Prerequisite(s): HRM 6015 with a minimum grade of C-

HRM 6030. The Employment Contract. (3 Hours)

Examines the legal relationship between employer and employee. Students will explore issues and topics such as discrimination, affirmative action, the Americans with Disabilities Act, sexual harassment, health and safety, AIDS in the workplace, compliance issues, and legal issues related to downsizing and terminations. Human Resource managers work in a highly complex environment with constantly changing laws and legislation that govern employee rights and employer obligations.

HRM 6035. Digital Human Resources Platforms. (3 Hours)

Explores the changes in organizational HR design that have produced a shift from transactional processes to an employee-focused experience. Offers students an opportunity to examine how integrative HR platforms and data analytics help HR leaders create process, deliver policy, and communicate with employees in real time through cloud-based software and mobile applications throughout the employee life cycle.

Prerequisite(s): HRM 6015 with a minimum grade of C-

HRM 6036. Digital Human Resources Lab. (1 Hour)

Offers students an opportunity to develop a more in-depth understanding of current and emerging technology applications that may be leveraged by the human resources function to address key business needs and transformation objectives. Examines, through further demonstrations/examples, how integrative digital HR platforms/applications can help HR leaders transform their function and create business value.

HRM 6042. Strategic Workforce Planning. (3 Hours)

Explores the development of talent management programs required to effectively execute corporate strategy. Effective workforce planning and implementation are essential to the maintenance of an organization's competitive advantage and the successful execution of organizational strategy. Reviews topics in human resource planning, gap analysis, overcoming implementation barriers, and promoting the change process.

Prerequisite(s): HRM 6025 with a minimum grade of C-

HRM 6047. Managing the Employee Life Cycle. (3 Hours)

Explores the best practices across a range of sectors in order to enable HR professionals to play the role of business partners with key organizational stakeholders. One of the primary responsibilities of HR professionals is managing talent throughout the employee life cycle in order to enhance employee productivity and career growth. Topics covered include performance management, retention strategies, training and development, and succession planning.

HRM 6050. Employee Engagement. (3 Hours)

Explores the cognitive, affective, and behavioral dimensions of employee engagement in supporting organizational performance. Research demonstrates that high levels of employee engagement contribute to high levels of productivity and innovation, as well as low turnover. Topics include the different dimensions of engagement, the design and interpretation of surveys, trust and transparency, diversity and inclusion, and best practices in employee engagement in a range of sectors.

HRM 6060. Organizational Design. (3 Hours)

Focuses on organizational design with special emphasis on innovative organizational forms that can provide strategic advantage. Topics include structuring and staffing HR functions, workspace design, and structural options for entire organizations, from startups to mature global companies. Explores leading-edge innovations, such as crowd-based organizations, internal resource markets, and other forms of collective intelligence.

HRM 6070. Global Human Resources Management. (3 Hours)

Explores the trends in workforce globalization and their implications for effective human resources management. Topics include intercultural competencies, cultural adaptation, global mobility, and a comparative examination of human resource policies and practices in major global markets. Students explore the skills and knowledge required to manage talent in multinational organizations.

HRM 6072. Global and Comparative Employment/Employee Relations. (3 Hours)

Focuses on institutional, organizational, and managerial perspectives of employment processes, relationships, and outcomes in a globalized economy. Examines cross-national variation in employment relations and labor law through the lens of convergent-divergent HRM theory. Other topics include global and national labor standards and rights, mechanisms through which labor is governed, ways in which workers are organized, as well as cultural and social factors that impact international employment.

Prerequisite(s): HRM 6070 with a minimum grade of C-

HRM 6074. Global Talent Acquisition and Mobility. (3 Hours)

Focuses on organizational staffing issues that are not present in a domestic environment or that increase in complexity in an international context. Examines ethnocentric, polycentric, regiocentric, and geocentric approaches to managing and staffing international subsidiaries. Other topics include the varied types of international assignments; selection criteria and procedures for the same; the roles of expatriates, nonexpatriates, and inpatriates; as well as management, motivation, development, and repatriation of workers on international assignments.

Prerequisite(s): HRM 6070 with a minimum grade of C-

HRM 6940. Projects for Professionals. (4 Hours)

Offers students an opportunity to apply knowledge and skills gained through their master's program to challenging short-term projects under faculty supervision. Matches students with discipline-specific consulting projects provided by a wide range of sponsoring organizations in the private and nonprofit sectors. Students develop a project plan, conduct research, develop and deliver recommendations to the sponsoring organization, and reflect on lessons learned. Mapping human resources management competencies and skills to the consultative process is a primary learning outcome. As the capstone, this course should be the last course taken. Students with less than two years of professional experience must successfully complete a noncredit Experiential Learning project before registering for the capstone course.

Prerequisite(s): HRM 6015 with a minimum grade of C ; HRM 6025 with a minimum grade of C ; HRM 6042 with a minimum grade of C

HRM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 6995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Human Services (HUSV)

Courses

HUSV 1000. Human Services at Northeastern. (1 Hour)

Intended for first-year students in the College of Social Sciences and Humanities. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

HUSV 1101. Social Change and Human Services. (4 Hours)

Offers students an opportunity to obtain a foundation for understanding social inequality and for practicing in the human services field. Introduces students to a range of specializations in the area of human services through lectures, service-learning, group work, individual projects, papers, debates, and presentations. Analyzes and applies ethical frames for practice using case studies and service-learning experiences. Additionally, students are expected to develop an understanding of the history of nonprofit and government responses to inequality and the social, political, and economic forces that influence social professionals.

Attribute(s): NUpath Integration Experience, NUpath Societies/Institutions

HUSV 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 2200. Psychological First Aid. (1 Hour)

Introduces the fundamentals of PFA, or Psychological First Aid, to students new to postdisaster work. PFA is the practice of recognizing and responding to the mental health of people experiencing crisis-related stress in the short-term aftermath of a disaster. This stress can impact people's physical, mental, psychological, and spiritual well-being. Explores the ways in which the evidence-based practice of PFA can help people increase their resilience and recover from the impact of psychological trauma. Offers students an opportunity to develop skills for responding in the aftermath of a variety of crises including pandemics, accidents, robberies, suicide, homicide, and community violence. Also offers students a foundation in crisis intervention theory. Students engage in case studies, role-plays, critical incident reviews, journals, and an examination.

HUSV 2300. Counseling in Human Services. (4 Hours)

Presents an overview of the major theoretical approaches to counseling and therapeutic interventions. Focuses on developing clinical skills and competency in intentional interviewing. Combines systemic group exercises and experiential activities to practice interviewing techniques. Cross-cultural issues in counseling are integrated throughout the course.

Prerequisite(s): (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C); (HUSV 1101 (may be taken concurrently) with a minimum grade of C or PSYC 1101 (may be taken concurrently) with a minimum grade of C)

Attribute(s): NUpath Difference/Diversity, NUpath Writing Intensive

HUSV 2320. Techniques in Individual and Group Counseling. (4 Hours)

Provides in-depth understanding of clinical practice with individuals, groups, and families. Focuses on developing practice skills through presentations, case studies, and self-reflection journals. Examines the role of spirituality within one's clinical practice. Explores theoretical techniques and their applications in a variety of settings, with particular attention to populations at risk.

Prerequisite(s): HUSV 2300 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity

HUSV 2340. Mindfulness in Mental Health. (4 Hours)

Explores mindfulness and its relationship to human services. Mindfulness is practiced in myriad human services settings, including schools, mental health facilities, medical settings, and prisons. Traces the development of mindfulness from its origins in Buddhism, to early adoption and integration with Western mental health ideologies, to the ways it is currently being integrated in social service organizations. Explores the inherent tensions in adopting a practice embedded in ancient non-Western cultures to Western thinking, healing, and psychotherapy. Examines the ways culture, identity, and power have shaped the presentation and proliferation of mindfulness.

Attribute(s): NUpath Interpreting Culture

HUSV 2355. Race, Identity, Social Change, and Empowerment. (4 Hours)

Examines racism, racial identity, and theories of social change and racial empowerment primarily within the U.S. context. Highlights different ways in which racism and racial privilege have been experienced by different racial communities, more specifically at the micro-, meso-, and macro-levels. Offers students an opportunity to learn ways to promote racial empowerment and equity. Using theory from primarily psychology and sociology, the course investigates the impact of social systems and institutions on individual-level and group experiences of racism. Investigates students' own racial identities, a deeper understanding of institutional inequalities and intersectionality, and practical skills in leadership and community building that can promote positive social change and racial equality.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity

HUSV 2370. Restorative Justice: Transforming the System. (4 Hours)

Explores the roots of restorative justice and locates contemporary examples of its application in various settings in the United States and the world. Examines its utility in addressing the mass incarceration crisis and the current penal system and mode of punishment in the United States. Students practice and apply critical race and systems theories to use a systems lens to examine the impact of racism, sexism, gender discrimination, and other systems of oppression on behavior and the justice system.

