institutions

COMM 2301. Communication Research Methods. (4 Hours)

Offers an overview of the concepts, methods, tools, and ethics of communication research. Introduces students to the basic statistical concepts used by communication researchers. Designed to help students become knowledgeable consumers and limited producers of communication research. Offers students an opportunity to learn to read, interpret, and critically evaluate research reports. Exposes students to basic social science concepts and research designs and the fundamentals of conducting and analyzing research using surveys, experiments, and content analyses. Students conduct their own empirical research study as a final project, which entails research design, data collection, data analysis, and a written presentation.

Attribute(s): NUpath Analyzing/Using Data

COMM 2303. Global and Intercultural Communication. (4 Hours)

Focuses on theories of and approaches to the study of intercultural communication. Emphasizes the importance of being able to negotiate cultural differences and of understanding intercultural contact in societies and institutions. Stresses the benefits and complexities of cultural diversity in global, local, and organizational contexts.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

COMM 2304. Communication and Gender. (4 Hours)

Presents a theoretical and practical examination of the ways in which communication is gendered in a variety of contexts. Integrates into this analysis how different institutions and interpersonal situations affect our understanding of gender roles. COMM 2304 and WMNS 2304 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

COMM 2350. Producing for the Entertainment Industry. (4 Hours)

Investigates the role of the producer in the production of content for traditional and new media venues. Explores a variety of distribution systems, including online channels, mobile video, terrestrial/satellite radio, documentary film, and independent films, among other platforms. Examines the producer's role in story conceptualization, budget planning, preproduction, and marketing. Through a series of discussions, screenings, homework writing assignments, and in-class writing workshops, offers students an opportunity to gain the skills to produce commercially viable content.

Attribute(s): NUpath Creative Express/Innov

COMM 2451. Sports Broadcasting. (4 Hours)

Develops and refines skills in the art of sportscasting. Students are given an historical perspective and a state-of-the-art analysis. Emphasis is on practical development of skills and evaluation of talent and potential. Areas of study include play-by-play announcing, interviewing, reporting, writing, and anchoring.

COMM 2500. Analyzing Conversations in Everyday Life. (4 Hours)

Considers aspects of talk, such as turn taking, sequence organization, and repair for handling breakdowns, in speaking or understanding. Studies the full range of things people do, such as making requests, blaming others, apologizing, complaining, etc. Having conversations with others is among the things that humans do most. Since talk is a locus of sociality and a site for examining language in use, offers students an opportunity to learn how to make discoveries about the orderliness of social life. By the end of the course, successful students recognize what people are doing with their talk, how to identify communication breakdowns, and learn methods for increasing communication efficiency in everyday and organizational encounters.

COMM 2501. Communication Law. (4 Hours)

Introduces the fundamental principles of communication law and ethics. Explores the complex interplay between law (the First Amendment) and ethics (personal and professional responsibilities). Topics covered include blasphemy, commercial speech, copyright, defamation, fighting words, free press/fair trial, hate speech, heresy, incitement, obscenity, political speech, pornography, prior restraint, public forums, special settings (such as schools, prisons, and the military), symbolic speech, threats, and time-place-manner restrictions. Emphasizes ethical issues involving privacy, accuracy, property, and accessibility. The transcendent question in communication law and ethics is whether it is right to exercise the rights granted communication professionals under the First Amendment.

Attribute(s): NUpath Ethical Reasoning

COMM 2510. Social Media Analytics. (4 Hours)

Introduces concepts and professional best practices in social media analytics. Offers hands-on instruction in analytic techniques for Facebook, Twitter, and other social media platforms, including experiments and observational analyses.

Attribute(s): NUpath Analyzing/Using Data

COMM 2534. Group Communication. (4 Hours)

Covers small group decision-making processes, problem solving, and the interpersonal dynamics of groups. Offers students an opportunity to study and increase their level of proficiency in group interaction and to develop skills in working with and in a variety of small groups. Topics include communication dynamics, systems thinking, dialogue, conflict management, leadership, power, and teams within different institutions, including government, higher education, and corporate America.

Attribute(s): NUpath Societies/Institutions

COMM 2550. Television Field Production. (4 Hours)

Offers advanced training in video production techniques, emphasizing remote location shooting. Includes location scouting, production budgets, writing techniques, equipment location, postproduction editing, and content analysis. Covers the fundamentals of single-camera field production and the nonlinear editing process. Offers students an opportunity to work in teams to produce and direct television using remote video equipment.

Attribute(s): NUpath Creative Express/Innov

COMM 2551. Free Speech in Cyberspace. (4 Hours)

Examines the intersection of law, policy, and new (or relatively new) information and communication technologies. New technologies offer the possibility of new forms of creativity, political engagement, and social life; they also, however, offer very real opportunities to cause serious reputational harm, promote damaging malicious speech, create new controls on creativity, and violate privacy. Uses readings and in-class activities to consider how values and principles that have historically been deemed important apply to the world of new information and communication technologies. Examines how law and policy shape the development and use of new technologies and, at the same time, investigates how new technologies challenge, undermine, and reconfigure existing law and policy.

Attribute(s): NUpath Societies/Institutions

COMM 2555. Games for Change. (4 Hours)

Offers students sound introduction to the psychological and behavioral theories of entertainment media with the goal of implementing these theories to the future design and evaluation of games for change. Focuses more on the psychological, behavioral, and social aspects of video games than on pure technical aspects. Organized around a collection of selected readings and real-world games and discussions. The final project is based on reflective thinking, critical evaluation, and creative application. COMM 2555 and GAME 2555 are cross-listed.

Attribute(s): NUpath Creative Express/Innov

COMM 2625. Communication, Technology, and Society. (4 Hours)

Surveys core concepts, histories, and controversies in the design, use, and critical study of communication technologies that both shape and are shaped by social relationships and social institutions (such as work, education, religion, and the family). Offers students an opportunity to learn about different definitions of communication, technology, and society; examine the values and assumptions of social actors who build communication technologies across various cultures and countries; and gain insights into how communication technologies are interpreted, resisted, and remade through ever-shifting institutional and interpersonal social dynamics. Through canonical works and contemporary case studies, students examine communication, technology, and society in the context of relationships, design, identity, mobility, value, labor, ethics, community, and belonging.

Attribute(s): NUpath Societies/Institutions

COMM 2650. The Business of Entertainment. (4 Hours)

Examines business issues associated with the entertainment industry. One dozen award-winning media industry guest speakers deliver lectures on the vital topics reshaping the entertainment landscape. Through lectures and case studies, introduces students to financing contracts, intellectual property issues, licensing, product placement, marketing and publicity, ratings, the impact of piracy, understanding and leveraging new technologies, and distribution. Offers students an opportunity to master these concepts by organizing into teams and developing an original entertainment industry business product or services. Requires each team to develop a formal business plan that includes a market analysis, a budget, and a marketing plan.

Attribute(s): NUpath Creative Express/Innov

COMM 2655. Television Studio Production. (4 Hours)

Introduces the process of planning, preparing, producing, and evaluating studio productions. Exposes students to the elements and terminology of studio production using multiple cameras, live switching, audio mixing, and studio lighting. Through a series of discussions, screenings, homework, and in-class exercises, offers students an opportunity to obtain skills in the basics of directing creative and technical talent and the skills needed to produce successful television studio productions.

Attribute(s): NUpath Creative Express/Innov

COMM 2700. Sports Promotion in the 21st Century. (4 Hours)

Develops frameworks and conceptual tools for understanding the world of sports marketing and promotion in an increasingly global and interconnected world. Drawing on examples from domestic and international sports promotional campaigns and academic literature, explores the promotion of sports at the professional, collegiate, and special event level. Focuses on the role marketing plays in attracting fans and sponsors and communicating effectively with the public. Emphasizes quantitative and qualitative approaches to research as part of a comprehensive approach to the development of an on-campus sports promotional campaign. Covers brand marketing and positioning, sports marketing research, event sponsorship and promotion, social media, public relations and community outreach, and controversial issues in sports.

COMM 2725. Popular Communication. (4 Hours)

Offers students an opportunity to engage with a specific genre, using historical and critical methods, to better understand this reciprocal relationship between a people and their moment. Successful completion of this course enables one to recall, compare, and give examples of key concepts and theories in popular communication; understand how the popular shapes and is shaped by its people; understand the historical context of a popular genre; critically analyze a genre with respect to social, economic, and political values and events; and demonstrate proficiency in communicating one's analyses. Genres of popular communication—be they self-help books, speculative fiction, or fashion blogs—reflect the aspirations and fears of a people at their moment in history. Simultaneously, popular communication shapes people's sense of identity, purpose, and worth.

Attribute(s): NUpath Interpreting Culture

COMM 2750. Beyond Television. (4 Hours)

Designed to teach students how to conceive, pitch, write an outline, and complete a script for a cutting-edge half-hour comedy pilot or drama that might appear on Netflix, Hulu, Amazon, and other emerging, nonlinear networks. Emphasizes the differences and similarities between writing content for streaming vs. broadcasting. Culminates in a final project, in which small groups of students complete an episodic show that will be judged by a panel of professional television writers. Course objectives are achieved through reading professional scripts, critically viewing television content, and participating in group writing assignments and "table reads".

Attribute(s): NUpath Creative Express/Innov

COMM 2800. Sport and Spectacle. (4 Hours)

Introduces students to the lens of performance studies, the world of sports, and the intersection of the two in the field of communication studies. Addresses performance as a cultural and communicative process that enables us to constitute our identities and our lives. Explores how our lives and identities are performed in space and time, while applying those same concepts to athletes and athletic competition. Offers students an opportunity to understand key concepts in performance studies such as ritual, play, performativity, performing, and performance processes.

Attribute(s): NUpath Interpreting Culture

COMM 2900. Sports, Politics, and Communication. (4 Hours)

Critiques historical and current examples of the intersection of sport and politics and applies relevant communication theory in written reviews of these events, how those events were covered by the media, and their societal impact domestically and globally. Topics include the influence of sport on political protest; gender, racial, and labor issues; and current marketing practices. Offers students an opportunity to develop frameworks and conceptual tools for understanding the intersection of sport and politics through the lens of communication studies.

Attribute(s): NUpath Societies/Institutions

COMM 2912. Special Topics in Communication Studies. (4 Hours)

Offers a special topics course in communication studies. Course content may vary from term to term. May be repeated once.

COMM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

COMM 2991. Research in Communication Studies. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

COMM 3200. Mobile Communication. (4 Hours)

Introduces students to the landscape of mobile communication technologies. Takes a broad view of what "mobile," "communication," and "technology" mean in the past, present, and future, encompassing a range of digital and nondigital objects as well as technological and communicative practices. Covers core concepts and theories in mobile communication, focusing on the impact that mobile hardware and software have on society, culture, and politics.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

COMM 3201. Health Communication. (4 Hours)

Explores various topics as they relate to health communication including interpersonal aspects, cultural issues, and political complexities of health. Subject matter includes patient-provider communication, organizational systems, advertising in the health industry, and the role of media in the formation of expectations about health and the use of media to promote social change.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

COMM 3230. Interpersonal Communication. (4 Hours)

Offers an overview of the theory and practice of interpersonal communication with the goal of developing the knowledge and skills to create dialogue in conversation, work through conflict, adapt to change, and establish/maintain relationships. Topics include definitions of the communication process, identity, self-disclosure, verbal and nonverbal language, listening, management of interpersonal conflict, and relational and dialogic communication.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

COMM 3304. Communication and Inclusion. (4 Hours)

Explores the relationships between communication, social identity, and social inclusion. Focuses on how communication shapes perceptions and positions of social identity categories and how individuals and groups resist and transform identity and promote inclusion through communication. Examines communication and inclusion in the contexts of gender, race, sexual identity, social class, ability, and age. Course topics cover a range of theoretical and practical issues, including diversity in organizational settings and the social construction of identity. COMM 3304 and WMNS 3304 are cross-listed.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Writing Intensive

COMM 3306. International Communication Abroad. (4 Hours)

Applies communication theory and practice to a wide range of documents, artifacts, museums, and landmarks. Available to students participating in a Dialogue of Civilizations sponsored by the Department of Communication Studies. Content is adapted by the faculty depending on the location of the class. For example, students may study the classical foundations of communication and contemporary political discourse in Athens or British history and documentary film production in London. Often includes meetings with foreign professors, government officials, community organizers, and local artists that have shaped their own country in unique and innovative ways. May be repeated without limit.

COMM 3307. Production Practicum Abroad. (4 Hours)

Combines the process of filmmaking with exploring Britain's multicultural society, offering students an opportunity to obtain firsthand experience to develop a deeper, more complex understanding of the culture, particularly as it is evident in London. Covers all aspects of field production from the preproduction process of intensive research and development of story ideas to the technical aspects of filming, lighting, sound recording, digital editing, and graphics. Students work with remote video equipment that includes HD cameras, audio, and remote editing equipment. Taught in London.

Attribute(s): NUpath Creative Express/Innov

COMM 3320. Political Communication. (4 Hours)

Reviews the construction and influence of rhetoric in political campaigns, particularly contemporary presidential campaigns. Also studies the impact of mass communication on the outcome of elections. Offers students an opportunity to analyze artifacts from recent political campaigns such as stump speeches, campaign debates, campaign advertising, and formal campaign speeches such as nomination acceptance addresses, concession and victory speeches, and inaugural addresses.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

COMM 3330. Argumentation Theory. (4 Hours)

Studies the conditions of successful and valid human reasoning as manifested in its products (arguments) and procedures (debates and critical discussions). The first half of the course explores the ethical and structural fundamentals of argumentation, including its main theorems regarding argument schemes and critical questions, argument structures and reconstruction, and fallacies and felicity conditions of valid reasoning. The second half engages contemporary trends in argumentation studies, including the formalization of arguments and its diagramming for artificial intelligence, the contextualization in different societal domains (politics, health, private and public discourse), and the translation of argument theory into pedagogical practice.

Attribute(s): NUpath Ethical Reasoning, NUpath Formal/Quant Reasoning, NUpath Writing Intensive

COMM 3409. Advocacy Writing. (4 Hours)

Offers an Advanced Writing in the Disciplines (AWD) course. Dedicated to teaching students to write scholarly arguments in the discipline of public advocacy and rhetoric and to translate that work for a general audience. Features both an academic approach to writing in the field of rhetoric and a practical approach to writing persuasively for general audiences.

Prerequisite(s): (ENGL 1111 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C); (COMM 1210 with a minimum grade of D- or COMM 1225 with a minimum grade of D- or COMM 1231 with a minimum grade of D- or COMM 1255 with a minimum grade of D- or COMM 1310 with a minimum grade of D- or COMM 1331 with a minimum grade of D- or COMM 1412 with a minimum grade of D-)

COMM 3415. Communication Criticism. (4 Hours)

Offers students an opportunity to deepen their abilities to think critically about texts in a variety of forms such as orations, advertisements, music, and art. Studies methods that may range from close textual analysis to deconstruction to theories of performance. Students are required to write a lengthy research paper that carefully analyzes a rhetorical object.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

COMM 3445. Public Relations Principles. (4 Hours)

Presents the principles, history, and methods of public relations; processes of influencing public opinion; responsibilities of the public relations practitioner; and analyses of public relations programs. Through case studies and class discussions, offers students an opportunity to confront real-life ethical dilemmas and learn to apply ethical frameworks to evaluate and resolve them. COMM 3445 and JRNL 3425 are cross-listed.

Attribute(s): NUpath Ethical Reasoning, NUpath Writing Intensive

COMM 3450. Voice-Over Artist. (4 Hours)

Introduces voice-over acting techniques for TV commercials, radio, multimedia, and various styles of presentation for both audio and video projects. Offers students an opportunity to uncover and develop their vocal range as narrator, announcer, character, and spokesperson with effectiveness and emotional authenticity. Covers both the "business" and the technical aspects of being a voice talent. Includes the use of microphones, headphones, and recording equipment while in our audio lab. Studies the essentials of vocal techniques, studio etiquette, and working with direction during a studio session.

Attribute(s): NUpath Creative Express/Innov

COMM 3451. Advertising Practices. (4 Hours)

Examines the development, procedures, economic functions, and responsibilities of advertising. Explores planning, research, production, and other elements that go into successful advertising. Covers the preparation of advertising for print and broadcast media, including campaign planning, space and time buying, and scheduling.

Attribute(s): NUpath Creative Express/Innov

COMM 3500. Environmental Issues, Communication, and the Media. (4 Hours)

Analyzes major debates over the environment, climate change, and related technologies such as nuclear energy, wind power, natural gas “fracking,” and food biotechnology. Studies the relevant scientific, political, and ethical dimensions of each case; the generalizable theories, frameworks, and methods that scholars use to analyze them; and the implications for effective public communication, policymaker engagement, and personal decision making. Offers students an opportunity to gain an integrated understanding of their different roles as professionals, advocates, and consumers and to improve their ability to find and use expert sources of information; assess competing media claims and narratives; write persuasive essays, analyses, and commentaries; and author evidence-based research papers.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

COMM 3501. Free Speech: Law and Practice. (4 Hours)

Provides students with an opportunity to better understand freedom and limits to freedom, particularly in the realm of speech and expression. Materials covered range from the philosophy of freedom to historical legal cases about free speech and the press to political correctness and the repression of dissent.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

COMM 3505. Rhetoric of Public Memory. (4 Hours)

Analyzes the specific ways in which the concepts of power and memory have been deployed and challenged through various rhetorical texts—including museums, memorials, monuments, commemorations, reenactments, film, television, theater, art, photography, music, and internet sites, among others. “Memory” has become a central concept for analyzing problems of historical representation and identities. As representations of the past have been/are used as instruments of power, it is important to study the ways in which various communicative practices and institutions are implicated in the construction, representation, negotiation, and revision of public memory.

COMM 3530. Communication and Sexualities. (4 Hours)

Analyzes the ways in which sexualities intersect with issues relating to interpersonal communication, mediated communication, popular culture, identity, and social movements. Discusses outing, media representations, queer identity development, and the HIV/AIDS epidemic. Covers theoretical perspectives from communication and other social science disciplines, gender and sexuality studies, and cultural studies. Students work with a variety of materials, contemporary and historical, theoretical and empirical, fiction and nonfiction. Offers students an opportunity to design, conduct, and write their own original empirical research paper relating to sexualities and communication using class content as a theoretical framework.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Writing Intensive

COMM 3532. Theories of Conflict and Negotiation. (4 Hours)

Explores both theories of conflict and potential strategies for more effectively managing conflict in a variety of contexts, that is, interpersonal relationships, organizational settings, and broader societal contexts. Offers students the opportunity to participate in the process of conflict assessment and to explore various negotiation strategies as well as discuss the role of forgiveness in conflict situations.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Writing Intensive

COMM 3615. #Black Twitter and Black Digital Culture. (4 Hours)

Uses social and digital media to examine questions about contemporary topics and the histories that contribute to them. Black Twitter stands as a point of entry for this course as we address questions about culture and communication, applying what we learn to better understand the dynamics of race, media, and power in the internet age. Offers students an opportunity to develop their own media products to put their learning into real-world context.

COMM 3625. Public Relations Practice. (4 Hours)

Demonstrates practices and techniques employed in the field including organization of events and functions. Studies campaign planning, research, and media relationships.

Prerequisite(s): JRNL 3425 with a minimum grade of D-

COMM 3655. Digital Editing for TV. (4 Hours)

Addresses the changes in editing practices through digitization and offers students advanced training in nonlinear editing utilizing Avid Media Composer. Introduces the terms and concepts of nonlinear editing as well as the technical/creative aspects of postproduction. Students are expected to have a working knowledge of digital video equipment and Macintosh computer skills.

Attribute(s): NUpath Creative Express/Innov

COMM 3750. Special Effects and Postproduction for Television. (4 Hours)

Explores a variety of approaches to making special effects for film, video, and the World Wide Web. Offers students an opportunity to utilize cutting-edge technology and to apply state-of-the-art techniques to design and produce innovative special effects. Explores historical, technical, and theoretical aspects of special effects. Topics covered include compositing, matte painting, multiplane animation, explosions, smoke, three-dimensional lighting, particle emitters, chroma keying, motion graphics, video tracking, and more.

Attribute(s): NUpath Creative Express/Innov

COMM 3912. Special Topics in Communication Studies. (4 Hours)

Offers a special topics course in communication studies. Course content may vary from term to term. May be repeated once.

COMM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

COMM 4102. Health Communication Campaigns. (4 Hours)

Offers an in-depth look at how persuasive health campaigns are designed and executed. Discusses how campaigns are designed to intentionally influence awareness, knowledge gain, and attitude/behavior change. Offers students an opportunity to obtain skills to design and evaluate campaigns through the completion of their own campaign projects and to learn about visual and verbal arguments and the unique ethical and other considerations of health campaigns.

Prerequisite(s): COMM 2301 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Capstone Experience

COMM 4530. Communication and Quality of Life. (4 Hours)

Seeks to further develop an understanding of the function of communication in life and how that relates to quality of life. Examines the communicative experiences of organizations and relationships using both theoretical approaches and practical experience. Students participate in activities designed to develop knowledge and skills necessary to successfully analyze and address ethical and interpersonal communication issues. Offers students an opportunity to be able to reflect on and assess one's own competence in communication and how one's communication affects one's quality of life and to respectfully consider the ethical complexities of quality-of-life issues in both organizational and interpersonal settings.

Attribute(s): NUpath Capstone Experience, NUpath Ethical Reasoning

COMM 4533. Consultation Skills. (4 Hours)

Introduces the theoretical frameworks necessary to engage in a broad range of consulting activities (management consulting or organizational training and development). By studying nonprofit organizations in the Boston area, offers students an opportunity to learn how to gather and analyze data, to use mathematical methods to perform critical analysis, and to evaluate and critique choices made in the presentation of data. Requires students to make a formal report to the organization and to write a paper reflecting on the organization and its mission in the context of broader social, political, and economic issues. Emphasizes ethical considerations involving security, privacy, and fairness.

Prerequisite(s): ENGL 1101 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Capstone Experience

COMM 4535. Nonverbal Social Interaction. (4 Hours)

Offers analytic insight on methods people use to communicate different types of social action through body language. Much of our communication is nonverbal, as it is through our body language that we initiate new relationships (both personal and professional) and communicate anger, frustration, happiness, and grief. Offers students an opportunity to develop an understanding of the tools needed to examine the role nonverbal behaviors (body orientation, gaze direction, gesture, laughter, etc.) have in conveying meaning and constructing and negotiating interpersonal relationships. This course incorporates materials from communication, psychology, anthropology, and sociology.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

COMM 4602. Contemporary Rhetorical Theory. (4 Hours)

Exposes students to contemporary perspectives on rhetorical theory and its use in society. 'Contemporary' refers to the models and theorists from the second halves of the 20th and the 21st centuries. 'Rhetoric' refers to strategic communication employed to reach the persuasive goal of an agent. 'Theory' is used in the holistic sense as the interested observation and careful scrutiny of an object. As a capstone course, the course also provides a transition for students from the role of receptive learners to independent researchers who can identify, answer, and defend research questions at the intersection of rhetorical theory and its neighbors (theories of argumentation, humor, style, politeness, courtship, and the like).

Attribute(s): NUpath Capstone Experience, NUpath Interpreting Culture

COMM 4605. Youth and Communication Technology. (4 Hours)

Examines how meanings of "youth" and "communication technology" shift in relation to one another and to broader changes in society, culture, politics, and the economy over time. Analyzes how communication technologies (and the content they deliver) positively and negatively affect the social, emotional, and cognitive development of young people and how these changes are influenced by the particular family, school, community, and institutional contexts in which children grow up. Examines how young people differ individually across the life span as well as collectively by class, race, ethnicity, nationality, gender, sexuality, and disability. Requires a final paper at the end of the term in which students articulate and defend positions about youth and communication technology.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

COMM 4608. Strategic Communication Capstone. (4 Hours)

Offers students an opportunity to complete a semester-long, intensive research and writing capstone project related to the field of strategic communication. Research topics can span business, politics, advocacy, entertainment, public health, the environment, and other societal sectors. Building on previous course work, students have an opportunity to gain a deeper scholarly and professional understanding of strategic communication; cultivate professional and academic contacts; and demonstrate mastery of relevant theoretical concepts, professional principles, research methods, and writing approaches. Encourages students to share and translate their findings for relevant academic and professional communities.

Attribute(s): NUpath Capstone Experience

COMM 4625. Online Communities. (4 Hours)

Considers online community dynamics, including formation, governance, conflict, and exit. Offers students an opportunity to understand and engage with online community and how this relates to topics such as human behavior, identity, and communication online. Reviews contemporary issues and concerns. Engages the question and practice of what it means to develop and maintain a successful online community.

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience

COMM 4631. Crisis Communication and Image Management. (4 Hours)

Examines theories, models, and strategies related to crisis communication and establishes ethical principles regarding what, how, and when essential elements must be employed for effective and ethical crisis communication. Offers students an opportunity to learn how to distinguish between an incident and crisis; to analyze communication practices and methods applied during a crisis; to apply social scientific theory to explain how and why a crisis occurred; and to draw upon theory to develop effective crisis communication plans. Assesses responses to crises using ethical principles such as transparency, two-way symmetrical communication, and timing. Designed to prepare communication professionals who appreciate the need for responsible advocacy when responding to crises.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

COMM 4755. Production Capstone. (4 Hours)

Offers advanced training in video production techniques, allowing students an opportunity to develop a deeper theoretical understanding of cohesive marketing strategies. Through case study assessments and hands-on exercises, explores the process of marketing video techniques from designing, building, and executing marketing ideas to evaluating effectiveness and exploring online corporate identities. Offers students an opportunity to hone their skills in all aspects of the production process by incorporating the knowledge they have acquired from previous production courses—from the preproduction process of intensive research and development of story ideas and scriptwriting; producing; to the technical aspects of filming, lighting, green screen, sound recording, digital editing, and graphics.

Attribute(s): NUpath Capstone Experience

COMM 4901. Seminar in Communications. (4 Hours)

Integrates students' experiences in cooperative education with classroom concepts and theories. Topics include integrative learning, the field of communication, pathways and careers in communication, and the professional communicator. Offers students the opportunity to demonstrate competency in communication skills such as oral reporting, conducting research in communication, and writing.

Attribute(s): NUpath Capstone Experience

COMM 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

COMM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

COMM 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Prerequisite(s): COMM 1101 with a minimum grade of D-

COMM 4994. Internship in Communication. (4 Hours)

Offers students the opportunity to gain hands-on experience in the communications industry. Further internship details are available in the department office. May be repeated without limit.

Prerequisite(s): COMM 1101 with a minimum grade of D-

Attribute(s): NUpath Integration Experience

COMM 5250. Communication and Technology Research Methods. (4 Hours)

Presents an in-depth introduction to ethical quantitative, qualitative, and mixed-methods approaches in communication, media, and technology-related research. Offers practice in concept explication and analysis across levels of society—from the individual to the organization. Covers designing and analyzing survey and content data, unstructured and semi-structured interviews, focus groups, ethnography, community-based research, and comparative case studies.

COMM 5510. Technology and Strategic Communication. (4 Hours)

Provides a current, integrated, and strategic approach to digital media practice and scholarship applied to strategic communication. Examines research literature on social media, search engine optimization, extended reality, and artificial intelligence and applies concepts studied to a real-world project or campaign. Students critique how digital technologies have been used strategically and develop their own goal-based strategy, content, format, and evaluation plan. Discusses ethical implications and impacts on diverse audiences.

COMM 6102. Health Communication Campaigns. (4 Hours)

Offers an in-depth look at how persuasive health campaigns are designed and executed. Discusses how campaigns are intentionally designed to influence awareness, knowledge gain, and attitude/behavior change. Offers students an opportunity to obtain skills to design and evaluate campaigns through the completion of their own campaign projects and to learn about visual and verbal arguments and the unique ethical and other considerations of health campaigns.

COMM 6304. Communication and Inclusion. (4 Hours)

Explores the relationships between communication, social identity, and social inclusion. Focuses on how communication shapes perceptions and positions of social identity categories and how individuals and groups resist and transform identity and promote inclusion through communication. Examines communication and inclusion in the contexts of gender, race, sexual identity, social class, ability, and age. Course topics cover a range of theoretical and practical issues, including diversity in organizational settings and the social construction of identity.

COMM 6320. Political Communication. (4 Hours)

Covers the major theories about the role of communication in U.S. politics, public opinion, and public policy. Discusses how to formulate and evaluate your own theory-based hypotheses on the influence of media in American democracy. Emphasizes the role and place of the media in a democratic system devoted to the proposition that the government should be responsive to the "will of the people." The course is organized around five subjects that are central to the study of political communication: communication systems and practices; communication effects: media, politics, and society; the politics of entertainment and the changing political information environment; elections, accountability, and the mass media; and media and political institutions.

COMM 6500. Environmental Issues, Communication, and Media. (4 Hours)

Analyzes major debates over the environment, climate change, and related technologies such as nuclear energy, wind power, natural gas "fracking," and food biotechnology. Studies the relevant scientific, political, and ethical dimensions of each case; the generalizable theories, frameworks, and methods that scholars use to analyze them; and the implications for effective public communication, policymaker engagement, and personal decision making. Offers students an opportunity to gain an integrated understanding of their different roles as professionals, advocates, and consumers and to improve their ability to find and use expert sources of information; assess competing media claims and narratives; write persuasive essays, analyses, and commentaries; and author evidence-based research papers.

COMM 6501. Free Speech: Law and Practice. (4 Hours)

Offers students an opportunity to better understand freedom and limits to freedom, particularly in the realm of speech and expression. Topics covered range from the philosophy of freedom to historical legal cases about free speech and the press to political correctness and the repression of dissent.

COMM 6505. Rhetorical Approaches to Public Memory. (4 Hours)

Analyzes the ways in which power and memory have been deployed and challenged through various rhetorical texts—including memorials, mass media, performance, and art, among others—in a seminar format. Memory has become a central concept for analyzing problems of historical representation and identities. As representations of the past are used as instruments of power, it is important to study the roles of various communicative practices in constructing, negotiating, and revising public memories. Situates these forms as central to the production of official discourses of citizenship, belonging, and nationalism, as well as the construction of identities. The course objective is not to seek solutions to problems of memory but to develop enabling questions that guide research.

COMM 6605. Youth and Communication Technology. (4 Hours)

Examines how meanings of "youth" and "communication technology" shift in relation to one another and to broader changes in society, culture, politics, and the economy over time. Analyzes how communication technologies (and the content they deliver) positively and negatively affect the social, emotional, and cognitive development of young people and how these changes are influenced by the particular family, school, community, and institutional contexts in which children grow up. Examines how young people differ individually across the life span as well as collectively by class, race, ethnicity, nationality, gender, sexuality, and disability. Requires a final paper at the end of the term in which students articulate and defend positions about youth and communication technology.

COMM 6608. Strategic Communication. (4 Hours)

Offers students an opportunity to complete a semester-long, intensive research and writing capstone project related to the field of strategic communication. Research topics can span business, politics, advocacy, entertainment, public health, the environment, and other societal sectors. Building on previous course work, students have an opportunity to gain a deeper scholarly and professional understanding of strategic communication; cultivate professional and academic contacts; and demonstrate mastery of relevant theoretical concepts, professional principles, research methods, and writing approaches. Encourages students to share and translate their findings for relevant academic and professional communities.

COMM 6631. Crisis Communication and Image Management. (4 Hours)

Examines literature related to crisis communication—including theories, models, and strategies—and establishes ethical principles in terms of what, how, and when essential elements must be employed for effective and ethical crisis communication. Offers students an opportunity to learn how to distinguish between an incident and a crisis; to analyze communication practices and methods applied during a crisis; to apply social scientific theory to explain how and why a crisis occurred; and to draw upon theory to develop effective crisis communication plans. Assesses responses to crises using ethical principles such as transparency (the what element), two-way symmetrical communication (the how element), and timing (the when element). Designed to prepare communication professionals who appreciate the need for responsible advocacy when responding to crises.

COMM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

COMM 6995. Research Project. (4 Hours)

Offers students an opportunity to complete and present a high-level research project. Requires the framing of a significant question or set of questions, the research to find answers, and written communication skills to convey the results to a wide range of audiences. Projects bridge theory and practice and are intended to have an impact on the professional life of students.

Prerequisite(s): COMM 5250 with a minimum grade of C-

COMM 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Communication Studies - CPS (CMN)**Courses****CMN 1100. Organizational Communication. (3 Hours)**

Introduces psychological, sociological, and communication theories as they apply to organizational life. Offers students an opportunity to analyze the importance of effective communication for organizations in a rapidly changing environment. Topics include management and leadership, culture and change, diversity, conflict management, and employee engagement. Throughout the course, students are encouraged to examine their communication skills in the context of those competencies necessary in today's complex organizational environments.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

CMN 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CMN 2310. Professional Speaking. (3 Hours)

Emphasizes the practical skill of public speaking, including methods for overcoming presentation anxiety, and the use of visual aids to enhance speaker presentations. Offers students an opportunity to prepare for a variety of typical public speaking situations and to learn the basic principles of organization and research needed for effective message design and delivery.

Prerequisite(s): ENG 1103 with a minimum grade of D- or ENG 1105 with a minimum grade of D-

CMN 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CMN 3100. Negotiation. (3 Hours)

Introduces the techniques of dispute resolution. Focuses on the processes of mediation, facilitation, and negotiation. Through readings, lectures, and class activities, offers students an opportunity to explore methods of applying these skills to professional settings.

Prerequisite(s): CMN 1100 with a minimum grade of D- or CMN 1103 with a minimum grade of D- or CMN 2210 with a minimum grade of D-

CMN 3220. Introduction to Public Relations. (3 Hours)

Offers students an opportunity to gain insight into the role of public relations in assisting organizations to achieve business objectives, ranging from branding and employee recruitment to product launches and stakeholder engagement. In particular, explores the intersection of traditional PR planning methodologies with today's internet, email, and social media communications channels. Flows from the research, strategies, tactics, and evaluation found in effective public relations plans to the major tools that a practitioner can apply to a public relations campaign. These tools include media relations, social media, websites, employee communications, community relations, and events.

Prerequisite(s): CMN 1100 with a minimum grade of D-

CMN 3350. Intercultural Communication. (3 Hours)

Focuses on gaining an advanced understanding of the concepts associated with culture and communication. Offers students an opportunity to develop intercultural awareness and patterns of perception and thinking to enable effective communication across cultural boundaries. Discusses the effect of cultural differences on communication styles, personal identities, and various organizational contexts.

Prerequisite(s): CMN 1100 with a minimum grade of D- or CMN 1103 with a minimum grade of D- or CMN 2210 with a minimum grade of D-

CMN 3360. Crisis Communication. (3 Hours)

Introduces important implications of effective internal and external communication during crises. Examines proactive and reactive approaches to crisis communication from an academic and practical perspective. Considers elements of effective crisis communication plans and tactics. Offers students an opportunity to analyze several crisis situations.

Prerequisite(s): (CMN 1100 with a minimum grade of D- or CMN 1103 with a minimum grade of D- or CMN 2210 with a minimum grade of D-); CMN 2310 with a minimum grade of D-

CMN 3410. Digital Communication Strategy. (3 Hours)

Introduces students to a communication-planning methodology that supports an organization's short- and long-term goals. Defining digital communication objectives, audiences, tactics, channels, and success indicators are all critical components of an effective strategy. Emphasizes content marketing and inbound marketing tactics and how they fit the voice of the customer and the voice of the organization.

CMN 3800. Designing and Implementing a Promotional Campaign. (3 Hours)

Offers students an opportunity to design and implement a digitally based promotional campaign for an external sponsoring organization. During the campaign design phase, students become part of a creative team, perform target audience research, analyze the research findings, review key performance indicators, and develop a communication plan. During the campaign implementation phase, students execute the communication plan. Implementation includes creating email marketing and social media marketing messages, calls to action, client presentations, monitoring campaign results, and performing an overall project assessment. Each phase includes project updates to the sponsor and self-reflection on the learning experience. Students develop deliverables and track their work using a leading-edge marketing automation platform.

Prerequisite(s): MKT 3010 with a minimum grade of D-

CMN 3850. Managing Communication Projects. (3 Hours)

Offers students an opportunity to manage creative teams and develop client relationships during the design and implementation of a promotional campaign for an external sponsoring organization. Topics include project leadership, client management techniques, communication planning methodology, client and team presentations, evaluation of campaign effectiveness, coaching, and supervision.

Prerequisite(s): CMN 3800 with a minimum grade of D-

CMN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CMN 4850. Capstone in Professional Communication. (3 Hours)

Seeks to guide students in developing a semester-length service-learning project that integrates theory, practice, creativity, and reflection explored throughout their communication studies. The project helps students deepen knowledge and extend ability within their chosen concentrations by having them analyze and apply what they have learned in pragmatic ways that enhance the learning experience, teach civic responsibility, and strengthen communities. Offers students an opportunity to create a portfolio of meaningful artifacts useful for career entry, development, and advancement in this writing-intensive course.

Prerequisite(s): CMN 3800 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

CMN 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

CMN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CMN 6000. Introduction to Organizational Communication. (3 Hours)

Considers writing and other forms of communication as a management tool. Addresses how effective writing—in plain English—can shape project plans, motivate people, solve problems, and enhance one's role as a communicator. Offers students an opportunity to demonstrate their writing and editing skills through research, case study analysis, and composing business-related communications as well as to develop other forms of communication, including oral presentations. As such, the two major goals of this course are to acquaint students with a step-by-step communication methodology and to provide them with an opportunity to develop and polish their writing and communication skills.

Corequisite(s): INT 6000

CMN 6005. Foundations of Professional Communication. (4 Hours)

Focuses on comprehensive oral, reading, and written communication skills from both academic and professional perspectives. Emphasizes developing academic acculturation and improving academic English.

CMN 6010. Strategic Communication Management. (3 Hours)

Focuses on the rapidly evolving role of organizational communication in the digital era. Since audience expectations regarding transparency and responsiveness are changing dramatically, the course introduces students to stakeholder analysis and the theory and practice of persuasion. Managing communication strategies requires a strong foundation in communication planning methodology in order to design communication programs and initiatives that support organizational performance. Offers students an opportunity to gain an understanding of the evolving roles and responsibilities of communication functions addressing both internal and external audiences.

Prerequisite(s): CMN 6000 with a minimum grade of C-

CMN 6020. Ethical Issues in Organizational Communication. (3 Hours)

Examines ethical questions that directly affect how organizations communicate and what they choose to relay and omit to their various audiences. Organizational women and men are compelled to make ethical decisions when they communicate. Proponents of strategic ambiguity in and for organizations have been confronted and countered by other theorists who reject ambiguity as a euphemism for lying. Analyzes cases and academic studies that reflect how ethical and unethical communication affected the fortunes of organizations. Analyzes and evaluates the practical values of ethical yardsticks.

CMN 6025. Digital Era Skills: Platforms, Tools, and Techniques. (3 Hours)

Seeks to help students develop content and community management skills by focusing on specific tools, techniques, and best practices for effective engagement on both public and private platforms (including time and information management skills). Both individual and organizational success in the digital era depends on the development of these skills by professionals in a range of disciplines. Offers students an opportunity to apply concepts by experimenting with various tools and platforms and reflecting on lessons learned from their own active engagement and to learn from the experiences and reflections of their peers.

CMN 6040. Consumer Behaviors in the Online Environment. (3 Hours)

Explores important concepts about consumer behaviors in the online environments, including the social media environment and the electronic commerce (e-commerce) environment. Topics include consumer engagement with social media, electronic word of mouth (eWOM), branding and advertising issues in social media, methodological perspectives on social media, consumer expectations and online shopping preferences in the e-commerce environment, and public policy issues in social and digital media.

CMN 6045. Leveraging Digital Technologies: Strategy, Assessment, and Governance. (3 Hours)

Focuses on the initial stages of social media initiatives: strategy identification, assessment, and governance considerations. Offers students an opportunity to learn the importance of establishing goals and objectives to guide subsequent development and implementation efforts, how to evaluate the potential for digital technologies to enable the pursuit of those goals and objectives, and how to conduct a comparative assessment of current and potential tools and practices to identify the most efficient and effective approaches. Also offers an opportunity to develop an appreciation for the governance issues that have to be considered once a commitment to leveraging new technologies has been made.

CMN 6050. Crisis Communication. (3 Hours)

Examines crisis communication from the perspective of practitioners as well as academics. Both groups have examined accommodation as well as avoidance strategies for crisis communication. Crises are a fact of life in organizations. Natural disasters, sexual harassment charges, psychopathic acts, and product callbacks are a few situations that require intelligent communication to internal and external stakeholders. Includes analysis of several crisis-communication studies, including recommendations for "what I would have done instead." Reviews the elements of an effective crisis communication plan and development of communication tactics for a range of stakeholder audiences.

CMN 6060. Negotiation, Mediation, and Facilitation. (3 Hours)

Introduces the techniques of dispute resolution. Emphasizes the processes of mediation, facilitation, and negotiation. Examines techniques suggested by practitioners and researchers regarding best practices for effective negotiation. A central part of the course requires students to participate in and evaluate negotiation simulations.

CMN 6065. Implementation and Management of Social Media Channels and Online Communities. (3 Hours)

Focuses on the implementation and management stages of social media initiatives. Offers students an opportunity to learn how to establish/expand an organization's initial presence on multiple platforms, define metrics for measuring success in both the short and longer terms, develop training for community managers and others, evaluate the performance of social media activities and revise strategies/tactics to adapt to feedback, and determine logical approaches for expanding a digital community and developing specific campaigns based on community activity.

Prerequisite(s): CMN 6045 with a minimum grade of C-

CMN 6075. Digital Marketing Analytics. (3 Hours)

Examines the measurement tools and analytics required to assess the effectiveness of customer acquisition and brand awareness campaigns and tactics. Focuses on the interpretation of marketing data sets and their use in performance dashboards. The ability to assess the impact of marketing communication tactics is a critical skill set. Experience with basic statistical tools is strongly recommended.

Prerequisite(s): CMN 6910 with a minimum grade of C-

CMN 6080. Intercultural Communication. (3 Hours)

Discusses the impediments to effective intercultural communication and methods for overcoming these impediments. The ease of travel, the pervasiveness of communication technology, and the realities of economic/political interdependence have made it essential for organizational women and men to be capable communicators in intercultural settings.

CMN 6085. Strategies for Cross-Cultural Facilitation and Negotiation. (3 Hours)

Examines several cultural theories, such as Hofstede's national cultural dimensions, Hall and Hall's contextual levels, along with Kluckhohn and Strodtbeck's variations in value orientations. Culture is defined as a group of people with shared values and means of being. Offers students an opportunity to acquire skills to move from gut reactions to applying empirically tested methods for cultural interactions and diplomacy. Includes case studies and role-play with a variety of intergenerational, international, racial, and religious groups. Students practice verbal and nonverbal communication to strengthen their diplomacy and public speaking skills. The written signature assignment designs a communication collateral that meets the needs of stakeholders from two different cultures (include different languages/wording). Supports collateral differences based on cultural theories and evidence.

CMN 6090. Organizational Culture, Climate, and Communication. (3 Hours)

Examines the relationship between organizational culture and communication and discusses the advantages and elements of a supportive communication climate. Some researchers believe that the culture of the organization drives the communication quality in an organization. Examines both case analysis and academic research to address common problems pertaining to cultivating supportive communication climates and methods for improving these climates.

CMN 6095. Foundations of Developing Cultural Awareness. (3 Hours)

Examines culture from three pillars: awareness, language, and history/politics. Offers students an opportunity to investigate their personal identity and barriers by incorporating two assessments to determine personal implicit bias and cultural intelligence. Interpretations are constructed from self-reports employing the cultural intelligence (CQ) assessment and Implicit Bias Project. Focuses on the impact of languages on cultures. By identifying nonstandard language and discussing the meaning of words across different languages, offers students an opportunity to gain understanding and formulate sensitivity when communicating with different audiences, albeit intergenerational and/or international. Examines the impact of history and politics on cultural groups, specifically as related to cross-cultural communication. The written signature assignment is a personal reflection analysis on insights gained throughout the course and career aspirations.

CMN 6096. Cultural Communications Lab. (1 Hour)

Introduces cultural communication within an organizational communication context. The lab learning modules and experiential applications support the learner's discovery of cultural resilience and how communication strategies and tools address this emerging global need. Three learning modules introduce students to data literacy, technological literacy, and human literacy. The Cultural Intelligence (CQ), a self-reporting assessment, is the basis of the learner's application to their personal and professional cultural communication development.

CMN 6100. Communication Networks and Managing Information. (3 Hours)

Examines new electronic technologies as well as other approaches to disseminating information. Organizations can employ various methods for communicating in organizations. Analyzes what types of information must be communicated in organizations and the impediments to successful transmission of information. Uses case studies to offer students an opportunity to identify problems with information management as well as methods for ameliorating situations caused by poor communication management.

CMN 6110. Group Dynamics and Interpersonal Conflict: Meeting Management. (3 Hours)

Examines common problems with organization meetings and intervention techniques that can be employed to reduce the tensions associated with such interaction. Discusses methods used for evaluating individual members in meeting contexts. A central part of the course involves participation in and evaluation of meeting interaction.

CMN 6910. Organizational Communication Assessment. (3 Hours)

Discusses quantitative and qualitative methods for conducting assessments called communication audits. If communication is central to organizational activity, then persons must be able to assess the quality of communication within organizations. Offers students an opportunity to evaluate the advantages and disadvantages of each technique and to participate in conducting a communication audit.

Prerequisite(s): CMN 6010 with a minimum grade of C-

CMN 6940. Projects for Professionals. (4 Hours)

Offers students an opportunity to apply knowledge and skills gained through their organizational communication master's program to challenging short-term projects under faculty supervision. Students are matched with discipline-specific consulting projects provided by a wide range of sponsoring organizations in the private and nonprofit sectors. They develop a project plan, conduct research, develop and deliver recommendations to the sponsoring organization, and reflect on lessons learned. Mapping organizational communication concepts and skills to the consultative process is a primary learning outcome. Application process is required. This is a capstone course. Students with less than two years of professional communication-related experience must successfully complete a noncredit Experiential Learning project before registering for the capstone course.

Prerequisite(s): CMN 6020 with a minimum grade of C ; CMN 6910 with a minimum grade of C

CMN 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CMN 6995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Communication Studies - CPS Specialty (CMMN)**Courses****CMMN 1102. Public Speaking. (4 Hours)**

Seeks to provide students with the tools necessary to plan and deliver a professional speech and with opportunities to practice and perfect their own presentation styles. Discusses common issues in public speaking, such as anxiety, audience analysis, and selecting a topic. Covers organizing a speech and developing effective introductions and conclusions. Explores methods of delivery and presentation aids. Exposes students to different types of speeches, both inside and outside of academia.

Corequisite(s): CMMN 1103

Computer Engineering Technology - CPS (CET)**Courses****CET 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CET 2100. Essentials of Computer Organization. (3 Hours)

Covers the structure and organization of computing systems. Topics include basic computer architecture, CPU and arithmetic-logic unit design, the datapath, input/output methods, memory management including caches and virtual memory, storage, instruction execution, assembly programming and assemblers, instruction formats, addressing modes, peripherals and interfacing, interrupts, and an introduction to operating systems and compilers.

CET 2200. Data Structures and Algorithms. (3 Hours)

Covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using an object-oriented programming language. Topics include elementary data structures (including arrays, stacks, queues, and lists); advanced data structures (including trees and graphs); the algorithms used to manipulate these structures; and their application to solving practical engineering problems.

Prerequisite(s): ALY 2100 with a minimum grade of D- or GET 2100 with a minimum grade of D- or ITC 2100 with a minimum grade of D-

CET 2210. Industrial Robotics. (3 Hours)

Introduces basic robotics concepts including frame geometry, coordinate systems, control systems, programming options, and safety procedures. Studies how to create, modify, and execute operational programs; recover from common program and robot faults; monitor, force, and simulate input and output signals; how to operate a teach pendant; and consider end-of-arm tooling.

CET 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CET 3100. Computer Networking and Communications Technology. (3 Hours)

Covers the technical foundation for designing, installing, maintaining, and monitoring computer networks. Covers technologies, protocols, and techniques used to connect computers to other computers and hardware components. Topics include the Open Systems Interconnection network model (OSI), internet protocols (TCP/IP), the User Datagram Protocol (UDP), Local Area Networks (LANs) and Wide Area Networks (WANs), wireless networks, network security, virtual private networking, and network management. Covers both circuit-switched and IP-based communications.

Prerequisite(s): CET 2100 with a minimum grade of D- ; GET 2100 with a minimum grade of D-

CET 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CET 4210. Robotics. (3 Hours)

Studies how to deploy robots in an existing manufacturing or processing environment. Examines how to design, integrate, and operate robots to improve productivity and safety. Offers students an opportunity to obtain an overall understanding of robotics from the point of view of the operator, technician, designer, and engineer. Reviews the history of robots, the various types of robots, and their applications. Robots rely on feedback from a variety of sensors, vision cameras, and other input devices to learn about their environment and react accordingly based on the system information. Investigates how mechanical, electrical, and software components all work together to perform a specific task.

Prerequisite(s): CET 2100 with a minimum grade of D- ; EET 3100 with a minimum grade of D- ; EET 3300 with a minimum grade of D-

CET 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

CET 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

CET 4983. Topics. (1-4 Hours)

Covers special topics in computer engineering technology. May be repeated without limit.

CET 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CET 4991. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

CET 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic.

CET 4994. Internship. (1-4 Hours)

Provides students with an opportunity for internship work.

Attribute(s): NUpath Integration Experience

CET 4995. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience.

CET 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major.

Attribute(s): NUpath Integration Experience

Computer Science (CS)

Courses

CS 1100. Computer Science and Its Applications. (4 Hours)

Introduces students to the field of computer science and the patterns of thinking that enable them to become intelligent users of software tools in a problem-solving setting. Examines several important software applications so that students may develop the skills necessary to use computers effectively in their own disciplines.

Corequisite(s): CS 1101

Attribute(s): NUpath Analyzing/Using Data

CS 1101. Lab for CS 1100. (1 Hour)

Accompanies CS 1100. Involves experiments and problem solving across multiple disciplines using computer science techniques and tools.

Corequisite(s): CS 1100

CS 1200. First Year Seminar. (1 Hour)

Seeks to support students in their transition to Northeastern and in their holistic development as they become responsible members of the college and university communities. Incorporates large group discussion, small group activities, and self-reflection in order to facilitate connections with faculty, staff, and peers; promote utilization of appropriate campus resources; and assist with academic and personal goal setting.

CS 1210. Professional Development for Khoury Co-op. (1 Hour)

Continues the preparation of students for careers in the computing and information fields by discussing co-op and co-op processes. Offers students an opportunity to prepare a professional resumé; practice proper interviewing techniques; explore current job opportunities; learn how to engage in the job and referral process; and to understand co-op policies, procedures, and expectations. Discusses professional behavior and ethical issues in the workplace.

Prerequisite(s): CS 2510 with a minimum grade of D- or DS 2500 with a minimum grade of D-

CS 1800. Discrete Structures. (4 Hours)

Introduces the mathematical structures and methods that form the foundation of computer science. Studies structures such as sets, tuples, sequences, lists, trees, and graphs. Discusses functions, relations, ordering, and equivalence relations. Examines inductive and recursive definitions of structures and functions. Discusses principles of proof such as truth tables, inductive proof, and basic logic. Also covers the counting techniques and arguments needed to estimate the size of sets, the growth of functions, and the space-time complexity of algorithms.

Corequisite(s): CS 1802

Attribute(s): NUpath Formal/Quant Reasoning

CS 1802. Seminar for CS 1800. (1 Hour)

Accompanies CS 1800. Illustrates topics from the lecture course through discussions, quizzes, and homework assignments.

Corequisite(s): CS 1800

CS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CS 2500. Fundamentals of Computer Science 1. (4 Hours)

Introduces the fundamental ideas of computing and the principles of programming. Discusses a systematic approach to word problems, including analytic reading, synthesis, goal setting, planning, plan execution, and testing. Presents several models of computing, starting from nothing more than expression evaluation in the spirit of high school algebra. Assumes no prior programming experience; therefore, suitable for first-year students—majors, and nonmajors alike—who wish to explore the intellectual ideas in the discipline.

Corequisite(s): CS 2501

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Natural/Designed World

CS 2501. Lab for CS 2500. (1 Hour)

Accompanies CS 2500. Covers topics from the course through various experiments.

Corequisite(s): CS 2500

CS 2510. Fundamentals of Computer Science 2. (4 Hours)

Continues CS 2500. Examines object-oriented programming and associated algorithms using more complex data structures as the focus.

Discusses nested structures and nonlinear structures including hash tables, trees, and graphs. Emphasizes abstraction, encapsulation, inheritance, polymorphism, recursion, and object-oriented design patterns. Applies these ideas to sample applications that illustrate the breadth of computer science.

Prerequisite(s): CS 2500 with a minimum grade of D-

Corequisite(s): CS 2511

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

CS 2511. Lab for CS 2510. (1 Hour)

Accompanies CS 2510. Covers topics from the course through various experiments.

Corequisite(s): CS 2510

CS 2800. Logic and Computation. (4 Hours)

Introduces formal logic and its connections to computer and information science. Offers an opportunity to learn to translate statements about the behavior of computer programs into logical claims and to gain the ability to prove such assertions both by hand and using automated tools. Considers approaches to proving termination, correctness, and safety for programs. Discusses notations used in logic, propositional and first order logic, logical inference, mathematical induction, and structural induction. Introduces the use of logic for modeling the range of artifacts and phenomena that arise in computer and information science.

Prerequisite(s): (CS 1800 with a minimum grade of D- or MATH 1365 with a minimum grade of D- or MATH 2310 with a minimum grade of D-); CS 2500 with a minimum grade of D-

CS 2810. Mathematics of Data Models. (4 Hours)

Studies the methods and ideas in linear algebra, multivariable calculus, and statistics that are most relevant for the practicing computer scientist doing machine learning, modeling, or hypothesis testing with data. Covers least squares regression, finding eigenvalues to predict a linear system's behavior, performing gradient descent to fit a model to data, and performing t-tests and chi-square tests to determine whether differences between populations are significant. Includes applications to popular machine-learning methods, including Bayesian models and neural networks.

Prerequisite(s): CS 1800 with a minimum grade of D- ; CS 2500 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

CS 2963. Topics. (1,2 Hours)

Offers undergraduate students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

CS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CS 2991. Research in Computer Science. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated three times.

CS 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

CS 3000. Algorithms and Data. (4 Hours)

Introduces the basic principles and techniques for the design, analysis, and implementation of efficient algorithms and data representations. Discusses asymptotic analysis and formal methods for establishing the correctness of algorithms. Considers divide-and-conquer algorithms, graph traversal algorithms, and optimization techniques. Introduces information theory and covers the fundamental structures for representing data. Examines flat and hierarchical representations, dynamic data representations, and data compression. Concludes with a discussion of the relationship of the topics in this course to complexity theory and the notion of the hardness of problems.

Prerequisite(s): ((CS 2510 with a minimum grade of D- or DS 2500 with a minimum grade of D-); CS 1800 with a minimum grade of D-) or EECE 2160 with a minimum grade of D-

Corequisite(s): CS 3001

Attribute(s): NUpath Formal/Quant Reasoning

CS 3001. Recitation for CS 3000. (0 Hours)

Accompanies CS 3000. Provides students with additional opportunities to ask questions and engage with course material.

Corequisite(s): CS 3000

CS 3200. Introduction to Databases. (4 Hours)

Studies the design of a database for use in a relational database management system. The entity-relationship model and normalization are used in problems. Relational algebra and then the SQL (structured query language) are presented. Advanced topics include triggers, stored procedures, indexing, elementary query optimization, and fundamentals of concurrency and recovery. Students implement a database schema and short application programs on one or more commercial relational database management systems.

Prerequisite(s): CS 2500 with a minimum grade of D- or DS 2000 with a minimum grade of D- or EECE 2560 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

CS 3500. Object-Oriented Design. (4 Hours)

Presents a comparative approach to object-oriented programming and design. Discusses the concepts of object, class, meta-class, message, method, inheritance, and genericity. Reviews forms of polymorphism in object-oriented languages. Contrasts the use of inheritance and composition as dual techniques for software reuse: forwarding vs. delegation and subclassing vs. subtyping. Fosters a deeper understanding of the principles of object-oriented programming and design including software components, object-oriented design patterns, and the use of graphical design notations such as UML (unified modeling language). Basic concepts in object-oriented design are illustrated with case studies in application frameworks and by writing programs in one or more object-oriented languages.

Prerequisite(s): CS 2510 with a minimum grade of D- or EECE 2560 with a minimum grade of D-

Corequisite(s): CS 3501

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

CS 3501. Lab for CS 3500. (1 Hour)

Accompanies CS 3500. Covers topics from the course and provides students with additional opportunities to engage with course material.

Corequisite(s): CS 3500

CS 3520. Programming in C++. (4 Hours)

Examines how to program in C++ in a robust and safe manner. Reviews basics, including scoping, typing, and primitive data structures. Discusses data types (primitive, array, structure, class, string); addressing/parameter mechanisms (value, pointer, reference); stacks; queues; linked lists; binary trees; hash tables; and the design of classes and class inheritance, emphasizing single inheritance. Considers the instantiation of objects, the trade-offs of stack vs. heap allocation, and the design of constructors and destructors. Emphasizes the need for a strategy for dynamic memory management. Addresses function and operator overloading; templates, the Standard Template Library (STL), and the STL components (containers, generic algorithms, iterators, adaptors, allocators, function objects); streams; exception handling; and system calls for processes and threads.

Prerequisite(s): CS 2510 with a minimum grade of D- or DS 2500 with a minimum grade of D-

CS 3540. Game Programming. (4 Hours)

Introduces the different subsystems used to create a 3D game, including rendering, animation, collision, physics, audio, trigger systems, game logic, behavior trees, and simple artificial intelligence. Offers students an opportunity to learn the inner workings of game engines and how to use multiple libraries such as physics and graphics libraries to develop a game. Discusses graphics pipeline, scene graph, level design, behavior scripting, object-oriented game design, world editors, and game scripting languages.

Prerequisite(s): CS 2500 with a minimum grade of D- or ARTG 2260 with a minimum grade of D- or ARTG 2262 with a minimum grade of D-

CS 3620. Building Extensible Systems. (4 Hours)

Deals with the design of extensible software systems, which enable clients to add functionality both statically as well as dynamically. Examples of such systems are operating systems, game servers, and Web browsers. Describes the classic systems built on C-like languages with unsafe, manual memory control and the more recent systems built on Java-like languages with safe, automated memory management. Introduces the Rust programming language, which combines the efficiency of C with safe manual memory control via type specifications and compiler constraints. Offers students an opportunity to build systems using all three settings but focuses on the Rust approach. Students also have an opportunity to evaluate their work via essays and memos.

Prerequisite(s): CS 2510 with a minimum grade of D- ; (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

CS 3650. Computer Systems. (4 Hours)

Introduces the basic design of computing systems, computer operating systems, and assembly language using a RISC architecture. Describes caches and virtual memory. Covers the interface between assembly language and high-level languages, including call frames and pointers. Covers the use of system calls and systems programming to show the interaction with the operating system. Covers the basic structures of an operating system, including application interfaces, processes, threads, synchronization, interprocess communication, deadlock, memory management, file systems, and input/output control.

Prerequisite(s): CS 2510 with a minimum grade of D- or EECE 2560 with a minimum grade of D-

CS 3700. Networks and Distributed Systems. (4 Hours)

Introduces the fundamentals of computer networks, including network architectures, network topologies, network protocols, layering concepts (for example, ISO/OSI, TCP/IP reference models), communication paradigms (point-to-point vs. multicast/broadcast, connectionless vs. connection oriented), and networking APIs (sockets). Also covers the construction of distributed programs, with an emphasis on high-level protocols and distributed state sharing. Topics include design patterns, transactions, performance trade-offs, security implications, and reliability. Uses examples from real networks (TCP/IP, Ethernet, 802.11) and distributed systems (Web, BitTorrent, DNS) to reinforce concepts.

Prerequisite(s): CS 2510 with a minimum grade of D-

CS 3800. Theory of Computation. (4 Hours)

Introduces the theory behind computers and computing aimed at answering the question, "What are the capabilities and limitations of computers?" Covers automata theory, computability, and complexity. The automata theory portion includes finite automata, regular expressions, nondeterminism, nonregular languages, context-free languages, pushdown automata, and noncontext-free languages. The computability portion includes Turing machines, the Church-Turing thesis, decidable languages, and the Halting theorem. The complexity portion includes big-O and small-o notation, the classes P and NP, the P vs. NP question, and NP-completeness.

Prerequisite(s): CS 2510 with a minimum grade of D- or EECE 2160 with a minimum grade of D-

CS 3950. Introduction to Computer Science Research. (2 Hours)

Introduces students to research in the fields of computer science, information science, data science, and cybersecurity. Explores how the scientific method is applied to these fields and covers the breadth of subareas of specialty that exist. Offers students an opportunity to practice how to locate and read scientific literature in different subareas. Also offers students an overview of graduate education in these fields.

Prerequisite(s): CS 2500 with a minimum grade of D-

CS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CS 4050. Artificial Intelligence and Society. (4 Hours)

Examines the societal impact of artificial intelligence technologies and prominent strategies for aligning these impacts with social and ethical values. Offers multidisciplinary readings to provide conceptual lenses for understanding these technologies in their contexts of use.

CS 4097. Mixed Reality. (4 Hours)

Seeks to provide a strong foundation in the fundamentals of virtual and augmented reality, broadly defined as mixed reality (XR). These technologies have recently witnessed a resurgence of interest. Offers students an opportunity to obtain hands-on experience developing XR applications by diving into this burgeoning area of research and practice in computer science. Synthesizes theoretical and practice knowledge from various disciplines, including computer graphics, 3D interfaces, human-computer interaction, tracking systems, and perceptual psychology.

Prerequisite(s): CS 3540 with a minimum grade of D-

CS 4100. Artificial Intelligence. (4 Hours)

Introduces the fundamental problems, theories, and algorithms of the artificial intelligence field. Includes heuristic search; knowledge representation using predicate calculus; automated deduction and its applications; planning; and machine learning. Additional topics include game playing; uncertain reasoning and expert systems; natural language processing; logic for common-sense reasoning; ontologies; and multiagent systems.

Prerequisite(s): CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 4120. Natural Language Processing. (4 Hours)

Introduces the computational modeling of human language; the ongoing effort to create computer programs that can communicate with people in natural language; and current applications of the natural language field, such as automated document classification, intelligent query processing, and information extraction. Topics include computational models of grammar and automatic parsing, statistical language models and the analysis of large text corpora, natural language semantics and programs that understand language, models of discourse structure, and language use by intelligent agents. Course work includes formal and mathematical analysis of language models and implementation of working programs that analyze and interpret natural language text. Knowledge of statistics is helpful.

Prerequisite(s): CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-

CS 4150. Game Artificial Intelligence. (4 Hours)

Offers an overview of classical and modern approaches to artificial intelligence in digital games. Focuses on the creation of believable agents and environments with the goal of providing a fun and engaging experience to a player. Covers player modeling, procedural content generation, behavior trees, interactive narrative, decision-making systems, cognitive modeling, and path planning. Explores different approaches for behavior generation, including learning and rule-based systems. Requires students to complete several individual assignments in these areas to apply the concepts covered in class. Students choose a group final project to explore one aspect of artificial intelligence for games in further depth. Offers students an opportunity to learn team management and communication. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): CS 3500 with a minimum grade of D- ; CS 3520 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 4180. Reinforcement Learning. (4 Hours)

Introduces reinforcement learning and the Markov decision process (MDP) framework. Covers methods for planning and learning in MDPs such as dynamic programming, model-based methods, and model-free methods. Examines commonly used representations including deep-learning representations. Students are expected to have a working knowledge of probability, to complete programming assignments, and to complete a course project that applies some form of reinforcement learning to a problem of interest.

Prerequisite(s): CS 3000 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or ENVR 2500 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or PSYC 2320 with a minimum grade of D- or CS 2810 with a minimum grade of D-); (MATH 2331 with a minimum grade of D- or CS 2810 with a minimum grade of D-)

CS 4300. Computer Graphics. (4 Hours)

Charts a path through every major aspect of computer graphics with varying degrees of emphasis. Discusses hardware issues: size and speed; lines, polygons, and regions; modeling, or objects and their relations; viewing, or what can be seen (visibility and perspective); rendering, or how it looks (properties of surfaces, light, and color); transformations, or moving, placing, distorting, and animating and interaction, or drawing, selecting, and transforming.

Prerequisite(s): (CS 2510 with a minimum grade of D- or CS 3500 with a minimum grade of D- or EECE 2560 with a minimum grade of D-); (MATH 1260 with a minimum grade of D- or MATH 2331 with a minimum grade of D- or MATH 2341 with a minimum grade of D- or CS 2810 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 4360. Non-Interactive Computer Graphics. (4 Hours)

Introduces computer graphics algorithms and concepts primarily focusing on offline rendering techniques. Consists of a lecture component and in-class laboratory to study common image synthesis algorithms and techniques to generate images used in games and 3D animated movies. Culminates with a final project in which students complete in groups or individually a renderer for generating high quality images. Students with an interest in a career as a graphics, rendering, or high performance computer engineer may consider taking this course.

Prerequisite(s): (CS 2810 with a minimum grade of D- or MATH 2331 with a minimum grade of D-); CS 3500 with a minimum grade of D-

CS 4400. Programming Languages. (4 Hours)

Introduces a systematic approach to understanding the behavior of programming languages. Covers interpreters; static and dynamic scope; environments; binding and assignment; functions and recursion; parameter-passing and method dispatch; objects, classes, inheritance, and polymorphism; type rules and type checking; and concurrency.

Prerequisite(s): CS 3500 with a minimum grade of D- ; (CS 3000 with a minimum grade of D- or CS 4800 with a minimum grade of D-)

CS 4410. Compilers. (4 Hours)

Studies the construction of compilers and integrates material from earlier courses on programming languages, automata theory, computer architecture, and software design. Examines syntax trees; static semantics; type checking; typical machine architectures and their software structures; code generation; lexical analysis; and parsing techniques. Uses a hands-on approach with a substantial term project.

Prerequisite(s): CS 4400 with a minimum grade of D- or CS 5400 with a minimum grade of C- or CS 7400 with a minimum grade of C-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 4500. Software Development. (4 Hours)

Considers software development as a systematic process involving specification, design, documentation, implementation, testing, and maintenance. Examines software process models; methods for software specification; modularity, abstraction, and software reuse; and issues of software quality. Students, possibly working in groups, design, document, implement, test, and modify software projects.

Prerequisite(s): CS 3500 with a minimum grade of D- ; (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

CS 4520. Mobile Application Development. (4 Hours)

Focuses on mobile application development on a mobile phone or related platform. Discusses memory management; user interface building, including both MVC principles and specific tools; touch events; data handling, including core data, SQL, XML, and JSON; network techniques and URL loading; and, finally, specifics such as GPS and motion sensing that may be dependent on the particular mobile platform. Students are expected to work on a project that produces a professional-quality mobile application. The instructor chooses a modern mobile platform to be used in the course.

Prerequisite(s): CS 3500 with a minimum grade of D-

CS 4530. Fundamentals of Software Engineering. (4 Hours)

Covers the fundamentals of software engineering, including software development life cycle models (e.g., waterfall, spiral, agile); requirements analysis; user-centered design; software design principles and patterns; testing (functional testing, structural testing, testing strategies); code refactoring and debugging; software architecture and design; and integration and deployment. Includes a course project in which some of the software engineering methods (from requirements analysis to testing) are applied in a team-based setting.

Prerequisite(s): CS 3500 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

CS 4535. Professional Practicum Capstone. (4 Hours)

Offers students an opportunity to expand skills in real-world application development and team collaboration within an experiential learning structure. Involves students in industry-specific projects designed to integrate into an industry partner's intellectual property portfolio. Projects focus on software design and development and also include written components that align with the partner's standards and reference relevant prior work. Students engage in a structured process of milestones and feedback cycles with peers; instructors; and, as appropriate, industry partners to refine project outcomes.

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

CS 4550. Web Development. (4 Hours)

Discusses Web development for sites that are dynamic, data driven, and interactive. Focuses on the software development issues of integrating multiple languages, assorted data technologies, and Web interaction. Considers ASP.NET, C#, HTTP, HTML, CSS, XML, XSLT, JavaScript, AJAX, RSS/Atom, SQL, and Web services. Requires each student to deploy individually designed Web experiments that illustrate the Web technologies and at least one major integrative Web site project. Students may work as a team with the permission of the instructor. Each student or team must also create extensive documentation of their goals, plans, design decisions, accomplishments, and user guidelines. All source files must be open and be automatically served by a sources server.

Prerequisite(s): CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 4610. Robotic Science and Systems. (4 Hours)

Introduces autonomous mobile robots, with a focus on algorithms and software development, including closed-loop control, robot software architecture, wheeled locomotion and navigation, tactile and basic visual sensing, obstacle detection and avoidance, and grasping and manipulation of objects. Offers students an opportunity to progressively construct mobile robots from a predesigned electromechanical kit. The robots are controlled wirelessly by software of the students' own design, built within a provided robotics software framework. The course culminates in a grand challenge competition using all features of the robots.

Prerequisite(s): CS 3500 with a minimum grade of D-

CS 4700. Network Fundamentals. (4 Hours)

Introduces the fundamental concepts of network protocols and network architectures. Presents the different harmonizing functions needed for the communication and effective operation of computer networks. Provides in-depth coverage of data link control, medium access control, routing, end-to-end transport protocols, congestion and flow control, multicasting, naming, auto configuration, quality of service, and network management. Studies the abstract mechanisms and algorithms as implemented in real-world Internet protocols. Also covers the most common application protocols (e-mail, Web, and ftp).

Prerequisite(s): CS 3650 with a minimum grade of D- or CS 5600 with a minimum grade of D- or CS 5600 with a minimum grade of C- (Graduate)

CS 4710. Mobile and Wireless Systems. (4 Hours)

Covers both theoretical foundations of wireless/mobile networking and practical aspects of wireless/mobile systems, including current standards, mobile development platforms, and emerging technologies. Incorporates a strong practical component; requires students to work in teams on several practical assignments (e.g., based on Wi-Fi sensing, mobile applications, Internet-of-Things devices, and software-defined radio applications) and a final project. The final project integrates knowledge about several wireless communication technologies and mechanisms.

Prerequisite(s): CS 3700 with a minimum grade of D- or CS 4730 with a minimum grade of D-

CS 4730. Distributed Systems. (4 Hours)

Introduces distributed systems, covering fundamental concepts and showing how they are applied to build reliable distributed services. Examines several existing distributed applications, such as file systems, databases, lock services, digital currencies, smart contracts, and machine learning, and how these applications must coordinate to function and overcome failures, network partitions, or compromised parties. Distributed systems, such as databases, cloud services, and blockchains, are omnipresent in the services and applications that serve society on a daily basis.

Prerequisite(s): CS 3650 with a minimum grade of D-

CS 4805. Fundamentals of Complexity Theory. (4 Hours)

Reviews basic material such as automata, Turing machines, (un)decidability, time complexity, P vs. NP, and NP-completeness. Studies core topics in computational complexity, including time and space complexity, polynomial hierarchy, circuit complexity, probabilistic computation, interactive proofs, and hardness of approximation. Optional topics may include Gödel's incompleteness theorem, Kolmogorov complexity, cryptography, quantum computing, communication complexity, lower bounds, or pseudorandomness.

Prerequisite(s): CS 3800 with a minimum grade of D-

CS 4810. Advanced Algorithms. (4 Hours)

Builds on CS 3000. Presents an advanced study of computer algorithms. Covers basic algorithmic paradigms (e.g., greedy, divide-and-conquer, and dynamic programming); graph algorithms; optimization; computational Intractability (e.g., NP-completeness, PSPACE-completeness); randomized algorithms; and approximation algorithms.

Prerequisite(s): CS 3000 with a minimum grade of D-

CS 4820. Computer-Aided Reasoning. (4 Hours)

Covers fundamental concepts, techniques, and algorithms in computer-aided reasoning, including propositional logic, variants of the DPLL algorithm for satisfiability checking, first-order logic, unification, tableaux, resolution, Horn clauses, congruence closure, rewriting, Knuth-Bendix completion, decision procedures, Satisfiability Modulo Theories, recursion, induction, termination, Presburger arithmetic, quantifier elimination, and interactive theorem proving. Offers students an opportunity to develop and implement a reasoning engine in a sequence of projects over the course of the semester. Also covers how to formalize and reason about computational systems using a modern interactive theorem prover.

Prerequisite(s): CS 2800 with a minimum grade of D- ; CS 3000 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience

CS 4830. System Specification, Verification, and Synthesis. (4 Hours)

Covers the fundamental topics in formal modeling and specification (transition systems, temporal logic, regular and omega-regular languages, safety and liveness properties, etc.); computer-aided verification (state-space exploration, model checking, bounded-model checking, binary-decision diagrams, symbolic model checking, etc.); compositionality and assume-guarantee reasoning; contracts; and component-based design. Also covers fundamental topics in computer-aided synthesis of correct-by-construction systems, starting from high-level formal specifications or from example scenarios. Designing large and complex systems (digital circuits, embedded control systems such as automated vehicles, computerized healthcare devices such as pacemakers, cyber-physical systems such as automated intersections, etc.) and their software cannot be done by hand. Instead, designers use computer-aided techniques that allow them to build system models and verify correctness of the design before the real system is actually built.

Prerequisite(s): CS 3000 with a minimum grade of D-

CS 4850. Building Game Engines. (4 Hours)

Discusses the components of game engines and strategies for their software implementation. Includes graphics management algorithms (animation, scene graph, level of detail); basic artificial intelligence algorithms (search, decision making, sensing); and related algorithmic issues (networking, threading, input processing). Explores the use of data-driven software design. Offers students an opportunity to use a rendering engine and to build and integrate several software components to create a complete game engine. Requires students to work on several individual assignments to apply the algorithms and then develop a project in a team. Offers students an opportunity to learn team/project management; work division; team communication; and the software development cycle of implementation, testing, critique, and further iteration. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): CS 3520 with a minimum grade of D- ; CS 3540 with a minimum grade of D-

CS 4950. Computer Science Research Seminar. (1 Hour)

Offers students an in-depth look at research in a particular subarea of computer science, information science, data science, or cybersecurity. The particular subarea varies from semester to semester. Exposes students to current research topics, often via guest faculty members. Offers students an opportunity to practice reading and discussing scientific literature, presenting scientific work, and distilling the key ideas and contributions of papers through required weekly paper summaries. May be repeated once.

Prerequisite(s): CS 3950 with a minimum grade of D-

CS 4955. Computer Science Teaching Seminar. (1 Hour)

Introduces techniques and frameworks to prepare undergraduate students to become more effective teaching assistants in the field of computer science. Students analyze and reflect on literature, case studies, and real examples of teaching computer science. Offers students an opportunity to participate within in-class activities to learn presentation skills, to practice speaking to different audience sizes, and to learn how to work with different types of audiences. Culminates with a final capstone project in which students prepare and present a lecture on a topic in computer science. Successful students are prepared for careers in teaching, presenting technical content when pursuing graduate studies, and for presenting technical information in industry.

Prerequisite(s): CS 2500 with a minimum grade of D-

CS 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors in the discipline project.

CS 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field.

Prerequisite(s): CS 4970 with a minimum grade of D-

CS 4973. Topics in Computer Science. (4 Hours)

Offers a lecture course in computer science on a topic not regularly taught in a formal course. Topics may vary from offering to offering. May be repeated up to three times.

Prerequisite(s): CS 3000 with a minimum grade of D- ; (CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-)

CS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CS 4991. Research. (4,8 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to three times.

Prerequisite(s): CS 3500 with a minimum grade of D- ; CS 3800 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

CS 4992. Directed Study. (1-6 Hours)

Focuses on student examining standard computer science material in fresh ways or new computer science material that is not covered in formal courses. May be repeated up to three times.

Prerequisite(s): CS 3500 with a minimum grade of D- ; CS 3800 with a minimum grade of D-

CS 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

CS 5001. Intensive Foundations of Computer Science. (4 Hours)

Introduces systematic problem solving through programming. Offers students an opportunity to learn how to analyze a problem, how to divide and organize the problem into appropriate components, how to describe the problem in a computer language, how to analyze and understand the behavior of their programs, and how to test that their programs are working correctly. Additionally, introduces a method of program design called object-oriented programming and various ways to organize data, including a discussion of their advantages and disadvantages. To practice the course concepts, students undertake assignments ranging from small, highly specified programming tasks to larger open-ended problems where students design and code their own solutions.

Corequisite(s): CS 5003

CS 5002. Discrete Structures. (4 Hours)

Introduces the mathematical structures and methods that form the foundation of computer science. Studies structures such as sets, tuples, sequences, lists, trees, and graphs. Discusses functions, relations, ordering, and equivalence relations. Examines inductive and recursive definitions of structures and functions. Covers principles of proof such as truth tables, inductive proof, and basic logic and the counting techniques and arguments needed to estimate the size of sets, the growth of functions, and the space-time complexity of algorithms. Also, discusses data structures such as arrays, stacks, queues, lists, and the algorithms that manipulate them.

CS 5003. Recitation for CS 5001. (0 Hours)

Provides a small-group discussion format to cover material in CS 5001. *Coreq CS 5001..*

Corequisite(s): CS 5001

CS 5004. Object-Oriented Design. (4 Hours)

Presents a comparative approach to object-oriented programming and design. Discusses the concepts of object, class, metaclass, message, method, inheritance, and genericity. Reviews forms of polymorphism in object-oriented languages. Contrasts the use of inheritance and composition as dual techniques for software reuse—forwarding vs. delegation and subclassing vs. subtyping. Offers students an opportunity to obtain a deeper understanding of the principles of object-oriented programming and design, including software components, object-oriented design patterns, and the use of graphical design notations such as UML (unified modeling language). Illustrates basic concepts in object-oriented design with case studies in application frameworks and by writing programs in Java.

Prerequisite(s): (CS 5001 with a minimum grade of C- or CS 5001 with a minimum grade of C-); (CS 5002 with a minimum grade of C- or CS 5002 with a minimum grade of C-)

Corequisite(s): CS 5005

CS 5005. Recitation for CS 5004. (0 Hours)

Provides small-group discussion format to cover material in CS 5004.

Corequisite(s): CS 5004

CS 5007. Computer Systems. (2 Hours)

Introduces the basic design of computing systems, computer operating systems, and assembly language using a RISC architecture. Describes caches and virtual memory. Covers the interface between assembly language and high-level languages, including call frames and pointers; the use of system calls and systems programming to show the interaction with the operating system; and the basic structures of an operating system, including application interfaces, processes, threads, synchronization, interprocess communication, deadlock, memory management, file systems, and input/output control.

CS 5008. Data Structures, Algorithms, and Their Applications within Computer Systems. (4 Hours)

Presents an integrated approach to the study of data structures, algorithms, and their application within systems topics. Introduces a variety of fundamental algorithmic techniques (divide-and-conquer, dynamic programming, graph algorithms) and systems topics (models of computation, computer architecture, compilation, system software, networking). Demonstrates the integration of topics through programming assignments in the C language that implement fundamental data structures (lists, queues, trees, maps, graphs) and algorithms as they are applied in computer systems. Additional breadth topics include programming applications that expose students to primitives of different subsystems using threads and sockets.

Prerequisite(s): (CS 5001 with a minimum grade of C- or CS 5001 with a minimum grade of C-); (CS 5002 with a minimum grade of C- or CS 5002 with a minimum grade of C-)

Corequisite(s): CS 5009

CS 5009. Recitation for CS 5008. (0 Hours)

Provides small-group active learning format to augment material in CS 5008.

Corequisite(s): CS 5008

CS 5010. Programming Design Paradigm. (4 Hours)

Introduces modern program design paradigms. Starts with functional program design, introducing the notion of a design recipe. The latter consists of two parts: a task organization (ranging from the description of data to the creation of a test suite) and a data-oriented approach to the organization of programs (ranging from atomic data to self-referential data definitions and functions as data). The course then progresses to object-oriented design, explaining how it generalizes and contrasts with functional design. In addition to studying program design, students also have an opportunity to practice pair-programming and public code review techniques, as found in industry today.

Corequisite(s): CS 5011

CS 5011. Recitation for CS 5010. (0 Hours)

Provides small-group discussion format to cover material in CS 5010.

Corequisite(s): CS 5010

CS 5047. Exploring AI Trends and Tools. (4 Hours)

Explores key ideas in artificial intelligence while delving into trending developments in the field. Examines AI tools and frameworks to enable collaboration effectively and efficiently across technical and nontechnical stakeholders. Analyzes topics such as AI-enabled perception, representation, reasoning, and learning as contextualized by societal impact. Offers students an opportunity to obtain the knowledge and skills necessary to confidently navigate the ever-evolving landscape of AI.

CS 5097. Mixed Reality. (4 Hours)

Seeks to provide a strong foundation in the fundamentals of virtual and augmented reality, broadly defined as mixed reality (XR), and hands-on experience developing XR applications. Offers students an opportunity to dive into this burgeoning area of research and practice in computer science. Given the complex nature of XR environments, this course synthesizes theoretical and practice knowledge from various disciplines, including computer graphics, 3D interfaces, human-computer interaction, tracking systems, and perceptual psychology (to name a few). XR technologies have recently witnessed a resurgence of interest.

CS 5100. Foundations of Artificial Intelligence. (4 Hours)

Introduces the fundamental problems, theories, and algorithms of the artificial intelligence field. Topics include heuristic search and game trees, knowledge representation using predicate calculus, automated deduction and its applications, problem solving and planning, and introduction to machine learning. Required course work includes the creation of working programs that solve problems, reason logically, and/or improve their own performance using techniques presented in the course.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 5150. Game Artificial Intelligence. (4 Hours)

Offers an overview of classical and modern approaches to artificial intelligence in digital games. Focuses on the creation of believable agents and environments with the goal of providing a fun and engaging experience to a player. Covers player modeling, procedural content generation, behavior trees, interactive narrative, decision-making systems, cognitive modeling, and path planning. Explores different approaches for behavior generation, including learning and rule-based systems. Requires students to complete several individual assignments in these areas to apply the concepts covered in class. Students choose a group final project, which requires a report, to explore one aspect of artificial intelligence for games in further depth. Offers students an opportunity to learn team management and communication. Requires knowledge of algorithms and experience with object-oriented design or functional programming.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 5170. Artificial Intelligence for Human-Computer Interaction. (4 Hours)

Offers an overview of the wide range of AI techniques that exploit knowledge of the domain and humans to facilitate interaction between humans and systems, mediate human-human interaction, leverage humans to improve system performance, and promote beneficial outcomes at the social and individual level. Topics can include AI/human computation, plan and activity recognition, smart sensing/homes, active learning, preference elicitation, intelligent/adaptive user interfaces, and mixed human-agent simulations. Studies how to design and develop intelligent interaction technologies while also critically assessing their social and ethical impact.

Prerequisite(s): CS 5100 with a minimum grade of C- ; CS 5800 with a minimum grade of C- ; CS 6140 with a minimum grade of C-

CS 5180. Reinforcement Learning and Sequential Decision Making. (4 Hours)

Introduces reinforcement learning and the underlying computational frameworks and the Markov decision process framework. Covers a variety of reinforcement learning algorithms, including model-based, model-free, value function, policy gradient, actor-critic, and Monte Carlo methods. Examines commonly used representations including deep learning representations and approaches to partially observable problems. Students are expected to have a working knowledge of probability and linear algebra, to complete programming assignments, and to complete a course project that applies some form of reinforcement learning to a problem of interest.

CS 5200. Database Management Systems. (4 Hours)

Introduces relational database management systems as a class of software systems. Prepares students to be sophisticated users of database management systems. Covers design theory, query language, and performance/tuning issues. Topics include relational algebra, SQL, stored procedures, user-defined functions, cursors, embedded SQL programs, client-server interfaces, entity-relationship diagrams, normalization, B-trees, concurrency, transactions, database security, constraints, object-relational DBMSs, and specialized engines such as spatial, text, XML conversion, and time series. Includes exercises using a commercial relational or object-relational database management system.

Attribute(s): NUpath Analyzing/Using Data

CS 5310. Computer Graphics. (4 Hours)

Introduces the fundamentals of two-dimensional and three-dimensional computer graphics, with an emphasis on approaches for obtaining realistic images. Covers two-dimensional algorithms for drawing lines and curves, anti-aliasing, filling, and clipping. Studies rendering of three-dimensional scenes composed of spheres, polygons, quadric surfaces, and bi-cubic surfaces using ray-tracing and radiosity. Includes techniques for adding texture to surfaces using texture and bump maps, noise, and turbulence. Requires knowledge of linear algebra.

Prerequisite(s): MATH 2331 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 5330. Pattern Recognition and Computer Vision. (4 Hours)

Introduces fundamental techniques for low-level and high-level computer vision. Examines image formation, early processing, boundary detection, image segmentation, texture analysis, shape from shading, photometric stereo, motion analysis via optic flow, object modeling, shape description, and object recognition (classification). Discusses models of human vision (gestalt effects, texture perception, subjective contours, visual illusions, apparent motion, mental rotations, and cyclopean vision). Requires knowledge of linear algebra.

Prerequisite(s): MATH 2331 with a minimum grade of D- or graduate program admission

CS 5335. Robotic Science and Systems. (4 Hours)

Introduces autonomous mobile robots with a focus on algorithms and software development, including closed-loop control, robot software architecture, wheeled locomotion and navigation, tactile and basic visual sensing, obstacle detection and avoidance, and grasping and manipulation of objects. Offers students an opportunity to progressively construct mobile robots from a predesigned electromechanical kit. The robots are controlled wirelessly by software of the students' own design, built within a provided robotics software framework. Culminates in a project that connects the algorithms and hardware developed in the course with a selected topic in the current robotics research literature.

CS 5340. Computer/Human Interaction. (4 Hours)

Covers the principles of human-computer interaction and the design and evaluation of user interfaces. Topics include an overview of human information processing subsystems (perception, memory, attention, and problem solving); how the properties of these systems affect the design of user interfaces; the principles, guidelines, and specification languages for designing good user interfaces, with emphasis on tool kits and libraries of standard graphical user interface objects; and a variety of interface evaluation methodologies that can be used to measure the usability of software. Other topics may include World Wide Web design principles and tools, computer-supported cooperative work, multimodal and "next generation" interfaces, speech and natural language interfaces, and virtual reality interfaces. Course work includes both the creation and implementation of original user interface designs, and the evaluation of user interfaces created by others. Requires knowledge of C programming language/UNIX.

CS 5350. Applied Geometric Representation and Computation. (4 Hours)

Surveys practical techniques for representing geometric objects in two and three dimensions, for computing their motions and interactions, and for human interfaces to manipulate them. These techniques are useful not only in graphics but also in robotics, computer vision, game design, geographic information systems, computer-aided design and manufacturing, spatial reasoning and planning, physical simulation, biomechanics, and the implementation of many types of human-computer interface. Requires undergraduate background in algorithms.

CS 5360. Noninteractive Computer Graphics. (4 Hours)

Introduces computer graphics algorithms and concepts. Focuses on offline rendering techniques. Consists of a lecture component and in-class laboratory offering instruction about common image synthesis algorithms and techniques to generate images used in games and 3D-animated movies. Culminates in a final individual or group project to complete a renderer for generating high-quality images. This course is appropriate for students interested in a career as a graphics, rendering, or high-performance computer engineer.

CS 5400. Principles of Programming Language. (4 Hours)

Studies the basic components of programming languages, specification of syntax and semantics, and description and implementation of programming language features. Discusses examples from a variety of languages.

Prerequisite(s): CS 5010 with a minimum grade of D- or CS 5004 with a minimum grade of B- or CS 5010 with a minimum grade of C- (Graduate)

CS 5500. Foundations of Software Engineering. (4 Hours)

Covers the foundations of software engineering, including software development life cycle models (e.g., waterfall, spiral, agile); requirements analysis; user-centered design; software design principles and patterns; testing (functional testing, structural testing, testing strategies); code refactoring and debugging; software architecture and design; and integration and deployment. Includes a course project where some of the software engineering methods (from requirements analysis to testing) are applied in a team-based setting. Requires admission to MS program or completion of all transition courses.

Prerequisite(s): CS 5010 with a minimum grade of D or CS 5004 with a minimum grade of C or CS 5010 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

CS 5520. Mobile Application Development. (4 Hours)

Focuses on mobile application development on a mobile phone or related platform. Discusses memory management; user interface building, including both MVC principles and specific tools; touch events; data handling, including core data, SQL, XML, and JSON; network techniques and URL loading; and, finally, specifics such as GPS and motion sensing that may be dependent on the particular mobile platform. Students are expected to work on a project that produces a professional-quality mobile application and to demonstrate the application that they have developed. The instructor chooses a modern mobile platform to be used in the course.

CS 5540. Game Programming. (4 Hours)

Covers the skills needed to develop easily scalable and modifiable scripts that can be used to implement various game mechanics common to most game genres. Programming is an integral part of the digital game design and development life cycle. Designed as a foundational game programming course covering numerous aspects of game programming.

Prerequisite(s): (CS 5004 with a minimum grade of C- or CS 5004 with a minimum grade of C-) or (CS 2500 with a minimum grade of D- ; CS 2510 with a minimum grade of D- ; CS 3500 with a minimum grade of D-) or CS 5010 with a minimum grade of C-

CS 5600. Computer Systems. (4 Hours)

Studies the structure, components, design, implementation, and internal operation of computer systems, focusing mainly on the operating system level. Reviews computer hardware and architecture including the arithmetic and logic unit, and the control unit. Covers current operating system components and construction techniques including the memory and memory controller, I/O device management, device drivers, memory management, file system structures, and the user interface. Introduces distributed operating systems. Discusses issues arising from concurrency and distribution, such as scheduling of concurrent processes, interprocess communication and synchronization, resource sharing and allocation, and deadlock management and resolution. Includes examples from real operating systems. Exposes students to the system concepts through programming exercises. Requires admission to MS program or completion of all transition courses.

CS 5610. Web Development. (4 Hours)

Discusses Web development for sites that are dynamic, data driven, and interactive. Focuses on the software development issues of integrating multiple languages, assorted data technologies, and Web interaction. Considers ASP.NET, C#, HTTP, HTML, CSS, XML, XSLT, JavaScript, AJAX, RSS/Atom, SQL, and Web services. Each student must deploy individually designed Web experiments that illustrate the Web technologies and at least one major integrative Web site project. Students may work in teams with the permission of the instructor. Each student or team must also create extensive documentation of their goals, plans, design decisions, accomplishments, and user guidelines. All source files must be open and be automatically served by a sources server.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 5700. Fundamentals of Computer Networking. (4 Hours)

Studies network protocols, focusing on modeling and analysis, and architectures. Introduces modeling concepts, emphasizing queuing theory, including Little's theorem, M/M/1, M/M/m, M/D/1, and M/G/1 queuing systems. Discusses performance evaluation of computer networks including performance metrics, evaluation tools and methodology, simulation techniques, and limitations. Presents the different harmonizing functions needed for communication and efficient operation of computer networks and discusses examples of Ethernet, FDDI, and wireless networks. Covers link layer protocols including HDLC, PPP, and SLIP; packet framing; spanning tree and learning bridges, error detection techniques, and automatic repeat request algorithms; sliding window and reliable/ordered services; and queuing disciplines including FQ and WFQ. Introduces flow control schemes, such as window flow control and leaky bucket rate control schemes, and discusses congestion control and fairness. Requires knowledge of probability theory.

CS 5800. Algorithms. (4 Hours)

Presents the mathematical techniques used for the design and analysis of computer algorithms. Focuses on algorithmic design paradigms and techniques for analyzing the correctness, time, and space complexity of algorithms. Topics may include asymptotic notation, recurrences, loop invariants, Hoare triples, sorting and searching, advanced data structures, lower bounds, hashing, greedy algorithms, dynamic programming, graph algorithms, and NP-completeness.

Attribute(s): NUpath Formal/Quant Reasoning

CS 5850. Building Game Engines. (4 Hours)

Discusses the components of game engines and strategies for their software implementation. Includes graphics management algorithms (animation, scene graph, level of detail); basic artificial intelligence algorithms (search, decision making, sensing); and related algorithmic issues (networking, threading, input processing). Explores the use of data-driven software design. Offers students an opportunity to use a rendering engine and to build and integrate several software components to create a complete game engine. Requires students to work on individual assignments and then develop a project in a team, which requires a report. Offers students an opportunity to learn team/project management; work division; team communication; and the software development cycle of implementation, testing, critique, and further iteration. Requires knowledge of computer graphics, differential calculus, operating systems concepts, and algorithms.

CS 5933. Advanced Computer Science Topics for Teachers. (4 Hours)

Offers learners intending to be certified as K–12 computer science educators an advanced programming course. Covers GUI development and event-driven programming, an introduction to modeling and simulation, basics of computer networking and security, as well as topics related to the state of the art in computer science.

CS 5934. Introduction to Inclusive Computer Science Teaching. (4 Hours)

Introduces teaching computer science (CS) in grades K–12. Focuses on integrating CS concepts with other topic areas. Includes working with multilingual learners—examining student identities with respect to CS and exploring strategies for creating an inclusive CS classroom. Offers students an opportunity to design and practice implementing lesson plans for CS curricula at all grade levels, to explore current research in CS education, and to build a portfolio of teaching resources.

CS 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering.

CS 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned', and incorporate suggestions from this review to improve and further develop their career development and professional plan. May be repeated twice.

CS 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner. May be repeated two times.

CS 5976. Directed Study. (2-4 Hours)

Focuses on student examining standard computer science material in fresh ways or new computer science material that is not covered in formal courses. May be repeated up to three times.

CS 6120. Natural Language Processing. (4 Hours)

Provides an introduction to the computational modeling of human language, the ongoing effort to create computer programs that can communicate with people in natural language, and current applications of the natural language field, such as automated document classification, intelligent query processing, and information extraction. Topics include computational models of grammar and automatic parsing, statistical language models and the analysis of large text corpuses, natural language semantics and programs that understand language, models of discourse structure, and language use by intelligent agents. Course work includes formal and mathematical analysis of language models, and implementation of working programs that analyze and interpret natural language text.

CS 6140. Machine Learning. (4 Hours)

Provides a broad look at a variety of techniques used in machine learning and data mining, and also examines issues associated with their use. Topics include algorithms for supervised learning including decision tree induction, artificial neural networks, instance-based learning, probabilistic methods, and support vector machines; unsupervised learning; and reinforcement learning. Also covers computational learning theory and other methods for analyzing and measuring the performance of learning algorithms. Course work includes a programming term project.

Prerequisite(s): CS 5800 with a minimum grade of C- or CS 7800 with a minimum grade of C-

CS 6200. Information Retrieval. (4 Hours)

Provides an introduction to information retrieval systems and different approaches to information retrieval. Topics covered include evaluation of information retrieval systems; retrieval, language, and indexing models; file organization; compression; relevance feedback; clustering; distributed retrieval and metasearch; probabilistic approaches to information retrieval; Web retrieval; filtering, collaborative filtering, and recommendation systems; cross-language IR; multimedia IR; and machine learning for information retrieval.

CS 6220. Data Mining Techniques. (4 Hours)

Covers various aspects of data mining, including classification, prediction, ensemble methods, association rules, sequence mining, and cluster analysis. The class project involves hands-on practice of mining useful knowledge from a large data set.

Prerequisite(s): CS 5800 with a minimum grade of C- or CS 7800 with a minimum grade of C-

CS 6240. Large-Scale Parallel Data Processing. (4 Hours)

Covers big-data analysis techniques that scale out with increasing number of compute nodes, e.g., for cloud computing. Emphasizes approaches for problem and data partitioning that distribute work effectively, while keeping total cost for computation and data transfer low. Studies and analyzes deterministic and random algorithms from a variety of domains, including graphs, data mining, linear algebra, and information retrieval in terms of their cost, scalability, and robustness against skew. Course work emphasizes hands-on programming experience with modern state-of-the-art big-data processing technology. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): CS 5800 with a minimum grade of C- or CS 7800 with a minimum grade of C- or EECE 7205 with a minimum grade of C-

CS 6350. Empirical Research Methods. (4 Hours)

Presents an overview of methods for conducting empirical research within computer science. These methods help provide objective answers to questions about the usability, effectiveness, and acceptability of systems. The course covers the basics of the scientific method, building from a survey of objective measures to the fundamentals of hypothesis testing using relatively simple research designs, and on to more advanced research designs and statistical methods. The course also includes a significant amount of fieldwork, spanning the design, conduct, and presentation of small empirical studies.

CS 6410. Compilers. (4 Hours)

Expects each student to write a small compiler. Topics include parser generation, abstract syntax trees, symbol tables, type checking, generation of intermediate code, simple code improvement, register allocation, run-time structures, and code generation.

Prerequisite(s): CS 5400 with a minimum grade of C- or CS 7400 with a minimum grade of C-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CS 6510. Advanced Software Development. (4 Hours)

Designed to integrate academic concepts and practical experience of software design by having students work as part of a programming team, with an option to lead a subteam. Offers students an opportunity to study, in-depth, some aspects of the development process. The goal is to have students participate in a large-scale project, taking time to reflect and analyze the work and the process, rather than concentrating exclusively on the final product. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): (CS 5004 with a minimum grade of B- or CS 5010 with a minimum grade of C-); CS 5500 with a minimum grade of C-

CS 6620. Fundamentals of Cloud Computing. (4 Hours)

Covers fundamentals of cloud computing, including virtualization and containers, distributed file systems and object stores, infrastructure as a service platforms, open source cloud platforms, key big data platforms, and topics in data center scale systems. Combines classroom material delivered via lectures, readings from literature, student presentations, and a semester-long software project.

CS 6640. Operating Systems Implementation. (4 Hours)

Introduces concepts of OS kernels. Discusses the design and implementation of today's OS kernel components, such as process abstraction, virtual memory module, and file systems. Offers students an opportunity to obtain hands-on experience in building these components step-by-step through a series of assignments on a state-of-the-art hardware platform and to implement their own OS kernels that can run on bare-metal machines.

Prerequisite(s): CS 3650 with a minimum grade of D- or CS 5600 with a minimum grade of C-

CS 6650. Building Scalable Distributed Systems. (4 Hours)

Covers the essential elements of distributed, concurrent systems and builds upon that knowledge with engineering principles and practical experience with state-of-the-art technologies and methods for building scalable systems. Scalability is an essential quality of internet-facing systems and requires specialized skills and knowledge to build systems that scale at low cost.

CS 6710. Wireless Network. (4 Hours)

Covers both theoretical issues related to wireless networking and practical systems for both wireless data networks and cellular wireless telecommunication systems. Topics include fundamentals of radio communications, channel multiple access schemes, wireless local area networks, routing in multihop ad hoc wireless networks, mobile IP, and TCP improvements for wireless links, cellular telecommunication systems, and quality of service in the context of wireless networks. Requires a project that addresses some recent research issues in wireless and mobile networking.

Prerequisite(s): CS 5700 with a minimum grade of C- or CS 5700 with a minimum grade of D-

CS 6760. Privacy, Security, and Usability. (4 Hours)

Challenges conventional wisdom and encourages students to discover ways that security, privacy, and usability can be made synergistic in system design. Usability and security are widely seen as two antagonistic design goals for complex computer systems. Topics include computer forensics, network forensics, user interface design, backups, logging, economic factors affecting adoption of security technology, trust management, and related public policy. Uses case studies such as PGP, S/MIME, and SSL. Introduces basic cryptography and hash function as it is needed. Course work includes analysis of papers, problem sets, and a substantial term project.

CS 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

CS 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated once.

CS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CS 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

CS 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

CS 6983. Topics in Computer Science. (4 Hours)

Offers various topics in computer science. May be repeated once.

CS 7140. Advanced Machine Learning. (4 Hours)

Covers topics in advanced machine learning. Presents materials in the current machine learning literature. Focuses on graphical models, latent variable models, Bayesian inference, and nonparametric Bayesian methods. Seeks to prepare students to do research in machine learning. Expects students to read conference and journal articles, present these articles, and write an individual research paper. CS 7140 and EECE 7397 are cross-listed.

Prerequisite(s): CS 6140 with a minimum grade of C- or EECE 7204 with a minimum grade of C- or EECE 7313 with a minimum grade of C-

CS 7150. Deep Learning. (4 Hours)

Introduces deep learning, including the statistical learning framework, empirical risk minimization, loss function selection, fully connected layers, convolutional layers, pooling layers, batch normalization, multilayer perceptrons, convolutional neural networks, autoencoders, U-nets, residual networks, gradient descent, stochastic gradient descent, backpropagation, autograd, visualization of neural network features, robustness and adversarial examples, interpretability, continual learning, and applications in computer vision and natural language processing. Assumes students already have a basic knowledge of machine learning, optimization, linear algebra, and statistics.

Prerequisite(s): CS 6140 with a minimum grade of C- or DS 5220 with a minimum grade of C-

CS 7170. Seminar in Artificial Intelligence. (2-4 Hours)

Offers students an opportunity to read and present various survey and research papers in artificial intelligence. May be repeated up to five times for a maximum of 24 semester hours. Faculty supervisor and topics vary from semester to semester.

Prerequisite(s): CS 5100 with a minimum grade of C- or CS 5100 with a minimum grade of D-

CS 7180. Special Topics in Artificial Intelligence. (4 Hours)

Offers various topics on artificial intelligence. May be repeated up to two times.

CS 7200. Statistical Methods for Computer Science. (4 Hours)

Introduces concepts in applied statistics. Covers frequentist and Bayesian characterization of uncertainty for continuous and categorical data, principles of experimental design, and methods of causal inference. Discusses the methodological foundations, as well as issues of practical implementation and use.

CS 7240. Principles of Scalable Data Management: Theory, Algorithms, and Database Systems. (4 Hours)

Covers the algorithms, core principles, and foundational concepts for managing data at scale. Topics include data models, query languages, query execution and optimization, complexity of query execution and query resilience, data stream processing, parallel data processing, transactions, linear vs. relational algebra, factorizations, and uncertainty in logic. Requires standard CS knowledge of algorithms and hardness (e.g., a typical undergraduate class based on a standard algorithms textbook such as Ericson; Cormen, Leiserson, Rivest, and Stein; or Dasgupta, Papadimitriou, and Vazirani). Offers students an opportunity to gain hands-on experience through smaller assignments and a project. The project is flexible to allow students to explore scalable data management and analysis aspects related to their PhD research.

CS 7250. Information Visualization: Theory and Applications. (4 Hours)

Covers foundational as well as contemporary topics of interest in data visualization to enable the effective representation of data across disciplines, including examples drawn from computer science, physical sciences, biomedical sciences, humanities, and economics. Topics include data visualization theory and methodology, visualization design and evaluation, visual perception and cognition, interaction principles, and data encoding and representation techniques. Students who do not meet course restrictions may seek permission of instructor.

CS 7260. Visualization for Network Science. (4 Hours)

Covers the principles of information visualization in the specific context of network science. Introduces visual encoding of data and our understanding of human vision and perception; interaction principles including filtering, pivoting, aggregation; and both quantitative and human subjects evaluation techniques. Covers visualization techniques for several network types, including multivariate networks with attributes for entities and relationships, evolving and dynamic networks that change over time, heterogeneous networks with multiple types of entities, and geospatial networks. Offers students an opportunity to learn about the design of layout algorithms for node-link and matrix visualizations.

CS 7270. Seminar in Database Systems. (2-4 Hours)

Gives students the opportunity to read and present various survey and research papers in database systems. Faculty supervisor and topics vary from semester to semester. May be repeated for credit for PhD students.

Prerequisite(s): CS 5200 with a minimum grade of C- or CS 5200 with a minimum grade of D-

CS 7280. Special Topics in Database Management. (4 Hours)

Offers various topics. Possible areas include object-oriented database systems and distributed database systems. May be repeated up to two times.

CS 7290. Special Topics in Data Science. (4 Hours)

Offers special topics in data science, including machine learning, statistics, data mining, parallel and distributed data analysis, database systems, information retrieval, knowledge representation, information visualization, natural language processing, computational biology and bioinformatics, computational social science, digital humanities, health informatics, business, and predictive analytics. May be repeated once for up to 8 total credits.

CS 7295. Special Topics in Data Visualization. (4 Hours)

Offers various topics in data visualization. May be repeated once.

CS 7300. Empirical Research Methods for Human Computer Interaction. (4 Hours)

Introduces concepts related to human subject studies for human computer interaction and personal health informatics. Discusses the methodological foundations, as well as issues of practical implementation and use. Provides an overview of the most common experimental designs used in these fields, and how studies should be proposed, conducted, analyzed, and documented for publication. Covers qualitative methods, including interviewing and focus groups, along with approaches to inductive qualitative data analysis. Methods discussed in the course are useful in any area of science that involves the application of the scientific method to situations involving people interacting with computational artifacts or systems, including observation, hypothesis formation, measurement, and descriptive and inferential statistical analyses.

CS 7332. Machine Learning with Graphs. (4 Hours)

Covers a number of advanced topics in machine learning and data mining on graphs, including vertex classification, graph clustering, link prediction and analysis, graph distance functions, graph embedding and representation learning, deep learning for graphs, anomaly detection, graph summarization, network inference, adversarial learning on networks, and notions of fairness in social networks. Seeks to familiarize students with state-of-the-art descriptive and predictive algorithms on graphs. Requires a foundational understanding of calculus and linear algebra, probability, machine learning or data mining, algorithms, and programming skills.

Prerequisite(s): PHYS 5116 with a minimum grade of C

CS 7340. Theory and Methods in Human Computer Interaction. (4 Hours)

Covers the foundations of human abilities, computational artifacts, design, and evaluation. Human computer interaction concerns the design and evaluation of software based on a deep understanding of how humans interact with computers, devices, and sensors. The field merges theories from psychology and computer science, using methods from AI and design. Introduces cognitive, perceptual, and affective theories and theories of individual differences that allow us to design and develop better computer software and systems. Also covers research methods for designing and evaluating computer software systems. Topics discussed in the context of next-generation interaction modalities include sensors, haptics, wearables, and performative interfaces. Students who do not meet course restrictions may seek permission of instructor.

CS 7375. Seminar in Human-Computer Interaction. (4 Hours)

Offers students an opportunity to read and present various survey and research papers in human-computer interaction, computer-supported collaborative work, data visualization, social computing, design, critical computing, accessibility, game design, health informatics, personal health informatics, human-robot interaction, or HCI in security. May be repeated once.

CS 7380. Special Topics in Graphics/Image Processing. (4 Hours)

Offers various topics on graphics/image processing. May be repeated up to two times.

CS 7390. Special Topics in Human-Centered Computing. (4 Hours)

Offers various topics in human-centered computing. May be repeated once.

CS 7400. Intensive Principles of Programming Languages. (4 Hours)

Studies the basic components of programming languages, specification of syntax and semantics, and description and implementation of programming language features. Discusses examples from a variety of languages.

CS 7430. Formal Specification, Verification, and Synthesis. (4 Hours)

Covers software and system modeling (how to formally describe the behavior of software and systems); specification (how to formally state the properties that the system should have); verification (how to check whether—and ultimately prove—that a system satisfies its specification); and synthesis (how to automatically generate software and systems that are "correct-by-construction").

CS 7470. Seminar in Programming Languages. (2-4 Hours)

Gives students the opportunity to read and present various survey and research papers in programming languages. Faculty supervisor and topics vary from semester to semester. May be repeated three times for a maximum of 16 total semester hours.

Prerequisite(s): CS 5400 with a minimum grade of C- or CS 5400 with a minimum grade of D- or CS 7400 with a minimum grade of C-

CS 7480. Special Topics in Programming Language. (4 Hours)

Offers various topics in programming language. May be repeated up to two times.

CS 7485. Special Topics in Formal Methods. (4 Hours)

Offers various topics in formal methods. May be repeated without limit.

CS 7575. Seminar in Software Engineering. (2-4 Hours)

Gives students the opportunity to read and present various survey and research papers in software engineering. Faculty supervisor and topics vary from semester to semester. May be repeated for credit for PhD students.

Prerequisite(s): CS 6520 with a minimum grade of C-

CS 7580. Special Topics in Software Engineering. (4 Hours)

Offers various topics on software engineering. May be repeated up to two times.

CS 7600. Intensive Computer Systems. (4 Hours)

Studies the structure, components, design, implementation, and internal operation of computer systems, focusing on the operating system level. Reviews computer hardware and architecture including the arithmetic and logic unit, and the control unit. Covers current operating system components and construction techniques including the memory and memory controller, I/O device management, device drivers, memory management, file system structures, and the user interface. Discusses distributed operating systems, real-time systems, and addresses concurrent processes, scheduling, interprocess communication, and synchronization. Discusses relevant distributed algorithms. Also covers design and analysis techniques for desirable properties in computer systems including functional correctness (in the absence of faults), performance and throughput, fault-tolerance and reliability, real-time response, security, and quality of service. Draws examples from real operating systems. Emphasizes abstraction, while programming exercises are used to facilitate the understanding of concepts.

CS 7610. Foundations of Distributed Systems. (4 Hours)

Covers foundational concepts in the design and implementation of efficient and reliable distributed computing systems. Covers internet communication protocols, fault-tolerant computing, synchronization protocols, synchronous and asynchronous computing, dynamic group communication systems, load balancing, Byzantine models, distributed hash tables, distributed file systems, and application of foundational concepts to modern distributed systems in the field. Requires knowledge of operating systems; e.g., an undergraduate course in Systems and Networks, Computer Systems, or Networks and Distributed systems.

CS 7670. Seminar in Computer Systems. (2-4 Hours)

Gives students the opportunity to read and present various survey and research papers in computer systems. Faculty supervisor and topics vary from semester to semester. May be repeated three times for a maximum of 16 total semester hours.

Prerequisite(s): CS 5600 with a minimum grade of C- or CS 5600 with a minimum grade of D- or CS 7600 with a minimum grade of C-

CS 7675. Master's Research. (4 Hours)

Exposes students to research in the fields of computer sciences. Explores how the scientific method is applied to these fields and covers the breadth of subareas of specialty that exist. Offers students an opportunity to practice how to locate and read scientific literature in different subareas. May be repeated once.

CS 7680. Special Topics in Computer Systems. (4 Hours)

Offers various topics on computer systems. May be repeated up to two times.

CS 7770. Seminar in Computer Networks. (2-4 Hours)

Gives students the opportunity to read and present various survey and research papers in computer networks. Faculty supervisor and topics vary from semester to semester. May be repeated for credit for PhD students.

Prerequisite(s): CS 5700 with a minimum grade of C- or CS 5700 with a minimum grade of D-

CS 7775. Seminar in Computer Security. (2-4 Hours)

Gives students the opportunity to read and present various survey and research papers in cryptography and computer security. Faculty supervisor and topics vary from semester to semester. May be repeated for credit for PhD students.