Attribute(s): NUpath Integration Experience

HUSV 2401. Food Justice and Community Development. (4 Hours)

Uncovers and examines the key dilemmas of the food system in the United States today using readings, media, discussion, service-learning, and field trips. Working from the foundations of environmental justice and community development, covers production, access, distribution, and key stakeholders from producers to retailers, workers, and consumers. Considers what justice-related issues face stakeholders within the food system in the United States; what policies have most impacted the workforce in the American food system; and what the opportunities and leverage points are for change in improving justice outcomes in this system.

Attribute(s): NUpath Integration Experience

HUSV 2440. Expressive Therapy. (4 Hours)

Examines foundational practices and theory in expressive therapies. Considers the ways that expressive therapies are used in clinical and community-based settings as a tool to improve well-being and mental health. Explores expressive modalities such as the visual arts, performing arts, movement, music, and creative writing. Special attention is given to contemporary topics including trauma, human development, and social and economic inequalities. Considers the application of expressive therapies in different settings, such as schools, hospitals, residential programs, and prisons.

Attribute(s): NUpath Creative Express/Innov

HUSV 2500. Science of Play. (4 Hours)

Examines the scholarship of play. Explores the role and function, benefits, and barriers of play in child development. Topics include the background and significance of play in history; the role of play as a predictor of academic and social functioning; and the use of play in character/moral development and to prevent, intervene, and treat trauma. Explores clinical and nonclinical implications of play, as well as the physiological and social implications of play, using contemporary research on brain science and development. Combines classroom learning with fieldwork experiences throughout the local Boston community and independent research on the role of play as prevention, intervention, and treatment. Students develop service-based research projects with community partners to address key questions related to the science of play.

Attribute(s): NUpath Integration Experience, NUpath Societies/Institutions

HUSV 2800. Sexual Orientation and Gender Expression. (4 Hours)

Introduces students to efforts among social and nonprofit organizations working to reduce heterosexism, homophobia, and transphobia in institutions, communities, and the society as a whole. Discusses practice across the life span for social professionals (social workers, counselors, advocates, and educators) in varied settings such as criminal justice, mental health, adoption, adult day health, and residential programs. Applying theories and current scholarship on LGBTQQ identity development, social movements, media, and advocacy, offers students an opportunity to evaluate contemporary issues of controversy for institutions, social practitioners, and policy. HUSV 2800 and WMNS 2800 are cross-listed.

Attribute(s): NUpath Difference/Diversity

HUSV 2950. International Human Services. (4 Hours)

Examines human service organizations from an international perspective. Through classroom lectures, guest speakers, and field experience, exposes students to how culturally relevant human service programming is developed/administered. Students participate in lectures, small-group work, and field experience.

HUSV 2960. Intercultural Studies through Human Services. (4 Hours)

Examines the social, political, and economic forces that influence how nongovernment organizations develop and operate in settings abroad. Compares predominant theoretical and philosophical orientations for poverty reduction and social impact. Students analyze and compare popular preventative and reactive interventions for change such as public health approaches, the use of aid, microlending, philanthropic funding, and sustainable development organizations. This intensive, integrated course applies lectures, presentations, case studies, meetings with local stakeholders, and service-learning.

Attribute(s): NUpath Difference/Diversity, NUpath Integration Experience, NUpath Societies/Institutions

HUSV 2970. Research Methods for Human Services. (4 Hours)

Offers an introduction to social science research that examines the theoretical and ethical foundations of social research methods. Highlights foundation knowledge and skills in hypothesis testing, research design, sampling strategies, measurement techniques, and basic data analysis and interpretation. Focuses on program evaluation to provide an opportunity for students to link social science research methods to direct human service practice.

Prerequisite(s): HUSV 1101 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

HUSV 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 3520. Child Intervention and Treatment. (4 Hours)

Compares and contrasts primary, secondary, and tertiary levels of intervention as they pertain to child welfare systems. Examines specifically the effectiveness and efficiency of home-visiting-based interventions, school-based interventions, child welfare interventions, and programs and practices targeted to reduce and eliminate juvenile delinquency. Considers the availability, distribution, and effectiveness of these prevention, intervention, and treatment programs as they apply to children and their families. Hands-on service learning in the field of child intervention is designed to link the course work on research and theory to human service practice.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

HUSV 3540. Substance Use and Social Justice. (4 Hours)

Analyzes the intersections of substance use with forms of oppression from a social justice harm reduction lens. Presents the complex interactions of biological, psychological, and social determinants of health as they relate to substance use and misuse. Explores the nature, etiology, and treatment of substance use disorders and how they relate to the health and human services field. Offers students an opportunity to obtain the requisite foundation knowledge of, and skills in, evidence-informed substance use prevention, education, and treatment with individuals, groups, families, organizations, and communities.

HUSV 3570. The Nonprofit Sector, Philanthropy, and Social Change. (4 Hours)

Offers students an opportunity to explore the nonprofit sector's multifaceted role in U.S. society and its relationship to democracy and social change. Introduces theoretical and practical frameworks for examining contemporary models of nonprofit and philanthropic practice and examines the ethical implications of engaging in and funding activities designed to effect social change. Offers students an opportunity to apply these concepts by mapping the complex systems within which social challenges emerge and by making real dollar grants to local nonprofit organizations.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

HUSV 3580. Sexual Violence: Counseling, Programs, and Policy. (4 Hours)

Offers an in-depth examination of sexual violence, its effects, and the resources available to assist survivors. Presents an overview of the criminal justice, medical, legal, and counseling systems and the impact these interweaving systems have on survivors. Offers students an opportunity to develop crisis counseling competency through group exercises and experiential activities. HUSV 3580 and WMNS 3580 are cross-listed.

HUSV 3590. Nonprofit Communications. (4 Hours)

Seeks to provide an understanding of the role of strategic communications in the nonprofit sector and to bridge theory with practice to develop communications strategies that support organizational goals and effectively move targeted audiences to action through appropriate and measured tactics. Examines case studies and engages in group work and individual papers that connect mission and goal setting with audience identification and segmentation, issue framing, message development, and communication. Offers students an opportunity to apply the course concepts in a service-learning partnership with an area nonprofit organization.

Attribute(s): NUpath Integration Experience

HUSV 3900. Social Policy. (4 Hours)

Examines how social policy influences child, family, and community development. Provides a historical overview and a contemporary examination of many social problems, including poverty, health and mental health issues, child welfare, educational inequality, and consequences of juvenile and adult crime. Examines the policies and programs that help or hinder positive individual, family, and community development and considers the role of human service values and ethics on the American response to social policy. Offers students an opportunity to examine and critique the implementation or lack of implementation of formal social policies at the local, state, and federal level and to suggest initiatives to meet the needs of intergenerational families.

Attribute(s): NUpath Societies/Institutions

HUSV 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 4700. Senior Seminar in Human Services. (4 Hours)

Examines emerging roles and career options within the human services field. Focuses on self-examination of attitudes and values affecting delivery of services, exploration of ethical issues and dilemmas relevant to human services, grant and funding issues, staff supervision and development within human services agencies, and refinement of group leadership skills.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

HUSV 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

HUSV 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): HUSV 4970 with a minimum grade of D-

HUSV 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

HUSV 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HUSV 4994. Human Services Internship. (6 Hours)

Requires students to fulfill one internship placement during the last two years of the program. Consists of required field site hours and varies according to the students' interests. Examples of placement sites include community centers, nursing homes, vocational workshops, state and federal agencies for children, and recreational facilities. Experiences are supervised by internship supervisor to maximize the student's learning opportunities. Fulfills the experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

Human Services - CPS (HSV)**Courses****HSV 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 2200. Introduction to Clinical Practice. (3 Hours)

Presents an overview of the major theoretical approaches to clinical practice. Offers students an opportunity to develop values, skills, dispositions, and competencies needed to serve a wide range of populations, particularly those who are vulnerable. Considers the influence of listening, emotional intelligence, interdisciplinary engagement, and cultural responsiveness on their work with clients.

Prerequisite(s): HSV 1100 with a minimum grade of D- or PSY 1100 with a minimum grade of D- or (PSY 1010 with a minimum grade of D- ; PSY 1210 with a minimum grade of D-) or (PSY 1010 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-) or (PSY 1210 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-)

HSV 2240. Human Behavior in the Social Environment. (3 Hours)

Offers students a foundation for understanding behavior as it applies within the context of dynamic human systems. Interactions with individuals, families, groups, organizations, and communities are at the core of practice. Explores the interrelationship between human development and behavior across the life span, focusing on the impact of surroundings such as culture, community, and social systems. Introduces research-oriented and practice-based perspectives to enhance students' development with regard to professional values, ethics, assessment, and intervention strategies. Emphasizes diverse and at-risk populations.