CS 7800. Advanced Algorithms. (4 Hours)

Presents advanced mathematical techniques for designing and analyzing computer algorithms. Reviews some of the material covered in CS 5800 and then covers advanced topics. Emphasizes theoretical underpinnings of techniques used to solve problems arising in diverse domains. Topics include asymptotic analysis, advanced data structures, dynamic programming, greedy algorithms and matroid theory, amortized analysis, randomization, string matching, algebraic algorithms, and approximation algorithms. Introduces Turing machines, P and NP classes, polynomial-time reducibility, and NP completeness.

CS 7805. Complexity Theory. (4 Hours)

Covers core topics in computational complexity, including NP-completeness, time and space complexity, polynomial hierarchy, circuit complexity, probabilistic computation, interactive proofs, and hardness of approximation. Moves to more advanced topics that may include lower bounds, pseudorandomness, cryptography, and communication complexity.

Prerequisite(s): CS 7800 with a minimum grade of C-

CS 7810. Foundations of Cryptography. (4 Hours)

Offers students at the PhD level an accelerated introduction to cryptography and quickly progresses to advanced topics that are at the forefront of current research. Cryptography is the science of protecting information against adversarial eavesdropping and tampering. Examines what kind of security properties can be achieved by relying solely on probability and information theory, without restricting the adversary's computational power. Studies the complexity-theoretic basis of modern cryptography and the connection between computational hardness and pseudo-randomness. Explores, as the main component of the course, how to take a few well-studied problems in number theory and algebra and use them to build powerful cryptosystems with advanced functionality and security properties. Requires prior completion of an undergraduate course in the theory of computation.

CS 7840. Foundations and Applications of Information Theory. (4 Hours)

Studies information theory and selected applications for data management, machine learning, and information retrieval. Information theory examines the transmission, processing, extraction, and utilization of information. Topics include entropy; mutual information; cross-entropy; data processing theorem; information inequalities; Cox's theorem; maximum entropy solutions; and applications such as data normalization, decision trees, maximum likelihood, logistic regression, and VC dimensions. Requires prior study of standard computer science algorithms. Offers hands-on experience through a flexible project, allowing students to explore information theory in aspects related to their PhD research.

CS 7870. Seminar in Theoretical Computer Science. (2-4 Hours)

Gives students the opportunity to read and present various survey and research papers in theoretical computer science. Faculty supervisor and topics vary from semester to semester. May be repeated three times for a maximum of 16 total semester hours.

Prerequisite(s): CS 5800 with a minimum grade of C- or CS 5800 with a minimum grade of D- or CS 7800 with a minimum grade of C-

CS 7880. Special Topics in Theoretical Computer Science. (4 Hours)

Covers various topics including advanced cryptography, approximation algorithms, complexity theory, computational algebra, distributed computing, formal verification, network algorithms, online computation, parallel computing, and randomness and computation. May be repeated up to two times.

CS 7930. Effective Scientific Writing in Computer Science. (2 Hours)

Introduces the principles and practice of technical communication in computer science and related fields. Emphasizes concepts such as genre, structure, argument, and audience expectations. Focuses on the story of scientific research and how it manifests in written genre like the abstract, research statement, and conference paper, with a portion of the course focused on presentation design and delivery.

CS 7962. Elective. (2-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CS 7976. Directed Study. (2-4 Hours)

Focuses on student examining standard computer science material in fresh ways or new computer science material that is not covered in formal courses. May be repeated without limit.

CS 7980. Research Capstone. (4 Hours)

Offers students a culminating experience to demonstrate proficiency in key concepts learned throughout their programs in the core and elective courses. Designed to reinforce concepts in ethics and basic concepts in research, beyond an emphasis on the technical principles learned throughout the program.

Prerequisite(s): (CS 5004 with a minimum grade of C- or CS 5010 with a minimum grade of C-); CS 5800 with a minimum grade of C-

CS 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

CS 7990. Thesis. (4 Hours)

Offers selected work with the agreement of a project supervisor. May be repeated once.

CS 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continued thesis work conducted under the supervision of a departmental faculty.

Prerequisite(s): CS 7990 with a minimum grade of C-

CS 8674. Master's Project. (4 Hours)

Offers selected work with the agreement of a project supervisor. May be repeated once.

CS 8948. Research Work Experience - Half-Time. (0 Hours)

Provides an opportunity for all doctoral students to engage in industry research in the area of their dissertation. Doctoral students register for this course before starting their off-campus internship. May be repeated up to five times.

CS 8949. Research Work Experience. (0 Hours)

Provides an opportunity for all doctoral students to engage in industry research in the area of their dissertation. Doctoral students register for this course before starting their off-campus internships. May be repeated without limit.

CS 8982. Readings. (1-8 Hours)

Offers selected readings under the supervision of a faculty member. May be repeated without limit.

CS 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

CS 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

CS 9990. Dissertation Term 1. (0 Hours)

Offers selected work with the agreement of a thesis supervisor.

Prerequisite(s): CS 9000 with a minimum grade of S

CS 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): CS 9990 with a minimum grade of S

CS 9996. Dissertation Continuation. (0 Hours)

Continues work with the agreement of a thesis supervisor.

Prerequisite(s): CS 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Computer Systems Engineering (CSYE)**Courses****CSYE 5976. Directed Study. (1-4 Hours)**

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to seven times for a maximum of 8 semester hours.

CSYE 6200. Concepts of Object-Oriented Design. (4 Hours)

Introduces object-oriented design and programming via the Java programming language; the use of inheritance, composition, and interface classes in software design; development of Java applets and applications; study of the Java class libraries, including the swing tool kit for building human computer interfaces, the network package for development of client-server systems, and the collections' package for data structures and sorting algorithms. Requires a course project. Requires knowledge of C programming.

CSYE 6202. Concepts of Object-Oriented Design with C#. (4 Hours)

Introduces object-oriented design and programming via the C# (C-sharp) programming language and its underlying .NET platform. Covers the use of inheritance and composition in software design and development of complex C# .NET applications. Topics include classes, overloading, data abstraction, information hiding, encapsulation, inheritance, polymorphism, file processing, templates, exceptions, container classes, and low-level language features.

CSYE 6205. Concepts of Object-Oriented Design with C++. (4 Hours)

Introduces object-oriented design and programming via the C++ programming language. Covers the use of inheritance and composition in software design and development of complex C++ applications. Topics include classes, overloading, data abstraction, information hiding, encapsulation, inheritance, polymorphism, file processing, templates, exceptions, container classes, and low-level language features. Requires a course project.

CSYE 6220. Enterprise Software Design. (4 Hours)

Designed to build on previous experience in concepts of object-oriented design courses with equal focus in the three areas of architecture, design, and implementation. Instruction and hands-on exercises cover both server-side and client-side web programming. Offers students an opportunity to build a conceptual understanding and to gain practical experience with popular frameworks (Spring MVC, Hibernate, and Dojo or jQuery) that increase productivity, empower developers, and greatly simplify web development. The goal is to be able to build the server side and client side of substantial web-based, client-server, database-intensive, multitier applications.

Prerequisite(s): CSYE 6200 with a minimum grade of B- or CSYE 6202 with a minimum grade of B- or CSYE 6205 with a minimum grade of B-

CSYE 6225. Network Structures and Cloud Computing. (4 Hours)

Offers a practical foundation in cloud computing and hands-on experience with the tools used in cloud computing. Designed as a foundation course for cloud-aware, adept professionals. Focuses on the fundamentals of cloud computing, the principal areas of cloud architectures, cloud security, cloud governance, cloud storage, cloud virtualization, and cloud capacity. Discusses the Internet evolution that led to cloud and how cloud applications revolutionized Web applications.

Prerequisite(s): CSYE 6200 with a minimum grade of B- or INFO 5100 with a minimum grade of B- or INFO 5100 with a minimum grade of B-

CSYE 6230. Operating Systems. (4 Hours)

Covers basic concepts of operating systems and system programming, such as utility programs, subsystems, and multiple-program systems. Main topics include processes, interprocess communication, and synchronization; memory allocation, segmentation, and paging; loading, linking, and libraries; resource allocation, scheduling, and performance evaluation; file systems, storage devices, and I/O systems; and protection, security, and privacy. Emphasizes key concepts through code design and development.

Prerequisite(s): INFO 6205 with a minimum grade of B-

CSYE 6305. Introduction to Quantum Computing with Applications. (4 Hours)

Addresses how scientists and engineers can use quantum computers to simulate large quantum mechanical systems easily, which is crucial in discovery of new lifesaving drugs and new efficient materials. Quantum computers maintain an abstract state where both 0 and 1 states exist simultaneously with some probability. The course delves deeper into how such an abstract state can be realized physically and used as a computing tool to simplify algorithm implementation and execution. Offers students an opportunity to learn about the latest breakthroughs in cryptography systems (RSA), as well as fast database search; accurate weather forecasting; ultrasecure communication; and fast image recognition.

Prerequisite(s): INFO 6205 with a minimum grade of B

CSYE 6700. Technical Writing and Professional Development. (0 Hours)

Emphasizes professional communication skills through intensive verbal practice and technical writing application. Students work together in groups and individually to practice verbal and written communication to increase their English competency and comfort level for work in the United States. Offers students an opportunity to develop their ability to communicate technical skills sets in a professional setting. This course does not count toward graduation requirements.

CSYE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CSYE 7105. High-Performance Parallel Machine Learning and AI. (4 Hours)

Explores the parallelization of machine learning and deep learning code that leads to high performance on heterogeneous cluster architectures. Includes the applications to a variety of domains, including image classification, speech recognition, and natural language processing, etc. Covers a brief overview of the emerging parallel computing applications. Analyzes system architectures for different kinds of parallel computing systems (shared-memory system, distributed-memory system, accelerator system, and hybrid). Offers students an opportunity to practice the principles and the practice of the emerging parallelism-based machine-learning paradigm.

Prerequisite(s): DAMG 6105 with a minimum grade of B or INFO 6105 with a minimum grade of B

CSYE 7125. Advanced Cloud Computing. (4 Hours)

Examines a collection of repeatable, generic software design patterns such as sidecar pattern, ambassador pattern, adapter pattern, event driven, stream and batch processing, containers and container orchestration with Kubernetes, replication, partitioning, transactions, consistency, and consensus to help make the development of reliable distributed systems more approachable and efficient. Microservices, containers, and container orchestration have fundamentally changed how distributed systems are developed. Offers students an opportunity to determine which kind of technology is appropriate for which purpose and to understand how these patterns can be combined to form the foundation of a good application architecture.

Prerequisite(s): CSYE 6225 with a minimum grade of B

CSYE 7200. Big-Data System Engineering Using Scala. (4 Hours)

Covers the fundamentals of functional programming with Scala and seeks to provide a basic, practical foundation for students who want to use it as a language for working with big-data platforms. Scala is one of a new breed of general-purpose functional programming languages that is strongly typed and is object oriented. It runs on the Java virtual machine and is able to share libraries from the vast collection of open-source projects written in Java. For these reasons it is readily accessible by programmers of Java, C++, and similar languages.

CSYE 7215. Foundations of Parallel, Concurrent, and Multithreaded Programming. (4 Hours)

Covers all aspects of concurrent program design, development, and implementation utilizing the Java multithreading API/facilities. Topics covered include thread safety and lifetime issues, block structured versus explicit synchronization, intrinsic versus explicit locking, thread pools, liveness issues, deadlock, livelock, race conditions, atomicity, performance and scalability, execution policies, test strategies. Major Java multithreading API/facilities covered include synchronized blocks, wait sets, intrinsic locks and condition variables, synchronized and concurrent collections, executor framework. Comparisons between the Java multithreading API and the Posix Pthreads multithreading standard are provided.

Prerequisite(s): CSYE 6200 with a minimum grade of B- or INFO 5100 with a minimum grade of B- or INFO 5100 with a minimum grade of B-

CSYE 7220. Deployment and Operation of Software Applications. (4 Hours)

Introduces the four most popular infrastructure languages—Chef, Puppet, Ansible, and Salt—and codes with them in the same way that we code with Java, Python, C#, and Javascript. IT infrastructure languages and their underlying methods and tools, referred to as DevOps, bridge the gap between software development and software administration. Instead of recruiting CPU cycles on our laptops, we create and manage virtual IT infrastructures on a public cloud. Offers students an opportunity to learn how to manipulate virtual machines, containers, and lambdas and set up assembly lines on public clouds in the fashion of a Model T assembly line.

Prerequisite(s): CSYE 6220 with a minimum grade of B- or INFO 6250 with a minimum grade of B-

CSYE 7230. Software Engineering. (4 Hours)

Looks at the software life cycle (requirements analysis and specification, software design, coding, testing, and maintenance). Offers verification, validation, and documentation at various stages of the life cycle. Covers the Unified Modeling Language as applied to the software life cycle. Covers applications of design patterns. Overviews user interface design, software metrics, and software development environments. Emphasis is on modular software construction and development of modular libraries. Requires a small software development project.

Prerequisite(s): CSYE 6200 (may be taken concurrently) with a minimum grade of B- or INFO 5100 (may be taken concurrently) with a minimum grade of B- or INFO 5100 (may be taken concurrently) with a minimum grade of B-

CSYE 7235. Model-Driven Architecture. (4 Hours)

Develops the skills to utilize new software modeling and management techniques in each state of the life cycle of component-based software systems. Applies and extends a basic knowledge of the Unified Modeling Language (UML). Introduces and applies metamodel management concepts using the OMG metaobject facility as a technology baseline. Develops a component-based software project throughout the course using C++ or Java; grading primarily based on the software project and its public presentation.

Prerequisite(s): INFO 6205 with a minimum grade of B-

CSYE 7270. Building Virtual Environments. (4 Hours)

Covers the basics of three-dimensional graphics programming using the Unity game engine. Includes a built-in terrain editor; a shader development facility; built-in physics; and advanced lighting, shadows, and audio to build 3D virtual environments and serious games. Javascript and C# can be used for scripting. Assets from various 3D modeling programs can be imported. Facilities to publish to the PC, Mac, iPhone and Wii and support for real-time multiplayer games are available. Requires a final project.

CSYE 7280. User Experience Design and Testing. (4 Hours)

Introduces user experience concepts while working on Web design projects. Offers students an opportunity to build the necessary skill sets to make better decisions when designing contemporary websites that cater to customer needs. Students practice interview techniques to understand user requirements while keeping user experience central to the effort. Uses wireframes and user scenarios to drive the creative design process. Various case studies are introduced and discussed in team settings to emphasize user perspectives. Uses quality assurance and usability testing to drive validation and user-acceptance testing and approvals.

Prerequisite(s): CSYE 6200 (may be taken concurrently) with a minimum grade of B- or INFO 5100 (may be taken concurrently) with a minimum grade of B- or INFO 5100 (may be taken concurrently) with a minimum grade of B-

CSYE 7370. Deep Learning and Reinforcement Learning in Game Engineering. (4 Hours)

Introduces a deep learning and reinforcement learning framework for games called ML-Agents, which enable games and simulations to serve as environments for training intelligent agents. Studies and reviews classical game artificial intelligence (game AI), primarily search and decision trees. Uses game AI to generate responsive, adaptive, or intelligent behaviors primarily in nonplayer characters (NPCs) similar to human-like intelligence. Game AI includes everything from simple chasing and evading to pattern movement, to create opponents with complex tactical and strategic decisions.

Prerequisite(s): INFO 5100 with a minimum grade of B or INFO 5100 with a minimum grade of B or CSYE 6200 with a minimum grade of B

CSYE 7374. Special Topics in Computer Systems Engineering. (4 Hours)

Offers topics of current interest in computer systems engineering. May be repeated without limit.

CSYE 7380. Theory and Practical Applications of AI Generative Modeling. (4 Hours)

Covers transformer-based language models (e.g., ChatGPT and Bard); generative image models (e.g., GAN and variational autoencoder); and generative models for structured data (e.g., Bayesian networks). Explores generative models for data of major modalities, namely, textual, image, and structured relational. Offers students an opportunity to learn how to build such models for practical applications in different verticals using Python and numerous publicly available libraries in Keras/TensorFlow and PyTorch. Given recent surges in generative modeling tools, generative modeling technologies and applications are necessary skills for students entering the field of industrial data science.

Prerequisite(s): INFO 6205 with a minimum grade of B

CSYE 7470. Advanced Game Analytics. (4 Hours)

Explores the use of deep learning for the automated creation and analysis of game metrics. Uses convolutional neural networks (CNNs) to segment and identify anything on a game screen in real-time, which is used as input to AI systems. The second part of the course analyzes the importance of the metrics. Covers surrogate models, Shannon entropy, Individual Conditional Expectation (ICE), leave-one-covariate-out (LOCO), local feature importance, partial dependency plots, tree-based feature importance, standardized coefficient importance, accumulated local effects (ALE) plots, and Shapley values. Lastly, covers building predictive models with game data using the following techniques: supervised learning, generative/discriminative learning, parametric/nonparametric learning, neural networks, unsupervised learning reinforcement learning, and adaptive control.

Prerequisite(s): INFO 6105 with a minimum grade of B

CSYE 7550. Distributed Intelligent Agents in the Metaverse. (4 Hours)

Introduces the field of agent-based computing as enablers of metaverse social avatar systems. Focuses on important aspects that shape the agent's experience within the challenging virtual-reality design and engineering landscape. Covers personal space, personified locomotion, agent aesthetics, agent social interactions, and agent's relation to blockchain decentralized virtual identity. Students engage in projects to deliver VR platforms applicable to engineering fields such as mechanical, civil, chemical, and bioengineering. Considers distributed learning applications and certification of credentials, as well. Offers students an opportunity to learn how to configure various agent types to construct virtual worlds bursting with lively agent interactive experiences that go far beyond the constraints of the physical reality.

Prerequisite(s): CSYE 7270 with a minimum grade of B ; INFO 6205 with a minimum grade of B

CSYE 7945. Master's Project. (4 Hours)

Supports teamwork on a large software project under faculty supervision. The projects are drawn from an engineering field, and involve design, systems engineering, manufacturing, planning maintenance, reliability, quality control, risk assessment, project control, evaluation of alternatives, and so on. The project may cover either the whole software development life cycle or a significant part of it.

CSYE 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CSYE 7976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to seven times for a maximum of 8 semester hours.

CSYE 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

CSYE 7990. Thesis. (4 Hours)

Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. May be repeated once.

CSYE 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers analytical and/or experimental work conducted under the auspices of the department.

Construction Management - CPS (CMG)

Courses

CMG 6400. Introduction to Construction Management. (4 Hours)

Seeks to provide a foundation in both technical skills and individual written and verbal communication for construction project managers. Since students come to the program from a variety of educational and experience backgrounds, offers students an opportunity to be assessed and brought to the level necessary for successful completion of the program. Topics covered include construction documentation, including specifications and drawings; the preconstruction processes required for planning; and construction operations needed for successful operations and control, including estimating, cost control, and change-order management. Students practice scheduling techniques, progress monitoring, and reporting approaches for projects and are introduced to construction organizations, contractor selection, and project procurement.

CMG 6402. Alternative Project Delivery Methods and Project Controls. (4 Hours)

Offers a comprehensive overview of alternative project delivery systems in public and private sectors. Topics include project life cycle; alternative project design, including building information modeling (BIM); schedule; cost and value management; project and program management; project closeout; and innovative procurement strategies. Also examines international projects, contracts, terminations, defaults, and sustainable and integrated project delivery (IPD) as vehicles to ensure the meeting of project objectives. Uses case studies and real-world examples to identify and practice the leadership skills required for successful project execution.

CMG 6403. Safety, Project Risk, and Quality Management. (4 Hours)

Offers students an opportunity to learn how to develop and manage a risk identification, analysis, and response plan. Students look at project participants and several construction processes with a focus on the safety, risk, and quality impacts on those processes. Covers the latest techniques to ensure that a project provides a safe environment for everyone. Studies the analytical tools necessary to ensure customer satisfaction in the area of quality and examines both quality control and assurance processes.

CMG 6405. Construction Law. (4 Hours)

Explores the statutory and legal context of contracts in construction. Covers business ethics and examines the legal issues that may result in bidding mistakes and construction disputes over such matters as differing expectations regarding specifications and plans, time and schedule impacts, delays and acceleration, change orders, and differing and unforeseen conditions. Explores some areas of warranties and guarantees; joint liability; and contract-dispute resolution, including negotiation, alternative dispute resolution, and litigation.

CMG 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Cooperative Education (COOP)

Courses

COOP 3945. Co-op Work Experience. (0 Hours)

Provides students an opportunity for work experience. Requires sophomore standing or above. May be repeated up to five times.

Attribute(s): NUpath Integration Experience

COOP 3946. Co-op Work Experience--Half Time. (0 Hours)

Provides students an opportunity for work experience. Requires sophomore standing or above. May be repeated up to five times.

Attribute(s): NUpath Integration Experience

COOP 3947. Co-op Work Experience Abroad--Half Time. (0 Hours)

Provides students with an opportunity for work experience abroad. Requires sophomore standing or above. May be repeated up to five times.

Attribute(s): NUpath Integration Experience

COOP 3948. Co-op Work Experience Abroad. (0 Hours)

Provides students with an opportunity for work experience abroad. Requires sophomore standing or above. May be repeated up to five times.

Attribute(s): NUpath Integration Experience

COOP 3949. Internship Exchange. (0 Hours)

Offers students an opportunity to participate in an internship experience. May be repeated up to five times.

Cooperative Education - CPS (COP)

Courses

COP 3940. Personal and Career Development. (3 Hours)

Offers students an opportunity to use co-op experience along with this course to clarify their vision of a successful professional and personal future and identify goals to create that vision; identify strengths, weaknesses, and communication and conflict-management preferences; design a career action plan; and develop and practice articulating professional goals, personal brand, and knowledge and experience gained from co-op. Encourages students to engage in a combination of introspection, critical reflection on experiences in the workplace, and with online collaborative learning and group behavior; learn to identify and analyze career and personal development opportunities in the external environment; and practice communication, relationship-building, conflict management, and leadership skills. This companion course to an internship or co-op requires permission of the CPS Office of Cooperative Education.

COP 3944. Co-op Work Experience - Half-Time. (0 Hours)

Offers students an opportunity to engage in work experience that relates to their academic field of study. May be repeated up to four times.

COP 3945. Co-op Work Experience—Full Time. (0 Hours)

Offers students an opportunity to engage in work experience that relates to their field of study. May be repeated without limit.

COP 4946. Global Co-op Work Experience - Full Time. (0 Hours)

Offers students an opportunity to engage in a global work experience that relates to their field of study. May be repeated without limit.

COP 5002. Internship. (0 Hours)

Enables students to engage in an internship to gain practical experience relating to their field of study. May be repeated up to two times.

COP 6940. Personal and Career Development. (3-4 Hours)

Offers a companion course to an internship or co-op. Offers students an opportunity to use the work experience along with this course to (1) clarify vision of a successful professional and personal future and identify goals to creating that vision; (2) identify strengths, weaknesses, and communication and conflict-management preferences; (3) design a career action plan; and (4) develop and practice articulating professional goals, personal brand, and knowledge and experience gained from the co-op. Encourages students to engage in a combination of (1) introspection; (2) critical reflection on experiences in the workplace and with online collaborative learning and group behavior; (3) learning to identify and analyze career and personal development opportunities in the external environment; and (4) practicing communication, relationship building, conflict management, and leadership skills. Requires permission of the CPS Office of Cooperative Education.

COP 6945. Co-op Work Experience—Full Time. (0 Hours)

Offers students an opportunity to engage in work experience that relates to their field of study. May be repeated without limit.

COP 6946. Global Co-op Work Experience—Full Time. (0 Hours)

Offers students an opportunity to engage in a global work experience that relates to their field of study. May be repeated without limit.

Cooperative/Experiential Education (EXED)

Courses

EXED 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EXED 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EXED 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EXED 4959. Cooperative Education Integrated Experience. (4 Hours)

Offers a guided learning opportunity to graduate students to accompany their cooperative education work experience. Under faculty supervision and assessment, students engage in one or more projects related to, but distinct from, their work assignments, or explore topics related to their work experience to enhance their experiential learning. May be repeated twice.

EXED 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EXED 5945. Experiential Integration Seminar. (0 Hours)

Guides students in connecting experiential learning to key concepts and skills for the student's degree program. May be repeated twice.

EXED 6959. Cooperative Education Integrated Experience. (4 Hours)

Offers a guided learning opportunity to graduate students to accompany their cooperative education work experience. Under faculty supervision and assessment, students engage in one or more projects related to, but distinct from, their work assignments, or explore topics related to their work experience to enhance their experiential learning. May be repeated twice.

EXED 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Corporate Innovation (INNO)

Courses

INNO 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INNO 2206. Global Social Enterprise. (4 Hours)

Designed to provide students with an in-depth exposure to entrepreneurship in the social sector, a rapidly growing segment of the global economy. Uses the case method to expose students to leading entrepreneurs who have developed and implemented business models to solve social problems such as extreme poverty, disease, illiteracy, and economic and social dislocation. Focuses on uniquely creative and driven people who have dedicated their lives to making a difference in the lives of others through values-based entrepreneurship.

INNO 2301. Innovation!. (4 Hours)

Designed for students across the entire University who wish to learn about innovation—the creative process, the different types of innovation, how innovations are created, and how innovations can be transformed into commercial reality either as new products or new services and either in startups, existing corporations, and nonprofit entities. Offers students an opportunity to obtain the fundamental insight needed to understand the innovation process and to become a player in it.

Attribute(s): NUpath Creative Express/Innov

INNO 2304. Industry Disruption and Corporate Transformation. (4 Hours)

Offers students an opportunity to learn several interrelated frameworks, concepts, and the language necessary to understand and analyze the origin and implications of industry disruptions and the difficulties experienced by incumbent firms as they seek to respond to the changes. Geared toward students who want to become innovation leaders in established companies and lead projects to create and launch new products or services, as well as students who plan to start their own businesses, particularly in high-technology sectors.

INNO 2414. Social Responsibility of Business in an Age of Inequality. (4 Hours)

Studies how businesses can be agents for social good, both locally and around the world. In an era of growing social and economic inequality both in the United States and globally, many “enlightened” businesses are reconsidering their roles in creating opportunity for disadvantaged or marginalized people and communities. Focuses on businesses that have the resources to invest in innovative social responsibility programs that address the impact of rising social and economic inequality. Considers the tension between the single-minded notion of maximizing profit for investors and serving a broader stakeholder community. The role of entrepreneurship and entrepreneurial thinking plays a key role in student learning. This is an integrative course that includes areas such as business policy, governance, strategy, and decision making.

INNO 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INNO 3308. Business Economic History of South Africa. (4 Hours)

Covers the economic history of modern South Africa through lectures from faculty at the partner university in South Africa and also from the Northeastern professor. Includes the country's transition from apartheid to its present economic and political situation. Offers an opportunity to learn how South Africa has managed to overcome the struggles of its recent past and become one of the leading emerging economies of the world with a flourishing business community. Includes readings in and study of modern South African economics, law, history, politics, and culture.

Attribute(s): NUpath Societies/Institutions

INNO 3335. Product Innovation and Portfolio Management. (4 Hours)

Covers the intersection of project management, product development, and product portfolio management. Focuses on how large corporations develop, manage, and commercialize new products and services. Explores the unique attributes of different industries, such as internet platform-based firms, service-based firms, traditional manufacturing firms, and healthcare.

INNO 3520. Impact Investing and Social Finance. (4 Hours)

Explores impact investing, a transformative way to work with money to achieve a more inclusive and sustainable economy. Large investors are entering the world of impact investing, a rapidly emerging space where social and ecological effects of finance are championed over maximizing shareholder value. New investment vehicles such as social impact bonds and Web exchanges are changing the role of financing institutions to better serve the needs of low-income populations around the world. Applies interdisciplinary frameworks, tools, and cases, with hands-on teamwork and guest speakers, to critically examine the field. Offers students an opportunity to learn to develop and test concepts that integrate social responsibility, sustainability, and mutual accountability into current financial and economic systems while expanding social capital markets.

INNO 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INNO 4225. Growth, Acquisitions, and Alliances. (4 Hours)

Analyzes whether, why, and how multibusiness corporations expand their operations into new business areas by questioning decisions to grow organically or through mechanisms such as acquisitions or alliances. Uses rigorous case-based discussions, expert readings, and major current events to discuss issues related to the choice of make, buy, or partner. Evaluates how these different corporate entrepreneurial strategies are used to help firms be more competitive and innovative.

INNO 4504. Integrated Studies in Corporate Innovation. (4 Hours)

Offers students an opportunity to experience corporate innovation in the classroom. Corporate innovation involves an enterprise experimenting with modern practices, technology, strategies, and opportunities to make its existing business model more competitive in the current marketplace. Students, as a class, represent a specific firm and tackle these corporate innovation challenges by adopting a culture that embraces new technology and actively seeks out ways to enhance the firm's business model. With this proactive approach to corporate innovation, the students can visualize how enterprises can remain agile in the face of rising competition. The goal is to learn how corporations may even identify new opportunities before any startup has a chance to establish itself in the market.

Prerequisite(s): ENTR 2301 with a minimum grade of D- or INNO 2301 with a minimum grade of D-

INNO 4506. Integrated Studies in Social Innovation and Entrepreneurship. (4 Hours)

Focuses on a single developing region. Offers an opportunity to analyze the role of socially-driven entrepreneurship or "social impact enterprises" (SIEs) in alleviating poverty and its symptoms (for example, disease, illiteracy and chronic unemployment) in that country. Students have an opportunity to study the history, politics, and development of the country, with an emphasis on the role that private-sector initiatives have played and hope to play in addressing widespread poverty and with a focus on the failures and successes in economic and business development, economic growth, and poverty alleviation. Offers students an opportunity to develop a plan for a micro-investment strategy focused on these and/or similar businesses and organizations having a significant social impact in a developing country.

INNO 4983. Special Topics in Innovation. (4 Hours)

Examines areas of current interest and special topics in innovation. Employs a mix of lectures, cases, and projects. Topics depend on the instructor. May be repeated once.

INNO 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INNO 6200. Enterprise Growth and Innovation. (3 Hours)

Explores the challenges and processes for harnessing technological innovation for new-business development. Integrates technology strategy, innovation in marketing, product development, and organization design for the purpose of enterprise growth. Through readings, cases, and exercises, studies how firms from different industries gain competitive advantage through distinctive products and services, and leverage their technologies and skills into new emerging markets. Also focuses on processes for conceiving, financing, and organizing new ventures.

INNO 6217. Lean Innovation. (3 Hours)

Explores how corporate venturing and entrepreneurial teams can quickly and effectively bring new concepts to market. Demonstrates how small technical teams can quickly investigate opportunity spaces, develop and select concepts, and translate these into prototypes. Other topics include industrial design thinking, project teams, prototyping, and commercialization of design. Explores the challenges and solutions to managing a technology-based product within an established corporation and details frameworks on how innovative projects can be inexpensively tested and deployed within the organization.

INNO 6222. Competing in Dynamic, Innovation-Driven Markets. (3 Hours)

Reviews the key theories and tools needed to understand how technological change creates new markets and prompts new business models, how technology-based firms can outcompete rivals in fast-growing markets characterized by high uncertainty, and how the evolution of technology in an industry affects the type of firm capabilities needed to succeed over time.

INNO 6225. Acquisitions, Alliances, and Growth. (3 Hours)

Offers students an opportunity to analyze whether, why, and how multibusiness corporations expand their operations into new business areas by questioning decisions to grow globally through mechanisms such as acquisitions or alliances. Uses rigorous case-based discussions, expert readings, and major current events to discuss issues related to the choice of make, buy, or partner. Offers students an opportunity to evaluate how these different corporate entrepreneurial strategies are used to help firms be more competitive and innovative.

INNO 6226. Leading Digital Transformation in Organizations. (3 Hours)

Examines how the global economy is being transformed by digital and information technologies. Companies increasingly use these technologies to develop and deliver products and services, interact with customers and stakeholders, operate their businesses more efficiently, and disrupt traditional business models with innovative digital solutions. Analyzes how digital technologies offer established companies opportunities to reduce costs, operate more quickly, and offer customers codesign and coproduction options. Studies how firms adapt to new conditions by adopting information technology and the barriers to entry inherent in every organization.

INNO 6227. Digital Bias in Business. (3 Hours)

Delves into the societal and ethical challenges companies increasingly face as they confront new technologies. Studies the origins of these challenges and explores how firms can address these important ethical and societal issues as they seek competitive advantage in the marketplace. Examines the unintended consequences of past technological advances and how firms, regulators, and society responded to similar issues in the past. Evaluates a range of current issues with new technologies and explores the extent to which lessons from the past can be applied to current debates. Explores how differences in incentives across organizations influence their stance on new technologies, including the range of solutions they consider when challenges do arise.

INNO 6230. Platform Innovation. (3 Hours)

Provides a business perspective on how to design and optimize platform-based business models for growth, value creation, and innovation and a practical analytical toolkit of theories, concepts, and frameworks. Uses case studies from various industries. Many of today's growth enterprises and startups are organized as platforms. Platforms facilitate other actors and support interactions among a wider "ecosystem" of users, services, suppliers, etc., and they have potential for massive growth and value creation. High returns to successful platform business models lead companies to learn to act like platforms. Technology trends toward digitization, big data, automation, etc., accelerate these trends. Aimed at people looking to work within existing companies or those interested in starting or growing new platforms.

INNO 6240. Strategic Disruption Residency 1. (1 Hour)

Examines how organizations invest in new technologies to gain a competitive edge. Exposes students to different methods used to improve core business performance through strategic planning, technology road mapping, and market analysis. Offers students an opportunity for hands-on experience with formulating and implementing strategic plans.

INNO 6241. Strategic Disruption Residency 2. (1 Hour)

Emphasizes the importance of how to market and sell new products or services, both for internal and external applications. Offers students an opportunity to acquire a comprehensive understanding of how to design strategic revenue strategies that focus on how value is determined and revenues are matched against expense investments. Guides students to explore the challenges and solutions to implementing new innovation processes that leverage digital technologies and collaborative cultures. Includes a mix of research topics, cases, and hands-on learning.

Prerequisite(s): INNO 6240 with a minimum grade of C-

INNO 6242. Strategic Disruption Residency 3. (1 Hour)

Explores the policies and procedures germane to the internal operation of a technology-driven organization. Emphasizes the principles of risk management and quality control, training and documentation requirements, standards design, and IT support systems. Focuses on choosing, developing, and using operational metrics and analytics to govern a technology-driven operation and mining business intelligence from internal and external sources for use in running that operation.

Prerequisite(s): INNO 6241 with a minimum grade of C-

INNO 6250. Integrated and Applied Technology Leadership Project. (2 Hours)

Offers three executive seminars in which students build "chapters" that comprise their Integrated and Applied Technology Leadership (IATL) project. Primarily examines the technical and managerial challenges of implementing complex technology-based products—from system modeling, integration of modules, requirements verification, and formal specifications to the definition and overall coordination of the development team's efforts. Covers multiple product environments. Pairs students with mentors based on initial project proposal. Regular meetings with mentors offer students opportunities to refine the project and reinforce the business needs. May be repeated twice.

INNO 6252. Business Opportunities in Sustainable Smart City Initiatives. (3 Hours)

Explores technology's role in addressing urban sustainability. Examines the impact of technology, designing profitable smart city projects, and key factors influencing corporate involvement in these initiatives. Studies the navigation of public sector processes for mutual benefit. Topics include smart traffic, safety, housing, the environment, education, healthcare, economic development, and tourism.

INNO 6253. Managing the Metaverse. (3 Hours)

Explores the foundations of the metaverse and its impact on technology, society, and commerce. Analyzes the historical context, augmented and virtual reality, alternate realities, and the potential for a fully realized metaverse. Utilizes transmedia storytelling as a lens to understand how these dimensions shape the human experience and offers opportunities for creative and profitable interactions.

INNO 6254. Technology and the Law. (3 Hours)

Introduces the intersection of law and technology, focusing on legal principles impacting business decisions. Examines how to make informed choices and collaborate with lawyers. Emphasizes understanding key legal issues, effective interaction with legal professionals, and fostering the capability to discuss and explain issues within business teams.

INNO 6300. Managing a Technology-Based Business. (3 Hours)

Covers topics specific to managing a business or a strategic business unit within a firm. Considers the special issues related to technology-based firms. Topics include creating a culture, operations planning, staffing for technical excellence, dealing with technology vendors, dealing with advisers, supply chain management, and writing operations plans. Open to first-year graduate students.

INNO 6318. Innovation Driven Strategy. (2 Hours)

Introduces a number of entrepreneurship and innovation topics, including innovation and entrepreneurship as a value-creating activity for economies and firms; types of innovation (technological, process, products, business models); fundamentals of product development (design thinking, rapid prototyping, ethnography); startup creation and articulating a value proposition; the role and traits of the entrepreneur; maximizing odds of success and minimizing odds of failure; growing the startup and creating a market; finding or creating the right niche; pivoting and judo strategy; lean startup approach; innovation in established firms and resistance to change; organizational inertia; business model change; and technological discontinuities.

INNO 6401. Blockchain AI and IT. (3 Hours)

Covers the design of blockchains and their applications in healthcare, media, financial services, information security, supply chain logistics, and enterprise systems. Introduces the technology underlying blockchains and related implications for IT, analytics, business models, and business processes. Studies a variety of topics within the domain of blockchain technology and its enablement of machine learning. Demonstrates and shares business implications through faculty-led discussion and synthesis. Readings, content, and lectures are context and raw materials.

INNO 6402. Creating Value in the Experience Economy. (3 Hours)

Introduces students to ideas, frameworks, and design principles for creating greater economic value for consumers and in B2B situations. Explores the full "Progression of Economic Value" beginning with fungible commodities (the basis of the agrarian economy), to tangible goods (the industrial economy), to intangible services (last century's service economy), shifting into memorable experiences—the basis of the experience economy.

INNO 6403. Cybersecurity Response Policy and Practice. (3 Hours)

Introduces the tools needed to build, deliver, and implement a cybersecurity strategy, obtain board consensus around the proposed strategy, and develop an associated "cyber playbook" to respond to security incidents. Focuses on cybersecurity strategy and risk framework from the perspective of the board and executive team. Offers students an opportunity to transition from a strategy and planning perspective to driving cybersecurity tactically with security teams and the business, including security awareness and integration of security controls. Examines how to apply tactical knowledge of incident response and reporting via a scenario-based experiential exercise with role-playing in a simulated cybersecurity crisis situation derived from real-world scenarios.

INNO 6404. Database Platform Design. (3 Hours)

Offers students an opportunity to enhance their technology leader skills by developing a working knowledge of data technology concepts such as NoSQL, Hadoop, and distributed processing. Explores metaconcepts to overcome common stumbling blocks and foster collaboration between technology and analysts when defining new work. Students work in groups and individually to experience the frustrations and resolutions of developing a business requirements document for an analytics project. Requires students to present group deliverables each week and to participate in discussions that focus on the process of working on both sides of relationships with technology leads and business users.

INNO 6405. Enterprise Information Security: Threats and Defenses. (3 Hours)

Examines tactical orientation following identification of a security threat, at the point of requiring immediate analysis and response to mitigate damage and loss to an organization. Reviews the strategic design of a connected defensive structure built of tools, procedures, and integrations. Focuses on business model relationships to security threat profiles, including managing vulnerability introduced through mergers and acquisitions and active directory migrations. Studies service and administrative account management and other aspects of network design and management. Offers students an opportunity to investigate recent/current cases and to devise countermeasures aimed at incident prevention and effective cyber incident response management and monitoring.

INNO 6406. Leading Disruptive Change in a Digital Economy. (3 Hours)

Focuses on the impact of information technology on an organization's transformative objectives. Studies concepts relating to how to integrate IT as the key driver for business process change, for continuous improvement in incremental gains, and for selective reengineering to effectuate substantial breakthroughs in process performance. Offers students an opportunity to develop an understanding of how technology has a push effect on an organization's processes and of the various factors that must be in sync to facilitate such an effect.

INNO 6408. Raising Capital. (3 Hours)

Explores multiple strategies for students to launch new ventures as entrepreneurs or intrapreneurs. Focuses on the assessment of business models, funding strategies, team building approaches, and go-to-market examples for new ventures. Offers students an opportunity to draw upon previous academic and professional experience in cross-disciplinary ideation, finance, business strategy, law, market research, and organizational behavior to actualize new venture ideas. Culminates in a new venture pitch to mentors and peers who may include serial entrepreneurs, venture capitalists, startup advisors, and individuals with C-level corporate experience.

INNO 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Counseling and Applied Educational Psychology (CAEP)**Courses****CAEP 1280. Introduction to Mindfulness. (4 Hours)**

Explores modern mindfulness practices and how these practices were derived from Eastern spiritual teachings, including Buddhism and Hinduism. Describes the current literature related to potential health and wellness outcomes of a mindfulness practice. Examines various meditation techniques, as well as accompanying practices such as yoga and breath work. Focuses on developing and practicing daily mindfulness using a highly experiential approach. Offers students an opportunity to learn and discuss the foundations on which such practices are based.

Attribute(s): NUpath Interpreting Culture

CAEP 1290. Personal Behavior Change. (4 Hours)

Designed to help students to develop an awareness of and strategies for the management of their behaviors. Examines how behavior is influenced via operant and respondent conditioning, motivating variables, and reinforcement and punishment. Requires students to design and implement a self-management project that involves goal setting, measuring behavior, selecting and implementing an intervention based on the research, and monitoring and evaluating progress. Offers students an opportunity to develop skills to support their goals, including time management and effective communication.

CAEP 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CAEP 2012. Health Psychology: An Introduction. (4 Hours)

Introduces the field of health psychology, which studies the role of psychology in health, illness, and healthcare. Topics include sustaining and promoting health, as well as experiencing illness and the body. Discusses focusing on people's behaviors, perceptions, emotions, and understandings of health and illness, within the contexts of relationships and culture. Also discusses how the theories and concepts of health psychology are instrumental in health promotion and prevention (including relevance to students' own well-being). Specific themes include the biopsychosocial model of health; stress, coping, and social support; health-promoting and health-risk behaviors; behavior change theories and approaches; gender and health; health disparities; and the relevance of health psychology for health promotion.

CAEP 2030. Education and Learning in Ghana. (4 Hours)

Explores education and learning in educational institutions in Ghana, West Africa. Examines learning with a focus on primary and secondary schools in the context of Ghanaian policies, structures, and culture. Examines issues of educating the Ghanaian citizenry in contrast to issues faced in the United States. Introduces the current standards of education in Ghana and the policies that guide those standards. Offers students an opportunity to witness how Ghanaian culture educates students with disabilities.

Attribute(s): NUpath Integration Experience

CAEP 2040. Higher Education in Ghana. (4 Hours)

Examines the academic programs and the administration of student services/affairs and student development in institutions of higher education in Ghana, West Africa. Explores higher education institutions and student development in the context of Ghanaian culture and society. Considers college student development theories as they relate to Ghanaian students. Compares Ghanaian colleges and universities with institutions in the United States.

Attribute(s): NUpath Societies/Institutions

CAEP 2050. Health Systems, Services, and Education in Ghana. (4 Hours)

Explores healthcare systems, services, education, and training in Ghana, West Africa. Discusses Ghana's medical facilities, services, training institutions, and policies that affect prenatal care, women's health, chronic and communicable diseases, traditional medicine, and general health issues. Explores preventative, immediate, and remedial care and healthcare delivery issues and challenges in Ghana. This is a Dialogue of Civilizations course.

Attribute(s): NUpath Integration Experience

CAEP 2060. Health and Well-Being in Ghana. (4 Hours)

Explores issues involving health and well-being in a Ghanaian context. Utilizes frameworks of well-being to examine ways in which Ghanaian healthcare institutions provide services to its citizenry. Offers students an opportunity to engage in a comparative analysis of college student health and well-being to that of students in U.S. institutions of higher education.

Attribute(s): NUpath Societies/Institutions

CAEP 2101. Behavioral Assessment and Treatment of Health Problems in the 21st Century. (4 Hours)

Focuses on the application of principles of behavior analysis to address health problems in the 21st century, such as obesity, addiction, and adherence to medical procedures. Offers students an opportunity to develop an understanding of basic behavioral principles and how those principles are applied to assess and treat health problems. Compares and contrasts a behavioral approach with other traditional methods in health psychology. Emphasizes systems of measurement, evaluation (single subject design), and treatment. Studies how a behavioral approach is integrated into a multidisciplinary treatment plan.

CAEP 2105. College Student Mental Health. (4 Hours)

Explores the mental health issues of college student populations, especially the mental health challenges that exist in students prior to college enrollment that may affect their matriculation through college. Explains those mental health issues that arise as a result of being a college student. Includes the mental health advocacy needed by these students as well as the services and activities that exist to address their needs.

CAEP 2106. History and Systems of Psychology. (4 Hours)

Offers an overview of the major people and ideas that have helped to shape the field of psychology. Considers both historical and philosophical influences, as well as systems relevant to Western intellectual thought. Affords students the opportunity to become aware of, and gain knowledge about, some of the assumptions, criteria, and systems shaping past and current theories of psychology.

CAEP 2107. Introduction to School Psychology. (4 Hours)

Introduces the field of school psychology, including the history, foundations, and future of the profession; the different roles and functions; the professional issues and standards; licensing and credentialing issues; ethical and legal issues; and the various associations of school psychologists. Discusses the influences of organization and operation of school systems, policy development, and school climate on children as well as school psychologists.

CAEP 2280. The Yoga Tradition in Nepal: Philosophy, Methods, and Practice. (4 Hours)

Introduces key aspects of the yoga tradition including preclassical, classical, postclassical, and modern aspects. Explores teachings from both the Hindu and Tibetan traditions, including the eight limbs of yoga, Hatha Yoga, and Yantra Yoga practices. Describes the research on mental and physical health outcomes from a regular yoga practice.

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture

CAEP 2290. The Yoga Tradition: Philosophy, Methods, and Practice. (4 Hours)

Introduces preclassical, classical, postclassical, and modern aspects of the yoga tradition. Explores teachings from both the Hindu and Tibetan traditions, including the eight limbs of yoga, Hatha Yoga, and Yantra Yoga practices. Describes the research on mental and physical health outcomes from a regular yoga practice.

Attribute(s): NUpath Interpreting Culture

CAEP 2460. Special Education. (4 Hours)

Surveys the characteristics and the development and learning needs of children and youth with special needs. Reviews legislation and current trends, with an emphasis on integration and full inclusion of children and youth with special needs in regular education settings and also in the community. Introduces principles of assessment and intervention and strategies for the development of individualized education programs (IEPs).

CAEP 2899. Introduction to College Student Development and Student Affairs. (4 Hours)

Offers students an opportunity to obtain a basic understanding of the role of the student affairs professional and the theories of college student development that serve as a foundation for practice. Emphasizes the importance of cocurricular educational experiences of students attending institutions of higher education as well as leadership development, problem solving, and career exploration in student affairs.

CAEP 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CAEP 2991. Research in Counseling and Applied Educational Psychology. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

CAEP 3000. Contemporary College Student Activism. (4 Hours)

Explores college student activism from historical foundations, present-day causes, and the possible burgeoning motivations for student activism. Describes student movements in the context of the times in which they exist, such as free speech, antiwar, Occupy Wall Street, and Black Lives Matter, as well as in the time of a pandemic and social unrest. Presents activism as college student development and as a continuing catalyst for changing higher education. Considers the role of media and social media in student activism. Explores the significance of quasi/backlash student movements such as the white student scholarship movement. Offers students an opportunity to work in task groups to think critically about the next generation of student activism.

Attribute(s): NUpath Societies/Institutions

CAEP 3200. Childhood Adversity and College Attainment. (4 Hours)

Introduces students to Adverse Childhood Experiences (ACE) and their prevalence in the childhoods of certain college student populations. Examines how these potentially traumatic events that occur during the ages of 0–17 are linked to chronic health problems, mental illness, and substance misuse in adulthood. Studies how the manifestation of ACE during the college years has implications for student development theory application and administration of services and programs on campuses, as well as ACE's impact on education, job opportunities, and college student degree attainment. Explores the classifications of ACE—pandemic, natural disaster, terrorist attack, or racial and social injustice—and the possible implications of living through, making life adjustments, or absorbing constant media coverage as a result of these experiences.

Attribute(s): NUpath Difference/Diversity

CAEP 3310. Say It Loud: The Black Power Movement and Higher Education. (4 Hours)

Explores the impact of the Black Power movement on American colleges and universities. Examines the history of the movement and its relationship to the civil rights movement and the various impacts of Black Power on contemporary higher education. Traces how the movement led to distinct ideologies, scholarship, practices, and terminology that provided new lenses through which institutions of higher education viewed Negroes in terms of the preservation, transmittal, and enrichment of their culture by means of instruction and scholarly and scientific work. Explores Negro college students' adoption of a Black identity and making demands on campuses that manifested in curricula, programs, and services that represented this identity.

Attribute(s): NUpath Difference/Diversity

CAEP 3480. Counseling Theories and Practice. (4 Hours)

Surveys major theoretical approaches to counseling. Provides training and practice in listening skills to aid in the development of facilitative responses. Combines didactic representations and experiential activities to assist in understanding and implementing a variety of counseling approaches. Requires prior completion of one introductory social science course.

CAEP 3485. Mental Health and Counseling. (4 Hours)

Explores those characteristics that constitute a mentally healthy person, factors in society that impact emotional health, the mind-body relationship, stress, and ways to achieve a higher level of emotional well-being. Offers students the opportunity to work in triads, small groups, and large group discussions. Role-play is utilized where appropriate. Requires prior completion of one introductory social science course.

CAEP 3899. Relationships in College. (4 Hours)

Explores the interpersonal interactions of traditional-age college students with their peers, faculty, roommates, romantic partners, and family. Investigates the implications of relationships on the college student's well-being, growth, and development. Requires students to discuss and analyze the impact of technology on relationships and how it enhances or diminishes effective communication in college. Emphasizes the importance of cultivating relational skills that can be applied in students' postacademic lives.

CAEP 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CAEP 4505. Human Sexuality. (4 Hours)

Presents an in-depth study of human sexuality mostly through role-play, small groups, and self-exploration. Addresses issues that affect the individual and society including intimate relationships, sexual behaviors and lifestyles, gender roles, and current health issues associated with human sexual behaviors. Focuses on counseling and intervention approaches as we explore current issues in human sexuality and trends in the field such as teen sexuality and pregnancy, rape, early sexual experiences, ethics, abortion, HIV and STIs, sex addiction, and sexuality across the life span.

Prerequisite(s): (BIOL 1113 with a minimum grade of C- or BIOL 1147 with a minimum grade of C-); CAEP 2012 with a minimum grade of C

CAEP 4511. Assessment, Program Planning, and Implementation in Special Education. (4 Hours)

Presents the process of assessment, program planning, and implementation for children and youth with special needs. Requires students to administer education assessments, summarize the results in a case report, propose a program of education intervention, and identify methods to facilitate and monitor its implementation, in the context of an individualized education program (IEP).

Prerequisite(s): CAEP 3460 with a minimum grade of D-

CAEP 4525. Introduction to Professional Psychology. (4 Hours)

Offers students an opportunity to gain an understanding of the roles and functions psychologists have in different work settings and how psychological theory, techniques, and research can be applied in real-world situations. Studies the several different areas of professional psychology, including counseling psychology, school psychology, clinical psychology, early intervention, applied behavior analysis, and organizational psychology. Students also have an opportunity to learn how to prepare themselves for graduate school and how to put together an application to graduate school programs. Intended for students considering graduate study in psychology or allied disciplines.

CAEP 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CAEP 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

CAEP 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

CAEP 5150. Early Intervention: Family Systems. (3 Hours)

Introduces students to the theory and practice of family interventions with a diverse population including infants, toddlers, and preschoolers with special needs. Discusses family systems, developmental, coping, crisis, and ecological theories and practices. Teaches assessment and intervention skills. Integrates theories of exceptionality as they pertain to family systems into course material.

Attribute(s): NUpath Difference/Diversity

CAEP 5151. Early Intervention: Infant and Toddler Development, Risk, and Disability. (3 Hours)

Introduces students to the major theories of development and their implications for intervention. Presents and discusses infant/toddlers' development, risk, and disability in the areas of cognition, communication, motor skills, social/emotional development, and adaptive skills, and considers variation in development as a result of multiple factors. Is team-taught by professors drawn from school psychology, special education, speech-language pathology, counseling psychology, nursing, and physical therapy.

CAEP 5153. Early Intervention: Assessment and Intervention. (3 Hours)

Covers assessment models and the multidomain tests used in early intervention. Students become familiar with informal and formal instruments used in different areas including cognition speech and language, motor, and social/emotional domains. Explains the process and responsibilities for the writing of individualized service plans (ISPs), as well as variety of intervention models, methods, and strategies to be implemented in natural environments. Is taught by professors drawn from special education, speech-language pathology, counseling psychology, nursing, and physical therapy. Students participate in Northeastern's Global Early Intervention Network.

CAEP 5330. Applied Animal Behavior Analysis. (4 Hours)

Introduces the reverse translation of behavior from the animal laboratories of Pavlov and Skinner to the world of human behavior change via applied behavior analysis, and back to the socially significant behavior of animals that live in proximity to humans. Discusses how to identify problem behaviors of dogs, cats, and other animals and how to ethically assess and analyze these behaviors through this lens, as well as how to design an ethical course of intervention.

CAEP 5876. Mental Health Education and Program Planning. (3 Hours)

Describes dominant models of health education and program planning for mental health. Emphasizes the importance of collaboration with end users, stakeholders, and the development of partnerships. Highlights cross-cultural differences in health service systems and underserved populations.

CAEP 5877. Research Methods in Applied Psychology. (3 Hours)

Provides an opportunity for students to learn basic concepts in applied research in psychology, education, and related behavioral and mental health fields. Provides a solid foundation for students to conceptualize the purpose, process, and key methods of applied research. Introduces relevant statistical topics within the context of their respective designs.

CAEP 5878. Pediatric Psychology. (3 Hours)

Introduces the field of pediatric psychology, which studies the role of psychology in health, illness, and healthcare among children and adolescents. Reviews various psychological, emotional, and behavioral factors associated with onset, course, and management of specific pediatric illnesses. Explores related evidence-based prevention and treatment interventions.

CAEP 5879. Trauma and Mental Health. (3 Hours)

Introduces the foundations of trauma theory to offer students a trauma-sensitive perspective to the continuum of practice from policy making to direct client service. Reviews the neurophysiology of trauma. Examines causative factors and evidence-based treatments of trauma-related mental health issues (e.g., PTSD). Reviews current theory and research on topical areas related to trauma including intimate partner violence, child abuse, sexual assault, school and community violence, war and terrorism, and other emerging trauma issues.

CAEP 6100. Prevention and Intervention: Evidence-Based Practices. (3 Hours)

Introduces the foundational principles and methods that guide research on prevention and intervention for mental health disorders. Reviews prevention approaches for specific public mental health topics, including intervention theory and clinical trial design, the role of community collaboration and engagement, the utility of interventions that operate at multiple ecological levels, and the complexities involved in the implementation and dissemination of evidence-based practice for mental health across the life span.

CAEP 6110. Etiology-Psychopathology Across the Life Span. (3 Hours)

Examines the major mental disorders across the life span, emphasizing the current thinking regarding etiology and essential features in the context of public health. Reviews diagnosis and classification; epidemiology; and the genetic, neurobiological, cultural, and social factors that relate to the etiology and maintenance of mental health disorders. Addresses innovative approaches and methods to integrate current psychopathology research, mental health frameworks, and public health frameworks.

CAEP 6200. Introduction to Counseling: Theory and Process in an Ecological Context. (3 Hours)

Provides an overview of counseling and psychology from the ecological perspective. Covers the history, theories, and process of counseling across forces within psychology and across individuals (children and adults), groups, and families. Includes an introduction to counseling skills.

CAEP 6201. Introduction to Assessment. (3 Hours)

Introduces testing and assessment in psychology and education including group achievement tests. Covers uses of tests in society, the politics and economics of tests, types of tests, test statistics, reliability, validity, item analysis, test construction, new movements in testing, and applications. Introduces descriptive statistics as a basis for understanding the statistical basis for establishing norms, scales, and for understanding approaches to scoring.

CAEP 6202. Research, Evaluation, and Data Analysis. (3 Hours)

Introduces topics in research and evaluation from a consumer perspective. Covers types of research studies and methodologies, philosophical bases for perspectives, research design, evaluation and outcomes assessment, data analysis techniques, clinical and qualitative approaches, and interpretation of research findings.

CAEP 6203. Understanding Culture and Diversity. (3 Hours)

Works from a broad definition of culture and diversity. In addition to traditional culture and ethnic classifications, examines disability, poverty, and gender as culturally defining factors. Also explores the dynamics of culture in social systems, with the perspective of valuing differences in society and sociocultural forces impinging on culture from the ecological perspective.

CAEP 6206. Learning Principles. (3 Hours)

Provides an overview of the theories of learning, cognition, and emotion. Introduces the major theories and relates them to applications and interventions in psychology and education.

CAEP 6218. Infant, Child, and Adolescent Development. (3 Hours)

Provides an overview of development from birth through late adolescence. Covers the major theories of human development from a culturally informed, gender-sensitive ecological orientation. Reviews stages and theories of development from an interdisciplinary perspective and related to implications for learning. Examines cognitive, language, social/emotional, play, and physical aspects of development.

CAEP 6220. Development Across the Life Span. (3 Hours)

Identifies and addresses culturally and gender-sensitive developmental issues throughout the life span, from the conventional stages of childhood through the end of life. Discusses ethnic, economic, gender, relational, and sexual identities, as well as health-medical and aging concerns.

CAEP 6222. Human Sexuality. (3 Hours)

Designed for the twenty-first century and the critical issues that have evolved in the field. Includes current information on issues in human sexuality (and acts as a forum for the discussion of current trends), which may include HIV/AIDS, abortion, ethics and morality in genetic engineering, sex education in the school and home, teen sexuality and pregnancy, personal behaviors, social aspects of acquaintance rape, early sexual experiences, divorce, and remarriage. Allows for the development of counseling skills needed to deal with various issues.

CAEP 6235. Vocational, Education, and Career Development. (3 Hours)

Focuses on the interactions of economic needs, work, class, education, and contemporary social trends as part of human development in a sociohistoric ecological context.

CAEP 6242. Psychopathology: Diagnosis and Treatment Planning. (3 Hours)

Identifies categories of human difficulty and abnormal behavior through current DSM terminology. Is based in a cultural and gender competent bio-psycho-social model over the life span. Discusses both preventive and individual interventions for each category. Also introduces treatment planning and treatment guidelines.

Prerequisite(s): CAEP 6200 with a minimum grade of B-

CAEP 6247. Child and Adolescent Psychopathology. (3 Hours)

Covers DSM-IV and major forms of psychopathology including the neuroses (obsessional states, hysteria, anxiety states, and phobias), the psychoses (schizophrenia, mania, depression, and paranoia), psychosomatic, sociopathy, conduct disorders, organic disorders, and mental retardation. Discusses the relationship between categories of special education disabilities (emotional impairment, autism, and so on) and DSM-IV.

CAEP 6250. Individual Interventions. (3 Hours)

Focuses on a variety of individually focused interventions: standard techniques used to achieve change goals as well as crisis intervention and prevention. Use of multimodal interventions (for instance, expressive, action) are joined with specific problems that individuals might face. Also addresses crisis intervention, solution-focused treatment planning, and promoting resiliency and activism.

CAEP 6260. Community Counseling Psychology. (3 Hours)

Addresses organizational and systems impact, stressors, and change efforts. Draws from the community, consultation, organizational, prevention, and social psychology literature. Considers understanding of health promotion in social and institutional contexts. Also explores crisis, coping, and social change.

CAEP 6282. Ethics and Professional Development. (3 Hours)

Addresses professional development and mental health counseling issues. Also considers professional ethics from ACA, APA, and FTI, with emphasis on the professional functioning of counselors. Discusses current issues in the practice and control of mental health. Also addresses the role of professional organizations and state licensing.

CAEP 6283. Brief Therapies. (3 Hours)

Discusses brief forms of therapy and counseling. Addresses therapies with each of the theoretical four forces. Discusses advantages and disadvantages of brief therapy. Considers the fit of the therapy with the person or client system as well as the goals and context. Also explores empirical, ethical, pragmatic, and political viewpoints.

Prerequisite(s): CAEP 6200 with a minimum grade of B

CAEP 6286. Family Counseling Interventions. (3 Hours)

Examines the role and social construction of families. Includes a brief overview of theoretical perspectives and especially considers the more recent implications of feminist and multicultural critiques. Discusses relationship building and specific interventions with families in terms of appropriate use of clinical, ethical, and gender/race-ethnic/class competencies.

Prerequisite(s): CAEP 6200 with a minimum grade of B

CAEP 6287. Group Counseling. (3 Hours)

Covers group design, dynamics, and leadership as well as their application in a range of mental health group activities. Since the conventional theoretical orientations have been covered in the theory course (CAEP 6200), this course approaches group work through a broader perspective. For example, while expressive groups based in a humanistic tradition and insight gained through psychodynamic and cognitive traditions are in the course, such recent developments as adventure and psychoeducation group work are also included.

CAEP 6324. Programmed Learning. (3 Hours)

Introduces the importance of programming for effective learning, including for students with autism spectrum disorders. Stresses goals shared by behavior analysts and educators. Employs evidence-based teaching procedures for training complex behavior. Emphasizes the need for assessment and data analysis for programming. Focuses on procedures based on establishing and transferring stimulus control, including establishing equivalence classes.

Prerequisite(s): CAEP 6331 with a minimum grade of B

CAEP 6326. Behavioral Concepts and Principles. (3 Hours)

Introduces concepts and principles that make up the foundation of behavior science. Identifies naturally existing examples of the basic principles of behavior. Requires demonstrated mastery of behavioral explanations of why behaviors occur. Contrasts behavioral descriptions with other philosophical conceptualizations.

CAEP 6327. Behavior Assessment. (3 Hours)

Expands on key elements of behavior assessment including systematic assessment of preferences and reinforcers, and assessment of behavior function through indirect methods, direct methods, and systematic manipulations.

Prerequisite(s): (CAEP 6326 with a minimum grade of B or CAEP 6326 with a minimum grade of B or CAEP 6326 with a minimum grade of B); (CAEP 6329 with a minimum grade of B or CAEP 6329 with a minimum grade of B or CAEP 6329 with a minimum grade of B)

CAEP 6328. Single-Case Research Design. (3 Hours)

Introduces single-case experimental designs and methods to define and measure behavior. Offers students an opportunity to learn how to measure behavior and design experimental arrangements to analyze relationships between dependent and independent variables.

CAEP 6329. Ethics for Behavior Analysts. (3 Hours)

Offers students an opportunity to develop competence in a comprehensive overview of the legal and ethical issues in applied behavior analysis, including design and implementation of applied behavior analytic services and applied research. Discusses ethical issues in staff training, performance management, and program evaluation.

CAEP 6331. Advanced Learning Seminar 1. (3 Hours)

Discusses a broad overview of teaching and learning topics with in-depth focus on specific technologies geared toward increasing behavior change. Identifies the principles involved in learning and how to apply those principles to enhance skill acquisition. Employs evidence-based procedures to systematically increase a behavior. Evaluates the effectiveness of the behavior change procedures throughout the semester.

Prerequisite(s): (CAEP 6326 with a minimum grade of B or CAEP 6326 with a minimum grade of B or CAEP 6326 with a minimum grade of B); (CAEP 6328 with a minimum grade of B or CAEP 6328 with a minimum grade of B or CAEP 6328 with a minimum grade of B)

CAEP 6332. Advanced Learning Seminar 2. (3 Hours)

Explores advanced behavior analytic topics, and practices applying basic principles to more complex scenarios. Extends basic behavior analytic conceptualizations and services, and investigates extensions of the behavioral sciences to areas other than work in special education.

Prerequisite(s): CAEP 6331 with a minimum grade of B or CAEP 6331 with a minimum grade of B

CAEP 6334. Applied Programming Seminar 1. (3 Hours)

Focuses on the systematic application of principles of behavior analysis to interventions in applied settings. Allows students to design, test, and evaluate instructional programs for remedial application to behavior problems and to test instructional theory. Emphasizes the relationship between behavioral assessment and behavioral intervention. Provides supervision through the weekly research and data seminar in collaboration with the student's project adviser.

Prerequisite(s): CAEP 6327 with a minimum grade of B or CAEP 6327 with a minimum grade of B or CAEP 6327 with a minimum grade of B

CAEP 6335. Applied Programming Seminar 2. (3 Hours)

Focuses on the practical issues surrounding development of an applied thesis research topic. Students develop their thesis topic and prepare a written proposal for their thesis research. Students present the initial thesis proposal and periodic updates during the weekly seminar. Thesis committee members are invited to attend their students' presentations to provide feedback and critique of the developing proposal.

Prerequisite(s): CAEP 6334 with a minimum grade of B

CAEP 6336. Systematic Inquiry 1. (3 Hours)

Requires each student to collect a comprehensive bibliography on a significant topic in applied behavioral research and complete a thorough written review. Emphasizes the integration and analysis of experimental findings and theoretical foundations of the research area, critical evaluation of current research, and the identification of potentially fruitful future research. Frequent presentation of current research by students helps develop their oral communication skills and prepares them for becoming contributing professionals in the field of behavior analysis.

Prerequisite(s): (CAEP 6331 with a minimum grade of B or CAEP 6331 with a minimum grade of B); CAEP 6334 with a minimum grade of B

CAEP 6338. Clinical Practice Supervision. (1-3 Hours)

Offers a seminar for supervision of a clinical experience in practicum, internship, or fieldwork. Meets on campus with instructor/supervisor and complements individual supervision at the practice site. May be repeated for up to 6 total credits.

CAEP 6341. Behavioral Interventions. (3 Hours)

Provides a broad overview of teaching and learning based on behavioral principles. Examines specific behavioral technologies geared towards both increasing and decreasing behavior. Emphasizes the relationship between assessment and function-based interventions to treat problem behavior and teach new skills.

Prerequisite(s): CAEP 6326 with a minimum grade of B ; CAEP 6329 with a minimum grade of B

CAEP 6342. Consultation, Supervision, and Management. (3 Hours)

Addresses topics related to behavioral supervision, consultation, and staff/program evaluation in human service organizations, including performance analysis and management, staff training, behavioral systems analysis, organizational culture, and culturally responsive leadership. Explores essential components of organizational behavior management.

CAEP 6343. Radical Behaviorism and Verbal Behavior. (3 Hours)

Explores the foundations of the philosophy of radical behaviorism and its extension to B. F. Skinner's analysis of verbal behavior. Examines explanations of complex human behavior, including verbal and nonverbal behavior, from differing behavioral perspectives. Offers students an opportunity to evaluate how B. F. Skinner's conceptual writings relate to current behavior analytic theory, research, and practice.

Prerequisite(s): CAEP 6326 with a minimum grade of B

CAEP 6344. Experimental Analysis of Behavior. (3 Hours)

Offers students an opportunity to obtain the skills to interpret basic research in behavior analysis. Examines concepts and principles of behavior from an experimental perspective, as well as the causes of complex behavior. Practices developing experimental arrangements to evaluate behavioral principles and analyzing data through cumulative records and single-case experimental design.

Prerequisite(s): CAEP 6326 with a minimum grade of B ; CAEP 6328 with a minimum grade of B

CAEP 6345. Promoting Youth Academic Success in Schools. (3 Hours)

Focuses on learning problems in relation to developmental tasks and curriculum frameworks including reading and writing. Examines the types and causes of learning problems and individual learning styles from constructivist, neuropsychological, and ecological perspectives. Reviews methods for assessment of physical, emotional, intellectual, and social development in childhood and adolescence. Emphasizes special education legislation and current service delivery programs.

CAEP 6346. Individual Behavior for Lasting Change. (3 Hours)

Offers students an opportunity to explore and practice methods to effectively change their own behavior, with the aim to create greater change in the world. Explores the impact of inadvertent behavior change and its potential effects. Emphasizes behavior change that will affect other individuals, communities, cultures and systems, or entire environments.

CAEP 6347. Behavior Management. (3 Hours)

Covers theory, research, and practice pertaining to management of behavior in preschool, elementary, and high school classrooms. Presents development of practical behavioral interventions using a systematic problem-solving process (including functional behavioral assessment). Includes skills and techniques of preventing and remediating behavior problems.

CAEP 6348. Systems in Schools 1. (1 Hour)

Explores a culturally responsive, integrated (academic plus behavioral), multi-tiered system of support within schools (MTSS). Emphasizes a data-based individualization framework to systematize the process of intensifying and adapting evidence-based interventions to meet individual needs of children and youth with disabilities.

CAEP 6349. Systems in Schools 2. (1 Hour)

Continues CAEP 6348. Explores a foundation for understanding a culturally responsive, integrated (academic and behavioral), multilevel system of support within schools. Students design an individualized and integrated academic and behavior plan for children and youth, monitor progress using graphic displays, evaluate outcomes, and discuss intervention adaptations according to data. Emphasizes using a data-based individualization framework that systematizes the process of intensifying and adapting evidence-based interventions to meet individual needs of children and youth from an interdisciplinary framework.

Prerequisite(s): CAEP 6348 with a minimum grade of B

CAEP 6350. Introduction to Cognitive Assessment. (3 Hours)

Introduces cognitive assessment and the relationship of cognitive theories to assessment. Also includes practice in administering and interpreting specific tests of cognitive functioning, such as the Wechsler Scales and the Woodcock-Johnson.

CAEP 6352. Personality Assessment. (3 Hours)

Administers and interprets projective tests, behavior rating scales, and personality tests. Offers advanced level of integrating results from different measures in report writing.

CAEP 6353. Curriculum-Based Assessment and Data-Based Decision Making. (3 Hours)

Presents curriculum frameworks (reading, mathematics), developmental sequences (language), socialization, and life skills as areas of learning breakdown. Focuses on collection and use of data from curriculum-based procedures that evaluate a child's current level of understanding and performance in one of these areas, determination of intervention goals, formulation of individualized education programs (IEPs), development of instructional plans, and monitoring progress using curriculum-based measurements.

CAEP 6354. Social, Emotional, and Behavioral Assessment. (3 Hours)

Uses a problem-solving framework designed to help students to develop skills in identifying common school-based social, emotional, and behavioral problems and designing targeted assessment plans. Offers students an opportunity to gain experience in the administration, scoring, and interpretation of relevant measures designed to assess children's and adolescents' social, emotional, and behavioral functioning; in the synthesis of multisource/multimethod data; and in psychological report writing.

CAEP 6360. Consultation and Program Evaluation. (3 Hours)

Overviews different consultation theories including behavioral, psychodynamic, and systems perspectives. Offers a focus on skill development with respect to a broad-based and pragmatic approach to client-centered behavioral consultation. Uses computer networks and e-mail in client-centered and peer consultation. Offers evaluation of the implementation and outcomes of consultation and related service delivery programs.

Prerequisite(s): CAEP 6347 with a minimum grade of B

CAEP 6365. Seminar in School Psychology. (3 Hours)

Covers the philosophical, historical, technical, and school administrative issues contributing to the professional identity of school psychologists. Emphasizes ethical standards, public policy, and legislation that impact school psychology.

CAEP 6375. Substance Use and Treatment. (3 Hours)

Covers use, abuse, and treatment of both legal and illegal psychoactive drug agents. Includes an introduction to psychotropic medications, overview of illicit substance use, differential substance abuse, interventions and treatment, and related social issues.

Prerequisite(s): CAEP 6200 with a minimum grade of B-

CAEP 6380. Seminar in Feminist Psychology. (3 Hours)

Looks at sex-gender socialization and role ascription in the development of women and men. Examines feminine and masculine gender role stereotypes and constructs in mental health theory, procedures, and practices. Introduces the variety of feminist standpoints and explores their impacts on the conceptualization of health and healing. Presents major points in feminist therapy and psychology. The student examines selected areas in-depth within this course.

CAEP 6390. History and Systems of Psychology. (3 Hours)

Examines the development of psychological theories in the context of western intellectual development. Attends to the underlying epistemological assumptions and historical and cultural forces on psychology. Also emphasizes some of the potential contributions to psychology of other world civilizations and to paradigmatic strengths and limits.

CAEP 6394. Advanced Multicultural Psychology. (3 Hours)

Provides critical analyses of "universalist" perspective counseling and development theory. Explores a variety of implications for culturally competent psychological work. Addresses process, procedures, and interventions as well as theory and inquiry. Focuses on individual and cultural differences in counseling and professional psychological services.

Prerequisite(s): CAEP 6203 with a minimum grade of B

CAEP 6399. Clinical Skills in Counseling Psychology. (3 Hours)

Develops self-awareness, communication skills, and therapeutic and practice procedures.

CAEP 6400. Prepracticum in School Psychology. (1 Hour)

Requires a minimum of 75 hours of school-based experience. Designed to orient school psychology graduate students to the school psychology profession and the practicum. Offers students an opportunity to understand the role of the school psychologist and the school environment. Seeks to familiarize students with the range of different school psychological services and the range of students who receive services from school psychologists, including students from different cultures and students with and without disabilities. Emphasizes observational learning. Students must complete the entire prepracticum and submit the documentation of its successful completion prior to beginning the practicum experience.

CAEP 6401. Counseling Children and Adolescents in Schools. (3 Hours)

Seeks to give students a foundation in the selection, evaluation, and application of empirically supported counseling interventions for children and adolescents. Topics include individual and group counseling techniques as well as specific clinical issues related to school-age children, families, family-school collaboration, and systems.

CAEP 6402. Promoting Social, Emotional, and Behavioral Success in Schools. (3 Hours)

Seeks to give students a foundation in the selection, implementation, and evaluation of evidence-based Tier 1 (classwide, universal) and Tier 2 (small group, targeted) interventions. Promotes an understanding of best practices and evidence-based approaches that promote school mental health.

Prerequisite(s): CAEP 6401 with a minimum grade of B

CAEP 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CAEP 6999. Practicum Continuation. (0 Hours)

Continues clinical requirements. May be repeated five times.

CAEP 7412. Systematic Inquiry in Behavior Analysis 1. (1 Hour)

Provides peer and individualized mentorship as students complete a scholarly behavior analytic project. Provides practice in identifying a behavioral problem and research question, developing methods to examine the question, and completing an IRB application.

Corequisite(s): CAEP 8412

CAEP 7413. Systematic Inquiry in Behavior Analysis 2. (1 Hour)

Continues CAEP 7412. Provides peer and individual mentorship as students complete a scholarly behavior analytic project. Offers students an opportunity to obtain the skills to complete a comprehensive literature review or case study.

Prerequisite(s): CAEP 7412 with a minimum grade of B

Corequisite(s): CAEP 8413

CAEP 7701. Doctoral Seminar in Counseling Psychology. (1 Hour)

Seeks to advance the student's development as a counseling psychologist based on a scientist-practitioner and ecological model and to ensure that the student is informed regarding the historical and current developments of the discipline of counseling psychology. May be repeated up to three times.

CAEP 7702. Scholarship, Teaching, and Leadership in Applied Psychology. (3 Hours)

Studies teaching, scholarship, and leadership within a system of higher education. Explores how teaching and scholarship are related to tenure and promotion processes. Considers ethical issues that arise in university settings (e.g., human subject protection, academic integrity). Offers students an opportunity to develop a research agenda and engage in the peer review process as an author and reviewer, as well as practice using various teaching philosophies, course development, and delivery. Contemplates university and professional leadership positions within the field of applied psychology.

CAEP 7703. Grant Writing in the Health Professions. (3 Hours)

Introduces the basic components of the grant writing process, from locating available funding opportunities to submitting a competitive grant proposal. Offers students an opportunity to develop a grant proposal for potential submission.

CAEP 7710. Advanced Clinical Assessment. (3 Hours)

Covers contemporary cognitive and personality testing as used in a variety of practice settings. Covers such areas as pain management, risk assessment, and learning styles. PhD students only.

CAEP 7711. Measurement: Advanced Psychometric Principles. (3 Hours)

Offers students an opportunity to gain an understanding of classical and modern test theory as well as to develop the capability to use these theories to develop tests for their own purposes. Topics include test validity, item statistics useful in test construction, score scales and norms commonly used in educational testing, item bias and test bias, and ideas of fairness and equity in educational and psychological testing. Introduces factor analysis as well as the major extensions and alternatives to classical test theory, generalizability theory, and item response theory (latent trait theory).

CAEP 7712. Intermediate Statistical Data Analysis Techniques. (3 Hours)

Emphasizes the use of existing theories and models as a basis for the formation of questions and hypotheses and for designing research to address those questions and hypotheses. Covers the logic of design of research and hypothesis testing, regression, general linear model (GLM), statistical model building and testing, hierarchical regression, and analysis of covariance structures. Emphasizes consideration of power and effects. Requires students to do problems on the computer and/or by hand using data sets assigned in class. Requires prior completion of a course in basic statistics and a course in methods of research design or permission of instructor.

CAEP 7716. Advanced Research and Data Analyses 2. (3 Hours)

Investigates techniques and models for exploring research questions and testing hypotheses developed in the first semester. Explores structural and advanced correlational models using linear and nonlinear approaches, multivariate data analysis, psychometric statistical theory and techniques, and qualitative inquiry. Requires considerable hands-on experience with real data sets. Explores qualitative and methodological approaches to ecological analysis of systems and contexts. Requires students to do problems on the computer and/or by hand using data sets assigned in class. Utilizes SPSS and other computer analysis packages including graphic methods of depicting data. Also covers specialized applications (text analysis software, survey design and scoring software, or specialized graphing programs). Students do projects, prepare reports of an analysis from the data set, and turn in a written report in APA format suitable for publication.

CAEP 7720. Advanced Clinical Interventions. (3 Hours)

Considers assessment and intervention from an ecological/systems perspective on a case-by-case basis. Uses individual, group, family, organizational, and community modalities. Emphasizes case conceptualization as a framework for treatment planning and evaluation. Emphasis is on impact of social systems and sociocultural factors. Restricted to PhD students with previous work in group and family counseling.

CAEP 7732. Legal and Ethical Issues in Community and Educational Settings. (3 Hours)

Designed to provide a systematic orientation to the ethical and professional issues faced by mental health practitioners in their teaching, research, and practice in a seminar setting. Addresses APA ethical guidelines, legal aspects of psychological practice including licensing, confidentiality in practice and research, historical perspective, supervision and training issues, and current topics of professional concern in counseling and school psychology practice. Considers relevant court decisions affecting psychological practice with children, adults, and family.

CAEP 7741. Advanced Practicum 1. (1,2 Hours)

Offers students an opportunity to obtain training in clinical settings to develop clinical skills in assessment, consultation, and interventions under supervision. Examines and supports clinical work within various assessment and treatment modalities. Analyzes systems issues within placement sites, which include but are not limited to administrative and supervisory issues, by focusing on critical analysis and provision of a supportive atmosphere. Provides opportunities to document competency through tapes and detailed process notes of sessions, videotape role-playing, critiques, and feedback. Requires practice in the clinical setting a minimum of 20 hours per week. May be repeated once for a total of 2 semester hours.

CAEP 7742. Advanced Practicum 2. (1,2 Hours)

Continues CAEP 7741. Provides an opportunity, under supervision in a clinical setting, to develop clinical skills in assessment, consultation, and interventions. Designed to provide support and evaluation of the advanced practicum placement for second-year students. Seeks to examine and support clinical work and examine systems issues within placement sites, which include but are not limited to administrative and supervisory issues. Opportunity to document competency through tapes and detailed process notes of sessions, videotape role-playing, critiques, and feedback. Focuses on critical analysis and provision of a supportive atmosphere to explore treatment and systems issues. Requires practice in the clinical setting a minimum of twenty hours per week. May be repeated once for a total of 2 semester hours.

Prerequisite(s): CAEP 7741 with a minimum grade of B

CAEP 7743. Advanced Practicum 3. (1,2 Hours)

Continues CAEP 7742. May be taken by students who elect to do additional practicum work to develop better, or deeper, skills or new skill areas. Requires practice in the clinical setting a minimum of twenty hours per week. May be repeated once for a total of 2 semester hours.

Prerequisite(s): CAEP 7742 with a minimum grade of B or CAEP 7742 with a minimum grade of S (Graduate) or CAEP 6355 with a minimum grade of B

CAEP 7744. Advanced Practicum 4. (1,2 Hours)

Continues CAEP 7743. Requires practice in the clinical setting a minimum of twenty hours per week. May be repeated once for a total of 2 semester hours.

Prerequisite(s): CAEP 7743 with a minimum grade of B

CAEP 7750. Biological Bases of Behavior. (3 Hours)

Lays the foundations for an understanding of brain-behavior relations, with an emphasis on implications for the clinician. Topics include basic neuroanatomy, the development of the nervous system over the life span, and hormonal and neuropharmacological aspects of behavioral regulation. Reviews perceptual and motor systems, cognition, emotions, and motivational states from the perspective of their biological underpinnings. Underscores the unfolding of these processes within a psychosocial and cultural context.

CAEP 7755. Cognitive and Affective Bases of Behavior. (3 Hours)

Provides students with an in-depth treatment of the theories of the cognitive and affective bases of behavior and their applications. Reviews the impact of thinking, emotions, affect, and temperament on behavior in the context of the ecological model. Restricted to PhD students.

CAEP 7756. Social Psychology in an Organizational and Ecological Context. (3 Hours)

Conducted as a seminar designed to meet the needs of doctoral students in school and counseling psychology for a course that spans theory and principles of social psychology from early work in the field-in such topics as social pressure, field theory, cognitive dissonance, and attitude formation-to more modern work in expectations, attitudes, and organizational behavior. Surveys basic concerns in social psychology, and considers material related to application in schools, communities, and organizations in which mental health is practiced. For example, in the study of group dynamics, stresses applications to group learning, administrative leadership, and organization theory. Also covers research paradigms, social change, social influence, system consultation, and community issues as they relate to social psychological considerations. Restricted to PhD students.

CAEP 7758. Doctoral Seminar in Contemporary Theories of Psychotherapy. (3 Hours)

Offers a critical examination from an ecological/systems perspective of conceptual developmental and clinical elements of contemporary psychotherapy theories. Emphasis is on object relations, social constructionist, and constructivist theories of personality and therapeutic change. Includes selected theoretical and research readings, lectures in student-led discussion. Evaluates critical issues and future directions of contemporary theoretical schools and considers varied approaches to case examples. The different theoretical approaches are examined through the lenses of gender, class, and cultural adequacy. Restricted to PhD students.

CAEP 7771. Research Team Experience. (1 Hour)

Offers students an opportunity to participate in various stages of ongoing research leading up to and including the design of their own research projects. Students are given responsibility for conceptualization, design, implementation, analysis, and interpretation of research according to their skills. Encourages students to tie their research to other aspects of their training as appropriate. Becoming a competent researcher requires active experience. A faculty mentor provides direct supervision to the students.

CAEP 7777. Doctoral Seminar: Program Planning and Evaluation. (3 Hours)

Offers students an opportunity to develop knowledge and skills in program planning and evaluation with a specific focus on promoting the health of children and adolescents. Focuses on program planning and evaluation within the coordinated school health model and the importance of planning, implementing, and evaluating programs within a community-based participatory research (CBPR) framework. Emphasizes the importance of programs that incorporate the intersection of family, school, and community systems. Builds upon the systematic, problem-solving approach to practice woven throughout the curriculum. Emphasizes participatory and context-sensitive approaches to planning and evaluating programs. Seeks to prepare psychologists to plan and evaluate programs systematically in their future work settings.

CAEP 7798. Doctoral Internship. (0.5-2 Hours)

Required of all doctoral students in counseling/school psychology PhD programs. Requires a minimum of forty hours per week for twelve months or twenty hours per week for twenty-four months in an accredited (or equivalent by permission) mental health training setting. In addition to internship site supervision and training seminars, interns attend, in person or online, a university-based seminar and complete case assignments. May be repeated up to four times, not to exceed 3 credits.

CAEP 7799. Doctoral Internship 2. (2 Hours)

Continues CAEP 7798. Restricted to PhD students.

CAEP 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CAEP 7976. Directed Study. (1-4 Hours)

Allows students to pursue topics of individual interest beyond the scope of formal course work under the direction of faculty. May be repeated without limit.

CAEP 8401. Practicum in Counseling Psychology. (3 Hours)

Includes forty hours of client contact plus supervision. Focuses on developing individual and group skills within mental health and human service agencies. May be repeated once.

Prerequisite(s): CAEP 6399 with a minimum grade of B

CAEP 8412. Experiential Learning in Skill Acquisition. (2 Hours)

Offers students an opportunity to obtain practical experience developing, implementing, and evaluating skill acquisition programs. Students work in a clinical setting, including accrual of supervised fieldwork hours required to sit for the Board-Certified Behavior Analyst ® examination.

Prerequisite(s): CAEP 6341 with a minimum grade of B

Corequisite(s): CAEP 7412

CAEP 8413. Experiential Learning in Behavioral Supervision. (2 Hours)

Provides students with the opportunity to practice methods of staff training and supervision. Offers students supervision for work in a clinical setting, including accrual of supervised fieldwork hours required to sit for the Board-Certified Behavior Analyst ® examination.

Prerequisite(s): CAEP 6342 with a minimum grade of B

Corequisite(s): CAEP 7413

CAEP 8415. Practicum in School Psychology 1. (2 Hours)

Offers supervised school-based field experience coupled with seminar class. Requires passing score on the communication and literacy tests of the Massachusetts Tests for Educator Licensure (MTEL).

CAEP 8416. Practicum in School Psychology 2. (2 Hours)

Offers supervised school-based field experience coupled with seminar class.

Prerequisite(s): CAEP 8415 with a minimum grade of B

CAEP 8417. Intensive Practicum in Applied Behavior Analysis 1. (2 Hours)

Offers students supervised experience that is required in order to sit for the BACB exam. Focuses on offering students an opportunity to acquire new behavior analytic skills related to the BACB Task List. Asks students to demonstrate the necessary skills to be a competent behavior analyst in applied settings. Covers preference assessments, task analysis and other skill acquisition programs, and other teaching strategies.

CAEP 8418. Intensive Practicum in Applied Behavior Analysis 2. (2 Hours)

Continues the work of CAEP 8417 with the primary focus on offering students an opportunity to acquire new behavior analytic skills related to the BACB Task List. Covers functional assessment, behavior reduction programs, conditioned reinforcement, data analysis, and clinical decision making.

Prerequisite(s): CAEP 8417 with a minimum grade of C-

CAEP 8419. Intensive Practicum in Applied Behavior Analysis 3. (2 Hours)

Continues the work of CAEP 8417 and CAEP 8418 with the primary focus on offering students an opportunity to acquire new behavior analytic skills related to the BACB Task List. Covers behavioral approaches to curriculum-based assessment, discrimination training, shaping, chaining, and pedagogies of teaching.

CAEP 8421. Intensive Practicum in Applied Behavior Analysis 4. (2 Hours)

Continues the work of CAEP 8417, CAEP 8418, and CAEP 8420 with the primary focus on offering students an opportunity to acquire new behavior analytic skills related to the BACB Task List. Covers behavioral approaches to skills assessment, training, supervision, and consultation.

CAEP 8501. Internship in School Psychology 1. (3 Hours)

Offers supervised school-based field experience coupled with seminar class.

CAEP 8502. Internship in School Psychology 2. (1-2 Hours)

Offers supervised school-based field experience coupled with seminar class. May be repeated once.

CAEP 8510. Internship in Counseling Psychology 1. (3 Hours)

Provides twenty hours per week in a field setting and a two-hour seminar on campus. In addition to providing supervising seminar, addresses practices, procedures, ethics, and policies in professional practice.

CAEP 8511. Internship in Counseling Psychology 2. (3 Hours)

Provides twenty hours per week in a field setting and a two-hour seminar on campus. In addition to providing supervising seminar, addresses practices, procedures, ethics, and policies in professional practice.

CAEP 8553. Advanced Counseling Practicum. (1,2 Hours)

Offers an elective course for doctoral students in the counseling psychology doctoral program who are completing additional years of supervised practical experience (minimum of 20 hours per week for 600 hours) as part of the training for the PhD degree and in clinical preparation for the APPIC/APA internship match process. Offers students training in clinical settings. Includes a seminar to offer students an opportunity to develop clinical skills in assessment, consultation, and interventions under supervision. Provides support and evaluation of the advanced fieldwork placement in which doctoral students are involved throughout the year. Led by a faculty supervisor who is the official liaison between Northeastern University and the advanced fieldwork sites. May be repeated up to five times for up to 6 total credits.

Prerequisite(s): CAEP 7744 with a minimum grade of C-

CAEP 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to four times.

CAEP 8986. Research. (0 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CAEP 9000. Comprehensive Exam. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

CAEP 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by individual members of the department. Restricted to PhD students.

Prerequisite(s): CAEP 9000 with a minimum grade of S

CAEP 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): CAEP 9990 with a minimum grade of S

CAEP 9996. Dissertation Continuation. (0 Hours)

Supports the continued development of the dissertation.

Prerequisite(s): CAEP 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Creative Technologies (CRTE)

CRTE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRTE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRTE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRTE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRTE 5010. Understanding Creative Technologies. (4 Hours)

Offers students an opportunity to engage with the communicative and ethical dimensions of new technology through a combination of empirical analysis and problem solving. Organized into four units that collectively present an interdisciplinary approach to media and technology in the 21st century. Begins with a technology-focused unit that emphasizes how social and cultural contexts shape how machines function and how people interact with them. Continues with units concerning digital media and design and audience that introduce the creation of media content through a critical lens. Concludes with a unit on ethics that asks students to reflect on the ethical dimensions of the decisions and problem solving highlighted in previous units.

CRTE 5030. Developing Creative Technologies. (4 Hours)

Explores tools, processes, and technologies to develop human-centered prototype experiences with creative technologies. Offers students an opportunity to learn, use, experiment with, and test creative technologies using prototype scopes ranging from rapid and paper prototypes to mid- and high-fidelity prototypes. Also offers choice of technology based on student interest. Students share and learn through critique and user testing from interdisciplinary feedback to improve their prototype projects.

CRTE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Criminal Justice (CRIM)

Courses

CRIM 1000. Criminal Justice at Northeastern. (1 Hour)

Designed to help students adjust to college life and become fully acquainted with the resources and services offered by the University. Covers various campus services, studies how to access various library resources, and focuses on study skills and time management. Also explores various careers for which the criminal justice major can prepare students.

CRIM 1100. Introduction to Criminal Justice. (4 Hours)

Surveys the contemporary criminal justice system in the United States. Examines the phases of the criminal justice system beginning with the detection of crimes by the police; the handling of the case through the courts; and, finally, disposition and sentencing. Analyzes issues and characteristics of each of the phases of the criminal justice system (police, courts, and corrections) and identifies its key actors (for example, police, judges, prosecutors, correctional officers). Traces the role of systemic racism and intersecting dimensions of oppression in the historical development of and current policies and practices in the criminal justice system. Also introduces students to the U.S. juvenile justice system.

Attribute(s): NUpath Societies/Institutions

CRIM 1110. Criminal Due Process. (4 Hours)

Focuses on a historical evaluation of the Fourteenth Amendment of the U.S. Constitution and its use in making rights prescribed under the Bill of Rights applicable to the individual states. Examines constitutional requirements in the administration of criminal justice with a particular emphasis on the Fourth, Fifth, and Sixth Amendment requirements and their implications for police practices in the areas of arrests, searches and seizures, right to counsel, and eyewitness identification. Through discussions of recent criminal cases, exposes students to the role that bias plays in wrongful convictions. Expects students to be familiar with basic concepts and legal language as well as the courts' changing interpretations of the law. Briefing of cases is required.

Attribute(s): NUpath Societies/Institutions

CRIM 1120. Criminology. (4 Hours)

Describes the nature and extent of crime, explains its causes, and examines society's responses to it. Defines the field of criminology by discussing the different types of crime and discusses different theories of crime causation. Studies the connections between systemic racism, inequalities, and crime and the role of bias in the development of the field and criminological theories. To establish the extent of crime in society, addresses measurement issues in the field of criminology.

Attribute(s): NUpath Societies/Institutions

CRIM 1300. The Death Penalty. (4 Hours)

Reviews the history of the death penalty in the United States from colonial times through the present. Among Western democracies, the United States stands alone in its continued use of capital punishment as a sanction. Examines the contemporary death penalty and the many controversies surrounding its continued use (focusing on U.S. Supreme Court decisions around the constitutionality of the death penalty). Discusses historical and contemporary controversies around the administration of the death penalty including potential innocence, special populations, methods of execution, race and gender biases, costs, deterrence, and international relations.

CRIM 1400. Human Trafficking. (4 Hours)

Offers an overview of human trafficking in its various forms. Emphasizes understanding the experiences and needs of trafficking victims and the methods of operations of traffickers and their networks across various cultural contexts. The trafficking of persons for sex or labor through force, fraud, or coercion has become an increasingly serious problem in modern society. Federal, state, and local criminal justice authorities have been tasked with the responsibility of identifying and rescuing trafficking victims and prosecuting their perpetrators. Offers students an opportunity to critically evaluate the social and cultural practices that give rise to and support human trafficking in the United States and around the globe.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CRIM 1500. Corruption, Integrity, and Accountability. (4 Hours)

Traces the history, nature, and current effects of corruption using concrete cases and illustrations. Covers international and national laws and standards against corruption (with special emphasis on the U.N. Convention against Corruption and the Foreign Corrupt Practices Act). Discusses efforts to measure corruption, governance, and anticorruption efforts. Focuses on the role of stakeholders from private sector to government, civil society, and individual actors. Corruption affects every aspect of our life and its quality. From bribery and illicit enrichment to obstruction of justice, from abuse of power to clientelism and favoritism, corrupt acts touch global, national, and local communities. Illustrates how fundamental are the values and practice of integrity, responsibility, and accountability.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

CRIM 1700. Crime, Media, and Politics. (4 Hours)

Discusses and critiques contemporary portrayals of crime and justice in the arenas of political debates and campaigns; news reports; and films, television shows, and music. Covers current events as they occur in these arenas. To set up these discussions, students have an opportunity to develop critical tool kits for assessing these images of crime and justice by reading and discussing theories, research, and critiques. Additionally, students are expected to read and discuss historical portrayals of crime and justice with the goal of identifying both parallels and differences between these and current events.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CRIM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRIM 2310. Courts: The Third Branch of Government. (4 Hours)

Studies the third branch of government—the judiciary: how courts work, how they are structured, what they do, and how they do it. Examines the theoretical underpinnings of our three-branch system of government; explores the U.S. and Massachusetts constitutions; and discusses the concepts of separation of powers and of judicial review. Students visit a number of state and federal courts to observe and interact with court leaders. Explores the interplay of the judiciary with the legislative and executive branches, as well as with external entities such as business and the media. Examines the role of the courts as a critically important component of a democratic society.

Attribute(s): NUpath Integration Experience

CRIM 2320. Youth Crime and Justice. (4 Hours)

Introduces students to the history, structure, processes, and philosophies of juvenile justice systems in the United States. Responses to juvenile offenders-ranging from prevention and diversion to institutional corrections and aftercare-are explored in the context of youth policy generally. Focuses on contemporary issues and controversies (system fragmentation, changing conceptions of juvenile offenders, lack of a coherent justice system rationale, racial and gender bias in processing and confinement, and proposals to abolish the juvenile court).

CRIM 2330. Punishment in the Age of Mass Incarceration. (4 Hours)

Examines the concept of punishment and its form, function(s), and enforcement throughout history, with an emphasis on current sentencing policies and procedures and their impact on the corrections system and correctional overcrowding. Explores the operation, structure, clientele, and issues confronting the institutions, agencies, and programs encompassing the corrections system including jails, prisons, and community-based corrections.

CRIM 2340. Corporate Security: Securing the Private Sector. (4 Hours)

Examines the history and evolution of security from a focus on crime prevention to one of loss prevention for business, industry, institutions, and government. Emphasizes the need for analytical, interpersonal, and communications skills in developing cost-effective programs for the protection of assets, personnel, and third parties. Discusses the security/government relationship.

CRIM 2350. Policing a Democratic Society. (4 Hours)

Traces the history, evolution, and organization of the police in the United States. Examines the role of police in society, structure and culture of police organizations, function and activities of the police, and police deviance and accountability. The course objectives are to acquaint students with prior research on the police, examine critically the police as a component of the criminal justice system, explore the complex nature of the profession, and assist those who are considering a policing career to understand the realities of the job.

CRIM 2370. Restorative Justice: Transforming the System. (4 Hours)

Explores the roots of restorative justice and locates contemporary examples of its application in various settings in the United States and the world. Examines its utility in addressing the mass incarceration crisis and the current penal system and mode of punishment in the United States. Students practice and apply critical race and systems theories to use a systems lens to examine the impact of racism, sexism, gender discrimination, and other systems of oppression on behavior and the justice system.

Attribute(s): NUpath Integration Experience

CRIM 2380. Black Families and Incarceration. (4 Hours)

Focuses on how the Black family functions, both interpersonally and as a social unit within a carceral state. Introduces the diverse institutional, cultural, and historical issues relating to past and present circumstances from the effects of slavery and colonization on the Black family structure. Explores policies and practices within carceral institutions dealing with childhood, motherhood, and fatherhood. Assesses the social and psychological harms of incarceration on Black children and their families.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity

CRIM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRIM 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

CRIM 3000. Co-op Integration Seminar 2. (1 Hour)

Continues CRIM 2000. Allows students to reflect on what they learned during their first co-op, and use their journal entries as the basis from which to examine real-life issues of ethics, values, and diversity as they experienced them in the workplace.

Prerequisite(s): CRIM 2000 with a minimum grade of D- or EESH 2000 with a minimum grade of D-

CRIM 3010. Criminal Violence. (4 Hours)

Surveys the trends, nature, patterns, and causes of criminal violence. Blending sociological and psychological perspectives on violent criminal behavior, focuses on serial and mass murder, sexual predators, youth and school violence, violence among intimates and family members, as well as the impact of media and entertainment violence. The effectiveness of various criminal justice responses are also examined including intervention strategies, police tactics, gun control, incarceration, and capital punishment.

CRIM 3030. Global Criminology. (4 Hours)

Seeks to strengthen an understanding of crime and its causes from a comparative, cross-national standpoint. In doing so, it places extant definitions of crime and deviance in a cultural context. Explores existing methods of studying crime on a global scale; offers an overview of various types of criminal and deviant behavior that occur in isolated group contexts as well as those crimes that transcend country boundaries. Examines various strategies designed to address these acts of crime on a national as well as transnational level.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CRIM 3040. Psychology of Crime. (4 Hours)

Explores the inner lives of offenders including cognitive, emotional, perceptual, and physiological phenomena. Examines the ecological context of crime, individual and social risk factors for psychological attributes related to offending, how these attributes develop, how they interact with the environment to produce crime, and, most importantly, how knowledge of the psychology of crime can assist in efforts to prevent delinquency or to help offenders desist.

CRIM 3050. Organized Crime. (4 Hours)

Examines the myths and realities surrounding organized crime. Offers an overview of the nature and extent of organized crime, the factors that contribute to it, as well as the origins and opportunities/motives for criminal enterprises. Discusses the impact of organized crime on U.S. society, both in terms of economy and politics. Also examines the interconnections between organized criminals and legitimate organizations as well as analyzes legislative and policy responses.

CRIM 3060. Political Crime and Terrorism. (4 Hours)

Provides students an understanding of what political crime and terrorism is, the nature and extent of the problem historically and currently, as well as prevention efforts designed to combat political crime and terrorism. Students are exposed to several sources of information on political crime and terrorism including the news media, scholarly sources, and video accounts.

CRIM 3070. Corporate and White-Collar Crime. (4 Hours)

Introduces students to a variety of topics and issues in the areas of white-collar and corporate crime. Examines corporate and white-collar offending through the criminal justice and regulatory justice systems, beginning with detection and prosecution through adjudication and sentencing. A variety of special topics are also covered such as definitional issues, the nature and extent of white-collar crimes, measurement, crime types, case studies, and the etiology of offending.

CRIM 3100. Criminal Law. (4 Hours)

Discusses the definition of common crimes and criminal responsibility. Addresses moral, philosophical, constitutional, and public policy considerations in the use of criminal sanctions to regulate conduct. Requires the knowledge of particular criminal law concepts and the ability to identify them in complex fact patterns and discuss their implications and ramifications. Also requires the application of legal principles to fact situations in a logical way. Case briefing is required.

CRIM 3110. Gender, Crime, and Justice. (4 Hours)

Examines the topics of femininities and masculinities and their influence on participants in the criminal justice system. Also explores topics such as gender and criminological theory; the notion of gender and offending; women and men as victims of violence; and women and men as professionals within the criminal justice system.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

CRIM 3120. Race, Crime, and Justice. (4 Hours)

Provides students with an overview of the role and treatment of racial/ethnic minorities in the criminal justice system. Covers historical and theoretical frameworks for understanding the relationship between race, crime, and criminal justice. In so doing, students become familiar with trends and patterns in criminal offending by racial/ethnic minorities, as well as system response to such behavior.

Attribute(s): NUpath Difference/Diversity

CRIM 3540. Addiction and Recovery. (4 Hours)

Introduces theories, skills, and policies that surround chemical dependencies and their treatments. Draws from psychology, sociology, social work, and other human service disciplines. Incorporates a bio-psycho-social-spiritual focus on substance-abusing clients, including information regarding basic assessment of substance abuse and dependence; properties of the different substances; modalities of substance abuse treatment; and individual, group, and family interventions. Offers students an opportunity to investigate the effects of chemical dependency on individuals, families, and communities.

CRIM 3600. Criminal Justice Research Methods. (4 Hours)

Introduces the basic concepts involved in conducting research in the areas of the criminal justice system and criminology. Through lectures, group discussions, and readings, familiarizes students with the scientific methods that are necessary for systematic analysis of crime trends, offender behavior, program effectiveness, and public attitudes about crime and justice. Critiques the historical role of racism and other biases in the development and implementation of research questions and methods. Offers students an opportunity to become capable of developing a research question, investigating and critiquing how it has been researched, developing a research design, and administering its implementation.

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

CRIM 3700. Analyzing and Using Data on Crime and Justice. (4 Hours)

Offers a foundation in different statistical techniques that may be utilized to answer research questions in the social sciences. Examines a range of computational social science techniques across data platforms to address crime and criminal justice system problems. Emphasizes existing databases that may inform questions about crime and criminal justice. Also introduces students to different ways to display or visualize quantitative data. Offers students an opportunity to learn how to produce and consume quantitative information.

Attribute(s): NUpath Analyzing/Using Data

CRIM 3900. Topics in Criminal Justice and Criminology. (1-4 Hours)

Focuses on topics related to criminal justice to be selected by instructor. May be repeated without limit.

CRIM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRIM 4000. Co-op Integration Seminar 3. (1 Hour)

Continues CRIM 3000. Builds upon what students learned in CRIM 3600 and focuses on experiences and research journals from the second co-op. Students discuss their research activities and findings, and begin to do some critical thinking about the nature of organizations. The discussion in this seminar also prepares them for the third co-op experience, in which they keep journals on some other aspect of organizational culture or dynamics. The seminar is pass/fail.

Prerequisite(s): CRIM 3000 with a minimum grade of D-

CRIM 4040. Crime Prevention. (4 Hours)

Offers an overview of issues related to crime prevention, both from criminological and criminal justice points of view. Examines crime prevention programs that encompass both the individual and community levels, as well as the integration of such levels. Offers students an opportunity to learn current theories of and leading research on the main approaches to preventing crime, including developmental, situational, and community prevention. Focuses on assessing effectiveness of prevention programs and policies.

Attribute(s): NUpath Writing Intensive

CRIM 4120. Courts and Sentencing. (4 Hours)

Examines the role of criminal courts in the United States, the structure and organization of the court system, and the flow of cases from arrest to conviction. Focuses on the key actors in the courtroom-prosecutors, defense attorneys, judges, and court clerks-and the decision-making processes in charging a person with a crime, setting bail, pleading guilty, going to trial, and sentencing. Addresses prospects for reforming courts.

CRIM 4660. Communities and Crime. (4 Hours)

Provides students with an overview of issues related to communities and crime. Examines sociological aspects of community context, behavior, and functioning, and how communities are implicated in both crime-generating and crime-preventing processes. Familiarizes students with historical and contemporary literature surrounding the communities and crime relationship, as well as how the study of human behavior generally, and crime particularly, should examine the interaction of persons and places.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

CRIM 4710. Law and Psychology. (4 Hours)

Examines a broad array of topics, from criminal profiling to the nature of justice and its relationship to social control. Focuses on five major questions: what forensic psychologists do; how psychologists and lawyers look at the world; how the criminal justice system (police, courts, and corrections) and other institutions involved in social control use psychologists; what psychologists think about the criminal justice system and other institutions of social control; and how psychological (and other behavioral science) research can be used to help prevent crime. Because psychologists and lawyers see the world very differently, the course is designed to help facilitate communication and understanding among present and future practitioners in each field, as well as in criminal justice and delinquency prevention generally.

CRIM 4800. Crime Mapping. (4 Hours)

Designed as a practical and hands-on introduction to various GIS techniques. Offers students an opportunity to obtain an understanding of how geographic information systems (GIS) are used by law enforcement agencies. Covers tools that provide a more complete understanding of crime locations and explores how criminological theory and geographic information together can be used to develop crime prevention/reduction strategies. Focuses on the strengths and limitations of various criminological perspectives, how they may be used to inform enforcement decisions, and how to use GIS applications to create maps that convey a clear message regarding the spatial distribution of a given criminal behavior.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

CRIM 4949. Senior Capstone Seminar. (4 Hours)

Offers students an opportunity to engage in a semester-long capstone project in which they identify a crime or justice system problem to research and propose a policy solution. Students draw on a variety of knowledge, tools, and experiences from their time at Northeastern: understandings of and experiences with justice system institutions, knowledge of the causes and consequences of crime and the laws intended to protect the accused, and expertise in the methods used and problems encountered in addressing crime and justice issues.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CRIM 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

CRIM 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): CRIM 4970 with a minimum grade of D-

CRIM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRIM 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

CRIM 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

CRIM 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

CRIM 5201. Global Criminology. (4 Hours)

Examines how the processes of globalization influence crime and criminal justice around the globe. Analyzes globalization and recent developments in global crime, including global trends in policing and security. Explores the global applicability of dominant criminological theories and transferability of crime control policies. Offers students an opportunity to develop an understanding of international criminal justice, particularly as it pertains to war crimes, crimes against humanity, and the global protection of human rights.

Attribute(s): NUpath Interpreting Culture

CRIM 5203. Security in the 21st Century. (4 Hours)

Examines societal security concerns by drawing upon current work in the social sciences, humanities, and physical sciences, as well as research and policy initiatives from public, private, nongovernmental, and nonprofit organizations. Offers students an opportunity to review extensive work on the interconnected nature of different types of risk and on the development of integrated strategies to address threats to security and sustainable growth. Considers the continuing evolution of global social justice, values, and institutions that can support comprehensive security and sustainable growth strategies in the 21st century.

CRIM 5250. Victimology. (4 Hours)

Involves a scientific study of crime victims and public policy responses to them. Focuses on the nature and extent of criminal victimization, the dynamics of victim-offender relationships (e.g., incest and domestic violence), theories of victimization, a historical analysis of the victim's role in the criminal justice process, the restorative justice model, and the contemporary victim rights and victim services movement.

CRIM 5264. Immigration and Crime. (4 Hours)

Focuses on crime and deviance (or lack thereof) among immigrant populations in the United States. Offers students an opportunity to develop an understanding of the historical relationship between patterns of immigration and patterns of crime, to examine the nature and extent of contemporary immigrant crime and victimization, and to assess the social and health consequences associated with crime among immigrant populations and within immigrant communities.

CRIM 5270. Crime Mapping. (4 Hours)

Offers students an opportunity to obtain an understanding of how crime mapping is used by law enforcement agencies. Designed as a practical and hands-on introduction to various crime mapping techniques. Employs a holistic approach to learning how to create and interpret maps, which seeks to provide a much deeper understanding of crime mapping and leave students with a solid foundation of skills that are transferable and scalable.

CRIM 5600. Illicit Flows and Criminal Networks. (4 Hours)

Reviews in-depth the extent, nature, victimization, causes, responses, and control of the problem of illegal trade in a variety of products. Focuses on medical supply chains and a wide variety of consumer goods. Examines the types of crimes committed, theoretical frameworks that can be used for the study of these types of misconduct, and the types of victimization associated with illicit flows and criminal networks. Investigates the social organization of illegal markets and networks. Studies techniques and technologies used for authentication, security, prevention, detection, investigation, and sanctioning of offenses, as well as disruption and mitigation strategies governance challenges.

CRIM 5601. Financial Crimes. (4 Hours)

Offers an in-depth review of the extent, nature, causes, and control of the problem of financial crimes. Through readings, group discussion, and research assignments, familiarizes students with financial crimes such as terrorism financing, money laundering, fraud, corruption, and banking scandals. Examines the nature and extent of offenses committed by corporations, professionals, and public officials in the course of their occupations. Investigates the social, economic, and physical costs of such misconduct. Proposes challenges, techniques, and approaches to effective prevention, detection, investigation, regulation, and sanctioning of financial crimes.

CRIM 5602. Crime, Place, and Community. (4 Hours)

Reviews in-depth the relationship between the characteristics of and social processes in communities and criminal behavior within those communities. Explores the nature of communities and crime through research-policy collaborations. Examines the complementary roles of "communities" and the "places" therein (i.e., individual properties) in shaping crime patterns. Examines how public safety agencies do their job through conversations with local practitioners. Investigates the design and execution of a research study on how community organizations and public agencies interface in addressing "problem properties".

CRIM 5900. Topics in Criminal Justice and Criminology. (4 Hours)

Offers an intensive study of a topic related to criminal justice selected by the instructor. May be repeated up to four times.

CRIM 6200. Criminology. (4 Hours)

Offers an overview of the current understanding of the causes of crime from an interdisciplinary perspective. Focuses on the historical and contemporary theories of crime and causation. Examines the connections between systemic racism, inequalities, and crime and the role of bias in the development of the field and criminological theories. Emphasizes integrating criminological theory and research, assessing the implications of this knowledge base for policies relating to crime control and prevention. Presents and discusses the most current data regarding the nature and extent of crime in the United States.

CRIM 6202. The Criminal Justice Process. (4 Hours)

Offers an overview of the criminal justice process and the important issues confronting the administration of justice, grounding these challenges in empirical research. Focuses on theories that explain the functioning of the justice system and predict its outcomes. Identifies changes in institutional responses to crime and justice issues over time and across cultural contexts. Traces the role of systemic racism and intersecting dimensions of oppression in the historical development of and current policies and practices in the criminal justice system.

CRIM 6232. Juvenile Law. (4 Hours)

Examines the legal relationship between the juvenile offender and the state. Covers case and statutory law as well as constitutional due process standards in juvenile proceedings. Topics include jurisdiction, pretrial process, waiver of jurisdiction adjudication, disposition and postdispositional issues, as well as the right to treatment.

CRIM 6262. Evidence-Based Crime Policy. (4 Hours)

Introduces students to the evidence-based paradigm in crime policy. Presents the theory and methods of the evidence-based paradigm, which places systematic research at the center of the policymaking process. Offers students an opportunity to further develop skills in critically assessing leading research findings and policy initiatives in the field of criminology and criminal justice.

CRIM 6270. Crime and Community Context. (4 Hours)

Offers an overview of crime in the context of communities. Covers major theoretical perspectives and introduces students to both major quantitative and ethnographic work on communities. Examines sociological aspects of community context and contrasts aspects of community processes that are implicated in either the generation or the prevention of crime. Considers current criminal justice practices and crime prevention approaches intended to address crime within communities—especially as they interact with neighborhood social processes in ways that deter or facilitate community crime.

CRIM 6502. Policing for Crime Prevention. (4 Hours)

Examines contemporary issues in American policing as they relate to the prevention of crime and violence. Studies current policing strategies—such as traditional, reactive, community-based, problem-oriented, and evidence-based policing—as well as hot spots policing, broken windows policing, and pulling levers policing. Also examines leading research on the effectiveness and fairness of policing practices under these models and as applied in different contexts and to pressing crime and violence problems.

CRIM 6504. Policing in U.S. Communities. (4 Hours)

Studies the historical and contemporary issues regarding the purpose and function of police in U.S. communities. Focuses on understanding variation in crime-control strategies across ecological settings, which complicates police leaders' efforts to reach balance between appropriately responding to citizen calls for service and proactive policing. Highlights effective policing efforts, which routinely involve bringing officers and community residents together in the hope of solving problems. Critically assesses the role of systemic racism and contemporary police practices that impact police-community relationships.

CRIM 6701. Fundamentals of Crime Analysis and Knowledge Dissemination in ArcGIS Pro. (1 Hour)

Introduces the basic functionality of ArcGIS Pro, the industry standard in spatial analysis software. Explores the various ribbon panes and data portals that comprise the ArcGIS Pro interface, the theoretical and practical foundations of the crime analysis profession, and maps and other crime analysis products. Examines how to prepare ArcGIS Pro outputs for dissemination to wider audiences.

CRIM 6702. Geoprocessing and Data Integration in ArcGIS Pro. (1 Hour)

Addresses common geoprocessing and data integration approaches in ArcGIS Pro, the industry standard in spatial analysis software. Explores how to search for geoprocessing tools in the ArcGIS Pro toolbox, run common geoprocessing functions, create and edit GIS data layers, maximize the analytical value of feature attribute tables, and conduct queries of GIS data layers.

CRIM 6703. Hot Spot Tracking and Temporal Analysis in ArcGIS Pro. (1 Hour)

Addresses hot spot tracking and temporal analysis techniques in ArcGIS Pro, the industry standard in spatial analysis software. Explores how to create and edit raster data, calculate incident counts within vector features, conduct temporal forecasting, and map sequential phases of events.

CRIM 6704. Spatial Statistics and Automation in ArcGIS Pro. (1 Hour)

Addresses spatial statistics and analysis automation in ArcGIS Pro, the industry standard in spatial analysis software. Explores how to identify statistically significant incident clusters, calculate patterns of feature attribute values, conduct regression analysis, create task processes, and create models to automate geoprocessing workflows.

CRIM 6801. Fundamentals of Crime Analysis and Mapping. (4 Hours)

Introduces students to the field of crime analysis and conducting crime mapping in the ArcGIS Pro software suite. Offers lectures on theoretical and practical aspects of the crime analysis profession and hands-on exercises using real-world crime and public safety data. Students develop the skills necessary to critically assess crime patterns and potential crime prevention interventions, create crime maps and other crime analysis products, analyze and interpret geospatial and temporal crime data, create and edit GIS data layers, edit and join tables, and query and export GIS data.

CRIM 6802. Data Management for Social Scientists. (4 Hours)

Introduces data collection, cleaning, preparation, and documentation. Offers students an opportunity to apply hands-on exercises to data and transform them from their raw state to an analysis-ready dataset. Emphasizes the principles and practice of data management and the development of intuition and logic skills related to the preparation and analysis of data. Introduces readily available and open-source software packages including Microsoft Excel, Python, and R.

CRIM 6900. Topics in Criminal Justice and Criminology. (4 Hours)

Offers intensive study of a topic related to criminal justice, selected by the instructor. May be repeated up to four times.

CRIM 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

CRIM 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

CRIM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRIM 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

Corequisite(s): INSH 6864

CRIM 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

CRIM 6966. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience. May be repeated without limit.

CRIM 6984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CRIM 7001. PhD Pro-Seminar in Criminology and Justice Policy 1. (0 Hours)

Introduces first-year PhD students to the research of the School of Criminology and Criminal Justice's faculty. Offers students an opportunity to practice the key components of, and tools for, scholarly production, including formulating research questions and theses, conducting literature reviews and using databases, using citation software; time management and organizational strategies; and writing and presenting scholarship in the field, such as journal articles, conference presentations, and other scholarly outlets.

CRIM 7002. PhD Pro-Seminar in Criminology and Justice Policy 2. (0 Hours)

Continues and builds upon CRIM 7001. Introduces first-year PhD students to the research of the School of Criminology and Criminal Justice's faculty. Offers students an opportunity to practice the key components of, and tools for, scholarly production, including formulating research questions and theses, conducting literature reviews and using databases, using citation software; time management and organizational strategies; and writing and presenting scholarship in the field, such as journal articles, conference presentations, and other scholarly outlets.

CRIM 7203. Theories of Criminal Justice Process. (4 Hours)

Studies the theoretical and empirical foundations for fundamental criminal justice process theories. Organized around key theoretical frameworks that explain the activities and outputs of the criminal justice system. Identifies key elements of criminal justice process theories and examines how these components are defined, operationalized, and tested empirically. Offers students an opportunity to develop mastery of the administration of justice process by reviewing research critiquing justice system strategies, functioning, and effects. Students identify and consider changes in institutional responses to crime and justice issues that have occurred over time and across cultural contexts. Traces the role of systemic racism and intersecting dimensions of oppression in the historical development of and current policies and practices in the criminal justice system.

CRIM 7700. Practicum in Teaching. (0 Hours)

Provides weekly meetings for graduate student lecturers and faculty advisers to discuss common concerns and issues arising during the course of teaching. With input from the Center for Effective University Teaching, covers topics such as syllabus preparation, examination preparation and grading, classroom protocol, and student interaction. Required for all doctoral students teaching a class for the first time.

CRIM 7706. Practicum in Writing and Publishing. (2 Hours)

Offers students an opportunity to develop and improve their academic writing skills while preparing a sole-authored article for potential publication. Requires each student to present a paper in-progress and, through an iterative process of review and revision, have it ready to submit to a journal by the end of the semester. Students comment, orally and in writing, on the papers presented by the other students over the course of the semester. There are regular assignments from leading texts on mechanics and style in writing and reflections on the peer-review and publication processes from multiple perspectives. May be repeated once.

CRIM 7710. Criminology and Public Policy 1. (4 Hours)

Offers detailed coverage of theoretical criminology and its implications for public policy. Approaches the understanding of crime from an interdisciplinary perspective, focusing on recent theoretical developments. Studies the connections between systemic racism, inequalities, and crime and the role of bias in the development of the field and criminological theories. Emphasizes evaluating theory in light of empirical research, understanding the implications of theory and research for programs and policies of crime prevention and control, and evaluating current approaches to crime prevention and control.

CRIM 7711. Criminology and Public Policy 2. (4 Hours)

Covers theoretical criminology and its implications for public policy. Approaches the understanding of crime from an interdisciplinary perspective, with emphasis on recent theoretical developments. Analyzes the connections between systemic racism, inequalities, and crime and the role of bias in the development of the field and criminological theories. Emphasizes evaluating theory in light of empirical research, understanding the implications of theory and research for programs and policies of crime prevention and control, and evaluating current approaches to crime prevention and control.

Prerequisite(s): CRIM 7710 with a minimum grade of C-

CRIM 7715. Multivariate Analysis 1. (4 Hours)

Builds upon the concepts of correlation and inference to present analytic procedures involving several variables, including multiple regression, logistic regression, causal analysis, and multiway ANOVA. Emphasizes the application of these methods with criminal justice data sets using statistical software programs.

Prerequisite(s): INSH 5301 with a minimum grade of C or INSH 6500 with a minimum grade of C

CRIM 7716. Multivariate Analysis 2. (4 Hours)

Continues CRIM 7715. Covers more advanced multivariate analytic methods. Topics include principal components and factor analysis, discriminant analysis, MANOVA, time series, and cluster analysis. Emphasizes the application of these methods with criminal justice data sets using statistical software programs.

Prerequisite(s): CRIM 7715 with a minimum grade of C-

CRIM 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CRIM 7976. Directed Study. (1-4 Hours)

Offers the student the opportunity to bring individual, concentrated attention to a particular topic as arranged and agreed upon in advance by a faculty member and the student. This option is generally recommended when the student desires a more intensive analysis of a particular subject. May be repeated without limit.

CRIM 7983. Topics in Criminal Justice and Criminology. (4 Hours)

Offers intensive study of a topic related to criminal justice, selected by the instructor. May be repeated up to four times.

CRIM 8960. Exam Preparation—Doctoral. (0 Hours)

Offers the student the opportunity to prepare, under faculty supervision, for the PhD qualifying examination. May be repeated three times.

CRIM 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CRIM 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

CRIM 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

CRIM 9990. Dissertation Term 1. (0 Hours)

Provides the student with the opportunity, under close faculty guidance, to conduct an original investigation of a criminal justice issue. Each student identifies a faculty chair and two additional faculty members who comprise the student's Dissertation Committee. While the student conducts research and develops a dissertation, the committee provides support and direction and, ultimately, approves the final research product.

Prerequisite(s): CRIM 9000 with a minimum grade of S

CRIM 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): CRIM 9990 with a minimum grade of S

CRIM 9996. Dissertation Continuation. (0 Hours)

Offers continued thesis work conducted under the supervision of a departmental faculty.

Prerequisite(s): CRIM 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Criminal Justice - CPS (CJS)

Courses

CJS 6030. Organized Crime. (3 Hours)

Surveys the history of organized crime around the world. Introduces the origins and activities of organized crime groups, policies designed to combat organized crime, and explanations for the persistence of organized crime. Also discusses new forms of organized crime.

CJS 6040. Human Trafficking and Exploitation. (3 Hours)

Introduces the phenomenon of human trafficking in the global context. Discusses specific forms and regional variations of human trafficking, including forced labor and sex work. Examines individual and societal effects of human trafficking and assesses formal responses to this type of crime. Also covers the role of global processes in the facilitation of human trafficking.

CJS 6105. Domestic and International Terrorism. (3 Hours)

Includes a general introduction to the overt as well as underlying ideology, history, reasons, and causes of terrorism. Discusses both domestic and international terrorism, with a focus on domestic hate groups, the roles of politics and the media, and counterterrorism. Exposes students to the philosophies of terrorists and terrorism.

CJS 6125. National Security—Law and Policy. (3 Hours)

Examines the various elements of national power and their application in advancing U.S. interests. Explores the distribution of national security powers among the three branches of government. Offers students an opportunity to develop a recognition of the synergy a multidisciplined approach affords by analyzing current strategy and policy.

CJS 6135. Intimate Partner Violence. (3 Hours)

Examines the causes and consequences of intimate partner violence, as well as the latest research regarding the criminal justice response.

CJS 6300. Communities and Crime. (3 Hours)

Focuses on various issues in the study of communities and crime. Offers students an opportunity to understand how neighborhood organization and patterns affect crime and vice versa. Attention is given to both the factors that influence neighborhood-level crime rates, as well as the effects that neighborhood characteristics have on the behavior and outcomes of individuals. Includes policy implications and current practices.

CJS 6430. Risk Management. (3 Hours)

Provides a framework for an organizational leader to improve decision making through a comprehensive understanding of an organization's exposure to risk. Exposes students to skills for conducting these assessments across organizational boundaries and in public-private partnerships. Focuses on how to model, measure, or assess undesirable risks and reduce risks relevant to large organizations with collective public obligations. Emphasizes conducting homeland-security-related assessments across criminal justice disciplines and in public-private security collaborations.

CJS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Culture (CLTR)

Courses

CLTR 1000. Cultures, Societies, and Global Studies at Northeastern. (1 Hour)

Introduces first-year students in the College of Social Sciences and Humanities to the liberal arts in general. Seeks to familiarize them with their major, to help them develop the academic skills necessary to succeed (analytical ability and critical thinking), to provide grounding in the culture and values of the university community, to help them develop interpersonal skills, and to familiarize them with all skills needed to become a successful university student.

CLTR 1120. Introduction to Languages, Literature, and Culture. (4 Hours)

Examines the rich interconnections between literature and language and the culture that supports them. Discusses the relationship of language to literature and investigates how language and literatures are embedded in culture. Addresses several very broad and important questions, such as the relationship between language and culture; the relationship between language and thought; the definition of cultural relativism; and how ethical dilemmas are expressed in different cultures. Explores the relationship of esthetic and rhetorical traditions in given languages to the culture from which they sprang. In this context, examines the extremely interesting case of American Sign Language and how a gestural language sheds light on these issues.

Attribute(s): NUpath Interpreting Culture

CLTR 1240. Latin American Film. (4 Hours)

Examines contemporary works of cinematography in Latin America, focusing on the culture and imagery of the Spanish-, French-, and Portuguese-speaking peoples of the Western hemisphere, including the United States. Critically engages—from a technical (cinematographic), genre, and sociohistorical perspective—topics of history, memory, and cultural resiliency; colonialism, racism, and patriarchy; dictatorship, revolution, and democratization; and nationalism, dependency, and globalization. Conducted in English; most films are in French, Portuguese, or Spanish with English subtitles.

Attribute(s): NUpath Interpreting Culture

CLTR 1260. Japanese Film. (4 Hours)

Provides an introduction to Japanese film through works by such great masters as Kurosawa, Mizoguchi, and Ozu, as well as works by new directors from the 1980s and 1990s such as Tami, Morita, and Suo. Studies both form and content; relates major works to Japanese culture. Conducted in English.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

CLTR 1500. Modern Chinese History and Culture. (4 Hours)

Introduces modern Chinese history and culture through literary works, films, and historical texts. Examines political, social, and cultural changes in China since 1800: the decline of empire; the New Culture Movement of the 1920s; the rise of nationalism and rural revolution; the changing roles of women; the Cultural Revolution of the 1960s; and China's cinematic, literary, and economic engagement with the world since 1978. Taught in English and open to all undergraduates. CLTR 1500 and HIST 1500 are cross-listed.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CLTR 1501. Introduction to French Culture. (4 Hours)

Explores contemporary France and French mentality through lectures, screenings, readings, and discussions. Topics covered include the modern vs. the traditional family, social reproduction, gender norms, culture and social distinction, the concept of "grandeur," identity, and immigration. Offers students an opportunity to evaluate historical and sociological readings, films, documentaries, and TV commercials; to compare French and American systems; and to consider contemporary human and social behaviors in the face of globalization.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CLTR 1502. Introduction to Arabic Culture. (4 Hours)

Designed to provide students with an in-depth survey of Arabic culture. Familiarizes students with the roots of one of the richest and oldest cultures but also seeks to satisfy their curiosity concerning certain social norms, patterns, and cultural traits in contemporary Arabic societies. Examines cultural manifestations ranging from the hijab (head covering), Jihad (holy struggle), human rights, polygamy, gender relations, public behavior, and many others by providing the historical backgrounds for these customs and traditions as well as exploring how they are now perceived in various Arab societies as well as in the West. Seeks to provide students with an appreciation for this multifaceted culture but most importantly a broad perspective on Arabic culture within the context of the universal human experience.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CLTR 1503. Introduction to Italian Culture. (4 Hours)

Explores the construction of an Italian national cultural identity through a historical and cross-disciplinary perspective from the Middle Ages; the Renaissance; and the modern, post-WWII period. Organized into modules that focus on the major issues related to the idea of unity and division such as north and south divide, regionalism, language pluralism, fascism and dissent, criminal organizations, and migration. Conducted in English.

Attribute(s): NUpath Interpreting Culture

CLTR 1504. Cultural History of Spain. (4 Hours)

Examines chronologically the forces that have forged Spanish culture and have made Spain the pluralistic society and multinational country it is today. Traces the development of the peoples of the Iberian Peninsula from prehistoric times to the present. Based primarily on the history of ideas, the arts, and architecture, incorporates history, sociology, anthropology, geography, economics, and politics. Conducted in English.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CLTR 1505. Latin American Culture, History, and Politics. (4 Hours)

Offers students an opportunity to learn about Latin American culture through the study of historical episodes such as colonization, independence, and dictatorships. Explores current issues including migration, globalization, and digital media. Examines writings by Latin American authors and selected films from Latin America. Conducted in English.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CLTR 1700. Introduction to Japanese Pop Culture. (4 Hours)

Provides an introduction to Japanese popular culture through critical analysis of mass media such as film, television, comics, and animation. Investigates various social and cultural issues, such as gender, family, and education. Films and videos supplement readings. Conducted in English.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

CLTR 1800. Introduction to Korean Pop Culture. (4 Hours)

Introduces students to Korean popular culture with texts ranging from comics, films, K-drama, pop music, and popular novellas in translation. Explores how "Hallyu" (the Korean wave) reverberated through different Asian regions and the rest of the globe in the 1990s and 2000s and continues into the present through global fandoms and streaming platforms. Critically examines the rising popularity of Korean popular cultural genres and influences in various global contexts in relation to race, class, gender, ethnicity, social media, and youth culture.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

CLTR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CLTR 2001. World Cultures through Film. (4 Hours)

Introduces the study of world cinema from the past several decades as a form of artistic and cultural expression. Emphasizes the way that different ethnicities and cultures mix and even clash within national boundaries. Readings cover such topics as the postcolonial inheritance, immigration, the boundaries of class, the pressures of modernization, ethnic identities, and historical memory. Examines storytelling in its multicultural aspects and deals with the diverse influences of entertainment cinema and art cinema, as well as measures taken by countries to limit the influx of foreign films in order to protect their own cultural productivity. One overall concern of the course is the place of film in contemporary global culture.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CLTR 2451. Postcolonial Women Writers. (4 Hours)

Examines the literature and cultures of postcolonial nations in the Caribbean, Africa, Asia, and elsewhere through the lens of gender. Designed to familiarize students with the relationships between cultural paradigms associated with gender and transnational experiences of colonialism. Focuses on the variety of artistic strategies employed by writers to communicate the impacts of gender and sexuality on contemporary postcolonial themes such as neocolonialism, nationalism, and diaspora. Writers may include Chimamanda Adichie, Nawal El Saadawi, Marjane Satrapi, Bessie Head, Arundhati Roy, Banana Yoshimoto, Sonia Singh, and Dionne Brand.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

CLTR 2973. Special Topics. (4 Hours)

Offers intermediate-level study on a selected topic related to the interaction of a particular language with its literary or other cultural contexts. May be repeated twice for a maximum of 12 semester hours.

CLTR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CLTR 3240. Social Justice in Latin American and Latinx Film. (4 Hours)

Examines issues in social justice in contemporary works of cinematography from Latin American and Latinx cultures. Critically engages—from a technical (cinematographic) and sociohistorical perspective—topics related to the representations of historically vulnerable populations, such as people of color, women, LGBTQIA+ persons, and indigenous peoples. Conducted in Spanish.

Prerequisite(s): SPNS 2102 with a minimum grade of C- or SPNS 3101 with a minimum grade of C- or SPNS 3102 with a minimum grade of C- or Placement in SPNS 3101 with a score of 3101 or Placement in SPNS 3102 with a score of 3102

Attribute(s): NUpath Interpreting Culture

CLTR 3418. Nationalism. (4 Hours)

Explores contending theories of identity and nationalism—a powerful force in international and domestic politics. Examines topics such as the process of identity creation, the choice of national symbols, how group boundaries are established, the role of identity in conflict and state building, and the debate over nationalism's constructed or primordial nature. POLS 3418 and CLTR 3418 are cross-listed.

Prerequisite(s): POLS 1155 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

CLTR 3715. New Narratives: Latin America after 1989. (4 Hours)

Focuses on film, literature, and new media. This course offers a panoramic view of the Latin American cultural production after 1989, attempting to characterize the variety of styles and trends. Relates the texts and movies to the socio, political, and economic issues of the moment, i.e., implementation of neoliberal democracies, globalization, neocolonialism, resistance, new social movements, etc. Also studies links between Latin America and the United States and between Latin America and Spain. Focuses on texts written by relatively young authors. Taught in Spanish.

Prerequisite(s): SPNS 2102 with a minimum grade of D- or SPNS 3101 with a minimum grade of D- or SPNS 3102 with a minimum grade of D-

CLTR 3720. Literature, Arts, and Poverty in Latin America. (4 Hours)

Focuses on the construction, characteristics, and representation of poverty/the poor in Latin American texts from the thirties and sixties and in the works of contemporary Latin American writers and film directors. Discusses the relation of these works to a "realist tradition" by studying social, political, and cultural aspects of Latin America from the nineteenth and twentieth centuries. Considers whether we are facing a new kind of realism. Also engages the problem of representation, the "role of literature" (ethics and literature), and its relation with politics and the global economy (literature and the market) in the Latin American context. Taught in Spanish.

Prerequisite(s): SPNS 2102 with a minimum grade of D- or SPNS 3101 with a minimum grade of D- or SPNS 3102 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture

CLTR 3805. Culture, Politics, and Media in Spain. (4 Hours)

Offers an in-depth critical inquiry into the current debates in the public sphere in Spain focusing on the politics of culture and identity as they both inform and challenge the very foundations of a modern nation-state. Arguably the first political entity in modern times to have been constructed as a state unified under one religion, one people, and one monarch, Spain is today an early example of a growing tendency toward national fragmentation and disintegration. Examines the ways in which current events in Spain may be the presage to an ever more unstable world order. Considers the possibility of a higher state of global governance beyond the nation-state and empire. Taught in English.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

CLTR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CLTR 4655. Latin American Literature. (4 Hours)

Offers an overview of the major trends in Latin American narrative, poetry, drama, and essays, from Bernal Diaz through Borges and Bolaño. Studies broad cultural and political contexts, especially the Cold War period and the impact of neoliberalism. Conducted in Spanish.

Prerequisite(s): SPNS 2101 with a minimum grade of D- or SPNS 2102 with a minimum grade of D- or SPNS 3101 with a minimum grade of D- or SPNS 3102 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

CLTR 4944. Cultural Engagement Abroad. (4 Hours)

Designed for a language-based Dialogue of Civilizations. Complements the intensive language course that students take while on a language-based Dialogue. Offers students an opportunity to obtain an in-depth knowledge of the contemporary culture(s) of the country of the Dialogue and how that culture differs from or is similar to contemporary American cultural values and practices. In addition to regular in-class lectures and activities, offers structured opportunities to engage in dialogue with businesspeople, scholars, educators, artists, government officials, journalists, students, senior citizens, and/or local residents about their perspectives on various topics and issues. May be repeated up to three times.

CLTR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CLTR 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

Cybersecurity (CY)**Courses****CY 2550. Foundations of Cybersecurity. (4 Hours)**

Presents an overview of basic principles and security concepts related to information systems, including workstation security, system security, and communications security. Discusses legal, ethical, and human factors and professional issues associated with cybersecurity, including the ability to differentiate between laws and ethics. Offers students an opportunity to use a substantial variety of existing software tools to probe both computer systems and networks in order to learn how these systems function, how data moves within these systems, and how these systems might be vulnerable. Covers security methods, controls, procedures, economics of cybercrime, criminal procedure, and forensics.

Prerequisite(s): CS 2500 with a minimum grade of D- or DS 2000 with a minimum grade of D-

CY 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CY 2991. Research in Cybersecurity. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated three times.

CY 3740. Systems Security. (4 Hours)

Introduces the fundamental principles of designing and implementing secure programs and systems. Presents and analyzes prevalent classes of attacks against systems. Discusses techniques for identifying the presence of vulnerabilities in system design and implementation, preventing the introduction of or successful completion of attacks, limiting the damage incurred by attacks, and strategies for recovering from system compromises. Offers opportunities for hands-on practice of real-world attack and defense in several domains, including systems administration, the Web, and mobile devices. Presents the ethical considerations of security research and practice.

Prerequisite(s): CS 3650 with a minimum grade of D-

CY 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CY 4170. The Law, Ethics, and Policy of Data and Digital Technologies. (4 Hours)

Describes the legal and ethical issues associated with collection, use, disclosure, and protection of digital information. Emphasizes legal infrastructure relating to privacy, data ethics, data security, hacking, automation, and intellectual property. Articulates the basic set of rules and rights that are relevant to data practices and protection, evaluates how these rules apply in context, and critically analyzes their efficacy and social impact.

Attribute(s): NUpath Ethical Reasoning, NUpath Writing Intensive

CY 4740. Network Security. (4 Hours)

Studies topics related to Internet architecture and cryptographic schemes in the context of security. Provides advanced coverage of the major Internet protocols including IP and DNS. Examines denial of service, viruses, and worms, and discusses techniques for protection. Covers cryptographic paradigms and algorithms such as RSA and Diffie-Hellman in sufficient mathematical detail. The advanced topics address the design and implementation of authentication protocols and existing standardized security protocols. Explores the security of commonly used applications like the Web and e-mail.

Prerequisite(s): CS 3700 with a minimum grade of D- or CS 4700 with a minimum grade of D- or CS 4730 with a minimum grade of D- or CS 5700 with a minimum grade of C-

CY 4760. Security of Wireless and Mobile Systems. (4 Hours)

Presents the foundations to understand security and privacy threats as well as defenses in wireless and mobile systems, especially in the era of softwareization of wireless networks. Studies the proliferation of wireless systems within a wide variety of contexts such as telephony, navigation, sensor networks, and critical infrastructures. Examines the security challenges inherent in the broadcast nature of wireless technologies and the increased availability of software-defined radios. Offers students an opportunity to obtain experience in describing and classifying security goals and attacks in modern wireless networks, to identify the unique security implications of these effects, and how to mitigate security issues associated with them.

CY 4770. Cryptography. (4 Hours)

Studies the design of cryptographic schemes that enable secure communication and computation. Emphasizes cryptography as a mathematically rigorous discipline with precise definitions, theorems, and proofs and highlights deep connections to information theory, computational complexity, and number theory. Topics include pseudorandomness; symmetric-key cryptosystems and block ciphers such as AES; hash functions; public-key cryptosystems, including ones based on factoring and discrete logarithms; signature schemes; secure multiparty computation and applications such as auctions and voting; and zero-knowledge proofs.

Prerequisite(s): (CS 3000 with a minimum grade of D- ; CS 3800 with a minimum grade of D-) or CS 4800 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning

CY 4930. Cybersecurity Capstone. (4 Hours)

Provides the culmination of the learned principles and methodologies for identifying and addressing cybersecurity issues in organizations. Offers students an opportunity to work in small groups to identify and scope a current cybersecurity problem/challenge. Requires students to submit a written proposal about the project, complete with motivation, literature research, and reasons for the study; create a work plan to develop a solution to include the development and identification of the data necessary to properly solve the problem/challenge; and create a final report.

Prerequisite(s): CY 3740 with a minimum grade of D- or CY 4740 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

CY 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors in the discipline project.

CY 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field.

Prerequisite(s): CY 4970 with a minimum grade of D-

CY 4973. Topics in Cybersecurity. (4 Hours)

Offers a lecture course in cybersecurity on a topic not regularly taught in a formal course. Topics may vary from offering to offering. May be repeated up to three times.

Prerequisite(s): CS 3000 with a minimum grade of D- ; (CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-)

CY 5001. Cybersecurity: Technologies, Threats, and Defenses. (4 Hours)

Seeks to provide a systematic understanding of cyberspace technology and applications deployed in the global digital infrastructure. Covers topics in computer networks, server architectures, operating systems, and scripting. All the techniques and tools included in the course are oriented to serve as instruments of security administrators and cybersecurity professionals. Uses practical hands-on labs running on virtual machines and containers hosted in the cloud computing environment to train students. For that reason, a practical overview of virtualization technologies, containerization, and cloud computing models is provided.

CY 5003. Foundations of Software Security. (4 Hours)

Provides an overview of various software security threats and some of the most effective countermeasures used to thwart both well-known and newly emerging software security threats. Introduces best practices and tools available to help minimize common software security attacks, recognizing that it is impossible to accomplish “perfect security” in software. Also studies secure coding concepts, tools, and practices in a high-level programming language.

CY 5010. Cybersecurity Principles and Practices. (4 Hours)

Introduces information security via concepts of confidentiality, integrity, and availability. Discusses ethical, legal, and privacy ramifications while reviewing various laws, such as the Patriot Act, the Gramm-Leach-Bliley Act, and the General Data Protection Regulation. Covers security methods, controls, procedures, economics of cybercrime, criminal procedure, and forensics.

CY 5061. Cloud Security. (2 Hours)

Introduces the fundamentals of cloud computing while segueing into understanding its various security challenges, threat models, and data privacy issues in regard to compliance and legal decisions. Examines the strategies to implement security controls, perform risk assessments, handle incident detection and response, while emphasizing maintaining a business-minded security life cycle for cloud-based environments.

Prerequisite(s): CY 5001 with a minimum grade of C- or CY 5010 with a minimum grade of C-

CY 5065. Cloud Security Practices. (4 Hours)

Introduces the fundamentals of cloud computing. Examines the strategies to implement security controls, perform risk assessments, and handle incident detection and response. Emphasizes maintenance of a business-minded security life cycle for cloud-based environments. Offers students an opportunity to obtain an understanding of various security challenges, threat models, and data privacy issues in regard to compliance and legal implications.

Prerequisite(s): CY 5010 with a minimum grade of C-

CY 5120. Applied Cryptography. (4 Hours)

Surveys the principles and the practices of cryptography. Overviews the core cryptographic algorithms: symmetric encryption schemes (e.g., DES and AES); public key cryptosystems (e.g., RSA and discrete logarithm); and hash functions (e.g., the SHA family). Discusses core information assurance building blocks, such as authentication, digital signatures, key management, and digital certificates. Finally, applies these concepts to important security architectures, including the IP network stack (e.g., IPsec and SSL/TLS), the cellular system, and broadcast media.

Prerequisite(s): CY 5001 with a minimum grade of C- or CY 5010 with a minimum grade of C-

CY 5130. Computer System Security. (4 Hours)

Offers a practical overview of enterprise computer security, operating systems security, and related topics. Applies concepts such as authentication, access control, integrity, and audit to the modern operating system. Discusses and demonstrates system, process, memory, and file system-level defenses—and the attacks against them. Also discusses topics in data security and virtualization. Uses hands-on labs to reinforce skills and provide practical experience.

Prerequisite(s): CY 5001 with a minimum grade of C- or CY 5010 with a minimum grade of C-

CY 5150. Network Security Practices. (4 Hours)

Explores issues involved in the security of computer networks. Topics include firewalls, viruses, virtual private networks, Internet security, and wireless security. Includes case studies and laboratory exercises.

Prerequisite(s): CY 5001 with a minimum grade of C- or CY 5010 with a minimum grade of C-

CY 5200. Security Risk Management and Assessment. (4 Hours)

Creates the opportunity for competency in the development of information security policies and plans including controls for physical, software, and networks. Discusses different malicious attacks, such as viruses and Trojan horses, detection strategies, countermeasures, damage assessment, and control. Covers information system risk analysis and management, audits, and log files. Uses case studies, site visits, and works with commercial products.

Prerequisite(s): CS 2550 with a minimum grade of D- or CY 2550 with a minimum grade of D- or IA 5010 with a minimum grade of C- or CY 5010 with a minimum grade of C- or graduate program admission

CY 5210. Information System Forensics. (4 Hours)

Designed to allow students to explore the techniques used in computer forensic examinations. Examines computer hardware, physical and logical disk structure, and computer forensic techniques. Conducts hands-on experiences on DOS, Windows operating systems, Macintosh, Novell, and Unix/Linux platforms. Builds on basic computer skills and affords hands-on experience with the tools and techniques to investigate, seize, and analyze computer-based evidence using a variety of specialized forensic software in an IBM-PC environment.

Prerequisite(s): CS 2550 with a minimum grade of D- or CY 2550 with a minimum grade of D- or IA 5010 with a minimum grade of C- or CY 5010 with a minimum grade of C- or graduate program admission

CY 5240. Cyberlaw: Privacy, Ethics, and Digital Rights. (4 Hours)

Describes the legal and ethical issues associated with information security including access, use, and dissemination. Emphasizes legal infrastructure relating to information assurance, such as the Digital Millennium Copyright Act and Telecommunications Decency Act, and emerging technologies for management of digital rights. Examines the role of information security in various domains such as healthcare, scientific research, and personal communications such as email. Examines criminal activities such as computer fraud and abuse, desktop forgery, embezzlement, child pornography, computer trespass, and computer piracy.

Prerequisite(s): CS 2550 with a minimum grade of D- or CY 2550 with a minimum grade of D- or IA 5010 with a minimum grade of C- or CY 5010 with a minimum grade of C- or graduate program admission

Attribute(s): NUpath Ethical Reasoning, NUpath Writing Intensive

CY 5250. Decision Making for Critical Infrastructure. (4 Hours)

Focuses on the art and science of security program management leadership in the context of critical infrastructure protection programs. Includes selected readings, review of decision-making models in crisis, lectures and insights from accomplished leaders in infrastructure protection, and examination of the students' own unique background and experiences. Trains students on the interaction of vulnerabilities, threats, and countermeasures and how to apply this knowledge to the protection of critical infrastructure using research and analysis of national and global strategies, historical and current legislation, and policies. Also seeks to give students a working knowledge of federal, state, and private-sector critical infrastructure protection resources and programs.

CY 5770. Software Vulnerabilities and Security. (4 Hours)

Seeks to help students to become aware of systems security issues and to gain a basic understanding of security. Presents the principal software and applications used in the Internet, discussing in detail the related vulnerabilities and how they are exploited. Also discusses programming vulnerabilities and how they are exploited. Examines protection and detection techniques. Includes a number of practical lab assignments as well as a discussion of current research in the field.

Prerequisite(s): CY 5001 with a minimum grade of C- or CY 5010 with a minimum grade of C-

CY 5976. Directed Study. (1-4 Hours)

Seeks to provide cybersecurity (CY) students with the training experience of working on a specific IA project under the direction of an CY instructor. The instructor provides students with a plan of seminar sessions, including lectures, research, and development of project deliverables and with direction to complete the course. May be repeated without limit.

CY 5984. Research. (2-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

CY 6120. Software Security Practices. (4 Hours)

Explores the fundamentals of software security issues from a practical perspective. Takes a deeper dive into the low-level mechanisms used in a variety of most prevalent software security issues and discusses some of the industry best practices needed to address the issues. Offers students an opportunity to learn both an attacker's and defender's perspectives when it comes to software security issue exploitation, detection, and mitigation. Incorporates a number of practical C and assembly coding and lab assignments. Includes an overview of some of the state-of-the-art software security issue exploitation and mitigation techniques used in the field.

Prerequisite(s): CY 5010 with a minimum grade of C-

CY 6200. Special Topics in IT Security Governance, Risk, and Compliance. (1-4 Hours)

Offers various topics in IT security governance, risk, and compliance. May be repeated for up to 8 total credits.

CY 6740. Network Security. (4 Hours)

Studies the theory and practice of computer security, focusing on the security aspects of multiuser systems and the Internet. Introduces cryptographic tools, such as encryption, key exchange, hashing, and digital signatures in terms of their applicability to maintaining network security. Discusses security protocols for mobile networks. Topics include firewalls, viruses, Trojan horses, password security, biometrics, VPNs, and Internet protocols such as SSL, IPSec, PGP, SNMP, and others.

Prerequisite(s): CY 5001 with a minimum grade of C- or CY 5010 with a minimum grade of C-

CY 6760. Wireless and Mobile Systems Security. (4 Hours)

Focuses on security and privacy of mobile and wireless systems. Provides the foundations to understand the security and privacy threats and defenses in wireless and mobile systems, especially in an era where wireless network functions are implemented in software instead of traditional hardware-based solutions. Covers topics on availability/integrity issues in wireless networks, Wi-Fi and cellular network security, broadcast authentication techniques, jamming and antijamming techniques, etc. Emphasizes hands-on practical exercises to strengthen the understanding of concepts covered during the lectures. Reviews the state of the art in wireless security research through readings. Offers students an opportunity to execute a semester-long project in the broad area of wireless security.

CY 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CY 7790. Special Topics in Security and Privacy. (4 Hours)

Offers various topics in security and privacy. May be repeated for up to 8 total credits.

CY 7900. Capstone Project. (4 Hours)

Draws together candidates from diverse backgrounds (technical, legal, and/or law enforcement) in a collaborative activity to address one or more security issues from an integrated perspective. Requires a project proposal, generally industrially oriented, to be submitted and accepted prior to the semester in which the project is to be undertaken.

CY 7962. Elective. (2-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CY 7990. Thesis. (2-4 Hours)

Offers selected work with the agreement of a project supervisor. May be repeated without limit.

CY 7995. Project. (1-4 Hours)

Offers students an opportunity to participate in a direct cybersecurity project under the supervision of a faculty member. May be repeated once for a total of 8 credits.

CY 8982. Readings. (1-8 Hours)

Offers selected readings under the supervision of a faculty member. May be repeated without limit.

CY 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

CY 9990. Dissertation Term 1. (0 Hours)

Offers selected work with the agreement of a thesis supervisor.

Prerequisite(s): CY 9000 with a minimum grade of S

CY 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): CY 9990 with a minimum grade of S

CY 9996. Dissertation Continuation. (0 Hours)

Continues work with the agreement of a thesis supervisor.

Prerequisite(s): CY 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Data Analytics (DA)**Courses****DA 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DA 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DA 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DA 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DA 5020. Collecting, Storing, and Retrieving Data. (4 Hours)

Studies how to build large-scale information repositories of different types of information objects so that they can be selected, retrieved, and transformed for analytics and discovery, including statistical analysis. Analyzes how traditional approaches to data storage can be applied alongside modern approaches that use nonrelational data structures. Through case studies, readings on background theory, and hands-on experimentation, offers students an opportunity to learn how to select, plan, and implement storage, search, and retrieval components of large-scale structured and unstructured information repositories. Emphasizes how to assess and recommend efficient and effective large-scale information storage and retrieval components that provide data scientists with properly structured, accurate, and reliable access to information needed for investigation.

DA 5030. Introduction to Data Mining/Machine Learning. (4 Hours)

Introduces the fundamental techniques for data mining, combining elements from CS 6140 and CS 6220. Discusses several basic learning algorithms, such as regression and decision trees, along with popular data types, implementation and execution, and analysis of results. Lays the data analytics program foundation of how learning models from data work, both algorithmically and practically. The coding can be done in R, Matlab or Python. Students must demonstrate ability to set up data for learning, training, testing, and evaluating.

DA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Data Architecture Management (DAMG)**Courses****DAMG 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DAMG 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DAMG 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DAMG 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DAMG 5976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to seven times for a maximum of 8 semester hours.

DAMG 6105. Data Science Engineering with Python. (4 Hours)

Studies the Python programming language with data science as the application domain. Offers students an opportunity to learn how to perform complex numerical calculations, fixed data types, space efficiency, and vector manipulations. Covers tools and techniques for manipulating tables, spreadsheets, and group and pivot tables involving extremely large data sets. Covers large multidimensional arrays and matrices and the high-level mathematical functions to operate on these arrays. Studies how to use Python to manipulate the classic math and science algorithms. Analyzes helper functions such as linear and nonlinear regression, integration, Fourier transformations, numerical optimization, etc. Includes higher-level classes for manipulating and visualizing data. Applies tools and techniques to classical data science using cases such as time series forecasting, social network analysis, text analytics, and big data processing.

DAMG 6210. Data Management and Database Design. (4 Hours)

Studies design of information systems from a data perspective for engineering and business applications; data modeling, including entity-relationship (E-R) and object approaches; user-centric information requirements and data sharing; fundamental concepts of database management systems (DBMS) and their applications; alternative data models, with emphasis on relational design; SQL; data normalization; data-driven application design for personal computer, server-based, enterprise-wide, and Internet databases; and distributed data applications.

DAMG 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DAMG 7105. Intelligent Data Modeling and Presentation for Engineers. (4 Hours)

Studies every step in a data analysis pipeline and the visual techniques that aid in understanding the quality of each step. Offers students an opportunity to visualize the quality of their data, learn how to fix issues, and then visualize what those fixes helped. Focuses on visualizing models to produce actionable insights and how to visualize causal relationships in models. Emphasizes attention to graphical machine-learning models and how to visualize the critical parts of a network. Covers graphic design principles to assist students to effectively communicate their findings.

Prerequisite(s): INFO 5002 with a minimum grade of B or INFO 6105 with a minimum grade of B or DAMG 6105 with a minimum grade of B

DAMG 7245. Big-Data Systems and Intelligence Analytics. (4 Hours)

Offers students an opportunity to learn a hands-on approach to understanding how large-scale data sets are processed and how data science algorithms are adopted in the industry through case studies and labs. This project-based course builds on INFO 7390 and focuses on enabling students with tools and frameworks primarily to build end-to-end applications. The course is divided into three parts: building the data pipeline for data science, implementing data science algorithms, and scaling and deploying data science algorithms.

Prerequisite(s): DAMG 6105 with a minimum grade of B or INFO 6105 with a minimum grade of B

DAMG 7250. Big Data Architecture and Governance. (4 Hours)

Focuses on creating and managing a data-driven enterprise. Geared to current IT technical professionals, data scientists, technical project managers, aspiring IT professionals, and managers who want to understand the complex nature of creating and managing data-driven projects to support the new and legacy data environments. Covers the analysis that is required to design data-driven projects and make appropriate recommendations for the target state of an organization. This analysis is used as input to create a comprehensive road map to achieve the target state and includes current and future uses of data, consumption methods, data sources and categories, and aggregation and quality requirements.

Prerequisite(s): CSYE 6200 with a minimum grade of B or DAMG 6105 with a minimum grade of B or DAMG 6210 with a minimum grade of B or INFO 5100 with a minimum grade of B or INFO 6210 with a minimum grade of B

DAMG 7275. Advanced Database Management Systems. (4 Hours)

Introduces the skill set required to become a serious database applications developer. Offers an overview of the Oracle9i object-relational database system for those who have mastered the fundamental principles of database design and are competent with basic SQL. Gives students the opportunity to develop a strong understanding of the PL/SQL programming language, which is used to create triggers, user-generated functions, stored procedures, and packages for programming Oracle objects. Emphasizes advanced SQL features and Oracle-specific SQL enhancements. Covers optimization and tuning issues. Covers corresponding material for Transact-SQL (used for Microsoft SQL Server and Sybase database systems) as time and resources permit.

Prerequisite(s): DAMG 6210 with a minimum grade of B or INFO 6210 with a minimum grade of B

DAMG 7290. Data Warehousing and Business Intelligence. (4 Hours)

Examines the technical and management aspects of building a data warehouse. Explores the architecture, infrastructure, processes, data quality, database design, and data analysis involved in building the data warehouse for business analysis. Management issues include business goals, tool selection, project management, personnel skills, training, and user requirements. Topics include dimensional data modeling, extraction/transformation/load processes, data quality problems, datamarts, operational data stores (ODS), staging databases, and online analytic processing (OLAP).

Prerequisite(s): DAMG 6210 with a minimum grade of B or DAMG 7275 with a minimum grade of B or INFO 6205 with a minimum grade of B or INFO 6210 with a minimum grade of B

DAMG 7325. Introduction to Information Technology Auditing. (4 Hours)

Designed to provide a foundation for the study and professional career development of information technology (IT) auditing. Introduces the fundamentals of IT auditing, core reasons why this is a specialized area of auditing, and the principle objectives of IT auditing and its relationship to integrated financial or operational auditing. Offers an insight into management's objectives regarding IT risk management. Uses the Cobit governance and control framework to emphasize management issues regarding control of IT and the achievement of value through managed IT processes. Introduces three primary types of IT audits: the audits of computerized information systems, IT processing environments, and the process of developing and implementing information systems.

Prerequisite(s): DAMG 6105 with a minimum grade of B ; (DAMG 6210 with a minimum grade of B or INFO 6210 with a minimum grade of B)

DAMG 7350. Systems and Cybersecurity Fundamentals. (4 Hours)

Presents the principles of data and technology that define systems and cybersecurity from a socio-technical perspective. Offers students an opportunity to gain insight into the importance of systems security within cybersecurity and the integral role that information systems analysts play in developing cybersecure systems that people use. Through hands-on dynamic learning, students explore foundational cybersecurity principles, security architecture, risk management, attacks and mitigation strategies using Kali Linux, cyber incident response, and emerging IT/IS technologies.

Prerequisite(s): DAMG 6105 with a minimum grade of B ; (DAMG 6210 with a minimum grade of B or INFO 6210 with a minimum grade of B)

DAMG 7370. Designing Advanced Data Architectures for Business Intelligence. (4 Hours)

Focuses on designing advanced data architectures supporting structured, unstructured, and semistructured data sources; hybrid integration and data engineering; and analytical uses by casual information consumers, power users, and data scientists. Technologies include databases (relational, columnar, in-memory, and NoSQL); hybrid data, application, and cloud integration; data preparation; data virtualization; descriptive, diagnostic, predictive, and prescriptive analytics; and on-premise and on-cloud deployments. Topics include data structures, data models, data integration workflow and data engineering, data integration, data preparation, and data virtualization.

Prerequisite(s): DAMG 6210 with a minimum grade of B or INFO 6210 with a minimum grade of B

DAMG 7374. Special Topics in Data Architecture and Management. (1-4 Hours)

Offers topics of current interest in data architecture and management. May be repeated without limit.

DAMG 7390. Advances in Hybrid Data Integration and Engineering. (4 Hours)

Offers students an opportunity to understand concepts on integration use cases, integration processes and personae, data governance (with privacy and security), and data management, in an era when enterprises are increasingly adding, expanding, and altering data sources. While gathering data is often straightforward, enterprises struggle to integrate, cleanse, curate, transform, and govern data to deliver comprehensive and consistent data to support operations and enable analytics. Covers real-world integration use cases that present data fragmentation, data inconsistency, and data quality challenges and effective architectures needed to design, develop, and implement hybrid integration platforms. Studies how to apply theory and best and pragmatic practices with various technologies to implement hybrid integration platform solutions.

Prerequisite(s): DAMG 7370 with a minimum grade of B-

DAMG 7945. Master's Project. (4 Hours)

Delves deeply into advanced concepts and methodologies within data architecture and management. Emphasizes the development of critical thinking skills and the practical application of theoretical knowledge to real-world problems in the field. Through individual efforts, including laboratory work and/or literature review, students thoroughly explore and analyze various aspects of data architecture and management, focusing on a project selected in consultation with their faculty advisor that allows for tailored exploration and research. Students compile a comprehensive report detailing their findings, methodologies, and conclusions. Offers students an opportunity to present their discoveries to peers and faculty, fostering scholarly discussion and collaboration.

DAMG 7976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to seven times for a maximum of 8 semester hours.

DAMG 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

DAMG 7990. Thesis. (4 Hours)

Offers theoretical and experimental work conducted under the supervision of a departmental faculty.

Prerequisite(s): DAMG 7945 with a minimum grade of C-

Data Science (DS)**Courses****DS 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DS 2000. Programming with Data. (2 Hours)

Introduces programming for data and information science through case studies in business, sports, education, social science, economics, and the natural world. Presents key concepts in programming, data structures, and data analysis through Python and Excel. Integrates the use of data analytics libraries and tools. Surveys techniques for acquiring and programmatically integrating data from different sources. Explains the data analytics pipeline and how to apply programming at each stage. Discusses the programmatic retrieval of data from application programming interfaces (APIs) and from databases. Introduces predictive analytics for forecasting and classification. Demonstrates the limitations of statistical techniques.

Corequisite(s): DS 2001

Attribute(s): NUpath Analyzing/Using Data

DS 2001. Data Science Programming Practicum. (2 Hours)

Applies data science principles in interdisciplinary contexts, with each section focusing on applications to a different discipline. Involves new experiments and readings in multiple disciplines (both computer science and the discipline focus of the particular section). Requires multiple projects combining interdisciplinary subjects.

Corequisite(s): DS 2000

DS 2500. Intermediate Programming with Data. (4 Hours)

Offers intermediate to advanced Python programming for data science. Covers object-oriented design patterns using Python, including encapsulation, composition, and inheritance. Advanced programming skills cover software architecture, recursion, profiling, unit testing and debugging, lineage and data provenance, using advanced integrated development environments, and software control systems. Uses case studies to survey key concepts in data science with an emphasis on machine-learning (classification, clustering, deep learning); data visualization; and natural language processing. Additional assigned readings survey topics in ethics, model bias, and data privacy pertinent to today's big data world. Offers students an opportunity to prepare for more advanced courses in data science and to enable practical contributions to software development and data science projects in a commercial setting.

Prerequisite(s): DS 2000 with a minimum grade of D-

Corequisite(s): DS 2501

Attribute(s): NUpath Analyzing/Using Data

DS 2501. Lab for DS 2500. (1 Hour)

Practices the programming techniques discussed in DS 2500 through hands-on experimentation.

Corequisite(s): DS 2500

DS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DS 2991. Research in Data Science. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated three times.

DS 3000. Foundations of Data Science. (4 Hours)

Introduces methods and concepts from linear algebra and probability that form a basis for modern machine learning. Emphasizes computational aspects using the Python programming language (the course assumes familiarity with Python). Students work with tensors (in NumPy) and may be tasked with implementing from scratch algorithms central to numerical linear algebra and introductory machine learning.

Prerequisite(s): CS 2510 with a minimum grade of D- or DS 2500 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

DS 3500. Advanced Programming with Data. (4 Hours)

Offers a deep dive into the design and implementation of enterprise-grade software systems with an emphasis on software architectures for more complex data-driven applications. Covers extensible architectures that support testing, data provenance, reuse, maintainability, scalability, and robustness and building software APIs and libraries for wide-scale adoption and ease of use. Students design, implement, and test complex loosely coupled service-oriented architectures using distributed processing, stream-based data processing, and interprocess communication via message passing. Explores the features, capabilities, and underlying design of popular data analysis and visualization frameworks.

Prerequisite(s): DS 2500 with a minimum grade of D-

DS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DS 4200. Information Presentation and Visualization. (4 Hours)

Introduces foundational principles, methods, and techniques of visualization to enable creation of effective information representations suitable for exploration and discovery. Covers the design and evaluation process of visualization creation, visual representations of data, relevant principles of human vision and perception, and basic interactivity principles. Studies data types and a wide range of visual data encodings and representations. Draws examples from physics, biology, health science, social science, geography, business, and economics. Emphasizes good programming practices for both static and interactive visualizations. Creates visualizations in Excel and Tableau as well as R, Python, and open web-based authoring libraries. Requires programming in Python, JavaScript, HTML, and CSS. Requires extensive writing including documentation, explanations, and discussions of the findings from the data analyses and the visualizations.

Prerequisite(s): CS 2510 with a minimum grade of D- or DS 2500 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

DS 4300. Large-Scale Information Storage and Retrieval. (4 Hours)

Introduces data and information storage approaches for structured and unstructured data. Covers how to build large-scale information storage structures using distributed storage facilities. Explores data quality assurance, storage reliability, and challenges of working with very large data volumes. Studies how to model multidimensional data. Implements distributed databases. Considers multtier storage design, storage area networks, and distributed data stores. Applies algorithms, including graph traversal, hashing, and sorting, to complex data storage systems. Considers complexity theory and hardness of large-scale data storage and retrieval. Requires use of nonrelational, document, key-column, key-value, and graph databases and programming in R, Python, and C++.

Prerequisite(s): CS 3200 with a minimum grade of D- ; (DS 4100 with a minimum grade of D- or DS 3000 with a minimum grade of D-)

Attribute(s): NUpath Analyzing/Using Data

DS 4400. Machine Learning and Data Mining 1. (4 Hours)

Introduces supervised and unsupervised predictive modeling, data mining, and machine-learning concepts. Uses tools and libraries to analyze data sets, build predictive models, and evaluate the fit of the models. Covers common learning algorithms, including dimensionality reduction, classification, principal-component analysis, k-NN, k-means clustering, gradient descent, regression, logistic regression, regularization, multiclass data and algorithms, boosting, and decision trees. Studies computational aspects of probability, statistics, and linear algebra that support algorithms, including sampling theory and computational learning. Requires programming in R and Python. Applies concepts to common problem domains, including recommendation systems, fraud detection, or advertising.

Prerequisite(s): (DS 3000 with a minimum grade of D- or CS 2810 with a minimum grade of D-); (DS 3500 with a minimum grade of D- or CS 3500 with a minimum grade of D-)

Attribute(s): NUpath Analyzing/Using Data, NUpath Capstone Experience, NUpath Writing Intensive

DS 4420. Machine Learning and Data Mining 2. (4 Hours)

Continues with supervised and unsupervised predictive modeling, data mining, and machine-learning concepts. Covers mathematical and computational aspects of learning algorithms, including kernels, time-series data, collaborative filtering, support vector machines, neural networks, Bayesian learning and Monte Carlo methods, multiple regression, and optimization. Uses mathematical proofs and empirical analysis to assess validity and performance of algorithms. Studies additional computational aspects of probability, statistics, and linear algebra that support algorithms. Requires programming in R and Python. Applies concepts to common problem domains, including spam filtering.

Prerequisite(s): DS 4400 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Capstone Experience, NUpath Writing Intensive

DS 4440. Practical Neural Networks. (4 Hours)

Offers a hands-on introduction to modern neural network ("deep learning") methods and tools. Covers fundamentals of neural networks and introduces standard and new architectures from simple feedforward networks to recurrent and "transformer" architectures. Also covers stochastic gradient descent and backpropagation, along with related parameter estimation techniques. Emphasizes using these technologies in practice, via modern toolkits. Reviews applications of these models to various types of data, including images and text.

Prerequisite(s): DS 4400 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

DS 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors in the discipline project.

DS 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field.

Prerequisite(s): DS 4970 with a minimum grade of D-

DS 4973. Topics in Data Science. (4 Hours)

Offers a lecture course in data science on a topic not regularly taught in a formal course. Topics may vary from offering to offering. May be repeated up to four times.

Prerequisite(s): CS 3000 with a minimum grade of D- ; (CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-)

DS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DS 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

DS 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. May be repeated without limit.

DS 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

DS 4997. Data Science Thesis. (4 Hours)

Offers students an opportunity to prepare an undergraduate thesis under faculty supervision.

DS 4998. Data Science Thesis Continuation. (4 Hours)

Focuses on student continuing to prepare an undergraduate thesis under faculty supervision.

DS 5010. Introduction to Programming for Data Science. (4 Hours)

Offers an introductory course on fundamentals of programming and data structures. Covers lists, arrays, trees, hash tables, etc.; program design, programming practices, testing, debugging, maintainability, data collection techniques, and data cleaning and preprocessing. Includes a class project, where students use the concepts covered to collect data from the web, clean and preprocess the data, and make it ready for analysis.

DS 5020. Introduction to Linear Algebra and Probability for Data Science. (4 Hours)

Offers an introductory course on the basics of statistics, probability, and linear algebra. Covers random variables, frequency distributions, measures of central tendency, measures of dispersion, moments of a distribution, discrete and continuous probability distributions, chain rule, Bayes' rule, correlation theory, basic sampling, matrix operations, trace of a matrix, norms, linear independence and ranks, inverse of a matrix, orthogonal matrices, range and null-space of a matrix, the determinant of a matrix, positive semidefinite matrices, eigenvalues, and eigenvectors.

DS 5110. Introduction to Data Management and Processing. (4 Hours)

Introduces students to the core tasks in data science, including data collection, storage, tidying, transformation, processing, management, and modeling for the purpose of extracting knowledge from raw observations. Programming is a cross-cutting aspect of the course. Offers students an opportunity to gain experience with data science tasks and tools through short assignments. Includes a term project based on real-world data.

DS 5220. Supervised Machine Learning and Learning Theory. (4 Hours)

Introduces supervised machine learning, which is the study and design of algorithms that enable computers/machines to learn from experience or data, given examples of data with a known outcome of interest. Offers a broad view of models and algorithms for supervised decision making. Discusses the methodological foundations behind the models and the algorithms, as well as issues of practical implementation and use, and techniques for assessing the performance. Includes a term project involving programming and/or work with real-world data sets. Requires proficiency in a programming language such as Python, R, or MATLAB.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

DS 5230. Unsupervised Machine Learning and Data Mining. (4 Hours)

Introduces unsupervised machine learning and data mining, which is the process of discovering and summarizing patterns from large amounts of data, without examples of data with a known outcome of interest. Offers a broad view of models and algorithms for unsupervised data exploration. Discusses the methodological foundations behind the models and the algorithms, as well as issues of practical implementation and use, and techniques for assessing the performance. Includes a term project involving programming and/or work with real-life data sets. Requires proficiency in a programming language such as Python, R, or MATLAB.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

DS 5500. Data Science Capstone. (4 Hours)

Offers students a capstone opportunity to practice data science skills learned in previous courses and to build a portfolio. Students practice visualization, data wrangling, and machine learning skills by applying them to semester-long term projects on real-world data. Students may either propose their own projects or choose from a selection of industry options. Emphasizes the overall data science process, including identification of the scientific problem, selection of appropriate machine learning methods, and visualization and communication of results. Lectures may include additional topics, including visualization, communication, and data science ethics.

Prerequisite(s): (CS 5800 with a minimum grade of C- or EECE 7205 with a minimum grade of C-); DS 5110 with a minimum grade of C- ; DS 5220 with a minimum grade of C- ; DS 5230 with a minimum grade of C-

DS 5983. Topics in Data Science. (4 Hours)

Offers special topics in data science based on the interest and expertise of the faculty member conducting the course. May be repeated once.

DS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DS 7990. Thesis. (4 Hours)

Offers selected work with the agreement of a project supervisor. May be repeated once.

DS 7995. Project. (1-4 Hours)

Offers students an opportunity to participate in a direct data science project under the supervision of a faculty member. May be repeated once for a total of 8 credits.

DS 8982. Readings. (1-8 Hours)

Offers selected readings under the supervision of a faculty member. May be repeated without limit.

Deaf Studies (DEAF)**Courses****DEAF 1500. Deaf People in Society. (4 Hours)**

Focuses on Deaf communities as linguistic and cultural minorities. Topics include perspectives on Deaf communities; attitudes toward Deaf people and sign languages, technology, and communication; the contributions of Deaf people to society; professional and social organizations of and for Deaf people; Deaf clubs as a locus of Deaf culture; communication issues; perspectives on legislation affecting the Deaf Community; legislative and political concerns of the Deaf Community; and the impact of educational options for Deaf children. Also covers the diverse intersectional identities comprising the American Deaf Community due to language use (multilingual), race, gender, class, and multicultural experiences. Discusses the impact of autism, racism, and many other -isms.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

DEAF 1550. Dynamics of the Deaf/Blind Community: Culture, History, and Communication. (4 Hours)

Explores the multidimensional aspects of the Deaf/Blind community, culture, communication, and history (dynamics of how society has handled individuals who are Deaf/Blind). Topics are studied from the Deaf/Blind perspective and include oppression and its power structures; empowerment vs. "rescue or fix it"; the loss of sight and its impact on communication; and learning about empathy and the courage of vulnerability. Explores Deaf/Blind culture and the grieving process as an ongoing component of life; different types of Deaf/Blindness and diverse styles of communication; and mobility issues and maintaining independence. A brief introduction to sighted guide techniques and technology available.

Prerequisite(s): AMLS 1102 (may be taken concurrently) with a minimum grade of C-

DEAF 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DEAF 2500. Deaf History and Culture. (4 Hours)

Surveys the history and culture of the American Deaf community and Deaf people in the Western world. Focuses on educational, political, and technological forces and events that have positively and negatively affected the American Deaf community. Focuses on the American Deaf community as a linguistic and cultural minority. Also examines contemporary values and factors that shape and define the diverse American Deaf community and compares and contrasts American Deaf cultural values with those of American society in general.

Prerequisite(s): DEAF 1500 with a minimum grade of D

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

DEAF 2700. ASL Linguistics. (4 Hours)

Introduces the basic issues in linguistics by examining the structural properties of American Sign Language. Includes phonology (formational properties of signs); morphology (word formation, rules, derivation, inflection, complex verbs, classifiers, and verb modulations); semantics (the meaning structure of signs); and syntax (the structure of ASL utterances in terms of old vs. new information and the structure of ASL narratives). Examines sociolinguistic variation of ASL usage (such as region, age, and Black ASL), as well as language attitudes and change over time.

Prerequisite(s): (LING 1150 with a minimum grade of D- or ENGL 1150 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C); AMSL 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

DEAF 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DEAF 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DEAF 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Digital Media - CPS (DGM)

Courses

DGM 6105. Visual Communications Foundation. (4 Hours)

Introduces the basic principles and concepts inherent in visual language systems. Covers fundamentals such as visual perception, composition, spatial relationships, color, form, repetition, texture, structure, abstraction, and figure-ground relationships. Student projects focus on visual problem solving with an emphasis on understanding of context, content, and the development of original forms.

DGM 6108. Programming Foundations for Digital Media. (4 Hours)

Offers students an opportunity to learn the fundamentals of programming in a multimedia environment. Emphasizes planning and production for interactive digital media. Using a scripting language as a base, covers how scripting relates to design and programming fundamentals that link logic to action. Topics include graphical user interfaces; user interaction; and algorithmic manipulation of text, graphics, sound, and video.

Corequisite(s): DGM 6109

DGM 6109. Lab for DGM 6108. (2 Hours)

Accompanies DGM 6108. Covers topics from the lecture course through various tutorials and problem-solving exercises.

Corequisite(s): DGM 6108

DGM 6122. Foundations of Digital Storytelling. (4 Hours)

Introduces the fundamentals of character and story development through practical applications in a variety of digital media, from text and storyboarding to sound, moving image, and interactive environments. Offers students an opportunity to become familiar with narrative sequencing and story development, experience the critical role of narrative in linear media, and apply these skills in nonlinear and experimental forms. Students work both individually and collaboratively to develop projects that explore creative storytelling.

Prerequisite(s): DGM 6105 with a minimum grade of C- ; DGM 6501 with a minimum grade of C-

DGM 6125. Time-Based Media. (4 Hours)

Introduces the creative potential of time-based media—data that changes with respect to time. Explores concepts of sequencing, transformation, and motion through time and space. Offers students an opportunity to explore the potential of video, 2D, animation, motion graphics, and sound design through hands-on assignments.

Prerequisite(s): DGM 6122 with a minimum grade of C-

DGM 6140. Sound Design. (4 Hours)

Explores the history, theory, and practice of sound design, the creation of aural environments, special effects, dialogue, and music for a variety of traditional and digital media, including film, TV/video, animation, theatre, radio, interactive games, and the Internet. Films such as *The Matrix*, *Citizen Kane*, and *Star Wars* serve as the basis for developing a core knowledge of sound design concepts, particularly the development of critical listening skills. Topics cover "spotting," digital audio editing and recording, sample libraries, aesthetics of design, music composition, script interpretation, critical listening, professional collaboration, sound and music technology, digital audio production, and production organization. Offers students an opportunity to master core skills, enabling them to communicate effectively with directors, producers, and/or creative artists in the media and entertainment industries.

DGM 6145. Information Technology and Creative Practice. (4 Hours)

Explores interdisciplinary methodologies that promote creativity and stimulate innovative thinking. Information technology (IT) has formed a powerful alliance with art and design to establish the existing new domain of information technology and creative practices (ITCP). The result is an astonishing variety of significant cultural and economic forms ranging from innovative product designs to interactive art installations. Uses case studies and emphasizes the design, planning, and implementation of innovative prototypes.

DGM 6168. Usability and Human Interaction. (4 Hours)

Surveys the theory and practice of human-computer interaction and the development of user interfaces. Through both analysis and design projects, students have an opportunity to learn cutting-edge approaches to usability research and evaluation, testing methods, and how to design systems that meet end-user needs. Topics covered include behavioral and cognitive foundations of interaction design, principles of good design for interaction, basic user research techniques, and the process of user-centered design.

DGM 6217. Typography for Interactivity. (4 Hours)

Explores the basic principles of typographic design, particularly as applied to screen-based media. Topics include screen legibility and resolution, hierarchy and scale, and typographic form and style.

Prerequisite(s): DGM 6105 with a minimum grade of C-

DGM 6230. Digital Media Entrepreneurship. (4 Hours)

Focuses on the personal characteristics necessary to become a successful entrepreneur, as well as on the processes of evaluating an idea, assessing the market, and implementing a new venture, whether inside an organization or as an independent startup. Teaching methods include case study, guest speakers with entrepreneurial experience, lectures, and team projects that develop feasible business plans. Offers students an opportunity to evaluate their potential as entrepreneurs by learning how to identify and evaluate business opportunities, develop a business concept and marketing plan, assess and obtain the required resources, manage the growth of new ventures, and plan for exit strategies.

Prerequisite(s): DGM 6280 with a minimum grade of C-

DGM 6268. Usable Design for Mobile Digital Media. (4 Hours)

Offers students an opportunity to apply the user-centered, human-computer interaction (HCI) skills covered in DGM 6168 to mobile digital media experiences such as game, entertainment, and social media applications. Considers digital media design, aesthetics, and user behavior in mobile-based environments in the creation of a satisfying and engaging experience. Offers students an opportunity to understand best design practices on a mobile platform by applying HCI methods such as iterative design and the evaluative methods of heuristic evaluation and play testing.

Prerequisite(s): DGM 6168 with a minimum grade of C-

DGM 6279. Project Management for Digital Media. (4 Hours)

Introduces the project management life cycle for technology-based products and applications. Beginning with project initiation and assembling a team, offers students an opportunity to apply project management principles to all aspects of planning and managing a project, including scheduling and budgeting. Major topics include managing a team, including setting goals for creatives; managing assets; documentation; deadlines and client expectations; and balancing continuous improvement and rapid prototyping against the need to manage the scope of work.

DGM 6280. Managing for Digital Media. (4 Hours)

Surveys evolving best practices in creative industry management. Begins with the recognition that managing in an environment of innovation and creative media requires a radical rethinking of traditional managerial paradigms. Agile response to technological change requires strategic alternatives in company goals, priorities, and direction. Intellectual content and creativity are difficult to value within classic financial models. New devices and social networks demand responsive action in internal and external communications. Correctly valuing the performance of highly creative people can be key in maintaining or gaining a leadership position. Uses case studies, presentations, and team-based analysis to examine these challenges and discuss effective responses.

DGM 6285. Interactive Marketing Fundamentals. (4 Hours)

Introduces the exploration of messaging in current and evolving media outlets, the digital marketing mix, the growing promise of mobility, and the possibilities and pitfalls of marketing in social media. Marketing has been deeply challenged by the move from traditional to digital channels, as print and TV give way to Web sites and mobile devices as primary centers of information and entertainment. Explores Web analytics, in particular search engine marketing (SEM) and search engine optimization (SEO).

DGM 6290. Social Media and Brand Strategy Implementation. (4 Hours)

Offers students an opportunity to develop the context for working with marketing professionals to implement strategy in a variety of social media, from blogs to social networking sites, and from game worlds to content communities. Social media environments have become a prime target for product and personal marketing, advertising, and supporting a brand image. But their differences from passive media and even standard websites have made it more difficult to apply traditional thinking to these digital media channels. Utilizes lectures, research, projects, and case studies.

DGM 6308. Intermediate Programming for Digital Media. (4 Hours)

Offers students an opportunity to extend the basic proficiency in scripting languages gained in DMG 6108 to more sophisticated programming tasks using an industry-standard scripting language such as JavaScript. Covers the use of arrays and objects to structure data and apply object-oriented and event-driven programming principles to create sophisticated interactivity.

Prerequisite(s): DGM 6108 with a minimum grade of C- or DGM 6501 (may be taken concurrently) with a minimum grade of C-

DGM 6317. Screen-Based Publication Design. (4 Hours)

Introduces the theory and practice of designing books, magazines, and interactive hybrid narratives for touch screens. Offers students an opportunity to become familiar with grids, style sheets and templates, and output to a variety of e-publishing tools as they explore the differences in designing content for the Web, tablets, and smartphones.

DGM 6322. Advanced Digital Storytelling. (4 Hours)

Builds on concepts introduced in DGM 6122. Explores the ideation and production of more complex, nonlinear interactive narratives. Working intensively in a team setting, offers students an opportunity to explore ways to further integrate a variety of narrative elements into immersive experiences.

Prerequisite(s): DGM 6122 with a minimum grade of C-

DGM 6400. Game Design Fundamentals. (4 Hours)

Provides the foundation for all of the other courses in the graduate specialization and/or certificate in game design. Offers students an opportunity to learn the basic principles of game design through the creation of board and card games, and through video-game prototyping. Also offers an opportunity to develop skills, including graphic and written communication, rules logic, group dynamics, and basic programming logic.

DGM 6403. Game Engine Fundamentals. (4 Hours)

Offers students an opportunity to apply their prior experience in DGM 6400 to multiplatform game development and rapid prototyping using an industry-standard game design engine. Game engines provide quick-start platforms and industry-standard solutions for developing video games.

Prerequisite(s): DGM 6400 with a minimum grade of C

DGM 6405. Game Development. (4 Hours)

Introduces video game programming using a game engine. Building on their work from DGM 6400, students have an opportunity to create single-player computer games using industry-standard scripting languages. Projects focus on sound design, two-dimensional design and animation, or three-dimensional design and animation. Students can develop projects as individuals or as part of a team.

Prerequisite(s): DGM 6403 with a minimum grade of C-

DGM 6410. Game Design Technology Lab. (4 Hours)

Offers students an opportunity to explore recent technological advances in game design, including networked multiplayer gaming, 3D gaming, and alternative user interfaces such as cameras and motion/location-sensing devices. Student teams are encouraged to round out their game-design portfolios by developing a sophisticated videogame demo that focuses on a specific theme and technology.

Prerequisite(s): DGM 6405 with a minimum grade of C-

DGM 6435. Digital Video Production. (4 Hours)

Using digital video cameras, students are introduced to field production skills and basic content editing. Students are encouraged to implement and experiment with ideas developed in DGM 6122 as they complete short videos. Through hands-on practice and discussion, as well as the viewing of classic documentary and fiction film/video examples, students have an opportunity to further explore composition of the frame and meanings produced from inter-shot and sequence relationships.

Prerequisite(s): DGM 6506 (may be taken concurrently) with a minimum grade of C-

DGM 6440. Editing in the Digital Studio. (4 Hours)

Uses virtual studio spaces to introduce and develop student comfort with non-linear digital editing. Offers students an opportunity to understand the basic principles of composition, pacing, titling, timecodes and video effects. Working with their own material, existing video clips, animations, still images and audio feeds, students are encouraged to experiment with different styles, methods, and output to gain a comprehensive understanding of the medium. DGM 6506 or prior experience with digital video editing is strongly recommended.

Prerequisite(s): DGM 6435 with a minimum grade of C-

DGM 6450. Animation Basics. (4 Hours)

Explores the creative potential of animation. Exposes students to animation processes and techniques through lectures, demonstrations, and hands-on assignments. Provides a historical survey of animation art. Emphasizes using the computer to creatively develop concepts while learning the fundamental skills of constructing images and forms. Students collaborate on projects during the first half of the course and work individually on final projects.

Prerequisite(s): DGM 6105 (may be taken concurrently) with a minimum grade of C-

DGM 6451. Web Development. (4 Hours)

Focuses on intermediate to advanced concepts and techniques for development of professional Web environments. Offers students an opportunity to explore different development strategies, including client-side interactions using AJAX libraries (such as JavaScript, PHP, and MySQL) compared with client/server methods, webpage presentation layer vs. interactive layer, and the use of WYSIWYG (what you see is what you get) tools vs. plain-text coding.

Prerequisite(s): DGM 6108 with a minimum grade of C- ; DGM 6521 with a minimum grade of C-

DGM 6461. Interactive Information Design 1. (4 Hours)

Focuses on the fundamental principles of interactive design to develop meaningful interactive experiences. Offers students an opportunity to develop skills in structuring and organizing information, recognizing and establishing content relationships, and building usable navigation. Explores a variety of tools and technologies to deliver varied media material for screen-based use.

Prerequisite(s): DGM 6168 (may be taken concurrently) with a minimum grade of C- or TCC 6120 (may be taken concurrently) with a minimum grade of C-

DGM 6463. Interactive Information Design 2. (4 Hours)

Builds on the content and explorations of DGM 6461. Explores complex information organization and delivery problems while seeking to advance the students' experience with interactive design and programming environments.

Prerequisite(s): DGM 6461 with a minimum grade of C- ; DGM 6217 with a minimum grade of C-

DGM 6471. Designing Infographics. (4 Hours)

Explores a variety of methods that help to translate raw data into accessible visual presentations that can inform, clarify, educate, and persuade. A powerful aspect of Internet technologies is how readily they provide access to information. However, that information often resides in opaque technical formats, making it hard to understand and disseminate.

Prerequisite(s): DGM 6461 with a minimum grade of C- ; DGM 6217 with a minimum grade of C-

DGM 6501. Web Creation Boot Camp. (2 Hours)

Offers students an opportunity to gain basic competency in the design and coding of an attractive, effective, static website. Covers basic web design technology, including webpage structure, markup languages (HTML and CSS), basic rules for image preparation, and site development and management using an industry-standard text editor. This course is an intensive workshop.

DGM 6506. Introduction to Digital Video. (2 Hours)

Uses industry-standard software to introduce editing and compression techniques critical for effective participation in digital video production and editing courses. Offers students an opportunity to become comfortable editing a short video for content, preparing it for posting on the Web, and/or including it in an interactive media project.

DGM 6510. 3D Modeling. (4 Hours)

Introduces the fundamentals of three-dimensional computer animation. Class lectures and demonstrations are followed by substantial hands-on exploration. Offers students an opportunity to gain fundamental skills for polygon modeling and UV surfacing. Projects progress from creating simple geometric objects to realistic organic characters.

Prerequisite(s): DGM 6505 (may be taken concurrently) with a minimum grade of C- ; DGM 6450 with a minimum grade of C-

DGM 6515. Introduction to After Effects. (2 Hours)

Introduces the creation and manipulation of motion graphics and time-based visual effects using the After Effects environment. Offers students an opportunity to acquire the basic knowledge required for DGM 6540.

DGM 6516. Virtual and Augmented Reality (VR/AR). (2 Hours)

Explores trends and technologies driving virtual reality and augmented reality (VR/AR) video production. Through a blend of class discussions and hands-on practice, offers students an opportunity to conceptualize, produce, and deliver high-quality immersive VR videos, apply AR in video production, and understand applications of this technology for a variety of fields.

Prerequisite(s): DGM 6506 with a minimum grade of C-

DGM 6520. Lighting for the Camera. (4 Hours)

Emphasizes essential lighting theory and techniques. Understanding lighting is the key to a professional photographic or video shoot. Topics include lighting equipment; lighting sources and arrangement; color temperature; lighting for indoor, outdoor, and location shooting; as well as the editorial use of lighting to create tone and communicate narrative. Offers students an opportunity to create projects in different lighting environments and for different purposes to experience a wide range of lighting problems and solutions.

DGM 6521. Web Creation for Content Management Systems. (2 Hours)

Expands on the foundations of web creation with an emphasis on developing for content management systems such as WordPress. Offers students an opportunity to work intensively to use web technologies to build on these open-source software models' core capabilities. Requires basic knowledge of cascading style sheets (CSS) and beginner knowledge of PHP.

DGM 6525. Research Methods for Global User Experiences. (4 Hours)

Focuses on a structured approach to user research methodology for the design of interactive applications. Emphasizes user research and interpretation for products and services that will be marketed to individuals spanning cultures with radically different customs and communication. Applies field methods such as interviewing, observation, and questionnaire design through the lens of intercultural psychology and communication patterns, cultural neutrality, and culture-centric design.

Prerequisite(s): DGM 6168 with a minimum grade of C-

DGM 6530. Character Animation. (4 Hours)

Provides an in-depth investigation of 3-D animation. Offers students an opportunity to continue development of realistic characters created in DGM 6510 and to develop intermediate skills for weight mapping and rigging, as well as midlevel proficiency with animation editors. Projects focus on creating animations that emphasize realistic deformation and movement.

Prerequisite(s): DGM 6450 with a minimum grade of C-

DGM 6535. Rigging Principles and Techniques. (4 Hours)

Offers animation students the opportunity to apply realistic motion effects to a complete, intuitive character rig. Convincing animation of 3D characters and objects requires rigging—the setup and scripting of a range of structural controls. Explores character preparation and motion control; kinematics; realistic motion effects, including textures such as fur and hair; and environmental elements, such as fluids, fire, and explosions.

Prerequisite(s): DGM 6540 with a minimum grade of C-

DGM 6540. Compositing. (4 Hours)

Investigates compositing and special FX techniques. Student teams have an opportunity to utilize green screen studio to capture live-action video footage that is seamlessly combined with computer-generated environments and characters that they create. Offers students an opportunity to develop original narratives that are suitable for exploring course objectives.

Prerequisite(s): DGM 6440 with a minimum grade of C- or DGM 6515 (may be taken concurrently) with a minimum grade of C-

DGM 6545. Documentary and Nonfiction Production. (4 Hours)

Offers students interested in documentary filmmaking an opportunity to learn the research, story structure, and production skills necessary to bring a nonfiction video narrative from preproduction through postproduction and refine their work from rough to final cut. Using scenes and examples from notable documentaries to inspire and illustrate technique, students research topics, find subjects, conduct interviews, practice techniques of cinema vérité and B-roll, and work with archival footage to complete one major nonfiction project.

Prerequisite(s): DGM 6440 with a minimum grade of C-

DGM 6550. Search Engine Optimization: Strategy and Implementation. (4 Hours)

Connects the search engine optimization (SEO) process to marketing and social media strategy by introducing students to the concepts behind consumer search behavior, search engine algorithms, and SEO analysis using tools such as Google Analytics. A website's frequency ranking in a content search critically impacts its visibility and, ultimately, viability. Seeks to provide foundational guidance on topics such as organic search tactics, website optimization, and keyword research and selection.

Prerequisite(s): DGM 6461 with a minimum grade of C- or DGM 6285 with a minimum grade of C-

DGM 6890. Thesis Proposal Development. (2 Hours)

Offers students an opportunity to understand thesis goals and process, with a view toward developing strong project ideas, an effective and realistic development path, and a well-written preliminary proposal.

DGM 6892. Capstone Project Preparation. (2 Hours)

Offers students an opportunity to understand capstone goals and process. Emphasizes developing strong team skills; identifying and leveraging individual strengths; and managing stakeholder relationships, project scope, and deliverables.

DGM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

DGM 6980. Capstone. (4 Hours)

Guides students to complete a digital media project, drawn from a selection of goals vetted by the experiential partnerships manager from the Experiential Network database of projects and directed by one or more members of the faculty. The capstone project can be an individual or a small group endeavor involving two to six students in the program. Students are advised and mentored through the client-consultant relationship as the group works collaboratively toward the agreed-upon client goals.

Prerequisite(s): DGM 6010 with a minimum grade of C- ; DGM 6020 with a minimum grade of C- ; DGM 6055 with a minimum grade of C- ; DGM 6115 with a minimum grade of C- ; DGM 6200 with a minimum grade of C- ; DGM 6255 with a minimum grade of C-

DGM 6983. Topics. (1-4 Hours)

Offers students the opportunity to study, through research and experimentation, in a specified discipline. May be repeated up to four times.

DGM 6995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated up to five times.

DGM 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

DGM 7980. Capstone. (6 Hours)

Offers students an opportunity to demonstrate competency in core digital media topics and concentration-based learning outcomes through the development of a research-based project.

DGM 7990. Thesis. (4-6 Hours)

Offers students an opportunity to complete a digital media project, researched and proposed by the student and directed by one or more members of the faculty. The thesis project can be an individual endeavor or the result of a collaboration involving two or more students in the program.

DGM 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continuing thesis supervision by members of the department.

Digital Transformation (DGTR)

Courses

DGTR 1001. Emerging Technologies in Digital Transformation. (4 Hours)

Offers an overview of the key emerging sectors in digital transformation: cloud computing, blockchain, fintech, healthcare, IoT, IaaS, cybersecurity, drones, and immersive technologies (AR, VR, MR). Studies specific cases and examples to examine how each of these technologies contributes to the digital transformation of business.

DGTR 1101. Mathematical Structures and Methods. (4 Hours)

Introduces mathematical structures and methods that form the foundation of computer science. Examines structures such as sets, tuples, sequences, lists, trees, and graphs. Explores functions, relations, ordering, and equivalence relations, as well as inductive and recursive definitions of structures and functions. Covers principles of proof such as truth tables, inductive proof, basic logic, counting techniques, and arguments that are needed to estimate the size of sets, growth of functions, and space-time complexity of algorithms.

Attribute(s): NUpath Formal/Quant Reasoning

DGTR 1110. Business Foundations and Digital Transformation. (4 Hours)

Examines the structure and operation of businesses through the lens of digital transformation. Covers general business operations and practices and how these operations and practices have evolved within an increasingly digital-first workplace. Explores the internal elements of customer, strategy, and organization, as well as the external elements of competition, regulation, and market environment. Focuses specifically on digital transformation and the role of individual contributors to the organization. Offers students an opportunity to obtain context and understanding of economics, business operations, and other key business considerations from various global standpoints.

DGTR 1700. Data Management Systems. (4 Hours)

Explores how a wide range of enterprises around the world use information and information technology to create better-managed, more innovative, and successful organizations. Today's business leaders must have ready access to timely, accurate, and relevant information to manage effectively in the global economy. Offers students an opportunity to apply knowledge of data management systems using industry-standard cloud-based technology.

DGTR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

DGTR 2150. Applied Data Visualization. (4 Hours)

Introduces the use of design, interaction, visualization techniques, and strategies to support the effective presentation and manipulation of business information, based on principles from art, design, psychology, and information science. Offers students an opportunity to learn how to choose appropriate methods for representing various kinds of business data to support analysis, decision making, and communication to organizational stakeholders. Students apply their knowledge of data visualization using industry-standard cloud-based technology, e.g., ServiceNow.

DGTR 2199. Database Design and Management 1. (4 Hours)

Covers the underlying principles and concepts of relational databases. Uses the reporting language SQL for creating and accessing data tables, indexing, arithmetic operations, loops, arrays, multiple table processing, I/P operations, data-type conversions, and views. Offers students an opportunity to use SQL to interrogate relational databases and design simple databases, applying their knowledge of relational databases using industry-standard cloud-based technology, e.g., ServiceNow.

Prerequisite(s): DGTR 1101 with a minimum grade of D-

DGTR 2299. Data-Driven Decision Making 1. (4 Hours)

Offers an in-depth focus on data-driven decision making in organizations. Uses solution-based case studies to examine the models, tools, techniques, and theory of data-driven decision making to improve the quality of business leadership decisions.

DGTR 2330. Organizational Culture and Change. (4 Hours)

Focuses on what drives the behaviors and actions of people in an organization. Explores topics such as motivation, influence, leadership, group dynamics, conflict, and other variables that impact organizational culture and change. Reviews key organizational behavior topics related to culture and change, including underlying theories and principles. Offers students an opportunity to analyze current cases that highlight practical application of the principles or underscore common themes or actions that impact culture and change in an organization.

DGTR 2500. Digital Fluency in the AI-Enabled Enterprise. (4 Hours)

Examines digital fluency for organizational leaders, including the syntax knowledge, sociolinguistic sensibility, and strategic expertise that a person gains and demonstrates in their use of information resources. Offers students an opportunity to improve their own digital fluency in the context of enhancing critical thinking, design thinking, and systems thinking.

Attribute(s): NUpath Natural/Designed World

DGTR 2501. Information Technology Project Management. (4 Hours)

Covers tools and techniques used to manage information technology projects. Topics include project planning, scheduling, budgeting, and project management tools. Discusses all phases of IT projects, from proposal evaluation through postimplementation reviews. Students plan and develop a project that offers a practical application of the topics covered in class. Offers students an opportunity to apply their knowledge of IT project management using industry-standard cloud-based technology, e.g., ServiceNow.

DGTR 2700. Foundations of Software Engineering. (4 Hours)

Covers the foundations of software engineering, including software development life cycle models (e.g., waterfall, spiral, agile); requirements analysis; user-centered design; software design principles and patterns; testing (functional testing, structural testing, testing strategies); code refactoring and debugging; software architecture and design; and integration and deployment.

DGTR 2822. Networks and Platform Technologies. (4 Hours)

Introduces the fundamentals of computer networks. Covers network architectures, topologies, and protocols; layering concepts (ISO/OSI, TCP/IP reference models); communication paradigms (point-to-point vs. multicast/broadcast, connectionless vs. connection oriented); and networking APIs (sockets). Also covers the construction of distributed programs, with an emphasis on high-level protocols and distributed state sharing. Topics include design patterns, transactions, performance trade-offs, security implications, and reliability. Uses examples from real networks (TCP/IP, Ethernet, 802.11) and distributed systems (web, BitTorrent, DNS) to reinforce concepts. Offers students an opportunity to apply their knowledge of networks and platform technologies using industry-standard cloud-based technology training, e.g., ServiceNow.

DGTR 2850. Intensive Foundations of Computer Science and Programming 1. (4 Hours)

Introduces the fundamental ideas of computing and programming principles. Discusses a systematic approach to word problems, including analytic reading, synthesis, goal setting, planning, plan execution, and testing. Presents several models of computing, beginning with functional program design. Explores the Python programming language, its syntax, mathematical functionality, and suitability for data analysis applications.

Prerequisite(s): DGTR 1101 with a minimum grade of D-

DGTR 2900. Digital Transformation and Decision Making. (4 Hours)

Introduces the fundamentals of individual reasoning and decision making in the context of digital transformation. Covers factors that influence decision making, such as personality, emotions and emotional intelligence, perception, and attribution. Explores the impact of situational variables on human behavior and decision making. Offers students an opportunity to apply these concepts to the study of human logic, decision-making processes, and common decision-making biases. Addresses the role of these topics in enabling organizational resilience.

DGTR 2901. Risk and Resilience in Digital Transformation Contexts. (4 Hours)

Introduces systems thinking and the ability to appreciate and plan for dynamic, constantly changing situations and environments. Risk management is a core theme in digitally driven organizations as the impact of disaster scenarios can wreak havoc. Reviews assessment strategies for business operations, as well as mitigation strategies in case of disruption. Examines how resilience, a skill set that has individual, organizational, and societal impacts, is established and maintained both by individuals and by organizations.

DGTR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

DGTR 3000. Innovation and Design in Customer Experience. (4 Hours)

Introduces innovative processes, including design thinking, for removing constraints and biases, extending intellectual curiosity, and enhancing customer and user experience. Explores product research as well as product development and prototyping.

Prerequisite(s): DGTR 1001 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

DGTR 3100. Intensive Foundations of Computer Science and Programming 2. (4 Hours)

Covers more advanced topics in computing and programming principles. Explores advanced Python programming and design principles. Engages students in an extensive programming task that should result in the creation of a test suite. Explores pair programming and public code review techniques, as found in the industry today. Offers students an opportunity to apply their knowledge of computer systems and programming using industry-standard cloud-based technology, e.g., ServiceNow.

Prerequisite(s): DGTR 1101 with a minimum grade of D- ; DGTR 2850 with a minimum grade of D-

DGTR 3199. Database Design and Management 2. (4 Hours)

Studies the design of a database for use in a relational database management system. Uses the entity-relationship model and normalization in problems. Discusses relational algebra and SQL. Covers advanced topics, including triggers, stored procedures, indexing, elementary query optimization, and fundamentals of concurrency and recovery. Offers students an opportunity to implement a database schema and short application programs on one or more commercial relational database management systems, applying their knowledge of databases using industry-standard cloud-based technology, e.g., ServiceNow.

Prerequisite(s): DGTR 2199 with a minimum grade of D-

DGTR 3299. Data-Driven Decision Making 2. (4 Hours)

Continues DGTR 2299. Explores key areas in data-driven decision making in leadership and organizations through the utilization of case studies and applied hands-on projects. Examines core issues around quality of data, data analytic approaches, techniques, and measuring and managing of data in a customer-centric organization. Studies this topic through the lens of various business metrics and applied tools in the market.

Prerequisite(s): DGTR 2299 with a minimum grade of D-

DGTR 3310. Predictive Analytics. (4 Hours)

Introduces the end-to-end data-driven statistical modeling and predictive modeling approach with applications and case studies. Includes all the data and modeling steps in a full modeling cycle; exploratory data analysis and data cleansing for outlier imputation and data normalization; commonly applied modeling techniques such as classification, linear regression, and logistic regression; and modeling steps such as model training, validation, and testing.

Prerequisite(s): DGTR 1101 with a minimum grade of D-

DGTR 3500. Cybersecurity in Digital Transformation. (4 Hours)

Studies cybersecurity threats facing organizational information systems and digital assets. Examines an organization's legal and ethical responsibilities regarding data protection and security. Explores cyberthreats and adversaries, access control mechanisms, encryption, and hashing. Also covers the SecOps function, the security operations center, incident management, and digital forensics. Examines approaches and frameworks for evaluating the cyber-risks facing organizations, as well as actions that can be taken and mechanisms that can be employed to strengthen the security of organizational data and computing systems.

Prerequisite(s): IS 1300 (may be taken concurrently) with a minimum grade of D- or PHIL 1300 (may be taken concurrently) with a minimum grade of D-

DGTR 3550. Data Analytics in Digital Transformation. (4 Hours)

Introduces the subject of data analytics. Examines how raw data is collected, stored, cleansed, and interrogated in order to contribute to the needs of organizations. Covers four main areas of data analytics: descriptive, diagnostic, predictive, and prescriptive. Applies industry-standard software and Python packages commonly used for data analytics, encompassing basic graphical, numerical, and statistical tools. Offers students an opportunity to apply their knowledge of data analytics using industry-standard cloud-based technology, e.g., ServiceNow.

Prerequisite(s): DGTR 1101 with a minimum grade of D-

DGTR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

DGTR 4000. Implementing Data Science. (4 Hours)

Studies how to approach data analysis problems in a systematic manner and how to design data analysis pipelines, as well as how to implement them at scale in the context of real-world problems. Data science is at the intersection of statistics, machine learning, and software development. Data analysis problems are solved in a series of datacentric steps: data acquisition, data cleaning, data transformation, data modeling, and data visualization.

Prerequisite(s): DGTR 3310 with a minimum grade of D-

DGTR 4100. Information Technology Service Management. (4 Hours)

Examines the frameworks and strategic approaches for the life cycle management of IT products—including planning, design, development, and delivery—and for improving IT services from a higher-level enterprise perspective—including the management of disparate servers throughout the organization. Covers the strategic management of IT infrastructure, agile IT service, configuration, data and information security, and disaster recovery in the context of cloud computing. Explores the strategies to provide value to customers. Offers students an opportunity to apply their knowledge of IT service management using industry-standard cloud-based technology, e.g., ServiceNow.

Prerequisite(s): DGTR 1110 with a minimum grade of D-

DGTR 4320. Voice of the Customer. (4 Hours)

Introduces students to the marketing function and the imperative of listening to the voice of the customer, or VOC. Explores the needs of modern customers for business-to-business (B2B) as well as business-to-consumer (B2C) products and services and how they influence operations in successful companies. Topics include principles of marketing, market research, marketing communications, and customer loyalty.

Prerequisite(s): DGTR 1110 with a minimum grade of D-

DGTR 4450. Strategy Consulting. (4 Hours)

Introduces the models, skills, and emerging trends in the field of strategic management consulting. Explores the global spectrum of consulting and reviews multiple consulting models and practices to compare and contrast the strengths and differences. Examines the evolution of the practice that is increasingly data driven and digital, with new technologies and AI innovations that drive process and strategy. Also explores the roles of influence and value creation. Offers students a hands-on and immersive opportunity to step into the role of a consultant, taking on real-world organizational challenges to develop critical-thinking skills; using analytical and systems-thinking approaches and tools to solve business problems; and developing skills for building and exercising influence within an organization and externally with clients.

Prerequisite(s): DGTR 1110 with a minimum grade of D- ; ENGW 3302 with a minimum grade of D-

DGTR 4580. Advanced Information Technology Service Management. (4 Hours)

Explores the IT Infrastructure Library, a best-practice framework for IT service management, which describes how IT resources should be best organized and managed to optimize organization goals. ITIL is independent of technology or business. Covers the fundamentals of ITIL: service strategy, service design, service transition, service operation, and continual service improvement. Offers students an opportunity to apply knowledge of data management systems using industry-standard cloud-based technology (e.g., ServiceNow training), as well as the opportunity to gain certification in ITIL.

Prerequisite(s): DGTR 4100 with a minimum grade of D-

DGTR 4720. Leadership and Personal Branding. (4 Hours)

Introduces the behavioral and communication skills needed to define and establish one's place in the professional world and the fundamentals of leadership in a business environment. Emphasizes the foundational skills needed to be effective and influential leaders, whether with or without formal power. Offers students an opportunity to clarify their skill sets, values, and career aspirations, as well as to take action to build a successful personal brand for their professional advancement.

Prerequisite(s): DGTR 1001 with a minimum grade of D- ; DGTR 1110 with a minimum grade of D-

DGTR 4910. Experiential Capstone. (4 Hours)

Offers students an opportunity, guided by the capstone faculty member, to apply their conceptual awareness and skills through a 15-week experiential, work-integrated project. Focuses on aligning a work-based project demonstrating a high level of technical skills and knowledge and reflecting mastery of the concepts covered by the courses for that academic year. The capstone focus can include an area of digital transformation covered throughout the program and might include a technical or data-driven challenge and solution, a process improvement challenge, a management challenge or opportunity, etc. Emphasizes independent research, in-depth analysis in digital technology solutions, and applied work-integrated skill development. Requires strong communication of findings and logic of ideas in a professional format as well as application of project management principles to work. May be repeated two times.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

DGTR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Earth and Environmental Sciences (ENVR)**Courses****ENVR 1000. Marine and Environmental Sciences at Northeastern. (1 Hour)**

Intended for first-year students in the College of Science. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

ENVR 1101. Environmental Science. (4 Hours)

Focuses on the complex array of topics that collectively form the discipline of environmental science. Emphasizes the problems facing today's natural, human-managed, and coupled human/natural ecosystems and the solutions to those problems. Studies the human dimensions of environmental science, including culture, politics, worldviews, ethics, and economics, particularly within the context of global climate change. Offers students an opportunity to learn to analyze data as a means of exploring relationships among societal and ecological drivers affecting economic, ecological, and socioeconomic stability; to learn how the scientific method is used to separate fact and data from opinion; and to apply these methods to explore the causes and solutions to global climate change.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

ENVR 1103. Age of Dinosaurs. (4 Hours)

Utilizes evidence from the sedimentary rock record to evaluate and to interpret significant biological and physical events in Mesozoic earth history. Changes in the Earth's landscape due to variations in climate, plate tectonics, and sea level provide the background for detailed consideration of Mesozoic life. Emphasizes the evolutionary history of dinosaurs and provides detailed data for testing hypotheses of evolutionary mechanisms, paleobiogeography, functional anatomy, ecology and community structure, and extinction and extinction models.

Attribute(s): NUpath Natural/Designed World

ENVR 1110. Global Climate Change. (4 Hours)

Analyzes Earth's modern climate system and natural climate change over Earth's 4.5-billion-year history. Examines ongoing and future climate change. Includes expected impacts of the predicted climate changes as well as mitigation and adaptation options.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

ENVR 1120. Oceans and Coasts. (4 Hours)

Explores the marine and coastal realm and the problems that arise from the human-marine relationship. Begins by studying the history of the ocean and ends with how to create a more sustainable marine world. Topics covered include ocean and estuarine circulation, climate change and ocean response, and the plant and animal life thriving in different parts of the ocean. Includes reading and analyzing the scientific literature, developing and presenting research projects, and group work.

Attribute(s): NUpath Natural/Designed World

ENVR 1200. Dynamic Earth. (4 Hours)

Offers a systematic study of the materials and systems comprising the earth. Emphasizes the processes that form, transport, alter, and destroy rocks, as well as the nature and development of landscape. Plate tectonics theory is introduced as a guiding paradigm in geology.

Attribute(s): NUpath Natural/Designed World

ENVR 1201. Lab for ENVR 1200. (1 Hour)

Accompanies ENVR 1200. Covers exercises pertaining to mineral and rock identification and topographic and geologic map interpretation. Required for environmental geology and geology majors.

Prerequisite(s): ENVR 1200 (may be taken concurrently) with a minimum grade of D-

ENVR 1202. History of Earth and Life. (4 Hours)

Traces biological and environmental development of the earth over the past 4.6 billion years using evidence preserved in the rock record. A primary goal is to understand how geoscientists interpret earth history by learning how to test hypotheses and develop explanations for events that occurred far in the geologic past. Examination of major earth systems, the biosphere, lithosphere, atmosphere and hydrosphere, reveals how they interact to control the origin of earth, the origin and evolution of life, the causes and effects of extinction, plate tectonics and mountain building, and climate change over earth history.

Attribute(s): NUpath Natural/Designed World

ENVR 1203. Interpreting Earth History. (1 Hour)

Focuses on students using sedimentary rocks, fossils, and geologic maps and stratigraphic sections to record and to interpret events in earth history.

ENVR 1400. Foundations in Environmental and Sustainability Sciences. (4 Hours)

Presents a series of lectures and case studies focused on the problems facing today's natural, human-managed, and coupled human/natural ecosystems. Integrates the underlying science with the human dimensions of environmental challenges. These include an understanding of the basic chemistry, physics, and ecology of environmental change and how this science is informed and altered by culture, politics, worldviews, ethics, and economics. Examines quantitative techniques to analyze data as a means of exploring relationships among societal and ecological drivers affecting economic, ecological, and socioeconomic stability. Studies how the scientific method is used to separate facts and data from opinion and applies these methods to explore the causes and solutions to global climate change and other environmental challenges.

Corequisite(s): ENVR 1401

Attribute(s): NUpath Natural/Designed World

ENVR 1401. Lab for ENVR 1400. (1 Hour)

Accompanies ENVR 1400. Offers supervised lab/discussion sessions for students to develop the tools needed to tackle environmental problem solving at the interface of human and natural systems.

Corequisite(s): ENVR 1400

ENVR 1500. Introduction to Environmental, Social, and Biological Data. (4 Hours)

Introduces the fundamental concepts in the fields of environmental, social, and biological science. Studies the expertise needed in each discipline to organize and manage data in sustainability science. The first half of the course covers data collection relevant to pressing issues in sustainability, database organization, coding, and finding errors in data sets. The second half of the course covers basic principles in the statistical analysis of data sets used in conservation and sustainability, including simulating data, machine learning, and errors in analysis. Offers hands-on experience through students' own data collection projects. Appropriate for students interested in biology, marine biology, environmental science, and ecology and evolutionary biology. Designed to prepare students for co-ops and upper-level classes in these fields.

Corequisite(s): ENVR 1501

ENVR 1501. Lab for ENVR 1500. (1 Hour)

Accompanies ENVR 1500. Offers supervised lab sessions demonstrating how topics covered in the lectures can be addressed using a variety of platforms, including Excel, R, and Python.

Corequisite(s): ENVR 1500

Attribute(s): NUpath Analyzing/Using Data

ENVR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVR 2200. Earth's Changing Cycles. (4 Hours)

Introduces the biological, chemical, and physical interactions that shape our environment and how industrial emission of gases and black carbon, the use of fertilizers and plastics, and the expansion of cities are altering Earth's systems at rates unprecedented in the recent geological record. Offers students an opportunity to build a fundamental understanding of major issues in environmental science, including climate change, eutrophication, loss of biodiversity, and urbanization. Considers how we might build a more sustainable future.

Attribute(s): NUpath Natural/Designed World

ENVR 2310. Earth Materials. (4 Hours)

Describes the physical and chemical characteristics of common rock-forming minerals and geologic processes that form rock and soils in the igneous, sedimentary, and metamorphic environments. Focuses on commonly encountered minerals, soil, and rock types and how these are used to interpret past and present earth processes. This is a writing-intensive course with a required term paper.

Prerequisite(s): (ENVR 1101 with a minimum grade of D- or ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Corequisite(s): ENVR 2311

Attribute(s): NUpath Writing Intensive

ENVR 2311. Lab for ENVR 2310. (1 Hour)

Accompanies ENVR 2310. Cover topics from the course through various experiments.

Corequisite(s): ENVR 2310

ENVR 2340. Earth Landforms and Processes. (4 Hours)

Focuses on the origin and evolution of landscape features by processes operating at or near the earth's surface. Exercises introduce interpretation of air photos, topographic maps, remotely sensed data, and digital elevation models.

Prerequisite(s): ENVR 1200 with a minimum grade of D-

Corequisite(s): ENVR 2341

ENVR 2341. Lab for ENVR 2340. (1 Hour)

Accompanies ENVR 2340. Covers topics from the course through various experiments.

Corequisite(s): ENVR 2340

ENVR 2401. Food Justice and Community Development. (4 Hours)

Uncovers and examines the key dilemmas of the food system in the United States today using readings, media, discussion, service-learning, and field trips. Working from the foundations of environmental justice and community development, covers production, access, distribution, and key stakeholders from producers to retailers, workers, and consumers. Considers what justice-related issues face stakeholders within the food system in the United States; what policies have most impacted the workforce in the American food system; and what the opportunities and leverage points are for change in improving justice outcomes in this system.

Attribute(s): NUpath Integration Experience

ENVR 2500. Biostatistics. (4 Hours)

Provides an overview of advanced statistical concepts and approaches for studying biological systems. Explains the mathematical underpinnings of the statistical methods and demonstrates how to implement them in the R programming language to analyze real data. Topics include Bayesian statistics, general and generalized linear models, mixed-effects models, multivariate statistics, and ensemble modeling. Emphasizes the philosophical differences between Bayesian and frequentist approaches and their implications for interpreting statistical results.

Corequisite(s): ENVR 2501, ENVR 2502

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

ENVR 2501. Lab for ENVR 2500. (1 Hour)

Accompanies ENVR 2500. Offers supervised lab sessions demonstrating how topics covered in the lectures can be addressed in the R programming environment.

Corequisite(s): ENVR 2500

ENVR 2502. Recitation for ENVR 2500. (0 Hours)

Accompanies ENVR 2500 and ENVR 2501. Covers various topics from the course. Offers students an opportunity to work interactively with instructors and other students to learn and apply the knowledge acquired in lecture and lab.

Corequisite(s): ENVR 2500, ENVR 2501

ENVR 2515. Sustainable Development. (4 Hours)

Focuses on the principles and practice of sustainable development, both as a way of looking at the interconnected world and an overarching framework for promoting economic development, social inclusion, and environmental stewardship. Students will study decades of local and global efforts aimed at developing economies, eradicating hunger and disease, and restoring and sustaining ecosystems for a large, and growing, population living on an increasingly altered planet and facing a changing climate. Along with lectures and discussions on core concepts, students will critically dissect the toughest questions and challenges of sustainable development through an online class blog and semester-long group projects.

Prerequisite(s): ENVR 1101 (may be taken concurrently) with a minimum grade of D- or ENVR 1400 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

ENVR 2900. Special Topics in Environmental Studies. (4 Hours)

Studies various topics on environmental issues. May be repeated once.

ENVR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVR 2991. Research in Marine and Environmental Sciences. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated seven times.

ENVR 3125. Global Oceanic Change. (4 Hours)

Explores major changes in physical, biological, and chemical properties of the ocean over geological and human timescales. Includes origin and early evolution of the oceans; sea-level change; global warming; ocean acidification; the role of plate tectonics in driving long-term oceanic change; the role of atmospheric carbon dioxide in driving short-term oceanic change; tipping points in the oceans; snowball earth theory; marine pollution; oil exploration; and social, economic, and political implications of global oceanic change. Themes include differentiating drivers of change across multiple temporal and spatial scales; evaluating change from different and sometimes conflicting perspectives (social, economic, political, environmental); differentiating local and global change; and establishing linkages between physical, chemical, and biological processes in the ocean. Requires prior completion of one laboratory science course or permission of instructor.

Attribute(s): NUpath Natural/Designed World

ENVR 3150. Food Security and Sustainability. (4 Hours)

Discusses the science of sustainable agriculture, fisheries, and aquaculture. Examines the issues related to nutrition and hunger, food safety, and food production in the face of a changing climate with a scientific lens. Using the FAO Global Food Security and Strategy document and other peer-reviewed literature, compares the food issues in the United States with those in the developing world, including sub-Saharan Africa and Southeast Asia. Explores the many issues related to food production and environmental sustainability—including fertilizer use, GMOs, and pollution—and local examples of sustainable food production. Discusses the ways in which we can potentially remedy many of the issues involved in providing food for more than 7 billion people worldwide.

Prerequisite(s): EEMB 1101 with a minimum grade of D- or ENVR 1101 with a minimum grade of D- or ENVR 1110 with a minimum grade of D- or ENVR 1120 with a minimum grade of D- or ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D- or SOCL 1246 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World, NUpath Writing Intensive

ENVR 3200. Water Resources. (4 Hours)

Offers students who wish to work in the area of water resources an opportunity to understand the issues related to water's availability and behavior at the Earth's surface. Topics covered include (1) the hydrologic cycle, including global and regional patterns of water movement; (2) characteristics of surface and groundwater systems, including the linkage between streams, rivers, lakes, wetlands, groundwater, and the sea; (3) water management issues and regulations that have been enacted to control the use of water as a resource; (4) water quality measures for surface water and groundwater; and (5) examples of water use conflicts and emerging water issues. Case studies include examples from California, New England, New York, the southwestern United States, China, Africa, and the Middle East.

ENVR 3300. Geographic Information Systems. (4 Hours)

Studies how to use a geographic information system (GIS). Explores the practical application of GIS to support scientific and social inquiry, analysis, and decision making. Topics include spatial data collection; data accuracy and uncertainty; cartographic principles and data visualization; geographic analysis; and legal, economic, and ethical issues associated with using GIS. Investigates case studies from geology, environmental science, urban planning, architecture, social studies, and engineering. Provides extensive hands-on experience with a leading commercial GIS software package. Offers students an opportunity to conceive their own research problem that can be addressed using GIS and reach conclusions that are summarized in a professional report. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): EEMB 1101 with a minimum grade of D- or ENVR 1101 with a minimum grade of D- or ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D- or ENVR 2200 with a minimum grade of D-

Corequisite(s): ENVR 3301

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov

ENVR 3301. Lab for ENVR 3300. (1 Hour)

Accompanies ENVR 3300. Covers topics from the course through various experiments.

Corequisite(s): ENVR 3300

ENVR 3410. Environmental Geochemistry. (4 Hours)

Offers students who wish to work in the geosciences or environmental science and engineering fields, including on the land, in freshwater, or the oceans, an opportunity to understand the geochemical principles that shape the natural and managed environment. Seeks to provide a context for understanding the natural elemental cycles and environmental problems through studies in atmospheric, terrestrial, freshwater, and marine geochemistry. Topics include fundamental geochemical principles; environmental mineralogy; organic and isotope geochemistry; the global carbon, nitrogen, and phosphorous cycles; atmospheric pollution; environmental photochemistry; and human-natural climate change feedbacks.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1214 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

ENVR 3418. Geophysics. (4 Hours)

Studies the basic techniques of reflection and refraction seismology and earthquake analysis; gravity and magnetic surveying methods; radioactive decay principles and Earth's heat flow; and how information from these methods are used to interpret the nature and age of the Earth's surface and interior. Emphasizes near-surface exploration, data collection methods, data analysis, and using data to constrain mathematical models of the subsurface distribution of geologic units.

Prerequisite(s): (ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-); (MATH 1241 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1341 with a minimum grade of D-)

Attribute(s): NUpath Analyzing/Using Data

ENVR 3435. Environmental Pollution: Fate and Transport. (4 Hours)

Provides a systematic approach to analyzing the fate and transport of pollutants within natural systems. Equilibrium modeling and reactive transport modeling are used to assess the predominant processes that control the movement and persistence of pollutants in water, soil, and air. Topics include mass transfer across multiple phases; physical, chemical, and biological transformations of substances; transport processes (diffusion, dispersion, advection, interphase mass transport); eutrophication of lakes; conventional pollutants in rivers and estuaries; groundwater contamination; and atmospheric deposition.

Prerequisite(s): CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1214 with a minimum grade of D-

ENVR 3540. Environmental Psychology. (4 Hours)

Incorporates themes from cognitive psychology and environmental science to examine how people understand the environment and their place in it and how this understanding varies with culture, informal experience, and formal education. Examines relations between environmental cognition, environmental attitudes, values and norms, and sustainable behavior.

Prerequisite(s): ENVR 1101 with a minimum grade of D- or ENVR 1400 with a minimum grade of D- or PSYC 1101 with a minimum grade of D-

ENVR 3600. Oceanography. (4 Hours)

Presents an integrated overview of biological, chemical, physical, and geological processes operating in the world's oceans. Emphasizes understanding the fragility and resilience of marine systems in the face of human-driven perturbations such as habitat fragmentation, elevated sea surface temperature and acidification, non-native species, nonsustainable fishing and aquaculture, and coastal land use. Offers students an opportunity to prepare for further course work in both marine biology and in earth, oceans, and environmental change.

ENVR 3701. Energy in the Desert Ecosystem. (4 Hours)

Incorporates lectures, seminars, and visits throughout several institutions/organizations within the Arava Desert (Israel) to identify the various ways in which energy sustains life in this arid and harsh region of the world. Covers both the biological needs for energy acquisition and conservation of desert organisms, as well as technological advances in the utilization and storage of energy such as wind, solar, biomass, fuel cells, and hybrid systems, all within the context of living and exploiting the desert environment. Touches upon the environmental consequences of energy conversion and how renewable energy can reduce air pollution and global climate change.

ENVR 3800. Plants and Society. (4 Hours)

Introduces the anatomy, physiology, ecology, diversity, and management of economically relevant plants. Applies plant biology to human nutrition, biofuels, wood, cloth, and medicines. Offers insight into cultural uses and values of plants across the globe. Also discusses traditional and new forms of plant management techniques, along with their advantages and disadvantages for sustainability.

Prerequisite(s): EEMB 1101 with a minimum grade of D- or ENVR 1101 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-

Corequisite(s): ENVR 3801

ENVR 3801. Lab for ENVR 3800. (1 Hour)

Accompanies ENVR 3800. Offers students an opportunity to interact with plants on a weekly basis, while applying their observational, creative, identification, and technical skills. Introduces basic plant biology and physiology principles, along with their application for plant care. Focuses on the care techniques for common landscaping as well as household, edible, medicinal, and other economically important plants.