Prerequisite(s): SOC 1100 with a minimum grade of D- or PSY 1100 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

HSV 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 3200. Techniques in Individual and Group Counseling. (3 Hours)

Explores clinical practice with individuals, groups, and families. Focuses on developing 21st-century practice skills relevant in today's global social and health services market through a variety of classroom methods. Explores theoretical frameworks and their applications in a variety of settings. Emphasizes marginalized, vulnerable, and underserved populations.

Prerequisite(s): HSV 2200 with a minimum grade of D-

HSV 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

HSV 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 6980. Capstone. (1-4 Hours)

Provides students with an opportunity to complete a service-learning project. Covers how to conduct a community needs assessment of a community and how to develop skill and sophistication in assessing community strengths and identifying community needs. The final project requires drafting a program proposal and making policy recommendations.

Prerequisite(s): HSV 6100 with a minimum grade of C- ; HSV 6110 with a minimum grade of C- ; HSV 6120 with a minimum grade of C- ; HSV 6630 with a minimum grade of C- ; HSV 6640 with a minimum grade of C- ; HSV 6160 with a minimum grade of C-

HSV 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Industrial Engineering (IE)

Courses

IE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 2310. Introduction to Industrial Engineering. (4 Hours)

Provides an overview of the history of industrial engineering and of the most common methods that industrial engineers use to solve problems and design efficient processes. The emphasis is on how these methods are used to study, improve, and/or optimize a product or process. Topics include work design, ergonomic design, engineering statistics, quality engineering, engineering economics, project management, and process optimization. Also discusses the design of the production processes, facilities, and material handling systems. Studies applications in manufacturing, product design, and service industries. Laboratory experiments and written reports are required.

Prerequisite(s): MATH 1340 with a minimum grade of D- or MATH 1341 with a minimum grade of D-

Corequisite(s): IE 2311

Attribute(s): NUpath Writing Intensive

IE 2311. Recitation for IE 2310. (0 Hours)

Provides small group demonstration and hands-on labs for IE 2310.

Corequisite(s): IE 2310

IE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 3412. Engineering Probability and Statistics. (4 Hours)

Presents probability theory axiomatically, with emphasis on sample space presentation of continuous and discrete random variables. Covers descriptive statistics, expected value of random variables, covariance and correlation, sampling distribution, and point and interval estimations. Introduces hypothesis testing including tests for means, variances, and proportions.

Prerequisite(s): MATH 2321 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

IE 3425. Engineering Database Systems. (4 Hours)

Examines the representation of data and its creation and management in engineering enterprises. Discusses the client/server model of database access. Presents the fundamentals of data modeling and management, data mining and warehousing, multitier applications, and the use of the SQL query language. Emphasizes the use and applications of database systems in engineering including design and manufacturing. Topics include design schema of tables, records and fields of databases, SQL statements, security issues, and the use of a scripting language such as Perl or Visual Basic.

Prerequisite(s): GE 1111 with a minimum grade of D- or GE 1502 with a minimum grade of D-

Corequisite(s): IE 3426

IE 3426. Recitation for IE 3425. (0 Hours)

Provides small group demonstration and problem solving for IE 3425.

Corequisite(s): IE 3425

IE 3500. Introduction to Healthcare Systems Engineering. (4 Hours)

Introduces systems engineering methods in healthcare system applications for students who are not industrial engineering majors. Using principles drawn from operations research and industrial engineering, this course focuses on analysis, design, management, and control of health systems (e.g., hospitals, emergency departments, surgery departments, and outpatient clinics) and processes which are critical to the delivery of quality healthcare. Topics include an overview of queueing, simulation, data envelopment analysis, and spreadsheet modeling as applied to real-world healthcare problems such as staffing and scheduling, resource allocation, patient flow management, process improvement, and medical decision making.

Prerequisite(s): IE 3412 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or PHTH 2210 with a minimum grade of D- or MGSC 2301 with a minimum grade of D-

IE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 4510. Simulation Modeling and Analysis. (4 Hours)

Covers process model design and development, validation, and experimentation for discrete-event simulation models. Topics include problem formulation, data collection and analysis, random-variable generation, model development, scenario experimentation, statistical analysis of output, and resultant decision management. Utilizes a major industry-standard simulation software application with animation capabilities.

Prerequisite(s): (GE 1111 with a minimum grade of D- or GE 1502 with a minimum grade of D-); (IE 3412 with a minimum grade of D- or MATH 3081 with a minimum grade of D-)

IE 4512. Engineering Economy. (4 Hours)

Introduces students to economic modeling and analysis techniques for selecting alternatives from potential solutions to an engineering problem. Presents basic methods of economic comparison such as present worth, annual worth, rate of return, and benefit/cost techniques. Studies effects of taxes on investment analysis. Also covers decision tree analysis and statistical decision techniques.

IE 4515. Operations Research. (4 Hours)

Introduces deterministic models including linear programming; duality and postoptimality analysis; transportation and assignment problems; and network flow problems such as the shortest path, minimum spanning tree, and maximum flow.

Prerequisite(s): MATH 2341 with a minimum grade of D-

IE 4516. Quality Assurance. (4 Hours)

Reviews the distributions and statistical approximations commonly applied in statistical quality control methods. Introduces analysis of variance and simple linear regression. Covers basic principles to state-of-the-art concepts and application of statistical process control and design. Applies principles to a variety of products. Topics include product quality measures and controls, Shewhart control charts, quality cost, Pareto analysis, discrete and variable sampling, and military standards in quality control.

Prerequisite(s): IE 3412 with a minimum grade of D- or MATH 3081 with a minimum grade of D-

IE 4520. Stochastic Modeling. (4 Hours)

Covers the analytical development and solution to stochastic models in operations research. Topics include Markov chains, queuing theory, and dynamic programming.

Prerequisite(s): IE 3412 with a minimum grade of D- or MATH 3081 with a minimum grade of D-

IE 4522. Human-Machine Systems. (4 Hours)

Emphasizes and addresses human sensory and motor performance, information processing, learning and training methodology, skilled-task development, psychophysical models, response time, and relevant aspects of attention and memory. Topics include system design and development, hazard and error evaluation, and properties of effective visual displays. Endorses experimentation as a source of knowledge of human performance characteristics. Covers research and statistical analyses related to human-asset engineering, fundamentals of vision, audition, somesthesia, signal detection, and some aging effects. Safety and usability of environments, machines, products, and devices consider principles of human-machine interaction, decision making, and anthropometric characteristics. Laboratory experiences include literature review, experimental design, data collection and analysis, hypothesis testing, and generation of reports to inform the design of safe, usable, and marketable engineering products, processes, and systems.

Prerequisite(s): (IE 3412 with a minimum grade of D- or MATH 3081 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Corequisite(s): IE 4523

IE 4523. Lab for IE 4522. (1 Hour)

Accompanies IE 4522. Covers topics from the course through various activities.

Corequisite(s): IE 4522

IE 4525. Logistics and Supply Chain Management. (4 Hours)

Introduces the analysis, design, control, and operation of logistics and supply chain management systems. Includes the integration of supply chain components, logistics information systems, forecasting, production scheduling, inventory management, transportation and warehousing, and facility location planning.

Prerequisite(s): (IE 3412 with a minimum grade of D- or MATH 3081 with a minimum grade of D-); IE 4515 with a minimum grade of D-

IE 4530. Manufacturing Systems and Techniques. (4 Hours)

Focuses on manufacturing and design and their impact on each other. Covers the basics of design-manufacturing integration, manufacturing systems, manufacturing processes and techniques, manufacturing automation, and production planning and control. Topics include concurrent engineering, design for assembly, design for manufacturability, rapid prototyping, mechanical tolerancing, bill of materials, group technology, computer-aided process planning, NC part programming, programmable logic controllers, flexible manufacturing systems, computer-integrated manufacturing, and just-in-time philosophy. Topics also include traditional manufacturing processes such as casting, forming, machining, welding, molding, and particulate processing, and nontraditional manufacturing processes such as electrical discharge machining, laser machining, and water-jet machining. Students are required to conduct manufacturing-related experiments in the manufacturing lab to gain hands-on experience.

Corequisite(s): IE 4531

IE 4531. Lab for IE 4530. (1 Hour)

Accompanies IE 4530. Covers topics from the course through various activities.

Corequisite(s): IE 4530

IE 4625. Facilities Planning and Material Handling. (4 Hours)

Explores engineering tools, techniques, and concepts for the design of facilities. The term facility is defined broadly. Industrial plants, schools, hospitals, or places in which things are produced or services are provided to a customer are all considered facilities. Provide students with a broad but practical understanding of the facilities planning and design process. The critical nature of material handling is discussed and approaches to designing optimal handling systems are examined. The tools of operations, research, statistical methods, and software applications are the focus of the problem-solving activities.

Prerequisite(s): IE 3412 with a minimum grade of D- or MATH 3081 with a minimum grade of D-

IE 4699. Special Topics in Industrial Engineering. (4 Hours)

Focuses on advanced industrial engineering project agreed upon between the student and instructor. May be repeated without limit.