Corequisite(s): ENVR 3800

ENVR 3850. Sustainable Agriculture. (4 Hours)

Focuses on the natural science and management of sustainable agricultural systems. Introduces agricultural principles for soil management, pest management, and crop planning. Examines different agricultural systems including row cropping, indigenous food forests, vertical farming, and integrated crop-livestock systems. Evaluates the economic, policy, and social justice barriers to scaling sustainable agriculture. Discusses climate change resilience of sustainable agricultural systems.

Prerequisite(s): EEMB 1101 with a minimum grade of D- or ENVR 1101 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-

ENVR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVR 4000. Science Communication and Professional Development. (4 Hours)

Covers professional skills such as writing cover letters, crafting resumés, interviewing, creating a biographical sketch, and developing overall confidence by connecting to audiences. Science communication focuses on connecting with nonscientific audiences to convey complex scientific concepts and engaging diverse stakeholders to solve pressing societal problems using scientific approaches. Covers general principles of messaging, based on an understanding of how people learn and make decisions, using techniques such as narrative storytelling, visualizations, and theatrical improvisation and other art forms. Offers students an opportunity to develop tools to highlight their strengths, market their skills, explore potential jobs and career paths, and understand how to best prepare for those positions. Designed to integrate with ENVR 4050.

ENVR 4050. Solving Emerging Environmental Challenges through Capstone. (4 Hours)

Gathers students from across the various environmental and sustainability sciences concentrations to solve environmental problems that are of concern to various stakeholders. Students perform service-learning with a number of not-for-profit and government agencies to identify specific environmental challenges to tackle. Students work in teams that unite social scientists, sustainability experts, conservation biologists and ecologists, and physical scientists to bring the specific expertise gained during their concentration studies together to tackle pressing environmental challenges. Offers students an opportunity to provide solutions to the problems proposed by our stakeholders, as well as to learn leadership and communication skills needed to head up a large project and to thrive in a transdisciplinary environment.

Attribute(s): NUpath Capstone Experience

ENVR 4500. Applied Hydrogeology. (4 Hours)

Covers the origin, distribution, and flow of groundwater in permeable sediments and bedrock; hydrological and geological characteristics of aquifers; regional flow systems emphasizing rock structure, stratigraphy, and other aspects of the geological environment; principles of hydrogeologic mapping and analysis; and introduces well testing and well hydraulics. Uses methods of collecting data about the physical distribution and properties of water and its interaction with geologic materials in the subsurface, including its chemical composition, and mathematical models to interpret the direction and velocity of groundwater flow. Considers remediation strategies for dealing with contaminated water in the subsurface.

Prerequisite(s): (ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-); (MATH 1241 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1341 with a minimum grade of D-)

Corequisite(s): ENVR 4501

Attribute(s): NUpath Analyzing/Using Data

ENVR 4501. Lab for ENVR 4500. (1 Hour)

Accompanies ENVR 4500. Covers topics from the course through various experiments.

Corequisite(s): ENVR 4500

ENVR 4504. Environmental Pollution. (4 Hours)

Describes models and methods for predicting fate and transport of organic contaminants within and between environmental media, including molecular diffusion, transport across boundaries, and box models. Uses chemical structure and thermodynamic properties to predict physical processes that control the distribution of contaminants between the atmosphere, fresh and marine surface waters, groundwater, soils, sediments, and biota. Introduces concepts linking environmental chemistry with ecotoxicology, including bioaccumulation, food web models, and risk assessment. Uses case studies and real-world scenarios to illustrate important concepts. Offers students an opportunity to develop the tools and skills necessary to determine the fate of organic chemicals released to the environment.

Prerequisite(s): (CHEM 1161 with a minimum grade of D or CHEM 1214 with a minimum grade of D); (EEMB 1101 with a minimum grade of D- or ENVR 1101 with a minimum grade of D- or ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-)

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

ENVR 4505. Wetlands. (4 Hours)

Presents an interdisciplinary overview of the physical, biological, and cultural aspects of wetlands. Topics covered include definitions, classification systems, origins, human use, and natural processes of wetland environments. Offers students an opportunity to learn about wetland hydrology, soils, and vegetation and their relationship to ecosystem processes, societal values, and management. Includes reading and analyzing the scientific literature and conducting in-class activities.

Prerequisite(s): EEMB 1101 with a minimum grade of D- or ENVR 1101 with a minimum grade of D- or ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

ENVR 4900. Earth and Environmental Science Capstone. (1 Hour)

Offers students an opportunity to reflect about what they have learned in the major, in their coursework, and experiential learning. With help from faculty, students identify topics for individual research tailored to their interests and the course content. Requires writing with revision to produce a final capstone paper.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ENVR 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

Attribute(s): NUpath Capstone Experience

ENVR 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): ENVR 4970 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience

ENVR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVR 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ENVR 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

ENVR 4997. Senior Thesis. (4 Hours)

Offers students an opportunity to prepare an undergraduate thesis under faculty supervision.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ENVR 5000. Community Stakeholder Engagement in Environmental Management and Research. (4 Hours)

Introduces the history and theories of public participation in environmental policy settings to reflect on what kinds of participatory processes work best, for what purposes, and under which conditions. Environmental problems of the 21st century can be effectively addressed using processes that link sound scientific analysis with effective public deliberation. Applies principles studied to stakeholder and community engagement in science, research, or policy. Covers best practices for administering participatory processes and community engagement for community science, citizen science, or other participatory practices.

Attribute(s): NUpath Societies/Institutions

ENVR 5115. Advanced Topics in Environmental Geology. (4 Hours)

Examines selected topics in geology through an understanding of the basic processes, materials, and evolution. Topics include basin analysis, landform evolution, volcanology, or regional geology. May be repeated without limit.

ENVR 5150. Climate and Atmospheric Change. (4 Hours)

Offers an in-depth view of the processes that drive change in Earth's climate system. Examines the modern climate system and how and why climate changes through time. Introduces the tools used to explore past climates and changes, and explores the long-term and short-term controls on the climate system. Also introduces the application of climate models to develop future climate projections. Offers students an opportunity to obtain hands-on experience analyzing and interpreting climate data and model output.

Prerequisite(s): (ENVR 1200 with a minimum grade of D- or ENVR 2200 with a minimum grade of D-) or (PHYS 1151 with a minimum grade of D- ; PHYS 1152 with a minimum grade of D- ; PHYS 1153 with a minimum grade of D-) or graduate program admission

ENVR 5190. Soil Science. (4 Hours)

Provides a description and evaluation of the physical, chemical, and biological properties of soils. Includes soil formation, soil types, and processes that occur in soil including the importance of these processes for the soil productivity and management of soil. Also covers sources, reactions, transports, and fates of chemical species in soils and associated water and air environments, as well as the chemical behavior of elements and compounds and the phenomena affecting natural and anthropogenic materials in soils.

Prerequisite(s): ENVR 1101 with a minimum grade of D- or ENVR 1200 with a minimum grade of D- or ENVR 1400 with a minimum grade of D- or ENVR 2310 with a minimum grade of D- or graduate program admission

ENVR 5201. Geologic Field Seminar. (4 Hours)

Studies aspects of geology/environmental science associated with a particular field setting, in the classroom, followed by an intensive field investigation. Examples include carbonate petrology and reef ecology, then field studies in the Bahamas; glacial geology and volcanology, followed by field studies in Iceland; or stratigraphy of the U.S. Southwest, with field studies in the Grand Canyon. Focuses on using field observations and field data to interpret modern and ancient geologic processes. May be repeated without limit.

Attribute(s): NUpath Analyzing/Using Data, NUpath Integration Experience, NUpath Natural/Designed World

ENVR 5202. Environmental Science Field Seminar Abroad. (4 Hours)

Offers an intensive environmental science field study experience associated with a particular off-campus geographic setting, such as Iceland, Newfoundland, Bahamas, etc. Offers students an opportunity to learn the principles of field study, to learn to recognize and record significant data, and to reach conclusions about a range of field-based problems being studied. May be repeated without limit.

Attribute(s): NUpath Integration Experience, NUpath Natural/Designed World

ENVR 5210. Environmental Planning. (4 Hours)

Examines aspects of surface runoff from geomorphic and hydrologic perspectives. Develops methods for description and calculation of major river and drainage basin processes and applies the results to the planning process. Examines human modification of these systems—including urbanization, dams, and channelization—and applies this information to an understanding of regulatory processes. This is a writing-intensive course.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or graduate program admission

Attribute(s): NUpath Writing Intensive

ENVR 5220. Ecosystem-Based Management. (4 Hours)

Introduces the principles and practice of ecosystem-based management. Covers how ecosystem-based management draws from social, economic, and ecological principles, as well as how these principles are fundamentally coupled. Begins by covering the evolution of resource management, from single-species to ecosystem-based approaches, including the strengths and challenges of each approach. Focuses on how ecosystem-based management has been applied to terrestrial, freshwater aquatic, and marine ecosystems, including challenges and successes of adopting this approach. Draws from a wide range of examples, including marine protected areas, terrestrial and marine spatial planning, and habitat restoration. Designed for upper-intermediate or advanced undergraduates and graduate students in environmental science and related fields.

ENVR 5242. Ancient Marine Life. (4 Hours)

Begins with a survey of major events, processes, and important invertebrate phyla preserved in the fossil record. This knowledge of paleontology is then utilized to evaluate evolutionary principles and the nature of function and adaptation in the history of life. Organization of populations into paleocommunities and their relationships to changes in environments through time permit the assessment and evaluation of paleoecology in Earth history.

Corequisite(s): ENVR 5243

ENVR 5243. Lab for ENVR 5242. (1 Hour)

Accompanies ENVR 5242. Introduces invertebrate fossil morphology by study of fossil specimens of all major groups. Principles of paleoecology and evolutionary theory are illustrated by analysis of suites of fossil specimens.

Corequisite(s): ENVR 5242

ENVR 5260. Geographical Information Systems. (4 Hours)

Examines geographical information systems (GIS), a way to input, store, analyze, and display spatial data (data with a geographic location). Introduces the major components and applications of this exciting new tool. Consists of two lectures and one laboratory period a week. Laboratory exercises introduce methods of data analysis as well as practical issues of how to manipulate various GIS software packages.

Attribute(s): NUpath Creative Express/Innov

ENVR 5350. Sustainable Energy and Climate Solutions. (4 Hours)

Examines the role of sustainable energy on emissions from energy production and the resulting impacts on climate changes. Introduces current observations, predictions of future climate change, and the resulting impacts on ecological and human systems. Assesses past and current sources of U.S. energy-related and non-energy-related sources of greenhouse gases. Reviews sustainable energy alternatives and emission reduction strategies with a focus on comparing moderate and deep decarbonization strategies and the overall goal of reaching zero net emissions.

ENVR 5410. Human Behavior and Sustainability. (3 Hours)

Offers a graduate-level introduction to the interdisciplinary field of human behavior and sustainability sciences. Explores an emerging literature embracing the complexity of social-ecological systems to better engage with the processes that reinforce unsustainable pathways and those that might be leveraged toward more sustainable futures. Focuses on understanding how observations about the psychology of individuals and collectives, and their relationship to institutions, have been theorized in relation to the environment and the approaches and methodologies used to test and describe such relationships.

ENVR 5450. Applied Social-Ecological Systems Modeling. (4 Hours)

Covers the key frameworks, theories, and approaches for conducting social-ecological systems (SES) research. Involves topic and paper discussions focused on developing detailed knowledge and agility at describing the theoretical and applied foundations of interdisciplinary SES research. Includes semester-long projects to develop hands-on skills for conducting robust, methodologically sound studies of social-ecological systems. Particularly emphasizes participatory modeling as a tool for both scientific inquiry and stakeholder engagement. Students complete a participatory modeling project, including all steps of the scientific process, and have an opportunity to gain experience with research design, data collection, analysis, interpretation, and communication.

ENVR 5500. Advanced Biostatistics. (4 Hours)

Describes the advanced statistical concepts and approaches needed to analyze complex biological data. Examines the theoretical underpinnings of modern statistical methods and discusses their suitability for addressing questions from a variety of biological fields. Studies how to apply these methods using the R programming environment. Topics include a brief review of general linear models, likelihood and optimization, generalized linear models and survival analysis, model selection and regularization, generalized mixed-effects models, generalized additive models, Bayesian modeling, constrained and unconstrained ordination, supervised and unsupervised classification, ensemble modeling, and machine learning.

Prerequisite(s): ENVR 2500 with a minimum grade of C- or graduate program admission

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

ENVR 5563. Advanced Spatial Analysis. (4 Hours)

Offers an in-depth evaluation of theoretical, mathematical, and computational foundations of geographic information systems (GIS). Examines advanced concepts and techniques in GIS analysis and spatial statistics methods. Topics include spatial information theory, database theory, mathematical models of spatial objects, and GIS-based representation.

Prerequisite(s): ENVR 3300 with a minimum grade of D- or ENVR 5260 with a minimum grade of C- or ENVR 5260 with a minimum grade of C-

ENVR 5600. Coastal Processes, Adaptation, and Resilience. (4 Hours)

Introduces the forcing and response of the built and natural coastal environment, including hurricanes and extratropical storms, wind waves, astronomical tides, storm surges, currents, sediment transport, and morphological changes. Seeks to provide an overview of the physical processes and interaction with human activity at the water and land interface, including anthropogenic, natural, and nature-based features for coastal defense. Uses examples and case studies of climate adaptation plans to illustrate alternatives to increase coastal resiliency. Emphasizes the challenges to developing resilience solutions in urban coastal areas, where population growth coupled with sea-level rise and climate extremes exacerbate exposure of people and infrastructure to flood hazards.

ENVR 5610. Technology and the Blue Economy. (4 Hours)

Focuses on emerging technology and the global blue economy that generates trillions of U.S. dollars in economic activity. Introduces key sectors including global shipping, operations of port and harbors, fishing and aquaculture, tourism, ocean monitoring and exploration, finance models, energy, and minerals extraction. Examines challenges to a sustainable and equitable blue economy including global biodiversity loss, marine pollution, decarbonization, access to capital, and national security. Includes virtual field trips to companies and institutions involved in technology and the blue economy.

ENVR 5670. Global Biogeochemistry. (4 Hours)

Examines the biological, chemical, and physical interactions that shape our global environment. These interactions combine in the global biogeochemical cycles. Industrial emission of gases, use of fertilizers and plastics, and the expansion of cities are altering the biogeochemical cycling of the elements carbon, nitrogen, and phosphorus at rates unprecedented in the geological record. Uses lectures and the latest update to Chapter 6, "Carbon and Other Biogeochemical Cycles," of the International Panel on Climate Change report to explore the main interactions between human activity, biogeochemical change, and climate. Discusses primary literature to delve deeper into these interactions.

Attribute(s): NUpath Natural/Designed World

ENVR 5700. Streams and Watershed Ecology. (4 Hours)

Studies the physical, chemical, and biological processes in streams and surrounding watersheds. Explores the hydrology, structure, function, and biota of running waters and the landscape that supports them. Examines current and relevant issues in stream science and policy, including natural and anthropogenic disturbance, climate change, and management and restoration techniques in stream systems. Provides broad foundational knowledge on stream science, which offers students an opportunity to learn experimental techniques and employ them in the field. The first half of the course consists of lecture and discussion, while the second half is taught principally in the field.

Prerequisite(s): EEMB 2302 with a minimum grade of C- or ENVR 1400 with a minimum grade of C-

ENVR 5750. Urban Ecology. (4 Hours)

Investigates the myriad ways that natural systems intersect with human-dominated landscapes, including urban hydrology, nutrient cycling, and the distribution of organisms in cities. Urbanization is rapidly expanding with over half of humans currently inhabiting urban landscapes. The conversion of natural areas to human-dominated landscapes is resulting in the loss of biodiversity, habitat connectivity, and ecosystem services. It is also changing how we perceive and value natural systems. Evaluates the ecology *in* cities but also ecology *of* cities, including how cities integrate into larger landscapes; ecosystem service provisioning; and the biological, cultural, and psychological value of urban nature for people. Culminates by looking to the future of how urban spaces adapt to climate change, increasing populations, and other emerging issues.

Prerequisite(s): ENVR 1400 with a minimum grade of C- or EEMB 2302 with a minimum grade of C- or graduate program admission

ENVR 5800. Climate Adaptation and Nature-Based Solutions. (4 Hours)

Examines ways of measuring ecological resilience, adaptation capacity, adaptation and mitigation strategies, and developing transformation pathways to new stable states. The effects of climate change are having wide-ranging impacts on people and nature. Climate mitigation and adaptation can slow or stop climate impacts and decrease their severity. Natural mitigation and adaptation strategies (nature-based solutions) offer sustainable approaches to respond to these challenges. Evaluates climate change impacts on natural systems and explores strategies that reduce and adapt to these changes, including impact assessment; evaluation of ecological health for ecosystems, habitats, communities, and populations; and response prioritization. Offers students an opportunity to build skills in informing and evaluating the potential for these strategies at local, regional, and global scales and opportunities to deploy these strategies.

Prerequisite(s): (ENVR 1101 with a minimum grade of C- or EEMB 2302 with a minimum grade of C-) or graduate program admission

ENVR 5984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

ENVR 6000. Professional Development for Co-op. (0 Hours)

Introduces the cooperative education program. Offers students an opportunity to develop job-search and career-management skills; to assess their workplace skills, interests, and values and to discuss how they impact personal career choices; to prepare a professional résumé; and to learn proper interviewing techniques. Explores career paths, choices, professional behaviors, work culture, and career decision making.

ENVR 6102. Environmental Science and Policy Seminar 2. (4 Hours)

Critically explores fundamental and modern theory, methodologies, and practices for conserving and managing coupled social-ecological systems (SES). Focuses on science and policy of environment management through the lens of coupled SES. Historically, the majority of studies focused on human-environment interactions have typically involved measuring and describing the negative impacts of human populations and development on natural ecosystems. More recently, however, environmental science and practice have experienced a paradigm shift to where now humans and the natural environment are recognized as tightly coupled systems. From an SES perspective, humans continue to shape the structure and function of ecosystems through both stressors and stewardship. However, a key advancement is the recognition that people and their behavior are directly influenced by structure, function, and services of ecosystems.

ENVR 6150. Food Security and Sustainability. (4 Hours)

Explores the science of sustainable food production around the world and examines the issues related to nutrition and hunger, food safety, and food production. Discusses issues such as population growth, climate change, and sustainability, which are presented as thematic topics. Also discusses issues such as soil health, genetically modified (and engineered) foods, water use, governmental food guidelines, and human health. Pulls focus on the thematic topics from scientific literature but also includes additional sources of information, such as gray literature, media coverage, documentaries, and popular nonfiction. Explores local examples of sustainable agriculture, including incentives in food security and sustainability in New England.

ENVR 6200. Water Resources. (4 Hours)

Focuses on the hydrologic cycle, including global and regional patterns of water movement; characteristics of surface and groundwater systems, including the linkage between streams, rivers, lakes, wetlands, groundwater, and the sea; water management issues and regulations that have been enacted to control the use of water as a resource; water quality measures for surface water and groundwater; and examples of water use conflicts and emerging water issues. Case studies of specific water challenges include examples from the United States, Asia, Africa, the Middle East, and Europe.

ENVR 6500. Biostatistics. (4 Hours)

Offers an in-depth overview of statistical methods used to analyze data, with a focus on the biological sciences as well as nonbiological applications. Covers probability theory, Bayes' theorem, hypothesis testing, derivations of statistical distributions, models used for inference with categorical and/or continuous data, linear models, model selection, information theory, and nonparametric methods in statistics. Offers students an opportunity to learn how to apply models to data in supervised lab sessions in the R programming environment.

Corequisite(s): ENVR 6501

ENVR 6501. Lab for ENVR 6500. (1 Hour)

Accompanies ENVR 6500. Introduces the core principles for programming in R, key functions, and application to real datasets.

Corequisite(s): ENVR 6500

ENVR 6954. Co-op Work Experience - Half Time. (0 Hours)

Provides eligible students with an opportunity for part-time work experience.

Prerequisite(s): MATH 6000 with a minimum grade of S

ENVR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVR 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

Earth Sciences - CPS (ESC)

Courses

ESC 1150. The Atmosphere. (3 Hours)

Examines Earth's atmospheric structure and applies laws of physics to describe and explain broad climate and circulation patterns and local weather events that maintain or can disrupt ecosystems as heat energy and water move through Earth's spheres.

Attribute(s): NUpath Natural/Designed World

ESC 1200. The Hydrosphere: Oceanography, Ground and Surface Water. (3 Hours)

Examines the physical structure, biological provinces, and varying chemistries of Earth's ocean and other water resources. Topics range from El Nino/Southern Oscillation to lake eutrophication.

Attribute(s): NUpath Natural/Designed World

ESC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ESC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ESC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ESC 4955. Project. (1-4 Hours)

Reviews the theory and practice of environmental permitting and environmental assessment. Topics include major federal and state environmental regulations, the environmental permitting process, risk assessment and management, and environmental compliance. May be repeated without limit.

ESC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Ecology, Evolution, and Marine Biology (EEMB)

Courses

EEMB 1101. Foundations in Ecology and Evolutionary Biology. (4 Hours)

Introduces students to the foundational principles of ecology and evolutionary biology. Merges traditional lectures on foundational topics in ecology and evolutionary biology (adaptation, mechanisms of evolution, community and ecosystems ecology) with explorations of local field sites and an introduction to field ecology. Students spend several weeks of the semester designing and implementing independent field research projects, through which they are exposed to the foundation of scientific inquiry, including hypothesis testing, collecting, managing, and analyzing data, and presenting their findings.

Corequisite(s): EEMB 1102

Attribute(s): NUpath Natural/Designed World

EEMB 1102. Lab for EEMB 1101. (1 Hour)

Accompanies EEMB 1101. Covers topics from the course through various experiments.

Corequisite(s): EEMB 1101

EEMB 1105. Foundations in Ecological and Evolutionary Genomics. (4 Hours)

Introduces students to the foundational principles of molecular ecology with an emphasis on applications of high-throughput sequencing techniques to answer questions in ecology and evolutionary biology. Covers foundational topics in ecological and evolutionary genomics (central dogma, structure of nucleic acids, genetic variation, tools in molecular ecology, understanding genomes, and genomics). Practical skills development includes clean technique and proper bench skills; basic command line programming; understanding, quantifying, and analyzing sequence variation; and visualizing genomic data for formal scientific presentations.

Corequisite(s): EEMB 1106

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

EEMB 1106. Lab for EEMB 1105. (1 Hour)

Accompanies EEMB 1105. Covers topics from the course through various experiments. Focuses on providing firsthand experience using tools from molecular ecology to test ecological and/or evolutionary hypotheses.

Corequisite(s): EEMB 1105

EEMB 1145. Beginning Scuba. (1 Hour)

Focuses on basic skin diving and scuba diving skills, with emphasis on safety. Requires lab fee. Requires ability to pass a swim test and basic comfort in the water.

EEMB 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEMB 2302. Ecology. (4 Hours)

Offers students an opportunity to learn about the environmental and biological processes that control the distribution and abundance of species and controlling factors that operate on individuals, populations, and communities. The lecture and laboratory introduce a set of generalizable concepts that are of fundamental importance to plant and animal life on the land and in the sea and provide hands-on experiential learning that reinforce concepts covered in lecture. Offers students an opportunity to become proficient in the following: (a) understanding research results the primary literature; (b) conducting a research experiment; (c) interpreting the results of in-class research; (d) communicating results as manuscript.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Corequisite(s): EEMB 2303

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Writing Intensive

EEMB 2303. Lab for EEMB 2302. (1 Hour)

Accompanies EEMB 2302. Covers topics from the course through various experiments.

Corequisite(s): EEMB 2302

EEMB 2400. Introduction to Evolution. (4 Hours)

Introduces evolutionary thinking, including contemporary examples of evolution. To understand the evolution of Charles Darwin's "endless forms most beautiful," the course adopts an integrative approach that includes information from ecology, genetics, molecular biology, biogeography, and paleobiology. Considers mechanisms of evolutionary change—how does it happen? Examines adaptation, the process by which attributes of an organism change to enhance fitness and the evolutionary history of life on our planet—what was the first living thing, how does speciation occur, what have we learned about evolution of life in the distant past, and how did humans evolve. Includes student presentations and analysis of scientific literature.

Prerequisite(s): BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or EEMB 1101 with a minimum grade of D- or

ENVR 1400 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

EEMB 2610. Plant Biology. (4 Hours)

Examines the biology and diversity of plants and plantlike organisms. Covers introduction to plant biology, anatomy and structure, physiology and development, evolution and classification, and ecology of plants. Emphasizes how global climate change affects the biology and ecology of plants in different ecosystems and biomes.

Prerequisite(s): BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or EEMB 1101 with a minimum grade of D- or EEMB 1105 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-

EEMB 2700. Marine Biology. (4 Hours)

Examines biological aspects of natural ocean ecosystems and the physical processes that regulate them. Covers distributions, abundances, and interactions of marine organisms; interactions between organisms and the transformation and flux of energy and matter in marine ecosystems; and aspects of physiology related to marine species distributions, abundances, and roles. Students generate, evaluate, discuss, and present data from primary research and apply their knowledge of the scientific method and biological concepts through the creation of a written grant proposal.

Prerequisite(s): (BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or BIOL 1115 with a minimum grade of D- or EEMB 1101 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Corequisite(s): EEMB 2701

Attribute(s): NUpath Natural/Designed World, NUpath Writing Intensive

EEMB 2701. Lab for EEMB 2700. (1 Hour)

Accompanies EEMB 2700. Covers topics from the lecture course through discussions and experiments.

Corequisite(s): EEMB 2700

EEMB 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEMB 3250. Freshwater Ecology. (4 Hours)

Examines the abiotic characteristics of freshwater ecosystems, such as their formation, distribution, and physical/chemical characteristics. Freshwater habitats have long been used as model systems because of their convenient attributes (for example, lakes are largely contained ecosystems with clearly defined edges, and most organisms stay within these aquatic boundaries). Studies how these first principles influence biotic community assembly, drawing on foundational studies that have used freshwater habitats to illustrate dynamics such as seasonal succession, nutrient limitation, trophic cascades, and transitions between alternative states. Examines the linkages between freshwater ecosystems and other ecosystems and the relationship between freshwater systems and the human societies that rely on their ecosystem services.

Prerequisite(s): EEMB 2302 with a minimum grade of D-

EEMB 3455. Ecosystems Ecology. (4 Hours)

Focuses on the foundational principles of ecosystems ecology. Examines the flow of energy and materials through both the biosphere (plants, animals, and microbes) and the geosphere (soils, atmospheres, and oceans) and the role that humans are playing in altering these key fluxes. Studies elemental cycles that are critically important for human and environmental sustainability—including carbon, nitrogen, and phosphorus—and examines similarities and differences in these cycles and flows while drawing on examples from both terrestrial and marine systems. Seeks to understand how changes in ecosystem structure ultimately affect ecosystem function and how this translates into the important services ecosystems provide.

Prerequisite(s): BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1214 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or ENVR 1200 with a minimum grade of D- or ENVR 2200 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

EEMB 3460. Conservation Biology. (4 Hours)

Explores conservation biology, an interdisciplinary science that focuses on conservation of biological diversity at multiple levels. Emphasizes the causes and consequences of biodiversity loss and demonstrates how ecological and evolutionary principles are applied to conservation problems. Covers sustainability; climate change; introduced species; conservation of threatened and endangered species; and pollution, disease, and habitat restoration using examples from marine, aquatic, and terrestrial systems. Offers students an opportunity to read, discuss, evaluate, and present data from primary research through written assignments and oral debates and to apply this knowledge to conservation issues. Emphasizes critical thinking, problem solving, and recognizing multiple perspectives.

Prerequisite(s): BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or BIOL 1115 with a minimum grade of D-

EEMB 1101 with a minimum grade of D- or ENVR 1101 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

EEMB 3465. Ecological and Conservation Genomics. (4 Hours)

Offers an overview of ecological and conservation genetics, an interdisciplinary science that focuses on understanding the processes that determine genetic diversity at the individual to population level. Focuses on fundamental concepts in evolutionary ecology and population and quantitative genetics, then applies those concepts to solving real-world problems in conservation science. Covers harvested populations, inbreeding, climate change, introduced species, conservation of threatened and endangered species, adaptation, and habitat restoration. Exposes students to multiple sides of these issues and the science that underpins them. Offers students an opportunity to develop the R programming skills required to analyze the complex data sets that often emerge when addressing cutting-edge questions in genetics. Includes writing and coding exercises and mathematical derivations. Emphasizes critical thinking and problem solving.

Prerequisite(s): BIOL 2301 with a minimum grade of C- or CS 2500 with a minimum grade of C- or ECON 2350 with a minimum grade of C- or

EEMB 2400 with a minimum grade of C- or ENVR 2500 with a minimum grade of C- or MATH 3081 with a minimum grade of C-

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

EEMB 3466. Disease Ecology. (4 Hours)

Covers the fundamentals of disease ecology and evolution. Focuses on how disease can impact the physiology of organisms and how this can, in turn, alter communities and ecosystems. Topics include mathematical theory on host-pathogen interactions; empirical studies of human, wildlife, insect, and plant host populations; emerging infectious diseases; effects on host behavior; host-parasite coevolution; multihost and multipathogen systems; and anthropogenic effects on disease. Includes writing exercises, with a special emphasis on critical thinking and problem solving.

Prerequisite(s): BIOL 1107 with a minimum grade of D- or BIOL 1111 with a minimum grade of D- or EEMB 1101 with a minimum grade of D-

ENVR 1101 with a minimum grade of D- or ENVR 1400 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

EEMB 3475. Wildlife Ecology. (4 Hours)

Focuses on wildlife ecology and management, with an emphasis on terrestrial species. Introduces habitat use, behavior, wildlife conservation, parasites and pathogens, wildlife sampling, wildlife management, food and nutrition, population viability, and conservation genetics. Offers students an opportunity to engage in analyzing primary literature, collection, interpretation, and wildlife data and using basic mathematical models.

Prerequisite(s): EEMB 2302 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

EEMB 3600. Animal Behavior. (4 Hours)

Covers the fundamental principles of animal behavior by focusing on the physiological, ecological, and genetic factors that promote the evolution of diverse behavioral responses in the animal kingdom. Offers students an opportunity to become critical thinkers and readers through discussion of the how and why animals evolve behaviors that appear to increase and/or decrease their fitness.

Prerequisite(s): BIOL 1113 with a minimum grade of D or BIOL 2299 with a minimum grade of D or EEMB 1105 with a minimum grade of D

EEMB 3700. Desert Ecology. (4 Hours)

Offers students an opportunity to obtain a basic understanding of fundamental ecological processes taking place in desert environments. Familiarizes students with how environmental and biological processes interact and influence the distribution and abundance of species in these arid biomes while recognizing the impact that human societies have on desert life and identifying sustainable solutions to ameliorate our ecological footprint. Introduces students to foundational concepts of fundamental importance to desert plant and animal life. Uses an ecological perspective to surround students with a rich social/cultural milieu including interactions with Israeli, Palestinian, and Bedouin communities.

Prerequisite(s): EEMB 2302 with a minimum grade of D- ; EEMB 2303 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity

EEMB 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEMB 4000. Applied Conservation Biology. (4 Hours)

Studies landscape-scale conservation in Transylvania and the Carpathian Mountains of Romania. Working intensively with Foundation Conservation Carpathia, explores efforts to build Europe's largest national park. Offers students an opportunity to learn from local conservation leaders, collect data, and develop plans to help launch the "Yellowstone of Europe." Focuses on large carnivore conservation (brown bears, lynx, and wolves); sustainable agriculture; resource management in a country formerly under communist rule; and balancing urban and rural conservation needs. Explores Romania's rich cultural heritage in Sighisoara, a UNESCO World Heritage Site, and Vacaresti Nature Park, a constructed urban wetland in the heart of Bucharest. Requires prior completion of one laboratory science course or permission of instructor.

Attribute(s): NUpath Integration Experience, NUpath Natural/Designed World

EEMB 4001. Landscape and Restoration Ecology. (4 Hours)

Topics include ecosystem processes, spatial patterns, disturbance, species distributions, invasive species, and habitat loss. Offers students an opportunity to participate in activities in which they look at and interpret spatial data. Course format includes group work, analyzing the scientific literature, and in-class activities.

Prerequisite(s): BIOL 1107 with a minimum grade of C or BIOL 1111 with a minimum grade of C or EEMB 1101 with a minimum grade of C or ENVR 1101 with a minimum grade of C or ENVR 1400 with a minimum grade of C

Attribute(s): NUpath Natural/Designed World

EEMB 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EEMB 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

EEMB 5130. Population Dynamics. (4 Hours)

Offers a comprehensive overview of the mathematical and computational concepts needed to construct dynamical models. Lectures describe how to mathematically derive and model the effects of species interactions, space, disease, and environmental variability in order to understand the dynamics of populations in a changing world. Emphasizes the mathematical tools required to analyze the dynamical behavior of models (e.g., stability, invasion, graphical, and numerical analyses) and validate their predictions using empirical data (e.g., via maximum likelihood and optimization methods). Tutorials demonstrate how to implement, analyze, and test models using the free R programming language.

Prerequisite(s): ((MATH 1241 (may be taken concurrently) with a minimum grade of D- or MATH 1251 (may be taken concurrently) with a minimum grade of D- or MATH 1341 (may be taken concurrently) with a minimum grade of D-); (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C)) or graduate program admission

Attribute(s): NUpath Writing Intensive

EEMB 5303. Marine Biology Careers Seminar. (1 Hour)

Covers the information and tools needed to begin pursuing career opportunities in marine biology. Encourages students to explore a variety of career paths, construct résumés, contact potential employers for their internship and permanent positions. Presents invited speakers from state and federal agencies, and from private consulting firms, to talk about their work and career track.

EEMB 5305. Professional Development for Ocean Sciences. (2 Hours)

Designed to assist Three Seas students in securing a graduate research internship. Seeks to provide students with the information needed to pursue diverse career opportunities in marine biology. Provides hands-on experience with an array of science communication tools, including resumés/CVs, cover letters, and social media. Speakers from academia, informal science education organizations, and the media present talks on their work and career tracks.

EEMB 5504. Biology of Corals. (2 Hours)

Covers a variety of topics including basic coral biology, the coral/algae symbioses, the mechanisms of coral bleaching, coral microbiology and disease, coral calcification and ocean acidification, and coral speciation and hybridization. Supplements lectures with readings from the primary literature. Focuses on active areas of research and hands-on learning through lab and field activities.

Prerequisite(s): BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or graduate program admission

Corequisite(s): EEMB 5505

Attribute(s): NUpath Analyzing/Using Data

EEMB 5505. Lab for EEMB 5504. (1 Hour)

Accompanies EEMB 5504. Focuses on relevant research questions while providing practical training techniques in coral biology. Hands-on learning includes visual surveys of reef transects, quadrat sampling, coral identification, enumeration of zooxanthellae with a hemocytometer, PAM fluorometry, ImageJ analysis, coral homogenization, and Vibrio plating.

Corequisite(s): EEMB 5504

EEMB 5506. Biology and Ecology of Fishes. (2 Hours)

Covers fundamental concepts in reef fish biology, ecology, and conservation. Additional lecture coursework includes analysis of both group and individual research projects conducted in lab. Presents recent or ongoing research projects by the instructor and guest lecturers. Discussions are based on papers from the scientific literature and relate topics about processes and patterns of fish recruitment, reproduction, dispersal, evolution, conservation, and management.

Prerequisite(s): BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or graduate program admission

Corequisite(s): EEMB 5507

EEMB 5507. Lab for EEMB 5506. (1 Hour)

Accompanies EEMB 5506. Studies methods to conduct research on reef fishes through class exercises and individual research projects. Hands-on learning includes common fish transect methodology, reef fish identification, cast net and handline (on scuba) fishing techniques, and specimen dissection. Emphasizes analyzing and presenting the data and writing clearly and effectively about scientific research through the lab reports.

Corequisite(s): EEMB 5506

EEMB 5508. Marine Birds and Mammals. (3 Hours)

Studies principles of classification, anatomy, physiology, behavior, and evolution of seabirds and marine mammals. Also addresses conservation and protection of animals and essential habitat. Includes field trips to observe local species.

Prerequisite(s): (BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D-) or graduate program admission

EEMB 5510. New England Marine Biomes. (4 Hours)

Investigates the major biomes in the northwest Atlantic, including their habitats—rocky intertidal, tidal estuaries, seagrass beds, kelp forest/rocky reef complex, soft sediments, salt marshes, and continental shelf. Studies the major chemical, physical, geological, and biological forces that shape each habitat. Investigates the ecological framework of each habitat, both in the field and in hands-on exercises. Examines the adaptations of plants, algae, and animals to their respective ecosystem. Offers students an opportunity to develop an appreciation for human-induced changes in each habitat and biome and the conservation and restoration efforts currently being used.

Prerequisite(s): (EEMB 2302 with a minimum grade of D- or EEMB 2700 with a minimum grade of D- or EEMB 3460 with a minimum grade of D- or EEMB 3475 with a minimum grade of D- or EEMB 4001 with a minimum grade of D-) or graduate program admission

EEMB 5512. Tropical Terrestrial Ecology. (1 Hour)

Studies the animals, plants, and ecosystems of the new world tropics, with the community structure and diversity of terrestrial Jamaican habitats as an example. Includes field trips to lowland forests, carbonate caves, and the Blue Mountain mist-montane forest. The issue of land use and development vs. conservation is a recurring theme.

Prerequisite(s): BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or graduate program admission

EEMB 5518. Ocean and Coastal Processes. (2 Hours)

Examines the coupling between physical and biological processes on coral reefs and adjacent habitats. Focuses on biophysical, oceanographic, and benthic-pelagic processes acting in coral reef and associated nearshore ecosystems. Specific topics include oceanographic forcing mechanisms, organismal biomechanics, hydrodynamics, and nutrient dynamics.

Prerequisite(s): BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or graduate program admission

Corequisite(s): EEMB 5519

EEMB 5519. Lab for EEMB 5518. (1 Hour)

Accompanies EEMB 5518. Studies techniques such as estimation of turbulent diffusion coefficients, mean speed, and logarithmic layer parameters using analysis of video imagery (NIH ImageJ); deploying and recovering zooplankton traps and nets and estimating mortality using vital dyes; use of GoPro for behavioral analyses (sediment shedding in corals); estimating flux rates from active suspension feeders like sponges using dye release; and use of the YSI Exo Sonde to measure different water quality parameters.

Corequisite(s): EEMB 5518

EEMB 5520. Tropical Marine Ecology. (2 Hours)

Highlights and explores the ecological characteristics and current threats facing four tropical ecosystems—coral reefs, seagrass beds, mangrove forests, and tropical lowland rain forests. Explores the connectivity between these ecosystems and the services each provides. Examines how these ecosystems have changed under past threats and are projected to change in future conditions. Includes formal lectures, informal lectures provided in the field, field demonstrations, and interpretive hikes.

Prerequisite(s): BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or graduate program admission

EEMB 5522. Experimental Design Marine Ecology. (4 Hours)

Includes introduction to and application of observational methods in three local marine habitats, experimental design, statistical analysis, R statistical computing and graphics software, and principles of marine ecology. Combines lecture, hand-on research experience, and computer laboratory and includes reading and analyzing the scientific literature and developing research projects. At the end of the semester, students are expected to demonstrate an integrative mastery of course topics by writing a scientific manuscript about a class experiment. Seeks to prepare students for practicing ecology in new environments and to provide students with the foundational knowledge necessary for pursuing more complex concepts in experimental design, statistical analysis, and marine ecology.

Prerequisite(s): BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

EEMB 5525. Advanced Field Methods in Marine Ecology. (3 Hours)

Explores the methods used to build and complete scientific studies in marine ecology from observation to data analysis and interpretation within the context of the northwest Atlantic Ocean. Offers students an opportunity to build quantitative skills by understanding how and when to apply different statistical methods to a range of ecological datasets. Studies how to appropriately interpret results and effectively communicate the interpretation to any audience. Applies these skills to additional study systems outside the marine environment of the northwest Atlantic.

Prerequisite(s): ENVR 2500 with a minimum grade of D- or graduate program admission

EEMB 5528. Marine Conservation Biology. (3 Hours)

Examines several critical issues facing marine ecosystems, including invasive species, marine pollution and eutrophication, fisheries impacts, physical alteration of habitats, and global climate change. Offers students an opportunity to spend field time surveying intertidal and subtidal habitats within the San Juan Islands and Friday Harbor Marine Reserve and to conduct independent research projects.

Prerequisite(s): BIOL 2311 with a minimum grade of D- or EEMB 2302 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Analyzing/Using Data, NUpath Ethical Reasoning

EEMB 5533. Marine Invertebrate Zoology and Botany. (2 Hours)

Explores major groups of marine macroalgae and marine invertebrates, their ecological roles, and interrelationships. Identifies defining features of these groups and the evolutionary and ecological drivers leading to adaptations. Emphasizes important groups in the Pacific Northwest habitats, including kelp forest and rocky intertidal habitats. Hands-on learning with corequisite lab includes field identification; visits to intertidal and subtidal marine environments; and specimen observation, dissection, preparation, and cataloging.

Corequisite(s): EEMB 5535

EEMB 5535. Lab for EEMB 5533. (1 Hour)

Accompanies EEMB 5533. Covers topics from the course through various experiments.

Corequisite(s): EEMB 5533

EEMB 5538. Conservation and Restoration of Marine Systems. (3 Hours)

Designed to foster an understanding of conservation and restoration strategies in the nearshore marine system using a real-world case study approach. Students collect and analyze historical and newly collected data and use this to inform a conservation and restoration plan within the context of local, state, and federal laws. Uses real-world examples (such as aquaculture, seagrass restoration, and shoreline hardening) to build ecological goals. Seeks to build understanding and appreciation of the input of all stakeholders, including that of marginalized groups. Offers students an opportunity to produce a high-level and annotated deliverable that could serve as a template for real-world use.

EEMB 5540. Changing Global Oceans. (2 Hours)

Investigates the major drivers to short-, medium-, and long-term changes in the world's oceans. Compares the role of natural and human-induced changes in ocean systems. Key areas focus on the role of nonhuman animals in modifying and mitigating oceanic and atmospheric change. Explores the linkages among oceans and atmosphere through examples in the Pacific Northwest and worldwide.

Corequisite(s): EEMB 5541

EEMB 5541. Lab for EEMB 5540. (1 Hour)

Accompanies EEMB 5540. Students participate in daily, topical, paper discussions, carry out laboratory exercises, or explore and collect data in field exercises. Offers students an opportunity to acquire skills such as using oceanographic equipment, modeling simulations, data collection, and data analysis.

Corequisite(s): EEMB 5540

EEMB 5542. Marine Spatial Planning. (4 Hours)

Investigates issues of marine and coastal spatial planning (MCSP) that include offshore wind power siting, fisheries and aquaculture management, natural resource extraction, marine mammal conservation, and/or living shoreline protection and mitigation. Covers the spatial planning process from question to deliverable strategy, including assessment of stakeholder needs and potential ecosystem impacts. Offers students an opportunity to acquire and assess data, apply appropriate statistical tools, and develop spatial maps using geographic information systems (GIS) and other software. Also covers how to synthesize the planning process and develop and evaluate recommendations.

Prerequisite(s): EEMB 2302 with a minimum grade of D- or EEMB 2700 with a minimum grade of D- or EEMB 3460 with a minimum grade of D- or EEMB 4001 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience

EEMB 5546. Sustainability of the Land-Sea Interface. (3 Hours)

Explores the current issues facing management and conservation of the land-sea interface, also known as the coastal transition zone (CTZ). Evaluates the mitigation, conservation, and restoration tools that are applied to human use of the land-sea interface. Observes these tools during site visits and discusses strategies with experts in sustainability of these habitats. Synthesizes the scientific literature on CTZ tools in the northwest Atlantic and other regions with pressing sustainable land-sea use issues. Offers students an opportunity to develop skills in prioritizing and advocating for particular conservation strategies and to practice science communication skills to effectively reach a broad audience.

Prerequisite(s): (EEMB 2302 with a minimum grade of D- or EEMB 2700 with a minimum grade of D- or EEMB 3460 with a minimum grade of D- or EEMB 4001 with a minimum grade of D-) or graduate program admission

Attribute(s): NUpath Writing Intensive

EEMB 5589. Diving Research Methods. (2 Hours)

Presents experimental design, sampling methodology, statistical analysis, techniques, and the use of underwater equipment to conduct subtidal research.

EEMB 6465. Ecological and Conservation Genomics. (4 Hours)

Provides an overview of ecological and evolutionary genomics. Covers foundational mathematical concepts in population in quantitative genetics, from individual loci up to whole genomes. Concepts covered include Hardy-Weinberg equilibrium, F statistics, signatures of natural selection in genomes and methods for detecting them, analysis of quantitative genetic evolution, hybridization, and gene expression. Also covers modern statistical methods used to analyze genomic data using the free and open source R programming environment. Builds knowledge through reading of the primary literature and advanced problem sets. The final project requires students to complete a novel data analysis of an open source genomics data set and write a research paper.

EEMB 6475. Advanced Wildlife Ecology. (4 Hours)

Focuses on wildlife ecology and management, with an emphasis on terrestrial species. Covers habitat use, behavior, wildlife conservation, parasites and pathogens, wildlife sampling, wildlife management, food and nutrition, population viability, and conservation genetics. Engages students in analyzing primary literature and wildlife data, collection, interpretation, and using basic mathematical models.

EEMB 7101. Seminar in Marine Sciences. (2 Hours)

Offers students an opportunity to lead critical discussions of recent and classic papers from primary and secondary literature in marine sciences. Discusses the important scientific paradigms and addresses strengths and weaknesses of these papers from the perspective of scientific communication, including design and presentation of data in figures and tables; the role of synthesis in justifying new concepts; and how terminology and jargon evolve in scientific subdisciplines. Students write occasional reviews of these papers as if they had just been submitted to a journal for consideration.

EEMB 7102. Seminar in Ecology and Evolutionary Biology. (2 Hours)

Offers an overview of major concepts in the fields of ecology and evolution and how these concepts can be synthesized under a common framework. The first half of the course is organized according to major areas of evolutionary biology, from quantitative genetics to population genetics and phylogenetics and their synthesis. Quantitative genetics, population genetics, and phylogenetics have been historically separate fields and have only recently been synthesized through genomics. Note that quantitative genetics is a field that studies the evolution of phenotypes and requires no genetic information. The second half of the course introduces major concepts in ecology and is designed to introduce students to the major historical underpinnings of community ecology so as to understand the utility (or lack thereof) of these concepts for modern ecology.

EEMB 7103. Seminar in Sustainability Sciences. (2 Hours)

Explores key papers that have shaped modern theory, methodologies, and practices of sustainability science. Sustainability science hinges on integrating social and ecological sciences to assess the sustainability of human-environment interactions. From the social science dimension, many past studies focused on understanding how values, beliefs, and social norms shape human behavior. From an ecological perspective, much work focused on the influence of various institutional arrangements on resource and environmental sustainability. Importantly, a coupled natural-human or social-ecological systems (SES) perspective focuses on the inherently dynamic nature of these systems and interactions.

EEMB 7104. Seminar in Geosciences. (2 Hours)

Exposes graduate students pursuing a PhD in marine and environmental sciences to classical and recent high-impact papers in the fields of recent and deep earth history, landform evolution, microbes and their role in global biogeochemical cycling, nutrient stoichiometry, the global carbon cycle, geochemical proxies, evolution of ocean chemistry, oceanic acidification, the role of organisms in sediment and rock production, and geochemical paleoproxies. Examines applications of the above disciplines to mitigating the impacts of anthropogenic impacts on the Earth system. This is a guided readings course.

EEMB 7674. Marine Biology Research Project. (1 Hour)

Offers an opportunity to design and implement a scientifically rigorous independent research project that builds upon current knowledge from the primary literature, under the supervision of a faculty advisor from the program. Students conduct research at any of the program's locations and are then required to analyze data using rigorous statistical methods, write a journal-style research paper, and present their results in a research seminar. May be repeated once.

EEMB 8101. Readings in Marine Sciences. (2 Hours)

Designed to prepare PhD students with a concentration in marine sciences for a career in their field by offering an opportunity to learn fundamental aspects of the discipline through readings. Each student works with their Northeastern committee members at their first committee meeting to identify one reading topic per committee member. Committee members provide guidance for the student's readings around their topic. Students meet with each committee member throughout the semester to discuss the readings, ask questions, and clarify any aspects of their topics.

EEMB 8102. Readings in Ecology and Evolutionary Biology. (2 Hours)

Designed to prepare PhD students with a concentration in ecology and evolutionary biology for a career in their field by offering an opportunity to learn fundamental aspects of the discipline through readings. Each student works with their Northeastern committee members at their first committee meeting to identify one reading topic per committee member. Committee members provide guidance for the student's readings around their topic. Students meet with each committee member throughout the semester to discuss the readings, ask questions, and clarify any aspects of their topics.

EEMB 8103. Readings in Sustainability Sciences. (2 Hours)

Designed to prepare PhD students with a concentration in sustainability for a career in their field by offering an opportunity to learn fundamental aspects of the discipline through readings. Each student works with their Northeastern committee members at their first committee meeting to identify one reading topic per committee member. Committee members provide guidance for the student's readings around their topic. Students meet with each committee member throughout the semester to discuss the readings, ask questions, and clarify any aspects of their topics.

EEMB 8104. Readings in Geosciences. (2 Hours)

Designed to prepare PhD students with a concentration in geosciences for a career in their field by offering an opportunity to learn fundamental aspects of the discipline through readings. Each student works with their Northeastern committee members at their first committee meeting to identify one reading topic per committee member. Committee members provide guidance for the student's readings around their topic. Students meet with each committee member throughout the semester to discuss the readings, ask questions, and clarify any aspects of their topics.

EEMB 8982. Readings. (1-4 Hours)

Assigns students independent readings on selected topics in ecology, evolution, and marine biology. May be repeated without limit.

EEMB 8984. Research. (1-4 Hours)

Offers students an opportunity to conduct research. May be repeated without limit.

EEMB 8986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

EEMB 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

EEMB 9990. Dissertation Term 1. (0 Hours)

Offers theoretical and experimental research for the PhD degree.

Prerequisite(s): EEMB 9000 with a minimum grade of S

EEMB 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): EEMB 9990 with a minimum grade of S

EEMB 9996. Dissertation Continuation. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): EEMB 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Economics (ECON)

Courses

ECON 1000. Economics at Northeastern. (1 Hour)

Intended for freshmen in the College of Social Sciences and Humanities. Introduces freshmen to the liberal arts in general; familiarizes them with their major; helps them develop the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps them develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

ECON 1115. Principles of Macroeconomics. (4 Hours)

Introduces macroeconomic analysis. Topics include the flow of national income, economic growth and fluctuation, the role of money and banking, and monetary and fiscal policies. Emphasizes the development of conceptual tools to analyze the economic problems facing modern society, including long-run growth, unemployment, inflation, and inequality. Analyzes strengths and weaknesses of aggregate measures of economic activity, including how aggregation can hide underlying inequalities across racial, gender, and socioeconomic lines.

Attribute(s): NUpath Analyzing/Using Data, NUpath Societies/Institutions

ECON 1116. Principles of Microeconomics. (4 Hours)

Introduces microeconomics—a branch of economics that focuses on the interaction of consumers, firms, and governments in markets. Covers a basic theory of supply, demand, and competitive equilibrium. Presents several market structures and emphasizes different forms of market and government failure. Explores the compatibility of efficiency and equity in a variety of areas, such as social justice, sustainability, and income distribution. Offers students an opportunity to become familiar with the economic way of thinking, which provides a foundation for subsequent learning in economics.

Attribute(s): NUpath Analyzing/Using Data, NUpath Societies/Institutions

ECON 1125. Recitation for ECON 1115. (0 Hours)

Provides small-group discussion format to cover material in ECON 1115.

ECON 1126. Recitation for ECON 1116. (0 Hours)

Offers small-group discussion format to cover material in ECON 1116.

ECON 1230. Healthcare and Medical Economics. (4 Hours)

Enables students to recognize the relevance of economics to health and medical care and apply economic reasoning to understand health-related issues better; to understand the mechanism of healthcare delivery in the United States within broad social, political, and economic contexts; to explore the changing nature of health and medical care and its implications for medical practice, medical education and research, and health policy; and to analyze public policy in health and medical care from an economic perspective.

ECON 1240. Economics of Crime. (4 Hours)

Offers an overview of core issues specific to the economics of crime. Examines the social costs of crime, the determinants of criminal behavior, and the design of enforcement policies. Topics may include incarceration, policing, the deterrent effect of punishment, gun policy, cybercrime, drug policy, and racial bias within the criminal justice system. May consider social factors relating to education, poverty, family structure, and the environment.

Attribute(s): NUpath Societies/Institutions

ECON 1245. Economics of Inequality. (4 Hours)

Introduces inequality from an economic perspective. Studies how inequality relates to scarcity, appropriability, and inheritability. Discusses how taxation, economic growth, globalization, and technological progress affect inequality. Emphasizes the difference between inequality of economic outcomes and inequality of economic opportunity. Covers inequality in sectors such as housing, healthcare, labor market, and others. Discusses alternative empirical methods for measuring inequality, and presents economic policies designed to address it.

ECON 1260. Contested Issues in the U.S. Economy. (4 Hours)

Covers many of the contested economic issues that the United States faces as a nation—the size of government, the national debt, the war on drugs, national healthcare, taxation, and many more. An important social system in any society is the economic system—the allocation of scarce resources. In the large and complex economy of the United States, there is controversy over what goods and services are produced and how they are distributed. To understand the nature and causes of these issues requires a course where theory is a tool of analysis, not the focus. Economics is not value free. Attention is given to the role of ethics and how our moral values shape policy. Course topics vary from semester to semester.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

ECON 1281. Economics of the Creative Industries. (4 Hours)

Presents an overview of the economic aspects of creative industries. Examines the production and consumption of creative goods and services. Topics include consumer demand, economic models of nonprofit and for-profit production of creative goods, competition and market structure, artists and other creative workers as members of the labor force, productivity issues in the performing arts, government support for the creative sector, and the role and impact of public and private subsidies.

ECON 1292. Economic History of the Middle East. (4 Hours)

Provides an historical account of the economies of the Middle East from the sixth century C.E. to the present. Conceives of the area between the Nile and Oxus as forming the core of the Middle East; besides the core, the region includes Turkey and North Africa. Identifies the major economic and demographic trends in the region, or segments of the region, to examine the ecological bases of the economies and the connection between political history and the economic trends and to understand the ways in which economies of the region articulated with other major economic regions including Europe, West Africa, and the economies of the Indian Ocean. Studies the systems of government and laws, agriculture, commerce, and manufacturing.

Attribute(s): NUpath Difference/Diversity

ECON 1711. Economics of Sustainability. (4 Hours)

Studies the significance of behavioral assumptions on economic outcomes and social norms, specifically as these relate to the perceived value of resources and the broader ecosystem. Explores the importance of economic concepts such as externalities and elasticity in relation to a market-driven economy, price, and consumption behavior. Through the use of elementary life cycle analysis, introduces both the definition and responsibilities of the rational agent as these relate to the establishment of sustainable outcomes. Offers students an opportunity to articulate the relationship between economic growth and climate change and reconcile the historical relationship between social values and sustainable outcomes.

ECON 1915. Introductory Selected Topics in Macroeconomics. (4 Hours)

Covers selected topics in the field of macroeconomics. The specific topic is chosen by the instructor. May be repeated up to three times.

ECON 1916. Introductory Selected Topics in Microeconomics. (4 Hours)

Covers selected topic matter in the field of microeconomics. The specific topic is chosen by the instructor. May be repeated up to three times.

ECON 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ECON 2315. Macroeconomic Theory. (4 Hours)

Presents several theoretical approaches to the study of macroeconomic dynamics in both the short and long run. Emphasizes the use of rigorous mathematical tools, such as calculus, to examine the major determinants of fluctuations in employment and price level, as well as the rate of economic growth. Explores theoretical models to evaluate the operation and impact of various macroeconomic policy tools. Discusses how macroeconomic performance relates to issues of social justice.

Prerequisite(s): ECON 1115 with a minimum grade of D- ; (MATH 1231 with a minimum grade of D- or MATH 1241 with a minimum grade of D- or MATH 1242 with a minimum grade of D- or MATH 1245 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1340 with a minimum grade of D- or MATH 1341 with a minimum grade of D- or MATH 1342 with a minimum grade of D-)

Attribute(s): NUpath Analyzing/Using Data, NUpath Societies/Institutions

ECON 2316. Microeconomic Theory. (4 Hours)

Examines the behavior of consumers and firms under several different market structures, including monopoly, oligopoly, monopolistic competition, and perfect competition. Covers sources of market failure, such as public goods, externalities, and information asymmetry. Presents the key analytical tools economists apply to evaluate the welfare and distributional impacts of policies designed to improve market outcomes. Relies on calculus-based methods, offering an opportunity for students to extend their knowledge of microeconomics.

Prerequisite(s): ECON 1116 with a minimum grade of D- ; (MATH 1231 with a minimum grade of D- or MATH 1241 with a minimum grade of D- or MATH 1242 with a minimum grade of D- or MATH 1245 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1340 with a minimum grade of D- or MATH 1341 with a minimum grade of D- or MATH 1342 with a minimum grade of D-)

Attribute(s): NUpath Natural/Designed World

ECON 2350. Statistics for Economists. (4 Hours)

Presents statistical techniques used to analyze data in order to address issues related to economics and other social sciences. Explores different types of datasets, sampling, and data collection techniques. Discusses how to obtain sociodemographic data for different subpopulations based on gender, race, class, ethnicity, and other stratifications. Uses data visualization techniques to depict economic phenomena. Offers students an opportunity to compute and interpret summary statistics, conduct confidence interval estimation, hypothesis testing, and simple regression analysis. Computer applications are an integral part of the course.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

ECON 2560. Applied Econometrics. (4 Hours)

Introduces the techniques of regression analysis useful to address relevant questions in economics and related subjects. Covers the foundations of multivariate regression analysis, including potential issues such as heteroskedasticity, multicollinearity, omitted variable bias, and model specification. Additional topics may include instrumental variables, panel data, discrete choice models, and time-series analysis. Utilizes regression software (e.g., Stata, R, Python) throughout the course to analyze real-world data. Writing an applied econometrics paper is an integral part of the course.

Prerequisite(s): ECON 1115 with a minimum grade of D- ; ECON 1116 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or INSH 3102 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C or ENGL 1102 with a minimum grade of C); (MATH 1231 with a minimum grade of D- or MATH 1241 with a minimum grade of D- or MATH 1245 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1340 with a minimum grade of D- or MATH 1341 with a minimum grade of D-)

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

ECON 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Prerequisite(s): ECON 1115 with a minimum grade of D- ; ECON 1116 with a minimum grade of D-

ECON 3255. Economics of Financial Market Structure. (4 Hours)

Examines global financial markets such as U.S. equities markets, stock options exchange markets, and the Treasury debt market. Explores financial instruments used in each of these markets such as debt and equity instruments, futures and options, credit default swaps, and interest rate swaps. Analyzes government regulation and shortcomings of these markets. Discusses policies for the potential improvement of financial markets. Offers students an opportunity to develop skills in the use of current financial market technologies and instruments.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3290. History of the Global Economy. (4 Hours)

Covers ideological biases in economics; the extent of global disparities around 1800; evolution of global disparities since 1800; evolution of international integration and international trading and monetary regimes, 1800–2000; theories explaining global disparities: classical, neoclassical, Marxian, neo-Marxian, and structuralist; import-substituting industrialization: Latin America, Asia, and Africa; international debt crises: nineteenth and twentieth centuries; the new global regime; structural adjustment: GATT (General Agreement on Tariffs and Trade) and WTO (World Trade Organization); and socialist interlude: a socialist experience and transition to capitalism.

Prerequisite(s): ECON 1116 with a minimum grade of D- or ECON 1115 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ECON 3291. Development Economics. (4 Hours)

Explores social and economic development around the world. Topics include income, poverty, inequality, human development, geography, growth, impact evaluation, health, education, financial markets, trade, and gender inequality. Analyzes four key elements of economic development: income, poverty, inequality, and human development. Offers students an opportunity to understand the determinants of economic growth. Focuses on major policy issues concerning health, education, credit, savings, gender differences, and globalization. Studies which interventions worked and which did not. Exposes students to readings and perspectives from several academic disciplines. Emphasizes one unifying methodological theme: the usefulness of empirical economic tools in assessing the arguments presented in debates about development.

Prerequisite(s): ECON 1116 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

Attribute(s): NUpath Societies/Institutions

ECON 3404. International Food Policy. (4 Hours)

Offers an overview of the rationale for and types of food policies in developing countries. Uses a food systems approach to cover economic and political dimensions of food policy. Emphasizes food security, nutrition, poverty alleviation, and environmental issues. Discusses and analyzes the dynamics of change in the role of government; food value chains; and institutions and governance and their implications for local, regional, and global food systems.

Prerequisite(s): ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ECON 3405. A Critique of Capitalism. (4 Hours)

Examines the origins, workings, successes, and failures of capitalism, defined as an economic system where capital is mostly privately owned and markets generally solve economic problems. Examines, in addition, several variants of private-ownership economies including slavery, feudalism, land-tenancy, putting-out system, and self-employment. Also examines some alternatives to capitalism, such as command socialism, market socialism, worker-ownership of capital, cooperatives, Islamic economy, and Christian economy.

Prerequisite(s): ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ECON 3406. Critical Perspectives on Economics. (4 Hours)

Examines the assumptions, concepts, theories, tools, and tests employed by neoclassical economics; identifies the biases and limits of these methods; and explores alternative economic approaches that might overcome these failings. Also develops an ethical critique of markets, the profit motive, corporations, efficiency, innovation, and economic growth. Offers students an opportunity to develop critical perspectives on neoclassical economics and other approaches to economics.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3410. Labor Economics. (4 Hours)

Emphasizes an economic analysis of the labor market, the labor force, and wages and earnings. Explores the differences that have existed and currently exist in the labor market with regard to race, ethnicity, and gender and the theories behind why they have existed and continue to exist. Covers supply, development, and efficient use of human resources; demand for labor by businesses and industries; wage inequality and its determinants; changing occupational and industrial structure; nature, causes, and incidence of unemployment; economic impact of unions; and influence of related labor-market institutions and relevant public policies including minimum wages, wage subsidies, and earned-income tax credits; health and safety regulations (OSHA); and antidiscrimination and affirmative action policies and programs.

Prerequisite(s): ECON 1116 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

ECON 3412. Women's Labor and the Economy. (4 Hours)

Introduces economic models of dating, marriage, divorce, and childbearing with the goal of understanding the dramatic changes in family structure that have occurred over the past 60 years. Focuses on women's behavior in the labor force: the labor force participation and poverty and antipoverty programs (as the majority of America's poor are in families headed by women). Discusses theories, evidence, and policy remedies for wage differences between men and women with emphasis on policy topics such as pro-marriage and fertility initiatives, welfare reform, the earned income tax credit, affirmative action, the marriage tax, parental leave, and childcare support.

Prerequisite(s): ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Difference/Diversity

ECON 3413. Health Economics and Healthcare Policy. (4 Hours)

Studies functional skills economists use in health policy analysis, how to apply economic models, and the tools of data and statistical analysis, with the goal of answering health policy questions. Topics include individual health decisions, health insurance coverage and access to care, the behavior of hospitals and health insurers, the Medicare and Medicaid programs, prescription drug prices, innovation/RD in the pharmaceutical sector, and topics in public health. Offers students an opportunity to develop the knowledge and tools required to understand, discuss, and provide informed perspective on national policy debates, such as the Affordable Care Act, rising healthcare prices and lack of affordability, the benefits and drawbacks of a national single-payer health insurance program, and public health topics such as rising mortality and prescription opioid and heroin abuse.

Prerequisite(s): ECON 1116 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

ECON 3416. Behavioral Economics. (4 Hours)

Questions assumptions made in standard microeconomic utility-driven models, using insights from psychology and other social sciences. Examines behavior that departs from these assumptions and tests theories with data. Incorporates empirical evidence from a wide range of fields, including development economics, health economics, labor economics, industrial organization, and finance. Topics include deviations from standard models in terms of preferences (present bias, reference dependence, and social preferences); beliefs (projection bias); and decision making (cognition, attention, and framing); as well as market and policy reactions to such deviations.

Prerequisite(s): ECON 1116 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

ECON 3420. Urban Economic Issues. (4 Hours)

Studies urban growth and development, focusing on economic analysis of selected urban problems such as housing, poverty, transportation, education, health, crime, and the urban environment. Discusses public policies related to such problems.

Prerequisite(s): ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ECON 3423. Environmental Economics. (4 Hours)

Applies the tools of economics to environmental issues. Explores taxonomy of environmental effects; externalities; the commons problem; taxation, regulations, marketable permits, and property rights as a solution; measuring benefits of cleaner air and water, noise abatement, and recreational areas; global issues including tropical deforestation and acid rain; and the relevance of economics to the environmental debate.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3424. Law and Economics. (4 Hours)

Introduces students to the economic approach to law. Focuses on several different bodies of law, including torts, property, contracts, and crime. Specific applications may consider additional areas, including those related to health and safety, the environment, and the legal services industry. Relies on economic models to examine the incentives created by various rules and considers the implications for social welfare. Covers select cases to highlight their economic importance. Examines the economic logic underlying the evolution of the common law.

Prerequisite(s): ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Societies/Institutions

ECON 3425. Energy Economics. (4 Hours)

Introduces theoretical and empirical perspectives on energy demand and energy supply. Energy is vital to modern economies. Emphasizes the role markets play in determining how to use energy and its sources and the scope for public policy to address market imperfections. Discusses oil, natural gas, coal, nuclear power, and renewable energy (such as hydro-, wind, and solar power). Covers the public policy issues around greenhouse gas emissions and energy security.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3440. Public Finance. (4 Hours)

Presents an overview of the economics of government and the role of public policy. Develops guidelines to determine which economic activities are best performed by government and which are not. Also examines the impact of tax policies on efficiency, economic growth, and equity. Topics include market failures, public choice, the personal income tax, the corporate tax, sales tax, and taxation of capital and wealth, and options for reform of the tax structure. Major spending programs such as social security and education and healthcare are analyzed.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3442. Money and Banking. (4 Hours)

Covers the nature and functions of money, credit, and financial markets in the modern international economy. Analyzes financial markets and institutions, central banking, and the effects of interest and foreign exchange rates on the real economy.

Prerequisite(s): ECON 1115 with a minimum grade of D-

ECON 3460. Managerial Economics. (4 Hours)

Explores the application of economic principles to the solution of managerial decision-making problems in areas such as demand estimation, cost estimation and control, pricing and marketing strategies, employee incentives, financing of capital investments, and responses to government regulation and taxation. Case studies and simulation models are typically used as pedagogical tools.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3462. Bubbles, Busts, and Bailouts: Market and Regulatory Failures in the Financial Crisis. (4 Hours)

Investigates economic and financial bubbles together with the busts and bailouts that usually follow. Analyzes how and why bubbles form in markets such as housing and stocks, emphasizing the financial crisis of 2007–2008 but covers others as well. Also examines the lasting effects on markets and the economy from the collapse of such bubbles and the need for bailouts and other policies that are often used. Applies a range of perspectives to identify the market failures and regulatory failures that can cause bubbles—failures of assumptions about information, about incentives, and about oversight. Includes perspectives from microeconomics, behavioral economics, finance, and public policy.

Prerequisite(s): ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ECON 3470. American Economic History. (4 Hours)

Covers the economic history of the United States from the colonial period to the present. Includes studies of the development of major economic institutions and the effects of technological change. Examines economic reasons for the spread of an industrial market economy in the nineteenth century and the successes and failures of this economy in the twentieth century.

Prerequisite(s): ECON 1115 with a minimum grade of D- ; (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C)

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

ECON 3481. Economics of Sports. (4 Hours)

Investigates what economics has to say about sports as an economic activity: what tools of economic analysis apply to sports, whether sports require different economic tools, what the evidence has to say about key questions. Focuses on professional team sports, although some attention is paid to college sports and to individual professional sports.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3490. Public Choice Economics. (4 Hours)

Studies public choice economics—the scientific analysis of government behavior—and is divided into two parts: institutional political economy and social choice theory. Public choice economics applies this neoclassical economic analysis to political issues such as rent seeking, tax reform, logrolling, voting behavior, the function of government, the intersection between public and private interests, and federalism. The point of departure from political science is that economists have based this analysis on the assumption that utility functions do not change once a person enters the realm of public service and that the argument of their utility functions is still their own self-interest and not the interest of the social system in which they operate.

Prerequisite(s): ECON 1115 with a minimum grade of D- ; ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

ECON 3520. History of Economic Thought. (4 Hours)

Traces the evolution of Western economic thought. Covers several important periods and schools of economic thought including mercantilism, physiocracy, classical, Marxist, neoclassical, and Keynesian. Emphasizes the relationship between historical changes in society and economic thought, focusing on changes in the types of questions economists ask and the analytical tools they use.

Prerequisite(s): ECON 1115 with a minimum grade of D- ; ECON 1116 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

ECON 3635. International Economics. (4 Hours)

Covers Ricardian and neoclassical theories of trade; trade policies; tariffs, quotas, voluntary export restraints, and customs union; global trade regime; GATT (General Agreement on Tariffs and Trade) and WTO (World Trade Organization); balance-of-payments accounts; foreign exchange markets; monetary and portfolio balance approaches to external balance; fixed or flexible exchange rates; and international monetary system.

Prerequisite(s): ECON 1115 with a minimum grade of D- ; ECON 1116 with a minimum grade of D-

ECON 3711. Economics of Race. (4 Hours)

Addresses economic issues related to race, including the persistence of racial discrimination. Studies the social construction of race and the use of this construction to legitimize exploitation. Covers the economic modeling of discrimination and segregation, as well as the effect of these societal attributes on economic outcomes, and the complexity of racial equity and equality specific to reparations. Course materials rely on published research, film, and other media.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3915. Intermediate Selected Topics in Macroeconomics. (4 Hours)

Covers selected topic matter in the field of macroeconomics. The specific topic is chosen by the instructor. May be repeated up to five times.

Prerequisite(s): ECON 1115 with a minimum grade of D-

ECON 3916. Intermediate Selected Topics in Microeconomics. (4 Hours)

Covers selected topic matter in the field of microeconomics. The specific topic is chosen by the instructor. May be repeated up to five times.

Prerequisite(s): ECON 1116 with a minimum grade of D-

ECON 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Prerequisite(s): ECON 2315 with a minimum grade of D- ; ECON 2316 with a minimum grade of D-

ECON 4637. Monetary and Fiscal Policy. (4 Hours)

Examines how government policies affect the macroeconomy both in theory and practice. Explores the trade-offs governments face when fiscal policy is used to smooth business cycles and address issues of equity. Covers models of monetary policy and how they are utilized by central banks to address business cycles. Key topics include fiscal and money multipliers, transmission mechanisms, nominal anchors, policy rules, and the role of expectations. While the central focus is on the United States, offers students an opportunity to examine fiscal and monetary policies of other nations.

Prerequisite(s): ECON 2315 with a minimum grade of D-

ECON 4640. Financial Economics. (4 Hours)

Introduces students to the theory of investments, including the principles of risk and return, the theory of portfolio selection, asset pricing models such as the capital asset pricing model (CAPM) and arbitrage pricing theory (APT), valuation of stocks, bond pricing and the term structure of interest rates, and options (what they are and how to use them). Geared toward nonbusiness majors who are interested in a rigorous course in finance.

Prerequisite(s): (ECON 2315 with a minimum grade of D- or ECON 2316 with a minimum grade of D-); (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

ECON 4680. Competition Policy and Regulation. (4 Hours)

Presents an analytic framework and empirical study of how the structure of industries and the conduct of sellers affect performance. Includes examples and case studies from both the "old economy" and the "new economy." Examines antitrust as a public policy designed to promote better market performance.

Prerequisite(s): ECON 2316 with a minimum grade of D-

ECON 4681. Information Economics and Game Theory. (4 Hours)

Offers an advanced course on the economics of information, including moral hazard and adverse selection; game theory; and mechanism design. Formally considers alternative solution concepts, such as Nash equilibrium and rationalizability for simultaneous move and sequential move games under complete information about payoffs and preferences, as well as solution concepts, such as Bayesian-Nash equilibrium to analyze selection, screening, and incentives in games of incomplete or asymmetric information. Covers optimal incentives or mechanism design, including the optimal design of contracts, auctions, and other mechanisms. Prior exposure to game theory recommended.

Prerequisite(s): ECON 2316 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Societies/Institutions

ECON 4692. Senior Economics Seminar. (4 Hours)

Incorporates aspects of real-world and academic experiences of students into an analytical context, enabling students to demonstrate their ability to apply economic concepts, methodology, and data to economic issues and problems of personal and philosophical significance.

Prerequisite(s): ECON 2315 with a minimum grade of D- ; ECON 2316 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ECON 4915. Advanced Selected Topics in Macroeconomics. (4 Hours)

Covers selected topic matter in the field of macroeconomics. The specific topic is chosen by the instructor. May be repeated seven times.

Prerequisite(s): ECON 2315 with a minimum grade of D-

ECON 4916. Advanced Selected Topics in Microeconomics. (4 Hours)

Covers selected topic matter in the field of microeconomics. The specific topic is chosen by the instructor. May be repeated up to four times.

Prerequisite(s): ECON 2316 with a minimum grade of D-

ECON 4965. Undergraduate Teaching Experience. (4 Hours)

Offers an opportunity for qualified undergraduate students to serve as undergraduate teaching assistants. Requires various assignments closely directed by the assigned course instructor. These may include holding office hours, light grading, maintaining the records for the course, proctoring—but not solely administering—exams and quizzes, holding recitation/tutorial sessions, and (very) limited lecturing or leading class discussions. Requires minimum overall GPA of 3.333 and grade of A– or better in course assignment; permission to enroll is further subject to the availability of an appropriate course assignment and instructor.

ECON 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

Prerequisite(s): ECON 2315 with a minimum grade of D- ; ECON 2316 with a minimum grade of D- ; (ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

ECON 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): ECON 4970 with a minimum grade of D-

ECON 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ECON 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

ECON 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May not be substituted for requirements leading to a BA or BS in economics. Requires approval of department chair. May be repeated without limit.

ECON 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

ECON 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

ECON 4997. Senior Economics Thesis. (4 Hours)

Offers students an opportunity to write and present a research project on a topic within the discipline of economics. Students identify a question derived from economic theory and conduct a review of relevant literature in economics and related fields, analyzing the question through a well-defined research methodology.

Prerequisite(s): ECON 2315 with a minimum grade of D- ; ECON 2316 with a minimum grade of D- ; ECON 2560 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ECON 5105. Math and Statistics for Economists. (4 Hours)

Offers an intensive study of the statistical methods and techniques and mathematical fundamentals necessary for quantitative economics. Statistical topics include descriptive statistics, probability theory, fundamentals of estimation and hypothesis testing, and regression and correlation analysis. Mathematical topics include linear algebra and differential and integral calculus. Computer applications are an integral part of the course.

ECON 5110. Microeconomic Theory. (4 Hours)

Presents a survey of microeconomic theory at the beginning graduate level. Topics include theories of the consumer, firm, and market (including input and output markets), welfare economics, and market failures. Includes applications of theory to public policy questions in such fields as industrial organization and public finance. Requires knowledge of undergraduate microeconomic theory.

ECON 5120. Macroeconomic Theory. (4 Hours)

Examines theories of the short-run determination of output, employment, and prices, and long-run economic growth. Presents alternative macroeconomic models. Also consists of applied case study analysis of the theoretical models presented in class.

ECON 5140. Applied Econometrics. (4 Hours)

Offers an intensive study of econometric techniques applied to cross-section, time-series, and panel data. Applies the fundamentals of econometrics to analyzing structural economic models, forecasting, and policy analysis. Computer applications and an empirical research project are an integral part of the course.

Prerequisite(s): ECON 5105 with a minimum grade of C- or ECON 6105 with a minimum grade of C-

ECON 5200. Topics in Applied Economics. (4 Hours)

Presents an application of microeconomic and macroeconomic theory, as well as quantitative methods, to a variety of social issues, both domestic and international. May be repeated without limit where topics are unique.

ECON 5291. Applied Development. (4 Hours)

Focuses on major macroeconomics policy questions for developing countries in an open economy context. Approaches these policy issues from a political economy perspective on macroeconomics. Combines theoretical foundations with institutional analysis and empirical evidence. Begins by developing a macroeconomic framework to analyze short-term macroeconomic adjustment and concludes with long-term growth, emphasizing the effects of financial integration and capital account regulations on macroeconomic performance in developing countries. Empirical data and country experiences help assess the validity of theoretical propositions and explain the complexity of development trajectories. Requires previous coursework in macroeconomic theory.

ECON 5292. Gender and Development Economics. (4 Hours)

Examines topics at the intersection of women's empowerment and economic development from an economic perspective. Introduces potential explanations for the gender inequalities in the context of developing countries as well as the role of public policy in addressing such disparities. Studies microeconomics topics such as education gaps, fertility, family planning, HIV/AIDS, marriage dynamics and intrahousehold allocation of resources, female labor outcomes and migration, as well as conflict and domestic violence. Offers students an opportunity to apply basic economic theory associated with each topic as well as the research methodologies used in recent empirical papers. Students with an econometrics background have a better understanding of the empirical papers. Requires previous course work in microeconomic theory and in statistics.

ECON 5293. Agriculture and Development Policy. (4 Hours)

Reviews main theories and empirical facts on the role of agriculture in economic development. Topics include population dynamics, agricultural productivity and growth, poverty alleviation, and future issues in agricultural development. Focuses on the analysis and application of policy solutions. Designed to help develop practical professional skills for application in the global development policy arena.

Prerequisite(s): ((ECON 2315 with a minimum grade of B or ECON 2316 with a minimum grade of B); ECON 2560 with a minimum grade of D-) or graduate program admission

ECON 5650. Economic Growth and Applications. (4 Hours)

Provides an in-depth analysis of models of economic growth and their empirical applications, analyzing the process and mechanics of economic growth, technological change, and sources of income and growth differences across countries, including, *inter alia*, the role of technology, population dynamics, institutions, geography, and culture. Discusses alternative growth strategies in the context of income inequality and natural resource constraints. Requires previous coursework in macroeconomic theory.

Prerequisite(s): (ECON 2315 with a minimum grade of D- ; (ECON 2560 with a minimum grade of D- or ECON 3560 with a minimum grade of D-)) or graduate program admission

ECON 6105. Advanced Mathematics and Statistics for Economists. (4 Hours)

Covers the fundamental quantitative methods in economics. The first part of the course focuses on the role of mathematical models in economics, the applications of linear algebra, multivariate calculus, and static optimization theory. Studies statistics in the second part of the course, and offers students an opportunity to learn how to apply proper methods of empirical testing in economics. Additionally, introduces the statistical language R to equip students to complete most of the assignments in statistics. This is an advanced graduate course.

ECON 6110. Advanced Microeconomic Theory. (4 Hours)

Discusses consumer choice, classical demand theory, production, choice under uncertainty, competitive markets, and market power, which provide the theoretical foundation of more advanced topics that can be used as the basis to design empirical applications. Requires a strong background in linear algebra, multivariate calculus, and optimization theory for success in the course. A good undergraduate intermediate-level microeconomic theory course is also helpful. This is the first advanced graduate-level course on microeconomic theory for graduate students.

ECON 6120. Advanced Macroeconomic Theory. (4 Hours)

Develops basic models used by macroeconomists to study long-run economic growth with exogenous savings and endogenous saving decisions by optimizing households. Studies models incorporating endogenous technology improvements, including the model of increasing product variety and the model of Schumpeterian growth. In the second part of the course, basic models used by macroeconomist are developed to explain short-term fluctuations in aggregate economic variables. Develops a simple real business cycle model, which is subsequently enriched by relaxing assumptions of perfect competition on the production side and monetary neutrality. This is the first advanced graduate-level course introducing modern theories of the aggregate economy.

ECON 6140. Advanced Applied Econometrics. (4 Hours)

Offers students an opportunity to obtain the theoretical tools, computer skills, and experience using econometrics needed to appreciate and do high-quality applied research in economics. Emphasizes understanding how the properties of estimators can be found and their implications for applied research. Introduces the programming language Python, which is integrated into the course. Focuses on methods that are most useful in microeconomic analysis, including classical linear regressions, Gauss-Markov theorem and hypothesis testing, endogeneity, instrumental variable estimation and causality analysis, heteroskedasticity and serial correlations, nonlinearity, panel data methods, difference-in-difference, and regression discontinuity. This is the first advanced graduate-level course on econometrics.

Prerequisite(s): ECON 5105 with a minimum grade of C- or ECON 5105 with a minimum grade of C- or ECON 6105 with a minimum grade of C-

ECON 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ECON 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ECON 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ECON 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ECON 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

ECON 7200. Topics in Applied Economics. (4 Hours)

Presents an application of microeconomic and macroeconomic theory, as well as quantitative methods, to a variety of social issues, both domestic and international. May be repeated without limit.

ECON 7240. Workshop in Applied Econometrics. (4 Hours)

Offers an intensive, hands-on application of econometrics to research problems in economics, using current econometric software packages. Both cross-section and time-series techniques are used and applied to different areas of economics, such as global economics, labor economics, urban economics, public finance, policy evaluation, and so on. Students are expected to complete a written applied econometrics project and present the results to the class.

Prerequisite(s): ECON 5140 with a minimum grade of C- or ECON 5140 with a minimum grade of C-

ECON 7250. International Economic Development. (4 Hours)

Covers leading research topics in development economics, with a particular focus on patterns of global inequality and globalization, effects of trade policy on labor market adjustment, gender and development, education and health, long-term effects of institutions, commodity price dynamics, and Dutch disease. Course objectives include exploring the cutting-edge literature emerging on these topics and improving understanding of the most recent empirical methods used in the literature. Offers students an opportunity to learn how to apply econometric techniques to particular research questions while evaluating advantages and disadvantages of using different approaches and to demonstrate understanding of difference-in-differences analysis, instrumental variables, randomized evaluation, regression discontinuity, and structural vector autoregressive models. Students critically assess the limitations of these methods.

ECON 7251. International Finance. (4 Hours)

Introduces students to international finance and equips them with tools and methods to study and analyze international economic issues and problems. Topics include the foreign exchange market, balance of payments, international investment and banking, monetary and fiscal policy in an open economy, economic integration and monetary unification, the international monetary system, and optimum currency areas. Each student is required to write a short paper on a current problem in international finance.

ECON 7266. Economics of Government. (4 Hours)

Presents an overview of the economics of government and the role of public policy. Develops guidelines to determine which economic activities are best performed by government and which are not. Topics include public choice, public goods, externalities, public enterprise, and efficiency and equity effects of alternative tax systems.

Prerequisite(s): ECON 5110 with a minimum grade of C- or ECON 5110 with a minimum grade of C-

ECON 7270. Economics of Law and Regulation. (4 Hours)

Relies on models of welfare economics to analyze the impact of laws, regulation, and deregulation, in terms of both positive and normative aspects. Topics include economic analysis of market failures and government remedies; property, tort, and contract law; and economic and social regulation. Students are encouraged to develop critical skills in analyzing various types of economic policy. Requires knowledge of microeconomics.

ECON 7710. Microeconomic Theory 2. (4 Hours)

Continues ECON 6110, building on its theories. Topics include game theory, economics of information, incentive theory, welfare economics, general equilibrium, and social choice theory.

Prerequisite(s): ECON 6110 with a minimum grade of B- or ECON 6110 with a minimum grade of B-

ECON 7720. Macroeconomic Theory 2. (4 Hours)

Continues ECON 6120. Offers an advanced course in macroeconomic analysis where economic theory and econometric evidence are brought together to explain economic events and changes at the macro level including economic growth, changes in unemployment and inflation rates, and business cycles. Topics include the Solow growth model, overlapping-generations models, research and development models of growth, real-business-cycle theory, Keynesian theories of economic fluctuations, microfoundations, consumption, investment, unemployment, inflation and monetary theory, and budget deficits and fiscal policy.

Prerequisite(s): ECON 6120 with a minimum grade of B- or ECON 6120 with a minimum grade of B-

ECON 7740. Applied Econometrics 2. (4 Hours)

Continues ECON 6140. Extends students' understanding of econometrics beyond the topics covered in the earlier course. Students develop and complete an econometric research project using methods covered. Topics include models with multiple equations, nonlinear regression models, asymptotic theory, maximum likelihood, discrete choice models, limited dependent variables and duration models, panel data, regression models for time-series data, and unit roots and cointegration.

Prerequisite(s): ECON 6140 with a minimum grade of B- or ECON 6140 with a minimum grade of B-

ECON 7751. Development Economics. (4 Hours)

Focuses on contemporary research questions and econometric methods in development economics. Includes a rigorous introduction to core microeconomic issues in economic development, focusing on both key theoretical contributions and empirical applications, to understand why some countries are poor and how markets function differently in poor economies. Examines and utilizes detailed survey data of the world's poor and scientifically evaluates policies and their effectiveness. Requires a solid understanding of how to read and interpret statistics. Topics include poverty and poverty traps, behavioral economics, savings, health, credit, networks, social norms, and the role of the public sector. Covers both seminal and leading contemporary economic research.

Prerequisite(s): ECON 6110 with a minimum grade of B or PPUA 6502 with a minimum grade of B

ECON 7763. Labor Market Analysis. (4 Hours)

Offers a theoretical and methodological survey of the field of neoclassical labor market analysis at the PhD level. Topics include the supply of labor from the perspective of the individual and the family, human capital, the demand for labor, market equilibrium, and the determination and distribution of wages and earnings. Other topics that may be included are unions, unemployment, labor mobility, alternative models of labor markets, labor productivity and growth, and income distribution and poverty.

Prerequisite(s): ECON 7710 with a minimum grade of C- ; ECON 7740 (may be taken concurrently) with a minimum grade of C-

ECON 7764. Topics in Labor Economics. (4 Hours)

Covers the theoretical and empirical issues surrounding current topics in the area of labor economics. Topics may vary each time the course is offered and may include discrimination, efficiency wage theory, labor legislation, life cycle analysis, and the use of microdata (panel studies, search behavior, intergenerational earnings mobility, and employment and training policies).

Prerequisite(s): ECON 7763 with a minimum grade of C-

ECON 7771. Framework of Industrial Organization. (4 Hours)

Sets out the analytical framework of industrial organization economics—the basis and method for evaluating the performance of markets and firms and for prescribing policies for improvement. Topics include size and structure of firms, market concentration, pricing in oligopoly and other markets, entry and entry deterrence strategies, and advertising and product strategies. Each of these topics is examined using a range of tools including microeconomic theory, game theory, and statistical analysis.

Prerequisite(s): ECON 7710 with a minimum grade of B- ; ECON 7740 with a minimum grade of B-

ECON 7772. Public Policy Toward Business. (4 Hours)

Covers the three major facets of public policy toward business: antitrust, regulation, and privatization. Demonstrates how economic theory and evidence are brought to bear on practical questions of market failure and policies to remedy such failure. Topics include mergers, collusion and facilitating practices, predatory conduct, cost of service regulation, price caps and incentive regulation, deregulation, and public enterprise vs. privatization. Policies are analyzed for their rationale, techniques for implementation, and effects as measure in the context of actual experience in the United States and other countries.

Prerequisite(s): ECON 7771 with a minimum grade of C-

ECON 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ECON 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May not be substituted for requirements leading to a BA or BS in economics. May be repeated without limit.

ECON 7990. Thesis. (1-4 Hours)

Provides thesis supervision by members of the department. May be repeated without limit.

ECON 8550. Internship In Economics. (1-4 Hours)

Comprises academic credit for internship work in economics. May be repeated without limit.

ECON 8960. Exam Preparation—Doctoral. (0 Hours)

Provides students with the opportunity to prepare for the qualifying exam during the semester in which they are registered for this course. Registration in this course constitutes full-time status. May be repeated three times.

ECON 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

ECON 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

ECON 9986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

ECON 9990. Dissertation Term 1. (0 Hours)

First of two consecutive semesters to meet the residency requirement of the doctoral program.

Prerequisite(s): ECON 9000 with a minimum grade of S

ECON 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): ECON 9990 with a minimum grade of S

ECON 9996. Dissertation Continuation. (0 Hours)

Requires registration for those students who have completed the doctoral program's residency requirement, but who have not yet completed the dissertation.

Prerequisite(s): ECON 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Economics - CPS (ECN)

Courses

ECN 1100. Principles of Microeconomics. (3 Hours)

Focuses on the development of the basic theory of supply and demand and market prices, as well as competition and monopoly and income distribution. Applies economic principles to selected problems such as poverty, pollution, and international trade.

ECN 1200. Principles of Macroeconomics. (3 Hours)

Introduces macroeconomics, the study of the economy as a whole. Macroeconomics applies the basic principles of economics to whole economic systems and the relationships among sectors of the economy. Topics include unemployment, inflation, national income and employment theory, government expenditures and taxation, the role of the banking system, and monetary and fiscal policies. Emphasizes the development of conceptual tools to analyze the economic problems facing modern society.

Attribute(s): NUpath Societies/Institutions

ECN 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ECN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ECN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ECN 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Economics - CPS Specialty (ECNM)**Courses****ECNM 1115. Principles of Macroeconomics. (4 Hours)**

Introduces macroeconomic analysis. Topics include the flow of national income, economic growth and fluctuation, the role of money and banking, and monetary and fiscal policies. Emphasizes the development of conceptual tools to analyze the economic problems facing modern society.

ECNM 1116. Principles of Microeconomics. (4 Hours)

Focuses on development of basic theory of demand, supply, and market price. Explores applications to selected microeconomic problems, such as basic monopoly and competition, and other issues that relate to the role of the pricing system in resource allocation and income distribution.

Education (EDUC)**Courses****EDUC 1111. Education in the Community. (4 Hours)**

Considers the unique contributions of community, family, and public schools to education in the United States today. Uses classroom and field-based activities to provide historical and social contexts of public education. Encourages students to reflect on their own prior education, to learn from persons active in the education community, and to consider their future roles as educators.

Attribute(s): NUpath Difference/Diversity, NUpath Integration Experience, NUpath Societies/Institutions

EDUC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EDUC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EDUC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EDUC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EDUC 5503. Culture, Equity, Power, and Influence. (4 Hours)

Examines the broad construct of culture and explores how these characteristics impact personal identity, access to education, social mobility, power, and influence. Explores educational institutions as cultural systems and questions concepts at the heart of personal and professional interactions in teaching, learning, curriculum, and administration. Expects students to participate in reflective discussion and begin to explore their own feelings and experience with culture; to develop competencies spanning cultural and international boundaries; to prepare to be more effective in diverse settings; and to influence and advocate for systemic change.

EDUC 5504. Child and Adolescent Development, Learning, and Teaching. (4 Hours)

Surveys contemporary educational theory of human learning and accomplished teaching. Offers students an opportunity to develop a working understanding of teaching and learning as they occur in different types of schools and community settings. Investigates how children and adolescents learn, acquire knowledge, and make sense of their experience, as well as theories of teaching or pedagogy—how best to teach for understanding and learning achievement.

Prerequisite(s): EDUC 1111 with a minimum grade of D-

EDUC 5570. Inclusion, Equity, and Diversity. (4 Hours)

Addresses the range of learning needs of special education legislation, as well as the politics of who is identified and why. Examines students' own attitudes about teaching children with learning disabilities. Offers students an opportunity to develop skills and strategies for identifying and teaching learning-disabled children. Requires graduate students to demonstrate advanced levels of study and research.

Prerequisite(s): EDUC 1111 with a minimum grade of D-

Education - CPS (EDU)

Courses

EDU 5051. Culture, Equity, Power, and Influence. (3 Hours)

Examines the broad construct of culture and explores how these characteristics impact personal identity, access to education, social mobility, power, and influence. Explores educational institutions as cultural systems and questions concepts at the heart of personal and professional interactions in teaching, learning, curriculum, and administration. Expects students to participate in reflective discussion and begin the personal exploration of their own feelings and experience with culture; to develop competencies spanning cultural and international boundaries; to prepare to be more effective in diverse settings; and to influence and advocate for systemic change.

EDU 5086. Foundations of Literacy Development and Instruction. (3 Hours)

Introduces fundamental theoretical and practical instructional principles of developing reading, writing, and language arts, grounded in research on cognitive development and language acquisition, and informed by political and sociocultural perspectives. An integrated language model suggests that reading, writing, and thinking be viewed as interrelated, critical processes for exploring and responding to the world. Offers students an opportunity to acquire foundational knowledge of materials, instructional strategies, and assessment tools that support developing literacy and engaging learners.

EDU 5101. Critical Issues in Education: Past and Present. (2 Hours)

Examines the historical, political, economic, and societal roles of schools while interrogating educational policies, inequities, and controversies that impact K-12 education, as well as the classroom and community opportunities for teachers to effect change. Educational experiences and outcomes in the United States are shaped by existing systems and institutional structures.

EDU 5102. Reflection, Community Engagement, and Agency in Education. (2 Hours)

Introduces the facets of reflective practice beginning with a dispositional self-assessment to ground an exploration of culturally responsive teaching, culturally and linguistically sustaining practices, and to cultivate an activist mindset. Includes a community-based field component to explore funds of knowledge within specific community contexts to in order to support the development of an asset view of students and families and empower an understanding of dynamic experiential teaching and learning.

EDU 5104. Child & Adolescent Development, Learning, and Teaching. (3 Hours)

Surveys contemporary educational theory of human learning and accomplished teaching. Offers students an opportunity to develop a working understanding of teaching and learning as they occur in different types of schools and community settings. Investigates how children and adolescents learn, acquire knowledge, and make sense of their experience, as well as theories of teaching or pedagogy—how best to teach for understanding and learning achievement.

EDU 5107. Inclusion, Equity, and Diversity. (3 Hours)

Addresses the range of learning needs of special education legislation, as well as the politics of who is identified and why. Examines students' own attitudes about teaching children with learning disabilities. Offers students an opportunity to develop skills and strategies for identifying and teaching learning-disabled children. Requires graduate students to demonstrate advanced levels of study and research.

EDU 5978. Independent Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic.

EDU 6001. Experiential Learning Theory and Practice. (4 Hours)

Offers experiential educators an opportunity to obtain the knowledge, skills, and competencies needed to design and facilitate engaging and meaningful learning experiences. Compares different theoretical foundations for how people learn through experience and how these theories are put into practice using different approaches for teaching through experiences including active learning, inquiry-based learning, service-learning, place-based learning, and project-based learning. Discusses the principles of deeper learning and how to support the development of deeper learning competencies through experiential learning.

EDU 6002. Culturally Responsive Experiential Teaching and Learning. (4 Hours)

Offers experiential educators an opportunity to obtain the knowledge, skills, and competencies needed to design and facilitate engaging and meaningful student-centered learning experiences that meet the needs of a diverse range of learners. Explores the constructs of culture, equity, power, and positionality and how educators facilitate the learning of others, it is important to understand who we are and how our own learning experiences shape our practices and perspectives. Also explores how to facilitate social emotional growth, agency, and self-authorship in students through culturally responsive experiential learning.

EDU 6003. Applied Research in Experiential Teaching and Learning. (4 Hours)

Offers experiential educators an opportunity to obtain the knowledge, skills, and competencies needed to collect, analyze, and use data as evidence to inform best practices in experiential teaching and learning. Explores the limitations of current assessment and teaching practices, after which learners apply Mind, Brain, and Education (MBE) science, the Understanding by Design (UbD) framework to develop an Experiential Learning (EXL) plan for deeper learning at the classroom, school, or district level. Learners reflect on how the design thinking process can be used to improve the EXL plan through the collection of a mix of multimodal, formative, and summative data collected from a variety of stakeholders. Learners share their EXL plan with relevant stakeholders and incorporate feedback.

EDU 6004. Leading Experiential Teaching and Learning. (4 Hours)

Offers experiential educators an opportunity to obtain the knowledge, skills, and competencies needed to engage in leadership practices to negotiate challenges and opportunities associated with experiential teaching and learning by applying the different leadership frameworks. Explores how to lead successful professional development experiences and how to establish and support effective professional learning communities. Offers students an opportunity to learn how to lead efforts to engage with, leverage, and contribute to different networks dedicated to supporting experiential teaching and learning.

EDU 6050. Education as an Advanced Field of Study. (5 Hours)

Focuses on the critical evaluation, interpretation, and uses of published research in education as a field of study. Offers students an opportunity to explore the relationship between theory and practice and the changing nature of knowledge, to examine peer-reviewed research articles, to learn the "rules" and methods through which these scholarly works are developed, and to begin to apply research findings to real problems and issues in education. As part of this course, students use an ePortfolio as they begin to document their development as scholars, practitioners, and leaders in the field of education.

EDU 6051. Introduction to Social Justice in Educational Settings. (4 Hours)

Introduces the concepts of social justice, especially as they relate to educational access. Explores educational institutions as systems and questions how individuals can be agents of change in teaching, learning, curriculum, and administration. Offers students an opportunity to engage in reflective discussion and begin to explore their own feelings and experiences with social justice and development of cultural intelligence to prepare them to influence and advocate for systemic change.

EDU 6064. Curriculum and Assessment. (4 Hours)

Presents how curriculum, student performance, and assessment are currently practiced in a variety of school settings with a view toward changing current practice to meet future needs. Offers students an opportunity to learn how to become active players in creating or improving curriculum at the classroom level, the school, or within a whole school district and to be able to link curriculum and assessment directly to student achievement.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6086. Foundations of Literacy Development and Instruction. (4 Hours)

Introduces fundamental theoretical and practical instructional principles of developing reading, writing, and language arts, grounded in research on cognitive development and language acquisition, and informed by political and sociocultural perspectives. An integrated language model suggests that reading, writing, and thinking be viewed as interrelated, critical processes for exploring and responding to the world. Offers students an opportunity to acquire foundational knowledge of materials, instructional strategies, and assessment tools that support developing literacy and engaging learners.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6101. Critical Issues in Education: Past and Present. (2 Hours)

Examines the historical, political, economic, and societal roles of schools while interrogating educational policies, inequities, and controversies that impact K-12 education, as well as the classroom and community opportunities for teachers to effect change. Educational experiences and outcomes in the United States are shaped by existing systems and institutional structures.

EDU 6102. Reflection, Community Engagement, and Agency in Education. (2 Hours)

Introduces the facets of reflective practice beginning with a dispositional self-assessment to ground an exploration of culturally responsive teaching, culturally and linguistically sustaining practices, and to cultivate an activist mindset. Includes a community-based field component to explore funds of knowledge within specific community contexts to in order to support the development of an asset view of students and families and empower an understanding of dynamic experiential teaching and learning.

EDU 6104. Child and Adolescent Development, Learning, and Teaching. (4 Hours)

Surveys contemporary educational theory of human learning and accomplished teaching. Offers students an opportunity to develop a working understanding of teaching and learning as they occur in different types of schools and community settings. Investigates how children and adolescents learn, acquire knowledge, and make sense of their experience, as well as theories of teaching or pedagogy—how best to teach for understanding and learning achievement.

EDU 6107. Inclusion, Equity, and Diversity. (4 Hours)

Addresses the range of learning needs of special education legislation, as well as the politics of who is identified and why. Examines students' own attitudes about teaching children with learning disabilities. Offers students an opportunity to develop skills and strategies for identifying and teaching learning-disabled children. Requires graduate students to demonstrate advanced levels of study and research.

EDU 6122. Teaching the Language Arts. (4 Hours)

Offers secondary teachers an opportunity to develop competence and confidence working with diverse students, many of whom appear to read and write only when required to do so. Considers the design and practices of traditional English curricula at the middle and high school level and explores alternative syllabi and unit design as strategies for actively engaging students in the pursuit of meaning in reading and writing as they enhance their skills. Explores the role of research as well as interdisciplinary and collaborative approaches as they relate to curricula in English and the humanities. Requires graduate students to demonstrate advanced levels of study and research.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6124. Teaching History and the Social Sciences. (4 Hours)

Explores the intersecting disciplines of history and social studies, including geography, sociology, economics, political science, and history. Emphasizes the interrelatedness of disciplines and the emerging role of middle and high school students as citizens in their school, community, nation, and the world. Examines the challenge of covering all the material deemed essential by state and district curriculum frameworks, while helping one's students become problem solvers and critical thinkers in their analysis of social problems. Requires graduate students to demonstrate advanced levels of study and research.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6127. Teaching Science. (4 Hours)

Examines how the evolving nature of science—ideas, theories, concepts, and controversies—relates to diverse middle and high school students and how teachers can use experience-based, problem-centered approaches that engage the range of student learners and help them meet local and state learning goals. Identifies research possibilities within school contexts, both inside and outside the laboratory. Explores curricular frameworks and culturally relevant content to enable teachers to create a learning environment that supports inquiry and problem solving. Analyzes examples of excellent curriculum products, programs, assessments, and technology tools. Offers students an opportunity to develop a curriculum unit including assessment philosophy and practices. Requires graduate students to demonstrate advanced levels of study and research.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6129. Teaching Mathematics. (4 Hours)

Explores mathematics teaching methods that are research based, experienced based, and grounded in the contemporary theoretical frameworks influencing mathematics education. Emphasizes issues related to teaching math in an urban school, problem solving, communication, connections, and integrating technology, as well as issues of access and equity, assessment, and cross-content teaching strategies. Requires graduate students to demonstrate advanced levels of study and research.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6154. Inquiry in the Sciences and Humanities. (4 Hours)

Explores methods for enabling children in grades 1–6 to experience the dynamics of scientific investigation as they develop their abilities to make thoughtful observation and make meaning of the results of those observations. Examines methods and materials, pedagogies, and assessment strategies that foster integrated learning across the sciences, social sciences, and humanities.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6155. Inquiry in Mathematics. (4 Hours)

Explores methods for teaching mathematics in grades 1–6 that are research and experience based and grounded in the contemporary theoretical frameworks influencing mathematics education. Designed to increase students' knowledge of mathematics as it simultaneously explores the intrinsic nature of math and methods for relating it to children. Emphasizes approaches to teaching mathematics that engage diverse populations of children.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6162. Language, Culture, and Literacy in Middle and High Schools. (4 Hours)

Examines the interrelationships among language, culture, and identity and explores the implications of those relationships for effective teaching in middle schools and high schools. Considers issues of linguistic diversity within their broad sociopolitical and philosophical contexts, emphasizing how language discrimination functions within the context of other forms of systematic oppression in our society. Explores the processes of identity development in the context of schooling and literacy performance. Also examines methods of helping linguistically diverse students to develop their oral and written language abilities within a learning environment that draws upon and celebrates their native language abilities and traditions. Requires graduate students to demonstrate advanced levels of study and research.

Prerequisite(s): EDU 6104 (may be taken concurrently) with a minimum grade of C- ; EDU 6107 (may be taken concurrently) with a minimum grade of C-

EDU 6183. Collaborative Strategies for Effective Classroom Management. (3 Hours)

Explores best practices in classroom organization and behavior management. Topics range from developing student-centered classrooms, routines, and space to strategies for managing transitions, classroom dynamics, individual behaviors, and positive behavioral support systems. Offers participants an opportunity to think critically and plan for a collaborative and productive classroom learning community.

EDU 6184. Interdisciplinary Foundations. (2 Hours)

Provides orientation through three areas of focus: reflection and self-assessment to inform the course selection process; exposure to a broad vision of the contemporary workplace and the competencies required for career success as individuals, members of organizations, and as global citizens; and development of an individual Professional Learning Plan (PLP). Includes a variety of academic and career-related support systems as students embark on a journey that builds on past experiences while providing opportunities for reflection as they develop goals for the future.

EDU 6185. English-Language Learners in the General Education Classroom. (4 Hours)

Designed to introduce K-12 general educators to skills that enable them to work more effectively with English language learners in their classrooms. Explores the history of bilingual education in the United States and other programs used to teach English language learners. Offers participants the opportunity to develop sheltered English instructional strategies to scaffold lessons that can be used in any classroom setting where English language learners are present. Offers participants an opportunity to plan Sheltered English Immersion (SEI) lessons in a Sheltered Instructional Observation Protocol (SIOP) template using the World-Class Instructional Development and Design English Language Development (WIDA ELD) Standards. This course meets DESE requirements for the Sheltered English Immersion (SEI) endorsement.

EDU 6202. Faculty, Curriculum, and Academic Community. (4 Hours)

Examines collaborative approaches to developing and improving both curriculum and the delivery of that curriculum. Faculty and curriculum are not only the core of an institution of higher education, they are also what make institutions of higher education unique from any other type of organization. Topics include academic structure and governance within the context of the wider university community in not-for profit and for-profit institutions. Examines faculty unions, academic freedom, tenure, and the increasing role of adjuncts. Assesses how administration, faculty, and staff interact in an integrated, collegial environment.

Prerequisite(s): EDU 6051 (may be taken concurrently) with a minimum grade of C- or EDU 6204 with a minimum grade of C-

EDU 6204. The Foundations of Higher Education. (5 Hours)

Offers students an opportunity to obtain a foundation to understand the structure, governance, and operations of institutions of higher education in the United States. Students examine peer-reviewed articles, study the rules and methods through which scholarly works are developed, and begin to apply research findings to real problems and issues in higher education. Through critical evaluation, interpretation, and uses of published research, assesses higher education's complex organizational structure. Examines how these constructs are subject to today's environmental, financial, technological, and competitive pressures; considers how higher education may implement innovation; and analyzes strategies for adaption. Offers students an opportunity to learn to use an ePortfolio to document their development as scholar-practitioners.

EDU 6205. The Demographics of the New College Student. (4 Hours)

Offers students an opportunity to understand the changing demographics of students who matriculate at higher education institutions, such as first-generation college students, veterans, international students, and adult learners. Explores strategies and theories for college student access and success.

Prerequisite(s): EDU 6051 with a minimum grade of C-

EDU 6216. The College Student Experience. (4 Hours)

Explores how various student development theories can be leveraged to positively impact learners' social and academic success in higher education.

Prerequisite(s): EDU 6205 (may be taken concurrently) with a minimum grade of C- or EDU 6447 (may be taken concurrently) with a minimum grade of C-

EDU 6217. The History of Colleges and Universities. (4 Hours)

Explores the historical origins of higher education in the United States, from the colonial era to the present. Focuses on an array of topics including liberal arts, graduate education, community colleges, historically black colleges and universities, Hispanic-serving institutions, study abroad, international students, online education, religious-affiliated institutions, and professional higher education associations.

EDU 6218. Money Matters: Financial Management in Higher Education. (4 Hours)

Offers students an opportunity to develop the practical skills and competencies necessary to build and manage budgets, advocate for and allocate both human/financial resources, and effectively articulate how strategic initiatives translate into budget requests. Linking theory to practice, successful students develop core financial management competencies while also being exposed to how colleges/universities approach critical fiduciary responsibilities. Developing both a conceptual and practical understanding of the financial management strategies employed within today's changing landscape of higher education is critical to professional success.

Prerequisite(s): EDU 6204 with a minimum grade of C-

EDU 6219. Higher Education Law and Policy. (4 Hours)

Offers an overview of the major aspects of the legal and political environments that impact institutions of higher education, ranging from access, affordability, readiness, and completion to gainful employment. Offers students an opportunity to learn multiple approaches for addressing these requirements and understanding and influencing policy development at all levels, both internal and external.

Prerequisite(s): EDU 6204 with a minimum grade of C- ; EDU 6217 with a minimum grade of C-

EDU 6222. Contemporary Issues Capstone. (4 Hours)

Offers students an opportunity to reflect on their development as scholars, practitioners, and leaders in the field of higher education. Students apply knowledge developed throughout the program to various contemporary issues in higher education. Requires students to demonstrate mastery of content through a significant project and present their final ePortfolios to showcase their work.

Prerequisite(s): EDU 6204 with a minimum grade of C- ; EDU 6217 with a minimum grade of C- ; EDU 6051 with a minimum grade of C- ; EDU 6205 with a minimum grade of C- ; EDU 6218 (may be taken concurrently) with a minimum grade of C- ; EDU 6234 (may be taken concurrently) with a minimum grade of C- ; EDU 6219 (may be taken concurrently) with a minimum grade of C-

EDU 6224. Strategic Leadership in Enrollment Management. (4 Hours)

Examines the multifold strategies in student enrollment including predictive analytics models, branding and marketing, access and affordability, and communication with internal and external constituents. Taught from a systems-thinking perspective.

Prerequisite(s): EDU 6050 with a minimum grade of C- or EDU 6204 with a minimum grade of C-

EDU 6225. Capstone. (4 Hours)

Offers students an opportunity to reflect on concentration-specific work, considering their development as scholars, practitioners, and leaders in the field of education. Requires students to demonstrate mastery of content through practicum or a significant project adapted to the professional requirements of each concentration. After a thorough process of feedback and revision, students are required to present their final ePortfolios in a public forum to showcase their work and demonstrate achievement of program competencies.

EDU 6227. The New Supervisor. (2 Hours)

Explores leadership, group dynamics, change management, and staff motivation within the field of higher education. Assuming a supervisory role over an established staff creates challenges and opportunities. Students draw from their professional contexts and engage in the process of developing a plan of action for assuming leadership in a new environment.

EDU 6228. Supervising Through Change. (2 Hours)

Explores topics such as the role of the supervisor during change, change management theories, communication strategies, leadership, and management techniques in the field of higher education. Leading a team through a change in organizational structure, philosophy, or shift in duties creates unique challenges for supervisors. Offers students an opportunity to navigate the challenge of motivating their staff through an identified change by creating an action plan.

EDU 6229. Challenges in Supervision. (2 Hours)

Explores topics around motivating difficult employees, communication techniques, management techniques, action plans, and power dynamics in the field of higher education. Offers students an opportunity to navigate the challenge of working with an underperforming employee.

EDU 6231. Crisis Management. (2 Hours)

Offers students an opportunity to identify a potential crisis relevant to their workplace or engage in a simulated crisis experience. Crisis can occur in any job function in higher education administration. Students develop and implement a tabletop exercise to stress-test their crisis management plan.

EDU 6234. Program Evaluation, Assessment, and Accreditation in Higher Education. (4 Hours)

Examines the purpose and goals of program evaluation. Offers students an opportunity to explore the different methodologies of program evaluation and the application of results for continuous improvement at their workplace. Reviews various assessment tools, such as NSSE surveys and campus climate surveys. Also explores the role and purpose of accreditation associations and the impact on colleges and universities.

EDU 6300. Introduction to Language and Linguistics. (4 Hours)

Explores the foundations of language and linguistics. Discusses theories of the origins of language and compares reading and writing systems of English and other languages. Offers students an opportunity to learn phonology (how sounds are produced), how English works in patterns (linguistics and phonetics), how meaning is conveyed (semantics), and how languages are used (pragmatics). Seeks to provide a foundation for courses related to teaching English as a second language.

EDU 6310. Literacy Development and the Academic Domains. (4 Hours)

Offers students an opportunity to learn how to adapt their instruction to the language needs of the students in their classes. Reading, writing, speaking, and listening are the keys to academic success for students for whom English is not the first language. It is critical to understand the research about early literacy development, vocabulary development, process writing, peer editing, comprehension and metacognition, content reading, and literacy assessment. Students read the research, discuss the theory behind the research findings, and have an opportunity to learn how to apply those findings to the unique content and skill challenges they will face as classroom teachers.

EDU 6319. How People Learn. (4 Hours)

Introduces the research and science of learning, integrating theory with case studies about learning principles and high-impact practices. Learning takes place in all stages of life: teenagers who go directly from high school to college, adults who "stop out" and return to school after years of work or family commitments, and even retirees who pursue learning made possible by expanded leisure time. Some education takes place formally within higher education; other opportunities are informal, sponsored by organizations such as museums and libraries or available for free online. Focuses on learning in online and mobile environments.

Prerequisite(s): EDU 6050 (may be taken concurrently) with a minimum grade of C- or EDU 6204 with a minimum grade of C-

EDU 6321. Models for Learning Design. (4 Hours)

Offers an orientation to learning design as art and science. Design has the capacity to support or detract from learning and, therefore, the design process itself needs to be intentional and evidence driven. Participants experiment with putting learning principles and high-impact practices into action within online and mobile learning scenarios. Investigates the many settings in which learning design takes place and considers the interplay between context and design methodology.

Prerequisite(s): EDU 6051 (may be taken concurrently) with a minimum grade of C- ; EDU 6319 with a minimum grade of C-

EDU 6323. Digital Learning Tools and Technologies for LXD. (4 Hours)

Investigates the role, both current and emerging, that digital tools and technology play in transforming the learning experience. Introduces methodology to align digital tools and technology with outcomes, assessments, and instructional strategies. Emphasizes selecting tools and technologies in accordance with learning science research on instructional and learning strategies, multimedia learning, and universal design principles. Evaluates outcomes—learning, engagement, and motivation—of learning experience designs (LXD) using data. Offers students an opportunity to experiment with a suite of digital tools and technologies and to develop an online, media-rich learning environment.

Prerequisite(s): EDU 6051 with a minimum grade of C-

EDU 6324. Competencies, Assessment, and Learning Analytics. (4 Hours)

Analyzes the intended outcomes of education, how we will know if we've made a difference, and what we can do to improve learning along the way. These hard but important questions are at the heart of learning design. The act of assessment verifies that learning has taken place, but it also provides opportunities for refining plans and improving student learning. Some strategies are easily implemented, while others require advanced expertise. Covers recent advances in technology that make it possible to gather a wealth of data on how people interact within the environments in which they learn, recording each click of the mouse. In education, the use of this data to improve learning is referred to as "learning analytics."

Prerequisite(s): EDU 6051 (may be taken concurrently) with a minimum grade of C-

EDU 6328. Policy and Leadership. (4 Hours)

Designed to engage students in systems thinking, specifically about how education policies at the federal and state levels impact teaching and learning in elementary and secondary schools. Studies the fundamentals of how policy is created and implemented and analyzes the ways in which competing visions of the purpose of public education frame policy debates and outcomes. Focuses on a variety of contemporary policy initiatives. Offers students an opportunity to evaluate the effectiveness of specific policies that relate closely to their professional roles and to seek to identify and practice the skills educators need in order to assume leadership roles in directly and indirectly influencing policy.

Prerequisite(s): EDU 6050 with a minimum grade of C-

EDU 6329. Connecting Theory and Practice. (4 Hours)

Involves participants in ePortfolio-based reflection regarding professional goals, progress toward program- and concentration-level competencies, and opportunities for connecting theory and practice. Investigates the "integrative knowledge" approach to evidence-based learning, reflection, and professional identity development. With input and feedback from peers, faculty, and the student's professional environment, participants then have an opportunity to develop a plan for experiential learning. The plan describes a three-to-five-month workplace-based, scholar-practitioner experience that is responsive to the needs of the employer, yet also steeped in the contemporary issues, science, and theory of learning design.

Prerequisite(s): EDU 6050 with a minimum grade of C- or EDU 6204 with a minimum grade of C-

EDU 6330. Digital Media Literacy. (4 Hours)

Addresses how K–12 educators learn and use digital media literacy to prepare students for the world of tomorrow. Introduces students to innovative teaching and assessment practices as well as theoretical and philosophical orientations around participatory culture and literacies. Examines the interrelationships between cultural competencies, traditional literacy, research skills, technological skills, and critical thinking skills. Explores the role of ethics, authentic assessments of student learning, and differentiation of instruction in K–12 contexts. Requires graduate students to demonstrate advanced levels of study, application, and research.

Prerequisite(s): EDU 6050 (may be taken concurrently) with a minimum grade of C-

EDU 6331. E-Learning Design as a Collaborative Profession. (4 Hours)

Explores the process of working with others to identify strategic directions about an institution's vision for the future, investment of resources, and distinctiveness; to benefit from multiple perspectives and sets of expertise, such as educators, technologists, and institutional researchers; and to respond constructively to conflicting visions and interests. Online and mobile learning is a complex venture. At the program level, key players collaborate on the development of curricula that often need to be vetted at many levels of the institution. E-learning designers often play a critical role in the project management of program and course development. Offers students an opportunity to consider their individual strengths and growth areas as collaborators.

Prerequisite(s): EDU 6050 with a minimum grade of C-

EDU 6332. Open Learning. (4 Hours)

Investigates the history, philosophy, and theoretical perspectives of open learning. While face-to-face classrooms have physical limits on how many people can attend, millions of people can access the same materials at the same time using online and mobile environments. Early innovators on the Web proclaimed that "information wants to be free." This perspective is the heart and soul of open learning, whose mission often includes global and affordable access to education. Analyzes whether an open approach is appropriate for the learning scenario, the strategy for sustainability, if the learning experience is equally viable across cultural and economic demographics. Takes a case-study approach that investigates and critically analyzes open learning exemplars. Expects students to design and develop an open learning experience.

Prerequisite(s): EDU 6050 with a minimum grade of C- or EDU 6204 with a minimum grade of C-

EDU 6334. Foundations of Learning Experience Design. (4 Hours)

Designed to orient students to the learning design profession and introduces the foundational elements of learning experience design. Emphasizes core theories, design frameworks, and delivery methodologies. Offers students an opportunity to practice introductory design-related skills.

Prerequisite(s): EDU 6050 (may be taken concurrently) with a minimum grade of C- ; EDU 6319 (may be taken concurrently) with a minimum grade of C-

EDU 6335. Advanced Practices in Learning Experience Design. (4 Hours)

Guides students through an entire learning design planning process. Includes an initial analysis of needs; the design of aligned objectives, learning strategies, and assessments; and resource development, delivery methods, implementation, and evaluation planning. Emphasizes creation of authentic learning-based solutions to identify problems of practice using design models that align with scope, content, learning context, and learner.

Prerequisite(s): EDU 6334 with a minimum grade of C-

EDU 6336. Data Literacy for Data-Driven Decision Making. (4 Hours)

Explores the role that data plays in decision making. Emphasizes the use of data to determine needs, unpack performance data, and interpret course or program performance measures. Highlights data exploration and analysis methods that support data visualization storytelling. Examines ethical and cultural implications around data use.

EDU 6338. Learning Experience Design Studio. (4 Hours)

Offers students a loosely-structured design space for the independent creation of an authentic learning experience or product (e.g., course, workshop, webinar, app, website), guided by professional learning designers. Emphasizes individual design decision-making and creative risk-taking opportunities throughout the learning design process, while also providing collaborative opportunities for critiquing, inspiring, and uplifting peers through the successes and challenges indicative of the learning design field.

Prerequisite(s): EDU 6335 with a minimum grade of C-

EDU 6343. Predictive Modeling for Learning Analytics. (4 Hours)

Offers students an opportunity to learn how to develop models to predict categorical and continuous outcomes, using such techniques as neural networks, decision trees, logistic regression, support vector machines, and Bayesian network models. Reviews expert options for each modeling node in detail and advises when and how to use each model. A hands-on final project offers students experience implementing predictive models.

Prerequisite(s): EDU 6182 with a minimum grade of C- ; EDU 6341 with a minimum grade of C-

EDU 6410. Instructional Leadership. (4 Hours)

Seeks to develop classroom leaders, department leaders, curriculum coordinators, and instructional coaches who focus their efforts on implementing practices that positively impact student learning. Explores how to design learning experiences that incorporate different combinations of innovative pedagogical approaches. Offers students an opportunity to develop the competencies instructional leaders need to shape a vision of academic success for all students; cultivate leadership capacity in others; and manage people, data, and processes to develop the skills, knowledge, networks, and experiences to design systems for greater equity.

EDU 6415. Law, Policy, and the Ecosystem of Education. (4 Hours)

Situates current local, state, and federal educational laws and policies in a larger social, political, economic, and historical context. Recognizes and addresses multiple structures across the education ecosystem that perpetuate inequalities in access to high-quality learning and instruction for all. Debates and recommends best practices to empower and protect teachers, students, and families from current laws, policies, and regulations.

EDU 6425. Special Education: Role of Special Educators in an Inclusive School. (4 Hours)

Designed to enable teachers to plan for the broad and varied range of student learning and behavior and build a foundation for inclusive schools. Offers students an opportunity to understand the policies and regulations in special education; the role of the special educator in writing and implementing individual education plans (IEPs); the responsibility of special educators to create partnerships with families; and the role of the special educator in working within the school on curriculum across disciplines, service delivery for students with IEPs, and co-teaching models. Explores high- and low-tech assistive technology options and its integration into practice and the facilitation of principles of universal design. Using a case-study approach offers students an opportunity to analyze and problem-solve scenarios derived from field experience.

EDU 6426. Developmental Language, Literacy, and Writing: Assessment and Instruction. (4 Hours)

Introduces fundamental theoretical instructional principles of developing oral and written language, reading, writing, and language arts skills. Offers students an opportunity to learn about materials, instructional strategies, classroom-based assessment for literacy development and instruction, and empowering both elementary and secondary readers. Links a focus on early literacy acquisition with clinical assessment and questions regarding English-language learners and students with mild-to-moderate learning disabilities and variations. Studies a multisensory, tiered evidenced-based reading program with a strong phonological foundation, including how specific dyslexia scales are used for early identification and monitoring.

EDU 6429. Variations in Child and Adolescent Development. (4 Hours)

Reviews the biological, neuropsychological, psychosocial, cognitive, behavioral, and ecological theories of development. Examines variations and progress in the developmental domains and the intersection among these domains in development and learning in terms of disability and language differences within these theoretical perspectives. The impact of culture on development is infused throughout. Introduces assessments and interventions in development and learning.

EDU 6438. Teachers as Curriculum Leaders. (4 Hours)

Explores how to translate curriculum development theory and vision into advocacy and action. Offers students an opportunity to develop a perspective and skills that allow them to be effective teacher-leaders in modifying curriculum across content areas, including math, science, history, and English-language arts. Seeks to prepare students to lead initiatives and projects, including those at the classroom, school, and district level. Examines state curriculum frameworks and other standards alignment and evaluation.

EDU 6465. Critical and Creative Thinking. (4 Hours)

Explores critical and creative thinking, particularly the ways in which the two types of thinking operate together. Focuses on K-12 classrooms and how teachers can bring critical and creative thinking to the center of their curriculum and instruction. Approaches critical and creative thinking as skills that can improve through practice but remains mindful of the relationship between thinking skills and specific academic content. Offers participants an opportunity to examine theories and research involving critical thinking and creativity, engage in activities designed to help them become more familiar with their own ways of thinking, and design strategies for teaching critical thinking and creativity in their own classrooms.

Prerequisite(s): EDU 6050 (may be taken concurrently) with a minimum grade of C-

EDU 6513. Sheltered English Immersion in the General Classroom. (4 Hours)

Seeks to prepare Massachusetts teachers across pre-K–12 classroom settings to effectively teach and assess English-language learners, ensuring students' abilities to access grade-level curriculum, achieve academic success, and build upon and contribute their cultural strengths and skills to their learning settings. Uses evidence-based principles to offer participants an opportunity to plan Sheltered English Immersion lessons in a Sheltered Instruction Observation Protocol template using the WIDA English Language Development Standards. This course meets DESE requirements for the SEI endorsement as a stand-alone course. Requires fieldwork in an appropriate pre-K–12 setting.

EDU 6517. Foundations of Teaching English as a Second Language: Research and Practice. (4 Hours)

Reviews the basics of language acquisition theory and explores how to translate those theories into practical strategies for teaching content in culturally sensitive ways using the Sheltered Instruction Observation Protocol (SIOP), World-Class Instructional Design and Assessment (WIDA) standards, and the Common Core. Addresses basic strategies for incorporating academic vocabulary into content instruction and assessment of language proficiency. Every educator shares the responsibility for ensuring that students who are in the process of learning English have every opportunity to increase their understanding of the content. This requires understanding the cultural context of each student's background and the level of their progress in English-language acquisition. Joins theory to practice by introducing students to current instructional research and practice and includes fieldwork.

EDU 6528. Adaptive Learning/Behavior Management Strategies: Consultation and Collaboration. (4 Hours)

Seeks to extend participants' competence in theory, research, and practice pertaining to creating a sense of classroom community, family engagement, and school culture. Examines behavior management approaches and offers participants an opportunity to develop practical interventions and skills for preventing, intervening, and remediating behavior problems. Participants also have an opportunity to apply inclusive principles to the classroom, examine student issues and learning needs, and analyze delivery models to consider how to impact participants' teaching, classroom, and school.

EDU 6558. Issues in Education. (1-4 Hours)

Offers students an opportunity to explore in-depth a current educational issue, long-standing unresolved educational problem, and/or ways of considering innovation and change in education. The topic alternates each time the course is offered, and students are allowed to enroll each time the focus of the course changes. May be repeated up to 15 times for up to 16 total credits.

EDU 6569. Differentiated Instruction and Assessment in Mathematics. (4 Hours)

Focuses on the development of individualized intervention programs for children and youth in need of special education. Offers students an opportunity to translate results of norm-referenced diagnostic assessments and curriculum-based or criterion-referenced assessments into goals for intervention and effective instructional strategies. Explores the use of data to differentiate mathematics and other instruction. Offers students an opportunity to learn the limitations of assessments and to develop informal classroom-based assessments that reflect student learning and drive instruction.

EDU 6866. Teaching Practicum and Seminar. (1-8 Hours)

Includes at least 300 hours of supervised student teaching in a public school system and reflection seminar. Provides a field-based assessment of teaching performance for students in one of the MAT programs. Requires prior successful completion of all Commonwealth of Massachusetts licensure prerequisites. May be repeated for up to 8 total credits.

Prerequisite(s): EDU 6104 with a minimum grade of C-

EDU 6874. Practicum, Portfolio, and Panel Review. (4 Hours)

Contains both a portfolio requirement and a panel review in addition to a supervised practicum. The portfolio that is submitted includes work products demonstrating the competencies specified in the Professional Standards for Teachers. The review panel is composed of School of Education faculty members, a partner-school special educator/administrator, and community members. Requires students to present a video and/or portfolio in which they demonstrate competencies.

EDU 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EDU 6980. Interdisciplinary Capstone. (2 Hours)

Offers students an opportunity to act as reflective change agents as they apply the knowledge and skills gained from their individualized programs of study to the creation of a final project, an action research proposal. The proposal, presented to faculty and peers, identifies a workplace problem or need and includes an implementation plan to address it. Students also have an opportunity to reflect on their learning journey and to refine their original Professional Learning Plan (PLP) with a five-year focus.

Prerequisite(s): EDU 6183 with a minimum grade of C-

EDU 6995. Project. (1 Hour)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field.

Prerequisite(s): EDU 6107 with a minimum grade of B or EDU 6425 with a minimum grade of B or EDU 6310 with a minimum grade of B

EDU 7204. Global and Historical Perspectives on Higher Education. (3 Hours)

Provides a historical foundation for understanding how current trends in higher education are informed by ideas and practices from the past. Compares seminal theories of teaching and learning, benchmarks in the evolution of higher education, and changing notions about the purposes of higher education cross-culturally over time. Offers students an opportunity to gain a more sophisticated perspective on today's changing landscape in higher education across the world.

Prerequisite(s): EDU 7207 with a minimum grade of C- or EDU 7209 with a minimum grade of C-

EDU 7207. Foundations of Doctoral Studies. (3 Hours)

Examines professional doctoral studies, the construct of scholar-practitioner, and the role of action research in creating change for social justice. Offers students an opportunity to define problems of practice and explore the basic components of action research.

EDU 7213. Education Entrepreneurship. (3 Hours)

Examines how entrepreneurial activity can make a significant impact on the lives of others and considers how political, social, and community conditions can either support or hinder such activity. Uses several contemporary case studies to examine how individuals and groups have pursued entrepreneurial activity. Through scenario planning students analyze the critical elements that lead to successful entrepreneurial activity. At the end of the course, offers students an opportunity to design their own entrepreneurial endeavor grounded in the impact they would like to make for others and their communities. Educators at all levels need to be innovators, capable of creating, facilitating, and supporting entrepreneurial activity that serves others and their communities.

Prerequisite(s): EDU 7209 with a minimum grade of C- or EDU 7207 with a minimum grade of C-

EDU 7217. Educational Systems: The Dynamics of Policy, Power, and Practice. (3 Hours)

Introduces the policy process, education governance, and education policy issues. Critically analyzes professional practice and problems of practice within the broader context of local, state, and federal education policy systems. The course is divided into four units: the foundations of education policy; education governance and policy subsystems; the policy process; and analyzing policy to develop more just and equitable educational outcomes.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7218. Leadership for Social Justice. (3 Hours)

Examines how knowledge is produced in the context of historical and contemporary understandings of power. Focuses on change agency through ongoing self-examination, context analysis, and development of an action plan.

Prerequisite(s): EDU 7207 with a minimum grade of C- ; EDU 7225 (may be taken concurrently) with a minimum grade of C-

EDU 7219. Foundations of Collaboration, Leadership, and Change. (3 Hours)

Focuses on the collaborative nature of leadership and the skills necessary to enact change. Considers the importance of teamwork in the collaboration process along with an understanding of what makes teams effective from both relational and task perspectives. Students examine their own role as a change agent and explore opportunities for social change from diverse and global perspectives. In combination with other foundation and research courses, offers students an opportunity to develop and execute action research plans.

Prerequisite(s): EDU 7218 with a minimum grade of C- ; EDU 7226 (may be taken concurrently) with a minimum grade of C-

EDU 7225. Fundamentals of Research. (3 Hours)

Examines the theory and philosophy behind qualitative, quantitative, and mixed-methods approaches to action research. Additional course topics include understanding research paradigms, translating theory to practice, and exploring the roles of stakeholders. Offers learners an opportunity to gain skills in collecting data, creating research questions, and exploring ethical considerations of conducting research.

Prerequisite(s): EDU 7207 (may be taken concurrently) with a minimum grade of C-

EDU 7226. Research Design. (3 Hours)

Introduces learners to qualitative and quantitative research methodology. Emphasizes qualitative data collection, making meaning of data, and creating an action plan for research. Offers students an opportunity to practice sharing data in a meaningful way to promote reflection on change.

Prerequisite(s): EDU 7207 with a minimum grade of C- ; EDU 7218 (may be taken concurrently) with a minimum grade of C- ; EDU 7225 with a minimum grade of C-

EDU 7227. The Power of Experiential Learning. (3 Hours)

Examines the theory and employment of personal, group, and organization-based experiential learning to effect change and innovation. By employing experiential learning we seek to transform our thinking, understanding, and actions of how we can design, support, and use experiential learning in our contexts to engender individual, educational, and organizational development, improvement, and transformation.

Prerequisite(s): EDU 7207 with a minimum grade of C- or EDU 7209 with a minimum grade of C-

EDU 7228. Bringing Experiential Learning, Assessment, and Reflection to Life. (3 Hours)

Offers students an opportunity to design, develop, and pursue organizational experiential learning activities, reflection, and assessment to explore understanding the impact and influence of experiential learning. Students design and implement the oversight of an experiential learning initiative and assess outcomes.

Prerequisite(s): EDU 7207 with a minimum grade of C- or EDU 7209 with a minimum grade of C-

EDU 7229. The Experiential Learning Leader. (3 Hours)

Focuses on the role of the leader in the design and use of experiential learning to effect improvement and change. The experiential learning leader engages their colleagues and community in experiential learning design, actions, reflection, and assessment, empowering others and their organization in that process. Explores and develops employing experiential learning tools—the skills, mindset, and competencies to lead through experiential learning.

Prerequisite(s): EDU 7207 with a minimum grade of C- or EDU 7209 with a minimum grade of C-

EDU 7234. Thinking and Acting Entrepreneurially. (3 Hours)

Considers theory, research, and case studies to critically analyze entrepreneurial thinking, behaviors, and pursuits. Explores insights as to how entrepreneurial thinking and activity can lead to the transformation of agency and organizational capacity. Offers students an opportunity to understand how the entrepreneurial mindset can lead to the transformation of one's actions and an organization's structures, practices, and use of resources to effect desired outcomes.

Prerequisite(s): EDU 7209 with a minimum grade of C- or EDU 7207 with a minimum grade of C-

EDU 7242. Situated Leadership. (3 Hours)

Focuses on student reflections on the challenges and opportunities they face as educational leaders and change agents in contemporary educational settings. Is theory driven. Offers students an opportunity to investigate various theoretical frameworks and apply them to their various problems of practice; to investigate, gather, and synthesize empirical research articles that pertain to their particular areas of interest; to write cogent literature reviews detailing their analysis; and to present and debate their ideas with classmates.

EDU 7243. Doctoral Seminar in Curriculum Leadership. (3 Hours)

Offers a special topics course that examines critical and timely issues challenging curriculum leaders. Through individual consultations with the instructor and critical feedback from their peers, offers students an opportunity to explore these topics and discuss how they relate to applied research in the field of curriculum leadership.

EDU 7244. Curriculum Theory and Practice Over Time: Implications for Educational Leadership. (3 Hours)

Explores the theoretical and historical dimensions of curriculum, teaching, and learning in varied educational settings. Offers students an opportunity to learn about touchstone principles that have shaped the thinking and implementation of subject-based curricula over time. Uses historical and contemporary case studies to examine how educational leadership is intimately connected to the process of curriculum development, teaching, and learning.

EDU 7250. Organizational Systems and Institutional Governance. (3 Hours)

Examines the issues related to shared governance. Focuses on managing and leading in an environment of shared governance. Institutions of higher education are unlike any other kind of institutions in either the public or private sector. The difference is largely due to the concept and use of shared governance. Other topics include variations of shared governance and organizational structures.

EDU 7251. Student Engagement in Higher Education. (3 Hours)

Examines influential student development theories and theorists. The higher education sector in the United States and around the world is being transformed by competitive forces that require institutions to be market-driven. Analyzes the implications of work on enrollment management and students in a market-driven environment.

EDU 7253. The Legal Environment of Higher Education. (3 Hours)

Examines the major laws that impact the decision making of higher education leaders and emphasizes strategies for navigating the legal environment and managing potential legal threats. Institutions of higher education operate in a complex legal environment that includes laws related to financial aid, admissions, licensure, and privacy.

EDU 7256. Financial Decision Making in Higher Education. (3 Hours)

Explores financial aspects of postsecondary educational institutions with particular emphasis on the use of financial information for decision making. Specific topics include financial analysis, budget creation, and budget oversight. Examines both cost-center and RCM models. Emphasizes using financial data for decisions related to resource allocation, forecasting, and other planning and control activities in higher education.

EDU 7258. Strategic Management in Higher Education. (3 Hours)

Examines strategic management from multiple conceptual and intellectual traditions. Focuses on the latest research and situates strategic management within the context of higher education.

EDU 7259. Doctoral Seminar in Higher Education Administration. (3 Hours)

Offers a special topics course that examines critical and timely issues challenging postsecondary leaders. Through individual consultations with the instructor and critical feedback from their peers, this course offers students an opportunity to explore these topics and discuss how they relate to applied research in the field of higher education administration.

EDU 7260. Comparative International/Global Higher Education. (3 Hours)

Examines the many educational systems that exist around the world, along with worldwide emerging trends in education. An understanding of these global models can better inform policy decisions, institutional strategies, and pedagogy at the micro- and macrolevels. Emphasizes topics of governance, credentialing, assessment, portability, funding, curriculum, and instruction. Examines current and emerging trends resulting from changing demographic and economic shifts, as well as varied reform initiatives.

EDU 7261. International Student Markets. (3 Hours)

Examines the characteristics and drivers that influence the needs and interests of various student markets, as well as current strategies being employed domestically and internationally to recruit and retain international students. International students have become a major factor in education markets that include specialized preparatory schools to major research universities. Many schools have relied on international students, who generally pay full tuition, to meet tuition revenue targets. As the world economy continues to globalize, and the importance of knowledge-driven industries expands, the importance of understanding and competing in global education markets continues to increase.

EDU 7266. Contemporary Issues in Community Colleges. (3 Hours)

Examines contemporary issues facing community college administration, including promoting equity, open access, diversity and affirmative action, transfer policies, workforce development, and developmental education.

EDU 7272. Organizational Culture and Change. (3 Hours)

Examines organizational culture models and change processes through the lenses of seminal theory and current research. Focuses on how organizational culture develops and evolves and discusses the relationship of organizational culture to leadership and organizational effectiveness. Students engage in an experiential field project that simultaneously seeks to build understanding of culture in practice and to enhance doctoral-level research skills. The capability to build effective local organizational cultures that function within larger cultural systems and to create lasting cultural change are key for effective leadership. With a deep understanding of organizational culture, students become empowered to organize systems, symbols, and people in ways that influence planning, policies, and resource allocations in their organizations.

Prerequisite(s): EDU 7209 with a minimum grade of C- or EDU 7207 with a minimum grade of C-

EDU 7274. Doctoral Seminar in Organizational Leadership and Communication. (3 Hours)

Examines critical and timely issues challenging education leaders. Uses individual consultations with the instructor and critical feedback from their peers to offer students an opportunity to focus their thesis arguments and articulate how their projects contribute to applied research in the field of organizational leadership and communication. May be repeated up to four times.

EDU 7275. Contemporary Leadership Perspectives. (3 Hours)

Reviews contemporary leadership theory and models emphasizing recent conceptualizations, such as relational, distributed, complexity, followership, and global leadership. Using these models as a diagnostic lens, offers students an opportunity to explore and develop real-world answers to the leadership challenges facing their organizations. Emphasizes personal leadership development, which allows students to expand, apply, reflect on, and refine their personal leadership knowledge, skills, and abilities to further how they steward their organizations. Understanding the theory and research underpinning current leadership practice is invaluable knowledge for any organizational leader.

Prerequisite(s): EDU 7209 with a minimum grade of C- or EDU 7207 with a minimum grade of C-

EDU 7276. Communication: Teams, Organizations, and Global Networks. (3 Hours)

Examines the ways we interact, make meaning, and work together—in our teams, within our organizations, and throughout global networks. Teams are the foundational, organizational archetype for bringing groups of people together to get things done. An essential experiential component of the course is the study of teamwork, analyzing the development and functioning of the team along with assessing individual roles and responsibilities. Considers organizations from perspectives such as messaging and meaning making, identity and relationships, and social media/technology. Finally, examines global networks of individuals and/or communities through levels of interconnectivity worldwide and through varying forms of social interaction.

Prerequisite(s): EDU 7209 with a minimum grade of C- or EDU 7207 with a minimum grade of C-

EDU 7277. Organizational Learning, Innovation, and Systems Thinking. (3 Hours)

Offers students an opportunity to explore foundational concepts of organizational learning and innovation from a systems perspective; to gain comprehension of strands of systems thinking and its grounding for action research; to critically compare organizational learning models for their requisite usefulness in enhancing innovative practices; and to develop diagnostic skills for assessing learning systems of an innovative workplace. Embraces a system perspective of collective learning, grounded in the premise that sustainable innovation is contingent upon an organization's ability to create new knowledge through dynamic social learning processes. An experiential learning design seeks to offer students multiple opportunities to apply scholarly concepts to workplace practices, to include collaborating in a microlearning network designed to enhance knowledge sharing practices, and to conduct a microfield project of an innovative workplace.

Prerequisite(s): EDU 7209 with a minimum grade of C- or EDU 7207 with a minimum grade of C-

EDU 7280. Fundamentals of Research. (3 Hours)

Offers students an overview of all components of a doctoral thesis. Designed to support students' efforts to hone in on their specific area of research and to write a problem of practice, research questions, and literature review. Offers students feedback on their work from faculty and peers in the course in order to complete a rough draft of the first two chapters of their potential thesis proposal.

Prerequisite(s): EDU 7202 with a minimum grade of C- ; EDU 7209 with a minimum grade of C- ; EDU 7210 with a minimum grade of C- ; EDU 7214 with a minimum grade of C-

EDU 7281. Research Design. (3 Hours)

Focuses on turning a research question into a potential thesis. Emphasizes effective alignment of problem, purpose, question, theory, and method. Offers students an opportunity to examine various qualitative and quantitative research designs and to explore the role of theory in each design. Encourages students to seek to gain a clear understanding of methodology and the different approaches and theories scholars have used to investigate their area of interest. Seeks to guide students through the process of creating a detailed outline that articulates all design components of their theses.

Prerequisite(s): EDU 7280 with a minimum grade of C-

EDU 7282. Quantitative Research. (3 Hours)

Introduces students to a variety of quantitative research designs and the necessary procedures of each design in order for them to conceptualize their doctoral thesis research. Offers students an opportunity to acquire and practice skills in analyzing quantitative data. Students should conclude the course with a conceptual foundation for their doctoral thesis and familiarity with the proposal development process.

EDU 7283. Qualitative Research. (3 Hours)

Introduces students to a variety of methodological approaches in order for them to conceptualize their doctoral thesis research from the perspective of multiple qualitative perspectives. Students conduct a field project with the goal of gaining skills in collecting and analyzing data. Students should conclude the research series with a conceptual foundation for their doctoral thesis and familiarity with the proposal development process.

Prerequisite(s): EDU 7205 with a minimum grade of C- or EDU 7208 with a minimum grade of C- or EDU 7281 with a minimum grade of C-

EDU 7294. Advanced Research Design 1. (3 Hours)

Offers students an opportunity to engage in cycle 1 of their action research project. Emphasizes techniques to support data collection and analysis, as well as communication of findings. Projects must be IRB-approved before students can enroll in this course.

Prerequisite(s): EDU 7207 with a minimum grade of C- ; EDU 7218 with a minimum grade of C- ; EDU 7219 with a minimum grade of C- ; EDU 7225 with a minimum grade of C- ; EDU 7226 with a minimum grade of C-

EDU 7295. Dissertation in Practice Seminar. (3 Hours)

Introduces learners to the tools, skills, and practical aspects of constructing a dissertation proposal plan for completing action research for the dissertation in practice. Learners practice writing a literature review and construct a plan for completing their dissertation research.

Prerequisite(s): EDU 7294 with a minimum grade of C-

EDU 7296. Adult and Workplace Learning. (3 Hours)

Offers a comprehensive overview of major adult learning models and philosophies and addresses application to research and problems of practice in the workplace and beyond. Invites students to explore self-as-learner as a first step for understanding what it means to be a leader of learners. Offers students an opportunity to learn about the basic tenets and major models of adult learning (andragogy), including self-directed, transformational, and experiential learning, as well as foundational philosophies. Additional topics covered include learning transfer, diversity and motivation, technology, instructional design, workplace learning, and reflective practice. Students participate in experiential learning through the observation and review of a program in a real-life setting from the perspective of adult learning scholarship and address ways adult learning theories can frame doctoral research.

Prerequisite(s): EDU 7209 with a minimum grade of C- or EDU 7207 with a minimum grade of C-

EDU 7310. Advanced Research Design 2. (3 Hours)

Offers students an opportunity to extensively explore their problem of practice through expanded data collection and review. Students use analytical research tools to reveal insights into their problems of practice and inform future cycles of research. Project must be IRB-approved.

Prerequisite(s): EDU 7294 with a minimum grade of C-

EDU 7311. Designing Educational Systems for Justice and Equity. (3 Hours)

Provides an overview of transformative educational models that center justice and equity across a diverse range of learning contexts. Education leaders across contexts must be innovators, capable of facilitating the generation and advancement of new ideas and strategic initiatives to promote greater learning and greater equity. Offers students an opportunity to engage with current and emerging theories and practices related to designing and transforming educational systems that are grounded in equity and justice.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7312. Landscape of Educational Leadership. (3 Hours)

Offers an overview of the history and context of educational leadership, including leadership theory and foundational models of leadership. Examines local, state, and global trends in education. Provides direct application to a variety of school settings. Emphasizes transformative and justice-oriented leadership throughout the course.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7313. Leading and Managing Change. (3 Hours)

Examines current and emerging challenges across educational contexts. Focuses on building capacity for transformative leaders. Emphasizes three main areas related to leading change: developing a greater understanding of models for leading local and educational district change initiatives; developing leadership capability, including mentoring and coaching; and developing shared and collaborative leadership models. Explores potential supports and constraints, moving beyond the traditional paradigms, structures, policies, and practices. Offers direct application to school settings as students apply concepts to their practice of leading change.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7314. Collaboration and Networks in Educational Leadership. (3 Hours)

Engages students in the iterative development of the competencies needed for transformative leaders, beyond traditional paradigms, structures, policies, and practices. This course is comprised of three main areas of focus related to leading change: developing a greater understanding of models for leading local and district change initiatives; developing leaders and building capacity—which includes mentoring and coaching; developing shared and collaborative leadership. Embedded within the course are opportunities for direct application to a variety of school settings as students apply concepts learned to practice leading educational change.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7315. Landscape of Teaching and Learning. (3 Hours)

Explores the history and context of teaching and learning by examining curriculum theory and trends in curriculum development. Examines local, state, and global trends in education by focusing on the social, political, and other contextual factors that influence the ever-changing nature of curriculum work. Emphasizes curriculum that fosters antiracist teaching and culturally responsive pedagogy. Provides direct application to a variety of school settings.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7316. Designing Transformative Curriculum and Professional Development. (3 Hours)

Examines transformative models for teaching and learning. Offers students an opportunity to develop competencies in designing and delivering curriculum in a variety of P–20 learning settings. Focuses on four main areas related to leading curriculum change: developing a greater understanding of transformative models for curriculum; designing curriculum; delivering professional development, including mentoring peers; and assessing the effectiveness of the design and delivery process. Embedded within the course are opportunities for experiential learning, so that students may apply concepts learned to practice by integrating and delivering innovative curriculum.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7317. Collaboration and Networks in Teaching and Learning. (3 Hours)

Offers students an opportunity to practice leadership innovation through collaboration, planning, and implementation. Designed to merge conceptual knowledge with active and applied participation in real-world contexts. Explores contemporary initiatives intended to address challenges in K–12 educational contexts. Students collaborate with practicing educational leaders to investigate, plan, and implement solutions to complex issues being confronted by partner schools.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7501. Designing Workplace Learning. (3 Hours)

Explores foundational theories and methods for learning in the workplace. Discusses fundamental learning tenets that support high-performing workplace learning programs, initiatives, and functions across modalities. Focuses on the promotion and design of successful and multilevel program outcomes that are strategically aligned to the organizational mission and support justice-oriented work.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7502. The Dynamics of Workplace Learning. (3 Hours)

Focuses on emerging dynamics of organizations with the conditions to foster new knowledge and, in turn, foster conditions to create new knowledge, leading to a just and equitable workforce. Offers students an opportunity for hands-on experience within and across innovative workplace systems.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7503. Leading the Learning Strategy. (3 Hours)

Focuses on the role of leading the creation of an actionable learning strategy in meeting an organization's objectives, leading to justice-oriented work. Topics include alignment with objectives, skills, and capabilities needed to deliver upon an organization's objectives; needs assessments; a governance model for stakeholder partnerships; multimodal learning journeys; and harnessing analytics to shape the learning and development agenda.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7504. Diversity, Equity, and Inclusion in Workplace Learning. (3 Hours)

Focuses on developing a deeper understanding of the value of diversity, equity, and inclusion in workplace learning and development. Explores how to create learning experiences that recognize and influence social inequities experienced by marginalized populations and to create learning strategies for greater inclusivity and productivity across the organization.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7510. Data-Driven Decision Making. (3 Hours)

Focuses on how learning organizations make strategic decisions informed by data. Offers students an opportunity to learn how to discern decisions that lead to maximized human capital, how to create environments that are conducive to learning, how to increase productivity, and how to achieve organizational success that acknowledges the equity and diversity of the organization and leads to justice-oriented work.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7511. Digital Workplace Learning. (3 Hours)

Offers students opportunities to investigate current and emerging technologies and their application in the context of formal and informal digital workplace learning. Students examine theories of digital workplace learning while considering diverse stakeholder perspectives that may lead to justice-oriented work. Explores digital workplace learning happening at the individual, social, and organizational levels.

Prerequisite(s): EDU 7207 with a minimum grade of C-

EDU 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

EDU 7983. Topics. (1-4 Hours)

Covers special topics in education. May be repeated without limit.

EDU 8750. Proposal, Action Step, and Evaluation. (6 Hours)

Offers students an opportunity to make progress toward their dissertation in practice proposal and submit modifications, if necessary, to the IRB. Following IRB authorization, students make progress toward conducting the action step, analyzing the data, and writing up initial field reports. Students make progress toward evaluating the effectiveness of the action step.

Prerequisite(s): EDU 7295 with a minimum grade of C-

EDU 8751. Proposal, Action Step, and Evaluation Continuation. (0 Hours)

Offers students an opportunity for continued dissertation work conducted under the supervision of their faculty chair toward the completion of their proposal and action step.

EDU 8760. Action Research Results and Dissemination. (6 Hours)

Supports the processes associated with writing the results and disseminating the results to relevant stakeholders. Successful completion is determined by the student's defense of the final dissertation in practice that is approved by the student's committee.

EDU 8761. Action Research Results and Dissemination Continuation. (0 Hours)

Offers students an opportunity for continued dissertation work conducted under the supervision of their faculty chair toward the completion of a student's defense of the final dissertation in practice that is approved by the student's committee.

EDU 8762. Dissertation in Practice Research. (0 Hours)

Offers students an opportunity for continued dissertation work conducted under the supervision of their faculty chair toward the completion of the student's defense of the final dissertation in practice that is approved by the student's committee. May be repeated three times.

EDU 8790. Doctoral Thesis Seminar. (6 Hours)

Supports the doctoral theses that must conform to the guidelines developed by members of the faculty. Final theses must be presented to a review panel prior to graduation. May be repeated once.

EDU 8791. Doctoral Thesis Continuation. (0 Hours)

Offers students an opportunity for continued doctoral thesis work conducted under the supervision of departmental faculty.

EDU 8792. Doctoral Thesis Continuation. (0 Hours)

Offers students an opportunity for continued doctoral thesis work conducted under the supervision of departmental faculty.

Prerequisite(s): EDU 8791 with a minimum grade of S

EDU 8796. Thesis Proposal. (0 Hours)

Offers support for the thesis proposal. Students work toward editing the first two chapters of their proposals in order to update or expand the literature review with recent contributions that have been made to the different bodies of research that inform their studies. Students work toward an initial draft of the doctoral thesis proposal, including introductory chapter and literature review.

Prerequisite(s): EDU 7282 with a minimum grade of C- or EDU 7283 with a minimum grade of C-

EDU 8797. Thesis Data Collection. (0 Hours)

Offers students an opportunity to work toward approval of the thesis proposal by the Institutional Review Board so that they can begin their research projects. Students work toward designing their data collection and analysis and to follow their clear plans for gathering data.

EDU 8798. Thesis Data Analysis and Presentation. (0 Hours)

Offers students an opportunity to work toward engaging in the data analysis process and constructing their presentation strategy for their analyses. Students work toward a completed outline of the fourth thesis chapter approved by the student's thesis advisor and second reader.

EDU 8799. Thesis Findings and Discussion. (12 Hours)

Supports the processes associated with writing the results and discussion chapters of the thesis. Highlights the scholar-practitioner aspect of the program's mission, requiring that students think carefully about the practical implications of their work and how they plan to communicate or disseminate those implications to an authentic audience and engage relevant stakeholders in a relevant application of their findings. Successful completion is determined by a student's defense of the final thesis work that is approved by their thesis committee.

Electrical and Computer Engineering (EECE)

Courses

EECE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EECE 2140. Computing Fundamentals for Engineers. (4 Hours)

Engages students in problem solving from an engineering perspective, offering essential computer hardware and software knowledge and experience. Computational problem solving involves expressing solutions to engineering problems in a way that a computer can efficiently solve. As our world continues to become more automated and interconnected, it becomes increasingly important to be able to leverage computer software and hardware, enabling us to evaluate and solve real-world engineering challenges. Offers students an opportunity to learn engineering solution design, leveraging a high-level programming language appropriate for interfacing hardware-based systems. Stresses best practices in design. Coursework includes programming assignments, quizzes, and a final project, offering students a number of ways to demonstrate their understanding of the concepts.

EECE 2150. Circuits and Signals: Biomedical Applications. (5 Hours)

Offers an integrated lecture/lab course that covers circuit theory, signal processing, circuit building, and MATLAB programming. Introduces basic device and signal models and circuit laws used in the study of linear circuits. Analyzes resistive and complex impedance networks. Uses the ideal operational amplifier model, focusing on differential amplifiers and active filter circuits. Introduces basic concepts of linearity and time-invariance for both continuous and discrete-time systems and concepts associated with analog/digital conversion. Demonstrates discrete-time linear filter design on acquired signals in the MATLAB environment. Offers students an opportunity to explore circuits and signals in the lab and to use their knowledge of circuits, analog signals, digital signals, and biological signals to build a working analog/digital EKG system.

Prerequisite(s): (GE 1111 with a minimum grade of D- or GE 1502 with a minimum grade of D-); MATH 2341 (may be taken concurrently) with a minimum grade of D-; (PHYS 1155 (may be taken concurrently) with a minimum grade of D- or PHYS 1165 (may be taken concurrently) with a minimum grade of D- or PHYS 1175 with a minimum grade of D-); EECE 2140 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

EECE 2160. Embedded Design: Enabling Robotics. (4 Hours)

Introduces the basics of digital design and programming for embedded systems through an integrated lecture and lab course. Covers digital design, object-oriented programming, using Linux, and controlling physical devices via software. The lab portion of this course offers hands-on experience at developing hardware and software to control a robotic device via an embedded systems platform.

Prerequisite(s): (GE 1111 with a minimum grade of D- or GE 1502 with a minimum grade of D-); EECE 2140 (may be taken concurrently) with a minimum grade of D-

EECE 2210. Electrical Engineering. (4 Hours)

Introduces the basic concepts related to circuits and circuit elements; current, voltage, and power; models for resistors, capacitors, and inductors; and circuit analysis using Kirchhoff's laws. Discusses selected topics that illustrate a variety of applications of electrical engineering, such as AC circuits and electric power, the basics of semiconductor devices with applications to transistor amplifier models, transients in circuits with energy storage, mechanical controls and mechatronics, digital signals, logic circuits, and some basic concepts of computer operations, specifically, number coding, arithmetic operations, and memory circuits.

Prerequisite(s): MATH 1342 with a minimum grade of D-

Corequisite(s): EECE 2211

EECE 2211. Lab for EECE 2210. (1 Hour)

Accompanies EECE 2210. Covers fundamental DC and AC electrical concepts as well as analog and digital electronics.

Corequisite(s): EECE 2210

EECE 2300. Computational Methods for Data Analytics. (4 Hours)

Introduces the programming tools, algorithms, and software tools used in data analytics. Offers hands-on experience working with statistical software/packages and scripting languages and shows students the power of computational tools. Covers concepts of correlation, regression analysis, classification, and decomposition. Includes example data-oriented applications taken from multiple science/engineering disciplines and applies linear algebra and probability to analyze actual data sets. Students not meeting course prerequisites may seek permission of instructor.

Prerequisite(s): GE 1111 with a minimum grade of D- or GE 1502 with a minimum grade of D- or CS 2500 with a minimum grade of D-

EECE 2310. Introduction to Digital Design and Computer Architecture. (4 Hours)

Covers the fundamentals of digital design topics including digital data representations and operations as well as combinational and sequential circuits design. Introduces various topics of computer organization, architecture, and microarchitecture applicable to modern computer engineering systems. Discusses principles of computer memory addressing. Applies the concept of hardware and software interface through programming in assembly language.

Prerequisite(s): CS 1800 with a minimum grade of D-

Corequisite(s): EECE 2311

EECE 2311. Lab for EECE 2310. (1 Hour)

Accompanies EECE 2310. Offers students an opportunity to design and implement various digital circuits that are essential for building computer systems. Utilizes a hardware design platform that is built around Field Programmable Gate Array (FPGA) technology. Covers simulation and testing of designs to solve practical engineering problems.

Corequisite(s): EECE 2310

EECE 2322. Fundamentals of Digital Design and Computer Organization. (4 Hours)

Presents a global perspective on the design of a full processor taking logic gates as the simplest building blocks. Starts with number systems and data representation and the design of simple combinational and sequential circuits. Continues with an introduction to the instruction set architecture of a selected processor architecture (e.g., RISC-V) and concludes with the construction of a simple processor using a single-cycle and a multi-cycle implementation approach. Assignments include designing and simulating digital hardware models using an appropriate hardware description language (e.g., Verilog), as well as some assembly language to expose the interface between hardware and software.

Prerequisite(s): EECE 2160 with a minimum grade of D-

Corequisite(s): EECE 2323

EECE 2323. Lab for EECE 2322. (1 Hour)

Offers students an opportunity to design and implement a simple computer system on field-programmable logic using a hardware description language. Covers simulation and testing of designs.

Corequisite(s): EECE 2322

EECE 2412. Fundamentals of Electronics. (4 Hours)

Reviews basic circuit analysis techniques. Briefly introduces operation of the principal semiconductor devices: diodes, field-effect transistors, and bipolar junction transistors. Covers diode circuits in detail; the coverage of transistor circuits focuses mainly on large-signal analysis, DC biasing of amplifiers, and switching behavior. Uses PSpice software to simulate circuits and large-signal models and transient simulations to characterize the behavior of transistors in amplifiers and switching circuits. Digital electronics topics include CMOS logic gates, dynamic power dissipation, gate delay, and fan-out. Amplifier circuits are introduced with the evaluation of voltage transfer characteristics and the fundamentals of small-signal analysis.

Prerequisite(s): EECE 2150 with a minimum grade of D- or EECE 2210 with a minimum grade of D- or BIOE 3210 with a minimum grade of D-

Corequisite(s): EECE 2413

EECE 2413. Lab for EECE 2412. (1 Hour)

Covers experiments reinforcing basic electronics topics such as diodes, bipolar junction transistors (BJT) as a switch, BJT amplifiers, and MOSFET circuits for switching and amplification. Practical measurements include use of voltmeters, ammeters, ohm meters, and impedance meters, as well as oscilloscope measurements of frequency, gain, distortion, and upper- and lower-cutoff frequencies of amplifiers.

Corequisite(s): EECE 2412

Attribute(s): NUpath Writing Intensive

EECE 2520. Fundamentals of Linear Systems. (4 Hours)

Develops the basic theory of continuous and discrete systems, emphasizing linear time-invariant systems. Discusses the representation of signals and systems in both the time and frequency domain. Topics include linearity, time invariance, causality, stability, convolution, system interconnection, and sinusoidal response. Develops the Fourier and Laplace transforms for the discussion of frequency-domain applications. Analyzes sampling and quantization of continuous waveforms (A/D and D/A conversion), leading to the discussion of discrete-time FIR and IIR systems, recursive analysis, and realization. The Z-transform and the discrete-time Fourier transform are developed and applied to the analysis of discrete-time signals and systems.

Prerequisite(s): (EECE 2150 with a minimum grade of D- or EECE 2210 with a minimum grade of D- or BIOE 3210 with a minimum grade of D-); MATH 2341 with a minimum grade of D-

EECE 2530. Fundamentals of Electromagnetics. (4 Hours)

Introduces electromagnetics and high-frequency applications. Topics include transmission lines: transmission line model with distributed circuit elements, transmission line equations and solutions, one-dimensional traveling and standing waves, and applications; electromagnetic field theory: Lorentz force equations, Maxwell's equations, Poynting theorem, and application to the transmission line's TEM waves. Also studies uniform plane wave propagation along a coordinate axis and along an arbitrary direction; equivalent transmission lines for TEM, TE, and TM waves; reflection and refraction of uniform plane waves by conducting and dielectric surfaces. Discusses applications to wave guides, resonators, optical fibers, and radiation and elementary antennas. Introduces modern techniques (computational methods) and applications (optics, bioelectromagnetics, and electromagnetic effects in high-speed digital circuits).

Prerequisite(s): (EECE 2150 with a minimum grade of D- or EECE 2210 with a minimum grade of D- or BIOE 3210 with a minimum grade of D-); MATH 2321 with a minimum grade of D- ; (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-)

Corequisite(s): EECE 2531

EECE 2531. Lab for EECE 2530. (1 Hour)

Accompanies EECE 2530. Supports class material related to transmission lines, wave-guiding structures, plane wave reflection and refraction, and antenna radiation. Includes experiments with microwave transmission line measurements and the determination of the properties of dielectric materials, network analyzer analysis of microwave properties of circuit elements and transmission line electrical length, analysis of effective dielectric constant and loss from microstripline resonator transmission, optical measurement of refraction and reflection leading to determination of Brewster angle and optical constants for transparent and absorbing materials, and measurement of radiation patterns from dipole antennas.

Prerequisite(s): (BIOE 3210 with a minimum grade of D- or EECE 2150 with a minimum grade of D- or EECE 2210 with a minimum grade of D-); MATH 2321 with a minimum grade of D- ; (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-)

Corequisite(s): EECE 2530

EECE 2540. Fundamentals of Networks. (4 Hours)

Presents an overview of modern communication networks. The concept of a layered network architecture is used as a framework for understanding the principal functions and services required to achieve reliable end-to-end communications. Topics include service interfaces and peer-to-peer protocols, a comparison of the OSI (open system interconnection) reference model to the TCP/IP (Internet) and IEEE LAN (local area network) architectures, network-layer and transport-layer issues, and important emerging technologies such as Bluetooth and ZigBee.

Prerequisite(s): EECE 2140 with a minimum grade of D-

EECE 2560. Fundamentals of Engineering Algorithms. (4 Hours)

Covers the design and implementation of algorithms to solve engineering problems using a high-level programming language. Reviews elementary data structures, such as arrays, stacks, queues, and lists, and introduces more advanced structures, such as trees and graphs and the use of recursion. Covers both the algorithms to manipulate these data structures as well as their use in problem solving. Introduces algorithm complexity analysis and its application to developing efficient algorithms. Emphasizes the importance of software engineering principles.

Prerequisite(s): EECE 2160 with a minimum grade of D- or CS 1500 with a minimum grade of D-

EECE 2750. Enabling Engineering. (4 Hours)

Offers students an opportunity to develop a proposal for a design project that uses engineering technologies to improve the lives of individuals with cognitive or physical disabilities. Offers student project groups an opportunity to work with end users and caregivers at local nursing homes and special education schools to assess a specific need, research potential solutions, and develop a detailed proposal for a project. Project groups are matched with product design mentors who guide groups through the design process. Lectures cover relevant topics, including surveys of specific physical and cognitive disabilities and applicable engineering technologies. The same project may not be used to satisfy both this course and EECE 4790. May be repeated once.

EECE 2949. Introductory Directed Research in Electrical and Computer Engineering. (4 Hours)

Offers first- and second-year students an opportunity to pursue project and other independent inquiry opportunities under faculty supervision. The course is initiated with a student-developed proposal, including expected learning outcomes and research products, which is approved by a faculty member in the department. Requires permission of instructor.

EECE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EECE 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors. May be repeated up to nine times.

EECE 3324. Computer Architecture and Organization. (4 Hours)

Presents a range of topics that include assembly language programming, number systems, data representations, ALU design, arithmetic, the instruction set architecture, and the hardware/software interface. Offers students an opportunity to program using assembly language and to simulate execution. Covers the architecture of modern processors, including datapath/control design, caching, memory management, pipelining, and superscalar. Discusses metrics and benchmarking techniques used for evaluating performance.

Prerequisite(s): EECE 2322 with a minimum grade of D- ; EECE 2323 with a minimum grade of D-

EECE 3392. Electronic Materials. (4 Hours)

Provides a basic treatment of electronic materials from atomic, molecular, and application viewpoints. Topics include atomic structure and bonding in materials, structure of materials, and crystal defects. These topics lay a foundation for the introduction of thermal and electronic conduction, which is the underlying physics of electronic devices. Finally, the electronic properties of semiconductors, dielectric, magnetic, superconducting, and optical materials are examined. The latter half deals with an introduction to the state of the art in electronic materials, including semiconductor nanoelectronics, magnetic semiconductors and spintronics, molecular electronics, carbon nanotubes, conducting polymers, diamondlike carbon, and other topics representing recent technological breakthroughs in the area of electronic materials.

EECE 3400. Introduction to Communication Systems. (4 Hours)

Covers the basic principles and building blocks of modern digital communication systems. These systems include the current and future generations of wireless services (e.g., 6G) and are predicted to become a multi-billion-dollar market in the next decade. Industrial giants at the forefront of related research and development include market-leading hardware and software companies, offering an increasing scope of employment opportunities. Includes the background of developments such as radio signal propagation, frequency spectrum regulation and resource division among multiple users, digital representation and compression of information, signal modulation and demodulation, information detection in the presence of noise and channel impairments, coding for improved reliability, and system performance analysis and simulation.

Prerequisite(s): EECE 2150 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-

EECE 3410. Electronic Design. (4 Hours)

Covers advanced analog and mixed-signal circuit analysis topics. Introduces analog integrated circuits (ICs) concepts with bipolar and field effect transistor devices. Covered IC building blocks include current sources and active loads, differential stages, cascode configurations, gain stages, and output stages. The uses of the building blocks are demonstrated for the design of popular ICs, such as operational amplifiers and voltage comparators. The high-frequency circuit models of transistors are described and used to evaluate the frequency responses of amplifiers. Introduces analog-to-digital and digital-to-analog conversion concepts and the concepts of feedback and instability with applications to the design of amplifiers and oscillators. The course makes extensive use of the SPICE simulation tool for assignments and projects.

Prerequisite(s): EECE 2412 with a minimum grade of D-

EECE 3468. Analysis of Random Phenomena in Electrical and Computer Engineering. (4 Hours)

Studies analytical concepts and methods for solving engineering problems involving randomness. Uses applications such as data analytics, artificial intelligence, signal processing, computer networks, electronic devices, and sensing systems as guiding examples. Begins with the basic theory of probability and random variables; then develops the concepts of random vectors, sequences, and processes with their statistical description. Introduces basic statistics, regression analysis, parameter estimation, and hypothesis testing, including the use of computer simulations. Defines the concepts of correlation, covariance, and power density spectra. Uses these concepts to discuss noise, uncertainty, and other random phenomena, which is covered in the context of electrical and computer engineering applications.

Prerequisite(s): EECE 2150 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-

EECE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EECE 4512. Healthcare Technologies: Sensors, Systems, and Analysis. (4 Hours)

Examines healthcare technologies using both theory and hands-on approaches. Testing, imaging, and data collection are essential tools medical specialists use to treat patients and the primary contribution of engineers to healthcare. Covers the physics and physiology behind the newly defined concept of digital biomarkers; the electronics needed to collect these biomarkers; analysis techniques for processing and interpreting the data; and invasive (swallowable/implantable), on-body (wearable), and contactless systems for data collection. Examines safety issues, ethics, and regulatory hurdles from both an industry and research perspective. In the hands-on labs, offers students an opportunity to follow the steps of creating a startup or conducting new research and assembling a microcontroller-based sensor system for collecting digital biomarkers.

Prerequisite(s): EECE 2210 with a minimum grade of D- or EECE 2412 with a minimum grade of D- or BIOE 3210 with a minimum grade of D-

EECE 4520. Software Engineering 1. (4 Hours)

Offers an overview of the discipline of software engineering. Identifies the problems that one should expect when developing large software systems; methods that the software developer can use to deal with each of the problems; tools that the software developer can use; and procedures that can be followed in developing software. Covers the software life cycle (requirements analysis and specification, software design, coding, testing, and maintenance); various models of the software process—structured and agile; the Unified Modeling Language (UML) as applied to the software life cycle, prototyping, and documentation; design patterns; software metrics and estimation; software development environments and tools; and verification and validation. Includes a software development project that covers all the stages of the life cycle.

Prerequisite(s): CS 3000 with a minimum grade of D- or EECE 2560 with a minimum grade of D-

EECE 4534. Microprocessor-Based Design. (4 Hours)

Focuses on the hardware and software design for devices that interface with embedded processors. Topics include assembly language; addressing modes; embedded processor organization; bus design; electrical characteristics and buffering; address decoding; asynchronous and synchronous bus protocols; troubleshooting embedded systems; I/O port design and interfacing; parallel and serial ports; communication protocols and synchronization to external devices; hardware and software handshake for serial communication protocols; timers; and exception processing and interrupt handlers such as interrupt generation, interfacing, and auto vectoring.

Prerequisite(s): EECE 3324 with a minimum grade of D- or CS 3650 with a minimum grade of D-

Corequisite(s): EECE 4535

EECE 4535. Lab for EECE 4534. (1 Hour)

Accompanies EECE 4534. Consists of a comprehensive laboratory performed by a team of students. These laboratory exercises require students to design, construct, and debug hardware and software that runs on an embedded platform. Exercises are centered around a common embedded platform. The final exercise is a project that lets each group integrate hardware and software to realize a complete embedded design.

Corequisite(s): EECE 4534

EECE 4574. Wireless Communication Circuits. (4 Hours)

Covers the electronics of radio receivers and transmitters. Employs a commercial radio transceiver (MFJ-9340) as a learning tool. Presents basic topics (radio spectrum and its utilization, antennae, and information processing by modulation and demodulation). Studies building block realizations for modulators and demodulators for analog (AM, FM) and digital (ASK, PSK, FSK) radio. Covers common radio receiver architectures. Presents circuit-level designs of radio building blocks (resonators; L-C RF filters; crystals and IF filters; tuned transformers and impedance matching; amplifiers and power amplifiers; RF oscillators; mixers and up/down frequency conversion; signal detectors; and automatic gain control circuits). Includes receiver noise and sensitivity; transmitter range; spurious emissions and IM distortion; antennae and propagation in the atmosphere; wireless standards; multiple-access techniques; and software-defined radio. May include additional topics at instructor's discretion.

Prerequisite(s): EECE 2412 with a minimum grade of D-

EECE 4604. Integrated Circuit Devices. (4 Hours)

Offers a comprehensive introduction to the technology, theory, and applications of the most important electronic devices in today's integrated circuits. Topics include semiconductor electronic properties, Si fabrication technologies, p-n junctions, MOS capacitors, MOSFETS, metal-semiconductor contacts, and bipolar transistors. Emphasizes MOS devices, which are currently the dominant technology in integrated circuits. Introduces recent research trends in novel device concepts. Offers students who may pursue semiconductor process engineering, IC design, biomedical electronics, or research and development of microelectromechanical systems (MEMS) or optoelectronics devices an opportunity to obtain electronic device knowledge.

Prerequisite(s): EECE 2412 with a minimum grade of D-

EECE 4630. Robotics. (4 Hours)

Introduces robotics analysis covering basic theory of kinematics, dynamics, and control of robots. Develops students' design capabilities of microprocessor-based control systems with input from sensory devices and output actuators by having teams of students design and implement a small mobile robot system to complete a specific task, culminating in a competition at the end of the course. Covers actuators, sensors, system modeling, analysis, and motion control of robots.

Prerequisite(s): EECE 2160 with a minimum grade of D- ; EECE 2412 with a minimum grade of D-

EECE 4632. Hardware-Software Codesign for FPGA-Based Systems. (4 Hours)

Studies hardware and software design for embedded systems. Focuses on techniques to efficiently design and make use of field-programmable gate arrays (FPGAs) to accelerate applications. Specific topics include HW/SW codesign, buses and interfacing, C as a hardware description language, high-level synthesis, pipelining, hardware memory hierarchies, and computer arithmetic. Offers students an opportunity to program an embedded processor and interface to digital logic designs implemented on programmable hardware, as well as an opportunity to develop a series of designs in class, culminating in a project of the student's choosing. Potential project topics include (but are not limited to) computer vision, cryptography, machine learning, and wireless communications.

Prerequisite(s): EECE 2322 with a minimum grade of D-

EECE 4638. Special Topics in Computer Engineering. (4 Hours)

Focuses on advanced topics related to computer engineering technology to be selected by instructor. May be repeated without limit.

EECE 4646. Optics for Engineers. (4 Hours)

Presents the basic optical concepts necessary for an understanding of current and future optical communication, remote sensing, and industrial and biomedical systems. Topics include geometrical optics, polarized light, diffraction, and interference. Studies lasers and other light sources, optical fibers, detectors, CCD cameras, modulators, and other components of optical systems. Presents applications to specific systems such as fiber-optic communication, medical imaging systems, fiber-optic sensors, and laser radar.

Prerequisite(s): BIOE 3210 with a minimum grade of D- or EECE 2150 with a minimum grade of D- or EECE 2210 with a minimum grade of D- or PHYS 1155 with a minimum grade of D-

EECE 4649. Biomedical Imaging Instrumentation. (4 Hours)

Explores a wide variety of modalities for biomedical imaging in the pathology laboratory and in vivo. After an introductory discussion of tissue properties, waves used in imaging, and contrast mechanisms, the course discusses modalities such as microscopy, endoscopy, x-ray, computed tomography, ultrasound, and MRI. With each modality, instrument parameters, contrast mechanisms, resolution, and depth of penetration are considered. Offers students an opportunity to work in groups to complete a project in which they examine one modality in detail and either generate synthetic data using a computational model or process available image data.

Prerequisite(s): (MATH 1242 with a minimum grade of D- or MATH 1342 with a minimum grade of D-); (PHYS 1145 with a minimum grade of D- or PHYS 1151 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-)

EECE 4694. Numerical Methods and Computer Applications. (4 Hours)

Presents numerical techniques used in solving scientific and engineering problems with the aid of digital computers. Topics include theory of interpolation; the theory of numerical integration and differentiation, numerical solutions of linear as well as nonlinear systems of equations, the theory of least squares; and numerical solution of ordinary and partial differential equations using a programming environment such as MATLAB.

Prerequisite(s): MATH 2341 with a minimum grade of D- ; (GE 1111 with a minimum grade of D- or GE 1502 with a minimum grade of D-)

EECE 4790. Electrical and Computer Engineering Capstone 1. (4 Hours)

Requires students to select a project requiring design and implementation of an electrical, electronic, and/or software system, including evaluation of multiple constraints and use of appropriate engineering standards in the design; formation of a team to carry out the project; and submission and presentation of a detailed proposal for the work. Students must specify the materials needed for their project, provide a cost analysis, and make arrangements with their capstone adviser to purchase and/or secure donation of equipment. Requires students to perform a feasibility study by extensive simulation or prototype design of subsystems to facilitate the second phase of the capstone design, considering public health, safety and welfare, global, cultural, social, environmental, and economic factors.

Prerequisite(s): EECE 2322 with a minimum grade of D- or EECE 2412 with a minimum grade of D- or EECE 2520 with a minimum grade of D- or EECE 2530 with a minimum grade of D- or EECE 2540 with a minimum grade of D- or EECE 2560 with a minimum grade of D- or CS 3000 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

EECE 4791. Electrical and Computer Engineering Capstone 1. (1 Hour)

Aims to give undergraduate engineering students significant experience in dealing with a senior design project. Students form teams and select a project requiring design and implementation of an electrical, electronic, and/or software system, including evaluation of multiple constraints, the use of appropriate engineering standards during the design to carry out the project, as well as the submission and presentation of a detailed proposal for the work. The project plan includes the consideration of public health, safety, and welfare and global, cultural, social, environmental, and economic factors. Students must specify a preliminary list of materials needed for their project, provide a cost analysis, and prepare and deliver written and oral presentations on the design proposal. This is the first of a two-course sequence.

Prerequisite(s): EECE 2322 with a minimum grade of D- or EECE 2412 with a minimum grade of D- or EECE 2520 with a minimum grade of D- or EECE 2530 with a minimum grade of D- or EECE 2540 with a minimum grade of D- or EECE 2560 with a minimum grade of D- or CS 3000 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

EECE 4792. Electrical and Computer Engineering Capstone 2. (4 Hours)

Requires design and implementation of the project proposed in EECE 4790. Students are expected to apply engineering principles acquired throughout their academic and co-op experiences to the design of a system, component, or process. Each project includes the development and use of design methodology, formulation of design problem statements and specifications, construction of hardware, integration of sensors and actuators, programming microcontroller and software development, and design of subsystems, followed by testing and integration to validate the overall design. Projects include realistic constraints such as economic factors, safety, reliability, maintenance, aesthetics, ethics, and social impact. Students make oral presentations in a series of design reviews, document their final design solution in a written report, and demonstrate a functional prototype in a final presentation.

Prerequisite(s): EECE 4790 with a minimum grade of D- or EECE 4791 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

EECE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EECE 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

Attribute(s): NUpath Integration Experience

EECE 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

EECE 5115. Dynamical Systems in Biological Engineering. (4 Hours)

Provides an introduction to the theoretical analysis and modeling of dynamical systems in biology, ranging from molecular to population applications. Topics include difference and differential equation models, with basic theory including nondimensionalization, steady states, linearization, stability, eigenvalues, global behavior, singular perturbations, multistability, hysteresis, cooperativity, periodic solutions, excitable systems, bifurcations, and an introduction to spatial (PDE) models. Develops all concepts in the context of concrete biological applications, such as gene regulation, chemical reaction networks and stoichiometry, drug models and PK/PD, receptor/ligand interactions, synthetic constructs, action potential generation, enzymatic reactions, population interactions, epidemiology, epigenetic phenomena including differentiation, and transport, chemotaxis, and diffusion.

Prerequisite(s): MATH 2341 with a minimum grade of D- or graduate program admission

EECE 5155. Wireless Sensor Networks and the Internet of Things. (4 Hours)

Covers design and modeling of architectures, communication protocols, and algorithms for wireless sensor networks and the Internet of Things. Provides instruction in general aspects of wireless sensor networking, including protocol design, modeling, and simulation at all layers of the communication stack. Studies standardization efforts, including Bluetooth, IEEE 802.15.4/Zigbee, and SigFox/LoRa, among others. Culminates with illustrations of applications of sensor networks technology to many challenging problems of our times, including mobile crowdsensing, smart cities, and cyber-physical systems.

Prerequisite(s): EECE 2540 with a minimum grade of D- or CS 3700 with a minimum grade of D- or graduate program admission

EECE 5161. Thin Film Technologies. (4 Hours)

Covers the fundamentals of vacuum technology, thin film deposition technologies, characterization technologies, their applications in different industries, and the frontiers of research activities on thin film deposition technologies. Thin films are fundamental building blocks for integrated circuits chips, microelectromechanical systems (MEMS) devices, and nanoelectromechanical system devices (NEMS), etc., and play critical roles in determining the performance of IC circuits, MEMS, and NEMS devices. Topics include vacuum technologies; vacuum pumps; vacuum system design and analysis; different thin film deposition technologies, including sputtering, chemical vapor deposition, electrochemical deposition, atomic layer deposition, etc.; and different thin film characterization technologies, in particular the magnetic thin film characterization technologies, including VSM, PPMS, FMR, MOKE, etc. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): (MATH 1342 with a minimum grade of D- ; PHYS 1155 with a minimum grade of D-) or graduate program admission

EECE 5170. Introduction to Multiferroics Materials and Systems. (4 Hours)

Offered by the NSF Nanosystems Engineering Research Center for Translational Applications of Nanoscale Multiferroic Systems (TANMS) and co-taught by professors from UCLA, UC Berkeley, Cornell, California State University Northridge, and Northeastern University. Course lectures will be available online for remote students. Covers introduction to multiferroics, atomic structure of multiferroics (chemistry), multiferroic material science, continuum-level analysis of multiferroic materials, and multiferroic devices.

Prerequisite(s): (MATH 2321 with a minimum grade of D- ; PHYS 1155 with a minimum grade of D- ; (CHEM 1151 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-)) or graduate program admission

EECE 5360. Combinatorial Optimization. (4 Hours)

Introduces combinatorial optimization, an emerging field that combines techniques from applied mathematics, operations research, and computer science to solve optimization problems over discrete structures. Emphasizes problems that arise in the areas of electrical and computer engineering, including VLSI, computer-aided design, parallel computing, computer architecture, and high-performance compiling. Covers the foundations of algorithm analysis, including asymptotic notation and complexity theory, and a range of optimization techniques, including divide and conquer, local optimization, dynamic programming, branch and bound, simulated annealing, genetic algorithms, approximation algorithms, integer and linear programming, matroid theory, and greedy algorithms. Considers the efficient generation of optimal solutions, the development and evaluation of heuristics, and the computation of tight upper and lower bounds.

Prerequisite(s): EECE 2560 with a minimum grade of C- or CS 3000 with a minimum grade of C- or graduate program admission

EECE 5550. Mobile Robotics. (4 Hours)

Investigates the science and engineering of mobile robots. Topics may include kinematics, dynamics, numerical methods, state estimation, control, perception, localization and mapping, and motion planning for mobile robots. Emphasizes practical robot applications ranging from disaster response to healthcare to space exploration.

Prerequisite(s): (EECE 2520 with a minimum grade of D- ; EECE 2560 with a minimum grade of D-) or CS 3000 with a minimum grade of D- or graduate program admission

EECE 5552. Assistive Robotics. (4 Hours)

Investigates the what (modeling), how (design), and why (analysis) of assistive robotics through the use of model-based design process. System models are essential to four key aspects of the assistive robot design process: derivation of executable specifications, hardware and software design based on simulations, implementation by code generation, and continuous testing and verification. Topics may include modeling continuous and discrete dynamics, heterogeneous models, hybrid systems, stochastic models, models of computation, analysis and design of embedded control systems with applications in assistive robotics, system simulation, and validation and verification techniques. Course projects emphasize model-based design for control of assistive robots in smart environments.

Prerequisite(s): (EECE 2160 with a minimum grade of D- ; EECE 2520 with a minimum grade of D-) or graduate program admission

EECE 5554. Robotics Sensing and Navigation. (4 Hours)

Examines the actual sensors and mathematical techniques for robotic sensing and navigation with a focus on sensors such as cameras, sonars, and laser scanners. These are used in association with techniques and algorithms for dead reckoning and visual inertial odometry in conjunction with GPS and inertial measurement units. Covers Kalman filters and particle filters as applied to the SLAM problem. A large component of the class involves programming in both the ROS and LCM environments with real field robotics sensor data sets. Labs incorporate real field sensors and platforms. Culminates with both an individual design project and a team-based final project of considerable complexity.

Prerequisite(s): ((MATH 3081 with a minimum grade of D- or EECE 3468 with a minimum grade of D-); (EECE 2160 with a minimum grade of D- or EECE 2210 with a minimum grade of D-)) or graduate program admission

EECE 5576. Wireless Communication Systems. (4 Hours)

Examines fundamental principles of wireless system design, focusing on modern techniques used in cellular systems and wireless local area networks. Covers various levels of system design, from modulation/detection to traffic analysis. Introduces basics of radio propagation and studies their effect on communication signals. Special topics include spatial frequency reuse; call blocking and cellular system capacity; power control and hand-off strategies; channel access and sharing; orthogonal frequency division multiplexing (OFDM—a modulation technique used in WLAN and the fourth-generation [4G] cellular systems) and spread spectrum modulation (third-generation WCDMA systems); diversity techniques and multi-input multi-output (MIMO) signal processing. Requires an undergraduate course in communications systems.

Prerequisite(s): EECE 3400 with a minimum grade of D- or graduate program admission

EECE 5580. Classical Control Systems. (4 Hours)

Introduces the analysis and design of classical control systems. Examines control system objectives, modeling and mathematical description, transfer function and state-variable representations, feedback control system characteristics, system responses, and stability of feedback systems. Also addresses compensator design based on root-locus and frequency response, and modern control system design using state-variable feedback.

Prerequisite(s): EECE 3464 with a minimum grade of D- or EECE 2520 with a minimum grade of D- or graduate program admission

EECE 5582. Making Systems Reliable—An Introduction to Coding Theory. (4 Hours)

Introduces modern approaches to ensuring reliable network communication, covering theory and use cases. After an accessible, engineering-centric introduction to Galois fields, presents erasure coding and decoding, with applications to protocols that reduce delays over links and networks (network coding) as well as post-quantum security. Considers error correction, starting with an overview of channel capacity and hard detection, as in storage systems. Introduces common codes (BCH, CRCs) with decoding using guessing random additive noise decoding, or GRAND, which can decode any code. Generalizes to using detector-generated information (soft information) and shows how GRAND can be extended to soft information systems, with examples such as CA-Polar and turbo decoding. Considers applications to reliable transport, communication, and storage of data.

Prerequisite(s): EECE 3468 with a minimum grade of D- or graduate program admission

EECE 5606. Micro- and Nanofabrication. (4 Hours)

Provides an overview of integrated circuit fabrication from the viewpoint of a process engineer. Offers students an opportunity to fabricate micro- and nanoscale devices in integrated lab sessions. Focuses on the physics, chemistry, and technology of integrated circuit fabrication in the lecture portion of the course, while students fabricate and test novel devices (an electrohydrodynamic micropump and three-dimensional carbon nanotube interconnects) in integrated lab sessions. Concentrates on silicon IC technology but also includes examples from other materials and device systems including microelectromechanical (MEMS) technologies that are used to build devices such as accelerometers, pressure sensors, and switches for telecommunications and other current examples provided from nanofabrication and nanotechnology. Lab hours are arranged.

Prerequisite(s): EECE 2412 with a minimum grade of D- or graduate program admission

EECE 5608. Magnetic Materials for Next-Generation Electronics. (4 Hours)

Covers the fundamentals of magnetic materials. Focuses on the frontiers of research activities on magnetic materials for next-generation sensors and electronics. Topics include magnetic units, magnetic materials classification, origin of ferromagnetism and ferrimagnetism, magnetic anisotropies, magnetostriction, magnetic domain theory, ferromagnetic/ferrimagnetic resonance, magnetodynamics, and magnetic material characterization techniques. Explores soft and hard magnetic materials and their applications, which include magnetic sensors, antennas, hard disk drives, magnetic materials for power supplies on chips, RF and microwave magnetic materials and devices, and spintronics. Also covers magnetic characterization techniques such as vibrating sample magnetometry, B-H looper, ferromagnetic resonance spectrometry, magneto-optic Kerr effect imaging, and magnetic sensing.

Prerequisite(s): (MATH 2321 with a minimum grade of D- ; (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D-)) or graduate program admission

EECE 5610. Digital Control Systems. (4 Hours)

Covers sampling and analysis tools for linear discrete-time dynamic systems, including the design of digital control systems using transform techniques by discrete equivalent and direct design methods; root locus, Bode and Nyquist diagrams, and Nichols charts; controller implementation issues, such as digital filter realizations, nonlinear effects due to quantization, round off, dead band, and limit cycles; and selection of the sampling rate.

Prerequisite(s): EECE 5580 with a minimum grade of C- or EECE 5580 with a minimum grade of D-

EECE 5612. Statistical Inference: An Introduction for Engineers and Data Analysts. (4 Hours)

Introduces fundamentals of statistical inference and data analysis through concepts of detection, estimation, and related signal processing algorithms. Addresses topics of hypothesis testing, Bayesian principles, multiple hypotheses and composite hypothesis testing, test power and uniformly powerful tests, likelihood functions, sufficient statistics, optimal estimation, bounds on the estimator variance, minimum variance linear estimation, prediction and regression, interval estimation, and confidence. Extraction of useful information from noisy observations and informed decision making are at the core of multiple disciplines ranging from traditional communications and sensor array processing to biomedical data analysis, pattern recognition and machine learning, security and defense, and financial engineering. Lectures are supported by illustrative examples, hands-on exercises, and numerical implementations grounded in real-world examples.

Prerequisite(s): (EECE 2520 with a minimum grade of D- ; (EECE 3468 with a minimum grade of D- or MATH 3081 with a minimum grade of D-) or DS 5020 with a minimum grade of C-) or graduate program admission

EECE 5614. Reinforcement Learning and Decision Making Under Uncertainty. (4 Hours)

Covers fundamentals of reinforcement learning. Begins with multiarmed bandit problems and basics of exploration and exploitation. Relates the key concepts of decision theory to dynamic programming and reinforcement learning. Discusses well-known off-policy and on-policy temporal difference learning methods. Connects reinforcement learning to key concepts in reasoning under uncertainty. Covers large-scale learning methods, including deep-value-based and policy-based methods. Explores reinforcement learning applications in robot navigation in uncertain and complex environments. Describes the applications of reinforcement learning in genomics and systems biology, including the derivation of intervention strategies for treating chronic diseases such as cancer.

Prerequisite(s): (EECE 3468 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MATH 2331 with a minimum grade of D- or IE 3412 with a minimum grade of D-) or graduate program admission

EECE 5626. Image Processing and Pattern Recognition. (4 Hours)

Introduces processing and analysis of digital images with the goal of recognition of simple pictorial patterns. Topics include discrete signals and systems in 2D, digital images and their properties, image digitization, image enhancement, image restoration, image segmentation, feature extraction, object recognition, and pattern classification principles (Bayes rules, class boundaries) and pattern recognition methods.

Prerequisite(s): ((EECE 3464 with a minimum grade of D- or EECE 2520 with a minimum grade of D-); (EECE 3468 with a minimum grade of D- or MATH 3081 with a minimum grade of D-)) or graduate program admission

EECE 5639. Computer Vision. (4 Hours)

Introduces topics such as image formation, segmentation, feature extraction, matching, shape recovery, dynamic scene analysis, and object recognition. Computer vision brings together imaging devices, computers, and sophisticated algorithms to solve problems in industrial inspection, autonomous navigation, human-computer interfaces, medicine, image retrieval from databases, realistic computer graphics rendering, document analysis, and remote sensing. The goal of computer vision is to make useful decisions about real physical objects and scenes based on sensed images. Computer vision is an exciting but disorganized field that builds on very diverse disciplines such as image processing, statistics, pattern recognition, control theory, system identification, physics, geometry, computer graphics, and learning theory. Requires good programming experience in Matlab or C++.

EECE 5640. High-Performance Computing. (4 Hours)

Covers accelerating scientific and other applications on computer clusters, many-core processors, and graphical processing units (GPUs). Modern computers take advantage of multiple threads and multiple cores to accelerate scientific and engineering applications. Topics covered include parallel computer architecture, parallel programming models, and theories of computation, as well as models for many-core processing. Highlights implementation of computer arithmetic and how it varies on different computer architectures. Includes an individual project where each student is expected to implement an application, port that application to several different styles of parallelism, and compare the results. Programming is done in variants of the C programming language.

Prerequisite(s): EECE 3324 with a minimum grade of D- or CS 3650 with a minimum grade of D- or graduate program admission

EECE 5641. Introduction to Software Security. (4 Hours)

Offers students an opportunity to learn how the security of systems can be violated and how such attacks can be detected and prevented. Computer security problems have a significant impact on practical aspects of our lives. Despite a considerable corpus of knowledge about tools and techniques to protect systems, information about actual vulnerabilities and how they are exploited is not generally available. Covers common programming, configuration, and design mistakes and examines possible protection and detection techniques. Uses examples to highlight general error classes. Includes a number of practical lab assignments that require students to apply their knowledge, as well as engage in a discussion of the current research in the field.

Prerequisite(s): ((EECE 2540 with a minimum grade of D- ; (EECE 4534 with a minimum grade of D- or EECE 3324 with a minimum grade of D-) or (CS 3650 with a minimum grade of D- ; (CS 3700 with a minimum grade of D- or EECE 2540 with a minimum grade of D-)) or (EECE 7205 with a minimum grade of C- ; (EECE 7376 with a minimum grade of C- or CS 5600 with a minimum grade of C-)))

EECE 5642. Data Visualization. (4 Hours)

Introduces relevant topics and concepts in visualization, including computer graphics, visual data representation, physical and human vision models, numerical representation of knowledge and concept, animation techniques, pattern analysis, and computational methods. Topics include tools and techniques for practical visualization and elements of related fields, including computer graphics, human perception, computer vision, imaging science, multimedia, human-computer interaction, computational science, and information theory. Covers examples from a variety of scientific, medical, interactive multimedia, and artistic applications. Includes hands-on exercises and projects. Emphasizes modern engineering applications of computer vision, graphics, and pattern classification methodologies for data visualization.

EECE 5643. Simulation and Performance Evaluation. (4 Hours)

Covers topics on computer simulation and performance evaluation in computer systems. Introduces basic computational and mathematical techniques for modeling, simulating, and analyzing the performance by using simulation, including models, random number generation, statistics analysis, and discrete event-driven simulation. Also covers both classic and timely techniques in the area of performance evaluation, including workload characterization, capacity planning, and resource management in enterprise systems, computer networks, data centers, and cloud computing.

Prerequisite(s): EECE 3326 with a minimum grade of D- or EECE 2560 with a minimum grade of D- or CS 3000 with a minimum grade of D- or graduate program admission

EECE 5644. Introduction to Machine Learning and Pattern Recognition. (4 Hours)

Studies machine learning (the study and design of algorithms that enable computers/machines to learn from experience/data). Covers a range of algorithms, focusing on the underlying models between each approach. Emphasizes the foundations to prepare students for research in machine learning. Topics include Bayes decision theory, maximum likelihood parameter estimation, model selection, mixture density estimation, support vector machines, neural networks, probabilistic graphics models, and ensemble methods (boosting and bagging). Offers students an opportunity to learn where and how to apply machine learning algorithms and why they work.

Prerequisite(s): EECE 3468 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or EECE 7204 with a minimum grade of C- or DS 5020 with a minimum grade of C- or MATH 1215 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or IE 3412 with a minimum grade of D- or CIVE 3464 with a minimum grade of D- or BIOE 2365 with a minimum grade of D- or MGSC 2301 with a minimum grade of D-

EECE 5645. Parallel Processing for Data Analytics. (4 Hours)

Covers the fundamentals of parallel machine-learning algorithms, tailored specifically to learning tasks involving large data sets. Reviews methods for dealing with both large and high-dimensional data sets, emphasizing distributed implementations. Beyond covering the theory behind statistical data analysis, the course also offers a hands-on approach, using Spark as a development platform for parallel learning. Topics include, Apache Spark fundamentals, multithreaded/cluster execution, resilient distributed data structures, map-reduce operations, using key-value pairs, joins, convex optimization, gradient descent, linear regression, Gauss-Markov theorem, ridge and lasso regularization, feature selection, cross validation, variance vs. bias trade-off, classification, logistic regression, ROC curves and AUC, matrix and tensor factorization, graph-parallel algorithms and sparsity, Perceptron algorithm, and deep neural networks.

Prerequisite(s): ((MATH 3081 with a minimum grade of D- or EECE 3468 with a minimum grade of D-); (EECE 2560 with a minimum grade of D- or CS 3000 with a minimum grade of D- or CS 4800 with a minimum grade of D-)) or EECE 5644 with a minimum grade of C- or DS 5220 with a minimum grade of C- or DS 5230 with a minimum grade of C-

EECE 5647. Nanophotonics. (4 Hours)

Introduces basic concepts and recent developments in nanophotonic materials and devices. Nanophotonics is one very important research area in nanotechnology. Discusses the fundamentals of electromagnetics (Maxwell's equations, polarization, wave propagations, etc.); quantum mechanics; and typical nanofabrication and characterization techniques. Focuses on specific topics in nanophotonics, including silicon photonics; photonic crystals; plasmonics and optical metamaterials, with their diverse applications in optical circuits; imaging; optical trapping; biomedical sensing; and energy harvesting. Offers students an opportunity to obtain a fundamental understanding of the property and manipulation of light at the nanoscale.

Prerequisite(s): EECE 3440 with a minimum grade of D- or EECE 2530 with a minimum grade of D- or graduate program admission

EECE 5649. Design of Analog Integrated Circuits with Complementary Metal-Oxide-Semiconductor Technology. (4 Hours)

Covers theoretical analysis, practical design, and simulation of analog integrated circuits implemented in complementary metal-oxide-semiconductor (CMOS) fabrication process technologies. Introduces cadence tools for circuit simulations, physical layout, and layout verification. Begins with basic concepts such as CMOS device models, DC and small-signal analysis techniques for single- and multistage amplifiers, biasing configurations, and reference generation circuits. Explores differential signal processing, operational amplifiers, operational transconductance amplifiers, and common-mode feedback circuits. Analysis methods include the evaluation of linearity, noise, stability, and device mismatches from process variations. Addresses some advanced design techniques, such as linearity improvement methods, frequency compensation, and digitally assisted performance tuning.

Prerequisite(s): EECE 3410 with a minimum grade of D- or graduate program admission

EECE 5651. Introduction to Photonic Devices. (4 Hours)

Introduces fundamentals of photonic devices and guided-wave optoelectronics. Photonic devices play a key role in long-haul telecommunications, datacom/high-performance computing, as well as quantum communication and computation. Introduces basics of passive and active components used in these applications with coverage of electromagnetic and fiber optics, dielectric waveguides, photonic integrated circuit (PIC) technology, sources (semiconductor lasers), and photon detectors and external modulators (electro- and acousto-optic).

Prerequisite(s): (EECE 2530 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-) or graduate program admission

EECE 5652. Microwave Circuits and Systems. (4 Hours)

Addresses novel applications of analytical and engineering techniques for RF/microwave circuits, in addition to transmission lines, impedance matching, S-parameters, high-frequency circuit analysis, power dividers, resonators, filters, amplifier, and nonlinear components. Emphasizes fundamental concepts, essential mathematical formulas and theorems, and engineering applications. Provides ample examples to offer participants an opportunity to fully appreciate the power of the techniques described and gain extensive experience in the area of high-frequency circuits, from theory formulation to novel engineering designs.

Prerequisite(s): ((EECE 2150 with a minimum grade of D- or EECE 2210 with a minimum grade of D- or BIOE 3210 with a minimum grade of D-); (EECE 2530 with a minimum grade of D-)) or graduate program admission

EECE 5653. Introduction to Quantum Engineering. (4 Hours)

Introduces the fundamental principles of quantum mechanics and their applications to emerging quantum technologies such as quantum computation, secure quantum communications, and quantum-enhanced sensing. Covers the description of simple quantum systems such as harmonic oscillators using Schrodinger's equation and operator formalism; the use of quantum platforms such as photons to encode qubits; generating and characterizing entanglement; and the implementation of quantum circuits for quantum computation and communication algorithms such as teleportation, entanglement swapping, and factoring. Emphasizes the foundations to prepare students for research in quantum devices and their applications to quantum information sciences.

Prerequisite(s): MATH 2341 with a minimum grade of D- or graduate program admission

EECE 5654. Design and Prototyping of Optical Systems for Engineering Applications. (4 Hours)

Studies how to design optics experiments and instrument prototypes on the benchtop, as well as to fabricate and test them in a laboratory environment. Discusses application areas including biomedical imaging; astronomy; LiDAR; remote sensing; environmental monitoring; semiconductor fabrication; optical communication; optical computing; military imaging; tracking; and guidance, solar energy, and imaging systems for robotics, security, and transportation. Illustrates how to apply the most important and common equations of optics to design of systems that meet specifications and to evaluation of their performance.

Prerequisite(s): ((BIOE 3210 with a minimum grade of D- or EECE 2150 with a minimum grade of D- or EECE 2210 with a minimum grade of D-); (EECE 4646 with a minimum grade of D- or EECE 2530 with a minimum grade of D-)) or graduate program admission

EECE 5665. Signal Processing for Global Navigation Satellite Systems. (4 Hours)

Introduces global navigation satellite systems (GNSS), covering the fundamental aspects of operation. Emphasizes receiver design, although onboard satellite aspects are also discussed, such as the different signals and GNSS constellations (focusing on GPS and Galileo). Offers students an opportunity to gain basic knowledge of the underlying principles of GNSS, while learning how to apply tools of statistical signal processing from detection, estimation, and filtering theories to a real-world engineering application. Topics include notions in GNSS history, constellations and signals, propagation channel and main impairments, RF front-end architectures, signal acquisition, signal tracking, position calculation and integrity measures, sensor hybridization and data fusion, and identification of the most challenging scenarios of operation.

Prerequisite(s): ((BIOE 3210 with a minimum grade of C- or EECE 2150 with a minimum grade of C- or EECE 2210 with a minimum grade of C-); EECE 2520 with a minimum grade of C- ; MATH 2341 with a minimum grade of C- ; (EECE 3468 with a minimum grade of C- or MATH 3081 with a minimum grade of C-)) or graduate program admission

EECE 5666. Digital Signal Processing. (4 Hours)

Presents the theory and practice of modern signal processing techniques. Topics include the characteristics of discrete signals and systems, sampling, and A/D conversion; the Z-transform, the Fourier transform, and the discrete Fourier transform; fast Fourier transform algorithms; design techniques for IIR and FIR digital filters; and quantization effects in digital signal processing. Graduate students may register for this course only if they did not complete an undergraduate course in digital signal processing; such graduate registration requires approval of instructor and an internal departmental petition.

Prerequisite(s): ((ME 4555 with a minimum grade of D- or EECE 2520 with a minimum grade of D-); EECE 3468 with a minimum grade of D-) or graduate program admission

EECE 5670. Sustainable Energy: Materials, Conversion, Storage, and Usage. (4 Hours)

Examines, in this interdisciplinary course, modern energy usage, consequences, and options to support sustainable energy development from a variety of fundamental and applied perspectives. Emphasizes both (1) physical and chemical processes in materials for the conversion of energy and (2) how to design a system with renewable energy for applications such as electricity generation and transmission. Takes a systems analysis point of view. Topics include energy conservation; fossil fuels; and energy conversion methods for solar, geothermal, wind, hydro, bioenergy, electrochemical, and similar methods.

EECE 5680. Electric Drives. (4 Hours)

Examines all subsystems that comprise an electric drive including electric machines, power electronic converters, mechanical system requirements, feedback controller design, and interactions with utility systems. Based on an integrative approach that requires minimal prerequisites: a junior-level course in signals and systems and some knowledge of electromagnetic field theory (possibly from physics classes), and does not require separate courses in electric machines, controls, or power electronics.

Prerequisite(s): ((EECE 3440 with a minimum grade of D- or EECE 2530 with a minimum grade of D-); (EECE 3464 with a minimum grade of D- or EECE 2520 with a minimum grade of D-)) or graduate program admission

Corequisite(s): EECE 5681

EECE 5681. Lab for EECE 5680. (0 Hours)

Accompanies EECE 5680. Covers topics from the course through various experiments.

Corequisite(s): EECE 5680

EECE 5682. Power Systems Analysis 1. (4 Hours)

Covers fundamentals including phasors, single-phase and balanced three-phase circuits, complex power, and network equations; symmetrical components and sequence networks; power transformers, their equivalent circuits, per unit notation, and the sequence models; transmission line parameters including resistance, inductance, and capacitance for various configurations; steady-state operation of transmission lines including line loadability and reactive compensation techniques; power flow studies including Gauss-Speidel and Newton Raphson interactive schemes; symmetrical faults including formation of the bus impedance matrix; and unsymmetrical faults including line-to-ground, line-to-line, and double line-to-ground faults.

Prerequisite(s): EECE 3440 with a minimum grade of D- or EECE 2530 with a minimum grade of D- or graduate program admission

EECE 5684. Power Electronics. (4 Hours)

Provide tools and techniques needed to analyze and design power conversion circuits that contain switches. The first part of the course emphasizes understanding and modeling of such circuits, and provides a background for engineering evaluation of power converters. The second part covers dynamics and control of this class of systems, enabling students to design controllers for a variety of power converters and motion control systems. Addresses a set of analytical and practical problems, with emphasis on a rigorous theoretical treatment of relevant questions. Designed for students with primary interests in power conditioning, control applications, and electronic circuits, but it could prove useful for designers of high-performance computers, robots, and other electronic and electromechanical (mechatronic) systems in which the dynamical properties of power supplies become important.

Prerequisite(s): (EECE 2412 with a minimum grade of D- ; (EECE 3464 with a minimum grade of D- or EECE 2520 with a minimum grade of D-)) or graduate program admission

Corequisite(s): EECE 5685

EECE 5685. Lab for EECE 5684. (0 Hours)

Accompanies EECE 5684. Covers topics from the course through various experiments.

Corequisite(s): EECE 5684

EECE 5686. Electrical Machines. (4 Hours)

Reviews phasor diagrams and three-phase circuits; the magnetic aspects including magnetic circuits and permanent magnets; transformers, their equivalent circuits, and performance; principles of electromechanical energy conversion; elementary concepts of rotating machines including rotating magnetic fields; and steady-state theory and performance of induction machines, synchronous machines, and direct current machines.

Prerequisite(s): EECE 2530 with a minimum grade of D- or graduate program admission

EECE 5688. Analysis of Unbalanced Power Grids. (4 Hours)

Examines common types of power system faults. Starts with a detailed description of three-phase modeling of basic power system elements such as transmission lines, transformers, and generators. Then presents fundamentals of three-phase circuit analysis in the steady state, both for balanced and unbalanced operating conditions. Uses symmetrical component transformation and positive, negative, and zero sequence networks to analyze unbalanced systems. Presents methods to calculate fault currents and postfault bus voltages. Reviews basic protective relaying and relay settings using typical distribution system examples.

Prerequisite(s): EECE 2150 with a minimum grade of D- or graduate program admission

EECE 5690. Electric Vehicle Power Trains. (4 Hours)

Designed to familiarize students with electric vehicle power trains. Covers different types of energy storage elements used in EV and hybrid electric vehicles, bidirectional DC-DC converters and their control, inverters, different power converter topologies for onboard charging, wireless power transfer for battery charging, and different types of electric motors that are used in EVs.

Prerequisite(s): (EECE 2412 with a minimum grade of D- ; EECE 2530 with a minimum grade of D-) or graduate program admission

EECE 5692. Antennas for Wireless Communication and Sensing. (4 Hours)

Introduces the fundamental physical principles for the electromagnetic radiation from antennas. Presents the most important mathematical techniques for the analysis of the radiation. Applies these principles and techniques to practical antenna systems. Starting with the fundamental parameters of the antennas, introduces the vector potentials and the theorems that are needed for the derivation of the radiation integrals from Maxwell's equations and formulates various antenna radiation characteristics. Covers the applications of practical antennas, wireless communications and networks, space antennas, bio and wearable antennas, and optical antennas, to name a few.

Prerequisite(s): EECE 2530 with a minimum grade of D- or graduate program admission

EECE 5693. Electromagnetic Devices for RF and Wireless Communications. (4 Hours)

Introduces some of the unique electromagnetic devices integrated in current and future technologies in the field of electromagnetics. These devices have impacted various disciplines including wireless systems, radar and space research, photonics, and bio and medical imaging. Covers transmission lines, RF/microwave circuits, high-frequency power dividers, and filters components. Discusses the translational area of antennas and wireless systems, radiation synthesis, and array antennas. Discusses some photonic components, as well as emerging applications such as antennas for 5G, massive MIMO (multiple-input and multiple-output) wireless antennas, and wearable sensors.

Prerequisite(s): EECE 2530 with a minimum grade of D- or graduate program admission

EECE 5697. Acoustics and Sensing. (4 Hours)

Introduces the fundamental concepts of acoustics and sensing with waves. Offers a unified theoretical approach to the physics of image formation through scattering and wave propagation in sensing. Topics include the linear and nonlinear acoustic wave equation; sources of sound; reflection, refraction, transmission, and absorption; bearing and range estimation by sensor array processing, beam forming, matched filtering, and focusing; diffraction, bandwidth, ambient noise, and reverberation limitations; scattering from objects, surfaces, and volumes by Green's theorem; forward scatter, shadows, Babinet's principle, extinction, and attenuation; ray tracing and waveguides in remote sensing; and applications to acoustic, radar, seismic, thermal, and optical sensing and exploration.

Prerequisite(s): EECE 3464 with a minimum grade of D- or EECE 2520 with a minimum grade of D- or graduate program admission

EECE 5698. Special Topics in Electrical and Computer Engineering. (4 Hours)

Covers special topics in electrical and computer engineering. Topics are selected by the instructor and vary from semester to semester. May be repeated up to four times.

EECE 5699. Computer Hardware and System Security. (4 Hours)

Introduces computer hardware and system security. Covers state-of-the-art hardware security and trust issues, including a hands-on lab session to implement various hardware security attacks. Topics include applied cryptography, side-channel attacks, differential power analysis, fault injection and analysis, cache side-channel attacks (Meltdown and Spectre), acoustic analysis, and hardware security primitives (physical unclonable function and random number generator).

Prerequisite(s): EECE 3324 (may be taken concurrently) with a minimum grade of D- or CS 3650 (may be taken concurrently) with a minimum grade of D- or CS 5600 (may be taken concurrently) with a minimum grade of D- or graduate program admission

EECE 6400. Special Problems in Electrical and Computer Engineering. (1-4 Hours)

Delves deeply, in collaboration with a faculty member, into a specialized subject typically not covered extensively in the standard electrical and computer engineering curriculum. The topic may involve analysis, experimentation, computational methods, or a blend of these approaches. Potential outcomes include producing a comprehensive report, gathering experimental data, or designing and evaluating algorithms.

EECE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EECE 7105. Optics for Engineers. (4 Hours)

Provides an introductory graduate course in optics, presenting the engineering concepts necessary to understand and evaluate electro-optical systems. Begins with a brief but rigorous treatment of geometric optics, including matrix methods, aberrations, and pupils and windows, with practical examples of optical instruments and electro-optical systems. Topics include polarization, interference, diffraction, and optical properties of crystals, thin films, optical resonators, guided waves, modulators, and detectors. Presents concepts with examples from modern optical systems such as LIDAR, fiber-optical sensors, range finders, infrared systems, and optical communication systems. Requires a Bachelor of science in engineering or physics.

EECE 7150. Autonomous Field Robotics. (4 Hours)

Examines the role of software and hardware in the design and use of real autonomous systems, including autonomous cars, autonomous underwater vehicles, and unmanned aerial systems. Focuses on using real large-scale robotics systems in real-world settings.

Prerequisite(s): EECE 5554 with a minimum grade of C-

EECE 7200. Linear Systems Analysis. (4 Hours)

Covers fundamental algebraic concepts and algebraic structures. Topics include linear operators and their representations; matrices, algebraic equations, equivalence, and similarity transformations; introduction to the state-variable theory of continuous and discrete linear systems; standard canonical representations, the concept of state, and the representation of interconnected systems, linear spaces, the state equations, and their solution; stability; and introduction to the general control problem in terms of controllability and observability.

EECE 7201. Solid State Devices. (4 Hours)

Covers the fundamental elements of solid-state device physics and the application of these principles. Seeks to provide students with the opportunity to develop an understanding of pn junctions, bipolar junction transistors, and MOSFETs.

EECE 7202. Electromagnetic Theory 1. (4 Hours)

Examines the fundamental equations, their physical meaning, principal mathematical techniques, and important engineering applications. Topics include sources of the electromagnetic field, Lorentz force equation, integral form of Maxwell's equations and point relations (differential equations and boundary conditions), electromagnetic energy and power, propagation of uniform and nonuniform plane waves in homogeneous media, reflection and refraction, scalar and vector potentials, solutions in the absence of boundaries for static and dynamic problems, solutions to boundary value problems, duality, uniqueness, images, physical theory of diffraction, and general theory of metal and dielectric wave-guides and resonators for Cartesian and cylindrical systems.

EECE 7203. Complex Variable Theory and Differential Equations. (4 Hours)

Comprises the theory of functions of a complex variable. Covers Cauchy's integral and related theorems, Taylor and Laurent series, analytic continuation, and multivalued functions. Considers special functions of mathematical physics using generating functions, Taylor and Laurent expansions, and various integral representations. Reviews applications of complex variable theory drawn from optics and electromagnetic theory and from digital signal processing and digital communications. Focuses on the theory of ordinary and partial differential equations of mathematical physics. Develops series solutions of ordinary differential equations of second order using the tools of complex variable theory. Covers Sturm-Liouville theory and uses it to develop eigen function and Green function solutions of homogeneous and inhomogeneous partial differential equations. Requires knowledge of undergraduate advanced calculus.

EECE 7204. Applied Probability and Stochastic Processes. (4 Hours)

Covers the fundamentals of probabilistic treatment and the concept of random processes, which are essential for many engineering disciplines and data analysis in general. Includes the basic laws of probability, random variables and their functions, probability density and cumulative distributions, statistical averages, bounds on probability, and the central limit theorem. Outlines basic principles of statistics, including estimation of probability, confidence intervals, and order statistics. Provides an overview of detection and estimation problems, including maximum likelihood and Bayesian principles, Cramer-Rao bound, linear estimators, and hypothesis testing. Studies random sequences, with notions of convergence, laws of large numbers, and examples of Markov chains. Defines random processes, along with the concepts of stationarity, ergodicity, autocorrelation and power spectral density, and filtering operations.

EECE 7205. Fundamentals of Computer Engineering. (4 Hours)

Introduces fundamental techniques in computer engineering used throughout the graduate curriculum. Covers basic programming and analysis methods and the formulation and solution of a wide range of computer engineering problems. Also discusses the applications of algorithm analysis and complexity theory to analyzing and solving problems. Emphasizes those fundamental computational problems and related algorithms whose solution can be obtained in polynomial time. For basic computational problems such as sorting, searching, elementary graph algorithms, shortest-paths problems, as well as flow problems in networks, many different algorithms and data structures are described and analyzed, implemented, and compared both from a theoretical and from an experimental point of view.

EECE 7211. Nonlinear Control. (4 Hours)

Discusses phase plane analysis for nonlinear systems. Topics include fundamentals of Lyapunov theory; absolute stability, passivity, averaging, singular perturbation, input-output stability, and other advanced stability topics; describing functions; nonlinear control methods based on linearization, feedback linearization, sliding control, Lyapunov, and passivity and center manifold theory and bifurcations.

Prerequisite(s): EECE 7200 with a minimum grade of C-

EECE 7213. System Identification and Adaptive Control. (4 Hours)

Discusses fundamental issues of adaptive identification and control, such as stability of adaptive systems, convergence, persistent excitation, and robustness. Identification is the process of mathematically modeling a system based on measurement data that may be limited or uncertain. Adaptive control, then, is the means by which a system that is poorly modeled is controlled adequately. Enhances the underlying basic ideas that are essential for adaptive control. Emphasizes recursive approaches, such as recursive least squares algorithm, where parameter estimates are updated in real time. Covers simple adaptive systems, adaptive observers, and adaptive control. Discusses in detail two major adaptive schemes, model reference adaptive control (MRAC) and self-tuning regulators (STR).

Prerequisite(s): EECE 7200 with a minimum grade of C-

EECE 7214. Optimal and Robust Control. (4 Hours)

Explores state-space, time-domain techniques for analyzing and designing optimal and robust linear control systems. Introduces basic concepts of dynamic optimization and applies them to problems of short-term and long-term optimal control, path planning and stabilization, state estimation, and filtering. Emphasizes linear quadratic optimization, H₂ control, H-infinity control, and mu-synthesis. Reviews pertinent linear systems concepts and discusses connections with a geometric intuition relating quadratic optimization to projections.

Prerequisite(s): EECE 7200 with a minimum grade of C-

EECE 7215. Introduction to Distributed Intelligence. (4 Hours)

Introduces distributed intelligence (complex distributed networks), their structure, and function, with examples from engineering, applied mathematics, and social sciences. Topics include spectral graph theory, notions of centrality, random graph models, contagion phenomena and epidemics, cascades and diffusion, game theory, and opinion dynamics.

Prerequisite(s): EECE 5580 with a minimum grade of C- or EECE 7346 with a minimum grade of C-

EECE 7223. Riemannian Optimization. (4 Hours)

Offers a self-contained introduction to optimization on smooth manifolds. Covers both theoretical foundations and practical computational methods that students can apply to their own work. Introduces the theory of Riemannian geometry. Emphasizes those elements that are relevant for the construction of optimization algorithms (tensor fields, metrics, connections, geodesics, retractions, and transporters). Applies this geometric machinery to devise first- and second-order smooth optimization methods on generic Riemannian manifolds. Focuses on the development of practical computational techniques, with applications to robotics, computer vision, and machine learning.

EECE 7224. Power Systems State Estimation. (4 Hours)

Offers an up-to-date account of the strategies utilized in state estimation of electric power systems. Provides a broad overview of power system operation and the role of state estimation in overall energy management. Presents an abundance of examples, models, tables, and guidelines to clearly examine new aspects of state estimation, the testing of network observability, and methods to assure computational efficiency.

EECE 7226. Modeling and Simulation of Power System Transients. (4 Hours)

Presents computer modeling of linear and nonlinear power system components to be used in transient studies. Covers methods of digital simulation of power systems operating in the steady-state and transient conditions. Discusses use of transient simulation programs for design and analysis of power systems. Students are asked to carry out a term project and deliver a presentation about its outcome.

EECE 7228. Advanced Power Electronics. (4 Hours)

Designed to familiarize students with advanced power electronic circuits. Covers single-phase and three-phase rectifiers and inverters, including their principles of the operation, design, analysis, and applications. Diode rectifiers, phase-controlled rectifiers, and switch mode rectifiers and inverters are among the topics. Introduces different modulation techniques. If time permits, covers three-phase ac-ac converters and soft switching techniques, as well.

Prerequisite(s): EECE 5684 with a minimum grade of D- or EECE 5684 with a minimum grade of C- (Graduate)

EECE 7240. Analog Integrated Circuit Design. (4 Hours)

Treats the analysis and design of analog ICs, their functional performance, and applications. Focuses on the various building blocks of analog circuits, their operation, and the underlying principles and techniques, with analysis supplemented by CAD simulation. Topics include modeling and layout of CMOS, bipolar, BiCMOS devices, and passive components; DC building blocks, including precision current and voltage references; performance analysis of signal gain, impedances, and frequency response and speed of basic/compound amplifier structures; architectures of operational amplifiers, including low-voltage, OTAs, and three-stage designs; feedback and performance merits, topologies, instability, and frequency compensation of feedback amplifiers; nonlinear and analog computation IC functions; noise in ICs, physical origins and device modeling, noise circuit analysis, SNR and NF, and techniques for the enhancement of system noise performance.

Corequisite(s): EECE 7248

EECE 7242. Integrated Circuits for Mixed Signals and Data Communication. (4 Hours)

Covers analysis and design of ICs for high-speed communications and mixed-signal processing. Focuses on performance of CMOS and BiCMOS implementations of building blocks for these systems. Covers passive R, L, C, and active devices for ICs; broadband amplifiers, TIAs, limiters, buffers/drivers, muxes, and demuxes; circuit noise modeling and analysis and methods for optimization of SNR and BER, with applications to optical communication; baseband and HF filters; design methods of L-C, OTA-C, MOSFET-C, and switched-C filters; data conversion and D-A and A-D characteristics, popular DAC architectures, serial and parallel ADCs, and high-resolution techniques; clock generators and oscillators, L-C resonator-based designs, VCOs, PLLs and frequency synthesis, and CDR circuits. Requires a verification review of a selected publication relevant to the course. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): EECE 5649 with a minimum grade of C- or EECE 7240 with a minimum grade of C-

EECE 7244. Introduction to Microelectromechanical Systems (MEMS). (4 Hours)

Introduces microelectromechanical systems, including principles of sensing and actuation, microfabrication technology for MEMS, noise concepts, and packaging techniques. Covers a wide range of disciplines, from electronics to mechanics, material properties, microfabrication technology, electromagnetics, and optics. Studies several classes of devices including inertial measurement devices, pressure sensors, rf components, and optical MEMS. Devotes the last third of the semester largely to projects involving design of MEMS devices to specifications in a realistic fabrication process.

EECE 7245. Microwave Circuit Design for Wireless Communication. (4 Hours)

Covers planar microwave circuits and integrated circuits (MMICs) for wireless communication systems. Employs microwave CAD tools in design projects as well as in-class case-study examples. Reviews communication system basics, modulation and demodulation, architectures of receivers and transmitters, and system performance. Covers planar transmission lines and coupled lines and their application to important devices and microwave circuit functions and multiport networks using S-parameters, flow graphs, and Smith charts. Studies microwave filters, narrowband and broadband amplifiers, their gain and stability, impedance matching, and noise performance, as well as mixers and frequency-conversion techniques. Finishes with design and performance of microwave oscillators. Covers wireless standards, multiple-access techniques, and recent advances if time permits.

EECE 7247. Radio Frequency Integrated Circuit Design. (4 Hours)

Introduces radio frequency (RF) integrated circuit analysis, design, and simulation methods with an emphasis on CMOS implementations. Covers basic RF design concepts including linearity, noise figure, sensitivity, impedance matching, and imperfections of integrated passive components (parasitics, quality factors). Discusses front-end circuit design considerations for low-noise amplifiers, mixers, oscillators, and power amplifiers.

Prerequisite(s): EECE 7240 with a minimum grade of C- or EECE 5649 with a minimum grade of C- or EECE 5649 with a minimum grade of D-

EECE 7248. Lab for EECE 7240. (0 Hours)

Accompanies EECE 7240. Covers topics from the course through various experiments.

Corequisite(s): EECE 7240

EECE 7250. Power Management Integrated Circuits. (4 Hours)

Presents power management circuits with a focus on modern system on a chip (SoC). Introduces linear regulators, switching converters, switched-capacitor converters, voltage references, energy harvesters, and battery chargers. Studies various control methods, design trade-offs, and performance metrics in the context of an SoC. Introduces emerging energy-harvesting techniques for IC design. After completing this course, the successful student should be able to design, characterize, choose, or specify power-management circuits or ICs for a system.

Prerequisite(s): EECE 5649 with a minimum grade of D- or EECE 5649 with a minimum grade of C- (Graduate) or EECE 7240 with a minimum grade of C-

EECE 7270. Electromagnetic Theory 2. (4 Hours)

Continues EECE 7202. Examines important electrodynamic applications by the use of advanced mathematical techniques. Topics include general theory of wave-guides and resonators with application to the cylindrical geometry; dielectric rod wave-guide; optical fibers; radiation; linear antennas; loop antenna; linear arrays; ray optics; scattering and diffraction of waves for planar, cylindrical, and spherical geometries; and effects of random media.

Prerequisite(s): EECE 7202 with a minimum grade of C-

EECE 7271. Computational Methods in Electromagnetics. (4 Hours)

Presents solutions to problems in electromagnetics using a wide variety of numerical and computational methods. Discusses in detail the finite difference approximations of partial differential equations and the finite difference time-domain method of simulating electromagnetic wave propagation and scattering. Uses moment methods to solve the integral equations related to currents and charges on wire structures. Uses finite element and higher-order finite difference methods to solve problems in electrostatics and wave propagation. Discusses efficient matrix methods, relaxation methods, the conjugate gradient technique, and multidimensional Newton's method in the context of electromagnetic field simulation.