IE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated once.

Attribute(s): NUpath Integration Experience

IE 5137. Computational Modeling in Industrial Engineering. (4 Hours)

Builds computational models for industrial engineering applications. Offers students an opportunity to learn how to identify the problem, split it into subsystems, develop mathematical models of each sub-system, and implement in Python. Selected problems are specific to industrial engineering applications with examples of inventory systems, queuing systems, production planning and control, supply chain management, transportation, network flows, forecasting, scheduling, Monte Carlo simulation, regression analysis, sensitivity analysis, and decision support systems in data science and machine learning to test and learn from models. Students also have an opportunity to learn how to use Python libraries to implement the corresponding data structures and algorithms.

Prerequisite(s): GE 1111 with a minimum grade of D- or GE 1502 with a minimum grade of D- or graduate program admission

IE 5360. Digital Manufacturing. (4 Hours)

Presents a boot camp for programming in manufacturing through the lens of 3D printing and automation. Offers students an opportunity to develop a skill set in Python and PLC programming. Covers how to write in G-code, using Python to control CNC machines; writing 3D processing code; and making restful APIs for 3D printers. Introduces how to develop web-connected infrastructure useful for automation, as well as PLC programming to enable web-connected manufacturing systems, scaffolding knowledge from a math background in multivariable calculus.

IE 5374. Special Topics in Industrial Engineering. (4 Hours)

Offers topics of current interest in industrial engineering. May be repeated up to two times.

IE 5380. Integrated Automation. (4 Hours)

Incorporates the concepts needed to integrally run and manage a set of automated systems in a manufacturing environment. Reviews manufacturing systems and techniques, and characterizes core drives such as control systems, the required hardware (sensors and actuators), robotic arm infrastructure, delivery system, machine vision, and integrated communication. Also covers the storage systems for production, integration uncertainties, failure modes, facts, and troubleshooting topics.

IE 5390. Structured Data Analytics for Industrial Engineering. (4 Hours)

Covers fundamental knowledge and skills for using structured data analytics for IE applications. Offers students an opportunity to learn data cleaning and preparation, as well as analytics of data sets, and coding in VBA (writing macros and creating GUI), both as a driver of spreadsheet formulas and as a stand-alone programming language. A final project involves the development and presentation of a structured data analytics application that addresses industrial engineering concepts.

Prerequisite(s): (IE 4515 with a minimum grade of D- or OR 6205 with a minimum grade of C-); (IE 3412 with a minimum grade of D- or IE 6200 with a minimum grade of C-)

IE 5400. Healthcare Systems Modeling and Analysis. (4 Hours)

Discusses the key functions of healthcare operations management, such as patient and process flow, process improvement, facility layout, staffing and scheduling, capacity planning, and resource allocation. Focuses on analysis, design, management, and control of health systems and processes that are necessary to provide clinical care. The applications of systems engineering methods, such as optimization, simulation, and queuing models, are discussed through papers and case studies in different care settings (e.g., hospitals, emergency departments, surgery departments, and outpatient clinics) for different diseases (e.g. diabetes, cancer, mental health, cardiovascular disease). Uses spreadsheet tools to model and solve simulation and optimization problems. Requires equivalent course work if prerequisites are not met.

Prerequisite(s): IE 4515 with a minimum grade of D- or OR 6205 with a minimum grade of C-

IE 5500. Systems Engineering in Public Programs. (4 Hours)

Introduces the design, development, analysis, and application of mathematical modeling for addressing public programs and societal needs. Systems engineering and mathematical models form the basis for decision making in both public and private applications. Focusing on societal applications, offers students an opportunity to discover how to incorporate public objectives and characteristics of large systems in the development of models and policies. Examines applications in the operation of public programs (e.g., public health systems, government programs) and public safety (e.g., security, emergency preparedness, and disaster response). Modeling techniques include game theory, data envelopment analysis, cost-benefit analysis, simulation, differential equations, and stochastic optimization. Requires equivalent course work if prerequisites are not met.

Prerequisite(s): (IE 4515 with a minimum grade of D- or OR 6205 with a minimum grade of C-); (IE 3412 with a minimum grade of D- or IE 5374 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or IE 5374 with a minimum grade of C- (Graduate) or IE 6200 with a minimum grade of C- or IE 6400 with a minimum grade of C-)

IE 5617. Lean Concepts and Applications. (4 Hours)

Covers the fundamentals of lean thinking and how to apply this knowledge to practical problems. Lean thinking is imperative for organizations aspiring to stay competitive in global markets. It calls for process changes to eliminate waste, shorten product delivery time, improve product quality, and curtail costs, while improving customer satisfaction. Offers students an opportunity to learn concepts, a kit of process improvement tools, implementation methods, and best practices for lean workforce development. Makes extensive use of active learning exercises and simulations, and case studies from different disciplines, to help students learn how lean principles are applied in manufacturing and also in less traditional areas such as knowledge work and healthcare systems.

Corequisite(s): IE 5618

IE 5618. Recitation for IE 5617. (0 Hours)

Accompanies IE 5617. Provides small group demonstrations, exercises, and team activities.

Corequisite(s): IE 5617

IE 5630. Biosensor and Human Behavior Measurement. (4 Hours)

Emphasizes the measurement of human behavior in complex human-machine interaction. Topics include introduction of complex human-machine interactions; research methods in complex human-machine interactions; various kinds of human psychophysiological signals/cues, including physiological cues, facial expressions, eye-gaze movement, head movement, contextual cues; human cues and behavior relationship; transducers and measurement for these human cues/signals; basic principles of biosensors; general classification of biosensors; current technologies for building biosensors; conventional transducers and new technologies including micro-/nanotechnology; general systematic design process for biosensors; application of biosensors to understand human behavior in human-machine interactions. Also introduces the latest relevant research advancements in sensor fusion, affective computing, and emotion recognition.

IE 5640. Data Mining for Engineering Applications. (4 Hours)

Introduces data mining concepts and statistics/machine learning techniques for analyzing and discovering knowledge from large data sets that occur in engineering domains such as manufacturing, healthcare, sustainability, and energy. Topics include data reduction, data exploration, data visualization, concept description, mining association rules, classification, prediction, and clustering. Discusses data mining case studies that are drawn from manufacturing, retail, healthcare, biomedical, telecommunication, and other sectors.

IE 5976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to a maximum of 12 total semester hours.

IE 6200. Engineering Probability and Statistics. (4 Hours)

Studies fundamental concepts of probability. Topics include events, sample space, and discrete and continuous random variables; density functions, mass functions, cumulative probability distributions, and moment generating functions; expectation of random variables; common discrete and continuous probability distributions including binomial, Poisson, geometric, uniform, exponential, and normal; multivariate probability distributions, covariance, and independence of random variables; sampling and descriptive statistics; and parameter estimation, confidence intervals, and hypothesis testing. Also introduces analysis of variance. Requires knowledge of multivariate calculus.

IE 6300. Manufacturing Methods and Processes. (4 Hours)

Focuses on manufacturing and its relationship to design and computers. Examines the relationship between design and various aspects of manufacturing. Covers manufacturing systems, manufacturing processes, bill of materials, group technology, mechanical tolerancing, QC, SPC, QPC, TQM, process planning and CAPP, NC part programming, supply chain management, production scheduling, JIT, lean manufacturing, flexible manufacturing systems, CIM cells, and manufacturing control via, say, programmable logic controllers.

IE 6400. Foundations for Data Analytics Engineering. (4 Hours)

Offers topics and skills designed to prepare students for advanced courses in data analytics engineering. Covers basic concepts and implementation of methods related to probability, eigenvalues and eigenvectors, cluster analysis, text mining, and time series analysis. Offers students an opportunity to learn how to work with modern data structures and apply computational methods for data cleaning and data wrangling operations.

IE 6500. Human Performance. (4 Hours)

Explores a wide range of human-machine systems. Focuses on human performance, human system integration, evaluation, and applications and how they can improve productivity, efficiency, safety, and quality of work life. Involves designing of machines, operations, jobs, and work environments in systems so that they are compatible with human capabilities, characteristics, and limitations. Discusses a variety of human-machine systems and interactions, including transportation, healthcare, human-computer, human-robot, consumer products, and service industries.

IE 6600. Computation and Visualization for Analytics. (4 Hours)

Offers students an opportunity to learn how to use visualization tools and techniques for data exploration, knowledge discovery, data storytelling, and decision making in engineering, healthcare operations, manufacturing, and related applications. Covers basics of Python and R for data mining and visualization. Introduces students to static and interactive visualization charts and techniques that reveal information, patterns, interactions, and comparisons by focusing on details such as color encoding, shape selection, spatial layout, and annotation.