Prerequisite(s): EECE 7202 with a minimum grade of C-

EECE 7275. Antennas and Radiation. (4 Hours)

Presents the fundamental theory and properties of antennas. Topics include equivalence, reciprocity, uniqueness, Huygen's principle, antenna impedance, and diffraction; linear, loop, array, and aperture antennas including horns, reflectors, lenses, and microstrip; transmitting and receiving antennas and transmission formulas; and numerical antenna analysis methods.

Prerequisite(s): EECE 7202 with a minimum grade of C-

EECE 7284. Optical Properties of Matter. (4 Hours)

Presents the formal mathematical treatment of classical crystal optics including dispersion, polarization, birefringence, metal optics, and the optics of thin films. Emphasis is on the interaction of electromagnetic waves and the crystal lattice. Classical crystal optics are extended to nonlinear effects observed with very intense electric and magnetic fields. Presents applications of nonlinear optics, such as second- and third-harmonic generation, optical mixing, optical parametric oscillation, multiple photon interaction, and linear and nonlinear scattering. Various topics in linear and nonlinear optics are applied in such areas as birefringent filters, second-harmonic generators, optical parametric oscillators, and acousto-optical beam deflectors.

EECE 7293. Modern Imaging. (4 Hours)

Covers basic and advanced topics in imaging engineering. Starts with the formulation of typical forward problems in electromagnetic and acoustic wave field propagation and scattering, emphasizing biomedical and nondestructive testing applications, and continues with a survey of imaging methodologies including the so-called qualitative imaging methods. Topics covered are: obstacle scattering, inhomogeneous medium scattering, uniqueness and stability in inverse scattering, imaging with finite data, point-source method and its applications, singular sources and shape reconstruction, linear sampling methods, signal-subspace-based methods, noniterative approaches for the inverse medium problem, intensity-only imaging, estimation theory in imaging and the question of superresolution, and selected topics in compressive sensing and quantum imaging.

Prerequisite(s): EECE 7202 with a minimum grade of C-

EECE 7296. Electronic Materials. (4 Hours)

Offers a basic treatment of electronic materials from atomic, molecular, and application viewpoints. Topics include atomic structure and bonding in materials, structure of materials, and crystal defects. These topics lay a foundation for thermal and electronic conduction, which is the underlying physics of electronic devices. Examines the electronic properties of semiconductors, dielectric, magnetic, superconducting, and optical materials. The latter half of the course deals with an introduction to state-of-the-art electronic materials, including semiconductor nanoelectronics, magnetic semiconductors and Spintronics, molecular electronics, carbon nanotubes, conducting polymers, graphene and graphane, and other topics representing recent technological breakthroughs in the area of electronic materials.

EECE 7310. Modern Signal Processing. (4 Hours)

Covers theory and practice of modern signal processing techniques with emphasis on optimal filtering and multirate signal processing. Includes the principle of orthogonality, Wiener and Kalman filters, linear prediction, spectral factorization, the Yule-Walker equations, decimation and interpolation, Noble identities and polyphase representation, and maximally decimated filter banks.

Prerequisite(s): EECE 7204 with a minimum grade of C-

EECE 7311. Two Dimensional Signal and Image Processing. (4 Hours)

Examines the fundamentals of two-dimensional signal processing, with emphasis on image processing. Topics include signals, systems, and transforms in two dimensions; design and analysis of FIR and IIR filters; DFT and FFT algorithms; generation of digital image from the source; image digitizers and display devices; image transforms; techniques for point-wise, local, and global image enhancement; statistical image restoration techniques including recursive estimation; image coding techniques in spatial and transform domain including coding for facsimile transmission; and feature analysis. Requires a good understanding of linear systems, transform techniques, linear algebra, and random processes.

EECE 7315. Digital Image Processing. (4 Hours)

Focuses on generation of digital image from the source; image digitizers and display devices; image transforms; enhancement techniques, such as histogram, equalization, and edge sharpening; restoration by Wiener and Kalman filters; image coding using run-length coding; DPCM; transform coding; and feature analysis. Undergraduate course in digital signal processing highly recommended but not required.

EECE 7323. Numerical Optimization Methods. (4 Hours)

Introduces fundamental theoretical and algorithmic concepts behind numerical optimization theory for objective functions with finite numbers of parameters. Optimization problems arise ubiquitously in all areas of engineering and science. Presents established numerical methods for iterative unconstrained and constrained optimization. Topics covered include line-search and trust-region strategies, gradient descent and Newton methods and their variations, linear and quadratic programming, penalty-augmented Lagrangian methods, sequential quadratic programming, and interior point methods. The course relies on the use of Matlab in projects. Requires a basic knowledge of calculus and linear algebra.

EECE 7336. Digital Communications. (4 Hours)

Covers fundamentals of digital communications and coding and the basic structure of a communication system. Topics include modeling of information sources; entropy; rate distortion function; lossless and lossy source coding theorems; Huffman coding; Lempel-Ziv algorithm; scalar and vector quantization; digital modulation schemes and their spectral characterization including PAM, MPSK, QAM, OQPSK, MSK, pi/4-QPSK, CPFSK, CPM, and GMSK; and orthogonal, biorthogonal, and simplex signaling. Explores optimal receiver design and probability of error derivation for various systems. Covers noncoherent detection and DPSK systems and their performance. Discusses synchronization systems, analysis of PLL in the presence of noise, methods of timing recovery, channel capacity, and Shannon's noisy channel coding theorem. Studies cutoff rate and its communication system design. Other topics include coding systems, linear block codes, soft and hard decision decoding, performance of linear block codes, cyclic codes, convolutional codes, Viterbi decoding, error probability bounds, concatenated codes, MAP decoding, Trellis code modulation, communication over band-limited channels, ISI, Nyquist conditions, raised cosine signaling, partial response signaling, equalization techniques, linear adaptive equalization, decision feedback equalizers, maximum likelihood sequence detection, and communication over fading channels.

Prerequisite(s): EECE 7204 (may be taken concurrently) with a minimum grade of C- or EECE 3468 with a minimum grade of C-

EECE 7337. Information Theory. (4 Hours)

Discusses basic properties of entropy and mutual information, Shannon's fundamental theorems on data compression and data transmission in the single-user case, binning, and covering lemmas. Topics include rate distortion theory, feedback in one-way channels, Slepian-Wolf coding of correlated information sources, source coding with side information at the receiver, multiple access channel and its capacity region, and the capacity region of the Gaussian multiple access channel. Also covers broadcast channels, superposition coding, and the capacity region of the degraded broadcast channel; performance and comparison of TDMA, FDMA, and CDMA systems from a theoretical point of view; capacity issues for time-varying channels and channels with memory; relation between information theory and statistics; Stein's lemma; and large deviation theory.

Prerequisite(s): EECE 7204 with a minimum grade of C-

EECE 7345. Big Data and Sparsity in Control, Machine Learning, and Optimization. (4 Hours)

Covers the issue of handling large data sets and sparsity priors, presenting very recently developed techniques that exploit a deep connection to semi-algebraic geometry, rank minimization, and matrix completion. Focuses on applications, including control and filter design subject to information flow constraints, subspace clustering and classification on Riemannian manifolds, and activity recognition and classification and anomaly detection from video sequences. The goal of this course is to introduce the subject to people in the systems, machine-learning, and computer vision communities faced with "big data" and scaling problems and serve as a quick reference guide, summarizing the state of the art as of today and providing a comprehensive set of references.

Prerequisite(s): EECE 5644 with a minimum grade of C- or EECE 7323 with a minimum grade of C-

EECE 7346. Probabilistic System Modeling and Analysis. (4 Hours)

Covers fundamentals of probabilistic system modeling, building toward techniques that allow analyzing complex stochastic systems in a tractable fashion. Modeling large and complex systems requires reasoning about probabilistic behavior at a large scale. Reviews classic topics like Markov chains, convergence to a steady state, renewal processes, renewal reward processes, the strong law of large numbers, and the elementary renewal theorem. Additional topics include the asymptotic behavior of probabilistic systems, including stochastic approximation/Robbins-Monro type algorithms, and ODE/fluid limits. Illustrates how these modeling techniques can be applied in modeling real systems and adaptive algorithms, including queueing systems, distributed systems, and online learning algorithms like stochastic gradient descent.

Prerequisite(s): EECE 7204 with a minimum grade of C-

EECE 7352. Computer Architecture. (4 Hours)

Presents many of the issues involved in the design and analysis of new and evolving computer architectures. Topics include all aspects of the system including the microprocessor, memory, I/O, and networking. Emphasizes the connection between architecture and the underlying software that drives it. Topics include pipelining, superscalar, out-of-order execution and completion, data flow, caching, prefetching, virtual memory, RAID, and ATM switching. Performance analysis is another fundamental theme of this course. A project is assigned that involves the creation of a trace-driven simulation model to study the performance of various hardware or software architectural features. Also provides a survey of the current state of the art in processor architectures and provides additional readings from recent research in the field. Requires a working knowledge of C programming language.

EECE 7353. VLSI Design. (4 Hours)

Covers all aspects of VLSI design and engineering including VLSI design methodology; MOS transistors and circuits; CAD tools to create, extract, simulate, and evaluate physical layouts; CMOS fabrication process; evaluation and optimization of circuit area, power consumption, and propagation delay; CAD tools to design CMOS systems with standard cells; system clocking design and evaluation; the characteristics and limitations of CAD tools, such as simulation, placement, and routing; VLSI testing, fault models, test vector generation, and design for testability; design projects going through a complete VLSI design cycle; and a research project targeting a specific area of VLSI engineering. Requires a knowledge of electronics and digital systems design.

EECE 7364. Mobile and Wireless Networking. (4 Hours)

Analyzes the working principles and practice of current and future mobile and wireless networks. Topics include overviews of different wireless and mobile systems and applications, 5G and beyond cellular networks, current and upcoming Wi-Fi standards, and emerging networking architectures. Covers theoretical foundations to computer simulation-based exercises. Designed with a research component involving a project that allows students to match classroom concepts to real-world problems. The overall objective is to enable the student to critically evaluate current and future wireless and mobile systems through an awareness of communication and networking theory, software protocols, and architectural know-how.

EECE 7368. High-Level Design of Hardware-Software Systems. (4 Hours)

Presents state-of-the-art methods, tools, and techniques for system-level design and modeling of complete multiprocessor systems from specification down to implementation across hardware-software boundaries. Recognizes that system complexities are growing exponentially, driven by ever-increasing application demands and technological advances that allow one to put complete multiprocessor systems on a chip (MPSoCs). System-level design that jointly covers hardware and software is one approach to address the associated complexities in the design process and the market pressures. Using system-level design languages (e.g., SpecC, SystemC), offers students an opportunity to specify, simulate, analyze, model, and design hardware-software systems based on examples of typical embedded applications. Requires working knowledge of C/C++, algorithms, and data structures.

Prerequisite(s): EECE 7205 with a minimum grade of C-

EECE 7370. Advanced Computer Vision. (4 Hours)

Offers students an opportunity to obtain practical knowledge in computer vision and to develop skills for being a successful researcher in this field. The goal of the field of computer vision is to make useful decisions about real physical objects and scenes based on sensed images. Achieving this goal requires obtaining and using descriptions (models) of the sensors and the world. Computer vision is an exciting field that builds on very diverse disciplines such as image processing, statistics, pattern recognition, control theory and system identification, physics, geometry, computer graphics, and machine learning. Course material includes state-of-the-art in the field, current research trends, and algorithms and their applications, with an emphasis on the mathematical methods used.

EECE 7374. Fundamentals of Computer Networks. (4 Hours)

Presents an overview of modern communication networks using the internet as a primary case study. Uses the concept of layered network architecture as a framework for understanding the principal functions and services required for achieving reliable end-to-end communications. Topics include networking application design and network programming (socket programming), service interfaces and peer-to-peer protocols, the reference model for TCP/IP (internet), transport layer and network layer issues, data link layer and LANs (local area networks) architectures, and important emerging technologies, including software-defined networking (SDN). Covers the basics of wireless and mobile networking (principles and practice) and standardization and policy issues concerning communications and networks.

EECE 7376. Operating Systems: Interface and Implementation. (4 Hours)

Covers fundamentals of operating systems (OS) design, including theoretical, OS-generic design considerations as well as the practical, implementation-specific challenges in the development of a real OS. Requires proficiency in the C programming language, the GNU tool set for C programming, and debugging in Unix operating systems.

Prerequisite(s): CS 3000 with a minimum grade of C- or EECE 2560 with a minimum grade of C- or EECE 7205 with a minimum grade of C-

EECE 7390. Computer Hardware Security. (4 Hours)

Covers computer hardware and embedded system security and trust, a major concern for national security. Topics include crypto engineering, side-channel attacks, hardware security primitives, counterfeit electronics detection and prevention, logic locking and obfuscation, hardware Trojan detection and isolation, passive and active metering for the prevention of piracy, FPGA security, and artificial intelligence security from a hardware perspective. Reviews the foundations of the new and evolving area of hardware security and trust, as well as the state-of-the-art on trusted and assured microelectronics and system-on-chip design. Discusses current frontier papers to motivate research interests and ideas in building secure and trustworthy computer hardware systems.

EECE 7393. Analysis and Design of Data Networks. (4 Hours)

Introduces fundamental concepts and approaches for the analysis and design of data networks. Covers delay models, multi-access communication, scheduling, routing, congestion control, and network coding. Presents analytical techniques such as basic queuing theory, queuing networks, optimization, stochastic control, and distributed algorithms. Requires knowledge of basic probability.

EECE 7397. Advanced Machine Learning. (4 Hours)

Covers topics in advanced machine learning. Presents materials in the current machine learning literature. Focuses on graphical models, latent variable models, Bayesian inference, and nonparametric Bayesian methods. Seeks to prepare students to do research in machine learning. Expects students to read conference and journal articles, present these articles, and write an individual research paper. CS 7140 and EECE 7397 are cross-listed.

Prerequisite(s): CS 6140 with a minimum grade of C- or EECE 7204 with a minimum grade of C- or EECE 7313 with a minimum grade of C- or EECE 5644 with a minimum grade of C-

EECE 7398. Advanced Special Topics in Electrical and Computer Engineering. (4 Hours)

Covers topics of interest to the faculty member conducting this class for advanced study. May be repeated up to four times.

EECE 7400. Advanced Special Problems in Electrical and Computer Engineering. (1-4 Hours)

Offers advanced theoretical or experimental work under individual faculty supervision.

EECE 7440. Electrical and Computer Engineering Leadership Challenge Project 1. (4 Hours)

Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype with an electrical engineering focus. Constitutes the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact, while enhancing the student's technological and engineering depth and fostering the student's leadership development.

EECE 7442. Electrical and Computer Engineering Leadership Challenge Project 2. (4 Hours)

Continues EECE 7440, a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype with an electrical engineering focus and to produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact, while enhancing the student's technological and engineering depth and fostering the student's leadership development.

Prerequisite(s): EECE 7440 with a minimum grade of C-

EECE 7945. Master's Project. (4 Hours)

Offers analytical and/or experimental work leading to a written report and a final short presentation by the end of the semester.

EECE 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EECE 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

EECE 7990. Thesis. (4 Hours)

Offers analytical and/or experimental work conducted under the auspices of the department. May be repeated once.

EECE 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers analytical and/or experimental work conducted under the auspices of the department.

EECE 8986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

EECE 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

EECE 9986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated up to 4 times.

EECE 9990. Dissertation Term 1. (0 Hours)

Offers theoretical and/or experimental work conducted under the auspices of the department. Includes attendance at Distinguished Lecture Series (DLS).

Prerequisite(s): EECE 9000 with a minimum grade of S

EECE 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): EECE 9990 with a minimum grade of S

EECE 9996. Dissertation Continuation. (0 Hours)

Offers continued dissertation work conducted under the supervision of a departmental faculty member. Includes attendance at Distinguished Lecture Series (DLS).

Prerequisite(s): EECE 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Electrical Engineering Technology - CPS (EET)

Courses

EET 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EET 2005. Circuits AC/DC. (3 Hours)

Covers the design and analysis of practical DC and AC circuits. DC-related topics include basic concepts; resistors; capacitors; inductors; series and parallel circuits; theorems of Norton and Thevenin; Ohm's law; Kirchhoff's laws; transient analysis of RL, RC, and RLC circuits; power and energy; power sources; and SPICE circuit simulation. AC topics include network theorems; phasors; sinusoidal sources; steady-state analysis; steady-state power; impedance; admittance and frequency response; resonance; Bode plots; average, reactive, and complex power; and SPICE circuits simulation.

Prerequisite(s): MTH 2100 with a minimum grade of D- or MTH 2120 with a minimum grade of D-

Corequisite(s): EET 2006

EET 2006. Lab for EET 2005. (2 Hours)

Accompanies EET 2005. Applies a range of topics from the course.

Prerequisite(s): MTH 2100 with a minimum grade of D- or MTH 2120 with a minimum grade of D-

Corequisite(s): EET 2005

EET 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EET 3100. Electronics 1. (3 Hours)

Covers the theory and practical uses of active semiconductors. Topics include the operating characteristics of diodes, field-effect transistors, bipolar junction transistors, MOS transistors, and op amps; the analysis and design of single-stage amplifiers, diode circuits, and transistor circuits; rectifier circuits, clamping and clipping circuits, voltage multipliers, Zener regulators, temperature measuring, discrete amplifiers, feedback, basic op amp circuits, and switching circuits. SPICE is used to simulate circuits.

Prerequisite(s): EET 2005 with a minimum grade of D-

Corequisite(s): EET 3101

EET 3101. Lab for EET 3100. (2 Hours)

Accompanies EET 3100. Covers topics from the course through various experiments.

Prerequisite(s): EET 2005 with a minimum grade of D- ; EET 2006 with a minimum grade of D-

Corequisite(s): EET 3100

EET 3200. Electronics 2. (3 Hours)

Covers advanced analog devices and circuits and their uses. Topics include operational amplifiers, power transistors, timers, linear voltage regulators, switching regulators, sensors, advanced op amp circuits, active filters, oscillator circuitry, function generator, comparators, and timer circuitry. SPICE is used to simulate circuits, and data sheet analysis is included.

Prerequisite(s): EET 3100 with a minimum grade of D- ; EET 3101 with a minimum grade of D-

Corequisite(s): EET 3201

EET 3201. Lab for EET 3200. (2 Hours)

Accompanies EET 3200. Covers topics from the course through various experiments.

Prerequisite(s): EET 3100 with a minimum grade of D- ; EET 3101 with a minimum grade of D-

Corequisite(s): EET 3200

EET 3300. Digital Logic. (3 Hours)

Covers the design, analysis, and simulation of digital circuits. Topics include number systems, Boolean algebra, logic gates, combinational logic, circuit simplification, multiplexers, demultiplexers, encoders, decoders, latches, flip-flops, registers, counters, synchronous sequential circuits, and read-only (ROM) and random-access memory (RAM). Includes digital logic circuitry based on RTL, TTL, ECL, and CMOS logic families and the simulation of digital circuits using a hardware description language.

Prerequisite(s): MTH 1100 with a minimum grade of D-

EET 3750. Linear Systems. (3 Hours)

Covers the basic theory of continuous and discrete systems, emphasizing linear time-invariant systems. Considers the representation of signals and systems in both the time and frequency domain. Topics include linearity, time invariance, causality, stability, convolution, system interconnection, sinusoidal response, and the Fourier and Laplace transforms for the discussion of frequency-domain applications. Analyzes sampling and quantization of continuous waveforms (A/D and D/A conversion), leading to the discussion of discrete-time FIR and IIR systems, recursive analysis, and realization. The Z-transform and the discrete-time Fourier transform are developed and applied to the analysis of discrete-time signals and systems.

Prerequisite(s): (EET 2005 with a minimum grade of D- ; EET 2006 with a minimum grade of D-) or (EET 2100 with a minimum grade of D- ; EET 2101 with a minimum grade of D-); MTH 3200 with a minimum grade of D-

EET 3800. Control Systems. (3 Hours)

Covers the analysis of feedback control systems under both transient and steady-state conditions. Topics include the application of Laplace transforms in the formulation of block diagrams and transfer functions in control systems modeling; the performance characteristics of feedback control systems; and the analysis of the stability of feedback control systems using Routh-Hurwitz criterion. Uses frequency plots and measurement techniques to evaluate steady-state responses.

Prerequisite(s): EET 3750 with a minimum grade of D-

EET 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EET 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

EET 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

EET 4983. Topics. (1-4 Hours)

Covers special topics in electrical engineering technology. May be repeated without limit.

EET 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EET 4991. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

EET 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic.

EET 4994. Internship. (1-4 Hours)

Provides students with an opportunity for internship work.

Attribute(s): NUpath Integration Experience

EET 4995. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience.

EET 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major.

Attribute(s): NUpath Integration Experience

Energy Systems (ENSY)

Courses

ENSY 5000. Fundamentals of Energy System Integration. (4 Hours)

Presents fundamental issues of successfully integrating and implementing energy systems. Exposes students to combined heat and power strategies (cogeneration system), strategies of incorporating renewable with nonrenewable energy sources, thermoeconomics, and carbon sequestration techniques. Includes energy, exergy, and thermoeconomic cost factors in the presented case studies. Explores the effects of public policy, regulations, and financial operations on selecting energy technology. Students are given case studies to illustrate the complexity of implementing energy systems and are expected to complete a major project involving proposing an energy system. Emphasizes that successful implementation of energy systems requires both a technical and an economic solution. Requires calculus-based physics and chemistry.

ENSY 5050. Fundamentals of Thermal Science 1. (4 Hours)

Introduces and reviews thermodynamic properties such as temperature, pressure, energy, enthalpy, and entropy. Defines work and heat interactions and calculates the amount of energy transferred during thermodynamic processes. Introduces the first and second laws of thermodynamics and concepts of thermodynamic equilibrium. Discusses mass, energy, and entropy balance relations as well as conversion devices, such as turbine, compressors, pumps, valves, and energy exchangers. Studies simple power plants, refrigeration, heat (energy) pumps, and stationary gas turbine systems. Presents and reviews fundamentals of calculus, such as limit, differentiation, integration, power series, vector spaces, and multivariable functions needed for thermodynamic analysis.

ENSY 5060. Fundamentals of Thermal Science 2. (4 Hours)

Studies fundamental principles in fluid mechanics and thermal systems analysis. Topics include hydrostatics (pressure distribution, forces on submerged surfaces, and buoyancy); Newton's law of viscosity; integral forms of basic laws (conservation of mass, momentum, and energy); pipe flow analysis; concept of boundary layer; and drag coefficient. Presents Navier-Stokes equations as differential forms of conservative properties. Introduces theories of thermal energy transport, including conduction, convection, and thermal radiation; the design of thermal systems; and fundamentals of calculus, such as linear algebra, vector fields, and curvilinear coordinate systems required for introducing concepts of fluid dynamics and heat transfer. Discusses surface and volume integrals, conservative vector fields, and surface flux. Green's, divergence, and Stokes theorems are introduced for vector and scalar fields.

Prerequisite(s): ENSY 5050 with a minimum grade of C- or ENSY 5050 with a minimum grade of C-

ENSY 5100. Hydropower. (4 Hours)

Covers fundamentals of hydropowered development projects and their relevant design parameters. Emphasizes harnessing the hydro-energy potentials of both natural and man-made reservoirs. Reviews hydro- and electromechanical equipment and civil structure. Addresses selection procedure and design parameters of the equipment and structure.

ENSY 5200. Energy Storage Systems. (4 Hours)

Explores the various energy storage technologies, their working, and their practical applications. Focuses on the state-of-the-art review of current and most recent technologies. Offers students an opportunity to explore various innovations in the field of energy storage that can be helpful for fulfilling our current energy storage needs. Covers many different energy storage systems such as mechanical, chemical, electrochemical, thermal, thermochemical, etc.

ENSY 5300. Electrochemical Energy Storage. (4 Hours)

Covers the basics of electrode kinetics and thermodynamics as applied to electrochemical energy storage systems, as well as batteries and capacitors for traction and stationary power. Discusses the chemical structure of electrodes and electrolytes and practical battery construction.

ENSY 5400. Power Plant Design and Analysis. (4 Hours)

Reviews the fundamental laws of thermodynamics and balance equations for mass, energy, exergy, and entropy. Studies thermochemistry, chemical equilibrium, fuels and combustion, steam power plant cycle, gas turbine systems, thermo-economics, nuclear power plants, and energy recovery.

ENSY 5500. Smart Grid. (4 Hours)

Covers fundamentals of smart electric power grid. Covers definition, design criteria, and technology. Smart grid can be defined as the application of information processing and communications to the power grid. Seeks to motivate development of the smart grid, evaluating options for adding sensing, communications, computation, intelligence, control, and automation to various parts of the electric system. Topics include automation, or lack thereof, in existing power systems; generation; transmission; distribution; and smart grid definition.

ENSY 5585. Wind Energy Systems. (4 Hours)

Introduces wind energy and its applications. Integrates aerodynamics of wind turbine design with the structures needed to support them. Covers types of wind turbines, their components, and related analyses; airfoil aerodynamics; concepts of lift, drag, pitching moment, circulation, angle of attack, and stall; laminar and turbulent boundary layers and separation concepts; fundamental conservation equations; Bernoulli's, Euler's, and Navier-Stokes equations and their applications; Betz limit; computational fluid dynamics and its application for flow over typical airfoils; compressibility and elements of one-dimensional gas dynamics; wind resource; wind climatology and meteorological data; turbine tower and structural engineering aspects of turbines; vibration problems; aeroelastic phenomena in turbines; small wind turbines and vertical axis wind turbines; and introduces environmental and societal impacts and economic aspects.

ENSY 5600. Fundamentals of Solar Photovoltaic Energy Conversion. (4 Hours)

Focuses on the principles and working fundamentals of photovoltaic (PV) energy conversion, while emphasizing currently available solar technologies. Studies the semiconductor processes and advanced characterization theories. Examines design, fabrication, characterization of the PV modules, and different generations of solar cells and their properties. Advanced topics include thin film cells, compound semiconductors multijunction, multiband cells, spectral conversion, and introduces organic devices. Offers insight about the energy consumption crisis, sustainable energy sources, PV system components, and solar markets. Also discusses issues relating to PV systems, economics, and sustainability.

ENSY 5650. Geologic Energy Systems for Energy Generation and Carbon Sequestration. (4 Hours)

Focuses on the technical fundamentals of geologic energy resources. Covers specific applications such as geothermal heat pumps, geothermal power generation, as well as geologic energy storage and carbon sequestration. Offers students an opportunity to use software to perform technical and economic assessments of such systems, reinforcing fundamental concepts. Geologic energy systems are deemed to be a major solution to the grand challenge of meeting rising global energy demand while also decarbonizing the economy.

Prerequisite(s): (ME 2380 with a minimum grade of D ; ME 3475 with a minimum grade of D ; ME 4570 with a minimum grade of D) or graduate program admission

ENSY 5700. Renewable Energy Development. (4 Hours)

Examines a unique blend of technological and commercial aspects of renewable energy development focused on solar and storage projects with a strong focus on distributed projects. Topics include an introduction to the Independent System Operator New England and generation markets; site selection and layout development; tilt and orientation calculations; shading analysis and interrow spacing requirements; energy production modeling; solar string designs; DC/AC ratios; National Electrical Code requirements/compliances; and wind load analysis. Introduces battery energy storage system sizing analysis and requirements for behind-the-meter and front-of-meter projects, as well as renewable portfolio standards and carbon analysis. Offers an overview of financial modeling and basic tax equity structures. Discusses case studies requiring substantial class participation to uncover practical aspects of project development.

ENSY 5800. Applications of Artificial Intelligence in Energy Systems. (4 Hours)

Covers fundamentals of artificial intelligence (AI) used in engineering applications for energy systems. Introduces a brief treatment of AI methods. Examines several AI methods, including search algorithms, decision making under uncertainty, graphical methods, and machine learning. Discusses a more thorough treatment for how AI is used for engineering applications in energy systems. Application areas include power generation, electric grid, renewables, and energy storage. Focuses on practical considerations, including economic opportunity, verification and validation, risks, and nontechnical challenges.

Prerequisite(s): ENSY 5000 with a minimum grade of C-

ENSY 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENSY 7440. Energy Systems Engineering Leadership Challenge Project 1. (4 Hours)

Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype with an energy systems focus. Constitutes the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

ENSY 7442. Energy Systems Engineering Leadership Challenge Project 2. (4 Hours)

Continues ENSY 7440, a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype with an energy systems focus and to produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

Prerequisite(s): ENSY 7440 with a minimum grade of C-

ENSY 7945. Master's Project. (4 Hours)

Offers theoretical or experimental work under individual faculty supervision.

ENSY 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

Engineering Cooperative Education (ENCP)**Courses****ENCP 2000. Introduction to Engineering Co-op Education. (1 Hour)**

Introduces engineering students to the cooperative education program and assists them through self-assessment in relation to the engineering profession. Offers students an opportunity to develop job search and career management skills and to learn about the co-op program. Analyzes how personality, values, skills, and interests relate to the co-op search and shape work experiences. Employer and student panels assist students exploring employment opportunities. Also introduces students to the attributes of a global engineer and the possibility of working globally.

Prerequisite(s): GE 1000 with a minimum grade of D- or ARCH 1000 with a minimum grade of D- or BIOL 1000 with a minimum grade of D- or BUSN 1102 with a minimum grade of D- or CHEM 1000 with a minimum grade of D- or CS 1200 with a minimum grade of D- or ENVR 1000 with a minimum grade of D- or FSEM 1000 with a minimum grade of D- or GENS 1102 with a minimum grade of D- or INPR 1000 with a minimum grade of D- or MATH 1000 with a minimum grade of D- or PHYS 1000 with a minimum grade of D-

ENCP 3000. Professional Issues in Engineering. (1 Hour)

Provides students with an opportunity to reflect on both academic and co-op experiences in the context of planning for the senior year and beyond. Issues include professional and ethical issues, resolving ethical conflicts, awareness of engineers as professionals in a diverse world, strengthening decision-making skills, career portfolios, and lifelong learning needs, goals, and strategies. Students reflect upon issues of diversity from their experience in the University and in their cooperative education placements. Explores the role of different work and learning styles and diverse personal characteristics on the workplace and the classroom. Professional issues include impact of the cultural context, both in the United States and around the world, on the client, government relations, and the workplace.

Prerequisite(s): BIOE 2000 with a minimum grade of D- or CHME 2000 with a minimum grade of D- or CIVE 2000 with a minimum grade of D- or EECE 2000 with a minimum grade of D- or ENCP 2000 with a minimum grade of D- or MEIE 2000 with a minimum grade of D-

ENCP 6000. Career Management for Engineers. (1 Hour)

Designed to introduce graduate engineering students to the cooperative education program and to maximize their learning by helping them become more intentional about learning in co-op and in the transfer of that knowledge and experience to and from their academic program and throughout their entire careers. Offers students an opportunity to develop career goals; to be able to identify and justify what they need to learn through their co-op experience and entire careers; and to acquire the tools to be able to continually assess what they already know, what they think they know, what they need to know, and what they would like to know in relation to achieving their career goals. Includes readings, exercises, and discussions. This course does not count toward degree requirements.

ENCP 6100. Introduction to Cooperative Education. (1 Hour)

Introduces graduate students to the cooperative education program. Offers students an opportunity to develop job-search and career-management skills. Students perform discipline-specific assessments of their workplace skills, interests, and values and discuss how they impact personal career choices. Covers how to develop field/industry-specific materials, including a professional-style resumé and cover letter, and introduces students to career portfolios. Additional topics include ethics, professional behaviors, workplace culture, and proper interviewing techniques. Familiarizes students with workplace issues relative to their field of study while outlining co-op policies, procedures, and expectations of the cooperative education program and employers. This course does not count toward degree requirements.

ENCP 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ENCP 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ENCP 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ENCP 6965. Co-op Work Experience Abroad. (0 Hours)

Offers eligible students an opportunity for work experience abroad. May be repeated without limit.

ENCP 7100. Career Management for PhD Engineers. (1 Hour)

Offers students an opportunity to develop job-search and career-management skills applicable to co-op, internship, and full-time positions. Students perform discipline-specific assessments of their workplace skills, interests, and values and discuss their impact on whether students want to pursue careers in academia or industry. Covers how to develop field/industry-specific materials, including a professional-style resumé, academic CV, LinkedIn profile, elevator pitch, and cover letter. Additional topics include networking; ethics; international student work authorization; workplace culture; interviewing techniques; and diversity, equity, and inclusion. Students complete a one-on-one mock interview with the instructor and hear from guest speakers with PhDs from industry or PhD students who have completed a co-op/internship experience.

Engineering Interdisciplinary (ENGR)

Courses

ENGR 2963. Topics. (1,2 Hours)

Offers undergraduate students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

ENGR 4956. Community-Based Integration Experience. (4 Hours)

Offers students an opportunity to engage in one or more projects or other structured experience in a community-based setting under faculty supervision and assessment.

ENGR 4957. Student Activity-Based Integrated Experience. (4 Hours)

Offers students an opportunity to engage in one or more projects or other structured aspect of a university-recognized student club or activity under faculty supervision and assessment.

ENGR 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated up to three times.

ENGR 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned,' and incorporate suggestions from this review to improve and further develop their career development and professional plan. May be repeated up to two times.

ENGR 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner. May be repeated up to two times.

ENGR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGR 7010. Fundamentals of the Platform Economy. (4 Hours)

Provides an overview of the platform economy, focusing on the impact of digitalization across various industries and the emergence of new business models enabled by computing technologies. Covers the foundational aspects of computing that facilitate access to resources through platforms, the economic principles underpinning digital transformations, and the ethical considerations inherent in digital platform use. Examines the construction and implications of multi-sided platforms, including issues of bias and discrimination, and discusses regulatory frameworks aimed at addressing these challenges. Aims to provide a comprehensive understanding of the platform economy's dynamics, prepare students for interdisciplinary collaboration, and guide them in conceptualizing a digital platform business plan, with an emphasis on ethical and practical considerations.

ENGR 7976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under individual faculty supervision. May be repeated seven times for a maximum of 8 total semester hours.

ENGR 9700. Dissertation Fieldwork. (0 Hours)

Offers students an opportunity to pursue experiential research outside the classroom and outside the university. Engineering PhD students only. May be repeated up to two times.

ENGR 9701. Engineering Teaching Practicum. (0 Hours)

Offers intermediate or terminal-level doctoral candidates a teaching assignment under the guidance of a faculty member. Typical activities include preparing and teaching recitations; preparing and teaching laboratory sessions; holding office hours; preparing and grading quizzes, problem sets, and other assignments; and assisting the instructor with other activities associated with teaching a course. All nonnative English speakers should conform to the university language requirements for teaching assistants. May be repeated up to five times.

ENGR 9702. Dissertation Fieldwork - Half-Time. (0 Hours)

Offers students an opportunity to pursue experiential research outside the classroom and outside the university. May be repeated up to eleven times.

Engineering Leadership (ENLR)

Courses

ENLR 3121. Engineering Leadership Professional Development. (0 Hours)

Studies what leadership is; why it is so powerful; and how applying leadership knowledge, skills, and abilities increase marketability, job performance, potential, and career advancement. Offers students an opportunity to learn what attributes provide the confidence and ability to influence others in the workplace and beyond to achieve personal goals and desired outcomes. After completing the experiential interaction in a classroom setting, participants work through self-directed modules during co-op to increase responsibility and credibility and enhance the overall co-op experience. Upon completion of modules, participants present to Gordon Institute cadre on their experiences.

ENLR 5121. Engineering Leadership 1. (2 Hours)

Covers elements of engineering practices such as product engineering (system design and engineering, integration, and documentation); engineering leadership (team building, communication, leadership styles, ethical behavior, and conflict resolution); market assessment (engineering economics, business plans, intellectual property, risk assessment, and mitigation); and engineering excellence (quality, reliability, serviceability, manufacturability, procurement, and problem solving). Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

ENLR 5122. Engineering Leadership 2. (2 Hours)

Continues the examination of engineering practices begun in ENLR 5121. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

Prerequisite(s): ENLR 5121 with a minimum grade of C- or ENLR 5121 with a minimum grade of D-

ENLR 5131. Scientific Foundations of Engineering 1. (2 Hours)

Presents the fundamental science underlying engineering disciplines. Develops a conceptual framework to understand interdisciplinary engineering practice and to make informed, back-of-the-envelope, quantitative estimates. Covers topics such as principles of mechanics and mechanics of materials, wave physics, quantum physics, statistical and thermal physics, fluid physics, Maxwell's equations and constitutive relations, and topics in chemistry and biology.

ENLR 5132. Scientific Foundations of Engineering 2. (2 Hours)

Continues the examination of fundamental science begun in ENLR 5131.

Prerequisite(s): ENLR 5131 with a minimum grade of C- or ENLR 5131 with a minimum grade of D-

ENLR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENLR 7440. Engineering Leadership Challenge Project 1. (4 Hours)

Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype. This course is the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

ENLR 7442. Engineering Leadership Challenge Project 2. (4 Hours)

Continues ENLR 7440, a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype and produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

Prerequisite(s): ENLR 7440 with a minimum grade of C-

ENLR 7444. Engineering Leadership Challenge Project Continuation. (0 Hours)

Continues ENLR 7442, a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

Engineering Management (EMGT)**Courses****EMGT 5220. Engineering Project Management. (4 Hours)**

Examines the theory and practice of managing projects. Explores human, mathematical, entrepreneurial, managerial, and engineering aspects of project management. The systems development life cycle is the framework for the course. Addresses needs analysis, requirements definition, design, and implementation in the context of project management. Introduces mathematical and software tools for planning, monitoring, and controlling projects.

EMGT 5300. Engineering/Organizational Psychology. (4 Hours)

Offers an analysis of the purpose and functioning of organizations as the basic networks for achieving goals through coordination of effort, communication, and responsibility. Studies the role and function of engineering organizations based on modern behavioral science concepts as well as the application of psychology to industry relative to human relations, group dynamics, tests and measurements, personnel practices, training, and motivation. Examines the evolution of the learning organization and its role in the management of R&D and technology, the influence of the rapid changes in technology, and the globalization of the marketplace through group-oriented case studies.

EMGT 6225. Economic Decision Making. (4 Hours)

Explores economic modeling and analysis techniques for selecting alternatives from potential solutions to an engineering problem. Considers measures of merit, such as present worth, annual worth, rate of return, and benefit/cost techniques. Examines recent techniques of economic analysis, especially the tools of decision making. Explores decisions under uncertainty. Studies the causes of risk and uncertainty, and examines ways to change and influence the degree of risk and uncertainty through sensitivity analysis, expectation-variance criterion, decision tree analysis, statistical decision techniques, and multiple attribute decision making through group case studies.

EMGT 6305. Financial Management for Engineers. (4 Hours)

Examines the issues and processes of short-term financing on industrial firms, financial analysis of cases, supplemented by readings to develop familiarity with sources and uses of working capital as well as the goals and problems involved in its management. Also covers the analysis necessary for such long-term financial decisions as issuance of stock or bonds; contracting of leases or loans, and financing of a new enterprise; mergers, capital budgeting, the cost of capital, and the valuation of a business. Examines financial statement ratio analysis along with the use of the capital asset pricing model as it relates to risk and return. Explores leverage and capital structure and international managerial finance in the examination of the overall financial policy decision-making process.

EMGT 6600. Engineering Team Performance. (4 Hours)

Offers students an opportunity to obtain foundational knowledge of team performance and learn the practical application of principles to enable them to develop practical skills in managing engineering and other technical team development initiatives. Teaming is a critical technique used to make a positive impact on personal and organizational performance and is essential for engineering and other technical disciplines. Designed to help students understand why and how team skills are critical to organizational success, learn how to use team skills to more effectively achieve engineering and technical goals as well as to organize and influence others to work more effectively, and to apply cognition to develop higher-performing teams.

EMGT 6700. Digital Product Design and Management. (4 Hours)

Examines the theory and practice of digital product design and management, tailored for engineering students. The development of quality digital products is of critical importance yet companies are still delivering products that take too long to manufacture, cost too much, and are not wanted by customers. Explores human, entrepreneurial, managerial, and engineering aspects of product management using a "learning-by-doing" approach to build product management skills. Designed for engineering students without product management experience but an interest in this area of study.

EMGT 6750. Advanced Product Management. (4 Hours)

Studies how basic product management concepts are applied in practice. Building the "right" product is an art and requires a specific approach, which we call product mindset, and behind every successful product is a team that internalizes this mindset. At the heart of this team is a product manager who understands the user's needs and knows how to effectively collaborate with stakeholders. Analyzes product mindset and the tools and skills that make a successful product manager. Focuses on practical examples from the industry and learning from our guest lecturers and instructor experience about how product management is being done in real life.

Prerequisite(s): GE 5100 with a minimum grade of C- or EMGT 6700 with a minimum grade of C-

EMGT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EMGT 7374. Special Topics in Engineering Management. (4 Hours)

Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

EMGT 7945. Master's Project. (4 Hours)

Offers theoretical or experimental work under individual faculty supervision.

EMGT 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EMGT 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to seven times for a maximum of 8 semester hours.

EMGT 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

EMGT 7990. Thesis. (4 Hours)

Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. Requires first-year students to attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Requires successful completion of the seminar program.

Prerequisite(s): EMGT 7945 with a minimum grade of C-

EMGT 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues thesis work conducted under the supervision of a departmental faculty member.

English (ENGL)

Courses

ENGL 1000. English at Northeastern. (1 Hour)

Intended for first-year students in the College of Social Sciences and Humanities. Introduces first-year students to the liberal arts in general; familiarizes them with their major; helps them develop the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps them develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

ENGL 1120. Trouble in Utopia. (4 Hours)

Offers a first-year seminar exploring utopian/dystopian thought from Plato to contemporary popular culture, as a site for literary, political, social, and personal experimentation. Offers students opportunities to identify, critique, and theorize utopian ideas in critical and creative writing exercises. Culminates in a collective exhibit for which students produce and analyze their own utopian "artifacts" in the medium of their choice.

Prerequisite(s): ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 1140. Grammar: The Architecture of English. (4 Hours)

Provides students with the basic tools for analyzing how sentences work. Whenever we produce or understand a sentence, we are following unconscious rules of grammar, our internalized "architecture" of English. In this course, we learn a new method for discovering and describing sentence structure and as well as a useful set of tools for analyzing language in all of its representations.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Formal/Quant Reasoning

ENGL 1160. Introduction to Rhetoric. (4 Hours)

Introduces major concepts, traditions, and issues in rhetorical studies. Explores topics such as the range of ways that people persuade others to change their minds or take action; the relationship among language, truth, knowledge, and power; the role of language in shaping identity, communities, and cultures; and the use of rhetoric for activism and advocacy. Focuses on rhetoricians and rhetorics from diverse traditions, emphasizing contemporary and interdisciplinary approaches to investigating a wide range of rhetorical artifacts.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ENGL 1300. Introduction to Health and Humanities. (4 Hours)

Explores the ways in which narrative and other forms of creative and cultural expression help shape conceptions of illness, healing, and the body. Offers students opportunities to consider the health and humanities through a variety of interdisciplinary perspectives and genres. Includes small-group and classwide experiential field outings. Culminates in the composition of reflective responses, a medical ethics/medical journalism piece, and a team-based experiential e-portfolio project. Course objectives include differentiating between healing and curing; knowing how to elicit, listen to, and analyze stories to determine how participants in the healthcare system experience illness and healing; being able to articulate the ways health is a cultural construct; and using this analysis to identify an empathic response as a future professional.

Attribute(s): NUpath Interpreting Culture

ENGL 1400. Introduction to Literary Studies. (4 Hours)

Introduces the diverse fields that comprise literary studies for English majors and minors. Surveys the methods and topics of English literary and textual studies, including a wide range of media (e.g., images, film, and graphic narrative). Explores strategies for reading, interpreting, and theorizing about texts, including how race, gender, sexuality, class, and colonialism are represented in literary texts, other media, and scholarship. Focuses on developing skills in thinking analytically, writing clearly about complex ideas, and conducting research.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Writing Intensive

ENGL 1410. Introduction to Research on Writing. (4 Hours)

Introduces students to research about the histories, theories, and practices informing how people learn to write and how writing is used in home, school, work, and civic contexts. Explores writing and writing instruction in the United States and in international contexts, including the social and political significance of writing in particular cultural contexts with an emphasis on diversity, equity, and inclusion. Class projects emphasize methods such as archival research, case study research, multimodal composing, and community-based writing that invite students to think about their own experiences and practices of other groups.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Writing Intensive

ENGL 1450. Reading and Writing in the Digital Age. (4 Hours)

Grapples with the long and sometimes tumultuous relationship between texts and new media technologies. Offers students opportunities to historicize and engage the social and intellectual upheavals of our own technological moment through reading, discussion, writing projects, and practicums that seek to develop skills for analyzing the data and metadata of texts through both qualitative and quantitative methods.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 1500. British Literature to 1800. (4 Hours)

Surveys the major British writers and major literary works from the Middle Ages to the end of the eighteenth century. Includes works by such writers as Julian of Norwich, Chaucer, Spenser, Shakespeare, Milton, Behn, Pope, and Swift.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 1502. American Literature to 1865. (4 Hours)

Surveys the major American writers and major literary forms from the colonial period to the Civil War. Includes works by such writers as Bradstreet, Taylor, Wheatley, Cooper, Poe, Hawthorne, Douglass, Stowe, Melville, and Emerson.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ENGL 1600. Introduction to Shakespeare. (4 Hours)

Introduces students to a selection of Shakespeare's major plays in each of the principle genres of comedy, tragedy, history, and romance.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ENGL 1700. Global Literatures 1. (4 Hours)

Introduces students to global works from the earliest literatures to 1500. May include texts from Africa (*Sunjara*); the Americas; Asia (Murasaki Shikibu's *Tale of Genji* from Japan and Lao Tzu's *Tao Te Ching* from China); Europe (Dante Alighieri's *Divine Comedy* from Italy, the *Song of Roland* from France, Homer's *Iliad* from Greece); and the Middle East (*The Epic of Gilgamesh* from Mesopotamia and *One Thousand and One Nights* from Arabic, Indian, and Persian sources). Works in translation where necessary.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 1701. Global Literatures 2. (4 Hours)

Introduces students to selected global literary works from the 16th century to the present. May include works from Africa (A. Igoni Barrett's *Blackass* from Nigeria); the Americas (Leslie Marmon Silko's *Ceremony* from the Laguna people, *Popol Vuh* from the Mayan peoples, and Isabel Allende's *The House of the Spirits* from Chile); Asia (Anita Desai, *Clear Light of Day* from India and Kyung-sook Shin's *Please Look After Mom* from South Korea); Europe (Evliya Çelebi's *Book of Travels: The City of Boudonitz* from Turkey, Miguel de Cervantes' *Don Quixote* from Spain, and François Rabelais' *Gargantua and Pantagruel* from France). Works in translation where necessary.

Prerequisite(s): ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGL 2296. Early African-American Literature. (4 Hours)

Surveys the development and range of black American writers, emphasizing poetry and prose from early colonial times to the Civil War. ENGL 2296 and AFM 2296 are cross-listed.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 2301. The Graphic Novel. (4 Hours)

Explores the word-and-image medium of comics as a narrative form. Focuses on the contemporary phenomenon of the so-called graphic novel. What are the preoccupations of today's graphic novels? How does their storytelling work? Some work in translation is included, but the course largely concentrates on the American tradition, focusing on fiction, memoir, and nonfiction reporting and adaptation. Offers students an opportunity to learn practices of reading—and making—comics. Emphasizes the formal language, or grammar, of comics in order to interpret its narrative procedure and possibilities.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

ENGL 2330. The American Renaissance. (4 Hours)

Studies the nineteenth-century development of an American national literary tradition in the context of democratic and romantic attitudes toward experience, nation formation, and national crisis. Includes such writers as Emerson, Thoreau, Hawthorne, Fuller, and Melville.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 2420. Contemporary Poetry. (4 Hours)

Studies developments in British and (especially) American poetry since 1945. Includes such writers as Bishop, Lowell, Ginsberg, Ashbery, Walcott, Heaney, Kunitz, Jorie Graham, Frank Bidart, Rita Dove, and Kevin Young.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 2430. Contemporary Fiction. (4 Hours)

Examines British and American writers from 1945 to the present, including such figures as Lessing, Burgess, Pynchon, Morrison, Kingston, and Erdrich.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 2440. The Modern Bestseller. (4 Hours)

Focuses on contemporary commercially successful fiction and nonfiction, including memoir, dystopian, fantasy, young adult, and experimental works. Examines the historical, cultural, and political contexts in which bestsellers were written and how they are named "bestsellers." Taking race, gender, class, and other identity markers into consideration, explores how some writers and audiences are included or excluded from the most popular bestseller lists.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 2450. Postcolonial Literature. (4 Hours)

Examines the literature and cultures of postcolonial nations in the Caribbean, Africa, and Asia. Designed to familiarize students with the cultural paradigms and transnational experiences of colonialism. Introduces various theories about postcolonialism and decolonization. Focuses on the variety of artistic strategies employed by writers to communicate contemporary postcolonial themes such as neocolonialism, nationalism, global feminisms, and diaspora.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 2451. Postcolonial Women Writers. (4 Hours)

Examines the literature and cultures of postcolonial nations in the Caribbean, Africa, Asia, and elsewhere through the lens of gender. Designed to familiarize students with the relationships between cultural paradigms associated with gender and transnational experiences of colonialism. Focuses on the variety of artistic strategies employed by writers to communicate the impacts of gender and sexuality on contemporary postcolonial themes such as neocolonialism, nationalism, and diaspora. Writers may include Chimamanda Adichie, Nawal El Saadawi, Marjane Satrapi, Bessie Head, Arundhati Roy, Banana Yoshimoto, Sonia Singh, and Dionne Brand.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 2455. American Women Writers. (4 Hours)

Surveys the diversity of American women's writing to ask what it means to describe writers as disparate as Phillis Wheatley, Edith Wharton, Toni Morrison, and Alison Bechdel as part of the same 'tradition.' With attention to all genres of American women's writing, introduces issues of race, genre and gender; literary identification; canons; the politics of recuperation; silence and masquerade; gender and sexuality; intersectionality; sexual and literary politics, compulsory heterosexuality, and more.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 2460. Multiethnic Literatures of the U.S.. (4 Hours)

Explores contemporary American literature by writers from distinctive ethnic groups (for example, Native, Asian, African, Latino/a, Jewish, Italian, Irish, Arab). Features a variety of works that reflect an evolving recognition of the artistically and culturally diverse nature of American literature.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 2470. Asian-American Literature. (4 Hours)

Introduces students to American writers of Chinese, Japanese, Korean, Filipino, South Asian, and Southeast Asian descent. Focuses on works published since the 1960s. Pays close attention to prevalent themes, sociohistorical contexts, and literary form.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 2510. Horror Fiction. (4 Hours)

Explores English and American horror fiction. Focuses on short stories, novels, and movies. Examines the evolution of horror fiction and the various themes, techniques, and uses of the macabre.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

ENGL 2520. Science Fiction. (4 Hours)

Traces the development of various science fiction themes, conventions, and approaches (human vs. machine, human/machine hybrids, alien encounters, colonizing other worlds, dystopian and postapocalyptic futures). Examines how science fiction explores what it means to be human and how self- and group identities are formed when measured against the idea of the non- or other-than-human.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 2600. Irish Literary Culture (Abroad). (4 Hours)

Explores Irish writers from the nineteenth century through the present. Emphasizes their relationships to contemporary Irish society. Explores the formal traditions of Irish writing as well as the historical, political, and cultural discourses that Irish writing has both helped to shape and within which the writing circulates. As the course takes place in Dublin during the summer term, offers students an opportunity to meet living Irish writers who talk about their relationship to the literary tradition and their own craft. Covers writers such as Oscar Wilde, James Joyce, Kate O'Brien, Colm Tóibín, Anne Enright, Paul Murray, Kevin Barry, and Maeve Binchy.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture

ENGL 2610. Contemporary Literature and Art in Israel. (4 Hours)

Explores contemporary Israeli culture. Offers students an opportunity to meet with Israeli writers, visit sites of literary settings, and explore art galleries and museums. Visiting significant historical sites provides the context for understanding allusions to Israel from biblical times to the present. Readings include historical backgrounds, scriptures, short stories, and poetry by major Israeli and Palestinian writers from 1948 through the present. Offered via a faculty-led study abroad program.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 2620. What Is Nature?. (4 Hours)

Focuses on a variety of texts (imaginative literature, memoir, scientific writing, creative nonfiction, and popular journalism) that take nature, ecology, and the environment as their subject. Examines paintings, photography, and other visual representations (such as computer simulations) of the natural world. Taught in Boston or in the United Kingdom.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture

ENGL 2650. Science Writing: Origins, Ethics, and Emerging Genres. (4 Hours)

Explores the history, development, and roles of academic and popular science writing, beginning with a critical examination of the origins of scientific genres. Students describe, define, and contextualize science writing genres. Reviews the ethical foundations and problems of current scientific genres. Offers students an opportunity to participate in the global dissemination of scientific knowledge and knowledge creation through a variety of writing assignments.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

ENGL 2690. Boston in Literature. (4 Hours)

Explores the various ways in which the city of Boston and its environs are represented in literature and other media. Each semester, the course focuses on a different aspect of Boston in literature, such as representations of Boston's different communities, different historical eras, particular genres or concepts associated with the city, and so forth. Offers students an opportunity to build upon their readings about the city by experiencing independent site visits, class field trips, guest speakers, and other activities. In addition to a culminating group or individual research project about Boston, students may also have the opportunity to participate in a community-based reading project. ENGL 2690 and AFAM 2690 are cross-listed.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture

ENGL 2695. Travel and Place-Based Writing. (4 Hours)

Focuses on travel writing and place-based writing. Examines the history, global cultural contexts, conventions of, and theories about the genres through reading exemplary texts and studying photographs and films. Offers students an opportunity to produce examples of travel writing and place-based writing as well as short videos and photo-collages.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

ENGL 2700. Creative Writing. (4 Hours)

Gives the developing writer an opportunity to practice writing various forms of both poetry and prose. Features in-class discussion of student work.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

ENGL 2710. Style and Editing. (4 Hours)

Explores the relationship between style and substance through close attention to choices made at the level of the paragraph, sentence, and word. Introduces editorial processes and practices and gives students practice in editing for themselves and others.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

ENGL 2730. Digital Writing. (4 Hours)

Explores the ways in which composing processes and meaning are impacted when writing moves from material media (e.g., print, images, voice, and performance) to digital media (e.g., hypertexts, digital stories, and videos). Readings cover aspects of digital writing as semiotic (e.g., domains of meaning, mode, materiality, delivery, ensembles of meaning) and draw on theories of multimodality to explore digital remediations of writing. Culminates in an electronic portfolio and collective exhibit.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

ENGL 2740. Writing and Community Engagement. (4 Hours)

Offers students an opportunity to study and practice writing in community contexts through advocacy writing, service-learning, community research, and/or community publishing.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 2760. Writing in Global Contexts. (4 Hours)

Explores the various ways that linguistic diversity shapes our everyday, academic, and professional lives. Offers students an opportunity to learn about language policy, the changing place of World English in globalization, and what contemporary theories of linguistic diversity, such as translingualism, mean for writing. Invites students to explore their own multilingual communities or histories through empirical or archival research.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 2770. Writing to Heal. (4 Hours)

Explores how creative writing can be used as a healing tool. Offers students opportunities to analyze, theorize, and create healing narratives through readings, in-class writing activities, writing workshops, and process journals. Culminates in the creation and revision of written personal narratives as well as a digital storytelling project.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

ENGL 2780. Visual Writing. (4 Hours)

Explores how visual elements, such as fonts, graphics, charts, and video, work within different types of documents to reach various audiences across cultures. Readings cover several aspects of visual writing (e.g., thinking, learning, and expressing) and draw on theories of visual rhetoric to explore the interaction among content, visual elements, audiences, and contexts. Culminates in an electronic portfolio and collective exhibit.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 2850. Writing for Social Media: Theory and Practice. (4 Hours)

Explores the development and roles of social media writing. Asks students to describe, define, and contextualize current social media genre(s) using readings from social media sites, scholarship, popular/journalistic works, and fiction. Invites students to adopt a new social media platform and to produce social media writing in short, longer individually produced, and longer collaborative forms. Offers each student an opportunity to create a curated, reflective portfolio that works toward an integrated personal/professional digital identity.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGL 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor for freshmen. May be repeated once for up to 4 total credits.

ENGL 2995. Practicum. (1-4 Hours)

Offers eligible students an opportunity for practical experience. May be repeated without limit.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3070. Literary Genres. (4 Hours)

Explores the characteristics of a particular literary form over time or in a given time frame through works by various authors. Emphasizes historical and cultural contexts.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3101. Early Literatures. (4 Hours)

Focuses on a particular theme, author, genre (such as epic or romance), or other aspect of premodern literatures (such as representations of gender and sexuality and/or race). Selected texts may include classical literary works or literatures of the Middle Ages and/or the Early Modern period.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 3120. 17th- and 18th-Century Literatures. (4 Hours)

Focuses on a particular topic in 17th- or 18th-century British or American literature, such as women and the novel or the captivity narrative.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3160. Topics in 17th- and 18th-Century British Literatures. (4 Hours)

Focuses on a particular aspect of seventeenth- or eighteenth-century British literature, such as representations of the new science in the seventeenth century or the rise of the novel in the eighteenth century. May be repeated up to five times.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3161. 20th- and 21st-Century Literatures. (4 Hours)

Focuses on a particular topic, theme, author, or genre in 20th- or 21st-century British and/or American literature. Emphasizes historical and cultural contexts.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3190. Topics in 19th-Century American Literature. (4 Hours)

Focuses on a group of authors (e.g., the Fireside Poets, Transcendentalists, regional/local color writers); specific theme (e.g., Manifest Destiny, American romanticism, regionalism, sentimentalism, slavery, democracy, public vs. private); or genre (e.g., the slave narrative, the novel, lyric poetry) in nineteenth-century American literature. May be repeated without limit.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3325. Rhetoric of Law. (4 Hours)

Introduces students to the persuasive work of legal texts, procedures, and institutions. Investigates the range of critical approaches to the study of law and rhetoric, as well as the implications of understanding law as rhetorical. Draws on texts produced by lawyers and judges, classical rhetoricians, contemporary rhetorical critics, and legal scholars.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 3340. Technologies of Text. (4 Hours)

Examines innovations that have reshaped how humans share information, e.g., the alphabet, the book, the printing press, the postal system, the computer. Focuses on debates over privacy, memory, intellectual property, and textual authority that have historically accompanied the rise of new media forms and genres. Offers students an opportunity to gain skills for working with texts using the rapidly changing tools of the present, e.g., geographic information systems, data mining, textual analysis.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov, NUpath Integration Experience

ENGL 3360. Digital Humanities. (4 Hours)

Introduces students to digital methods, tools, and modes of discourse, and to their genesis, history, and political and cultural significance. Explores the ways in which digital tools and practices shape our study of literary and cultural works. Experiments with digital approaches to analyzing and interpreting varied forms of humanities data. Combines classroom discussion, workshop and lab sessions, and project design and development. May also offer experiential opportunities for work with external projects.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or (ENGW 1110 with a minimum grade of C ; ENGW 1111 with a minimum grade of C)

ENGL 3370. Writing Cultures. (4 Hours)

Offers students an opportunity to conduct qualitative empirical research (using methods such as interviewing and observation) into rhetorical practices, such as reading, writing, listening, speaking, and body language. Explores the role of rhetoric and writing in the representation of people, cultures, and research in online and physical spaces.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 3374. Writing London. (4 Hours)

Explores how writing shapes the life of, and life in, the city. Considers how London is constructed in a range of discourses and disciplines. Offers students an opportunity to research and write about the city and participate in a community-based writing project.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Integration Experience, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 3375. Writing Boston. (4 Hours)

Explores how writing shapes the life of, and life in, the city. Considers how Boston is constructed in a range of discourses and disciplines. Offers students an opportunity to research and write about the city and participate in a community-based writing project.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Integration Experience, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 3376. Creative Nonfiction. (4 Hours)

Explores how writers apply narrative strategies and techniques to factual material. Offers students an opportunity to read and write a variety of nonfiction forms (e.g., narrative essays and narrative journalism, travel and science writing, memoir, editorials, protest and political essays), as well as cross-genre and hybrid forms (e.g., nonfiction prose mixed with poetry, audio and graphic nonfiction). The topics for narrative nonfiction writing apply to a wide array of disciplines, including the humanities, the sciences, and journalism.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

ENGL 3377. Poetry Workshop. (4 Hours)

Offers an advanced workshop in writing and reading original poetry. Students experiment in established poetic forms. Features in-class discussion of student work.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

ENGL 3378. Fiction Workshop. (4 Hours)

Offers an advanced workshop in writing and reading original fiction. Features in-class discussion of student work.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

ENGL 3380. Writing Seminar. (4 Hours)

Offers writers an opportunity to hone their skills in a workshop focused on a particular topic or form, such as advocacy writing, public policy writing, autobiography and memoir, rhetoric for writers, speculative fiction, or screenwriting.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

ENGL 3381. The Practice and Theory of Teaching Writing. (4 Hours)

Focuses on the teaching of writing by studying the professional literature of writing theory as well as a teaching practicum. Students work as a writing tutor or shadow experienced teachers. Offers students an opportunity to prepare for future teaching of writing and to obtain deeper insight into their own writing processes.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Writing Intensive

ENGL 3382. Publishing in the 21st Century. (4 Hours)

Explores modes and processes of publication in an era of technological and economic change. Investigates the roles of writers, editors, and publishers in this shifting landscape. Offers students an opportunity to attend readings, lectures, and other community literacy events and work with community partners on publication projects.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Integration Experience, NUpath Writing Intensive

ENGL 3384. The Writer's Marketplace. (4 Hours)

Explores how writers negotiate the world of literary publishing. Focuses on producing publishable work in genres of the student's choice (fiction, poetry, creative nonfiction), submitting work to appropriate venues, and working with editors and agents.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

ENGL 3400. Opening the Archive. (4 Hours)

Introduces students to the rich archival holdings in the greater Boston area, as well as to online archives. Offers students an opportunity to obtain training in the materials and methods of primary source research. Primary materials include a wide range of resources, including books, manuscripts, letters, pamphlets, broadsides, journals, maps, illustrations, and photographs. May focus on Shakespeare's archive, archives for social justice, literary uses of archives, queer archives, people of color in the archive, or other themes.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture, NUpath Writing Intensive

ENGL 3404. African American Rhetorical Traditions. (4 Hours)

Examines and organizes the ways that African Americans have historically maintained their humanity and negotiated freedom through discourse. Explores various discursive practices of African American discourse communities—such as the enslaved, abolitionists, feminists, nationalist/revolutionaries, and entertainers—to engage discussions about freedom, access to democracy, racial uplift, gender equity, and the discursive and recursive nature of racial identity. Studies historical contexts and current sociopolitical dynamics emphasizing the Black Jeremiad, civil rights rhetoric, the Black Power Movement, Black Feminist Thought, and Hip-Hop.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 3458. Language Matters. (4 Hours)

Explores language "on the ground," drawing from a range of topics where language matters— legal language, political discourse, grammar teaching, standard and "nonstandard" dialects, language controversies, and how the rules of grammar and usage are changing, among others.

ENGL 3460. The Archives of Public Health. (4 Hours)

Presents the history of public health through firsthand experience working with archival materials. Emphasizes the stories told about public health crises in the past: how individuals experienced crisis; how communities encountered, managed, and responded to the crisis; and what stories public health institutions produced to narrate their own efforts and shape individual behaviors. Offers students an opportunity to gain experience in gathering and analyzing historical narratives and forms of data.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture

ENGL 3487. Film and Text (Abroad). (4 Hours)

Studies the similarities and differences between literary texts and film versions of those texts or the interrelations between film and literature as a means of cultural expression in a specific country outside the United States. May be repeated without limit.

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture

ENGL 3619. Emerson and Thoreau. (4 Hours)

Focuses on Ralph Waldo Emerson and Henry David Thoreau, two major American Romantic writers whose ideas about the individual, spirituality, nature, and politics have had a wide-ranging impact on American culture. Readings include essays, poetry, and journals by these two Massachusetts-based authors.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3664. Black Poetry and the Spoken Word. (4 Hours)

Focuses on the black poet's place in the history of American poetry. Considers black poetry as both written words and spoken words.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3678. Bedrooms and Battlefields: Hebrew Bible and the Origins of Sex, Gender, and Ethnicity. (4 Hours)

Considers stories from Hebrew Scripture in English translation, beginning with the Garden of Eden through the Book of Ruth, asking how these foundational narratives establish the categories that have come to define our humanity. Analyzes how the Bible's patterns of representation construct sexual and ethnic identities and naturalize ideas about such social institutions as "the family".

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 3685. Modern and Contemporary Jewish Literature. (4 Hours)

Surveys Jewish literature from the late modern (1880–1948) and contemporary (1948–present) periods. Considers themes of immigration and cross-cultural influences and issues of religious, ethnic, and gender identity. Emphasizes American and European literatures to begin to define an international Jewish literary canon, including Yiddish poets and playwrights, Russian Jewish writers, and modern writers. ENGL 3685 and JWSS 3685 are cross-listed.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 3700. Narrative Medicine. (4 Hours)

Introduces students to the field of narrative medicine, which explores literary analysis as a set of tools for medical practice. Offers students an opportunity to develop close reading and analytical skills that are useful for improving doctor-patient relationships and patient care. Requires students to complete essays that cultivate these skills.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

ENGL 3710. Major Seminar. (4 Hours)

Offers English majors in-depth study organized around an important critical question in English studies. Presents a framework, in a seminar setting, for students to examine disciplinary theories, methods, and practices. Offers students an opportunity to reflect upon their experiences in and paths through the major in seminar projects.

Prerequisite(s): ENGL 1400 with a minimum grade of D- or ENGL 1160 with a minimum grade of D- or ENGL 1410 with a minimum grade of D-

ENGL 3730. 20th- and 21st-Century Major Figure. (4 Hours)

Examines in detail the work and critical reception of a major writer of the twentieth or twenty-first century. May be repeated up to four times.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 3900. Gender and Black World Literatures. (4 Hours)

Explores different aspects of the literary and cultural productions of black women throughout history. Examines writing by women in the United States—like Octavia Butler, Zora Neale Hurston, and Toni Morrison—in addition to writing by women across the global African diaspora—like Chimamanda Adichie and Jamaica Kincaid. Students may also engage with theories such as Black feminism, womanism, or intersectionality; consider issues of genre such as the novel, poetry, or science fiction; and explore key themes such as class, sexuality, and disability. AFRS 3900, WMNS 3900, and ENGL 3900 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

ENGL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGL 4010. Topics in Shakespeare. (4 Hours)

Examines a focused topic, theme, or critical approach to Shakespeare. May be repeated twice up to a total of 12 SH.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 4100. Topics in Literary Criticism. (4 Hours)

Studies a specific problem, method, or school of literary criticism, such as poststructuralism or feminist criticism. May be repeated once.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 4410. Research in Rhetoric and Writing. (4 Hours)

Introduces students to, and offers them practice in, a range of research methodologies (e.g., ethnography, archival research, historical inquiry) and methods (e.g., interviewing, observation, rhetorical analysis) for studying rhetoric, writing, and writers.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ENGL 4710. Capstone Seminar. (4 Hours)

Offers an advanced senior seminar organized around an important critical question in the discipline. This writing-intensive course is designed to be a summative experience for English majors, offering in-depth study of the theories, methods, and practices of critical work on a particular topic while providing students opportunities for reflecting on the connections between their capstone and other work they have done as majors. Offers students an opportunity to produce significant research projects on the critical issues raised by the seminar. May be repeated once.

Prerequisite(s): (ENGL 3301 with a minimum grade of C or ENGL 3302 with a minimum grade of C or ENGL 3303 with a minimum grade of C or ENGL 3304 with a minimum grade of C or ENGL 3305 with a minimum grade of C or ENGL 3306 with a minimum grade of C or ENGL 3307 with a minimum grade of C or ENGL 3308 with a minimum grade of C or ENGL 3309 with a minimum grade of C or ENGL 3310 with a minimum grade of C or ENGL 3311 with a minimum grade of C or ENGL 3313 with a minimum grade of C or ENGL 3314 with a minimum grade of C or ENGW 3301 with a minimum grade of C or ENGW 3302 with a minimum grade of C or ENGW 3303 with a minimum grade of C or ENGW 3304 with a minimum grade of C or ENGW 3305 with a minimum grade of C or ENGW 3306 with a minimum grade of C or ENGW 3307 with a minimum grade of C or ENGW 3308 with a minimum grade of C or ENGW 3309 with a minimum grade of C or ENGW 3310 with a minimum grade of C or ENGW 3311 with a minimum grade of C or ENGW 3313 with a minimum grade of C or ENGW 3314 with a minimum grade of C or ENGW 3315 with a minimum grade of C); ENGL 3710 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ENGL 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C

ENGL 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGL 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated once.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Integration Experience

ENGL 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGL 5103. Proseminar. (4 Hours)

Introduces the history and current scholarly practices of English studies. Surveys theoretical, methodological, and institutional issues in the development of the discipline; introduces students to the research of the English department's graduate faculty; and offers opportunities for the practice of key components of scholarly production, including formulating research questions, using databases, conducting literature reviews, and writing and presenting scholarship in common formats other than the long research paper, such as conference proposals, oral presentations, and book reviews.

ENGL 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ENGL 6301. Fiction Workshop. (4 Hours)

Focuses on the craft of fiction writing. Students read and write in a variety of fiction genres. Experiments with a range of forms and techniques, placing them within historical context and the critical tradition, and examines the implications of form. Offers students an opportunity to build self-critique and editorial abilities through peer review and to build a final well-developed and structurally sophisticated work of fiction toward professional publication standards.

ENGL 6302. Poetry Workshop. (4 Hours)

Focuses on the craft of poetry writing. Experiments with a range of forms and techniques, placing them within historical context and the critical tradition, and examining the implications of form. Offers students an opportunity to build self-critique and editorial abilities through peer review and to prepare their poetry to meet professional publication standards.

ENGL 6303. Creative Nonfiction Workshop. (4 Hours)

Focuses on the craft of nonfiction writing. Explores how writers apply narrative strategies and techniques to factual material. Students read and write a variety of nonfiction forms. Topics for narrative nonfiction writing apply to a wide array of disciplines, including the humanities, the sciences, and journalism. Experiments with a range of forms and techniques, placing them within historical context and the critical tradition, and examining the implications of form. Offers students an opportunity to build self-critique and editorial abilities through peer review and to build a final well-developed and structurally sophisticated work of nonfiction toward professional publication standards.

ENGL 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

ENGL 6955. Co-op Work Experience Abroad – Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

ENGL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGL 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

Corequisite(s): INSH 6864

ENGL 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

ENGL 7211. Topics in American Literature. (4 Hours)

Explores a significant topic in American literature. Topics are selected by the instructor and vary by semester.

ENGL 7266. Victorian Literature. (4 Hours)

Treats such topics as Victorian masculinities; female poetic identity; the move to aestheticism and decadence in the latter nineteenth century; and resemblances of the 1890s to our own fin-de-siècle. Considers such figures as R. Browning, E.B. Browning, Christina Rossetti, Florence Nightingale, Swinburne, Pater, Stevenson, Wilde, H.G. Wells, and Freud.

ENGL 7281. Topics in Medieval Literature. (4 Hours)

May consider the following: Anglo Saxon literature (including poems such as Beowulf, Judith, The Wanderer, The Seafarer, and a selection of prose); the poems of the Pearl Poet (Sir Gawain and the Green Knight, Pearl, Cleanness); women and/in the Middle Ages; medieval literature and medievalism; the medieval romance, Malory's Morte Darthur; religious, mystical, and didactic works; medieval travel literature; or William Langland's Piers Plowman. May be repeated without limit.

ENGL 7282. Topics in Renaissance Literature. (4 Hours)

Considers specific topics in the literature of the sixteenth and seventeenth centuries, such as the sonnet sequence, Renaissance women, and utopian and travel literature. May be repeated without limit.

ENGL 7284. Topics in 18th-Century Literature. (4 Hours)

Explores in depth a topic, theme, or genre in eighteenth-century British literature, such as satire; London's city culture; literary theory; the emerging women writers; the essay; or a major writer, for example, Jonathan Swift, Jane Austen, or Henry Fielding. May be repeated without limit.

ENGL 7351. Topics in Literary Study. (4 Hours)

Focuses on literature on a thematic, formal, or generic basis. Varies by instructor.

ENGL 7352. Topics in Genre. (4 Hours)

Examines such topics in genre criticism as biography, autobiography, satire, and children's literature. May be repeated without limit.

ENGL 7358. Topics in Literature and other Disciplines. (4 Hours)

Examines such subjects as literature and the visual arts, literature and psychology, and literary impressionism. May be repeated without limit.

ENGL 7360. Topics in Rhetoric. (4 Hours)

Focuses on specialized topics in rhetoric, such as visual rhetoric, rhetorical criticism, rhetoric of science, issues in contemporary rhetorical theory, and rhetoric and cultural studies. Varies by semester. May be repeated without limit.

ENGL 7370. Introduction to Digital Humanities. (4 Hours)

Offers a critical orientation to the tools, methods, and intellectual history of the digital humanities (DH). Explores key questions such as what debates are (re)shaping DH in this moment; what central theories lead humanities scholars to experiment with computational, geospatial, and network methodologies; how visualization can illuminate literature, history, writing, and other humanities subjects; and how new modes of research and publication might influence our teaching. Balances theory and praxis: Successful students come away with a well-grounded understanding of the DH field and a set of foundational skills to support their future research. No prior technical expertise is required to take the course, but students should be willing to experiment with new skills.

ENGL 7380. Topics in Digital Humanities. (4 Hours)

Explores specific analytical techniques such as mapping, computational text analysis, or network analysis; a particular methodological tradition such as digital scholarly editing; the history of a particular debate, research problem, or theoretical orientation such as intersectional feminism; or the intersection of digital humanities and another domain such as writing studies. Offers students an opportunity to develop more specialized skills and methods that support advanced research and teaching in digital humanities. May be repeated three times.

ENGL 7392. Writing and the Teaching of Writing. (4 Hours)

Engages MA and PhD students in the theory, practice, and praxis of teaching writing at the university level, drawing on recent scholarship in rhetoric and writing studies. Explores theories and practices regarding the nature of written expression; the role of diversity, inclusion, and equity in writing instruction; the research on how people learn to write and how that writing might be assessed; the historical contexts for required writing in U.S. higher education; the nature of multimodal composing; and the environments and activities that best help students learn writing.

ENGL 7395. Topics in Writing. (4 Hours)

May include the following topics: literacy and literacies; basic writing; issues of gender, race, and class in the classroom; writing assessment; or collaborative learning. May be repeated without limit.

ENGL 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGL 7976. Directed Study. (1-4 Hours)

Offered by arrangement. May be repeated without limit.

ENGL 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

ENGL 7990. Thesis. (4 Hours)

Offers thesis supervision by members of the department. May be repeated without limit.

ENGL 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers thesis supervision by members of the department.

Prerequisite(s): ENGL 7990 with a minimum grade of C-

ENGL 8407. Teaching Practicum. (1 Hour)

Gives students the opportunity to observe a senior faculty member teaching an undergraduate course in American or British literature, literary studies, rhetoric, composition studies, or linguistics. Students meet regularly with the faculty member to discuss teaching practices and other pedagogical issues and submit a term project discussing the experience in the context of the scholarship of teaching. May be repeated without limit.

ENGL 8960. Exam Preparation—Doctoral. (0 Hours)

Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision. May be repeated three times.

ENGL 8986. Research. (0 Hours)

Offers the student the opportunity to conduct full-time research. May be repeated without limit.

ENGL 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

ENGL 9986. Research. (0 Hours)

Offers the student the opportunity to conduct full-time research. May be repeated up to three times.

ENGL 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): ENGL 9000 with a minimum grade of S

ENGL 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): ENGL 9990 with a minimum grade of S

ENGL 9996. Dissertation Continuation. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): ENGL 9991 with a minimum grade of S or Dissertation Check with a score of REQ

English - CPS (ENG)

Courses

ENG 1105. College Writing 1. (3 Hours)

Offers students an opportunity to develop written communication skills and basic research techniques in preparation for college writing in their majors. Incorporates reading, research, and critical thinking in the development of expository writing, the kind of objective, audience-directed prose used in college and the workplace to explain and defend ideas. Emphasizes planning, drafting, revising, and correct citation in essays, along with development of focus, organization, and paragraph/sentence structure. Offers opportunities for in-class assignments and peer-review activities in addition to extended essays developed outside of class. Students must pass with a C or higher in order to receive credit and continue to ENG 1107.

Corequisite(s): ENG 1106

ENG 1106. Lab for ENG 1105. (1 Hour)

Requires students to analyze and draft writing assignments from topics covered in ENG 1105.

Corequisite(s): ENG 1105

ENG 1107. College Writing 2. (3 Hours)

Builds on students' skills of written communication and basic research in preparation for college writing in their majors. Offers opportunities to emulate and incorporate various rhetorical strategies in the development of written analysis and researched argumentation. Focuses on techniques for logical analysis (inductive and deductive reasoning) and effective reasoning, establishing credibility, and emotional appeals to develop persuasive arguments. Emphasizes planning, drafting, revising, and correct citation in essays. Offers opportunities for in-class assignments and peer-review activities in addition to extended essays developed outside of class. Students must pass with a C or higher in order to receive credit and continue to ENG 3105 or ENG 3107.

Prerequisite(s): ENG 1103 with a minimum grade of C or ENG 1105 with a minimum grade of C

Corequisite(s): ENG 1108

ENG 1108. Lab for ENG 1107. (1 Hour)

Requires students to analyze and draft writing assignments from topics covered in ENG 1107.

Prerequisite(s): ENG 1106 with a minimum grade of S

Corequisite(s): ENG 1107

ENG 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENG 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

ENG 3105. Writing for the Professions: Science and Engineering. (3 Hours)

Offers writing instruction for students considering careers or advanced study in fields of science, technology, engineering, and mathematics. Students practice and reflect on writing in professional, public, and academic genres as they plan, research, write, and analyze various forms of technical communications such as technical reports, progress reports, proposals, instructions, presentations, and technical reviews relevant to technical professions and individual student goals. Offers students opportunities to evaluate a wide variety of sources and to develop communication skills in audience analysis, critical research, peer review, and revision. Students must pass with a C or higher in order to receive credit.

Prerequisite(s): ENG 1107 with a minimum grade of C ; ENG 1108 with a minimum grade of S

Corequisite(s): ENG 3106

ENG 3106. Lab for ENG 3105. (1 Hour)

Requires students to analyze and draft writing assignments from topics covered in ENG 3105. *Coreq ENG 3105..*

Corequisite(s): ENG 3105

ENG 3107. Writing for the Professions: Business and the Social Sciences. (3 Hours)

Offers writing instruction for students considering careers or advanced study in business administration and the social sciences. Students practice and reflect on writing in professional, public, and academic genres as they plan, research, write, and analyze various forms of business communications such as proposals, recommendation reports, letters, presentations, and emails relevant to industry. Offers students opportunities to evaluate a wide variety of sources and to develop communication skills in audience analysis, critical research, peer review, and revision. Students must pass with a C or higher in order to receive credit.

Prerequisite(s): ENG 1107 with a minimum grade of C ; ENG 1108 with a minimum grade of S

Corequisite(s): ENG 3108

ENG 3108. Lab for ENG 3107. (1 Hour)

Requires students to analyze and draft writing assignments from topics covered in ENG 3107. *Coreq ENG 3107..*

Corequisite(s): ENG 3107

ENG 3220. Writing Poetry. (3 Hours)

Introduces techniques and styles of poetry. Focuses on fundamentals and philosophy of poetry, including rhythm, rhyme, line breaks, and originality. Examines the roles of audience, speaker, and message in poetry with an emphasis on historically marginalized and under-represented voices. Class discussion emphasizes the role of the literary journal in 21st-century poetry and media. Offers students an opportunity to develop insights grounded in the reading, sharing, and analysis of current poetry published in literary journals/magazines to determine their place in the poetry community as creators, consumers, and/or curators. Students define poetry and its role in their life; craft, revise, and polish their original poems; critique their work and the work of others in discussion boards; and explore avenues for publication.

Prerequisite(s): ENG 1107 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ENG 3230. Writing Fiction. (3 Hours)

Introduces techniques and strategies of fiction writing. Examines key communication elements of fiction, including plot, characterization, setting, point-of-view, and various story development techniques. Students have an opportunity to read and react to a variety of texts while completing writing exercises and while generating, developing, and revising original pieces of fiction. Provides time for students to critique their own work and the work of others in writing workshops and peer review sessions.

Prerequisite(s): ENG 1107 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ENG 3240. Writing Nonfiction. (3 Hours)

Explores how writers translate personal experience and research into effective pieces of creative nonfiction. Studies literary journalism, personal essays, memoir, nature writing, and other subgenres to enhance understanding of this communication strategy. Class discussions analyze published works through points of view of scholar and writer, while delving into ethical considerations of writing from "real" life. Considers accurate description, scenic representation, and narrative framing, along with meaningful integration of images, videos, and Web tools. Offers students an opportunity to develop and revise original works of creative nonfiction. Provides time for students to critique their work and the work of others in writing workshops and peer-review sessions.

Prerequisite(s): ENG 1107 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ENG 3260. Writing to Inform and Persuade. (3 Hours)

Focuses on techniques used in nonfiction writing to communicate ideas and influence audience point of view about "true" events or affairs. Examines a variety of nonfiction pieces and styles, such as journalism features and profiles, editorials and opinion pieces, literary essays, and visual arguments. Offers students an opportunity to advance their understanding and appreciation of informative, persuasive writing techniques as they discuss, develop, revise, and review each other's original nonfiction pieces.

Prerequisite(s): ENG 1107 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

ENG 3300. Literature and Business Leadership. (3 Hours)

Examines organizational leadership by studying fictional characters whose workplace challenges parallel those encountered by today's business executives. Analyzes a variety of management styles and strategies as depicted in story form to guide students' understanding of leadership as it applies to workplace responsibility, choice, risk taking, moral obligation, and self-mastery. Offers students an opportunity to use insights gained from literary examples to inform personal reflections on the meaning of leadership and the qualities that combine to make someone an effective manager of people and organizations.

Prerequisite(s): ENG 1103 with a minimum grade of D- or ENG 1105 with a minimum grade of D-

ENG 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENG 4950. Seminar. (1-4 Hours)

Offers students the opportunity to integrate knowledge and abilities gained throughout the program. This capstone course for English majors concludes with a detailed research project.

ENG 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

ENG 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENG 4991. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

ENG 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

English Writing (ENGW)

Courses

ENGW 1102. First-Year Writing for Multilingual Writers. (4 Hours)

Designed for students whose first or strongest language is not English. Parallels ENGW 1111 but focuses on the concerns of multilingual writers. Students study and practice writing in a workshop setting; read a range of texts in order to describe and evaluate the choices writers make and apply that knowledge to their own writing; explore how writing functions in a variety of academic, professional, and public contexts; and write for various purposes and audiences in multiple genres and media. Offers students an opportunity to learn how to conduct research using primary and secondary sources and to give and receive feedback, to revise their work, and to reflect on their growth as writers.

ENGW 1110. Introductory First-Year Writing. (4 Hours)

Offers students an opportunity to develop awareness of their rhetorical practices, engage with critical perspectives, and identify and employ effective research techniques in a workshop setting. Throughout the course, students give and receive feedback, revise their work, and reflect on their identities as writers.

ENGW 1111. First-Year Writing. (4 Hours)

Designed for students to study and practice writing in a workshop setting. Students read a range of texts in order to describe and evaluate the choices writers make and apply that knowledge to their own writing and explore how writing functions in a range of academic, professional, and public contexts. Offers students an opportunity to learn how to conduct research using primary and secondary sources; how to write for various purposes and audiences in multiple genres and media; and how to give and receive feedback, to revise their work, and to reflect on their growth as writers.

ENGW 1113. First-Year Writing Innovation Seminar. (4 Hours)

Covers special topics and novel approaches to teaching and practicing writing in a workshop setting. Explores how writing functions in a range of academic, professional, and public contexts. Offers students an opportunity to learn how to conduct research using primary and secondary sources; how to write for various purposes and audiences in multiple genres and media; and how to give and receive feedback, to revise their work, and to reflect on their growth as writers.

ENGW 1114. First-Year Writing with Service-Learning. (4 Hours)

Offers students an opportunity, in a workshop setting, to study and practice writing. Hands-on experience shapes the students' practice of writing, and writing projects meet specific community needs. Students read a range of texts in order to describe and evaluate the choices writers make and apply that knowledge to their own writing. Covers how to conduct research using primary and secondary sources and apply that knowledge in service-learning-focused settings. Studies how to write for various purposes and audiences in multiple genres and media, how to give and receive feedback, how to revise work, and how to reflect on growth as a writer.

ENGW 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGW 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGW 3302. Advanced Writing in the Technical Professions. (4 Hours)

Offers writing instruction for students in the College of Engineering and the College of Computer and Information Science. Students practice and reflect on writing in professional, public, and academic genres—such as technical reports, progress reports, proposals, instructions, presentations, and technical reviews—relevant to technical professions and individual student goals. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3303. Advanced Writing in the Environmental Professions. (4 Hours)

Provides writing instruction for students in fields related to environmental studies. Students develop an in-depth analytic or recommendation report about a complex environmental concern related to their majors and/or their co-op or other personal or professional experiences. In a workshop setting, students evaluate scholarly and popular sources, practice a variety of professional and academic forms of writing and communication, and develop expertise in audience analysis, critical research, peer review, and revision. Writing is guided in stages from initial topic exploration and a formal proposal through drafts and progress reports to a final polished report, presented in a bound portfolio with a cover letter, an abstract, and other writing samples.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3304. Advanced Writing in the Business Administration Professions. (4 Hours)

Offers writing instruction for students in the D'Amore-McKim School of Business. Students practice and reflect on writing in professional, public, and academic genres—such as proposals, recommendation reports, letters, presentations, and e-mails—relevant for careers in business. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3305. Advanced Writing in the Criminal Justice Professions. (4 Hours)

Offers writing instruction for students in criminal justice. Students practice and reflect on writing in professional, public, and academic genres—such as reports, protocols, press releases, and public service announcements—relevant for careers in criminal justice and related fields. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3306. Advanced Writing in the Health Professions. (4 Hours)

Offers writing instruction for students in the Bouvé College of Health Sciences. Students practice and reflect on writing in professional, public, and academic genres—such as literature reviews, case studies, protocols, and care instructions—relevant for careers in nursing, pharmacy, and other health professions. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3307. Advanced Writing in the Sciences. (4 Hours)

Offers instruction in writing for students considering careers or advanced study in the physical or life sciences. By exploring research literature and reflecting on their own experiences, offers students an opportunity to identify issues of interest in their field and analyze how scientific texts make claims, invoke other scientific literature, offer evidence, and deploy key terms. Through analysis and imitation, exposes students to the challenges of the scientific project, such as the use of quantitative data and visual presentation of evidence. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3308. Advanced Writing in the Social Sciences. (4 Hours)

Offers instruction in writing for students considering careers or advanced study in the social sciences. By exploring research literature and reflecting on their own experiences, offers students an opportunity to identify issues of interest and analyze how texts make claims, invoke other social science literature, offer evidence, and deploy key terms. Through analysis and imitation, exposes students to the challenges of the social science project, including the collection of data on human subjects and the ethical presentation of evidence. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3309. Advanced Writing in the Humanities. (4 Hours)

Offers instruction in writing for students considering careers or advanced study in the humanities. By exploring critical literature and reflecting on their own experiences, offers students an opportunity to identify issues of interest and analyze how texts make claims, invoke primary and secondary texts, offer evidence, and deploy key terms. Through analysis and imitation, exposes students to the challenges of the humanities project, including the framing of interpretive questions and the presentation of textual evidence. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3311. Advanced Writing for Prelaw. (4 Hours)

Offers instruction in writing for students considering legal careers. Introduces students to legal reasoning and to the contexts, purposes, genres, audiences, and styles of legal writing. Emphasizes the role of writing and argument in U.S. legal culture. Using strategies drawn from rhetorical theory and criticism, students examine briefs, memoranda, opinions, and other legal texts to identify and describe techniques of analysis and persuasion. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3314. Advanced Writing in the Arts, Media, and Design. (4 Hours)

Examines writing in the arts and in the fields of media and design. Explores writing for a range of public and professional audiences, including scholarly and critical. Emphasizes understanding different literacies: alphabetic, visual, musical, and sculptural. Genres might include critical reviews, grant writing, promotional pieces, interactive narratives, newspaper articles, and Web pages, among others. Offers students an opportunity for analysis, reflexive imitation, and creative interdisciplinary work.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3315. Interdisciplinary Advanced Writing in the Disciplines. (4 Hours)

Offers writing instruction for students interested in interdisciplinary study or who wish to explore multiple disciplines. Students practice and reflect on writing in professional, public, and academic genres relevant to their individual experiences and goals. In a workshop setting, offers students an opportunity to evaluate a wide variety of sources and to develop expertise in audience analysis, critical research, peer review, and revision.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

ENGW 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENGW 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Enterprise Artificial Intelligence (EAI)

Courses**EAI 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EAI 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EAI 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EAI 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EAI 5000. Fundamentals of Artificial Intelligence. (2.25 Hours)

Introduces the fundamental problems, theories, and algorithms of the artificial intelligence field. Topics include heuristic search and game trees, knowledge representation using predicate calculus, automated deduction and its applications, problem solving and planning, and an introduction to machine learning. Required course work includes the creation of working programs that solve problems, reason logically, and/or improve their own performance using techniques presented in the course.

EAI 5010. Applications of Artificial Intelligence. (2.25 Hours)

Explores numerous industry applications of AI with emphasis on solving specific needs or problems. Topics include neural networks, natural language processing, and implications of cybersecurity. Artificial Intelligence is actively developing in applications across numerous fields and industries, including finance, healthcare, education, and transportation.

EAI 5020. AI System Technologies. (2.25 Hours)

Presents a selection of systems technologies utilized in AI, including data visualization; file systems for a large data mart; applications of structured query language; and filtering and transforming to ingest data, predictions, etc. Covers mathematics/statistics and computation, machine learning, and privacy requirements.

EAI 5030. Usability and Human Interaction. (2.25 Hours)

Surveys the theory and practice of human-computer interaction and the development of user interfaces. Through both analysis and design projects, offers students an opportunity to learn cutting-edge approaches to usability research and evaluation, testing methods, and how to design systems that meet end-user needs. Topics covered include behavioral and cognitive foundations of interaction design, principles of good design for interaction, basic user research techniques, and the process of user-centered design.

EAI 5080. Advanced Analytical Utilization. (2.25 Hours)

Focuses on instrumental methods of data analysis and provides a foundation to the theory and application of modern analytical techniques for artificial intelligence. Explores the importance of instrumental analysis for specific uses of AI within various fields and context applications across numerous professional fields.

EAI 6000. Fundamentals of Artificial Intelligence. (3 Hours)

Introduces the fundamental problems, theories, and algorithms of the artificial intelligence field. Topics include heuristic search and game trees, knowledge representation using predicate calculus, automated deduction and its applications, problem solving and planning, and an introduction to machine learning. Required course work includes the creation of working programs that solve problems, reason logically, and/or improve their own performance using techniques presented in the course.

EAI 6010. Applications of Artificial Intelligence. (3 Hours)

Explores numerous industry applications of AI with emphasis on solving specific needs or problems. Topics include neural networks, natural language processing, and implications of cybersecurity. Artificial Intelligence is actively developing in applications across numerous fields and industries, including finance, healthcare, education, and transportation.

EAI 6020. AI System Technologies. (3 Hours)

Presents a selection of systems technologies utilized in AI, including data visualization; file systems for a large data mart; applications of structured query language; and filtering and transforming to ingest data, predictions, etc. Covers mathematics/statistics and computation, machine learning, and privacy requirements.

Prerequisite(s): EAI 6000 (may be taken concurrently) with a minimum grade of C- ; EAI 6010 (may be taken concurrently) with a minimum grade of C-

EAI 6030. Usability and Human Interaction. (3 Hours)

Surveys the theory and practice of human-computer interaction and the development of user interfaces. Through both analysis and design projects, offers students an opportunity to learn cutting-edge approaches to usability research and evaluation, testing methods, and how to design systems that meet end-user needs. Topics covered include behavioral and cognitive foundations of interaction design, principles of good design for interaction, basic user research techniques, and the process of user-centered design.

Prerequisite(s): EAI 6000 (may be taken concurrently) with a minimum grade of C- ; EAI 6010 (may be taken concurrently) with a minimum grade of C-

EAI 6050. Finance Information Processing. (3 Hours)

Covers advanced data management technologies and management systems with a focus on the finance industry. Emphasizes evaluating the advantages and disadvantages of such technologies in different application contexts. Addresses specific application contexts of AI and presents the entity relationship to data management (including network hierarchical and object oriented), with an emphasis on processing, storing, and retrieval, while also including privacy requirements.

EAI 6060. Healthcare Information Processing. (3 Hours)

Covers advanced data management technologies and management systems with a focus on the healthcare industry. Emphasizes evaluating the advantages and disadvantages of such technologies in different application contexts. Addresses specific application contexts of AI and presents the entity relationship to data management (including network hierarchical and object oriented), with an emphasis on processing, storing, and retrieval, while including privacy requirements.

EAI 6070. Human Resources Information Processing. (3 Hours)

Covers advanced data management technologies and management systems with a focus on human resources. Emphasizes evaluating the advantages and disadvantages of such technologies in different application contexts. Addresses specific application contexts of AI and presents the entity relationship to data management (including network hierarchical and object oriented), with an emphasis on processing, storing, and retrieval, while including privacy requirements.

EAI 6080. Advanced Analytical Utilization. (3 Hours)

Focuses on instrumental methods of data analysis and provides a foundation to the theory and application of modern analytical techniques for artificial intelligence. Explores the importance of instrumental analysis for specific uses of AI within various fields and context applications across numerous professional fields.

EAI 6120. AI Communication and Visualization. (3 Hours)

Offers an overview of key informational design concepts, emphasizing the relationship between information and audience in the context of communicating complex quantitative information. Encompasses three main context areas: exploratory data visualization, dashboard and scorecard design, and spatial data representation. Discusses ethical questions related to the communication and visualization of data analytics: storytelling; different techniques (such as R-spatial, GeoDa, GeoWave, GeoTrellis, GeoMesa, graph databases network visualization); and principles for visual design, including privacy requirements.

EAI 6400. Data Governance and Responsible AI. (3 Hours)

Focuses on data ethics, data privacy, data integrity, and protecting data from the viewpoint of an organization's internal and customer data. Covers the ethical challenges of AI and analytics systems, developing a model to provide a reliable and sustainable system complying with ethical standards, government regulations, and policies. Topics include data privacy, data regulations, bias in AI, and building a trustworthy AI system. Explores real-world scenarios and business cases, applying approaches to ethical issues organizations face throughout the complete lifecycle of analytics and AI models.

EAI 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

EAI 6980. Integrated Experiential Capstone. (3 Hours)

Offers students an opportunity to apply the knowledge, skills, and best practices acquired throughout the Enterprise Artificial Intelligence program in the context of a practicum in the development and delivery of discipline-specific artificial intelligence projects. Students advance a project plan, conduct research, and create and deliver recommendations with the objective to apply artificial intelligence to real-world problems in organizations. Students develop and present the insights and recommendations for successful implementation of the capstone project.

Entrepreneurship and Innovation (ENTR)

Courses**ENTR 1201. The Entrepreneurial Universe. (4 Hours)**

Introduces students to the world of entrepreneurship. Covers the importance of entrepreneurship, the characteristics of entrepreneurs, and the entrepreneurship process. Describes entrepreneurship in its various forms, including startup growth ventures, entrepreneurship in small and medium enterprises, and microbusinesses.

ENTR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENTR 2215. Understanding Family Enterprise. (4 Hours)

Covers business, personal, and family issues found in family owned and managed companies, including management of the business, succession planning, entitlement, hiring, nonfamily employees, boards of advisors and directors, compensation, managing conflict, and communications. Designed for individuals who plan to enter into the management of a family business. Focuses on small and midsize firms with annual revenue of \$5 million to \$500 million.

ENTR 2225. Examining Family Business Dynamics Through Film. (4 Hours)

Examines various television shows and films to critically analyze and evaluate family relationships and family business dynamics. Discusses how these media reflect research and theories related to family businesses and how a "healthy family" helps to ensure a "healthy business." Observes examples of important family psychology concepts like sibling rivalry, entitlement, generational conflict, gender stereotypes, divorce, and spousal conflict. Also covers family business concepts like primogeniture, entitlement, succession, stagnation, wealth management, innovation, and gender discrimination. Emphasizes understanding family businesses as a source and consequence of diversity, using a global lens to showcase the similarities and differences among family firms around the world.

ENTR 2303. Marketing Strategies for Startups. (4 Hours)

Designed to help aspiring and serious entrepreneurship students to generate and evaluate robust marketing opportunities that may serve as the foundation for a new venture. Once a new opportunity has been vetted, students then have an opportunity to work on developing an entrepreneurial marketing plan. Covers methods for recognizing, discovering, or creating opportunities and validating those opportunities. One of the biggest challenges entrepreneurs face is coming up with the right opportunity for a new venture. This is an applied and experiential course involving field research. Two key deliverables are the opportunity assessment project and the entrepreneurial marketing plan.

ENTR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENTR 3217. Global Family Business Leadership. (4 Hours)

Offers students an opportunity to develop an understanding of the nuanced challenges facing entrepreneurial leaders in different cultural settings. While family businesses have been found to be both numerically and economically significant in most countries, these enterprises worldwide share many common issues. However, there are differences that emanate from specific institutional and cultural contexts. Understanding these differences and how they can affect leadership of a family business is increasingly important for stewards of family businesses in a global marketplace. Understanding the nature of international differences and appreciating the opportunities they offer for growth-oriented family business leaders is especially important as family businesses face unique barriers to international expansion. Required participation in spring break international field project.

ENTR 3220. International Entrepreneurship and Innovation Consulting. (4 Hours)

Offers students an opportunity to learn the principles and methods of consulting to growing companies and social enterprises abroad. This is done through a set of frameworks that focus on customer segmentation, product or service requirements, product-line and service strategy, business model design, and then internationalization strategy. Working in teams, students apply these frameworks to local companies in different business sectors and then prepare to apply them to client companies in their follow-on designated destination country. The final part of the course is preparation for the international field studies. This includes an introduction to effective methods for management consulting, including goal setting, team organization, and client management.

ENTR 3302. Managing and Growing the Family Business. (4 Hours)

Covers the issues and practices of successful multigeneration family businesses, including family values and culture, managing conflict, sibling rivalry, entitlement, hiring family and nonfamily employees, management of the family business, facilitating growth and change, and succession planning.

ENTR 3305. Business Model Design and Innovation. (4 Hours)

Considers dynamic entrepreneurial startup strategy from three perspectives: positioning of the venture within a dynamic, evolving industrial ecosystem that includes major companies, startups, and universities at various parts of the value-chain; different sources of innovation, including open innovation and industry-wide technology platforms; and business model design and implementation. Explores startup strategy from these perspectives using case studies and web-based company research projects and then asks students to develop their own strategy for a startup using the frameworks studied in class.

ENTR 3306. Global Entrepreneurship. (4 Hours)

Offers an opportunity to learn how entrepreneurs start, finance, and manage small businesses. Includes a field experience in South Africa, which involves identifying startups and small business for assistance in developing a business plan and seeking debt and/or equity financing. Students have an opportunity to consider the unique challenges encountered by entrepreneurs in economically disadvantaged communities and the additional challenges presented by South Africa's history of racism and its current struggles with HIV/AIDS. Teaches students the basic concepts and tools associated with small business management, such as preparing financial models and a written business plan and investment presentation, with the goal that they can provide meaningful consulting assistance to township entrepreneurs.

Attribute(s): NUpath Creative Express/Innov

ENTR 3330. Design Thinking for Startups. (4 Hours)

Focuses on how small teams can develop new products and services in a startup environment by applying design thinking methodology. Applies the management concept of lean, agile development to concept creation, customer research, prototype development, and market validation. Offers students an opportunity to apply these skills to their own new product or service ideas and develop prototypes during the semester. Students are assessed not only for the quality of their ideas and project execution but also for their ability to work in small teams, with limited resources, as in a traditional startup experience.

ENTR 3401. Consulting Operations & Growth in SMEs. (4 Hours)

Offers teams of students an opportunity to consult with owners of small- and medium-sized enterprises (SMEs) to develop project proposals and perform field casework specific to the needs of their SME clients. A highlight of this course is the SME consulting project. Through the project and course material, covers how to manage an SME from the day-to-day operations to strategic planning for growth. Exposes students to a variety of ways that an SME can achieve profitability and growth by generating lasting customer relationships, offering exemplary service, managing cash flow, implementing marketing strategies, and developing new and retooled products/services to reach new markets.

ENTR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENTR 4414. Bridging Conflict, Creating Diversity. (4 Hours)

Offers students a unique opportunity to serve as management and marketing consultants to early stage startups. Students work with entrepreneurs from diverse backgrounds (e.g., ethnic, social, religious, demographic) with experience operating a joint startup. Focuses on development of conflict resolution and leadership development skills that may be needed when cofounders of a startup come from diverse backgrounds. Students experience firsthand some of the challenges that entrepreneurs face, as well as support entrepreneurs' efforts as problem solvers and collaborate to learn about entrepreneurship and marketing.

ENTR 4501. Integrated Studies in Entrepreneurial Startups. (4 Hours)

Designed as an advanced course for students who are studying entrepreneurship. Covers the issues raised when creating a technology venture that goes through multiple rounds of financing in order to become a successful large company. Topics include managing growth, writing business plans, raising money, and formulating exit strategies. Focuses on projects to obtain venture financing from venture capitalists, angels, and corporate investors.

ENTR 4503. Integrated Studies in Family Business. (4 Hours)

Designed for advanced students interested in launching a new venture or growing an existing business venture. Includes developing a business plan, strategy development for small- to medium-sized enterprises, sales forecasting, pro forma development, debt financing, and service developments. Sponsored by the Center for Family Business, focuses on obtaining a bank loan to start a business or to grow an existing small- to medium-sized venture.

ENTR 4505. Entrepreneurial Venture Growth Strategies. (4 Hours)

Focuses on helping technology ventures define and improve their strategies and tactics to achieve external funding. Studies frameworks for developing a growth-focused product and service strategy; techniques to grow and evolve a startup team, creating scalable business models; and early stage, successive-round venture finance. Working in teams, students must apply these methods to improve the business plans for early stage technology ventures and to create new financial projections and investor packages for early stage ventures, with specific assessments of customer focus and needs, intellectual property, new product-line and technology strategy, and business model design. Company projects include the fields of web services, IT, healthcare, and life sciences. The course is a practicum on how to get new venture concepts funded and scaled from the perspective of entrepreneur and investor.

ENTR 4510. Management Consulting Abroad. (4 Hours)

Offers an intensive field consulting program with local ventures in different countries. Designed to have students experience firsthand the challenges that entrepreneurs confront internationalizing products and services as well as core product management issues. In some cases, students work in cross-culture consulting teams with local stakeholders. Projects vary widely but typically involve assessment of current product line and services strategy, marketing approaches, and how these must be adapted for foreign markets, including the United States. This is a field consulting course with heavy client engagement, requiring detailed written and oral communications for the client.

Prerequisite(s): ENTR 2301 (may be taken concurrently) with a minimum grade of D- or ENTR 3220 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov, NUpath Integration Experience

ENTR 4983. Special Topics in Entrepreneurship. (4 Hours)

Covers special topics in entrepreneurship. May be repeated once.

ENTR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENTR 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ENTR 5000. New Venture Development. (1-4 Hours)

Pairs students with entrepreneurs and faculty in a mentorship capacity. This experiential learning is designed to accelerate entrepreneurial projects. Uses classroom learning to enhance project value proposition, market opportunity, technology development level, financials, go-to-market-strategy, and pitches.

ENTR 6210. Managing Operations in Early Stage Ventures. (3 Hours)

Stresses the operating problems of managing small businesses. Case studies develop analytical approaches for appraising the risks and rewards of potential growth opportunities as well as operating problems. Problems range from locating, evaluating, marketing, and financing a small company to the survival and growth of more established businesses. Guest speakers and entrepreneurs provide pertinent business perspectives to in-class activities.

ENTR 6211. Entrepreneurship: Services and Retail Business Creation. (3 Hours)

Covers the issues surrounding the creation of a new business in the service and retail sectors. Emphasizes issues relating to the startup, growth, and operation of business ventures in these areas. Topics include developing a business plan for startup, market positioning, services design, operations management, sales forecasting, cash flow management, and venture financing with a heavy emphasis on debt financing. Students are asked to develop business plans for services and retail ventures of their own choosing as the class project. Requires prior completion of 9 SH of MBA core courses.

ENTR 6212. Business Planning for New Ventures. (3 Hours)

Gives students the opportunity to build a complete business plan for new high-potential ventures. Covers all aspects of the planning process, from the point of view of both the prospective entrepreneur and the potential investor. Explores the demands of the entrepreneurial career through reading, self-assessment exercises, and group projects. Guest speakers from startup companies, law firms, and venture capital firms provide a window on current experiences in the small-business world. Recommended for prospective entrepreneurs as well as others who may become involved with new ventures.

ENTR 6214. Social Enterprise. (3 Hours)

Designed to provide students with an in-depth exposure to entrepreneurship in the social sector, a rapidly growing segment of the global economy. Uses the case method to expose students to leading entrepreneurs who have developed and implemented business models to solve social problems such as extreme poverty, disease, illiteracy, and economic and social dislocation. Focuses on uniquely creative and driven people who have dedicated their lives to making a difference in the lives of others through values-based entrepreneurship.

ENTR 6216. Global Social Entrepreneurship and Innovation. (3 Hours)

Explores using innovation to build and create value in the larger global context. Examines some of the latest innovation practices: (1) to build and create value within emerging economies, (2) to facilitate social entrepreneurship, (3) to promote sustainable development, and (4) to build and create value at the bottom of the pyramid. Exposes students to what successful entrepreneurs must learn to balance business demands with the larger need for innovative thinking. Stresses the application of successful practices to generate results. Topics include creating and sharing knowledge and intellectual property, exploiting systems and networks, redefining disruptive innovation, and the steps necessary to make innovation and entrepreneurship happen in a variety of global contexts. Uses real-life examples and case studies to illustrate successful practices.

ENTR 6218. Business Model Design and Innovation. (3 Hours)

Introduces major topics in the modern understanding of business models: their essence and role in securing competitive advantage, key components and design of business models, business model change and innovation, technology commercialization through sustaining business models, financial representation of a business model, and validation of developed business models.

ENTR 6219. Financing Ventures from Early Stage to Exit. (3 Hours)

Introduces students to the financing process for ventures from early stage to exit. Exposes students to various financing options, which may include crowdsourcing, the American JOBS Act, and foreign-sourced capital, as well as different types of debt and equity financing. Offers students an opportunity to learn about analyzing financial aspects of term sheets, including valuation methodologies and other financing documents.

ENTR 6240. Emerging and Disruptive Technologies. (3 Hours)

Covers the role emerging technologies play in innovation for new ventures and established corporations. Includes a mix of theory and practical knowledge. Topics covered include technology disruption, diffusion, life cycles, and research-and-development strategy. Explores, in detail, the technical and market opportunities for current and emerging technologies across a broad spectrum of industries.

ENTR 6241. Entrepreneurial Marketing and Selling. (3 Hours)

Examines the specific situation of entrepreneurial marketing. Topics include how to perform a market analysis when there are limited resources and tight schedules to be met. Also addresses new market situations, opportunity assessment, customer segmentation, going to market, and writing a marketing plan.

ENTR 6250. Lean Design and Development. (3 Hours)

Covers the intersection of customer research with product design, specifically lean design and how to map abstract attributes that customers seek into concrete product designs that can actually be built. Other topics include managing the technology business interface, creating product teams, and drafting product development plans. Open to first-year graduate students.

ENTR 6300. Managing a Technology-Based Business. (3 Hours)

Covers topics specific to managing a business or a strategic business unit within a firm. Considers the special issues related to technology-based firms. Topics include creating a culture, operations planning, staffing for technical excellence, dealing with technology vendors, dealing with advisers, supply chain management, and writing operations plans. Open to first-year graduate students.

ENTR 6320. Innovation, Entrepreneurship, and Dynamic Competition. (3 Hours)

Explores the life cycle of industries and their effects on the dynamics of competition, including the creation of industries and the role of startups and proliferation of designs; the half-truth of entry timing advantage; design competition, emergence of dominant designs, and implication for firm strategy and industry structure; the onset of maturity; the role of process innovation and incremental product changes; technological discontinuities, challenges for incumbents, and opportunities for new entrants; the hybrid trap and how incumbents often miss the mark during times of industry transformation; the rise of platform disruptions and winner-take-all dynamics; the sociocognitive dimension of industry evolution: product categories and framing; and best practices for managing innovation in startups and established firms. Taught through a combination of cases, vignettes, and interactive lectures.

ENTR 6340. The Technical Entrepreneur as Leader. (3 Hours)

Focuses on the personal skills an entrepreneur needs to lead and persuade others. Students read about and complete exercises on leadership and selling ideas. In addition, students meet members of the entrepreneurship community in New England. Stresses communications skills, both written and oral, along with self-discovery of leadership style.

ENTR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENTR 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Environmental Studies (ENVS)**Courses****ENVS 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ENVS 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

ENVS 4997. Senior Thesis. (4 Hours)

Offers students an opportunity to prepare an undergraduate thesis under faculty supervision.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

Extended Realities (EXRE)

Courses

EXRE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

EXRE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

EXRE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

EXRE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

EXRE 5010. Immersive Media: Extended Realities (XR) History, Theory, and Impact. (4 Hours)

Introduces the historical foundation and conceptual frameworks with which to analyze and interrogate extended reality experiences, including virtual reality, augmented reality, and mixed reality. Covers the theoretical, cultural, and technological developments that have informed contemporary XR. Explores the promises, dreams, and expectations, as well as the ethical concerns and philosophical dilemmas, associated with the field. Offers students an opportunity to create XR experiences and prototype their own ideas.

EXRE 5011. Seminar for EXRE 5010. (1 Hour)

Offers students an opportunity to analyze and critique extended reality experiences. Examines historical, seminal, and new experiences. Discusses the XR experiences using industry nomenclature and basic research methodology.