IE 6700. Data Management for Analytics. (4 Hours)

Covers the theory and applications of database management to support data analytics, data mining, machine learning, and artificial intelligence. Discusses the fundamental concepts and emerging technologies in database design and modeling, database systems, data storage, and the evolving world of data warehousing and data governance. Presents a balanced theory-practice focus and covers relational databases, NoSQL databases, data integration, data quality, data governance, big data, and data processing for analytics.

IE 6750. Data Warehousing and Integration. (4 Hours)

Covers various topics in data engineering in support of decision support systems, data analytics, data mining, machine learning, and artificial intelligence. Studies on-premises data warehouse architecture, dimensional modeling of data warehouses, extract-transform-load integration from source systems to data warehouse, online analytical processing systems, and the evolving world of data quality and data governance. Offers students an opportunity to design, develop, and maintain cloud-based data pipelines. Uses both on-premises and cloud-based platforms to illustrate and implement data engineering techniques using operational and analytical data warehouses.

Prerequisite(s): IE 6700 with a minimum grade of C-

IE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 7200. Supply Chain Engineering. (4 Hours)

Presents modern quantitative techniques for designing, analyzing, managing, and improving supply chains using deterministic and probabilistic models. Topics include a macro view of supply chains, demand forecasting, aggregate planning, sequencing and scheduling, inventory analysis and control, materials requirement planning, pricing and revenue management, contracts decisions, transportation decisions, location and distribution decisions, supplier selection methods, and global supply chains.

Prerequisite(s): (IE 5374 with a minimum grade of D- or IE 5374 with a minimum grade of C- (Graduate) or IE 6200 with a minimum grade of C- or MATH 7241 with a minimum grade of C or IE 6400 with a minimum grade of C-); OR 6205 with a minimum grade of C-

IE 7215. Simulation Analysis. (4 Hours)

Covers elementary queueing models, simulation and modeling, simulation model design, a survey of simulation languages with one language covered in detail, input data analysis and distribution fitting, model verification and validation, output analysis and transient/steady-state response, terminating/nonterminating systems, model experimentation and optimization, random number/random variate generation, and variance reduction techniques.

Prerequisite(s): IE 5374 with a minimum grade of D or IE 5374 with a minimum grade of C (Graduate) or IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C- or MATH 7241 with a minimum grade of C

IE 7270. Intelligent Manufacturing. (4 Hours)

Covers advanced and emerging topics in manufacturing. Discusses fundamentals of digital and cyber-physical manufacturing including machine communication protocols, control architectures, agent-based and holonic systems, cloud-based and service-oriented manufacturing, and applications of artificial intelligence in manufacturing.

IE 7275. Data Mining in Engineering. (4 Hours)

Covers the theory and applications of data mining in engineering. Reviews fundamentals and key concepts of data mining, discusses important data mining techniques, and presents algorithms for implementing these techniques. Specifically covers data mining techniques for data preprocessing, association rule extraction, classification, prediction, clustering, and complex data exploration. Discusses data mining applications in several areas, including manufacturing, healthcare, medicine, business, and other service sectors.

Prerequisite(s): IE 5374 with a minimum grade of D or IE 5374 with a minimum grade of C (Graduate) or IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C- or MATH 7241 with a minimum grade of C

IE 7280. Statistical Methods in Engineering. (4 Hours)

Discusses statistical models for analysis and prediction of random phenomena. Topics include review of descriptive statistics and hypothesis testing, linear models, both regression and ANOVA. Introduces design of experiments. Covers experiments with single and multiple factors of interest, and considers experiments with high-order experimental restrictions.

Prerequisite(s): IE 5374 with a minimum grade of D or IE 5374 with a minimum grade of C (Graduate) or IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C- or MATH 7241 with a minimum grade of C

IE 7285. Statistical Quality Control. (4 Hours)

Designed to study the fundamental concepts of quality planning and improvements. Studies analysis and application of modern statistical process control methods including cusum, EWMA, multivariate, and modified control charts. Covers inspection error and design of sampling plans. Topics include software quality assurance, and study of the concepts of Deming, Ishikawa, Feigenbaum, and Taguchi's approach in quality planning, organization, and improvement.

Prerequisite(s): IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C or MATH 7241 with a minimum grade of C

IE 7290. Reliability Analysis and Risk Assessment. (4 Hours)

Studies principles of the methods of risk assessment and reliability analysis including fault trees, decision trees, and reliability block diagrams. Discusses classical, Bayesian, and median rank methods for analysis of components and systems reliability. Presents various factors that determine the stress and strength of components and their impact on system reliability. Uses practical applications, examples, and problems to cover a broad range of engineering fields, such as mechanical, electrical, industrial, computer, structures, and automatic control systems.

Prerequisite(s): IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C- or MATH 7241 with a minimum grade of C

IE 7295. Applied Reinforcement Learning in Engineering. (4 Hours)

Covers fundamentals of reinforcement learning (RL) and its applications in engineering areas. Provides an overview of the RL concepts and important algorithms. Demonstrates applications of RL to address engineering problems in manufacturing, supply chain, healthcare, and engineering economics. Offers students an opportunity to master their skills to apply RL to practical engineering projects through a series of lab sessions.

Prerequisite(s): IE 5374 with a minimum grade of C or IE 5374 with a minimum grade of D or IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C or MATH 7241 with a minimum grade of C

IE 7300. Statistical Learning for Engineering. (4 Hours)

Covers statistical models and methods for data analytics. Reviews fundamentals and key concepts in statistical inferences and learning theory. Presents important statistical learning techniques and algorithms for implementation. Discusses ordinary least square for regression, overfitting and regularization, generalized linear models, and nonlinear and nonparametric models. Applies Bayesian statistics for classification problems. Offers theoretical aspects including the statistical learning framework, conditional probabilistic methods, and their applications in several areas including manufacturing, healthcare, and business.

Prerequisite(s): IE 5374 with a minimum grade of C or IE 5374 with a minimum grade of D or IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C- or IE 6800 with a minimum grade of C- or MATH 7241 with a minimum grade of C

IE 7315. Human Factors Engineering. (4 Hours)

Offers students an opportunity to acquire the necessary knowledge and skills to recognize and analyze existing or potential human factors problems and to identify, design, and possibly implement feasible solutions. Includes introduction to human factors and ergonomics; engineering anthropometry and biomechanics; physiology related to human factors and workstation design; cognition and information processing; decision making, attention, and workload; human error and accidents; human-machine interface design; controls and displays; and human factors applications in transportation, aerospace, consumer product design, and so forth.

IE 7350. Sociotechnical Systems: Computational Models for Design and Policy. (4 Hours)

Presents state-of-the-art computational methods and case studies for modeling and designing sociotechnical systems. Focuses on the dynamic interactions between the social and technical aspects and incorporating computational models of human behavior into design, governance, and policy decisions. Begins with general model thinking methods and discusses the modeling of individual decision making and bounded rationality. Delves into the dynamics of group interaction and strategic multiagent decisions and the emergence of group behavior, particularly in network structures. Includes modeling dynamics of human-AI systems in multiagent setups and empirical analysis of governance mechanisms in sociotechnical systems.

Prerequisite(s): IE 6200 with a minimum grade of C- or IE 6400 with a minimum grade of C- or MATH 7241 with a minimum grade of C- or NETS 7334 with a minimum grade of C-

IE 7374. Special Topics in Industrial Engineering. (4 Hours)

Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

IE 7440. Industrial Engineering Leadership Challenge Project 1. (4 Hours)

Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype with an industrial-engineering focus. Constitutes the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

IE 7442. Industrial Engineering Leadership Challenge Project 2. (4 Hours)

Continues IE 7440, further developing a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype with an industrial engineering focus and produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

Prerequisite(s): IE 7440 with a minimum grade of C-

IE 7500. Applied Natural Language Processing in Engineering. (4 Hours)

Covers fundamentals of natural language processing and its applications in engineering areas. Presents an overview of the NLP concepts and important algorithms. Demonstrates applications of NLP to address engineering problems in transportation, civil engineering, manufacturing, healthcare, business, commerce, and selected other areas of engineering. A substantial course project offers students an opportunity to solidify their skills to apply NLP to practical engineering problems.

Prerequisite(s): IE 5374 with a minimum grade of C or IE 5374 with a minimum grade of D or IE 6200 with a minimum grade of C or IE 6400 with a minimum grade of C or MATH 7241 with a minimum grade of C

IE 7615. Neural Networks and Deep Learning. (4 Hours)

Covers the theory and applications of neural networks in engineering. Reviews basics of machine learning, discusses important neural network architectures, and presents neural network training methods and algorithms. The specific neural network models covered in this course include feedforward neural networks such as deep learning architectures, radial basis function networks, support vector machines, self-organizing feature maps, and recurrent networks. Discusses neural network applications in several areas including manufacturing, healthcare, medicine, business, and diagnostics and prognostics.

IE 7945. Master's Project. (4 Hours)

Offers theoretical or experimental work under individual faculty supervision.

IE 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

IE 7990. Thesis. (4 Hours)

Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. May be repeated once.

IE 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues thesis work conducted under the supervision of a departmental faculty member.

IE 8960. Candidacy Preparation—Doctoral. (0 Hours)

Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision. Intended for students who have completed all required PhD course work and have not yet achieved PhD candidacy; students who have not completed all required PhD course work are not allowed to register for this course. May be repeated once.

IE 8986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

IE 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

IE 9986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

IE 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision under individual faculty supervision.

Prerequisite(s): IE 9000 with a minimum grade of S

IE 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): IE 9990 with a minimum grade of S

IE 9996. Dissertation Continuation. (0 Hours)

Offers continuing dissertation supervision under individual faculty supervision.

Prerequisite(s): IE 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Information Science (IS)

Courses

IS 1300. Knowledge in a Digital World. (4 Hours)

Examines the impact that information technologies (such as the internet, search engines, blogs, wikis, and smartphones); information processing techniques (such as big data analysis, machine learning, crowdsourcing, and cryptography); and information policies (such as privacy norms and speech restrictions) have on what we know and how much we know, as individuals and as a society. The digital world can enhance our ability to acquire knowledge by providing us with fast and cheap access to huge amounts of information. However, it can also undermine our cognitive abilities and provide us with inaccurate or misleading information. Studies normative frameworks from epistemology and ethics (such as epistemic value theory, the extended mind hypothesis, and moral rights) to evaluate these technologies and policies.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

IS 1500. Introduction to Web Development. (4 Hours)

Introduces Web development and networks. Discusses HTML5, CSS, and client-side scripting with JavaScript and jQuery; embedding of media: images, video, and sound; the use of back-end data (either from databases or XML) to create dynamic Web sites; Web hosting, operating systems, and network infrastructure; and the automation of website construction using content management systems. Considers the construction of Web forms and the underlying protocols for information exchange: HTTP and HTTPS. Emphasizes the need for testing both correctness and usability. Offers a brief introduction to server-side scripting. Surveys the security problems faced by dynamic websites. Hands-on laboratory work is built into the course. May be taken as a general elective by CCIS students but does not count as a CS or IS elective.

Attribute(s): NUpath Analyzing/Using Data

IS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IS 2000. Principles of Information Science. (4 Hours)

Introduces information science. Examines how information is used to solve problems both for individuals and organizations and how information systems interface with their users. Considers the technical, economic, social, and ethical issues that arise when working with information. Discusses how to collect, manage, classify, store, encode, transmit, retrieve, and evaluate data and information with appropriate security and privacy. Storage models include lists, tables, and trees (hierarchies). Examines applications of information: visualization, presentation, categorization, decision making, and predictive modeling. Introduces key concepts in probability. Explains Bayesian analysis for information classification and modeling. Teaches intensive programming in Excel, including VBA macro development. Introduces programming in R.

Attribute(s): NUpath Analyzing/Using Data

IS 2050. Information and Uncertainty. (4 Hours)

Introduces the foundations of probabilistic inference, information theory, and their uses for drawing conclusions from noisy data. Applications include diagnosing diseases with inconclusive medical tests, locating autonomous vehicles when sensors are imperfect, and how best to make inferences with incomplete or partial information. Central topics include distinguishing deductive and probabilistic inference, philosophical interpretations of probability, fundamental justifications for the rules of probability, and key concepts of information theory. Introduces analytic and mathematical methods of analysis in these cases and contemporary computational (i.e., programming) techniques for implementing and applying theories of information and probabilistic inference.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

IS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IS 2991. Research in Information Science. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated three times.

IS 3050. Information and Uncertainty. (4 Hours)

Introduces the foundations of probabilistic inference, information theory, and their uses for drawing conclusions from noisy data. Applications include diagnosing diseases with inconclusive medical tests, locating autonomous vehicles when sensors are imperfect, and how best to make inferences with incomplete or partial information. Central topics include distinguishing deductive and probabilistic inference, philosophical interpretations of probability, fundamental justifications for the rules of probability, and key concepts of information theory. Introduces analytic and mathematical methods of analysis in these cases and contemporary computational (i.e., programming) techniques for implementing and applying theories of information and probabilistic inference.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

IS 3500. Information System Design and Development. (4 Hours)

Discusses the planning, analysis, design, and implementation of computer-based information systems, focusing on the methodologies and procedures used in organizational problem solving and systems development. Topics include the systems development life cycle; project management; requirements analysis and specification; feasibility and cost-benefit analysis; logical and physical design; prototyping; and system validation, deployment, and postimplementation review. Additional topics may include platform and database selection and integration issues; CASE tools; end-user training; maintenance; and object-oriented analysis and design.

Prerequisite(s): IS 2000 with a minimum grade of D- ; CS 3500 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

IS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IS 4200. Information Retrieval. (4 Hours)

Introduces information retrieval (IR) systems and different approaches to IR. Topics covered include evaluation of IR systems; retrieval, language, and indexing models; file organization; compression; relevance feedback; clustering; distributed retrieval and metasearch; probabilistic approaches to IR; Web retrieval; filtering, collaborative filtering, and recommendation systems; cross-language IR; multimedia IR; and machine learning for IR.

Prerequisite(s): (CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-); (CS 2810 with a minimum grade of D- or ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-)

IS 4300. Human Computer Interaction. (4 Hours)

Studies the principles of human-computer interaction and the practice of user interface design. Discusses the major human information processing subsystems (perception, memory, attention, and problem solving), and how the properties of these systems influence the design of interactive systems. Reviews guidelines and specification languages for designing user interfaces, with an emphasis on tool kits of standard graphical user interface (GUI) objects. Introduces usability metrics and evaluation methods. Additional topics may include World Wide Web design principles and tools; wireless/mobile device interfaces; computer-supported cooperative work; information visualization; and virtual reality. Course work includes designing user interfaces, creating working prototypes using a GUI tool kit, and evaluating existing interfaces using the methods studied.

Prerequisite(s): CS 3500 with a minimum grade of D- or DS 3500 with a minimum grade of D-

IS 4800. Empirical Research Methods. (4 Hours)

Evaluates and conducts empirical research, focusing on students' use of empirical methods to study the effectiveness and organizational/social impact of information systems and technologies. Empirical research involves a number of broad steps including identifying problems; developing specific hypotheses; collecting data relevant to the hypotheses; analyzing the data; and considering alternative explanations for the empirical findings. Some of the most commonly used research techniques, such as surveys, experiments, and ethnographic methods, are discussed. Additional topics include the ethics of data collection and experimentation in behavioral science. Although the course focuses primarily on the relationship between formulating research questions and implementing the appropriate methods to answer them, students can expect to apply the statistical techniques learned in the course prerequisites.

Prerequisite(s): CS 2810 with a minimum grade of D- or ECON 2350 with a minimum grade of D- or ENVR 2500 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PHTH 2210 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-

IS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IS 4991. Research. (4,8 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to three times.

Prerequisite(s): IS 4800 with a minimum grade of D- or (CS 5350 with a minimum grade of C- or CS 5350 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

Information Systems Program (INFO)

Courses

INFO 5001. Application Modeling and Design. (4 Hours)

Practices social-technical software engineering methods and tools to solve real-world problems. Explores innovative design and programming techniques to build significant business applications quickly. Studies the process of systematically combining UX techniques, business processes, and complex data models to assemble applications that are user-friendly and meet business requirements. Employs the object-oriented paradigm, visual user interface design principles, and programming languages such as Java, as well as productivity tools, to put together complicated, powerful business applications with ease. Explores the art of how to systematically write software programs to solve any business problem, through practicing simple and smart ways of making software programming enjoyable.

INFO 5002. Introduction to Python for Information Systems. (4 Hours)

Studies the Python programming language for application engineering. This hands-on course offers students an opportunity to obtain proficiency in the core concepts of Python and the skills and knowledge for building applications using any of the hundreds of thousands of task-specific Python libraries. Covers the important concepts such as reading and writing to standard IO, using operators, controlling the flow of execution, using functions, reading and writing files, and basic object-oriented programming concepts. Applies tools and techniques to classical software engineering and Python-specific facilities such as code introspection, reuse, built-in sequence types, and iteration.

INFO 5100. Application Engineering and Development. (4 Hours)

Takes students in a step-by-step manner through the process of systematically combining UX techniques, business processes, and complex data models to assemble applications that are user-friendly and meet business requirements. Employs the object-oriented paradigm, visual user experience, and system design principles to put together complicated, powerful, real-world applications. The primary objective of this course is to practice social-technical software engineering methods and tools to solve real-world problems. Offers students an opportunity to learn innovative design and programming techniques to build significant business applications quickly; to practice simple and smart ways of making software construction enjoyable; and to master the art of how to systematically write software programs to solve any business problem.

Corequisite(s): INFO 5101

INFO 5101. Lab for INFO 5100. (0 Hours)

Accompanies INFO 5100. Provides additional instruction in Java programming.