Corequisite(s): EXRE 5010

EXRE 5020. Developing Extended Realities (XR). (4 Hours)

Examines how to create extended reality (XR) experiences including virtual reality (VR), augmented reality (AR), and mixed reality (MR). Studies coding and developing projects in XR using current hardware and software, including scripting, sensing, interactions, and preproduction methods that are specific to XR. Examines simulation sickness, sensing, eye tracking, empathy, and narrative in XR.

EXRE 5030. Designing Extended Realities (XR). (4 Hours)

Studies the craft and theory of designing, executing, and directing compelling extended reality experiences. Covers techniques to analyze, advise, and critique designs in the XR industry, or the many industries this experience augments, via a hands-on, experiential learning approach. Offers practical, professional, and theoretical instruction in writing and design, spatial narrative, and world building. Presents methodologies for formatting and directing interactive scripts and voice-overs. Shares professional methods as well as strategies and approaches to world building in the metaverse. Explores all forms in the broad field of extended reality, including games, animation, 360 video, journalism, and advertising. Offers networking opportunities through invited guests, publishers, and partners in XR.

EXRE 5973. Topics in Extended Realities (XR). (4 Hours)

Focuses on a specific topic that is of timely relevance to the domain of extended reality. Explores current discourses in the field and draws directly from ongoing instructor expertise and research. Offers students an opportunity to develop original projects in response to course topic, informed by case studies, critical readings, instructor and guest lectures, class discussions, and exercises. Emphasizes developing skills and strategies for self-directed XR experience production, including experimentation, planning, development, iteration, revision, and critique of creative work. May be repeated once.

EXRE 6500. Extended Realities (XR) Studio. (4 Hours)

Focuses on the design of experiences and artifacts using extended reality technologies for the development and critique of XR projects. Includes planning and design of the final work. Students use multiple ideation methods to develop project ideas and work in critical groups to strengthen project ideas and then prototype. Requires the completion of a project and presentation of the work.

EXRE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

EXRE 7500. Extended Realities (XR) Project. (4 Hours)

Offers students an opportunity to focus on the creation of extended reality experiences. Includes planning and design of the experiences. Discusses and reflects on the design process at the crossroads of methodological, systematic iteration, and creative exploration.

Prerequisite(s): EXRE 5010 with a minimum grade of C-

EXRE 7990. Thesis. (4 Hours)

Offers students support in developing and producing the written component of an extended reality thesis that integrates and applies their accumulated knowledge. Encourages student participation within a practice and research community consisting of classmates, advisor(s), and external professionals.

Prerequisite(s): EXRE 5030 with a minimum grade of C-

Finance - CPS (FIN)**Courses****FIN 1200. Managing Your Personal Finances. (3 Hours)**

Introduces the practical finance skills that enable students to identify their personal financial goals—such as budgeting, saving and investing, borrowing, retirement, home buying, insurance needs, and estate planning—with their careers and incomes. Offers students an opportunity to plan and make financial decisions that will help them reach those goals.

FIN 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FIN 2105. Introduction to Corporate Finance. (3 Hours)

Studies the basic theory, techniques, and application of financial analysis tools needed for business financial administration and decision making.

FIN 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FIN 3100. Finance for New Ventures. (3 Hours)

Focuses primarily on startup ventures and the methods most useful to early stages companies, including microfinance, crowdfunding, angel investing, and venture capital. Covers the financing mechanism of a startup, including nonprofit companies and social entrepreneurship ventures.

Prerequisite(s): ACC 2100 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

FIN 3310. Financial Institutions and Markets. (3 Hours)

Explores the structure and functioning of the U.S. and international financial markets and institutions. Topics covered include banking theory; instruments of various financial markets; the roles of traditional and nontraditional financial intermediaries; and the impact of securitization, international financial competition, financial system stability, and financial regulation.

Prerequisite(s): FIN 2105 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

FIN 3330. Risk Management and Insurance. (3 Hours)

Offers students an opportunity to develop an understanding and appreciation of fundamental insurance principles. Studies risk, risk management, rating, and contract elements. Course material includes the major lines of insurance covering both personal and commercial insurance.

Prerequisite(s): FIN 2105 with a minimum grade of D-

FIN 3340. Investments. (3 Hours)

Studies the nature of securities, the mechanics and costs of trading, and the ways in which the securities markets operate. Applies risk-return analysis in making decisions to buy or sell stocks, bonds, options, and other investments. Requires a semester-long project in which students follow and analyze the performance of individual and a portfolio of investments with written analysis.

Prerequisite(s): FIN 3310 with a minimum grade of D-

FIN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FIN 4220. Working Capital Management. (3 Hours)

Explores short-term financial management. Reviews institutional and legal aspects as a context for making decisions involving current assets and current liabilities. This working capital management—the management of cash, inventories, accounts receivable, and short-term credit arrangements by business firms—provides the basis of long-term survival of businesses.

Prerequisite(s): FIN 2105 with a minimum grade of D-

FIN 4230. International Finance. (3 Hours)

Studies the international financial environment in which organizations operate, including trade, balance of payments, capital flows, tariff policies, international economic institutions, currency, and exchange-rate issues. Explores international aspects of investment planning and financing decisions and other factors important to managing multicountry cash flows and financing of multinational corporations.

Prerequisite(s): FIN 3310 with a minimum grade of D-

FIN 4240. Personal Financial Planning. (3 Hours)

Focuses on the logic, concepts, tools, and applications of financial planning for retirement, estate planning, and financial risk management. Forecasts and analyzes various financial needs such as retirement income, health and insurance protection, dependent protection projections, etc., and utilizes investment vehicles to develop a financial plan to meet the forecast needs. Intended for those planning careers in personal financial advising in one of the various financial services environments.

Prerequisite(s): FIN 3330 with a minimum grade of D- ; FIN 3340 with a minimum grade of D-

FIN 4250. Real Estate Finance. (3 Hours)

Discusses finance concepts applied to real estate issues. Topics include mortgage instruments, mortgage markets, residential real estate closing, income property analysis, financial leverage, real estate valuation, securitization, and real estate investments.

Prerequisite(s): FIN 3310 with a minimum grade of D-

FIN 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

FIN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FIN 6101. Accounting Fundamentals for Financial Institutions. (3 Hours)

Emphasizes managerial and financial accounting concepts as they apply to financial institutions. Analyzes financial statements of a variety of financial institutions with an emphasis on understanding the accounting structure of financial institutions, ratio analysis as it is used to evaluate financial performance, and accounting control systems.

FIN 6102. Asset and Liability Management. (3 Hours)

Provides a risk-management analysis of the assets and liabilities of financial institutions. Topics include analysis and management of regulatory, liquidity, capital, credit, currency, and interest-rate risks.

FIN 6120. Building Financial Relationships. (3 Hours)

Explores how financial institutions develop, price, and market financial products and services in a global economy. Examines the variety of financial products available, product packaging and pricing decisions, cross-selling, and relationship building in a competitive marketplace.

FIN 6161. Investment Analysis. (3 Hours)

Focuses on investment management as the study of risk and return of financial securities and real assets. Explores domestic and international financial markets and the securities traded therein. Offers students an opportunity to develop an understanding of security analysis, including fundamental, technical, and quantitative techniques used in the valuation of financial assets. Analyzes qualitative concepts such as market efficiency, intrinsic value, and risk. Stresses portfolio construction, management, and protection.

FIN 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Finance and Insurance (FINA)

Courses

FINA 1209. Personal Finance. (4 Hours)

Emphasizes the development of individually focused financial information and a comprehensive financial plan designed to enable the individual to manage his or her financial affairs. Integrates personal goals—such as buying a home, retirement, investing, and insurance needs—to help assure that the financial plan incorporates the major decision stages an individual faces.

FINA 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FINA 2201. Financial Management. (4 Hours)

Designed to develop the financial skills and logical thought processes necessary to understand and discuss financial policy decisions in a global economy. Specific objectives include developing an understanding of the time value of money; using financial statements in decision making; and understanding the nature of financial markets, the cost of capital, valuation of stocks and bonds, management of short-term assets, short-term and long-term financing, capital markets, and multinational financial management. Addresses the impact of legal, social, technological, and ethical considerations on efficient economic outcomes. Requires a financial calculator and provides an opportunity to develop computer spreadsheet skills.

Prerequisite(s): ACCT 1201 with a minimum grade of D- or ACCT 1209 with a minimum grade of D- or ACCT 1202 with a minimum grade of D-

FINA 2209. Financial Management. (4 Hours)

Does not count as credit for business majors. Counts as FINA 2201 for business minors only.

Prerequisite(s): ACCT 1201 with a minimum grade of D- or ACCT 1209 with a minimum grade of D- or ACCT 1202 with a minimum grade of D-

FINA 2720. Sustainability in the Business Environment. (4 Hours)

Examines a variety of environmental problems, including global warming, use and disposal of toxic substances, and depletion of natural resources such as water and petroleum. Many of these problems arise because these are resources that are available to all and so their overuse is an externality that is not included in manufacturing costs. Businesses have been involved in both identifying sustainability issues in their individual organizations and providing a variety of innovative solutions. Uses a combination of readings and case analyses to assesses how both government regulations—such as taxes, subsidies, building codes, prohibitions of use—and business solutions—including zero emissions, green design, producer take-back, life cycle assessment, and corporate environmental reporting—address these problems.

FINA 2730. Fintech and Financial Innovation. (4 Hours)

Offers a broad overview of the world of fintech, from the perspectives of both large financial institutions and small startups. Evaluates the financial services industry, forces at play that may lead to disruption in the industry, startups that have already succeeded in bringing about change, the technological tools that may be used to make changes, and how both startups and established firms might respond to the continued pace of change.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2209 with a minimum grade of D- or FINA 2202 with a minimum grade of D-

FINA 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FINA 3301. Corporate Finance. (4 Hours)

Designed to develop the skills needed to make and implement financial policy decisions in a global economy. Specific objectives include developing an understanding of financial analysis; company valuation; capital markets; cost of capital; capital asset pricing and risk management; short- and long-term financial policies; working capital management; multinational financial management; and special topics including lease financing, debt refunding, mergers and acquisitions, and bankruptcy and restructuring. Offers opportunities to consider many broader issues including the relevance of globalization; the world economy; technological advances; and legal, social, and ethical issues related to the practice of corporate finance. Stresses written and oral communication skills and teamwork. Uses cases and spreadsheets extensively.

Prerequisite(s): (FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-)

FINA 3303. Investments. (4 Hours)

Focuses on investment management as the study of risk and return of financial securities and real assets. Students design and assess models that evaluate investments while recognizing the constraints of the real world. Explores domestic and international financial markets and the securities traded therein. Discusses techniques for valuation of financial assets. Analyzes qualitative concepts such as market efficiency, intrinsic value, and risk. Provides the ability to build unique valuation models to suit the particular investment alternative that students wish to scrutinize. Also stresses portfolio construction, management, and protection, as well as performance assessment. During the semester, students have an opportunity to create and manage a stock portfolio.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 3305. Real Estate Principles. (4 Hours)

Presents a broad introduction to real estate. Introduces real estate theory, law, market analysis, and the fundamentals of real estate finance. Explores commercial real estate financing, property management, value creation strategies, and major historical events in property markets. Offers students an opportunity to develop the practical skills to evaluate personal and investment-oriented real estate decisions, understand the influences of macroeconomic factors, and consider urban development trends. No prior knowledge of real estate is necessary.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 3401. Responsible Investing. (4 Hours)

Examines environmental, social, governance, and socially responsible investing. Focuses on responsible investing from the perspective of investors and asset managers. Reviews the history and current landscape using a quantitative approach by evaluating the potential trade-offs between returns and impact. Considers how to incorporate ESG factors into investment decisions and use data-driven approaches to assess various investment products to determine if they are meeting their stated goals.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FINA 4219. Portfolio Management. (4 Hours)

Studies the characteristics and formation of optimal portfolios by investing risky assets and fixed incomes. The discussion of theories and models is associated with the application for portfolio decision making in practice. Offers students an opportunity to obtain the ability to establish appropriate client investment objectives, gather and assess information necessary for determining the investment style and the selection of the securities and, evaluate the performance of a portfolio. Portfolio management is a critical functionality that is provided by financial institutions such as investment banks, insurance companies, and funds. This full-semester course is designed to introduce industry-grade portfolio analysis, exploring all aspects of investment evaluation from the perspective of institutional and individual investors.

Prerequisite(s): FINA 3303 with a minimum grade of D-

FINA 4220. Behavioral Finance. (4 Hours)

Designed to revisit neoclassical economic theory based on rational market participants, then introduce students to the theory and evidence regarding psychological heuristics and biases that are inconsistent with the underlying assumptions of these classical models. Behavioral biases can severely influence financial decision making in the investment and the corporate environments, and it is important for students to understand how and why these biases occur. The course material, born out of the fields of cognitive psychology and behavioral economics, is designed to help students understand their own biases in making personal financial decisions.

Prerequisite(s): FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-

FINA 4310. Working Capital Management. (4 Hours)

Examines strategies and analytical approaches to managing current assets and current liabilities. Explores corporate cash management under changing money market conditions. Discusses the use of interest rate futures and working capital management in a multinational context. Provides a summary overview of entrepreneurial finance, with a focus on small businesses, corporate ventures, and intrapreneurship. Applies knowledge of corporate finance in the context of starting, acquiring, managing, and divesting a business or a business unit within a corporation. Topics include analyzing the financial needs of new ventures, exploring sources of financing, managing decline, determining valuation, and reviewing exit strategies.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 4312. Issues in Corporate Governance. (4 Hours)

Examines the nature of conflicts over control of the corporation. Applies modern finance theory and practice to the issues raised and draws on seminal works in the finance and economics literature that influence the current debate in this area. Discusses legal and ethical considerations that are especially important in corporate-control issues. Uses cases involving well-known takeovers, as well as current hostile takeover battles, to illustrate the theories discussed.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 4320. International Financial Management. (4 Hours)

Introduces international financial markets including balance of payments, history of the international monetary system, exchange-rate determination, foreign-exchange-exposure hedging strategies, and international capital markets. Examines how the financial strategies and policies of multinational corporations differ from domestic corporations and how financial management is utilized in an international setting to achieve corporate goals.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 4330. Emerging Financial Markets. (4 Hours)

Presents essential theoretical background and practical knowledge regarding investments in emerging financial markets. Covers how emerging markets are developed and how securities are valued and traded. Explores the major risk factors associated with investing in these markets as long as the basic institutional policy issues affect emerging markets. Finally, offers a practical approach to investing in emerging financial markets (including financial securities selections, analysis, and portfolio diversification).

Prerequisite(s): FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-

FINA 4335. Computational Methods and Their Applications in Finance. (4 Hours)

Introduces Python and its data-oriented library ecosystem (NumPy, Pandas, Matplotlib, Statsmodels, SciPy, etc.). Python is one of the most widely used open-source, cross-platform programming languages. Focuses on developing a strong foundation for working with financial data in Python and implementing various financial models.

Prerequisite(s): FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-

FINA 4340. Blockchain Applications in Finance. (4 Hours)

Introduces the fundamental concepts and an overview of the blockchain and cryptocurrency space. Offers a background in fundamental concepts in blockchain technology and functionality. Explores the basics of how blockchains record and verify information, including the related definitions and terminology. Provides an in-depth overview of blockchain applications in finance. Concludes by examining the legal and regulatory framework, along with potential risks and hurdles faced by blockchain technologies.

Prerequisite(s): ((FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-); (DS 2000 with a minimum grade of D- ; DS 2001 with a minimum grade of D-)) or (FINA 4335 with a minimum grade of D- or FINA 4380 with a minimum grade of D-)

FINA 4350. Applied Financial Econometrics and Data Modeling. (4 Hours)

Examines how to understand and analyze data using a set of analytical tools in financial econometrics. Emphasizes time-series financial data and financial modeling. The course uses programming languages, such as Python, that are standard in fintech applications.

Prerequisite(s): ((FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-); (DS 2000 with a minimum grade of D- ; DS 2001 with a minimum grade of D-)) or (FINA 4335 with a minimum grade of D- or FINA 4380 with a minimum grade of D-)

FINA 4370. Financial Modeling. (4 Hours)

Designed to develop students' quantitative financial modeling skills and techniques using the Excel spreadsheet. Through learning how to use numerical examples and business cases, students study corporate valuation, weighted average cost of capital (WACC), pro forma statement modeling, portfolio models, and Monte Carlo simulation methods, etc. Seeks to cultivate students' ability to make assumptions, deal with imperfect information, and real-world data issues. Offers students an opportunity to apply theoretical knowledge in advanced corporate finance, asset pricing, and option pricing in a real-world context. This course is highly quantitative in nature; while it does not derive complicated mathematical formulas, familiarity with concepts such as the capital asset pricing model (CAPM), WACC, portfolio theory, and pro forma financial statements is expected.

Prerequisite(s): FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-

FINA 4390. Machine Learning in Finance. (4 Hours)

Offers students an opportunity to prepare for rapid changes in the financial services world due to technological innovations and to understand how ML and AI tools are relevant in the financial services industry; to learn the basics of these tools, including machine learning; and to analyze the ethical considerations in the use of these tools in financial services. Seeks to train students to develop data analytics solutions using machine learning and deep learning models, allowing them to answer analytical questions that are encountered in the finance space. Working knowledge of Microsoft Excel or other spreadsheet programs is strongly recommended.

Prerequisite(s): FINA 4335 with a minimum grade of D- or FINA 4380 with a minimum grade of D-

FINA 4410. Valuation and Value Creation. (4 Hours)

Explores recent developments in financial management and financial analysis through the use of modern finance theory to make capital allocation decisions that lead to long-run value maximization for the corporation. Focuses on applications and financial model building. Examines risk analysis by building spreadsheet models for valuation and risk-analysis applications. Utilizes valuation analysis models to merge financial, corporate, and business strategies to measure and manage corporate value. Develops an understanding of the mechanics of the valuation process, along with an understanding of the drivers of value and development of strategies for value creation. Topics covered are relevant to value consultants, corporate managers, and securities analysts.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 4412. Personal Financial Planning. (4 Hours)

Emphasizes the development of personal financial management knowledge by applying the techniques and perspectives of financial planning professionals. Builds upon and applies skills gained in FINA 2201 to personal finance decisions such as retirement planning, home mortgages, and overall risk management. Offers students an opportunity to develop their own financial plan and understand how that plan will change as they age and their life situation changes. Note that while this course is not designed to prepare students to take the Certified Financial Planner exam, many of the topics, such as retirement planning, investment and securities planning, and estate planning, are among those discussed.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 4420. Mergers and Acquisitions. (4 Hours)

Offers a practical, planning-based approach to managing the mergers and acquisitions (M&A) process. Analyzes how M&As create or destroy value; commonly used takeover tactics and defenses; M&A valuation techniques; alternative deal structures; and the financial, strategic, legal, and regulatory aspects of M&As. The first section covers how and when to apply the appropriate tools and skills to successfully complete a transaction. The second section offers students an opportunity to apply what has been learned to solve real-world business problems. Discusses all major elements of the acquisition process in the context of a logical process.

Prerequisite(s): FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-

FINA 4460. Algorithmic and Robo-Trading. (4 Hours)

Covers the basis and implementation of trading strategies commonly used by investment professionals, such as fundamental analysis, factor investing, covariance models, and high-frequency trading. Today's asset management industry increasingly incorporates the delivery and execution of investment strategies through automated algorithms. Offers students an opportunity to understand the advantages and limitations of systematic trading and execution strategies. Students apply and modify such strategies and evaluate their performance using real-time data and incorporate aspects of Big Data in their quantitative strategies. Familiarity with a programming language such as Python is expected.

Prerequisite(s): FINA 4335 with a minimum grade of D- or FINA 4380 with a minimum grade of D-

FINA 4512. Financial Risk Management. (4 Hours)

Explores the concepts of financial futures, options on financial futures, and listed options markets as developed to help corporations and financial institutions manage financial risk. Covers financial derivatives and standard hedging techniques first, followed by a study of market risk and strategies in managing market risk.

Prerequisite(s): FINA 3303 with a minimum grade of D- or FINA 3301 with a minimum grade of D-

FINA 4514. Investment Banking. (4 Hours)

Examines the investment banking business. Investment bankers are one of the most important conduits through which funds flow from savers to corporations needing to invest in plant and equipment. Offers an opportunity to examine the major functions of large investment banks in regard to their investment banking, market making, and asset management businesses; to determine the financing needs of domestic and international corporations, not-for-profit organizations, and government entities by using concepts learned in earlier courses; and to learn to link these financing needs with products that are available in the capital markets, usually through the investment banking houses.

Prerequisite(s): FINA 3303 with a minimum grade of D- or FINA 3301 with a minimum grade of D-

FINA 4516. Real Estate Finance. (4 Hours)

Surveys the field of real estate including principles of real estate law, transactions brokerage, management, development, valuation, taxation, finance, and investment. Provides a framework of real estate finance and investment, in both theory and practice. Examines all aspects of real estate financing including the primary and secondary mortgage markets, real estate financial institutions, regulations, and mortgage-backed securities. Analyzes the return, risk, and various strategies in real estate investments with financial methods and techniques. Uses case discussions, spreadsheet analysis, and investment projects to make learning effective.

Prerequisite(s): FINA 3303 with a minimum grade of D- or FINA 3301 with a minimum grade of D-

FINA 4524. Credit Analysis. (4 Hours)

Explores all aspects of credit evaluation from the perspective of banks and other institutions. Introduces industry-grade credit analysis. Credit analysis is used by all manner of banks and other institutions, such as insurance companies, hedge funds, private equity groups, and even elements of local, state, and federal governments, to evaluate clients and potential borrowers who need loans and other structured debt products.

Prerequisite(s): FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-

FINA 4526. Core Topics in Alternative Investments. (4 Hours)

Covers alternative investments, including real assets such as real estate and real estate investment trusts, hedge funds, commodities, private equity, and structured products. This course is highly quantitative and focuses on methods for understanding risk, return, and benchmarking of these investments. Offers students an opportunity to obtain a deeper understanding of each of these asset types.

Prerequisite(s): FINA 3303 with a minimum grade of D- or FINA 3301 with a minimum grade of D-

FINA 4602. Turnaround Management. (4 Hours)

Examines strategies for identifying companies likely to fail and selecting and implementing remedial actions. Topics include business turnarounds, troubled companies, workouts, bankruptcies, and liquidations, using case studies and readings. Students evaluate a turnaround plan.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 4604. Fixed-Income Securities. (4 Hours)

Exposes students to the theory, application, and evidence concerning highly sensitive interest rate products. Explores recent developments in pension fund management, asset/liability management, duration matching, "gap" management, and other important issues confronting domestic and international financial and corporate management. Offers students the opportunity to learn how to customize a risk management program.

Prerequisite(s): FINA 3303 with a minimum grade of D- or FINA 3301 with a minimum grade of D-

FINA 4605. Fintech Experiential Project. (4 Hours)

Offers students an opportunity to integrate the skills developed through their previous fintech coursework to propose, design, and implement a technology solution, either individually or in teams, to address a business problem. Either students or industry partners identify and define the business problem. The main objective of this experiential course is to develop and enhance students' problem-solving and hands-on skills, leading to a deliverable project that includes proof of concept, a prototype, and/or a final paper/presentation that demonstrates a deep understanding of the subject. Students formally present their project to the faculty member and/or industry partner with whom they are collaborating. Registration is contingent on a research proposal and approval by one of the supervising instructors.

Prerequisite(s): FINA 4340 with a minimum grade of D- or FINA 4350 with a minimum grade of D- or FINA 4390 with a minimum grade of D-

FINA 4610. Entrepreneurial Finance and Private Equity. (4 Hours)

Covers qualitative and quantitative aspects of entrepreneurial finance, such as venture capital and angel financing. Also covers private equity (i.e., buyout/leveraged-buyout firms), but in less detail. Introduces valuation in entrepreneurial finance, including valuation of startups, using real options to value innovation-intensive firms, valuation in staged financing, etc. Casework emphasizes the practical aspects of qualitative and quantitative issues related to venture capital financing, entrepreneurship, and innovation from the perspective of the financier and the startup firm. Discusses issues related to the venture capital industry, such as the limited partnership structure, term-sheets and contracts, exit of portfolio firms, and international investments. Requires a working knowledge of Excel or other spreadsheet programs.

Prerequisite(s): FINA 2201 with a minimum grade of D- or FINA 2202 with a minimum grade of D- or FINA 2209 with a minimum grade of D-

FINA 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

FINA 4983. Special Topics in Finance. (4 Hours)

Examines areas of current interest and special topics in finance. Employs a mix of lectures, cases, and projects. Topics depend on the instructor. May be repeated up to two times.

Prerequisite(s): FINA 3301 with a minimum grade of D- or FINA 3303 with a minimum grade of D-

FINA 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FINA 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times for a maximum of 8 semester hours.

FINA 6200. Value Creation through Financial Decision Making. (3 Hours)

Highlights the role of financial management as a source of value creation in a competitive global environment characterized by rapid technological, personal, and market changes. Offers students an opportunity to develop tools and techniques of financial analysis and valuation to support financial decision making. Presents future managers with actual business problems to learn to apply the tools of financial analysis to strategic decisions faced by the firm, such as capital budgeting and capital structure.

Prerequisite(s): ACCT 6201 (may be taken concurrently) with a minimum grade of C- ; MGSC 6200 with a minimum grade of C-

FINA 6202. Analysis of Financial Institutions and Markets. (3 Hours)

Introduces the domestic and international financial system and the institutions within it. Develops data and quantitative analysis tools utilized for economic and financial modeling and analysis. Emphasis is on regression analysis and its application, including how to build and interpret statistical models. Topics include the major types of financial institutions that operate within the global economy and the financial instruments employed by them; how exchange rates, interests rates, and security prices are determined and how they affect the global economy; and how governments and central banks impact economic and financial conditions.

FINA 6203. Investment Analysis. (3 Hours)

Familiarizes students with domestic and international financial markets and the securities traded therein. Discusses a variety of techniques for valuation of financial assets and relies heavily on quantitative methods. Critically analyzes such qualitative concepts as market efficiency, intrinsic value, and risk. The contents of this course, descriptive, theoretical, and applied, should provide students with the ability to build unique valuation models to suit the particular investment alternative they wish to scrutinize. Also provides students with an understanding of how investment theory and investment practice relate.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6204. International Financial Management. (3 Hours)

Develops specific concepts, policies, and techniques for the financial management of the multinational firm. Topics include operation of the foreign exchange markets, foreign exchange risk management, sources and instruments of international financing, foreign direct investment and the management of political risk, multinational capital budgeting, and financing control systems for the multinational firm.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6205. Financial Strategy. (3 Hours)

Develops financial, analytical, and communication skills necessary to develop and implement a financial strategy consistent with firm value creation in a dynamic environment. Stresses the impact of ethical and legal considerations, global markets, and technological innovation on efficient economic outcomes. Emphasizes written and oral communication skills. Upon completion of this course, students should be able to identify and analyze a firm's strategic opportunities and propose a suitable financial strategy that is consistent with firm value creation.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or FINA 6331 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6206. Finance Seminar. (3 Hours)

Structures discussion of current topics in the finance literature. Students read and present the works of leading researchers. Topics are broad and may cover various areas of corporate finance, investments, and institutions. Students also complete an original project emphasizing current methodologies of analysis.

Prerequisite(s): FINA 6203 with a minimum grade of C-

FINA 6207. Financial Modeling. (3 Hours)

Introduces financial modeling applications in the fields of risk management, statistics applied to finance, investments, and portfolio management. Financial modeling is used for performing financial analysis facilitating business decision making in virtually any business. Excel is the most widely used electronic spreadsheet program in the world. Offers students an opportunity to develop strong Excel proficiency needed to effectively and efficiently understand and implement the quantitative aspects of financial topics covered in the various financial courses taught in the MBA and MSF programs and to learn how to use a variety of spreadsheet tools and techniques to enhance their overall analytical skill set.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or FINA 6331 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 with a minimum grade of C-)

FINA 6211. Financial Risk Management. (3 Hours)

Provides an overview of all of the hedging markets and hedging instruments. Explores specific hedging use of options, forwards, futures, swaps, and options on futures. Focuses on advanced financial risk management of interest rates, currency rates, equity returns, and fixed income returns. Students use readings and case problems to study when and how to use hedging instruments to alter a portfolio's risk exposure.

Prerequisite(s): FINA 6203 (may be taken concurrently) with a minimum grade of C-

FINA 6212. Fixed-Income Securities and Risk. (3 Hours)

Exposes students to theory, applications, and evidence concerning highly sensitive interest rate products. Discusses recent developments in pension fund management, asset/liability management, duration matching, "gap" management, concurrent interest rate and exchange rate management, and other important issues now confronting domestic and international financial and corporate management. Studies how to customize a risk management program.

Prerequisite(s): FINA 6203 (may be taken concurrently) with a minimum grade of C-

FINA 6213. Investment Banking. (3 Hours)

Discusses policy, strategy, and administration of financial services firms. Topics include issuance of securities, the service function within financial services, pricing a negotiated issue of common stock or competitive bid issue, and meeting capital requirements of a securities firm.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6214. Mergers and Acquisitions. (3 Hours)

Explores the environments that have recently given rise to a large number of corporate mergers and the business factors underlying these corporate combinations. Examines the financial, managerial, accounting, and legal factors affecting mergers. Focuses on three aspects of the merger and acquisition process: the strategic decision to acquire, the valuation decision of how much to pay, and the financing decision on how to fund the acquisition.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or FINA 6331 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6215. Business Turnarounds. (3 Hours)

Concentrates on the diagnosis, prescription, and implementation of actions pertinent to business turnarounds, troubled companies, workouts, bankruptcies, and liquidations. Case studies and readings guide the student through the maze of financial, ethical, legal, general business, and strategic aspects of turnarounds, culminating in the student evaluating and developing a turnaround plan.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or FINA 6331 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6216. Valuation and Value Creation. (3 Hours)

Focuses on cash-flow oriented models of the valuation of the firm. Topics include enterprise value, free cash flow, economic value added, and risk/reward analysis. Explores recent developments in financial management and financial analysis through the use of modern finance theory to make capital allocation decisions that lead to long-run value maximization for the corporation. Focuses on applications and financial model building, risk analysis for valuation applications, and business strategies to measure and manage corporate value and value creation. Topics are relevant to value consultants, corporate managers, and securities analysts.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or FINA 6331 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6217. Real Estate Finance and Investment. (3 Hours)

Provides students with a comprehensive understanding of real estate finance. Emphasizes factors affecting real estate investment. Topics include valuation (appraisal), market analysis, development, taxation, ownership types, short-term financing, mortgage markets, and investment strategies. Designed for students interested in a general overview of real estate finance, as well as those intending to pursue a career in the real-estate field.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-) or FINA 6332 with a minimum grade of C-

FINA 6219. Portfolio Management. (3 Hours)

Develops portfolio construction, revision, and performance measurement. Highlights portfolio construction in an efficient capital market. Topics include risk-return analysis, the effects of diversification on risk reduction, and the costs of inflation, taxes, and transaction costs on fixed income and equity security portfolios. Examines financial models of capital asset pricing as the basis for the analysis of portfolios from the institutional investor's viewpoint.

Prerequisite(s): FINA 6203 (may be taken concurrently) with a minimum grade of C-

FINA 6220. Healthcare Finance. (3 Hours)

Implements financial management and economic principles to analyze real-world healthcare issues. Emphasizes and encourages problem solving and creative thinking through the use of texts, cases, and models of the healthcare industry. Students are exposed to financial, managerial, and risk management strategies unique to the healthcare industry.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6225. Entrepreneurial Finance for High Tech Companies. (3 Hours)

Provides an overview of entrepreneurial finance with a focus on high-technology companies. Specific topics covered include analyzing the financial needs of high-technology ventures, including working capital management, risk analysis, capital budgeting, sources of financing, valuation; and exit strategies, including licensing, joint ventures, mergers and acquisitions, and initial public offerings (IPOs). Uses a combination of text material, books, and cases.

FINA 6234. Evaluating and Managing Financial Investments. (3 Hours)

Introduces the menu of financial assets available to investors and how these assets can be combined into optimal portfolios to meet different objectives. Presents an overview of the primary asset classes, the markets in which these assets trade, and the investment companies that manage portfolios. Focuses on quantifying the rates of return and levels of risk associated with individual investments and diversified portfolios. Offers students an opportunity to develop models of asset valuation to calculate equilibrium prices for debt and equity securities. Studies how actively managed portfolios can exploit mispricing and how investors should evaluate the performance of a managed portfolio.

FINA 6235. Exploring and Understanding Value Creation, Maintenance, and Destruction. (3 Hours)

Examines enhanced shareholder value as the primary goal of business and how the best managers attain that goal within ethical, legal, and regulatory guidelines. Analyzes the importance of equipping managers with a comprehensive understanding of the financial landscape, encompassing the creation and utilization of reliable information and the application of robust analytical tools. Focuses on fostering critical thinking abilities. Explores value, value creation, sustainability, and measurement by examining value investing, financial analysis and forecasting, cost of capital estimation, capital budgeting, resource allocation, capital structure, and value realization via public offerings, mergers, and acquisitions. Investigates some alternative and perhaps controversial methods used to create value. Studies interesting examples of value destruction.

FINA 6236. Risk Management with Technology. (3 Hours)

Introduces and explores financial risk management using derivative instruments, which are contracts whose values derive from prices of underlying assets and goods such as equities, currencies, debt, and commodities. Focuses on the valuation and application of the principal derivative building blocks, including fixed-income securities, futures and forward contracts, options, and structured financial products. Covers market structure and how these products are specifically used by corporations and financial institutions for controlling financial market risks. Explores current global developments and new product innovations. Introduces some state-of-the-art technology such as large language models in financial markets.

FINA 6237. Fintech, Financial Innovation, and Blockchain. (3 Hours)

Offers a broad overview of the world of fintech from the perspectives of both large financial institutions and small startups. Explores the dynamic intersections of finance and technology with a deep understanding of financial innovation, fintech trends, and blockchain technology. Presents a comprehensive understanding of regulatory challenges, risks, and opportunities within the fintech landscape. Focuses on cutting-edge concepts that are shaping the financial industry. Analyzes the impact of blockchain technology, understanding its role in creating secure, transparent, and immutable financial ecosystems.

FINA 6238. Risk Parity Investing with Python. (1 Hour)

Introduces risk parity investing with applications in Python. Risk parity is an asset allocation approach that considers the risk contribution from each asset and overall portfolio risk, which can lead to more stable portfolio returns over time. Exposes students to risk parity, with and without reallocation and leverage, and offers them an opportunity to deepen their understanding of diversification, modern portfolio theory, asset allocation, and Python.

Prerequisite(s): FINA 6203 with a minimum grade of C- ; FINA 6333 with a minimum grade of C-

FINA 6240. Portfolio Construction and Management with Python. (1 Hour)

Introduces portfolio construction, management, and reporting with applications in Python, focusing on low-volatility and risk-parity investing styles. Students complete two miniprojects that involve position sizing, portfolio rebalancing, stress testing, risk limits, and portfolio reporting.

Prerequisite(s): FINA 6203 with a minimum grade of C- ; FINA 6333 with a minimum grade of C- ; FINA 6238 with a minimum grade of C- ; FINA 6239 with a minimum grade of C-

FINA 6260. Entrepreneurial Finance and Venture Capital. (3 Hours)

Covers qualitative and quantitative aspects of entrepreneurial finance, such as venture capital and angel financing. Introduces students to valuation aspects in entrepreneurial finance, including valuation of startups, using real options to value innovation-intensive firms, and valuation in staged financing. Emphasizes the practical aspects of qualitative and quantitative issues related to venture capital financing, entrepreneurship, and innovation from the perspective of the financier and the startup firm. Also covers many issues related to the venture capital industry, such as the limited partnership structure of the venture capital/private equity industry, venture capital term sheets and contracts, exit of portfolio firms, and international investments. May be repeated without limit.

Prerequisite(s): FINA 6200 with a minimum grade of C- or FINA 6201 with a minimum grade of C- or FINA 6208 with a minimum grade of C- or FINA 6331 with a minimum grade of C- or (FINA 6318 with a minimum grade of C- ; FINA 6320 (may be taken concurrently) with a minimum grade of C-)

FINA 6284. Financing Innovation and Growth. (3 Hours)

Offers an immersion in corporate finance with a specific focus on the financing of innovation and growth at firms. Topics include analyzing and applying finance from the perspective of intrapreneurship as well as entrepreneurship.

FINA 6292. Advanced Topics in Finance. (3 Hours)

Examines current, specialized, and advanced topics in the areas of corporate finance, investments, risk management, valuation, private equity, venture capital, and other areas as appropriate. Course content, pedagogy, and prerequisites vary by topic and instructor. May be repeated once.

FINA 6309. Foundations of Accounting and Finance. (3,4 Hours)

Explores key principles of accounting, as presented in the principal financial statements. Using those principles, explores a number of accounting practices and issues. Develops tools of financial analysis and financial planning and applies the information gained to business decision making. Utilizing the principle of time value of money to compare inflows and outflows of funds occurring at different times, develops basic decision tools for managers to make sound financial choices and to understand the context in which they are made. At the end of the course, the successful student should have a sound basic understanding of accounting and financial matters and the ability to understand business decisions in context and to evaluate the choices that management faces in the normal course of business development.

FINA 6318. Financial Management. (2 Hours)

Introduces time value of money calculations and applications. Building upon a basis in accounting, offers students an opportunity to learn how to extract relevant information from the accounting statements for use in financial calculations and ratio analysis. Also examines capital planning, including determining relevant cash flows, calculating decision measures, and making the correct decisions.

FINA 6320. Advanced Financial Management. (3 Hours)

Builds upon FINA 6318. Focuses on capital allocation and both equity and fixed-income markets. Covers the fundamentals of stock and bond valuation, as well as a brief review of macroeconomic concepts including the role of the Federal Reserve, growth, and inflation. Culminates with coverage of firm capital structure and the weighted average cost of capital (WACC).

Prerequisite(s): FINA 6318 with a minimum grade of C- or FINA 6200 with a minimum grade of C-

FINA 6331. Corporate Finance. (3 Hours)

Introduces the basic framework of corporate finance and financial decision making. Topics include capital budgeting; capital investment decisions; complex valuations; security issues; dividend policy; static and dynamic capital structure; real option analysis; restructuring; bankruptcy; corporate control and governance; and the legal, ethical, and regulatory environment of financial management.

FINA 6332. Fundamentals of Financial Math and Financial Markets. (3 Hours)

Introduces the essential fundamental mathematics needed for the study of modern finance: probability, stochastic processes, statistics, and regression analysis. Also focuses on theory and empirical evidence useful for investment decisions. Topics include financial risk factors, financial models, financial markets and equilibrium models of security prices, market efficiency, and the empirical behavior of security prices.

FINA 6333. Data Analytics in Finance. (3 Hours)

Introduces Python and its use as a financial data analytics tool. Python has become one of the most widely used open-source, cross-platform programming languages. Covers the basics of programming in Python and key libraries (NumPy, Pandas, Matplotlib, etc.) used in data analytics, then focuses on implementing various financial models in Python. Topics include single and multifactor portfolio models, portfolio theory and the efficient frontier, algorithmic trading, options and futures, and value at risk.

FINA 6334. Empirical Methods in Finance. (3 Hours)

Examines statistical methods used to analyze financial data and test financial theories. Offers students an opportunity to learn how to access various sources of financial data, design empirical tests, and apply basic programming skills to analyze the data and arrive at conclusions. Specific topics include regression analysis, time-series analysis, event study methodology, panel data analysis, and limited dependent variable models.

FINA 6335. Derivatives and Risk Analytics. (3 Hours)

Introduces derivative assets, financial engineering, and risk management. Explores specific hedging use of options, forwards, and futures. Focuses on the determinants of forwards, futures, options and swaps, and various exotic derivatives pricing using computer-based numerical methods in a Monte Carlo setting and in closed form using elements of stochastic calculus. Also explores risk-management strategies using positions in derivative securities, static hedging, and dynamic hedging in continuous time.

FINA 6336. Fixed-Income Securities and Derivatives. (3 Hours)

Exposes students to theory, applications, and evidence concerning highly sensitive interest-rate products. Designed for students seeking to develop understanding of fixed-income valuation and hedging methods and familiarity with major markets and instruments. Emphasizes tools for quantifying, hedging, and speculations. Topics include duration; convexity; approaches to modeling the yield curve; interest-rate forward; futures, swaps, and options; credit risk and credit derivative; mortgages; and securitization.

FINA 6337. Computational Methods in Finance. (3 Hours)

Studies various computational methods in finance. Analyzes market data and build trading strategies. Uses interpolation, solver, and optimization methods to calibrate discount curve and volatility surfaces to market prices. Analyzes market data and applies dimension-reduction techniques such as principal component analysis (PCA). Applies time-series analysis and PCA to implement and back test trading strategies.

FINA 6338. Alternative Investments. (3 Hours)

Emphasizes assets and portfolios that fall into the category of alternative investments, which includes nontraditional assets—such as structured products and other types of derivatives—and managed portfolios—such as private equity, venture capital, and hedge funds. Offers students an opportunity to obtain a fundamental understanding of the securities and products that are traded in this space. Focuses on in-depth analyses of case studies, outside speakers, focused discussions, quantitative analyses, and current developments in the industry.

FINA 6339. Quantitative Portfolio Management. (3 Hours)

Offers an introduction to portfolio management with a focus on quantitative methods. Major topics include portfolio construction, revision, and performance measurement. Examines portfolio construction using constrained mean-variance optimization, as well as performance evaluation using factor models such as the Fama-French three-factor model. Additional topics include the effects of diversification on risk reduction and the costs of inflation, taxes, and transaction costs on management of fixed-income and equity security portfolios. Also covers quantitative approaches to manage specific sources of risk. Students employ historical data to construct backtests to assess the performance of various portfolio strategies.

Prerequisite(s): FINA 6203 (may be taken concurrently) with a minimum grade of C-

FINA 6340. Financial Markets and Banking in the Postcrisis Era. (3 Hours)

Examines the history and evolution of the ways banking has changed following the 2008 financial crisis. Changes impacting the banking industry include major changes in the regulatory environment, changes in market liquidity, negative interest rates, shifts in Fed monetary policy, LIBOR transition, and technological innovation (blockchain, digital currency, automation, and artificial intelligence). Analyzes the history and evolution of these changes and the impact on the financial services industry, with a specific focus on the banking sector. Discusses the management of various banking functions (risk management, governance, profitability, liquidity management, auditing, and regulation) in today's regulatory and market environment as well as the evolution of payment systems and the expected impact of technological advancements, such as blockchain and artificial intelligence, on the industry.

Prerequisite(s): FINA 6203 with a minimum grade of C-

FINA 6342. Financial Data and Fintech. (3 Hours)

Covers methods of managing data and extracting insights from real-world financial sources. Topics include extracting and organizing data from financial, geospatial and supply chain sources; financial aggregation; and reporting. Applications include current and emergent data sources employed in finance, risk-weighted assets, market and credit risk modeling, stress testing, and climate risk. Studies major sources of financial data, data visualization, and architecture. Offers hands-on instruction in tools used in the financial industry to process datasets.

Prerequisite(s): FINA 6203 with a minimum grade of C-

FINA 6343. Credit Risk Management. (3 Hours)

Introduces credit and counterparty risk-management practices in banking, corporate and commodity finance, commercial real estate, bonds, and credit derivative markets. Banking and corporate sectors face significant capital funding challenges as central banks respond to inflationary pressures. Presents a range of analytic methods used to assess risk exposures in credit portfolios, price credit products, and hedge credit risk exposure and interest-rate volatility. Covers factors driving corporate ratings and policies aimed at ensuring bank solvency. Models related to credit risk management are presented in class. Assignments employ a variety of technology tools.

Prerequisite(s): FINA 6203 with a minimum grade of C-

FINA 6360. Fund Management for Analysts. (1 Hour)

Introduces a variety of operating documents typical to an active mutual fund. Offers students an opportunity to apply lessons from investment and portfolio management classes by presenting investment recommendations to a panel and communicating with peers in a thoughtful and forceful manner. Investment decisions are made based on student analysis and recommendations that include knowledge of macroeconomic expectations, corporate financing issues, dept-repayment concerns, and employee and technological changes. May be repeated up to three times.

FINA 6361. Fund Management for Managers. (1 Hour)

Builds on FINA 6360. Designed to provide students further analytical knowledge, including exposure to and opportunity to perform managerial tasks related to the management and operation of mutual funds. Included in these tasks are reconsideration of the fund's investment policy statement and asset allocation plan as well as preparation of accounting statements, dealing with compliance issues, addressing ethical concerns, measuring and managing risk, and performing marketing and fund-raising activities. May be repeated up to three times.

Prerequisite(s): FINA 6360 with a minimum grade of C- ; (FINA 6219 (may be taken concurrently) with a minimum grade of C- or FINA 6339 (may be taken concurrently) with a minimum grade of C-)

FINA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FINA 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

First-Year Seminar (FSEM)**Courses****FSEM 1000. Connections and Decisions. (1 Hour)**

Intended for first-year students who have not yet declared a major. Designed to introduce students to the liberal arts disciplines and majors, help them develop the analytical and critical thinking skills necessary to choose a major, and provide undeclared first-year students with grounding in the culture and values of the college and the University community.

FSEM 1101. First-Year Inquiry Seminar. (1 Hour)

Offers students an opportunity to explore a specific area of academic research in a small-group seminar environment. Students meet regularly with a faculty member to read and discuss the faculty member's research. Research topics vary, but general themes discussed include (a) how a specific research topic emerges and evolves over time, (b) the selection and implementation of specific research methodologies, (c) the contextualization of particular research studies within broader academic and real-world conversations, and (d) how the specific research contributes to philosophical and/or practical discussions in the world in which we live. The latter may include discussing how the research findings might help answer questions and/or be used in solving problems and making decisions. May be repeated up to three times.

FSEM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FSEM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FSEM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FSEM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FSEM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

French (FRNH)

Courses

FRNH 1101. Elementary French 1. (4 Hours)

Designed for students with very little or no prior knowledge of French. Provides a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Each lesson incorporates helpful information about daily life in France and the varied cultures within the world of French speakers. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

FRNH 1102. Elementary French 2. (4 Hours)

Continues FRNH 1101. Reviews and continues the study of grammar and basic language skills. Offers progressively more intensive practice in oral and written communication. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

Prerequisite(s): FRNH 1101 with a minimum grade of C- or FRNH 1301 with a minimum grade of C-

FRNH 1280. French Film and Culture. (4 Hours)

Provides an introduction to some of the qualities that have made French film one of the great national cinemas. Focuses on both form and content; relates outstanding directors' major works to the French culture and society of their period. Conducted in English.

Attribute(s): NUpath Interpreting Culture

FRNH 1973. Special Topics in Francophone Culture. (4 Hours)

Explores in-depth a specific topic related to Francophone culture, literature, and/or language. Taught in English. May be repeated twice.

FRNH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FRNH 2101. Intermediate French 1. (4 Hours)

Emphasizes further vocabulary building and mastery of fine points of grammar through written composition, prepared oral reports, and reading and discussion from current French periodicals.

Prerequisite(s): FRNH 1102 with a minimum grade of C- or FRNH 1302 with a minimum grade of C-

FRNH 2102. Intermediate French 2. (4 Hours)

Continues FRNH 2101. Stresses the fundamentals of French to promote effective self-expression through speaking and writing and to explore the idiomatic aspects of the language. Through progressive class discussions and oral and written commentaries, students analyze a contemporary French novel or a French cultural reader, screenplay, or collection of short stories. Strives to help students read and comprehend modern French writing with confidence, and to be able to talk and write about it in good French. Provides preparation for advanced courses.

Prerequisite(s): FRNH 2101 with a minimum grade of C- or FRNH 2301 with a minimum grade of C-

FRNH 2900. Specialized Instruction in French. (1-4 Hours)

Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language.

FRNH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FRNH 3101. Advanced French 1. (4 Hours)

Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): FRNH 2102 with a minimum grade of C- or FRNH 2302 with a minimum grade of C- or French Placement Test with a score of 411

FRNH 3102. Advanced French 2. (4 Hours)

Builds on FRNH 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): FRNH 3101 with a minimum grade of C- or FRNH 3301 with a minimum grade of C-

FRNH 3800. Special Topics in French. (1-4 Hours)

Focuses on specific aspects of French/Francophone language, culture, or society not included in existing courses and designed for students with advanced proficiency. Content may vary, as indicated by the section title and description. May be repeated up to three times with the permission of the French section coordinator.

Prerequisite(s): FRNH 2102 with a minimum grade of C-

FRNH 3900. Specialized Instruction in French. (1-4 Hours)

Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language.

FRNH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FRNH 4800. Special Topics in French. (1-4 Hours)

Focuses on a unique aspect of the French language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

FRNH 4944. Cultural Engagement: Dialogue of Civilizations. (4 Hours)

Engages students on-site with the culture(s) and the communities of French-speaking regions. Emphasizes the complexity, transnationalism, and interdisciplinary nature of culture(s). Employs a range of methodological approaches to describe and analyze how cultural practices, objects, texts, and meanings are created, distributed, and exchanged within particular social groups or geographic areas. Explores questions of cultural identity, meaning, representation, policy formations, and ideologies. In addition to regular in-class lectures and activities, offers students an opportunity to engage in dialogue with members of the local communities about their perspectives on relevant cultural topics and everyday experiences. May be repeated once. Conducted in French.

Prerequisite(s): FRNH 2101 with a minimum grade of C- or FRNH 2102 with a minimum grade of C- or FRNH 3101 with a minimum grade of C- or FRNH 3102 with a minimum grade of C- or FRNH 4800 with a minimum grade of C-

FRNH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

FRNH 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

FRNH 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Game Design (GAME)**Courses****GAME 1110. Games and Society. (4 Hours)**

Provides an historical and cultural perspective on games and other forms of interactive entertainment. Examines the present state and future directions of paper, card, and board games; physical games and sports; and video games. Introduces students to current issues, experiments, and directions in the field of game design. Through weekly lectures and small-group labs, students have an opportunity to develop a critical basis for analyzing game play.

GAME 1850. Experimental Game Design. (4 Hours)

Explores traditions of games, play, participation, and procedurality in twentieth-century art movements, including Dada, Surrealism, Fluxus, conceptual art, the Situationists, Happenings, participatory performance and Tactical Media, avant-garde music, and contemporary art games. Through readings, lectures, and studio assignments, offers students an opportunity to understand and apply key principles by creating a series of artworks using various strategies drawn from these traditions, including appropriation, scores, intervention, and expression.

GAME 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GAME 1999. Principles of Board Game Development. (4 Hours)

Introduces game design from engineering and innovation perspectives using initial design, rapid prototyping, and iterative design. Covers theory and implementation techniques to enable technical evaluation and game review, including statistical probability of random events; relative balance of player skill to game chance; game mechanics; and incorporating game art, theme, and flavor. Offers students an opportunity to learn game mechanics, development methods, and play-testing techniques. Introduces methods to match a game to its intended audience and designing games to be fun. Surveys roles in the tabletop game industry that impact game design: designers, publishers, manufacturers, distributors, game stores, conventions, and online sales. Students use acquired knowledge in a project-based learning environment to create a game that could be considered for commercialization.

Attribute(s): NUpath Creative Express/Innov

GAME 2010. The Business of Games. (4 Hours)

Surveys a wide array of game-specific industry topics, including pitching and development of talking points, business models and revenue structures, studio organization and style, intellectual property, contracts, project management expectations, project green-lighting, production pipelines, return on investment, outsourcing, and marketing. Exploring historical shifts and evolution of the video game market offers students an opportunity to obtain perspective on the status of the industry and potential growth in the economy.

GAME 2355. Narrative for Games. (4 Hours)

Offers students an opportunity to learn how contemporary narrative theories evolved and their uses in various media. Examines various mediated texts to understand how best to use storytelling strategies for students' own narrative-forward games so as to best take advantage of designing narratives for different platforms and audiences. Uses presentations and performances to enhance students' understanding of how audiences assimilate information and to critique. Students write, play, and study narrative-driven games in the context of various narrative theories and practice writing with the awareness and intention that actors and audiences will read their work and respond.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

GAME 2500. Foundations of Game Design. (4 Hours)

Seeks to define the practice of game design within the larger context of playful interaction design, while constantly maintaining a player-centric approach. Unfolds the process of designing games between phases of analysis, synthesis, and evaluation. Establishes the role of game designer as an expert with a vision for determined player experiences and a vocal advocate for players. Seeks to offer students a broad methodology consisting of brainstorming methods, prototyping techniques, process management practices, and evaluation procedures to solve a wide array of design problems in an iterative manner.

Attribute(s): NUpath Creative Express/Innov

GAME 2650. Introduction to Game Research Methods. (4 Hours)

Surveys research methods and epistemologies relevant to game researchers, designers, and artists, including experimental studies; analytics, formal and historical analysis; ethnography; qualitative social research; and design research. Engages students in lectures, readings, and game faculty guest lectures presenting practical examples of methods discussed in the class. Seeks to familiarize students with core literatures on games, library research, and research design through a series of hypothetical research project drafts and the completion of a research project using a specific method covered in the class.

Attribute(s): NUpath Analyzing/Using Data

GAME 2750. Games Criticism and Theory. (4 Hours)

Covers fundamental theories of art, meaning-making, expression, cultural reflection, and criticism concerning media, games, and playful artifacts. Assigns several papers that offer students an opportunity to choose and apply different critical lenses to games, game criticism, and their own gameplay experience. A long-form paper allows students to train writing theoretically informed and argumentatively cogent critical presentations of games and gameplay experience.

Prerequisite(s): GAME 1110 (may be taken concurrently) with a minimum grade of D- or GAME 2500 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

GAME 2755. Games and Social Justice. (4 Hours)

Analyzes games from a social justice perspective, encouraging students to consider issues of social stereotyping, normalization, exclusion, and inequity as they apply to games from all sectors of the industry. Discusses and analyzes games using a variety of social theories from a diverse set of fields, including gender studies, critical race theory, and LGBTQ studies. Provides a studio setting in which students have an opportunity to engage in critical making of playable experiences that are based upon and deeply integrate social justice theories in their design.

GAME 2950. Game Studio. (4 Hours)

Offers an experiential learning course in which students collaborate with faculty on a project for credit, which may include research, game creation, or a combination of the two. Offers students an opportunity to co-produce a publishable, distributable, or exhibitable game and/or research paper, which can become part of the student's portfolio. Course may be taught by an individual faculty member or team-taught to explore a specific topic, such as documentary games, art games, physical interfaces, installations, historical games, live-action role-playing, etc. Offers students an opportunity to gain experience working on a real-world project, as well as being credited for collaboration with an established practitioner/researcher. May be repeated once.

Prerequisite(s): GAME 1110 with a minimum grade of D- ; GAME 2500 with a minimum grade of D- ; GAME 2650 (may be taken concurrently) with a minimum grade of D-

GAME 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GAME 2991. Research in Game Design. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

GAME 3300. Game Interface Design. (4 Hours)

Introduces interface design for games. A game interface is the point at which the player interacts with the game system, which pertains to visual, auditory, and haptic cues; screens and graphical user interfaces; the player character; and the game controller. Analyzes successful and unsuccessful game interfaces from historical, theoretical, and cultural perspectives. Offers students an opportunity to learn to analyze, critique, and iteratively design innovative game user interfaces; learn about and practice game usability and game feel, as well as design techniques for user interfaces and user experience; and focus on designing innovative game interfaces as they iteratively develop and test a game interface from beginning to end, resulting in a portfolio-ready game interface prototype. Designed as an intermediate course for undergraduate students across disciplines.

Prerequisite(s): GAME 1110 with a minimum grade of D-

GAME 3400. Level Design and Game Architecture. (4 Hours)

Analyzes game-level designs in a variety of genres and forms. Building upon basic drawing and design skills, students have an opportunity to develop paper prototypes and simple game "mods" in the context of story and game play. Students use computer-based tools to examine game-level architecture. Encourages students to take this elective in preparation for or in parallel to the Game Projects courses.

Prerequisite(s): GAME 1110 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

GAME 3700. Rapid Idea Prototyping for Games. (4 Hours)

Studies digital and nondigital prototyping techniques through weekly activities in which students build and critique prototypes around a variety of game design themes. Offers students an opportunity to build a portfolio of small proof-of-concept game prototypes over the course of the semester. Additionally, covers how to iterate on a single prototype through a semesterlong project in which students have an opportunity to work individually on a larger game design.

Prerequisite(s): GAME 1110 with a minimum grade of D- or GAME 2500 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

GAME 3800. Game Concept Development. (4 Hours)

Offers student teams an opportunity to conceptualize, design, document, and develop a complete game, including content, level design, user interface, and game mechanics as specified in design documents. Offers a set of brainstorming techniques. Students segment the concepts into individual systems and prototype them in an iterative manner, formally iterating over the whole game to improve the player experience. Requires students to maintain a schedule and project management documents. Results in the presentation of the complete game for critique. May be repeated once.

Prerequisite(s): GAME 3700 with a minimum grade of D- ; (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C)

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

GAME 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GAME 4000. Topics in Game Design. (1-4 Hours)

Explores a variety of advanced topics in game design, including the multimedia, multidisciplinary nature of games. Taught by faculty according to their research interests and expertise.

GAME 4155. Designing Imaginary Worlds. (4 Hours)

Offers students an opportunity to learn to conceive, design, and convey imaginary worlds across a wide range of media. The crafting of fictional worlds has become an important skill in the media landscape, whether for video and tabletop games, comic books, novels, film, or television. Analyzes existing works in diverse genres such as fantasy, science fiction, superhero, and supernatural worlds. Explores, through creative projects, the ways in which the use of different media are suited to portray different aspects of an imaginary world.

Attribute(s): NUpath Creative Express/Innov

GAME 4460. Generative Game Design. (4 Hours)

Studies principles of procedural content generation and generative methods, including modular design, the role of randomness in design, and designing for emergence. Examines the role of generative design in games and its impact on both designers and players. Through assignments and a semester-long project, encourages student creation of generative systems for playful experiences.

Prerequisite(s): ARTG 2260 with a minimum grade of D- or CS 2500 with a minimum grade of D- or GAME 2500 with a minimum grade of D-

GAME 4600. Game Production. (4 Hours)

Focuses on the production of a substantial playable game. Students work in a team to produce a game that has been conceptualized and prototyped in a previous class. Beta testing prepares students to enter the workforce through the understanding and practice of workflows that resemble those at a professional game studio. Offers students an opportunity to develop, play-test, and iteratively refine a substantial multilevel game by creating their own goals and timelines under the guidance and supervision of the professor and then adopting individual roles and responsibilities within their team. The end result should be a fully functional group project and refined understanding of professional workflows.

Prerequisite(s): GAME 3700 with a minimum grade of D- or GAME 3800 with a minimum grade of D-

GAME 4700. Game Design Capstone. (4 Hours)

Offers students an opportunity to develop a fully functional game using the iterative design skills they develop in GAME 3700 and GAME 3800. Students take on individual roles in a large-group project, with the goal of creating a complete game from preproduction through implementation and testing. Focuses on developing, playtesting, and iteratively refining a multilevel game, in addition to class discussions and exercises oriented toward professional and portfolio development. This class is an opportunity to complete, polish, and potentially publish that project. Integrated into the capstone are opportunities for the students to gain exposure for their games and to practice their professional development skills.

Prerequisite(s): GAME 3700 with a minimum grade of D- ; GAME 3800 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience

GAME 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

GAME 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): GAME 4970 with a minimum grade of D-

GAME 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GAME 4992. Directed Study. (1-4 Hours)

Provides study for the student whose unique academic needs or interests cannot adequately be satisfied in any of the scheduled courses of the department. May be repeated up to three times.

GAME 4994. Internship. (4 Hours)

Provides students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

Game Science and Design (GSND)**Courses****GSND 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GSND 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GSND 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GSND 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GSND 5110. Game Design and Analysis. (4 Hours)

Provides theoretical background and foundation for analyzing and designing games. Examines fundamental domains that are necessary to understand what games are and how they affect players, including but not limited to interface design, level design, narrative, learning, and culture. Presents relevant concepts and frameworks from a wide variety of disciplines—psychology, phenomenology, sociology, anthropology, media studies, affect theories, learning theories, and theories of motivation—for each domain. Explains the core elements of game design, introduces students to formal abstract design tools, explores several models of design process and iteration, and offers students an opportunity to practice game design in groups.

Corequisite(s): GSND 5111, GSND 5112

GSND 5111. Seminar for GSND 5110. (1 Hour)

Offers students an opportunity to discuss and analyze selected games, applying concepts from GSND 5110. Exposes students to a varied mix of AAA and indie titles and demonstrates how to analyze and appreciate them. Open to seniors; restricted to students in selected colleges.

Corequisite(s): GSND 5110

GSND 5112. Recitation for GSND 5110. (0 Hours)

Requires students to familiarize themselves with industry-standard game development tools and to demonstrate their familiarity by developing a simple game. Participation in the recitation is integral to success in GSND 5110.

Corequisite(s): GSND 5110

GSND 5122. Business Models in the Game Industry. (1 Hour)

Examines the underlying business structure of the interactive digital entertainment industry and the characteristics of the various participants, notably developers and publishers. Seeks to deliver insight into key business models within the game industry and how the economic challenges interact. Explores the game business landscape across the industry spectrum, ranging from AAA, mobile, casual to indie development. Examines market strategies currently in practice and how they are linked with game analytics. Topics range from retail vs. online, free-to-play modes vs. pay-to-play, as well as basic monetization and distribution channels. Designed to serve as an overview of the various stakeholders in the industry and how they interact.

GSND 5130. Mixed Research Methods for Games. (4 Hours)

Focuses on methods and methodologies from human-computer interaction (HCI) and their use in different applications, including apps, web applications, games, and virtual worlds. Covers the basics of user-oriented evaluation, associated topics, and usability methods. Introduces the design process, usability heuristics, HCI paradigms, task models, and cognitive models. Examines quantitative and qualitative analysis of data. Offers students an opportunity to delve into experimental design, institutional review board approvals, ethics, research subject recruitment, and experiment implementations. Applies concepts through concrete projects, case examples, and exercises. Expects students to be running assignments continually and trying out different evaluation methods and methodologies.

Corequisite(s): GSND 5131

GSND 5131. Recitation for GSND 5130. (0 Hours)

Requires students to familiarize themselves with statistical analysis software and to demonstrate their ability to use the software and statistics by analyzing an existing data set retrieved from a game study. Participation in the recitation is integral to success in GSND 5130.

Corequisite(s): GSND 5130

GSND 6000. Advanced Topics in Game Design. (1-4 Hours)

Explores a variety of advanced topics in game design, including the multimedia, multidisciplinary nature of games. Taught by faculty according to their research interests and expertise.

GSND 6001. Advanced Topics in Game Science. (1-4 Hours)

Explores a variety of advanced topics in game science, which includes game user research, game analytics, the psychology of play, and more generally scientific methods to study and understand players and games. Taught by faculty according to their research interests and expertise. May be repeated once for a maximum of eight semester credits.

GSND 6225. Applied Game Design. (4 Hours)

Focuses on the design and development of applied games that effectively and ethically utilize the motivational characteristics of entertainment games to meet beneficial, nonentertainment outcomes for its players (such as serious games, gamification, games for social change, games for health, game-based learning, etc.). Studies and applies related learning and motivational theories and paradigms from larger academic fields, a selection of relevant board and digital game mechanics, salient applied game design cases, and preexisting applied game design and assessment methods. Culminates in a portfolio-building final project, during which the students apply the course materials within a simplified applied game development process.

GSND 6240. Exploratory Concept Design. (4 Hours)

Explores the process of designing new modalities of interaction utilizing novel uses of established technology, e.g., pervasive and affective technologies. Focuses on philosophy and practice of creating and evaluating experimental interactions. Recontextualizes gameplay concepts through permutations of basic elements such as controls, platforms, cameras, interfaces, etc. Leverages constraints as vehicles to push the boundaries of accepted design. Explores four key approaches to experimental interaction through course projects and assignments: discovering, examining, and exploring potential new technologies and interaction principles; rapidly designing and prototyping experimental interactions; pitching, justifying, and explaining designs and prototypes to others; and addressing new technologies and forms of interaction from a research perspective, focusing on their larger implications and potential impact on play.

GSND 6250. Spatial and Temporal Design. (4 Hours)

Explores the development and understanding of spaces used by people in 3D and 2D virtual environments. Uses an iterative process of making, criticizing, experiencing, and analyzing spatial form; compositional ideas for form making; and critical thinking. Offers students an opportunity to develop the arbitrary, yet necessary, mind-set needed to make assumptions about aesthetic spatial values and expected player behaviors. Analyzes the connection between spatial-aesthetic elements and their effects on players' psyches. Experiments with how spaces, textures, shapes, and colors can support different synchronous moods. Explores how to shape spaces that fit the rational, emotional, and behavioral profile of different types of players. Applies concepts learned from architecture and game-level design to extend students' creative and critical abilities.

GSND 6320. Psychology of Play. (4 Hours)

Explores theories of perception, motivation, needs, learning, goals, and belief systems as they pertain to games and play. Examines psychological principles, including visual and audio perception, emotions, behavior, personality, and the more recent scientific discoveries around psychological models explaining play behavior or motivation theories behind play. Introduces how players learn in and from games based on the relationship of play to learning theories. Forms a solid theoretical basis for a new segmentation tool—psychographics. Explores visual and cultural archetypes, digging into comics, movie sets, and cartoons to distillate what makes people tick in certain ways relating to universal theories of perception and gestalt theories. Applies the theories through critical analysis of play behavior and games.

Prerequisite(s): GSND 5110 with a minimum grade of D- or GSND 5110 with a minimum grade of C- (Graduate)

GSND 6330. Player Experience. (4 Hours)

Focuses on topics of player psychology—cognition; memory; emotions; attention; and game-focused theories such as engagement, fun, user experience, player-need-satisfaction model, and flow. The development cycle of any game relies on the understanding of the players, the target market of the game product. Covers game usability engineering and game-specific evaluation methods, such as play testing, rapid iterative testing and evaluation (RITE), play-heuristic evaluation, and retrospective play reviews. Offers students an opportunity to learn how to analyze qualitative and quantitative data and to apply parametric and nonparametric statistical evaluation methods, qualitative data coding and analysis, and descriptive statistics. Requires students to apply visualization techniques of data and reporting.

Prerequisite(s): GSND 5130 with a minimum grade of D- or GSND 5130 with a minimum grade of C- (Graduate) or (CS 5340 with a minimum grade of C- ; CS 6350 with a minimum grade of C-)

Corequisite(s): GSND 6331

GSND 6331. Recitation for GSND 6330. (0 Hours)

Requires students to familiarize themselves with survey instruments and data visualization techniques. Participation in the recitation is integral to success in GSND 6330.

Corequisite(s): GSND 6330

GSND 6340. Biometrics for Design. (4 Hours)

Covers the domain of psychophysiological testing. Introduces theory and research in major areas of human psychology, including cognition, emotions, and attention. Studies the principles, theory, and applications of psychophysiological assessment inside and outside interactive digital entertainment. Offers students an opportunity to understand the basics of eye tracking—eye movements, fixations, saccades. Applies methods of data collection, clearing, and analysis for both physiological and eye-tracking data. Covers all issues of using such measurements, including validity of conclusions and confounding variables. Covers the process of triangulation and reporting in-depth along the entire process of the game production life cycle.

Prerequisite(s): GSND 5130 with a minimum grade of C-

GSND 6350. Data-Driven Player Modeling. (4 Hours)

Introduces the topic of game analytics, defined as the process of discovering and communicating patterns in data with a goal of solving problems and developing predictions in user behavior supporting decision management, driving action, and/or improving game products. Covers the fundamental tools, methods, and principles of game analytics, including the knowledge-discovery process, data collection, feature extraction and selection, pattern recognition to aid in prediction and churn analysis, visualization, and reporting. Covers analytics across game forms, notably online games and delivery platforms. Presents analytical tools recommended during development and tools designed for ongoing maintenance of games.

GSND 6460. Generative Game Design. (4 Hours)

Studies principles of procedural content generation and generative methods, including modular design, the role of randomness in design, and designing for emergence. Examines the role of generative design in games and its impact on both designers and players. Through assignments and a semester-long project, encourages student creation of generative systems for playful experiences. In advanced course assignments, students are expected to evaluate the experience by applying game analytics and metrics and conducting user evaluations.

GSND 6520. 3D Modeling and Asset Creation Principles. (4 Hours)

Introduces the principles of 3D computer modeling and asset creation. Class lectures and demonstrations are accompanied by substantial hands-on exploration. Offers students an opportunity to gain fundamental skills for modeling, surfacing, lighting, and rendering. Projects progress from creating simple geometric objects to exploring systems for developing more complex assets, including characters and virtual environments. Topics include polygonal surface modeling tools/techniques, topology/edge flow, retopology, UV layout, surfacing/materials, lighting, physically based rendering and asset optimization for games, and real-time applications.

GSND 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GSND 6984. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision. May be repeated up to four times.

GSND 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

GSND 7980. Capstone. (4 Hours)

Offers students an opportunity to work collaboratively on a project that showcases their game design and research skills. Projects integrate both the “science” and “design” aspects of the discipline. Students define and scope a project through appropriate research questions or hypotheses, as well as discuss the project in consideration of the preexisting literature. Presents effective project management practices for a large-scale team project. Encourages students to present and demonstrate their work at festivals, conferences, exhibitions, etc. Requires a research proposal prior to registration.

GSND 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

GSND 7990. Thesis. (4 Hours)

Focuses on preparing a master's thesis under faculty supervision.

GSND 7995. Games Project. (4 Hours)

Offers students an opportunity to obtain practical experience working on a project with a faculty member. Allows students to work with faculty in the program to develop their own project.

GSND 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continued work on the thesis project.

Prerequisite(s): GSND 7990 with a minimum grade of C-

General Engineering (GE)**Courses****GE 1000. First-Year Seminar. (1 Hour)**

Seeks to support students in their transition to Northeastern and in their development as they become members of the college and university communities. Through classroom discussion and self-reflection activities, students are introduced to campus partners and opportunities, institutional policies and procedures, and academic support resources. Students are expected to attend activities that include major exploration events, diversity discussions, and student organization meetings.

GE 1110. Engineering Design. (4 Hours)

Seeks to develop problem-solving skills used in engineering design, using case studies for a variety of engineering disciplines. Introduces students to the use of spreadsheet tools to solve engineering problems, including data reduction and visualization of data and functions. Design topics include problem formulation and specification, creativity, evaluation tools, patents, ergonomics, system design, manufacturing, ethics in engineering, and presentation techniques. Presents engineering graphics focusing on developing 3D visualization skills and computer-aided design (CAD) application. Students develop an original design solution to a technical problem as a term project. Requires students to have a laptop computer that meets the specifications of the College of Engineering.

Attribute(s): NUpath Ethical Reasoning

GE 1111. Engineering Problem Solving and Computation. (4 Hours)

Uses a structured approach to solve engineering problems. Draws applications from a variety of engineering disciplines, which serve as a tool for introducing students to engineering analysis and design. Introduces a math application package for matrix applications and various real-life engineering problems. Includes the design of problem-solving algorithms using a high-level programming language. Topics include the use of programmable microcontrollers, as well as various electronic components.

Attribute(s): NUpath Formal/Quant Reasoning

GE 1210. Scientific Revolutions Abroad. (4 Hours)

Studies two revolutions in scientific thought—the Scientific Revolution of the seventeenth and eighteenth centuries and the computational revolution of the twentieth century. The Scientific Revolution gave scientists optimism that, in principle, they could understand everything about the world around them. In contrast, the revolutions in complexity, logic, computation, mathematics, and physics of the twentieth century put fundamental limits on what scientists could know and understand. Taught abroad, this course explores the natural connections between the history of science and scientific sites, including local museums, observatories, universities, laboratories, and archaeological sites. This material is contrasted with key results from chaos theory, computational complexity, logic, physics, quantum mechanics, and the theory of computation, all developed in the twentieth century.

Attribute(s): NUpath Societies/Institutions

GE 1501. Cornerstone of Engineering 1. (4 Hours)

Introduces students to the engineering design process and algorithmic thinking using a combination of lectures and hands-on projects and labs while encouraging critical thinking. Offers students an opportunity to develop creative problem-solving skills used in engineering design, to structure software, and to cultivate effective written and oral communication skills. Topics include the use of design and graphics communication software, spreadsheets, a high-level programming language, programmable microcontrollers as well as various electronic components, and 3-D printing. Requires students to develop an original design solution to a technical problem as a final term project. Requires students to have a laptop computer that meets the specifications of the College of Engineering.

GE 1502. Cornerstone of Engineering 2. (4 Hours)

Continues GE 1501 using a project-based approach under a unifying theme. Covers topics that introduce students to engineering analysis and design. Uses a math application package for matrix applications along with various real-life engineering problems solved using programming. Considers ethical reasoning in design and analysis, including ethical theories, professional codes, and emerging micro/macro issues in engineering. Introduces quantitative tools and ethical topics separately and weaves them into all design and problem-solving stages of the student projects. Covers 3-D assembly drawings and modeling, along with review and further work in design. Students work on open-ended design problems, developing working models and prototypes to demonstrate and present their designs. Requires students to have a laptop computer that meets the specifications of the College of Engineering.

Prerequisite(s): GE 1501 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Ethical Reasoning

GE 1520. Making Fundamentals in Design and Fabrication. (4 Hours)

Utilizes numerous, accessible, low-to-medium fidelity fabrication methods used in design and fabrication prototyping. Offers students an opportunity to develop in-depth knowledge to investigate multiple manufacturing and assembly methods and learn best practices, with a goal of demonstrating the ability to choose the best technique from among the options presented. Coursework consists of individual and team-based hands-on experiences using these tools to design and build prototypes via a suite of weekly/biweekly design-build assignments. Designed for interested nonengineering students.

GE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GE 2010. Introduction to Customer-Driven Technical Innovation: Silicon Valley. (4 Hours)

Studies the role of engineering innovation in addressing customer needs in early startups and the need to conceive successful innovative engineering design as part of a commercialization strategy. Emphasizes understanding how engineering innovation can meet real technical market needs and how to gather the necessary, relevant technical information early in the innovation process to produce a successful engineering design. Uses a series of practical engineering design projects to demonstrate how students can assess the technical capabilities of the startup in producing an innovative design, how to communicate with customers in an iterative engineering design process, and how to correspondingly design and innovate to meet customer technical requirements. Taught in Silicon Valley.

GE 2030. Introduction to Product Prototyping: Silicon Valley. (4 Hours)

Seeks to develop in-depth knowledge and experience in prototyping by focusing on engineering processes and instrumentation that are used in different industries. Studies the prototyping cycle from initial process flow and sketching, to prototype development, to testing and analysis, with an emphasis on iteration. Analyzes how different kinds of engineering prototypes can address design and user-interface needs vs. functional needs, such as looks-like and works-like prototypes. Offers students an opportunity to obtain operating knowledge of methods including 3-D printing, SolidWorks, off-the-shelf hardware-software interfaces, simulation, embedded systems, product testing, prototype analysis, and prototype iteration. Taught in Silicon Valley.

GE 2310. Engineering and Technological Innovations Abroad. (4 Hours)

Introduces students to the fundamental engineering and technological principles underlying major technical advances throughout history in a specific international context. Investigates how these significant technical innovations impacted local culture, industry, and institutions. Classroom introductory material is complemented by visits to local museums, university and government laboratories, observatories, archaeological sites, and companies. Taught in a study-abroad format.

GE 2500. Design Analysis and Innovation. (4 Hours)

Explores a customer-driven project while integrating various project management techniques, advanced computer-aided design, and microcontroller integration. Delivers course content through a series of project deliverables, design innovations and improvements, and design testing—including not only the technical performance but also commercialization potential by developing and presenting a business plan. Offers students an opportunity to manage their project using traditional and modern project management techniques, carry out a needs assessment, design a representative model, implement the model through their design, verify and validate, report on the design and modeling, and suggest improvements for a revised design and model. Design projects and topics integrate class interests to make for a customized student experience while pursuing the overall learning goals.

Prerequisite(s): (GE 1501 with a minimum grade of D- ; GE 1502 with a minimum grade of D-) or (GE 1110 with a minimum grade of D- ; GE 1111 with a minimum grade of D-)

GE 2750. Enabling Engineering. (4 Hours)

Offers students an opportunity to develop a proposal for a design project that uses engineering technologies to improve the lives of individuals with cognitive or physical disabilities. Offers student project groups an opportunity to work with end users and caregivers at local nursing homes and special education schools to assess a specific need, research potential solutions, and develop a detailed proposal for a project. Project groups are matched with product design mentors who guide groups through the design process. Lectures cover relevant topics, including surveys of specific physical and cognitive disabilities and applicable engineering technologies. The same project may not be used to satisfy both this course and EECE 4790. May be repeated once.

GE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GE 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

GE 3300. Energy Systems: Science, Technology, and Sustainability. (4 Hours)

Offers students an opportunity to obtain a sound scientific, technological, and economic understanding of our modern energy system and the challenge of energy sustainability. Covers principles of energy, work, and thermodynamics; technologies from supply and demand side, including extraction of primary energy, conversion into fuels and electricity, important energy end-uses, and energy losses; fossil, nuclear power plants, and renewable energy technologies (wind, solar, wave, hydro, geothermal, biofuels); transmission and distribution for electricity and fossil fuels; energy demand by buildings, transportation, and industry, emphasizing efficient technologies; sustainability concepts, including net energy/exergy analysis and life-cycle assessment, energy-related emissions, decentralized generation, smart grids, district heating, and net-zero energy facilities.

Prerequisite(s): (MATH 1241 with a minimum grade of D- or MATH 1250 with a minimum grade of D- or MATH 1341 with a minimum grade of D-); (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-)

GE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GE 4100. Engineering for Mobile Applications Abroad. (4 Hours)

Focuses on engineering mobile applications. Topics include, but are not limited to, platform introduction, environment setup, system prototyping, project structure and resources, application life cycle, UI components, system services, sensors, security and permissions, data storage, and testing and debugging. The designed mobile application is mainly for satisfying engineering settings, such as integrating available sensor data, and interfacing with externally physical systems, such as IoT systems.

Prerequisite(s): GE 1111 with a minimum grade of C- or GE 1502 with a minimum grade of C- or CS 2500 with a minimum grade of C-

GE 4892. Engineering Product Design and Prototyping Challenge Project. (4 Hours)

Offers students an opportunity to prepare detailed engineering designs and physical prototypes of technology-based products based on real-world specifications. Projects are carried out under the umbrella of the Generate organization within the Sherman Center for Engineering Entrepreneurship Education. Project proposals are developed in collaboration with the center director, including learning outcomes, project goals, and anticipated results/products. May be repeated up to nine times.

GE 4900. Career Management. (1 Hour)

Provides an interactive course designed to enhance an engineering student's professional and career-related education through a series of classes taught by managers, engineers, and other professionals with industry experience. Topics include career services resources, developing skills to be an effective manager, the balance between personal and professional life, mentors, making career choices, time management vs. energy management, and others. May be repeated without limit.

GE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GE 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

GE 5010. Customer-Driven Technical Innovation for Engineers. (4 Hours)

Studies the role of engineering innovation in addressing customer needs in early start-ups and the need to conceive successful innovative engineering design as part of a commercialization strategy. Emphasizes understanding how engineering innovation can meet real technical market needs and how to gather the necessary, relevant technical information early in the innovation process to produce a successful engineering design. Uses a series of practical engineering design projects to demonstrate how students can assess the technical capabilities of the start-up in producing an innovative design, how to communicate with customers in an iterative engineering design process, and how to correspondingly design and innovate to meet customer technical requirements.

GE 5020. Engineering Product Design Methodology. (4 Hours)

Explores the iterative product development process, with a focus on user-centered design techniques. Employs generative and evaluative user research methods to set product requirements and end-user technical specifications and inform the product development decision-making process. Expects students to develop a simple product, device, or tool in a team-based workshop environment, through a project spanning opportunity recognition, concept generation, prototyping and testing, concept selection, and engineering design, all informed by the needs of the intended user population. Includes discussions of industrial design, sketching, design thinking, prototyping and manufacturing processes, and product development consulting.

GE 5030. Iterative Product Prototyping for Engineers. (4 Hours)

Seeks to develop in-depth knowledge and experience in prototyping by focusing on engineering processes and instrumentation that are used in different industries. Studies the prototyping cycle, from initial process flow and sketching to prototype development to testing and analysis, with an emphasis on iteration. Analyzes how different kinds of engineering prototypes can address design and user-interface needs vs. functional needs, such as looks-like and works-like prototypes. Offers students an opportunity to obtain operating knowledge of methods including 3D printing, SolidWorks, off-the-shelf hardware-software interfaces, simulation, embedded systems, product testing, prototype analysis, and prototype iteration.

GE 5100. Product Development for Engineers. (4 Hours)

Focuses on the main processes needed to develop a complex, high-technology product. Emphasizes the most important techniques and approaches used in a startup environment. Seeks to benefit students of all engineering disciplines including computer science and biomedical, industrial, electrical, mechanical, computer, and chemical engineering. Includes a running practical project in which a new product is designed and executed through a series of small projects for each phase of the product development process. Topics include the product life cycle, new product development processes, project planning and management, new product idea generation, the systems approach to product development, design for manufacturing, market testing and launch, and escalation to manufacturing.

GE 7945. Master's Project. (4 Hours)

Offers theoretical or experimental work under individual faculty supervision.

GE 7990. Thesis. (4 Hours)

Offers analytical and/or experimental work conducted under the auspices of the department. May be repeated once.

General Engineering Technology - CPS (GET)**Courses****GET 1100. Introduction to Engineering and Technology. (3 Hours)**

Analyzes the diversity, need, and applicability of engineering as the profession that solves technical problems and drives technological innovation. Discusses essential requirements to succeed academically in engineering and introduces useful tools to optimize academic performance, such as the use of computers to perform calculations and mathematics to communicate engineering ideas. Reviews simple concepts of science and mathematics in historical and quantitative context, and uses small projects and in-class demonstrations to acquaint students with engineering concepts behind common technologic innovations. Discusses basic ideas for management of projects; techniques to formulate solutions to technical problems; and general structure for engineering design, manufacturing, and testing of products.

Attribute(s): NUpath Natural/Designed World

GET 1150. Foundations of Engineering Graphics and Design. (3 Hours)

Offers students an opportunity to obtain basic engineering drafting and introductory design skills needed to function in a computer-aided drafting (CAD) environment. Covers the history of engineering hand drafting and the differences/similarities with respect to CAD tools used today. Discusses the basic steps of the engineering design process and how to apply these steps in small design projects where pictorial sketching and descriptive geometry (isometric and oblique drawings and projections) are used to communicate graphical solutions to proposed problems. Covers basic understanding of mechanical, electrical, and architectural layouts, and introduces basic dimensioning and tolerancing terms. Introduces the general features, capabilities, similarities, and differences among common engineering CAD software—such as SolidWorks, Autodesk AutoCAD, and PTC Creo—through introductory lab sessions.

Attribute(s): NUpath Creative Express/Innov, NUpath Natural/Designed World

GET 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GET 2100. Computer Engineering Programming and Analysis. (3 Hours)

Introduces the C++ programming language. Covers basic programming constructs and manipulation of data types including arrays, strings, and pointers. Offers students an opportunity to learn to isolate and fix common errors in C++ programs, to properly allocate/de-allocate procedures, and to apply object-oriented approaches to software problems in C++. Students use data structures of arrays, stacks, lists, trees, and graphs implemented using conventional programming techniques and class libraries. Students are asked to develop and write small-scale C++ programs using the skills covered during the lectures and practices in the laboratory.

Prerequisite(s): MTH 2100 with a minimum grade of D- or MTH 2105 with a minimum grade of D- or MTH 2110 with a minimum grade of D- or MTH 2400 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

GET 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GET 3100. Computer Control of Manufacturing Processes. (3 Hours)

Presents and discusses computer control of manufacturing processes. Offers students an opportunity to learn the fundamentals of manufacturing processes and automation and control technologies. Reviews hardware components such as sensors, actuators, analog-to-digital converters, and I/O devices. Demonstrates computer numeric control, industrial robotics, discrete and programmable logic controllers, and analyzes their functions, applications, advantages, and limitations. Also analyzes a variety of manufacturing systems, including automation production lines, assembly systems, and cellular and flexible manufacturing. Topics include quality control system integration and lean production.

Prerequisite(s): EET 3100 with a minimum grade of D-

GET 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GET 4840. Engineering Technology Capstone Project Preparation and Proposal. (2 Hours)

Offers students an opportunity to apply the steps of the engineering design process and develop a comprehensive written engineering project proposal. Includes a review of the engineering design process from problem statement to prototype fabrication and testing. Working closely with the instructor, students are asked to identify a technological need of actual interest for local companies, communities, or students' workplace and to follow the engineering design process. Students document the marketing, patent, and literature search for prior art, customer/engineering specifications, brainstorming process to generate feasible solutions, most viable solution selection process, and detailed labor and materials budget for actual execution of the solution to be completed in GET 4850.

Prerequisite(s): ENG 3105 with a minimum grade of C ; ENG 3106 with a minimum grade of S ; (AVM 4100 with a minimum grade of D- or AVM 4150 with a minimum grade of D- or MET 4100 with a minimum grade of D-)

Attribute(s): NUpath Writing Intensive

GET 4850. Engineering Technology Capstone Project Execution. (4 Hours)

Continues the design process initiated in GET 4840. Students implement the solution to the identified need/problem that they previously identified. This course is the culmination of the engineering technology academic curriculum, where students are expected to apply the knowledge and practice needed from a variety of domains in order to execute their plan of action and timeline of activities. The results of their work should culminate in the creation of an actual engineering system prototype along with a comprehensive final written report and oral presentation by team members.

Prerequisite(s): GET 4840 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

GET 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

GET 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

GET 4983. Topics. (1-4 Hours)

Covers special topics in general engineering technology. May be repeated without limit.

GET 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GET 4991. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

GET 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic.

GET 4994. Internship. (1-4 Hours)

Provides students with an opportunity for internship work.

Attribute(s): NUpath Integration Experience

GET 4995. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience.

GET 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major.

Attribute(s): NUpath Integration Experience

General Studies (GENS)**Courses****GENS 1101. Transitioning, Learning, and Connecting Seminar. (1 Hour)**

Designed to enhance academic success and help students transition to university life and academics. Uses a multimedia approach, diverse perspectives, and collaborative learning to challenge students to examine their assumptions and values by analyzing, synthesizing, and evaluating contemporary social issues and trends in popular culture. Emphasizes exploration of academic and career interests for student life-long success.

GENS 1102. Transitioning, Learning, and Connecting Seminar 2. (1 Hour)

Continues the exploration of academic and career interest for life-long success. Focuses on research, argumentation, and oral presentations. Addresses the sophomore transition process to the destination colleges.

GENS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GENS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GENS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GENS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GENS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Geographic Information Systems - CPS (GIS)

Courses

GIS 5103. Foundations of Geographic Information Science. (4 Hours)

Introduces geospatial data, technology, visualization, and analysis to support spatial inquiry and decision making. Topics include geospatial principles, geospatial data models and data types, metadata and attribute data, data sources, geospatial software options, quality assurance and quality control, and government/industry application areas. Includes technical knowledge of common geospatial analysis tasks. Offers students an opportunity to obtain hands-on experience using professional-grade platforms (ArcGIS, QGIS) and other geospatial software products.

GIS 5104. Foundations of Geographic Information Science. (3 Hours)

Introduces geospatial data, technology, visualization, and analysis to support spatial inquiry and decision making. Topics include geospatial principles, geospatial data models and data types, metadata and attribute data, data sources, geospatial software options, quality assurance and quality control, and government/industry application areas. Includes technical knowledge of common geospatial analysis tasks. Offers students an opportunity to obtain hands-on experience using professional-grade platforms (ArcGIS, QGIS) and other geospatial software products.

GIS 5201. Advanced Spatial Analysis. (3 Hours)

Provides an in-depth evaluation of theoretical, mathematical, and computational foundations of GIS. Topics include spatial information theory, database theory, mathematical models of spatial objects, and GIS-based representation. Examines advanced concepts and techniques in raster-based GIS and high-level GIS modeling techniques.

Prerequisite(s): GIS 5103 (may be taken concurrently) with a minimum grade of C- or GIS 5102 (may be taken concurrently) with a minimum grade of C-

GIS 5202. Advanced Spatial Analysis. (2.25 Hours)

Provides an in-depth evaluation of theoretical, mathematical, and computational foundations of GIS. Topics include spatial information theory, database theory, mathematical models of spatial objects, and GIS-based representation. Examines advanced concepts and techniques in raster-based GIS and high-level GIS modeling techniques.

GIS 6320. Use and Applications of Free and Open-Source GIS Desktop Software. (3 Hours)

Intended to expose students to free and open source (FOSS) GIS desktop applications (primarily QGIS GRASS GIS) and implementations for them to gain an understanding of the potential benefits or drawbacks of FOSS GIS alternatives compared to proprietary standards such as ArcGIS. Focuses on practical application over GIS theory but students examine historical development of FOSS GIS as well as case studies regarding FOSS GIS utilization to aid in their understanding and appraisal of these applications. Software used: QGIS (Desktop, Browser, Print Composer, DB Manager), GRASS-GIS, Boundless Suite, PostGIS, Spatialite.

Prerequisite(s): (GIS 5103 with a minimum grade of C- or GIS 5102 with a minimum grade of C-); GIS 5201 with a minimum grade of C-

GIS 6340. GIS Customization. (3 Hours)

Provides an in-depth introduction to the customization of Esri ArcGIS using Python with hands-on experience with ArcGIS, ModelBuilder, Python, geoprocessing, and ArcPy. The focus is on automating tasks and workflows in ArcMap using ModelBuilder; applying Python programming in ArcMap and for ModelBuilder; applying practical methods of debugging, tool input parameters, and tool and code documentation. Students will create a GIS data processing tool, useful to their work or area of interest, using Python or Python and ModelBuilder. The tool must be documented and capable of gracefully handling errors. Software: ArcGIS Desktop, Notepad++, IDLE - Python IDE, other Python IDE according to student choice.

Prerequisite(s): GIS 5103 with a minimum grade of C- or GIS 5101 with a minimum grade of C-

GIS 6345. Geospatial Programming. (3 Hours)

Introduces basic concepts in computer programming for geospatial data with a focus on the Python language. Applies learned approaches to geospatial analysis and accessing Python packages for spatial data science. Examples include shapely, pandas, NumPy, matplotlib, and SciPy.

Prerequisite(s): GIS 5103 with a minimum grade of C- or (GIS 5101 with a minimum grade of C- ; GIS 5102 with a minimum grade of C-)

GIS 6350. Planning a GIS Implementation. (3 Hours)

Emphasizes the process of planning a GIS implementation so an organization ends up with the "right" GIS. GIS has the potential to benefit many different types of organizations in many different ways. Focuses on understanding the planning process and the issues involved in preparing for the implementation of a GIS within a multiuser environment. Assignments help students grasp the various stages of the process, including the understanding of organization strategy, needs assessments, capability definition, data design, system requirements, and organizational impacts. While the class uses enterprise-level GIS as the context for the planning process, the process discussed can also be applied to smaller-scale organizations and systems. This course assumes a basic understanding of GIS and basic information technology concepts. Software: N/A.

Prerequisite(s): GIS 5103 with a minimum grade of C- or GIS 5101 with a minimum grade of C-

GIS 6360. Spatial Databases. (3 Hours)

Offers students an opportunity to develop skills in acquiring and building spatial data and maintaining spatial databases. Emphasizes Personal, Workgroup, and Enterprise ArcSDE geodatabases, topology, and versioned editing. Analyzes fundamental theoretical knowledge about information systems and the unique demands created by geographic information. Material includes data modeling and knowledge representation for spatial data, database schemas and models, and architectural principles for GIS. Students use database documentation (metadata) and SQL tools to query and update database attributes. Requires a final project to create a complete geodatabase representative of a spatial database used to support a real-world application. Software: ArcGIS Desktop Advanced; ArcSDE/Microsoft SQL Server enterprise geodatabase; OSQL application to query and create data in a Microsoft SQL Server database.

Prerequisite(s): GIS 5103 with a minimum grade of C- or (GIS 5101 with a minimum grade of C- ; GIS 5102 with a minimum grade of C-)

GIS 6370. Internet-Based GIS. (3 Hours)

Introduces the basic concepts associated with publishing spatial data and serving maps on the internet. Topics covered include copyright, federal, state, and local laws about spatial data sharing; map creation with web and desktop client applications; web map coding using Open Source and proprietary APIs; publishing advanced geoprocessing services. Offers students an opportunity to create a polished web mapping application that leverages Open Source or proprietary internet GIS technologies on both server and client side. Software: Google Earth, Google Maps, ArcGIS Explorer Desktop, ArcGIS Desktop, ArcGIS Online, GeoServer, SFTP software (e.g., FileZilla, FireFTP, Cyberduck, etc.), and Carto.

Prerequisite(s): GIS 5103 with a minimum grade of C- or GIS 5101 with a minimum grade of C-

GIS 6385. GIS/Cartography. (3 Hours)

Introduces the principles and concepts essential to thoughtful, informative, aesthetic, and effective map composition and layout. Among the topics included are color theory, typography, data classification and symbology, cartographic design, critique, and production. Focuses on foundational cartographic concepts to improve the student's ability to create geographic visualizations that can communicate GIS information effectively. Software: Required: ArcGIS Desktop (ArcMap) for all hands-on class assignments other than the project. Optional: Students may use software of choice for the project, e.g., QGIS, Illustrator, ArcGIS Pro, or any other software (commercial or FOSS), although no instructional support is provided.

Prerequisite(s): GIS 5103 with a minimum grade of C- or (GIS 5101 with a minimum grade of C- ; GIS 5102 with a minimum grade of C-)

GIS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GIS 6980. Capstone. (1-4 Hours)

Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project. Emphasizes student responsibility, development of individual competencies, and geospatial analytical techniques and methods. Learning strategies encourage self-motivation and autonomy to discover work in a supportive environment with guidance and clear expectations. The class proceeds by outlining key milestones and showing examples of deliverables to visualize the process and the desired outcomes; coaching, feedback, and guidance throughout the learning process; and structured discussions, formative assessments, and journaling via e-portfolio to elicit articulation and reflection—two key processes in effective learning. Students are expected to create a conference-ready poster, present their work orally, and assemble a showcase e-portfolio.

Prerequisite(s): (GIS 5103 with a minimum grade of C- or (GIS 5101 with a minimum grade of C- ; GIS 5102 with a minimum grade of C-)); GIS 5201 with a minimum grade of C- ; RMS 5105 with a minimum grade of C-

GIS 6983. Topics. (1-4 Hours)

Covers special topics in geographic information systems. May be repeated without limit.

GIS 6995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

German (GRMN)**Courses****GRMN 1101. Elementary German 1. (4 Hours)**

Designed for students with very little or no prior knowledge of German. Provides a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Each lesson incorporates helpful information about daily life in German. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

GRMN 1102. Elementary German 2. (4 Hours)

Continues GRMN 1101. Includes completion of basic grammatical usage, reading of contemporary German material, and increased stress on oral and aural skills.

Prerequisite(s): GRMN 1101 with a minimum grade of C- or GRMN 1301 with a minimum grade of C- or German Placement Test with a score of 126

GRMN 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GRMN 2101. Intermediate German 1. (4 Hours)

Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary German materials.

Prerequisite(s): GRMN 1102 with a minimum grade of C- or GRMN 1302 with a minimum grade of C- or German Placement Test with a score of 226

GRMN 2102. Intermediate German 2. (4 Hours)

Builds on GRMN 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary German materials.

Prerequisite(s): GRMN 2101 with a minimum grade of C- or GRMN 2301 with a minimum grade of C-

GRMN 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GRMN 3101. Advanced German 1. (4 Hours)

Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): GRMN 2102 with a minimum grade of C- or GRMN 2302 with a minimum grade of C- or German Placement Test with a score of 411

GRMN 3102. Advanced German 2. (4 Hours)

Builds on GRMN 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): GRMN 3101 with a minimum grade of C- or GRMN 3301 with a minimum grade of C-

GRMN 3800. Special Topics in German. (1-4 Hours)

Focuses on a unique aspect of the German language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

GRMN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GRMN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GRMN 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

GRMN 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Global Studies - CPS (GST)**Courses****GST 6100. Globalization and Global Politics and Economics. (4 Hours)**

Examines the multifaceted nature of politics and economics in an expanding global world. Analyzes the impact of globalization on political and economic systems, such as capitalism, democracy, socialism, nationalism, totalitarianism, and populism. Introduces students to the use of quantitative methods in the analysis of global relationships. Offers students an opportunity to use these tools to hypothesize the impact of future global trends on contemporary political and economic systems.

GST 6101. Global Literacy, Culture, and Community. (4 Hours)

Introduces basic theories of culture, identity, and communication. Topics may include race, ethnicity, social class, gender, national identity, and religion. Explores these theories and topics through an in-depth study of a particular aspect of culture within a chosen country. Introduces students to the use of qualitative methods in the analysis of culture and communication. Offers students an opportunity to use these tools to hypothesize the impact of future global trends on contemporary cultures and identities.

GST 6102. Global Corporate Social Responsibility. (4 Hours)

Examines the social responsibilities of corporations and individuals in the global 21st century. Topics include outsourcing, offshoring, international labor laws, global environmental responsibility, global human rights, global citizenship, and sustainable development. Today's global organizations understand that corporate social responsibility (CSR) must become central to their strategies in order to be truly sustainable. Explores the driving forces behind CSR, the ways that companies incorporate CSR into their growth strategies, and the risks of falling behind. Discusses how companies' views of CSR have shifted from compliance and philanthropy to efficiency and growth opportunities. Focuses on the use of qualitative and quantitative methods in the analysis of current policies and practices of multinational corporations, nation-states, and international nongovernmental organizations.

GST 6105. Foundations of Global Studies and International Relations. (2 Hours)

Introduces the fundamental concepts and theories of international relations theory and global studies. Examines the various international relations theories such as liberalism, realism, and constructivism and how they apply to past and present events. Critically assesses the foundations of topics such as international development, climate change, conflict resolution, and global health.

GST 6109. Basic Field Research Methods. (4 Hours)

Focuses on research and analysis, which are central to scholarly learning. To understand how information is gathered, processed, and communicated, it is imperative that students familiarize themselves with and cultivate basic research methods used in the field of social sciences. Studies the essentials of field research methods, covering various research methods as well as their applications, advantages and disadvantages, and limitations. Examines different types of studies and methods. Seeks to help students prepare for field research work, effective online and library data retrieval, analysis of research data and information, and the writing of a thesis paper.

GST 6200. The Funders. (4 Hours)

Focuses on the financial organizations and enabling institutions of globalization. Studies the actions of the holders of financial power—"the Funders"—such as the WTO, IMF, G8, and the World Bank.

GST 6210. The Developers. (4 Hours)

Focuses on the community-based groups and movements that shape popular opinion about and activism in response to living in a global world. Beginning with the social movement concept, the course examines the emergence of a global civil society that operates on a dynamic of advocacy and development mobilized by grassroots-based economic organizations and individuals.

GST 6220. Globalization of Emerging Economies. (4 Hours)

Examines the rising status and influence of countries categorized as "emerging economies" and whether this status is sufficient to make them a viable long-term challenge to U.S. political and economic power. Some are significant regional players. Collectively, they are seen as challenging U.S. hegemony in their region and beyond, and they have called for a larger role in global decision making for the developing world. Analyzes how these emerging economies become a potent force in the global economy and their impact on various stages of the international arena. Discussions may include a review of specific regional impacts, implications for international security, and effects on international aid policies.

GST 6300. Security and Terrorism. (4 Hours)

Examines the issues of security and terrorism in relation to globalization. Covers the objectives of terrorism and the implications for defining and implementing global security policy, monitoring and controlling weapons proliferation, and initiating acts of counterterrorism. Examines the impact and linkage of terrorism and security on economic development, human rights in counterterrorism, and counterintelligence activities.

GST 6310. Immigration and Labor. (4 Hours)

Examines the issues of immigration and labor in relation to globalization. Covers the changing role of blue- and white-collar labor in the global world and the impact of these changes on perceptions of work and labor. Explores outsourcing, offshoring, immigrant communities, citizenship, activism, and immigration in their global and historical contexts.

GST 6320. Peace and Conflict. (4 Hours)

Examines peace and conflict from a variety of vantage points as the two interact and emerge from intrastate violence, terrorism, and extremism.

GST 6324. Divided Societies in the Modern World. (4 Hours)

Analyzes the importance of culture and ethnicity in understanding conflict. Provides an overview of key concepts, ideas, and debates in the field; causes; dynamics; and policy options for resolution of social conflict using comparative international case studies.

GST 6326. International Conflict and Cooperation. (4 Hours)

Emphasizes conflict resolution theory, drawing upon a broad range of academic disciplines, including economics, law, sociology, psychology, anthropology, and dispute resolution, within a historical context. Provides an in-depth examination of international conflicts and approaches to peace building that enables comparisons between and among key players in international conflict and their impact on world affairs. Offers students an opportunity to prepare for further study of peace and conflict resolution in international affairs or provides transferable perspectives for a variety of professional contexts, such as nongovernmental organizations, diplomacy, teaching, media, business and law, and criminal justice.

GST 6327. Conflict and Postconflict Development. (4 Hours)

Focuses on causes of intrastate and interstate conflict and the role that international actors play in the process of conflict resolution and postconflict development. Presents case studies on reconciliation and confidence-building measures in societies and countries engaged in long-term conflict and how entities such as the NGOs and IGOs can hamper or facilitate resolution.

GST 6340. The Economics of Development. (4 Hours)

Introduces the use of economic indicators and measurements of development with reference to situations that have led to economic crises and subsequent responses by governments and institutions. Examines the predominant policy responses of rich and poor countries to the challenges of development, including issues of international assistance and recent trends in poverty reduction and participatory development. Offers students an opportunity to understand drivers for economic growth in developing and mature economies.

GST 6350. Global Economics of Food and Agriculture. (4 Hours)

Designed to provide students with a broad-based understanding of the global food system, while assessing its performance in terms of satisfying world food needs. Examines international dimensions of food system performance, including global trade and international aid; supply and demand trends and their implications for global food security; food and agricultural trade policies; ethics and safety regulations; and specific national food systems. Also examines specific commodity chains and their impact on economic development.

GST 6360. Nuclear Nonproliferation. (4 Hours)

Explores the history and development of all forms of nuclear weapons from World War II to the present. Decades after the invention of nuclear weapons, the issue of proliferation continues to occupy a significant position in both U.S. and global political discussions. Traces the history of arms control efforts; the role of science and technology; the impact of international organizations set up to monitor and regulate nuclear weapons; and the proliferation of nuclear weapons and their impact on international relations.

GST 6425. Comparative Higher Education Systems Across Regions. (4 Hours)

Studies how the United States higher education system grew out of specific historical, economic, and cultural contexts. Assesses the higher education systems and structures of other selected countries and regions, focusing on the contexts that have influenced their development. Explores emerging trends in the globalization of higher education across assessment standards, qualifications frameworks, and ethical practice. Offers students an opportunity to learn the differences between comparative, international, and cross-border education and how to build their own perspective on comparative higher education.

GST 6430. Leadership and Management. (4 Hours)

Examines leadership and management and the changes to both of growing global realities. Considers the evolving understanding of how leadership and management are evaluated when cross-cultural, cross-border, and increasingly complex human and economic transactions take place. Examines real-world examples of changing leadership demands and the economic realities that increasingly drive managerial innovation.

GST 6501. Regional Studies: East Asia. (4 Hours)

Examines regional stability and cooperation, efforts to foster democracy and human rights, and policies that have led toward increased trade and rapid economic prosperity. Explores pressures on traditional societies confronting globalization, changing roles of women, demands for improved education, along with challenges from transnational crime such as money laundering, trafficking in persons, and narcotics smuggling.

Prerequisite(s): GST 6100 (may be taken concurrently) with a minimum grade of C-

GST 6502. Regional Studies: Middle East and North Africa. (4 Hours)

Examines the Middle East from historical, sociological, political, and economic perspectives. The Middle East focus describes a range of countries extending from Morocco to Iran and includes the subregions of North Africa, the Persian Gulf, and the Arabian Peninsula. Traces the origins and ongoing efforts toward a two-state solution to the Palestinian-Israeli conflict. Explores ongoing efforts across the region for political and economic reform, the growth of civil society, and easing the strain on traditional societies in an increasingly globalized world. Studies the roots of sectarian conflicts, the problem of terrorism, and the proliferation of conventional weapons, as well as weapons of mass destruction.

GST 6503. Regional Studies: Sub-Saharan Africa. (4 Hours)

Explores issues in Sub-Saharan Africa surrounding democratic governance, civil society, and regional cooperation; the role of economic growth and development; efforts in conflict prevention, mitigation and resolution; challenges in the fields of health, agriculture, energy, education, and the role of women; and the problem of transnational crimes, such as narcotics smuggling, the arms trade, and trafficking in persons.

GST 6504. Regional Studies: Europe and Eurasia. (4 Hours)

Extends the traditional focus on Western Europe and the European Union eastward by including the blend of European and Asian cultures that has shaped the development of Russia and Central Eurasia, including Turkey, Russia, and other post-Soviet countries that form the eastern borderlands of Europe. Focuses on the persistence of historical tensions between authoritarian and democratic political cultures; the diversity of ethnic and other identities in the region; and the interconnectedness of Europe and Eurasia in policy areas such as energy, security, and immigration.

GST 6505. Regional Studies: Southwest and Central Asia. (4 Hours)

Focuses on countries of Central Asia as well as the subcontinent. Explores economic development, political transition, education, security, health, environmental challenges, religion, and the changing role of women in this region.

Prerequisite(s): GST 6100 (may be taken concurrently) with a minimum grade of C-

GST 6506. Regional Studies: Latin America. (4 Hours)

Covers all of Central and South America and the Caribbean. Explores economic development in the poorest regions; managing rapid growth elsewhere; and approaches to challenges including democratization, rule of law, civil society, health, narcotics, environment, and regional economic integration.

Prerequisite(s): GST 6100 (may be taken concurrently) with a minimum grade of C-

GST 6525. International Organizations: Law and Diplomacy. (4 Hours)

Examines the "law-making" and/or law-enforcement aspects of such entities as the UN, its specialized agencies, and international financial institutions such as the IMF and the World Bank. Knowing how intergovernmental organizations function, from those of the UN system to over 20 international courts and arbitral bodies, is crucial to aspiring international law practitioners. Knowing how law works in conjunction with diplomatic endeavors is just as critical. This course attempts to do both. Critically examines institutions and their efforts to promote the rule of law but also recently increasing onslaughts on them by populists and nationalists. Complements basic survey courses on international law, human rights, and international trade.

GST 6540. Politics of the European Union. (4 Hours)

Explores various political, economic, and social aspects of creation and functioning of the European Union. Introduces the politics, structure of governance, institutional design, and various policies of the European Union. Begins with a historical overview of the European integration process and surveys various theories of integration. Separate sessions cover particular topics, such as history and evolution of the EU integration, major institutions, interinstitutional dynamics of governance, and role member states. The second part of the course deals with current key policy issues, such as environment, enlargement, immigration, EU citizenship, crime prevention and terrorism, monetary union, CFSP, euroscepticism, and democratic deficit.

GST 6550. U.S. Foreign Policy. (4 Hours)

Examines the U.S. role in the world by focusing on the dynamics of power in the international system. Explores the theoretical foundations, historical contexts, and domestic sources of past and present U.S. foreign policy choices. Evaluates the roles of nongovernment actors. Assesses the impact of inter-agency rivalries. Case materials and topics include humanitarian intervention; the militarization of U.S. foreign policy; the global economy; tensions in the Middle East; and bilateral relations between the United States and such nations as China, Russia, Iran, as well as the European Union. Debates the efficacy and ethics of U.S. global power and the future of the U.S.-dominated liberal world order.

GST 6560. Multilateral Diplomacy. (4 Hours)

Studies how nations, nongovernmental organizations, multinational organizations, and other international actors advance their agendas in global and regional forums. Using an issues-based case study and applied approach, offers students an opportunity to explore how members promote diplomatic initiatives and engage in collaboration, coalition building, and negotiation within the context of multilateral organizations.

GST 6580. Opportunities in International Consulting. (4 Hours)

Explores international business across countries and sectors. Constitutes a first step in introducing students to concepts that cover various aspects of the private sector's role in international relations. Uses consultancy case studies and other readings.

GST 6590. Public Diplomacy. (4 Hours)

Examines how governments communicate directly with foreign publics for the purpose of improving image, advocating policy, and shaping public opinion. Explores radio and television broadcasting across borders, cultural programming, educational exchange programs, visitor programs, libraries and language institutes, and the impact of social media. Case studies illustrate topics such as global media and international journalism, propaganda, media in democracies and totalitarian states, media influence on foreign policy, the digital divide, intellectual property, and privacy.

GST 6600. The Practice of Diplomacy. (4 Hours)

Explores the practice and process of diplomacy and the work of foreign ministries, embassies, and consulates. Introduces students to representation, reporting, negotiation, intercultural contacts, and consular affairs, as well as interaction with the media, the private sector, and civil society. Offers students an opportunity to obtain a knowledge base and develop professional skills important to the diplomatic profession, including policy analysis, written and oral communication, and negotiation. Students use extensive simulations, role-playing, and case studies.

Prerequisite(s): GST 6100 with a minimum grade of C-

GST 6610. Sustainable Development. (4 Hours)

Examines the basic tools of policy analysis in the area of sustainable development. Introduces various techniques used by states, NGOs, and private corporations trying to create viable policy. These may include game theory, cost-benefit analysis, and critical mass models. Utilizes global case studies to analyze current policy and consider political viability of development programs. At the conclusion of the course, students are required to produce policy recommendations and a policy memo.

GST 6700. Global Health Perspectives, Politics, and Experiences in International Development. (4 Hours)

Examines the linkages between health and development that can only be understood within the broader context of sociopolitical and economic factors. Begins with the recognition that poverty plays a central role in many preventable diseases. With the development of nations have come improvements in health. In the landscape of globalization and international development, there has emerged a vast international health regime. Focuses on these linkages in the context of this international political economy of health. Examines key aspects including the concepts and architecture of global health, the global burden and epidemiology of disease, health and development of nations, and political-economic determinants of health and development. Uses a variety of analytical perspectives including political, legal, economic, and epidemiological.

GST 6710. Critical Issues and Challenges in the Practice of Global Health. (4 Hours)

Examines the critical issues in global health. Focuses on roles of different actors in the delivery of healthcare services, healthcare delivery systems, key initiatives and strategies to meet the burden of major diseases, planning and managing national and global health programs, emerging medical health technologies, pharmaceutical policies, marketization of healthcare, the human resources for health, etc. Begins by recognizing that, despite improvements in health across the world over the last half century, vast challenges remain for a majority of people in developing countries. Analyzes the cutting-edge issues and knowledge that are at the forefront of the global health policy agenda today. Uses a practical and policy-analytical approach with illustrative case-based analysis and extensive coverage of material.