Corequisite(s): INFO 5100

INFO 5976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated seven times for up to 8 semester hours.

INFO 6105. Data Science Engineering Methods and Tools. (4 Hours)

Introduces the fundamental techniques for machine learning and data science engineering. Discusses a variety of machine learning algorithms, along with examples of their implementation, evaluation, and best practices. Lays the foundation of how learning models are derived from complex data pipelines, both algorithmically and practically. Topics include supervised learning (parametric/nonparametric algorithms, support vector machines, kernels, neural networks, deep learning) and unsupervised learning (clustering, dimensionality reduction, recommender systems). Based on numerous real-world case studies.

Prerequisite(s): INFO 5100 (may be taken concurrently) with a minimum grade of B- or INFO 5100 (may be taken concurrently) with a minimum grade of B- or CSYE 6200 (may be taken concurrently) with a minimum grade of B-

INFO 6106. Neural Modeling Methods and Tools. (4 Hours)

Uses a graph theoretic approach to build models representing dependencies of model components instead of using analytical functions in statistics to interpolate observations, build data models, and estimate model parameters. The interpolation is still parametric, but the parameters are graph related and do not involve analytic functions. Discusses how to explain neural models and not fear them; when it is appropriate to use neural models; and how to interact with machines that use neural models in the same way one would trust a friend, so that trust between humans and machines is enhanced rather than diminished. These so-called neural models mirror in some regard how biological brains build models to make sense of the world and do predictions.

Prerequisite(s): INFO 6105 with a minimum grade of B

INFO 6150. Web Design and User Experience Engineering. (4 Hours)

Exposees students to both conceptual and technical aspects of Web design. User experience design is the discipline of creating a useful and usable website or application that is easily navigated and meets the needs of both the site owner and its users. Covers Web standards and best practices. Studies the fundamental concepts, techniques, practices, work flows, and tools associated with the practice of user-experience design in Web interfaces. Offers students an opportunity to learn the core principles of information architecture, usability, marketing hierarchy, and user experience for contextual, value-driven websites. Additional areas of focus include typography, color theory and composition, responsive design, CSS3 concepts, basic scripting, and JavaScript libraries to create functional, effective, and visually appealing websites.

Prerequisite(s): INFO 5100 (may be taken concurrently) with a minimum grade of B- or INFO 5100 (may be taken concurrently) with a minimum grade of B- or CSYE 6200 (may be taken concurrently) with a minimum grade of B-

INFO 6205. Program Structure and Algorithms. (4 Hours)

Presents data structures and related algorithms, beginning with a brief review of dynamic memory allocation. Discusses the fundamental data structures in detail, including the abstract representation, supporting algorithms, and implementation methods. Focuses on understanding the application of the abstract data structure and the circumstances that affect implementation decisions. Covers lists, stacks, queues, trees, hash tables, and graphs. Covers recursion and searching and sorting algorithms in detail. Emphasizes data abstraction and encapsulation in code design. Explores external storage structures, time permitting.

Prerequisite(s): INFO 5100 with a minimum grade of B- or INFO 5100 with a minimum grade of B- or CSYE 6200 with a minimum grade of B-

INFO 6215. Business Analysis and Information Engineering. (4 Hours)

Covers computer information systems and the decision-making process, determination of information requirements, system development life cycle, and system modeling and analysis. Uses a hands-on approach to introduce the student to software engineering methodologies and practices, business requirements specification, business process design, model-driven object-oriented design, software development, and maintenance. Emphasizes the effective leverage of the Unified Modeling Language (UML) to transform business issues and objectives to concrete software solutions that meet business needs and usability and user interface design as critical elements of a successful software engineering engagement.

INFO 6245. Planning and Managing Information Systems Development. (4 Hours)

Provides an overview of the most popular information systems needs' assessment methodologies including portfolio analysis, stage assessment, business systems planning, and the Alloway survey technique. Topics include utilities IS strategic plan prioritization techniques of business goal alignment, architectural compatibility, and cost/benefit and risk analysis to demonstrate how businesses match needs to budgetary constraints. Describes and evaluates options for the placement of the IS function within the organization and a variety of methods to manage the function. Introduces a generic application development and project planning methodology used as a model to facilitate the development of a four-stage project plan for a prototype project. Uses the Project Management Institute's PMBOK and Harvard Business School case studies extensively.

INFO 6250. Web Development Tools and Methods. (4 Hours)

Explores advanced server-side technologies and tools necessary to design and engineer complete web-based enterprise applications quickly. Designed to build on previous experience to cover the life cycle of a web-based application. Focuses on MVC web development frameworks to build server-side, data-intensive, and multitier web applications. Additionally, discusses designing rich internet applications (RIA) using AJAX and service-oriented architecture (SOA) using REST.

Prerequisite(s): INFO 5100 with a minimum grade of B- or INFO 5100 with a minimum grade of B-

Corequisite(s): INFO 6251

INFO 6251. Lab for INFO 6250. (0 Hours)

Accompanies INFO 6250. Offers additional instruction in Web tools discussed in class.

Corequisite(s): INFO 6250

INFO 6255. Software Quality Control and Management. (4 Hours)

Examines techniques for the management and evolution of software systems. Topics include managing software as an asset; life cycle development and rapid development technologies; maintainability; quality assurance of software systems including testing strategies and problem analysis; software risk analysis; analysis of software project failures; process models, such as CMM and ISO 9001; configuration management; and the impact of new development technologies on software management.

Prerequisite(s): INFO 5100 (may be taken concurrently) with a minimum grade of B- or CSYE 6200 (may be taken concurrently) with a minimum grade of B-

INFO 6350. Smartphones-Based Web Development. (4 Hours)

Covers application development for mobile devices using advanced development platforms. Focuses on how to write mobile applications using cross-platform development tools and processes. Topics include user interfaces, the software life cycle, persistent storage, networking using HTTP and other REST interfaces, and mobile/handheld data applications. Requires a final project.

Prerequisite(s): INFO 5100 with a minimum grade of B- or INFO 5100 with a minimum grade of B- or CSYE 6200 with a minimum grade of B-

INFO 6660. Business Ethics and Intellectual Property for Engineers. (4 Hours)

Seeks to support successful engineering careers by offering students an applied understanding of ethical principles in the workplace and fundamentals of intellectual property and the American legal system. Seeks to increase students' awareness of the ethical implications of their work and to influence colleagues to think and act in a socially cognizant manner. Introduces ethical principles and codes of professional ethics; types of intellectual property (patents, trade secrets, trademarks, copyrights); and fundamentals of the American legal system (sources of American law, contracts, torts, intellectual property, antitrust). Offers students an opportunity to practice verbal communication and presentation skills; develop an applied understanding of the relationship and differences between legal liability and ethical behavior; and develop applied critical thinking, communication, and presentation skills.

INFO 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INFO 7110. High-Performance Coding for Fintech. (4 Hours)

Distills the programming challenges constantly faced by quantitative developers in the fintech space. Presents high-performance computing challenges as well as their solutions for investment banks, market-making firms, capital management funds, and loan-financing institutions. Covers the art of high-performance computing using object-oriented structure of five prevailing programming languages widely adopted in the fintech industry: Java, C++, MATLAB, R, and Python. In particular, the course offers students an opportunity to obtain capabilities to successfully complete high-performance computing tasks in the following five application areas: global-macro arbitrage, quantitative equity portfolio management, option pricing and trading, fixed-income securities, and market making.

Prerequisite(s): INFO 6205 with a minimum grade of B-

INFO 7205. Advanced Application Engineering Project. (4 Hours)

Offers students an opportunity to master advanced software design and programming techniques for building complex software applications quickly. The engineering issues addressed assume the business problems are difficult to understand and manage in a practical manner—the system capacity must support thousands or even millions of users in a multitude of roles. Addresses high-performance computing requirements, such as concurrency and control, scalability, replication, and failover.

Prerequisite(s): INFO 5100 with a minimum grade of C- or INFO 5100 with a minimum grade of D- or CSYE 6200 with a minimum grade of C-

INFO 7225. Accounting and Budgetary Systems for Engineers. (4 Hours)

Covers the latest engineering principles necessary for building complex software systems that comply with recognized standards in the financial industry. With automated business processes today, risk and responsibility are shifting to information technology (IT) systems. Offers students an opportunity to learn how to incorporate information-based controls related to the financial industry that signal trouble, detect violations, and provide accountability, as well as a working approval process. Emphasizes software design. Seeks to help engineers construct complex software from a sophisticated engineering perspective. Examines how to put together cutting-edge organizational systems that people in the financial world can put to good use. Designed to prepare students for jobs in the building, maintaining, and employment of such information systems.