GST 6740. Human Rights. (4 Hours)

Introduces students to the concept of international human rights. Focuses on the role of global, regional, and national institutions to protect human rights as well as create and enforce human rights law. Explores the role of nongovernmental organizations and the media in fact-finding and publicizing human rights violations, along with current issues and case studies.

GST 6810. International Higher Education. (4 Hours)

Explores the phenomenon of global student mobility and internationalization of both campuses and curricula. Looks at historical landmarks in student and faculty exchanges, government-sponsored programs, recruiting practices, and the development of cross-cultural competencies. This is an introductory course.

GST 6820. Managing Study Abroad. (4 Hours)

Focuses on the experience of American students, faculty, and their home institutions as they travel overseas for educational purposes. Begins with historical foundations such as "Junior Year Abroad" and continues to the present day, exploring trends in enhancing cross-cultural learning, faculty-led programs, service-learning, and experiential programs.

GST 6830. Managing International Students. (4 Hours)

Explores how increasing numbers of international students from diverse countries can best be managed to increase campus internationalization, avoid clustering, provide rich experiences for domestic students, and cope with cultural adaptation.

GST 6840. The Business of International Education. (4 Hours)

Explores the role of third-party study-abroad providers, recruiters, program developers, and nonprofit organizations dedicated to student and faculty exchanges and their growing relationship with U.S. university campuses. Examines the financial costs and benefits inherent in offering a growing range of international programs.

GST 6850. Immigration and Legal Issues in International Higher Education. (4 Hours)

Focuses on the necessary legal knowledge for managers running international student offices on campuses. Covers visa and immigration law from the U.S. perspective. Includes legal knowledge study-abroad staff need—such as crisis management, insurance, physical and mental health issues, and liability problems—as staff assist both American students who travel in increasing numbers to nontraditional destinations and international students who come to their campuses.

GST 6920. Case Study in Global Studies. (4 Hours)

Offers an integrative, summative course for the master's degree that builds on the understanding and concepts of global studies learned throughout the program. The curriculum draws heavily upon learning outcomes and acquired skills from both the global studies core courses and advanced electives in the concentration. Throughout the course, the instructor leads students through a step-by-step process of researching and writing a well-defined project, from the initial construction of a research question through the final stages of editing and revision. Course assignments may include group projects and individual presentations. At the conclusion of the course, students should have finished a portfolio piece capable of demonstrating their application of concepts and methods learned throughout their studies.

Prerequisite(s): GST 6100 with a minimum grade of C- ; GST 6101 with a minimum grade of C- ; GST 6109 with a minimum grade of C- ; GST 6320 with a minimum grade of C- ; (GST 6501 with a minimum grade of C- or GST 6502 with a minimum grade of C- or GST 6503 with a minimum grade of C- or GST 6504 with a minimum grade of C- or GST 6505 with a minimum grade of C- or GST 6506 with a minimum grade of C-)

GST 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GST 6965. Professional Practice in Global Education. (4 Hours)

Discusses the many career opportunities available in the field of international education. Introduces students to professional conferences concerning international education and provides opportunities to explore proposal development for conference presentation. Guest speakers represent different professional practice areas of global education.

GST 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

GST 7983. Topics. (1-4 Hours)

Covers special topics in global studies. May be repeated without limit.

GST 7990. Thesis. (1-8 Hours)

Offers thesis supervision by members of the department.

Global Studies (GBST)

Courses

GBST 1012. The Global Learning Experience. (1 Hour)

Examines global citizenship in the 21st century. Introduces the concepts of global citizenship, cosmopolitanism, pluralism, and culture. Connects local issues at host sites with broader dynamics of globalization, migration, positionality, power, and privilege. Offers opportunities to analyze and apply ideas through personal reflection, application of intercultural theory, and team-based problem solving.

GBST 5100. Global Network Program. (20 Hours)

Offers an opportunity to study at a global network location. May be repeated up to five times.

Health Informatics (HINF)

Courses

HINF 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 2991. Research in Health Informatics. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

HINF 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 5101. Introduction to Health Informatics and Health Information Systems. (3 Hours)

Introduces the history and current status of information systems in healthcare: information architectures, administrative and clinical applications, evidence-based medicine, information retrieval, decision support systems, security and confidentiality, bioinformatics, information system cycles, the electronic health record, key health information systems and standards, and medical devices. Requires enrollment in Graduate Health Informatics Program.

HINF 5102. Data Management in Healthcare. (3 Hours)

Explores issues of data representation in healthcare systems, including patient and provider identification, audit trails, authentication, and reconciliation. Discusses underlying design of repositories for electronic health records (EHRs) and computerized provider order entry (CPOE) systems. Includes an overview of privacy issues, legislation, regulations, and accreditation standards unique to healthcare.

HINF 5105. The American Healthcare System. (3 Hours)

Covers the organization, financing, and outcomes of the U.S. healthcare system. Studies opportunities and challenges to improve the cost and quality of healthcare and expand adequate coverage to all. Non-health informatics students may be able to take the course with permission of the program director.

HINF 5106. The Canadian Healthcare System. (3 Hours)

Presents an overview of the Canadian healthcare system. Emphasizes the current system's strengths and limitations. Uses historical context to strengthen analysis of present-day concerns. Focuses on issues of access, cost, and quality of care.

HINF 5110. Global Health Information Management. (3 Hours)

Studies the challenges of managing health information systems in the United States, Canada, India, China, the United Kingdom, Saudi Arabia, Singapore, Taiwan, Ghana, and Malawi. Differences in healthcare systems and national regulations make the process slightly different in each country. By exploring environments with varying degrees of regulation, students have an opportunity to think critically about the impact that a nation's environment has on health information management. Discusses case studies to encourage students to think about health informatics from a managerial perspective across private companies, government, and nongovernment organizations.

HINF 5200. Theoretical Foundations in Personal Health Informatics. (4 Hours)

Offers an introduction to and foundation for personal health informatics by reviewing major theories and models of health behavior change and health education at individual, interpersonal, and community levels in a wide variety of settings and populations. Health behavior change is arguably our greatest hope for reducing the burden of preventable physical and mental disease and death around the world. A thorough understanding of health behavior change theories is thus essential to developing and translating personal health interface technologies into practice and policy that can result in more powerful interventions and more robust theories. Emphasizes cultural and health disparities, global applications, advances in health communications, and the use of electronic media (e-health) and mobile media (m-health). Open to students with senior standing with permission of instructor.

HINF 5300. Personal Health Interface Design and Development. (4 Hours)

Explores the design of innovative personal health human-computer interface technologies. Examples include assistive technologies that aid persons with disabilities, consumer wellness promotion applications, patient education and counseling systems, interfaces for reviewing personal health records, and elder care and social network systems that monitor health and support independent living. Offers students an opportunity to work in teams to build a prototype personal health interface system to solve a real problem. Topics include needs assessment and participatory research, iterative user interface design methods for health interface development, computational sensing of health states and behavior, software architectures for iteratively testing prototype personal health interface technologies, human-computer interaction issues related to personal health technology, and technology transfer requirements to support future validation studies of technology.

HINF 5301. Evaluating Health Technologies. (4 Hours)

Explores the deployment and evaluation of innovative health technologies. In this project-based course, students work in teams to deploy and evaluate a health technology. Offers students an opportunity to develop a research plan to measure the effectiveness, usability, and/or feasibility of the technology; recruit study participants; deploy the technology; and analyze the data collected. Also offers students an opportunity to learn about each of these steps and work toward producing a publishable-quality research paper on the technology and results of the efficacy study, as well as to prepare a grant application that extends the technology and research methodology. Additional topics include technology transfer and implications on health policy.

Attribute(s): NUpath Capstone Experience

HINF 5407. Business Application of Decision Support in Healthcare. (3 Hours)

Explores the business of healthcare and the practical application of decision support needed to improve access to care, improve health outcomes, and reduce the cost of care. Discusses the impact of consumerism, risk-based purchasing (including ACOs), the migration from facility to home and community-based care (including medical home models), the implied broadening of the healthcare supply chain, and emerging technology trends such as blockchain.

HINF 5976. Directed Study. (3 Hours)

Offers students an opportunity to examine standard health informatics material in fresh ways or new health informatics material that is not covered in formal courses. May be repeated up to two times.

HINF 6201. Organizational Behavior, Work Flow Design, and Change Management. (3 Hours)

Reviews the concepts, issues, and practices of organizational behavior at the individual, group, and organizational levels. Offers an opportunity to learn how to gather information from users and understand the users' point of view and problems. Examines processes and work flow in healthcare environments. Seeks to explain organizational structures and analyze business processes and how they are translated into specifications to build a RFP for vendors. Also examines fundamentals of organizational behavior and change management.

HINF 6202. Business of Healthcare Informatics. (3 Hours)

Focuses on the business practices relating to health information technology. Includes departmental design and management, capital and operating budgets, the budget planning process, and infrastructure design and strategic planning. Other topics include evaluation of vendors, vendor selection, clinical administration systems, and the design and management of integrated delivery networks.

HINF 6205. Creation and Application of Medical Knowledge. (3 Hours)

Explores the relationship between clinical data and clinical knowledge and how both are developed and deployed in organizations to support improvements in patient care and research. Topics covered include what medical data is available and how it should be accessed, analyzed, and organized to support evidence-based medicine and research. Analyzes current and future approaches to clinical decision support and expert system development and how they can be deployed via new or existing knowledge-management infrastructures.

HINF 6215. Project Management. (3 Hours)

Introduces students to managing healthcare informatics projects, including the tools and techniques used to manage small, medium, and large software and systems projects. Topics include project planning, project management tools, estimating, budgeting, human resource management, and the like. All phases of a project are discussed, and students are required to develop a project plan for a health informatics project as part of the course.

HINF 6220. Database Design, Access, Modeling, and Security. (3 Hours)

Designed to provide an introduction to the theory and application of database management systems. Topics covered include the relational model, basic and intermediate query formulation using structured query language, database design using the entity relational model, and database normalization and optimization. In addition to these traditional topics, this course covers a sample of emerging topics relevant to the healthcare professional, including personal health information, privacy and security considerations, XML as a data model, and clinical data warehousing and mining.

HINF 6240. Improving the Patient Experience through Informatics. (3 Hours)

Explores the current and future dynamics influencing care for patients. The patient experience is a key differentiator in delivery of healthcare. Technology makes a difference for the patient in both the delivery of advanced care applications and innovation. Discusses and explores technology and workflow enhancements that could work to improve the patient experience from a cost, quality, and care perspective. Examines best practices and organizations and evaluates how they are using informatics to deliver a better patient experience. Analyzes change management and why change is difficult within healthcare and explores case studies on how to make change happen and the role that change plays in connection with technology. People, process, and technology all need to be present to offer an ideal experience.

HINF 6335. Management Issues in Healthcare Information Technology. (3 Hours)

Uses case studies to identify typical issues confronting chief information officers in healthcare organizations, including human resource management, strategic planning, project management, vendor contract negotiations, budgeting, service levels, etc. Requires prior completion of HINF 5101.

HINF 6345. Design for Usability in Healthcare. (3 Hours)

Introduces the general principles of usability and user interface design as they relate to healthcare technology. Through a series of hands-on projects, offers students an opportunity to gain skill in user-centered/UX research and design methodologies such as interviewing, persona creation, task analysis, usability testing, prototyping, and iterative design. Class materials, exercises, and discussions cover usability and design for EHRs/ EMRs, connected health, smart home products, and interoperability. While there are no prerequisites for this course, the material is directed toward advanced students who need to understand how to design usable interactive products and software within healthcare so they can either do the work themselves or manage this function within a project.

HINF 6350. Public Health Surveillance and Informatics. (3 Hours)

Offers students an opportunity to learn how public health information is generated, collected, transferred, and shared. Discusses the principles and practice of public health surveillance as well as the application of health informatics standards and methods in the design of surveillance systems. Also reviews the core components of analysis and interpretation of population data. Non-health informatics students may be able to take the course with permission of the program director.

Prerequisite(s): HINF 5101 with a minimum grade of D- or HINF 5101 with a minimum grade of C- (Graduate)

HINF 6355. Interoperability Key Standards in Health Informatics. (3 Hours)

Reviews the different healthcare informatics standards for storing and exchanging data in healthcare technology systems. Covers where and how they are used, where and why they are not used, and an overview of some of the types of products available to facilitate their use. Seeks to demystify the details behind the standards. Offers students an opportunity to work through examples in small groups in class and discuss issues involving the standards' adoption and use. Non-health informatics students may be able to take the course with permission of the program director.

Prerequisite(s): HINF 5101 with a minimum grade of D- or HINF 5101 with a minimum grade of C- (Graduate)

HINF 6400. Introduction to Health Data Analytics. (3 Hours)

Introduces the field of health data analytics. Topics include understanding stakeholder needs; the variety of types of health data; software tools; as well as case studies from pharma, public health, electronic health records, claims data, and home-monitoring data. Emphasizes the importance of understanding the complexity and potential biases in how health data (direct or indirect) is collected and represented. Presents all data-analytic discussions within a context of health data and stakeholder information needs. Offers students an opportunity to practice presenting the results of analyses. Requires a basic knowledge of statistics.

HINF 6404. Patient Engagement Informatics and Analytics. (3 Hours)

Studies patient engagement and health informatics systems and analyses of data collected from these systems. Patient engagement is the ability and willingness of patients to manage their own health and care combined with interventions to increase patient involvement in their own health and care, as well as other positive health behaviors. In these interventions, health informatics systems and analyses of data are used. Offers students an opportunity to engage in data analytic exercises to investigate the underlying design and implementation of health informatics systems used in patient engagement initiatives. Presents an overview of the current state, new technologies, and other areas (health reform, legal, privacy, quantified self) influencing the future direction of patient engagement.

HINF 6405. Quantifying the Value of Informatics. (3 Hours)

Examines the various ways in which health informatics delivers value to organizations. Organizations invest in informatics because they believe that doing so will enable them to meet their objectives. The course offers students a series of tools to use to quantify value, which can help them to articulate and assess the value of potential investments in informatics. Examines case studies to offer students an opportunity to practice articulating the value of informatics in real settings.

HINF 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 7701. Health Informatics Capstone Project. (3 Hours)

Offers students an opportunity to integrate knowledge gained in the classroom with real-world problems. Consists of practical work and research in a major area of health informatics. Potential areas of work include design or analysis of health informatics systems, programs, or applications; program planning; and policy development. Encourages community-based participatory projects. To the extent possible, capstone projects have as a goal an active contribution to the health informatics field. Students initiate and design capstone projects in consultation with working professionals. Faculty members provide guidance and mentoring. Requires prior completion of at least three semesters of graduate study in health informatics.

HINF 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HINF 7990. Thesis. (3 Hours)

Offers supervision and oversight of master's thesis in a selected topic under the direction of the faculty in fulfillment of the requirements for the degree. Requires students to submit a written thesis. May be repeated twice.

Prerequisite(s): (PHTH 5210 with a minimum grade of B- or PHTH 5210 with a minimum grade of B- or PHTH 5210 with a minimum grade of B-); (CS 6350 with a minimum grade of B- or HINF 5200 with a minimum grade of B-)

HINF 8982. Readings. (1-8 Hours)

Offers selected readings under the supervision of a faculty member. *Personal health informatics PhD students only..*

HINF 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to four times.

HINF 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated up to four times.

HINF 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

HINF 9990. Dissertation Term 1. (0 Hours)

Offers selected work with the agreement of a dissertation supervisor.

Prerequisite(s): HINF 9000 with a minimum grade of S

HINF 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): HINF 9990 with a minimum grade of S

HINF 9996. Dissertation Continuation. (0 Hours)

Continues work with the agreement of a dissertation supervisor.

Prerequisite(s): HINF 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Health Management - CPS (HMG)

Courses

HMG 1100. Foundations of Healthcare Management. (3 Hours)

Examines the management of health services organizations (HSOs) and health systems from management functions, concepts, and principles to managerial roles, skills, and competencies within the context of HSOs and health systems and their external environment. Introduces managerial tools and techniques for managing effectively in the HSO/health systems environment. Emphasizes how health managers solve problems, make decisions, and conduct strategic planning. Studies the roles played by quality, productivity, and technology in establishing and maintaining a competitive position and how managers seek to manage the complex human relationships that exist within HSOs and health systems as well as other agencies and external stakeholders.

HMG 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 2100. Healthcare Operations. (3 Hours)

Focuses on operations management planning and execution. Explores the challenges of restructuring and control common to hospitals and other health services organizations.

Prerequisite(s): HMG 1100 with a minimum grade of D- or MGT 1100 with a minimum grade of D-

HMG 2110. Health Law and Regulation. (3 Hours)

Examines the impact of health law and regulation on healthcare systems. Explores how to assess liability in the workplace, the impact of medical malpractice, risk management, and current ethical and legal dilemmas in the practice of medicine. Discusses how to manage the risk of the employer and patient through the use of medical records and specific behavior patterns, how to determine personal risk, and how to recognize potential litigious issues in the practice of medicine.

Prerequisite(s): HMG 1100 with a minimum grade of D- or MGT 1100 with a minimum grade of D-

HMG 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 3210. Health Informatics. (3 Hours)

Focuses on information systems in healthcare. Topics include information architectures, administrative and clinical applications, evidence-based medicine, information retrieval, decision support systems, security and confidentiality, the electronic health record, integration of key health information systems, and medical devices.

Prerequisite(s): HMG 1100 with a minimum grade of D- or MGT 1100 with a minimum grade of D-

HMG 3220. Risk Management and Quality Assurance. (3 Hours)

Explores aspects of quality management within the healthcare arena. Studies legislative mandates, healthcare agencies' requirements, and methods of assessing and improving the quality of care. Emphasizes the procedures utilized to monitor physician and professional staff reappointment and credentialing. Discusses integration of the research process to conduct performance monitoring, quality improvement, and risk assessment. Emphasizes using statistical analysis to inform decision making.

Prerequisite(s): HMG 2100 with a minimum grade of D-

HMG 3225. Public Health. (3 Hours)

Introduces the history and principles of public health and their application to the development of activities that benefit the health status of populations. Explores the roles of epidemiological studies, biostatistics, healthcare planning and policy development, healthcare administration, and community organization in addressing public health needs.

Prerequisite(s): HMG 1100 with a minimum grade of D- or MGT 1100 with a minimum grade of D-

HMG 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 4210. Healthcare Policy. (3 Hours)

Examines the healthcare policy environment, including the economics and politics of healthcare policy. Explores institutional, local, regional, national, and international approaches to public health, health systems, and determination of research and development priorities. Discusses a variety of critical, contemporary policy issues such as health insurance, Medicare and Medicaid, the increase of medical expenditures, the malpractice crisis, the evolution of managed care, and a comparison of other nations' healthcare systems.

Prerequisite(s): HMG 3225 with a minimum grade of D- or HSV 3300 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

HMG 4850. Healthcare Management Capstone. (3 Hours)

Offers students an opportunity to integrate knowledge gained in the classroom with real-world problems. Consists of practical work and research in a major area of healthcare management. Students initiate and design capstone projects in consultation with faculty and working professionals.

Prerequisite(s): HMG 4210 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

HMG 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

HMG 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 4994. Internship. (3 Hours)

Offers students an opportunity to participate in an internship in a healthcare organization.

Prerequisite(s): HMG 3220 with a minimum grade of D-

Attribute(s): NUpath Integration Experience

HMG 6110. Organization, Administration, Financing, and History of Healthcare. (3 Hours)

Provides a historical context for the current healthcare system, the current economic drivers, the leading integrated delivery systems, political pressures, ethical issues, and the roles of insurance and pharmaceutical companies.

HMG 6130. Healthcare Strategic Management. (3 Hours)

Focuses on analyzing, planning, negotiating, problem solving, and decision making for healthcare systems managers in a risk-based environment. Strategic management as practiced in healthcare functional units, clinics, and hospitals is rapidly changing in today's technology-driven environment. Planning and management strategy at all levels are essential to the organization.

HMG 6140. Principles of Population-Based Management. (3 Hours)

Covers epidemiological analysis of health and health services with an emphasis on assessment of cost and benefits of population-based interventions. Special topics include community health assessments, the monitoring of community health indicators, and the evaluation of community health improvement activities. Includes strategies for the analysis of potential and actual health-risk factors and the discovery and implementation of appropriate risk-reduction strategies.

HMG 6160. Healthcare Information Systems Management. (3 Hours)

Offers students an opportunity to understand how to manage high-technology systems, tools, and products and to provide a conceptual framework for understanding how to use technology to reduce costs and improve productivity, efficiency, and effectiveness in their current and future work situations. Today's health practitioner has to use technology to find medical information and use accounting systems, personal systems, health insurance company systems, inventory systems, patient billing systems, purchasing systems, as well as input and retrieve data. Focuses on the business of healthcare and how to understand, use, and manage technology and information systems that have become such an integral part of the health delivery spectrum in a medical environment.

HMG 6170. Health Law, Politics, and Policy. (3 Hours)

Surveys the legal foundations of healthcare and applies current case law to contemporary situations. Topics include legal aspects of legislation, patient rights, data security, professional liability, labor relations, and the politics of healthcare reform. Issues include the high price of prescription drugs and why they are less expensive in Canada and overseas. Do rising medical costs produce better health? How should a Medicare prescription drug benefit be designed? Should kidneys and other organs be bought and sold? Includes case studies and group projects related to these questions and/or others as they emerge.

HMG 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Health Science (HSCI)

Courses

HSCI 1000. College: An Introduction. (1 Hour)

Provides an introduction to the University, college, and health professions to enhance students' understanding of self and the decisions they make academically and socially as members of the University's diverse, multicultural community. Group activities and individual assignments along with active participation in a learning community help students adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

HSCI 1105. Human Nutrition. (4 Hours)

Examines the fundamental role of nutrition in promoting health and how lifestyle and the socioecological model work together. Covers the physiological functions of energy-providing nutrients in the body and interrelationships, including the key functions of macronutrients and micronutrients. Introduces the use of two different diet assessment tools to assist individuals in selecting food for health promotion. Offers students an opportunity to gain a deeper understanding of what it means to make healthy choices and the role nutrients have on a person's wellness.

Prerequisite(s): BIOL 1107 (may be taken concurrently) with a minimum grade of C- or BIOL 1111 (may be taken concurrently) with a minimum grade of C- or BIOL 1115 (may be taken concurrently) with a minimum grade of C- or BIOL 1117 (may be taken concurrently) with a minimum grade of C- or BIOL 1147 (may be taken concurrently) with a minimum grade of C- or BIOL 2217 (may be taken concurrently) with a minimum grade of C- or CHEM 1101 (may be taken concurrently) with a minimum grade of C- or CHEM 1161 (may be taken concurrently) with a minimum grade of C- or CHEM 1211 (may be taken concurrently) with a minimum grade of C- or HSCI 1106 with a minimum grade of C- or PHSC 2301 (may be taken concurrently) with a minimum grade of C- or PHSC 2303 (may be taken concurrently) with a minimum grade of C-

Attribute(s): NUpath Natural/Designed World

HSCI 1106. Contemporary Issues in Nutrition. (4 Hours)

Explores the fundamental role of nutrition in promoting health. Offers an overview of nutrient functions, compositions, and digestion/absorption. Relates concepts covered in class to current topics of interest in nutrition. Offers students an opportunity to discuss their dietary behaviors in relation to the Dietary Guidelines for Americans.

Attribute(s): NUpath Natural/Designed World

HSCI 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 2000. Professional Development for Bouvé Co-op. (1 Hour)

Introduces students to the Bouvé Cooperative Education Program and provides them with the opportunity to develop job-search and career-management skills. Offers students an opportunity to perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Students also have an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Familiarizes students with workplace issues relative to their field of study and teaches them to use myNEUCOOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

HSCI 2350. Advanced Nutrition in Health and Disease. (4 Hours)

Designed for health professionals to increase their knowledge and skills in advanced nutrition in health and disease. Builds on a foundation of nutrition and introduces nutrients and their physiological impacts, including the nutritional guidelines for good health and disease prevention. Through case studies, offers students an opportunity to interpret nutrition in the prevention and treatment of diet-related health problems, such as obesity, diabetes, and cardiovascular disease.

Prerequisite(s): HSCI 1105 with a minimum grade of C

HSCI 2500. Public Health Nutrition in the Community. (4 Hours)

Explores the role nutrition plays in promoting and improving health in the community. Examines modern aspects of public health nutrition in the healthcare system by applying the principles of nutrition to design policies, behavior, program planning, food insecurity, marketing, and children and adult nutrition programs. Offers students an opportunity to develop and deliver nutrition education to various populations in the community, including school-age children, college students, and the elderly population.

Prerequisite(s): HSCI 1105 with a minimum grade of C

HSCI 2983. Special Topics. (4 Hours)

Offers students an opportunity to participate in a small seminar to explore selected topics within the vast subject of healthcare. May be repeated twice.

HSCI 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 2991. Research in Health Science. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

HSCI 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 4700. Health Science Capstone Introduction. (0 Hours)

Offers students an opportunity to integrate their coursework, knowledge, and experiences into a proposal for a spring semester capstone experience. Students propose their health science culminating experience from options in the form of developing and implementing their own project with faculty mentor support or participating in a faculty-led seminar.

Prerequisite(s): PHTH 2210 with a minimum grade of C ; (PHTH 2300 with a minimum grade of C or PHTH 2301 with a minimum grade of C); (PHTH 2350 with a minimum grade of C or PHTH 2351 with a minimum grade of C); PHTH 2515 with a minimum grade of C ; (ENGW 3302 with a minimum grade of C or ENGW 3304 with a minimum grade of C or ENGW 3306 with a minimum grade of C or ENGW 3307 with a minimum grade of C or ENGW 3308 with a minimum grade of C or ENGW 3314 with a minimum grade of C or ENGW 3315 with a minimum grade of C)

HSCI 4720. Health Science Capstone—Service. (4 Hours)

Offers students an opportunity to integrate their course work, knowledge, and experiences into a project that results in a written report and presentation regarding an issue within the field of health or healthcare. The project is a culminating experience in the health science program. Includes working with a mentor in a field experience in public health education or health policy, public affairs, social service, or other healthcare environment in which the student is qualified. Requires students to present their projects to the seminar class and possibly to the agency or group with which they are working.

Prerequisite(s): HSCI 4700 with a minimum grade of S

Attribute(s): NUpath Capstone Experience

HSCI 4730. Health Science Capstone—Research. (4 Hours)

Offers students an opportunity to integrate their course work, knowledge, and experiences into a project that results in a written report and presentation regarding an issue within the field of health or healthcare. The project is a culminating experience in the health science program. Students may choose to participate in an ongoing research project or create and implement their own research project as their capstone project. Requires students to present their projects to the seminar class and possibly to present a poster at a professional/research expo.

Prerequisite(s): HSCI 4700 with a minimum grade of S

Attribute(s): NUpath Capstone Experience

HSCI 4740. Health Science Capstone Seminar. (4 Hours)

Offers intensive study on the public health approach to a specific, relevant issue. Through a combination of close readings of empirical literature and interactive class discussion, students critique public health approaches and policies regarding the topic of the seminar. Requires students to complete an in-depth study, write a paper, and present their findings on a topic of interest within the larger discussion.

Prerequisite(s): HSCI 4700 with a minimum grade of S

Attribute(s): NUpath Capstone Experience

HSCI 4950. Seminar. (4 Hours)

Offers students an opportunity for an in-depth study of selected topics within healthcare.

HSCI 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

HSCI 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): HSCI 4970 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience

HSCI 4983. Topics. (4 Hours)

Offers students an opportunity to study contemporary issues in healthcare and to expand their breadth of knowledge and engage diverse perspectives.

HSCI 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

HSCI 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HSCI 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

HSCI 5130. Introduction to Real-World Evidence. (2 Hours)

Introduces students to the generation of real-world evidence (RWE) from real-world data (RWD) collected through different forms of observational health data. Examines how RWE is used to inform regulators and other stakeholder groups in life sciences and healthcare. Emphasizes the role of team science in executing an RWE analysis.

HSCI 5140. Foundations of Data Models. (2 Hours)

Introduces students to design principles behind data modeling in life sciences and healthcare. Examines and compares approaches to common data models across different research communities. Explores the rationale for popular data models through the use of industry case studies.

HSCI 5150. Methods for Observational Research 1. (3 Hours)

Surveys approaches to observational research across pharmacoepidemiology, emphasizing approaches used by the Observational Health Data Sciences and Informatics community.

HSCI 5151. Methods for Observational Research 2. (3 Hours)

Examines advanced methods in conducting observational research across pharmacoepidemiology, emphasizing approaches used by the Observational Health Data Sciences and Informatics community. Focuses on using open-source software and open-science principles to conduct and interpret a real-world evidence (RWE) study.

Prerequisite(s): HSCI 5150 with a minimum grade of B- or HSCI 5150 with a minimum grade of B-

HSCI 5160. Standardization of Real-World Data. (2 Hours)

Introduces students to the principles of interoperability protocols in healthcare and life sciences to support clinical data standardization. Explores the process of extract, transform, and load (ETL) in the harmonization of healthcare data. Emphasizes real-world case studies driving current standardization approaches.

Prerequisite(s): HSCI 5140 with a minimum grade of B- or HSCI 5140 with a minimum grade of B-

HSCI 5170. Data Model Transformation. (2 Hours)

Examines the process for transforming data into a common representation that can be used across research environments. Covers the technical and business processes for data model adoption. Establishes the framework for evaluating data quality and the implementation of agile principles in data model release management.

Prerequisite(s): HSCI 5140 with a minimum grade of B- or HSCI 5140 with a minimum grade of B-

HSCI 5180. Phenotyping. (2 Hours)

Surveys the process for constructing heuristics to define a population of interest in observational research. Emphasizes the principles of phenotype curation across real-world data feeds and strategies to ensure robust, reproducible research.

Prerequisite(s): (HSCI 5130 with a minimum grade of B- or HSCI 5130 with a minimum grade of B-); (HSCI 5140 with a minimum grade of B- or HSCI 5140 with a minimum grade of B-)

HSCI 5190. Cohort Building. (2 Hours)

Examines approaches to defining cohorts in pharmacoepidemiology, emphasizing common analytical tools, knowledge objects, and assessing the appropriateness of clinical heuristics to answer a clinical study question.

HSCI 6110. Advanced Population Characterization. (2 Hours)

Introduces students to the design principles of population-level characterization studies at scale, emphasizing the use of common data models and shared analytical approaches to implement reproducible, repeatable research.

Prerequisite(s): HSCI 5150 with a minimum grade of B- or HSCI 5150 with a minimum grade of B- or HSCI 5180 with a minimum grade of B- or HSCI 5180 with a minimum grade of B-

HSCI 6120. Advanced Population Estimation. (3 Hours)

Introduces students to the design principles of causal inference studies (population-level effect estimation) at scale, emphasizing the use of common data models and shared analytical approaches to implement reproducible, repeatable research. Covers a framework for study diagnostics including empirical equipoise, covariate balance, negative control calibration, empirical null distribution, and power.

Prerequisite(s): HSCI 5150 with a minimum grade of B- or HSCI 5150 with a minimum grade of B-

HSCI 6130. Advanced Patient Prediction. (3 Hours)

Introduces students to the design principles of patient-level prediction studies at scale, emphasizing the use of common data models and shared analytical approaches to implement reproducible, repeatable research. Covers frameworks for evaluating internal and external validity of machine learning models constructed using real-world data.

Prerequisite(s): HSCI 5150 with a minimum grade of B- or HSCI 5150 with a minimum grade of B-

HSCI 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 6980. Real-World Evidence Capstone. (3 Hours)

Offers students an opportunity to complete a specialized research or applied capstone project in real-world data strategy and evidence generation as part of the master's degree. Designed to meet the specific learning and research interests of the student to prepare for a career in healthcare and life sciences. Learning experience is based on independently led activities that meet agreed-upon benchmarks with the faculty-mentor. Activities may include working with healthcare, life sciences, regulatory, and/or technology organizations.

Prerequisite(s): (HSCI 5151 with a minimum grade of B- or HSCI 5151 with a minimum grade of B-) or (HSCI 5180 with a minimum grade of B- or HSCI 5180 with a minimum grade of B-) or (HSCI 5190 with a minimum grade of B- or HSCI 5190 with a minimum grade of B-)

Health Science - CPS (HSC)

Courses

HSC 1200. Nutrition. (3 Hours)

Explores the fundamental role of nutrition in promoting health, wellness, and prevention of chronic disease. Topics include nutrients and nutritional needs across the life span; food safety and security; body weight regulation; and the genetic, social, and environmental influences on food choices and nutrition status.

Attribute(s): NUpath Natural/Designed World

HSC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 3300. Epidemiology. (3 Hours)

Introduces the principles, concepts, and methods of population-based epidemiology—the study of patterns and determinants of disease in different populations. Topics include the dynamic behavior of disease; measures of disease frequency and effect; uses of rates, proportions, and other statistics to describe the health of populations; epidemiologic study designs; and bias in investigating the extent of disease problems and the associations between risk factors and disease outcomes.

Prerequisite(s): MTH 2300 with a minimum grade of D- or MTH 2310 with a minimum grade of D- or MTH 3300 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

HSC 3320. Pharmacology. (3 Hours)

Offers the fundamentals of pharmacology to students entering the health professions. Topics include the general principles of drug action, drug distribution, and drug elimination. Focuses on principles of pharmacology and the major drug classifications in relation to the treatment of health problems. Emphasizes dose response, side effects/drug interactions, route of administration, and place in clinical therapy. Drugs are presented according to therapeutic or functional classification.

Prerequisite(s): CHM 1200 with a minimum grade of D- ; CHM 1201 with a minimum grade of D-

HSC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 4850. Project in Health Science. (3 Hours)

Offers students an opportunity to integrate knowledge gained in the classroom with real-world problems. Students initiate and design a capstone project in health science in consultation with faculty and working professionals.

Prerequisite(s): HSC 3300 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

HSC 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

HSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Health Science - Interdisciplinary (HLTH)

Courses

HLTH 1200. Basic Skills for the Healthcare Professional. (2 Hours)

Introduces health science students to the basic skills necessary to be successful in entry-level healthcare positions. These skills include: Basic Life Support, safe patient handling, vital signs, oxygen transport and safety, and EKG prep and placement. Also covers basic medical terminology, appropriate professional behaviors, and communication skills.

Corequisite(s): HLTH 1201

HLTH 1201. Lab for HLTH 1200. (1 Hour)

Accompanies HLTH 1200. Provides students with hands-on opportunities to learn skills in Basic Life Support, safe patient handling, determining vital signs, oxygen transport and safety, EKG prep and placement, and related clinical skills.

Corequisite(s): HLTH 1200

HLTH 1203. Basic Clinical Skills for the Healthcare Professional. (3 Hours)

Introduces undergraduate students to the basic knowledge and skills necessary to be successful in entry-level healthcare positions. Provides students with hands-on opportunities to learn skills in Basic Life Support, safe patient handling, determining vital signs, oxygen transport and safety, EKG prep and placement, and related clinical skills.

HLTH 1205. Wellness. (4 Hours)

Explores the concept of wellness and examines behaviors and lifestyle choices that lead to a high level of physical, emotional, and spiritual well-being. Topics include health risk, behavioral change, lifestyle analysis, the life cycle, and stress management through self-analysis.

HLTH 1250. Introduction to Health Professions. (3 Hours)

Uses a foundation in interprofessional education competencies to introduce students to careers in the health professions including medicine, nursing, rehab sciences, mental health/behavioral sciences, and other health professions. Discusses roles and responsibilities for each covered discipline as well as common values, ethics, and commitment to patient safety and confidentiality. Introduces fundamentals of the U.S. healthcare system, concepts in public health, health equity and access to care, legal issues in health, health industries and health entrepreneurship, and health-related technologies including artificial intelligence. Explores issues of burnout and introduces strategies for personal resistance and wellness. Engages students in goal setting and planning their professional journey.

HLTH 1717. Enriching Lives Through Behavior Change Interventions. (4 Hours)

Presents the skills required to work directly with learners receiving applied behavior analytic services. Explores the science of behavior and offers students an opportunity to practice assessing behavior, teaching new skills, and helping reduce behaviors that interfere with learners' own goals. Emphasizes compassionate care and inclusion of learners and their families as team members.

HLTH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLTH 2100. Interprofessional Ethics for Individual and Population Health. (4 Hours)

Provides case reviews and discussion related to basic theories, principles and contemporary issues of bioethics. Secondarily, this course is an interprofessional course that covers specific ethical guidelines for various health disciplines from nursing, pharmacy, health sciences, and others. Offers students an opportunity to develop systematic strategies and analytic frameworks for identifying and examining bioethical issues and for resolving bioethical dilemmas and problems. Students have an opportunity to apply their specific discipline's ethics code and work in multidisciplinary groups to apply ethical principles from different perspectives.

Attribute(s): NUpath Ethical Reasoning, NUpath Writing Intensive

HLTH 2183. Interdisciplinary Special Topics: Pop-up Course. (1,2 Hours)

Addresses timely trends, issues, and events as they unfold. Offers students an opportunity to learn about and respond to issues of the day in an immersive, interdisciplinary, short-course format. Content and instructors vary by offering. May be repeated five times for a maximum of eight semester hours.

HLTH 2200. Emergency Medical Technician Training. (6 Hours)

Offers students an opportunity to learn basic healthcare clinical skills and seeks to prepare students to function as emergency medical technicians (EMTs) at the basic life support level. EMTs are an essential component of prehospital emergency medical service (EMS) systems. This course seeks to establish a solid foundation in EMS, broadly including patient assessments, medical emergencies, trauma emergencies, relevant pharmacology, special populations, and EMS operations.

HLTH 2302. Alternative Medicine. (4 Hours)

Presents an objective assessment and discussion of alternative and complementary medical approaches used in the United States and their significant historical, cultural, and cross-cultural implications. The majority of alternative and complementary medical strategies were developed in a specific historical and cultural context. Some of the therapies have had an impact on human health for thousands of years. Others have become popular only recently. Many methods discussed are fused with different cultural practices, such as the concept of "vitalism," a force that modern science does not recognize but is an important attribute in certain cultural practices. Some methods have long and successful histories based upon sophisticated ancient medical theories, such as "Chi," found in Chinese medicine.

HLTH 2500. Entrepreneurship in Health Sciences. (4 Hours)

Explores in-depth the intersection between entrepreneurship and the health sciences field. Addresses unique opportunities and challenges of starting and managing businesses in the healthcare industry. Covers the fundamental principles of entrepreneurship and applies them specifically to the context of health sciences. Offers students an opportunity to obtain the tools to identify and evaluate innovative healthcare business ideas, develop sustainable business models, and navigate the complex healthcare landscape. Uses case studies to analyze approaches to identify opportunities, develop innovative solutions, and create sustainable businesses that have a positive impact on the health and well-being of individuals and communities.

HLTH 2550. Product Design, Development, and Innovation in Health Science. (4 Hours)

Introduces the process of product design, development, and innovation across the health sciences. Presents the tools and methods for creating new products that benefit health and well-being across the life span. Focuses on overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and minimal viable product development. Offers students an opportunity to understand regulatory processes for the FDA, medical devices, and digital therapeutics. Reviews go-to-market strategies and provides exposure to the full product development life cycle.

HLTH 2963. Topics. (1,2 Hours)

Offers undergraduate students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

HLTH 2973. Special Topics in Healthcare. (1-4 Hours)

Offers an intermediate-level study of contemporary issues in healthcare. Draws upon a variety of perspectives. Offers students an opportunity to expand their breadth of knowledge and to facilitate their understanding of various themes grounded in a particular area of healthcare. May be repeated once.

HLTH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLTH 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

HLTH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLTH 4800. Careers in Child and Adolescent Mental Health. (4 Hours)

Introduces a wide range of careers dedicated to supporting the mental health of children, adolescents, and their families and reducing health inequities. Explores the roles of different mental health professions. Discusses how psychological theories and research findings can be applied to address real-world challenges. Presents firsthand accounts of how professionals design and implement culturally sensitive strategies for prevention, intervention, and advocacy with vulnerable children and youth facing a range of developmental and mental health issues.

HLTH 4981. Research—Global. (4 Hours)

Offers an opportunity to conduct research in global locations under faculty supervision.

HLTH 4982. Directed Study—Global. (4 Hours)

Offers independent work in global locations under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated once.

HLTH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLTH 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

HLTH 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HLTH 4994. Internship. (1-4 Hours)

Provides students with an opportunity for research internship work. May be repeated up to four times.

HLTH 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

HLTH 5002. Mindfulness: Theory and Practice. (3 Hours)

Studies key aspects of theory and practical principles of mindfulness practice. Mindfulness is a particular way of paying attention to experiences that has been scientifically researched and found to decrease habitual and destructive cycles of thought and emotion. This course is highly experiential and daily homework practice consists of at least 20 minutes of mindfulness practice. Instructions for the various practices are provided throughout the course. Each class typically includes a didactic portion, a mindfulness practice, and a group discussion. The benefits of mindfulness practice include reduced stress, improved attention, reduced emotional reactivity, and greater mind-body awareness. Offers students an opportunity to develop practical skills of relational mindfulness in interactions with others and to cultivate positive emotions.

HLTH 5120. Statistics for Health Science. (3 Hours)

Focuses on applying formal reasoning to understand the underlying principles of statistics; how to select and conduct statistical tests; and how to interpret and use the results of data analysis in relation to research questions and research hypotheses.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

HLTH 5200. Magic and Healthcare: A Scientific Exploration. (3 Hours)

Explores the arts and humanities to examine complex concepts in nursing and medicine. Surveys how magic and magic theory inform an array of neuroscientific concepts, cognitive bias, expectation violation, and surprise, with application to clinical practice. Critically evaluates medical information using some of the principles of magic, illusion, and mentalism. Explores the principles of blind spots, misdirection, attention, memory, and influence from the theoretical construct of magic, and applies these principles to concepts in nursing and other medical specialties.

HLTH 5280. The (in)Visibility of (dis)Ability in Society. (3,4 Hours)

Addresses the issues of disability relative to culture, public policy, rights, and advocacy. Focuses class discussion on the experiences of people with disabilities living in our current society as well as from a historical perspective. Explores the following topics: who is disabled, social attitudes toward people with disabilities, and images and stigma in the media. Also covers the language of disability, disability culture, and the forgotten minority. Affords students an opportunity to gain a broad understanding of the complex and dynamic issues and themes concerning people with disabilities.

Attribute(s): NUpath Difference/Diversity

HLTH 5301. Clarity and Connection: Pronunciation Skills in English. (3 Hours)

Explores how diversity in language backgrounds, dialects, and accents can both enrich community and sometimes present challenges in specific situations. Provides an opportunity for high intermediate or advanced non-native English speakers or speakers of non-North American dialects of English to learn general strategies for improving comprehensibility across English dialects, as well as some features specific to Mainstream North American English (MAE). Offers opportunities to engage in written and spoken exercises, speaking with partners and in front of a larger group, and preparing for presentations with a focus on pronunciation.

HLTH 5310. Introduction to Transgender Perspectives in Healthcare. (3 Hours)

Introduces cultural responsiveness in healthcare fields, specifically related to transgender and gender nonconforming populations. Offers students an opportunity to gain comfort in engaging with this population and develop actionable steps toward more reflective and accountable practices. Examines implicit bias and its impact on interactions in healthcare settings. Explores the ethical requirements and considerations for the provision of services to TGNC populations across all medical and clinical settings.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HLTH 5410. Introduction to Statistics in Health and Behavioral Science. (3 Hours)

Introduces basic and intermediate concepts in research methods and quantitative analysis in health and behavioral sciences. Explores foundational considerations in research methodology and acquisition of knowledge in statistical techniques, ranging from descriptive statistics to probability and inference. Offers students an opportunity to state and test hypotheses guiding them through the analysis and interpretation of collected information and to build experience with conducting statistical analysis using common spreadsheet software (e.g., Excel).

HLTH 5450. Healthcare Research. (4 Hours)

Provides an overview of the research process and its application in clinical arenas. Emphasizes the role of the health professional as a consumer of research, with concern for the ethical management and treatment of patients and their families. Elements of research design and their implications in clinical settings provide the framework for the analysis of research and the development of a research proposal. Also emphasizes the use of research findings for evidence-based practice. Encourages interdisciplinary projects.

Prerequisite(s): (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C) or graduate program admission

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Natural/Designed World, NUpath Writing Intensive

HLTH 5600. Introduction to Patient Safety. (3 Hours)

Introduces patient safety science, which is a growing specialty in healthcare, driven by research and reporting efforts that demonstrate unacceptable levels of patient harm in care delivery. Provides a comprehensive overview of the tools and knowledge necessary for healthcare clinicians, administrators, and leaders to create safer healthcare systems. Explores the major themes of patient safety science and the concepts utilized in designing safer healthcare systems and mechanisms for healthcare delivery. Focuses on the history of patient safety, political and regulatory drivers and their impact on patient safety, the importance of robust data capture in recognizing risks, and the inherent challenges of informatics and technology for patient safety. Applying these concepts guides design of safer healthcare.

HLTH 5610. Patient Safety Science. (3 Hours)

Examines healthcare as a high-risk industry, where complex healthcare systems attempt to meet the complex needs of diverse patients. Introduces the many drivers that influence the design and evolution of healthcare systems, particularly patient safety, which until recently was not typically recognized as one of these design drivers. Expands on the concept of complex systems theory and introduces the concept of high reliability organizations (HROs) and how they approach safety. Examines engineering strategies from HROs by studying how healthcare systems should adapt and retrofit to create safer systems of care delivery. Compares the challenges of improving patient safety at the system vs. the microsystem level. Examines diverse error-reducing strategies.

Prerequisite(s): HLTH 5600 (may be taken concurrently) with a minimum grade of B or HLTH 5600 (may be taken concurrently) with a minimum grade of B

HLTH 5620. Leadership, Patient Safety, and Clinician Wellness. (3 Hours)

Examines patient-safety-focused leadership that recognizes the importance of partnering with key healthcare proponents to advance the safe delivery of care. Discusses the role of leaders in advancing a culture of safety and creating a just culture approach to adverse event reviews. Identifies the importance of psychological safety in adverse event reporting and analysis. Focuses on leadership roles in promoting robust workforce wellness initiatives to prevent clinician burnout.

Prerequisite(s): HLTH 5600 (may be taken concurrently) with a minimum grade of B or HLTH 5600 (may be taken concurrently) with a minimum grade of B

HLTH 5630. Quality Improvement in Patient Safety. (3 Hours)

Introduces key components of patient safety science that promote identification of patient safety risks and effectively foster changes to reduce those risks. Examines the processes and tools employed in quality improvement efforts and recognizes the importance of risk assessment, data collection, and measurement in healthcare settings. Identifies quality improvement models and compares their effectiveness in promoting safer care delivery. Concludes with a discussion of the advantages and disadvantages of incentivizing quality improvement efforts through reimbursement strategies that utilize quality incentives.

Prerequisite(s): HLTH 5600 (may be taken concurrently) with a minimum grade of B or HLTH 5600 (may be taken concurrently) with a minimum grade of B

HLTH 5700. Social Determinants of Health. (3 Hours)

Introduces social and structural conditions as key contributors to people's physical and mental health. Describes unjust and avoidable socioeconomic conditions considered to be the main contributors to health inequities. Meets a growing demand for health professionals to have fundamental knowledge of the social determinants of health, including social isolation and social support; structural/ institutional racism; income inequality; and social and economic policies. Provides an opportunity to develop awareness of the role of social determinants of health in population health; knowledge of the pathways through which they impact health; awareness of the specific ways the health of different populations and demographic groups is impacted; and enhanced evaluation, diagnosis, and communication with patient and clients.

Attribute(s): NUpath Societies/Institutions

HLTH 5800. AI Across the Health Sciences. (4 Hours)

Presents foundational information about artificial intelligence and its applications in healthcare, public health, pharmacology, and pharmaceutical sciences. Develops AI literacies for entry-level clinical practice, public health, and health-related careers. Provides an overview of the history of AI, most common types of AI approaches, and state-of-the-art of AI in health-related applications. Distinguishes realities from hype around AI's capabilities and limitations and reviews ethical and regulatory considerations. Offers students experiential opportunities to build a conceptual AI solution to a real-world problem in the health space. Technical background in AI/computer science not required.

HLTH 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

HLTH 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned' and incorporate suggestions from this review to improve and further develop their career development and professional plan.

HLTH 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner.

HLTH 5973. Special Topics in Healthcare. (1-4 Hours)

Offers an advanced-level study of contemporary issues in healthcare. Draws upon a variety of perspectives. Offers students an opportunity to expand their breadth of knowledge and to facilitate their understanding of various themes grounded in a particular area of healthcare. May be repeated up to five times for up to 6 total credits.

HLTH 6961. Internship. (1-4 Hours)

Offers students an opportunity for internship work. May be repeated up to three times.

HLTH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLTH 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated seven times.

HLTH 7999. Extended Field Experience. (0 Hours)

Offers supervised field experience.

Hebrew (HBRW)

Courses

HBRW 1101. Elementary Hebrew 1. (4 Hours)

Designed for students with little or no prior knowledge of Hebrew. Presents a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Uses practical vocabulary drawn from realistic situations, and aims at good pronunciation and ease in response.

HBRW 1102. Elementary Hebrew 2. (4 Hours)

Continues HBRW 1101. Includes continued focus on oral expression, listening comprehension, and elementary reading and writing. Expands functional and practical vocabulary base drawn from realistic situations and focuses on grammatical accuracy. Continues to focus on good pronunciation and ease of response.

Prerequisite(s): HBRW 1101 with a minimum grade of C- or HBRW 1301 with a minimum grade of C-

HBRW 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 2101. Intermediate Hebrew 1. (4 Hours)

Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Hebrew materials.

Prerequisite(s): HBRW 1102 with a minimum grade of C- or HBRW 1302 with a minimum grade of C-

HBRW 2102. Intermediate Hebrew 2. (4 Hours)

Builds on HBRW 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Hebrew materials.

Prerequisite(s): (HBRW 2101 with a minimum grade of C- or HBRW 2301 with a minimum grade of C-)

HBRW 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

History (HIST)

Courses

HIST 1000. History at Northeastern. (1 Hour)

Intended for first-year students in the College of Social Sciences and Humanities. Seeks to introduce first-year students to the liberal arts in general, to familiarize them with their history major, to provide grounding in the culture and values of the university community, and to help them develop interpersonal skills.

HIST 1100. Law and History. (4 Hours)

Introduces the role of law in shaping human society. Explores how laws have evolved over the past two millennia in different contexts under the influence of different religious systems and political, economic, and social theories. Studies key legal texts and analyzes legal traditions in several regions of the world. Considers how laws have affected the everyday lives of subjects, slaves, and citizens.

Attribute(s): NUpath Societies/Institutions

HIST 1105. Introduction to Trans Studies. (4 Hours)

Introduces students to the interdisciplinary field of transgender studies by focusing on the emergence of the field, key concepts, and pivotal debates.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 1120. Public History, Public Memory. (4 Hours)

Explores the politics surrounding the creation and consumption of history outside the classroom. Draws on contemporary debates over memorials, museum displays, television and film, and other popular sources of historical information to answer the questions: How does memory become history? How, where, and why do people encounter and interpret history outside of the classroom? Why are certain versions of the past so controversial? Through readings, discussion, field trips, and assignments, offers students an opportunity to gain a deeper understanding of public history's challenges and opportunities and to develop more informed opinions about its philosophical, ethical, and practical aspects.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 1130. Introduction to the History of the United States. (4 Hours)

Engages with the major issues in U.S. history. Topics include the interaction of native populations with European settlers, the American Revolution and the Constitution, slavery, the Civil War, industrialization and migration, the growth of government and rise of the welfare state, media and mass culture, struggles for civil rights and liberation, and America's role in the world from independence to the Iraq wars.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 1140. Introduction to African-American History. (4 Hours)

Surveys the development of African Americans in the United States from their African background to the present. Covers medieval and early modern societies in West and Central Africa; the transatlantic slave trade; the evolution of slavery from the colonial period through the Civil War; free blacks; Reconstruction; migration; civil rights; and black nationalism. Considers gender relations throughout the entire period and emphasizes how an historical perspective helps to inform discussions of contemporary issues.

HIST 1150. East Asian Studies. (4 Hours)

Seeks to provide an understanding of the constituent characteristics that originally linked East Asia as a region and the nature of the transformations that have occurred in the region over the last two thousand years. Concentrates on China and Japan, and addresses Korea and Vietnam where possible. Also seeks to provide students with effective interdisciplinary analytical skills as well as historical, ethical, cultural diversity, and aesthetic perspectives. ASNS 1150 and HIST 1150 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 1170. Europe: Empires, Revolutions, Wars, and Their Aftermath. (4 Hours)

Examines how empires, wars, and revolutions have influenced the development of the modern world, focusing on Europe and Europe's connections with the non-European world. Explores how wars and revolutions led to the emergence of modern concepts of sovereignty, the state, and citizenship and how global competition between states led to the emergence of empires. Traces the promise of allegedly liberating ideologies and the political and economic revolutions they fostered, repeated wars and their aftermaths, and the challenges of recent world developments viewed from the perspective of history. Explores how human diversity and difference have shaped modern societies through history and how human difference and multiculturalism have both fostered and posed challenges to civic sustainability. Interrogates the meanings of "modernity," democracy and totalitarianism, capitalism and socialism, and globalization.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 1185. Introduction to Middle Eastern History. (4 Hours)

Relies on historical and literary sources, as well as such other cultural artifacts as architecture and photography, and focuses on interaction and changing relations and perceptions between Europe and the Middle East. Surveys the major political and economic events that have linked the trajectory of both civilizations, as well as broad patterns of human activity, such as migrations, conversions, and, cultural exchange. Emphasizes the commonality of encounters, and analyzes the construction of an "other" and its enduring legacy in modern times.

HIST 1187. Introduction to Latin American History. (4 Hours)

Surveys major themes in Latin American history from the arrival of the first human inhabitants until the present through a diversity of primary and secondary sources. Examines the social, cultural, political, and economic transformations that shaped Latin America during this period. Emphasizes how concepts of race, class, gender, and sexuality informed these changes and the people's experiences of them. Topics include migration, colonialism and postcolonialism, war and revolution, slavery and abolition, nationalism and nation building, democracy and despotism, urbanization, modernization, religion, imperialism and underdevelopment, human rights, drug policy and international relations, labor, the arts, popular culture, and the environment.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 1200. Historical Research and Writing. (1 Hour)

Offered in conjunction with HIST 1201. Introduces incoming history freshmen to the history major in the context of other disciplines within the college and University. Offers students an opportunity to learn and to practice methods and conventions of research and historical writing.

Corequisite(s): HIST 1201

HIST 1201. First-Year Seminar. (4 Hours)

Provides an introduction to historical methods, research, writing, and argument in which all students produce a substantial research project that passes through at least two revisions, and that is presented publicly to other members of the colloquium.

Prerequisite(s): ENGL 1111 (may be taken concurrently) with a minimum grade of C or ENGL 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Corequisite(s): HIST 1200

Attribute(s): NUpath Writing Intensive

HIST 1206. Drug Trade and Drug War: History, Security, Culture. (4 Hours)

Analyzes the role of drugs in world history. From the early use of stimulants such as coca and sugar to the "war on drugs" and narco-terrorism, the course examines drugs as commodities in the world economy. Focuses primarily on opiates, stimulants, and hallucinogens from the nineteenth century to the present, considering how changing social and cultural mores led different drugs to be coded as licit and illicit. Topics include traditional uses, early medical use, trade networks, prohibition, black market, and drug cultures, as well as the role of drugs in the histories of industrialization, imperialism, and cold war geopolitics. Sources include historical scholarship, declassified intelligence reports, documentaries, novels, movies, songs, and art.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 1215. Origins of Today: Historical Roots of Contemporary Issues. (4 Hours)

Focuses on the historical roots of four pressing contemporary issues with global implications. Our world has grown increasingly complex and interconnected, and the planet's diverse peoples are facing common problems that have tremendous impact on the immediate future. They are (1) globalization, from its origins in the sixteenth century to the present; (2) the potential for global pandemics to alter the course of history, from bubonic plague in the fifth century to H1N1; (3) racial inequality, from religious interpretations in the early modern period to science in the modern era; and (4) gender inequality, from the agricultural revolution forward. For each issue, studies cases and locations spread across the world, examines the links between past and present, and attempts to identify ways forward.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 1218. Pirates, Planters, and Patriots: Making the Americas, 1492–1804. (4 Hours)

Seeks to challenge students to understand more than the outlines of American history—Pilgrims, patriots, plantations—in the broader contexts of events that unfolded in and around the Atlantic Ocean in the Americas, Europe, and Africa. Covers Columbus's first landing in the Caribbean to the Haitian declaration of independence in 1804 and includes the Atlantic trade, piracy, slavery and other forms of labor, cultural and ecological exchange, and independence and emancipation.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 1219. History of Global Pandemics. (4 Hours)

Explores epidemics and pandemics as a feature of human life for millennia. Charts the history of major pandemics, such as bubonic plague, smallpox, cholera, or the H1N1 influenza of 1918–19. Focuses on the causes and events of each pandemic and also how they shaped the future. Students read multiple primary sources documenting individuals' experience of each pandemic and produce a research project on a pandemic of their choice.

Attribute(s): NUpath Interpreting Culture

HIST 1225. Gender, Race, and Medicine. (4 Hours)

Examines the basic tenets of "scientific objectivity" and foundational scientific ideas about race, sex, and gender and what these have meant for marginalized groups in society, particularly when they seek medical care. Introduces feminist science theories and contemporary as well as historical examples to trace the evolution of "scientific truth" and its impact on the U.S. cultural landscape. Offers students the opportunity to question assumptions about science and view the scientific process as a site for critical analysis.

Attribute(s): NUpath Difference/Diversity

HIST 1232. History of Boston. (4 Hours)

Explores the history of Boston from colonial times to the present, with attention to the topographical growth and the ethnic composition of the city. Includes visits to historical sites, museums, and archives in the area.

Attribute(s): NUpath Interpreting Culture

HIST 1246. World War II in the Pacific. (4 Hours)

Studies World War II, the most devastating war in history, which began in Asia and had a great long-term impact there. Using historical and literary texts, examines the causes, decisive battles, and lingering significance of the conflict on both sides of the Pacific.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 1252. Japanese Literature and Culture. (4 Hours)

Explores major works of Japanese fiction and poetry in historical and cultural context. All readings are in English translation.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 1253. History of Vietnam Wars. (4 Hours)

Presents a history of military conflicts on the Indochinese Peninsula from its precolonial settlement; internal developments and divisions; its stormy relationship with China; French colonization and the resistance to it; the rise of the Vietminh during World War II; the postwar struggle against the French; the impact of the cold war; and the involvement of the United States after 1950 in the creation of two Vietnams and in the conflict that engulfed it and its neighbors, Laos and Cambodia, in the decades that followed. Emphasizes the roles of nationalism and communism in the 20th-century conflicts and the motives for U.S. intervention. Films revealing the reactions of Americans to the escalating conflict are shown and evaluated.

HIST 1261. Global Caribbean. (4 Hours)

Focuses on the culture and history of Caribbean societies in global perspective. Explores Caribbean creativity and resilience across English, French, and Spanish linguistic and political spheres with examples from literature, art, music, food, technology, and performance. Considers the global reach of Caribbean diasporas, highlighting the long local histories of Caribbean communities in Boston. Follows four key themes—indigeneity, blackness, diaspora, and creolization—to understand this unique point of entry for the study of race, gender, and sexuality in the Americas.

HIST 1270. Ancient Greece. (4 Hours)

Studies the Greek achievement from proto-Indo-European migrations through the Minoan and Mycenaean bronze age, to the evolution of Homeric and Hellenic societies in the iron age, to the rise of the city-states and the age of Alexander. Topics include the coexistence of the rational and the irrational; the paradox of ethical philosophies and exclusionary political systems; the tensions between particularism and cultural unity; and gender ideology and what has been termed “the reign of the phallus.”

HIST 1272. Europe in the Middle Ages, 500–1500. (4 Hours)

Examines the history of medieval Europe in a period of tremendous fluidity, migration, and flux. Studies the experiences of men and women in European societies before clearly defined nation-states had emerged. Topics include forms of political and cultural integration; the contacts between Europeans and non-Europeans in the Mediterranean and beyond; and the place of religion, art, and ideology, with attention to how Europeans' experiences varied according to their gender, class, and race.

HIST 1286. History of the Soviet Union. (4 Hours)

Examines Russia and the Soviet Union in the 20th century focusing on empires and revolutions: the Russian empire's dissolution, the Russian Revolution and civil war, building the Soviet Union, World War II, the cold war and Soviet expansion in Eastern Europe and Asia, the breakup of the Soviet Union and its newly independent states, and Russian efforts to maintain influence in the post-Soviet space. Assesses the construction of Soviet identity by interpreting Soviet culture in the form of film, literature, art, and music. Evaluates explanatory theories of revolution and empire and the evolution of Marxism in the context of revolution and state building.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 1290. Modern Middle East. (4 Hours)

Examines the political, social, and cultural history of the Arab countries of the modern Middle East, as well as Iran, Israel, and Turkey. Covers the period from the early 19th century through the late 20th century. Offers students an opportunity to obtain a basis for understanding the politics, social movements, and cultural expressions of the region in the late 20th century. Major themes include imperialism and colonialism; the creation and transformation of the modern states and their political systems since World War I; the transformation of Middle Eastern societies during this same period under the impact of colonialism, independence, regional wars, and oil; women's and labor movements; and revolutions. Uses a variety of sources including memoirs, photography, literature, and political speeches.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 1294. History of the Jews in the Modern World. (4 Hours)

Surveys the history of the Jews in the modern world, with an emphasis on global cultural exchange. Examines Jewish interaction with non-Jewish society from Europe to North Africa, the Middle East, the Soviet Union, Israel, and the United States; and explores this relationship's creative and destructive consequences. Focuses on how Jewish society, culture, religious practice, and political definition changed in relation to a variety of processes now associated with modernity, such as urbanization, industrialization, state centralization, and the development of nationalism and secularism.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 1300. Introduction to Health and Humanities. (4 Hours)

Explores the ways in which narrative and other forms of creative and cultural expression help shape conceptions of illness, healing, and the body. Offers students opportunities to consider the health and humanities through a variety of interdisciplinary perspectives and genres. Includes small-group and classwide experiential field outings. Culminates in the composition of reflective responses, a medical ethics/medical journalism piece, and a team-based experiential e-portfolio project. Course objectives include differentiating between healing and curing; knowing how to elicit, listen to, and analyze stories to determine how participants in the healthcare system experience illness and healing; being able to articulate the ways health is a cultural construct; and using this analysis to identify an empathetic response as a future professional.

Attribute(s): NUpath Interpreting Culture

HIST 1357. History of Information in the United States: Media, Technology, Law. (4 Hours)

Explores the history of information in the United States—how and why conceptions, technologies, and politics of information have evolved, as well as the various ways Americans have confronted information-related crises at various moments in time. Offers students an opportunity to develop more sophisticated understandings of historical and ongoing controversies over the history, politics, technologies, and ethics of information, as well as to be able to bring valuable historical context as they evaluate and address the challenges posed by today's rapidly shifting information ecosystem. In an age of clickbait and media bots, deepfakes and data surveillance, information is a fraught category—resulting in weakened trust in expertise, institutions, and democracy—but Americans have long struggled with the ethics and politics of information.

Attribute(s): NUpath Societies/Institutions

HIST 1389. History of Espionage 1: Antiquity to World War II. (4 Hours)

Explores the history of espionage through a series of case studies from ancient Rome, Greece, and China; the Reformation; the Age of Discovery; the French Revolution; the American Civil War; World War I and the Russian Revolution; and World War II. Commonly referred to as the world's "second oldest profession," espionage is an intrinsic part of the relationships between communities, institutions, and states. Draws from a wide variety of published and unpublished primary and secondary sources, supplemented by modern theoretical and social science perspectives, literature, and films.

Attribute(s): NUpath Societies/Institutions

HIST 1390. History of Espionage 2: Cold War Spies. (4 Hours)

Explores the history of espionage during the Cold War era (1945–1991) through a series of case studies. Draws from a wide variety of published and unpublished primary and secondary sources, supplemented by modern theoretical and social science perspectives, literature, and films. Students work individually and in teams to explore the history of covert operations, including the following subthemes: the origins of the Cold War in World War II, the postwar battle for German scientists, containment and rollback, Venona and code breaking, nuclear spies, defectors, proxy wars, insurgencies and counterinsurgencies, terrorism, and technology.

Attribute(s): NUpath Societies/Institutions

HIST 1500. Modern Chinese History and Culture. (4 Hours)

Introduces modern Chinese history and culture through literary works, films, and historical texts. Examines political, social, and cultural changes in China since 1800: the decline of empire; the New Culture Movement of the 1920s; the rise of nationalism and rural revolution; the changing roles of women; the Cultural Revolution of the 1960s; and China's cinematic, literary, and economic engagement with the world since 1978. Taught in English and open to all undergraduates. CLTR 1500 and HIST 1500 are cross-listed.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 2000. Native American Resistance: Past and Present. (4 Hours)

Introduces the Indigenous peoples of North America and the academic field of Native American and Indigenous studies. Combines public history and public art, field trips, and original research to focus on the ongoing resistance to colonization and erasure and the resilience of Indian nations in New England and beyond. Covers particular themes, including the present-day impact of historical treaties and policies including land allotment, relocation, termination, boarding schools, and natural resource extraction.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2011. Capitalism and Business: A Global History. (4 Hours)

Analyzes the emergence of capitalism as a global system, from the emergence of early modern market societies to today's globalization and its discontents. Considers how technological and geopolitical developments changed the economic lives of people around the world and how those people responded. Examines historical debates about ethics of redistribution and economic justice. Topics include empire and slavery, industrialization and deindustrialization, moral economy and market societies, and finance and speculation, as well as the histories of money, commodities, and consumer cultures. Sources include historical scholarship, archive documents, economic philosophy, and cultural production such as novels, music, and art.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 2025. Latin American History through Film. (4 Hours)

Uses films to analyze major questions in Latin American history. Topics include conquest, slavery, and revolution. The films are works of fiction, but most of them relate to real events. Course readings include "traditional" primary sources about the events (such as letters and espionage reports). Studies the history represented in the films and the assumptions and ideological perspectives and how these are conveyed through narrative and visual techniques. More broadly, considers how history is presented and represented by different sources. Offers students an opportunity to obtain a deeper appreciation for the complexity of Latin America.

Attribute(s): NUpath Interpreting Culture

HIST 2101. Law and Religion in Israel. (4 Hours)

Examines how religious diversity features in Israeli life, society, and laws. Israel maintains a unique form of legal pluralism in regulating its official religious communities and their courts. Considers how Israeli society, its religious and civil courts, and its government navigate the challenges that Israel faces as a self-defined "Jewish and democratic state" with a legal commitment to the religious autonomy of its officially recognized religious communities. Explores the complex interplay between religion and law in the daily life of Israel's citizens.

HIST 2211. The World Since 1945. (4 Hours)

Examines the political, economic, social, and cultural relationship between the developed and developing world since the end of World War II. Topics include the Cold War, independence and national movements in developing countries, the globalization of the world economy, scientific and technological innovations, wealth and poverty, the eradication of some diseases and the spread of others, the fall of the Soviet Union, Middle East turmoil, and the enduring conflict between Israel and Palestine.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 2217. The Global Far-Right since 1945: Politics, Culture, Violence. (4 Hours)

Explores the emergence of far-right activism globally since the end of World War II. Emphasizes how radical far-right ideology developed and shifted over the course of the last 75 years by focusing on how it globalized through written culture, music, and the internet. Examines a number of case studies in which far-right cultures developed and then spread, which can include South Africa, the United States, the United Kingdom, and Russia, as well as related movements such as radical Hindu nationalism and Hindutva. Explores each case study in terms of culture, politics, and ideologies of violence.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2220. History of Technology. (4 Hours)

Offers an interdisciplinary survey of the global history of science and technology. Explores how scientific and technical knowledge, processes, and innovations developed and circulated. Examines how science and technology both shaped and responded to society, culture, ethics, and thought.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 2233. The History of Medicine in North America. (4 Hours)

Surveys the history of medicine in what is now the United States between the arrival of European explorers in the 16th century and the end of the Second World War. Introduces exemplary moments in the history of medicine as it is practiced today and examines how these histories connect to the experience of the dispossessed, the enslaved, and the economically and culturally marginalized in American history. Encourages students to consider how the history of medicine has been written both by historians and practitioners. Explores the history of medicine both as a series of events, places, and people and as a method for opening up American history more broadly.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2280. Hitler, Germany, and the Holocaust. (4 Hours)

Studies historical developments from Germany's defeat in World War I to the end of World War II. Topics include the failure of Weimar democracy; Weimar culture; the rise to power of Hitler and National Socialism; Nazi culture and racial wars against alleged "degenerates"; the roles of party leaders, business and cultural elites, and ordinary Germans in supporting and legitimizing the Nazi dictatorship.

Attribute(s): NUpath Societies/Institutions

HIST 2282. The Holocaust and Comparative Genocide. (4 Hours)

Examines the origins of the Holocaust, perpetrators and victims, and changing efforts to come to terms with this genocide. The Holocaust, the murder of six million Jews by Germans in Nazi-occupied Europe during World War II, is one of the crucial events of modern history. Investigates the uniqueness of the Holocaust relative to other acts of ethnic cleansing or genocide, including mass death in the New World and mass murder in Armenia, Bosnia, and Rwanda.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

HIST 2285. America and the Holocaust. (4 Hours)

Examines the American response to the Holocaust, in terms of both contemporaneous knowledge and actions and the lasting impact on policy and culture. Starts with early twentieth-century events, such as the Armenian genocide, that shaped later attitudes. Explores the prewar period, particularly U.S. immigration and isolationist policies. Assesses Americans' knowledge of European events as the extermination campaign unfolded and fights ensued over rescue possibilities. Examines changing depictions of the Holocaust that emerged in the postwar period as a result of critical events such as the Eichmann trial and popular television and film portrayals. Finally, considers how perceptions of the Holocaust have shaped subsequent U.S. responses to genocide. HIST 2285, JRNL 2285, and JWSS 2285 are cross-listed.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

HIST 2299. Uses and Abuses of History: Historical Reasoning in U.S. Global and Domestic Policy. (4 Hours)

Studies how historical information influenced decision making in the United States during four policymaking episodes of the post-World War II era: the confrontation with the Soviet Union during the Cold War; the expansion of the welfare state during the 1960s; the war in Vietnam; and the Reagan "revolution." Focuses on decisions made by policymakers as these four episodes evolved. Analyzes why decision makers did what they did; what extent they were guided by their understanding of history; how accurate their historical information was; and how usefully they applied their historical understanding to the situation at hand.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 2301. The History Seminar. (4 Hours)

Introduces history majors to advanced techniques of historical practice in research and writing. Offers students an opportunity to conduct original research and write an original research paper. Seminar themes vary; students should check with the Department of History for a list of each year's seminar offerings. May be repeated without limit.

Prerequisite(s): HIST 1201 with a minimum grade of D-

Corequisite(s): HIST 2302

HIST 2302. Historical Writing. (1 Hour)

Covers learning and practicing methods and conventions of historical writing for publication. Adjuncted to a Seminar in History, which fulfills the Advanced Writing in the Disciplines requirement.

Prerequisite(s): HIST 1201 with a minimum grade of D-

Corequisite(s): HIST 2301

HIST 2303. Gender and Reproductive Justice. (4 Hours)

Introduces the social, legal, and economic barriers to accessing reproductive healthcare domestically and internationally. Draws on various theoretical and analytic tools including critical race theory, critical legal theory, sociology of science, human rights, feminist theory, and a range of public health methods. Access to reproductive health services, including abortion, is one of the most contested political, social, cultural, and religious issues today. Covers domestic, regional, and international legal and regulatory frameworks on sexual reproductive health. HIST 2303, SOCL 2303, and WMNS 2303 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 2308. Law, Justice, and Society in Modern China. (4 Hours)

Offers an overview of the historical development and function of law in Chinese society from the late imperial era to today and in comparison with other bodies of jurisprudence. Reading a wide range of scholarly articles and monographs, the course looks at "law" beyond jurisprudence and legal codes to examine its changing relationship with social customs, political institutions, religious traditions, popular culture, family and gender relations, and economic exchanges.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

HIST 2311. Colonialism/Imperialism. (4 Hours)

Examines the military, economic, political, and cultural expansion of world powers since the fifteenth century, and the ways in which colonized peoples were ruled. Why did colonialist countries feel the need to conquer and dominate, how did they do it, and why did they retreat on some fronts? How did people resist and cooperate with colonialism? How did colonialism affect national and cultural identities? Colonialism is examined as a global phenomenon and from a comparative perspective that looks at particular case studies. Also examines decolonization in the twentieth century.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 2318. New England Stories: Storytelling and the African American Experience. (4 Hours)

Delves into the fascinating stories of African Americans who have called New England home, from the seventeenth century up to the present. Discusses themes such as freedom and slavery, migration, and civil rights. Introduces an interdisciplinary framework for understanding Black identity formation, activism, and cultural as well as intellectual traditions amid the long struggle for justice.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2325. African-American Women. (4 Hours)

Examines themes and topics in the history of African-American women using an interdisciplinary approach. Includes women's lives in precolonial Africa, their role in the transatlantic slave trade, women and American slavery, community and institution building after emancipation, black women and labor, stereotypes of black women, black women and civil rights, and black women today.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

HIST 2330. Colonial and Revolutionary America. (4 Hours)

Covers the discovery and exploration of the New World, the settlement of the English, French, Dutch, Swedish, Spanish, and Russian colonies on the North American mainland, their development to 1763, the origins of their clashes with England, and the American Revolution.

HIST 2337. African American History Before 1900. (4 Hours)

Traces the presence of African-descended people in North America. Emphasizes the historical and cultural links between Africa and North America that have shaped the Black experience in the United States. Explores and analyzes the institution of slavery, the role of free Black communities, the Civil War and emancipation, and Black leadership and protest during the Reconstruction era. Introduces students to the historian's craft, theoretical debates concerning race and gender, and the persistence of the past in the present.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2351. Modern Japan. (4 Hours)

Examines state formation, economic growth, imperialism and colonialism, war and defeat, and contemporary culture.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 2360. History of Capitalism in East Asia. (4 Hours)

Traces capitalism's transformation of economic life in East Asia from the early modern era to the contemporary world. Explores changes in the human participation of production, exchange, and consumption. Reading a wide range of scholarly articles and monographs, the course examines key topics, including the great divergence debate, commodification of labor, consumer cultures, birth of industrialization, resilience of family enterprises, gender and the economy, and the role of the developmental state.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 2370. Renaissance to Enlightenment. (4 Hours)

Covers the social, economic, political, and cultural transformations of Europe from the Renaissance to the French Revolution. Traces the rebirth of Catholic Europe from 1300; the Reformation; the religious wars; struggles over religious and scientific beliefs; advances in technology, science, and warfare; overseas expansion; the scientific revolution; and the Enlightenment.

HIST 2373. Gender and Sexuality in World History. (4 Hours)

Introduces key concepts in the fields of gender and identity studies as they apply to world history since about 1800. Offers students an opportunity to understand the critical significance of gender, sex, sexuality, and identity to world events and how these contentious subjects influence the contemporary world. Surveys a series of major movements in geopolitics, labor, economics, culture, and society in order to analyze how individual and group identities, as well as mass assumptions about behavior and performance, have shaped these events. Gender, sex, and sexuality are integral to class discussions of work, welfare, art, culture, violence, war, and activism. HIST 2373 and WMNS 2373 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2375. The Tudors, the Stuarts, and the Birth of Modern Britain. (4 Hours)

Examines the history of early modern England as well as Ireland, Wales, and Scotland. Follows the development of England from a small backwater to one of the most powerful European nations by the end of the seventeenth century. Analyzes the constantly shifting relationships between the various cultural identities within Britain. Concentrates on British history not only from the perspective of the elites but also the ordinary people whose names have often been lost to history. Key themes include the growth of the British Empire, issues of gender, the interactions between England and the Celtic fringes, and participation in the political franchise.

HIST 2376. Britain and the British Empire. (4 Hours)

Traces the rise of Britain as a major colonial power and its transformation after the end of empire. Explores the interrelationships between metropole and colonies through sustained attention to critical race, feminist, and socioeconomic frameworks. Units include colonial violence, settler colonialism, anticolonial resistance, decolonization, multicultural Britain in the postcolonial era, and relations with the European Union.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 2390. Africa and the World in Early Times. (4 Hours)

Examines the place of Africa in the world from 1000 C.E. to the mid-19th century. Investigates the histories of ancient Egypt, the savannah and forest regions of West Africa, coastal and interior East Africa, and southern Africa. Explores the rise of medieval city-states and empires, the activities of the Atlantic slave trade and the trans-Saharan and Indian Ocean slave trades, debates over mass migration and the spread of language groups, the rise of agriculture, the development of nonstate political structures, the growth of trading societies, and the development of new cultural forms. Links Africa's early histories to current debates about the role of history in contemporary politics and to present understandings of Africa's historical place in world affairs.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2397. Modern Africa. (4 Hours)

Introduces the history of modern Africa. Topics include European colonization in the 19th and early 20th centuries; African states' freedom movements and emergence from colonial rule through the 1960s; the fall of the apartheid state in South Africa in the 1990s; and current political, environmental, and economic trends.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HIST 2430. Digital Histories of Ethnic Boston. (4 Hours)

Integrates history of ethnic groups in Boston with methods from the digital humanities (DH) through a semester-long collaborative student project focused on one particular ethnic group. Combines learning how to use DH technology (as well as its possible misuses) with learning about the history of particular ethnic groups in Boston, such as Jews, the Irish, African-Americans, etc. Uses hands-on approaches to study ethnic migration and history to and within Boston by touring neighborhoods and sites. Examines DH technologies through workshops introducing tools such as Omeka, Story Maps, and Tableau, among other possibilities. Also examines different techniques for data visualization, relationship mapping, network analysis, and text analysis.

Attribute(s): NUpath Analyzing/Using Data

HIST 2431. Immigration and Identity in the American Jewish Experience. (4 Hours)

Examines Jewish political, social, and cultural history from the arrival of the first group of Jews at New Amsterdam in 1654 to the present. Themes include immigration, adaptation, family life, religion, anti-Semitism, Zionism, the Holocaust, and American-Israeli relations.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Open to students with freshman standing with permission of instructor. May be repeated once for up to 4 total credits.

HIST 3305. Beyond the Binary: Race, Sex, and Science. (4 Hours)

Considers how gender, race, and sexuality have been treated in science, focusing primarily on the 19th and 20th centuries. Examines the history of ideas about gender, race, and sexuality as reflected in fields such as biology, psychology, endocrinology, and neuroscience. Discusses contraceptive and reproductive technologies, pharmaceutical trials, the gendering of scientific professions, and recent studies that use algorithmic predictions of sex or sexual orientation. Uses close reading techniques and discussions to advance student expertise.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HIST 3330. The Global Cold War. (4 Hours)

Examines the Cold War, emphasizing how the Soviet-American struggle for global preeminence intersected with decolonization and the rise of the "Third World." Uses primary sources, monographs, and scholarly articles to trace the major events and developments of the Cold War—ideological differences between the capitalist and socialist systems, the Cuban Missile Crisis, the construction of the Berlin Wall, the Vietnam War—while also exploring how and why the Cold War came to pervade economic, cultural, and social relations globally. Examines how unexpected actors—Cuban doctors and Peace Corps volunteers—responded to and shaped superpower rivalry. Considers how the Cold War continues to shape the world today.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

HIST 3333. Showcasing the World: Museums in History and Practice. (4 Hours)

Examines the social, cultural, and political history of museums and exhibitions around the world over the past 500 years. Focuses on the formation of the modern museum with the goal of illuminating contemporary museums' contributions and controversies. Offers special emphasis upon the history of U.S. museums. Topics include museum collecting and collections; governance; the influence of nationalism and colonialism; cultural heritage, property, and repatriation; museums' historical and present roles in education and exhibition; past and present understandings of curators, visitors, and communities; museum architecture; the impact of digitization on museum collections and exhibitions, visitor access and institutional strategy; contemporary efforts in decolonization and community building. Regular field trips to local museums are required.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HIST 3334. Assassinations in World History. (4 Hours)

Explores the historical antecedents to the unprecedented use of assassination and targeted killing as state policy in the current war on terror: the theory, strategic use, ethics, and legality of assassination. Using film, literature, and primary and secondary readings, explores case studies in the world history of assassination, from ancient times to the current day, including case studies from the Roman Empire, early modern Europe, revolutionary Europe, and the 20th century.

Attribute(s): NUpath Societies/Institutions

HIST 3335. History of Modern Terrorism. (4 Hours)

Surveys the history of modern terrorism via film, literature, art, social science theory, and historical documents and engages the history of terrorism from 19th-century Europe to the present day. Explores the roots of this global phenomenon via weekly readings and requires students to conduct independent research and create individual or group presentations on selected themes.

Attribute(s): NUpath Societies/Institutions

HIST 3340. Technologies of Text. (4 Hours)

Examines innovations that have reshaped how humans share information, e.g., the alphabet, the book, the printing press, the postal system, the computer. Focuses on debates over privacy, memory, intellectual property, and textual authority that have historically accompanied the rise of new media forms and genres. Offers students an opportunity to gain skills for working with texts using the rapidly changing tools of the present, e.g., geographic information systems, data mining, textual analysis.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov, NUpath Integration Experience

HIST 3344. The History of Western Public Health. (4 Hours)

Examines the rise of public health as a discipline and as an institution dedicated to monitoring and improving the health of specific populations. Studies key historical texts in the history of public health and medicine from Europe, Canada, and the United States, as well as European and American empires and colonies throughout the world. Emphasizes the importance of new techniques of state data gathering and analysis, including statistical methods, epidemiology, and state censuses. Considers how public health has increased state intervention in the daily lives of citizens and subjects and where and why resistance to these measures arose.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

HIST 3350. Leaders and Leadership in History. (4 Hours)

Explores the classic historical question of whether leaders make history or history makes leaders. Some leaders are considered unquestionable successes, while others are deemed partial or abject failures. Examines how certain men and women arrived at leadership positions, considering personal charisma and historical contingency. Studies the choices leaders made in difficult situations, and analyzes leaders' successes and failures through historical notions of ethics and justice. Also examines the question of legacy, to understand why some leaders stand out (for better or worse) and other leaders recede from historical narratives. Case studies from around the world include national leaders and unsung heroes, from the early modern period through the present. Sources include historical scholarship, archive documents, and cultural renderings.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

HIST 3400. The Making of the Modern City. (4 Hours)

Combines urban history, spatial history, environmental history, and cultural history. Focuses on cities and their inhabitants from the 18th century to the present. Covers topics such as modernization debates, globalization, national capitals and nation-states, women in the city and gendered uses of urban space, contested cities, cities at war, the city and its natural environment, and some of the main challenges facing cities today. Larger themes include urban design and ideology; resistance, rebellions, and social movements in the city; exclusion and inclusion and spatial segregation; violence and the city; the production and contestation of urban heritage; and the production of space.

Attribute(s): NUpath Societies/Institutions

HIST 3973. Topics in History. (4 Hours)

Covers special topics in history, selected by the instructor. May be repeated twice.

HIST 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 4701. Capstone Seminar. (4 Hours)

Offers students an opportunity to make use of advanced techniques of historical methodology to conduct original research and write a major, original research paper as the culmination of their work toward the history degree. This is a capstone research and writing seminar for history majors.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

HIST 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

HIST 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): HIST 4970 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

HIST 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

HIST 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HIST 4994. Internship in World History. (4 Hours)

Offers a formal internship at the World History Resource Center for preservice teachers of history during the fall semester of the fourth year. Students read curriculum units prepared by other teachers and develop at least one substantial, multilesson unit of world history curriculum, under supervision of a history faculty member and in consultation with a practicing teacher. Fulfills experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

HIST 5101. Theory and Methodology 1. (4 Hours)

Examines the following questions in the context of major issues in current historical research and debate. Where do historical questions come from, and how do we answer them? How do we produce knowledge about historical events and processes? What theoretical models guide historians work? Emphasizes interdisciplinary approaches as well as concrete techniques in historical research. Required of all first-year graduate students.

HIST 5102. Theory and Methodology 2. (4 Hours)

Continues HIST 5101. Offers an advanced exploration of the theories and methods used by historians to develop students' ability to understand and critique the work of other historians. Emphasis is on theories and methods in world history, such as comparative models, systemic approaches, and focus on interconnections. Explores what it means to have a local, national, or global perspective, and how world history fits in with other fields of historical scholarship. Required of all PhD students.

Prerequisite(s): HIST 5101 with a minimum grade of C- or HIST 5101 with a minimum grade of D-

HIST 5237. Issues and Methods in Public History. (4 Hours)

Examines and analyzes major issues and methods in public history in the United States and the world. Topics include the nature and meaning of national memory and myth, the theory and practice of historic preservation, rural and land preservation and the organizational structures and activities associated with those efforts, the interrelationship of historical museums and popular culture, the history and organization of historic house museums, historical documentary filmmaking, historical archaeology in world perspective, interpreting "ordinary" landscapes, and the impact of politics on public history.

HIST 5240. Feminist Resistance. (4 Hours)

Engages students in the study of a variety of forms of feminist resistance in recent history, emphasizing the United States in the context of cross-cultural examples. Examines key feminist texts and manifestos and studies feminist activism in coalition with other social movements. Students identify and analyze unique features of gender-based activism in itself and in its intersections with other social movements, including movements and activism focused on race, class, sexuality, and physical ability.

Attribute(s): NUpath Societies/Institutions

HIST 5241. Exhibits and Museums. (4 Hours)

Considers the history of museums and exhibitions from a transnational perspective in order to examine the various roles museums have played in historical and contemporary global culture. Explores museums as cultural institutions and institutional cultures through historical and theoretical readings, museum visits, and the development of students' own exhibitions. Currently among the world's most popular sites of education and leisure, museums have held a wide range of social, political, and cultural roles over the past 500 years. Offers students an opportunity to develop more acute insight into the ways museums and their exhibitions have made and reflected ideas about history, science, art, identity, and culture.

HIST 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

HIST 6955. Co-op Work Experience Abroad – Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

HIST 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

Corequisite(s): INSH 6864

HIST 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

HIST 7219. Topics in Cultural History. (4 Hours)

Offers special topics in cultural history. May be repeated without limit.

HIST 7221. Topics in World History. (4 Hours)

Offers readings on selected themes and issues in world history. May be repeated without limit.

HIST 7239. Space and Place. (4 Hours)

Examines the role of space and place in the constitution of society and culture through a set of key readings. Themes include the geographical production of class, gender, and race/ethnicity in modernity and postmodernity as well as the role of space and place in debates around postcolonialism. The ways in which space and place are implicated in the practice of power and resistance are key to the course.

HIST 7250. Topics in Public History. (4 Hours)

Offers readings, class work, and projects on selected themes and issues in public history.

HIST 7251. Topics in American History. (4 Hours)

Focuses on one or more topics in the history of the United States. May be repeated up to two times.

HIST 7314. Research Seminar in World History. (4 Hours)

Gives students the opportunity to do research and write a paper that addresses historical issues and processes significant at a global scale. Discussions focus on what it means to be significant on a global scale, how to find and utilize relevant source material, and on previous scholarship relevant in helping shape questions and issues in our own work. Students also read and critique one another's work. May be repeated up to four times.

HIST 7320. Research Seminar in Cultural History of the United States. (4 Hours)

Requires students to conduct research and write an original paper that addresses historical issues in the cultural history—in particular the material culture—of North America. May be repeated two times.

HIST 7370. Texts, Maps, and Networks: Readings and Methods for Digital History. (4 Hours)

Introduces the methods and practice of history in a digital age. Offers students an opportunity to see the wide variety of work being done computationally by historians and other humanists today and to obtain the background to be creative producers of new work and critical consumers of existing projects. The rise of computing technology and the Internet has the potential to reshape all parts of historical practice, from curation to research to dissemination. Examines the historian's craft in three primary domains: the creation of digital sources, the algorithmic transformations that computers can enact on cultural materials like texts, and the new ecologies of publishing and scholarly communication made possible by new media.

HIST 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

HIST 8409. Practicum in Teaching. (1 Hour)

Offers students the opportunity to teach individual college-level courses within the Department of History under the general supervision of a senior faculty member. Open to doctoral students.

HIST 8410. Fieldwork in History 1. (2 Hours)

Offers students the opportunity to get practical experience in historical agencies including historical societies, archives, museums, exhibits, restorations, preservation projects, and the like. Requires students to work in the agency ten hours a week for one semester under the direction of an agency supervisor and departmental adviser. May be repeated once.

HIST 8411. Fieldwork in History 2. (4 Hours)

Gives students a second opportunity to acquire practical experience in an historical agency. Requires ten hours a week for one semester under the direction of an agency supervisor and a departmental adviser.

HIST 8960. Exam Preparation—Doctoral. (0 Hours)

Intended to show full-time status during the semester of the PhD qualifying exam. Students are expected to carry a full load of research and/or teaching responsibilities in addition to this course. May be repeated three times.

HIST 8982. Readings. (1-4 Hours)

Offers selected readings under the supervision of a faculty member. May be repeated without limit.

HIST 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

HIST 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

HIST 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

HIST 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): HIST 9000 with a minimum grade of S

HIST 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): HIST 9990 with a minimum grade of S

HIST 9996. Dissertation Continuation. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): HIST 9991 with a minimum grade of S or Dissertation Check with a score of REQ

History - CPS (HST)

Courses

HST 1100. History of the World 1: Prehistory to the Renaissance. (3 Hours)

Examines the key factors and events that shaped world history from its earliest recordings to the age of the Renaissance. Analyzes history from a thematic and geographic perspective, examining the major moments in the ancient, medieval, and early modern periods. Studies how these periods in history led to the modern era.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

HST 1200. American History 1: Precontact to the Civil War. (3 Hours)

Examines American history from the precolonial period up to the end of the American Civil War. From the time of the earliest settlers through the Civil War, religious, ethnic, racial, and cultural differences were important factors in the development of the U.S. as a pluralistic democracy. The important role played by these many differences are explored as students analyze history from social, cultural, and political perspectives and examine key moments and turning points in American history.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HST 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 2125. 20th-Century World Wars. (3 Hours)

Examines the major causes, events, and outcomes of World War I and World War II. Analyzes the period of history prior to World War I to discover the causes of the Great War and then studies the end of the war and the events of the interwar period as a pretext for World War II. Offers students an opportunity to learn how the events of history from 1914–1945 shaped the world we live in today.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HST 2150. The World Since 1945. (3 Hours)

Examines major historical events since 1945. Analyzes the political, social, cultural, and economic relationship between the developed and developing world as a backdrop for major moments in history since the end of World War II. Major topics include the end of World War II, the Cold War, decolonization, the fall of the Soviet Union, the Middle East, and the role of nationalism and globalization in recent historical events. Emphasizes the role of difference—ethnic, racial, gender, religious, etc.—in determining the geopolitical reality.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HST 2425. Coming to America: The American Immigrant Experience. (3 Hours)

Examines the migration of people to North America. Analyzes the migration of Native Americans in ancient times, the arrival of European settlers and explorers, and the various waves of immigration to the United States from Europe, Africa, Asia, and Latin America. Emphasizes the diverse cultures that came, their reasons for coming, their reasons for settling in particular places, and the processes by which they resolved issues relating to "Americanization."

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HST 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

HST 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

History - CPS Specialty (HSTY)**Courses****HSTY 1130. Introduction to American History. (3,4 Hours)**

Introduces students to major topics in American history using some combination of primary documents, biographies, monographs, and film. Topics include the interaction of native populations with European settlers; the American Revolution and the Constitution; slavery; the Civil War; the rise of industrialism and immigration; the growth of government and rise of the welfare state; race, gender, and class in America; and America's role in the world from the emergence of imperialism to collective security.

Homeland Security - CPS (HLS)**Courses****HLS 6000. Introduction to Homeland Security. (3 Hours)**

Offers an overview of the essential ideas that constitute the emerging discipline of homeland security. Seeks to expand the way students think, analyze, and communicate about homeland security and to assess knowledge in critical homeland security domains. Includes critically exploring strategy, history, terrorism, fear management, crisis communication, leadership, weapons of mass destruction, lessons learned, civil liberties, intelligence and information, homeland security technology, and analytics.

HLS 6010. Contemporary Threats to Homeland Security. (3 Hours)

Introduces the operational and organizational dynamics of terrorism and other threats facing the United States today. Considers those who act as individuals, in small groups, or in large organizations and indigenous actors, as well as those who come to the United States to raise money, recruit, or commit their acts of violence. Focuses on violent clandestine activity that, whatever its motivation, has a political purpose or effect. Addresses specific topics such as suicide terrorism, the role of the media, innovation and technology acquisition, and ways of measuring the effect of counterterrorism policies and strategies.

HLS 6020. Technology for Homeland Security. (3 Hours)

Offers individuals involved in homeland security a broad overview of homeland security technology, information systems, inspection and surveillance technology, communication, knowledge management, and information security. Government agencies in today's information age are more dependent than ever on technology and information sharing. Focuses on technology as a tool to support homeland security personnel regardless of functional specialty. The methodology used in the course frames technology in terms of its contribution to deterrence, preemption, prevention, protection, and response after an attack.

HLS 6030. Intelligence for Homeland Security. (3 Hours)

Examines key questions and issues facing the U.S. intelligence community and its role in homeland security. The September 11, 2001, terrorist attacks on the World Trade Center and Pentagon and the ensuing war on terror have focused the nation's attention on homeland security. Addresses policy, organizational, and substantive issues regarding homeland intelligence support. Course reference materials provide an overview of diverse intelligence disciplines and how the intelligence community operates. Emphasizes issues affecting policy, oversight, and intelligence support to homeland security and national decision making. Covers the 2004 Intelligence Reform and Prevention of Terrorism Act and focuses on homeland intelligence support issues at the state/local/tribal levels.

HLS 6040. Critical Infrastructure and Protection. (3 Hours)

Focuses largely on protecting the most fundamental critical infrastructures, one of the cornerstones of homeland security. Develops a network theory of vulnerability analysis and risk assessment called "model-based vulnerability analysis," which is used to extract the critical nodes from each sector and then applying fault and financial risk-reduction techniques to derive the optimal strategy for protection of each sector. At the completion of the course, students should be able to apply the model-based vulnerability technique to any critical infrastructure within their multijurisdictional region, derive optimal strategies, and draft policies for prevention of future terrorist attacks.

HLS 6050. Multidisciplinary Approaches to Homeland Security. (3 Hours)

Explores the homeland security project in relation to the laws that both support and constrain it. Homeland security efforts in the United States constitute a project framed by the rule of law. Constitutional concerns, civil rights issues, and the roles of the various disciplines engaged in the effort are driven and impacted by the various local, state, and federal systems of law. Uses both historical and contemporary references to unpack the various issues and answer related questions. While military, law enforcement, and judicial issues are a central concern of the course, considers the range of issues in relation to many other disciplines engaged in homeland security and defense.

HLS 6060. Strategic Planning and Budgeting. (3 Hours)

Examines a resource management system that allows decision makers to see the long-term implications of the decisions they are making today. Homeland security requires programs in such disparate areas as counterterrorism, information security, border security, counterdrug activities, etc. It also requires coordination of programs at the federal, state, and local levels. Covers how decision makers at the various levels decide which of these programs should be funded, the size approved programs should be and how they fit together, and how plans are translated into budgets. Studies an analytic approach to allocating resources in order to provide maximum security with limited budgets.

HLS 6070. Emergency Management and Geographic Information Systems. (3 Hours)

Explores how emergency management activities can best utilize geographic information technologies (GIT) to solve real-world issues in emergency management. This includes planning and response for both natural disasters and man-made events (accidental and terror-related incidents). Through the use of a variety of tools and analytical techniques, demonstrates and explores the nexus between emergency management and GIT. Exposes students to an understanding and appreciation for that relationship as well as the tools and skills for appropriate utilization of them.

HLS 6080. Continuity of Operations and Planning. (3 Hours)

Seeks to enable students to develop and implement continuity of operations (COOP) plans. COOP is a federal initiative, required by presidential directive, to ensure that executive branch departments and agencies are able to continue to perform their essential function under a broad range of circumstances. Today's changing threat environment and recent emergencies have increased the need for COOP capabilities and plans. Topics include what COOP is and why it is important; how COOP differs from continuity of government (COG); the roles and responsibilities of key players in COOP planning; and family support measures to take in case of COOP implementation.

HLS 6150. Essentials of Emergency Management. (3 Hours)

Examines the hazards and phases in emergency management and planning. Includes all levels of public and private sector involvement in discussing the definition of emergencies and disasters, both natural and man-made, and the issues involved with managing situations. Examines frameworks such as the National Preparedness System; the National Incident Management System; and others for organizing, responding, and mitigating crises from an all-hazards, all-threats perspective, including both U.S. and international concerns. Offers students an opportunity to learn a comprehensive understanding of the U.S. emergency management system; how communities mitigate against, respond to, and recover from all disaster events; as well as the U.S. involvement for international disaster response contingencies.

HLS 6155. Critical Infrastructure, Security, and Emergency Management. (3 Hours)

Examines real-world critical infrastructure protection and emergency response to analyze and assess the essential points of protection and prevention combined with emergency response mechanisms for natural and man-made crises. Examines policy, programs, and management of critical infrastructure risk and protection in the context of emergency management and planning for the varying levels of public and private sector involvement. Uses the 16 Critical Infrastructure Sectors as a basis of examining the collaborative responses and complex interactions at all levels of government for today's emergency management concerns. Uses frameworks such as the National Preparedness System, the National Incident Management System, and others to analyze emergency management processes and examples of historical critical infrastructure threats, failures, and incidents.

HLS 6160. Advanced Emergency Management. (3 Hours)

Evaluates real-world disaster scenarios for planning and response to prepare students for roles within the continuum of emergency management and planning. Examines cases and contingencies involving various types of threats and hazards to communities, business, and organizations using a scenario-based approach. Offers students an opportunity to analyze, critique, and develop planning strategies based on existing real-world contingencies using Department of Homeland Security (DHS) and the Federal Emergency Management Agency (FEMA) guidelines for U.S. protection and resilience for communities and organizations. Emphasizes assessing the threats, risks, and vulnerabilities of communities, infrastructure, and organizations, enabling students to plan for and develop strategic assessments for all-hazards, all-threats scenarios within the National Preparedness System.

HLS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLS 6983. Topics in Homeland Security. (1-4 Hours)

Introduces selected and substantive issues in homeland security. Topics vary from one offering of the course to the next. May be repeated up to seven times for up to 8 total credits.

Prerequisite(s): HLS 6000 with a minimum grade of C- ; HLS 6010 with a minimum grade of C- ; HLS 6020 with a minimum grade of C- ; HLS 6030 with a minimum grade of C- ; HLS 6040 with a minimum grade of C- ; HLS 6050 with a minimum grade of C-

HLS 7990. Thesis. (1-4 Hours)

Offers thesis supervision by members of the department.

Prerequisite(s): HLS 6010 (may be taken concurrently) with a minimum grade of C ; HLS 6020 (may be taken concurrently) with a minimum grade of C ; HLS 6030 (may be taken concurrently) with a minimum grade of C ; HLS 6040 (may be taken concurrently) with a minimum grade of C ; HLS 6050 (may be taken concurrently) with a minimum grade of C ; GST 6109 (may be taken concurrently) with a minimum grade of C

Honors Program (HONR)**Courses****HONR 1102. Honors Discovery. (1 Hour)**

Offers students an opportunity to take full advantage of the John Martinson Honors Program and to foster a sense of community within the first-year honors experience. Students explore the goals of the program through a variety of experiential learning activities such as taking part in a theme-based living/learning community, learning through an interdisciplinary perspective, advancing their global mindset, and making an impact in the communities that they inhabit. Required for all first-year honors students.

HONR 1310. Honors Inquiry. (4 Hours)

Designed to provide an honors introductory-level experience. Draws upon an interdisciplinary perspective to expand individual knowledge and facilitate a deeper understanding of issues. Similar to a topics course, each section of the course offers a new and unique academic experience. May be repeated without limit.

HONR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HONR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HONR 2991. Research and Creative Endeavors in Honors. (1-4 Hours)

Offers University Honors students an opportunity to conduct research and creative endeavors under faculty supervision. Requires the permission of instructor and University Honors Program. May be repeated two times for a maximum of 12 semester hours.

HONR 2992. Research and Creative Endeavors. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors performed under faculty supervision. Requires the permission of instructor and University Honors Program. May be repeated nine times.

HONR 3309. Honors Seminar Abroad. (4 Hours)

Seeks to promote knowledge, understanding, and global engagement through course work, language acquisition, travel, and participation in a Northeastern University designed and delivered international academic experience. Targeted toward honors students who may not have the opportunity to complete international work later on in their academic career or who want to have an early international experience prior to a more traditional study abroad or international co-op experience. May be repeated without limit.

HONR 3310. Honors Seminar. (4 Hours)

Designed to provide an honors intermediate-level experience. Draws upon an interdisciplinary perspective to expand individual knowledge and facilitate a more advanced understanding of issues. Emphasizes research and inquiry of urban, historical, or contemporary themes. May be repeated up to nine times.

HONR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HONR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HONR 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of the department on a chosen topic. Course content depends on instructor. Requires Honors Program participation. May be repeated without limit.

HONR 4997. Honors Interdisciplinary Thesis. (4 Hours)

Represents a culmination of the diverse topics students encounter while enrolled in the University Honors Program. Offers students an opportunity to work closely with a faculty mentor to conduct intensive original research that includes an interdisciplinary perspective and produces a significant body of work. The thesis should utilize a cross-discipline perspective that includes at least two disciplines, allowing students to express their academic creativity, to discover new ways of synthesizing information, and to test the traditional boundaries between disciplines.

HONR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Human Resources Management (HRMG)

Courses

HRMG 6200. Managing People and Organizations. (3 Hours)

Examines today's evolving environment, in which effective utilization of human resources is a source of competitive advantage. To maximize the contribution of organizational members, managers must be able to understand, diagnose, and influence workplace behavior in the context of change. Topics include management of cross-functional teams and boundaryless organizations. Emphasis is on the role of corporate culture and distributed leadership.

HRMG 6212. Creating an Innovative Organization. (3 Hours)

Examines the actions that managers must take to stimulate innovation and direct it in ways that allow the organization to accomplish its goals. Topics include what organization forms are most conducive to innovation, what factors hinder innovativeness and how can they be overcome, and what role managers play in bringing about innovation. Focuses on the actions that companies and their managers can take to design their organizations and systems effectively in order to foster innovativeness. Elements of an organization's infrastructure include design, reward mechanisms, communication patterns, boundary spanning, control systems, leadership at all levels, and the organization's culture.

Prerequisite(s): HRMG 6200 with a minimum grade of C- or HRMG 6208 with a minimum grade of C- or HRMG 6318 with a minimum grade of C-

HRMG 6217. Virtual, Vicious Teams: Building and Leading High-Performance Teams. (3 Hours)

Offers an opportunity to learn how to build and lead different types of teams, including co-located, virtual, global, and top management teams. Asks students to identify the roles and responsibilities of team members and leaders and to develop effective communication, collaboration, and commitment among team members and other constituencies. Also examines how to effectively facilitate coordination across functionally distinct teams.

Prerequisite(s): HRMG 6200 with a minimum grade of C- or HRMG 6208 with a minimum grade of C-

HRMG 6218. Great Companies. (3 Hours)

Studies and debates the criteria for a great company. As suppliers, customers, employees, or students, everyone has experience with a range of organizations. Some are admired, some are mediocre, and some are dreadful. This course focuses on companies with management practices that produce and sustain extraordinary outcomes such as low cost, amazing service, fast growth, and exceptional quality. Often, these companies are great because they dare to be different and the key question is: "How do they do it?" Explores such topics as organizational culture, organizational design, empowerment, business process improvement, reward systems, and employee and organizational learning. Uses a variety of learning approaches, including case studies, articles, lecture/discussion, videos, and exercises.

Prerequisite(s): HRMG 6200 with a minimum grade of C- or HRMG 6208 with a minimum grade of C- or HRMG 6318 with a minimum grade of C-

HRMG 6220. Health Organization Management. (3 Hours)

Covers key issues and introduces management principles in health organization management. Offers students an opportunity to apply important theoretical ideas, such as systems thinking and organizational learning, to meet challenges effectively, to learn how the healthcare workplace functions, and how to manage in these workplaces. Emphasizes case-based learning, critical thinking, and evidence-based management using individual and group projects. Introduces cutting-edge tools in areas such as work redesign, performance management, brand enhancement, and quality improvement. Addresses the management imperatives of today's healthcare organizations and how to implement strategies and programs to meet those imperatives effectively. Intended for anyone interested in working or managing within the healthcare industry, including the field of public health.

HRMG 6221. Power and Influence. (3 Hours)

Introduces students to the uses of power and influence in the surroundings in which they work, working with and managing people, and achieving the goals they set for themselves. Offers students an opportunity to make sense of their own on-the-job learning experiences and to explore basic diagnostic and action-planning skills that they can later use on the job. Exposes students to a variety of cases that demonstrate the effective and ineffective uses of power in different types of organizational contexts and at different points in a manager's career and how to consider difficult ethical questions as well.

HRMG 6222. The Entrepreneurial Mindset of Leaders. (3 Hours)

Examines the entrepreneurial mindset: the relationship between successful business leadership and the psychological techniques and characteristics that thriving entrepreneurs possess. Studies the interpersonal and interactional side of building impactful ventures that matter and provide value, drawing from a mix of live cases and experiential exercises. Introduces a conceptual foundation and offers practical tools for addressing situations that students are likely to face in entrepreneurship and in leadership roles.

HRMG 6223. Global Talent Management. (3 Hours)

Offers students an opportunity to obtain the insights, frameworks, and tools to effectively manage and develop talent in teams and organizations. Also explores promotion and cross-functional systems that strengthen the organization as well as retention strategies to promote and reward high-quality talent. Managing and developing talent is one of the top three issues on the minds of CEOs from around the world. In fact, CEOs cite managing and developing their leadership talent as the issue that is most important to the future success of their business but that their organizations are least capable of addressing effectively. Offers students an opportunity to engage in various activities intended to illustrate and practice the skills involved in implementing talent management systems.

HRMG 6230. Leading a Diverse and Inclusive Organization. (3 Hours)

Examines issues including discrimination and bias, sexual harassment and workplace romance, professional and personal development, power and privilege, work and family, and organizational strategies for promoting equal opportunity and a multicultural approach for leveraging diversity and inclusion. Incorporates readings to generate lively discussions and debates, experiential learning, self-reflection, case studies, and guest speakers who are diversity experts and thought leaders. Diversity in the workplace involves recognizing and capitalizing on individual differences such as religion, gender, race, ethnicity, sexual orientation, national origin, age, and physical ability/disability. Leaders need to address issues of diversity in strategic and ethical ways if they are to compete and succeed in a global economy.

HRMG 6260. Advanced Topics in Human Resource Management. (3 Hours)

Offers an in-depth examination of selected issues and problems in human resource management that are of current interest to faculty and students. Specific topics alternate depending on faculty availability and interest as well as student enrollment criteria. May be repeated once.

Prerequisite(s): HRMG 6200 with a minimum grade of C- or HRMG 6208 with a minimum grade of C-

HRMG 6280. The Human Side of Innovation. (3 Hours)

Examines the leadership and managerial skills required for effectively managing multifunctional teams engaged in product, service, and business process innovation. Incorporates fieldwork, corporate visits, and other experiential learning opportunities. Explores strategies for recruiting, motivating, and retaining high-performance people. Introduces models for leading systematic innovative change within established corporate cultures, including understanding senior management attitudes toward innovation and how to create executive sponsors and mentors.

HRMG 6318. Managing the Organization. (2 Hours)

Offers key insights every business professional should understand working in, managing, and leading organizations in today's complex, diverse, and dynamic business environment. The primary goal of this course is to challenge—and improve—students' understanding of human behavior in organizations so that they are better positioned to strategically leverage human capital. Introduces critical theories and concepts through case analyses, debates, TED Talks, and exercises that aim to help students understand, analyze, and ultimately address real business situations and problems.

HRMG 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRMG 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Human Resources Management - CPS (HRM)**Courses****HRM 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 2320. Human Resources Management. (3 Hours)

Examines and applies principles, practices, and current issues facing organizations as related to attracting, selecting, motivating, and keeping the most talented organizational members in today's competitive environment. Focuses on human resource management strategy, organizational staffing, employee and labor relations, and organizational safety and security. Emphasizes current legal considerations and issues.

Prerequisite(s): MGT 1100 with a minimum grade of D- or HMG 1100 with a minimum grade of D-

HRM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 6005. Creating a High-Performance Organization: Strategic Organizational and HRM Choices. (3 Hours)

Covers the choices that are critical and central to a growing organization and the role that HRM plays in the decision-making process. As our global and domestic environments grow more complex, organizations seeking excellence are faced with a myriad of strategic choices, and many of those choices are the responsibility of the HR manager. Major topics include motivation, perception, interpersonal communication, leadership, power and influence, decision making, group dynamics, team building, corporate culture, and socialization. Offers students an opportunity to learn how to motivate employees and create a team-based culture of support, learning, and renewal. Emphasizes the practical application of specific skills, theories, and concepts that empower students to become effective HR managers and leaders in their organizations.

HRM 6010. Compensation and Benefits. (3 Hours)

Examines how organizations determine their merit and incentive plans, wage and salary structures, and compensation methods to give students a close-up look at team-based reward systems, flexible benefits plans, and indirect compensation. Designing the right mix of compensation and benefits is critical to attracting and retaining quality employees. Explores innovative ways to construct and manage the compensation and benefits mix.

HRM 6015. Introduction to Human Resources Management. (3 Hours)

Introduces students to the scope, vocabulary, and strategic environment of a rapidly evolving field. Examines the range of competencies that contribute to effective human capital management in support of organizational performance. Topics include human resources strategy, talent acquisition, performance management, and compensation and benefits.

HRM 6020. Talent Acquisition and Onboarding. (3 Hours)

Underscores the importance of linking recruitment goals with overall company strategy. Finding and hiring the right people is often cited as the number-one concern of businesses. Topics include approaches to job design, market analysis, recruiting and selecting employees, leveraging social media and hiring analytics to ensure better-quality hires, and effective onboarding practices.

HRM 6025. Workforce Analytics. (3 Hours)

Examines the characteristics of high-quality data, key workforce metrics, and introduces common analysis techniques. Human resources management helps drive business performance by delivering competitive advantage through people. This requires a solid grasp of HR analytics: the systematic collection, analysis, and interpretation of data designed to improve decisions about talent and the organization as a whole.