INFO 7245. Agile Software Development. (4 Hours)

Offers students an opportunity to achieve a high level of practical understanding of software development life cycle (SDLC) with emphasis on agile and adaptive incremental methodologies. Examines techniques for the management and evolution of software systems, including project planning from requirements gathering, analysis, estimation, and releasing using a hands-on approach to implement agile methodologies. Also covers maintainability, including software risk analysis, project retrospectives, and process models such as capability maturity model, configuration management, and their practical implementation.

Prerequisite(s): INFO 5100 with a minimum grade of B- or INFO 5100 with a minimum grade of B- or CSYE 6200 with a minimum grade of B-

INFO 7250. Engineering of Big-Data Systems. (4 Hours)

Introduces a general framework for thinking about big data. Services such as Web analytics and intelligent e-commerce have promoted a rapid increase in the volume of data generated, analyzed, and archived. In order to solve the problems related to big data, a newer type of database product has emerged. Covers how to apply technologies like Hadoop, Accumulo, MongoDB, and various NoSQL databases to build simple, robust, and efficient systems to manage and analyze big data. Also describes an easy approach to big data systems that can be built and run by a small team of students. Guides students through the theory of big data systems, how to implement them in practice, and how to deploy and operate them once they are built.

Prerequisite(s): INFO 6205 with a minimum grade of B- or INFO 6250 with a minimum grade of B- or INFO 7390 with a minimum grade of B- or CSYE 6220 with a minimum grade of B-

INFO 7255. Advanced Big-Data Applications and Indexing Techniques. (4 Hours)

Studies advanced indexing techniques and algorithms for big-data platforms such as Hadoop and NoSQL databases. Covers big-data design and indexing patterns to organize, aggregate, manipulate, and analyze huge amounts of data beyond human scale. Offers students an opportunity to learn advanced techniques to improve the performance and robustness of the advanced big-data programming models. Additional areas of focus include scalable graph databases, advanced indexing, and full-text searching in graph databases.

Prerequisite(s): CSYE 6220 with a minimum grade of B- or INFO 6205 with a minimum grade of B- or INFO 6250 with a minimum grade of B-

INFO 7260. Business Process Engineering. (4 Hours)

Addresses the question of how to understand and specify the flow of work responsibility and movement of information throughout the enterprise. For businesses to maximize the benefits of technology, they must transform their ad-hoc and often poorly defined ways of doing things to formal business processes. Analyzes the specification and implementation of complex information systems that integrate well into core business operations. Offers students an opportunity to learn how to use agile process specification techniques, dynamic process execution, and real-time measurement and reporting to support continuous business improvement and change.

INFO 7285. Organizational Change and IT. (4 Hours)

Focuses on the change effort needed to integrate a project into the firm's organizational structure, culture, business, and process metrics. Geared for students undertaking enterprise resource planning systems, or those involved in small or large organizational reengineering projects designed to make IT a primary focus of the firm's business strategy. Topics include management theories and organizational design principles; strategy and critical success factor formulation; methods to reach information systems maturity; business process modeling techniques; quality, the mindset, and the problem-solving tools; human resource, cultural, and technical change enablers; how to plan a business reengineering project; and implementation of major organizational change.

INFO 7330. Information Systems for Healthcare-Services Delivery. (4 Hours)

Addresses the important information systems questions facing the delivery and assessment of healthcare services from administrative, financial, and clinical perspectives. These include the use of electronic medical records; health information exchanges; and performance evaluation of providers, patients, and payers. Provides an introduction on how healthcare is delivered. Also focuses on various information management tools being implemented as well as those needed to move care delivery and quality forward.

INFO 7374. Special Topics in Information Systems. (1-4 Hours)

Covers state-of-the-art material of current interest. May be repeated without limit.

INFO 7375. Special Topics in Artificial Intelligence Engineering and Applications. (1-4 Hours)

Covers recent advances in neural nets and deep learning techniques with applications to large-scale engineering problems. May be repeated up to five times for a maximum of 24 semester hours.

Prerequisite(s): INFO 6205 with a minimum grade of B-

INFO 7380. User Experience Design for Healthcare Applications. (4 Hours)

Introduces the unique challenges of user experience research, design, and evaluation in a complex safety-critical domain with a systems engineering perspective. Covers regulations, standards, development processes, implementation, and adoption considerations for health technology. Designed to prepare students for the challenges UX professionals need to tackle when working on healthcare applications. Offers students an opportunity to build the necessary skill sets to enter the competitive and highly specialized industry of healthcare IT.

Prerequisite(s): CSYE 7280 with a minimum grade of B- or INFO 6150 with a minimum grade of B-

INFO 7385. Managerial Communications for Engineers. (4 Hours)

Focuses on communication strategies and tactics for engineers at the interpersonal, team, and organizational level. Course topics include forms (oral and written), styles, and differences in communication; coaching and giving feedback to staff; and building teams, managing conflict, and special topics in organizational communication. The primary goal is to strengthen the students' social and emotional intelligence skills to help them progress along their engineering career path. Combines academic content with practical skill-building activities.

INFO 7390. Advances in Data Sciences and Architecture. (4 Hours)

Covers a wide range of skills and responsibilities that are necessary for managing complex business performance and operational data. Such data tend to be fragmented, poorly organized, and often flawed. Offers students an opportunity to learn how a more up-to-date mapping of complex data works and to be alerted to the care and attention they must give to such a task as well as the implications of the results. Covers best practices for managing all aspects of the data transformation life cycle, covering broad areas such as requirements gathering, meta-model design, data integration and transformation, as well as implementation and ongoing operations. Discusses tools for mapping fragmented data into business intelligence solutions that guide successful strategies.

Prerequisite(s): INFO 6105 with a minimum grade of B

INFO 7405. Advances in Engineering Medical Information Systems. (4 Hours)

Focuses on the fundamentals of engineering patient medical records as timelines of medical encounters that capture critical clinical decisions made in various contexts such as assessments, diagnoses, treatments, etc. Emphasizes semantically rich clinical information models to support predictive analysis in order to recognize patterns of disease early. Record systems typically focus on data recording for legal purposes, ignoring the critical needs of patients and caregivers. Introduces innovative software design and architecture techniques that recognize the complex interaction between patients and caregivers, provide immediately available detailed information for both, and thus invigorate clinical workplaces. Covers techniques for engineering medical applications as sociotechnical systems that promote the safety, effectiveness, and efficiency of core clinical operations.

Prerequisite(s): INFO 5100 (may be taken concurrently) with a minimum grade of B- or INFO 5100 (may be taken concurrently) with a minimum grade of B-

INFO 7410. Advanced Medical Device Software Engineering. (4 Hours)

Offers students an opportunity to achieve an advanced level of practical knowledge and understanding of the medical device software development process and the skills needed to develop software for medical devices according to the FDA and IEC 62304 standards. Aiming to bridge the gap between theory and practice, this comprehensive and hands-on course combines lectures, case studies, and a capstone project to help students gain the necessary expertise to develop safe and effective medical device software.

Prerequisite(s): CSYE 6200 with a minimum grade of B- or INFO 5100 with a minimum grade of B-

INFO 7500. Cryptocurrency and Smart Contract Engineering. (4 Hours)

Seeks to provide a detailed understanding of the function and deployment of smart contracts using the Solidity language. Digs deep into the technical design and operation of blockchain platforms and specifically the implementation of smart contracts for operationalizing business processes. Offers students an opportunity to practice the development of decentralized autonomous organization applications using blockchain scripting languages.

Prerequisite(s): INFO 5100 with a minimum grade of B- or INFO 5100 with a minimum grade of B- or CSYE 6200 with a minimum grade of B-

INFO 7510. Smart Contract Application Engineering and Development. (4 Hours)

Emphasizes the essential coding skills for implementing self-enforcing, multiparty, mutually beneficial, contractual rights and obligations on top of blockchain technologies. Offers students an opportunity to learn how to leverage the principles and mechanisms of “decentralized autonomous organization” to programmatically coordinate the interaction between participating parties at a global scale without the need for trusting a third party and how to build blockchain-type applications that automate the interaction of a network of participating entities such as buyers, sellers, suppliers, insurance, and finance.

Prerequisite(s): INFO 7500 with a minimum grade of B-

INFO 7520. Engineering of Advanced Cryptocurrency Systems. (4 Hours)

Addresses programming and information systems aspects of bitcoin and other cryptocurrencies. Topics covered include fundamentals of bitcoin mining, the theory of distributed consensus, principles of strong anonymity and untraceability, smart contract security, and peer-to-peer networking. Offers students an opportunity to learn about current developments in, and challenges facing, the use of cryptocurrencies in terms of the computing platform and systems integration. Students also have an opportunity to gain practical experience through challenging programming projects.

Prerequisite(s): INFO 7500 with a minimum grade of B-

INFO 7525. Regulatory Aspects of Smart Contract Automation. (2 Hours)

Addresses the legal implication of using the blockchain to transfer and exchange money, perform trade transactions, maintain ownership of property, and enforce contractual obligations in secure and cost-effective ways. These applications present significant legal challenges in finance, property rights, and general commercial contracts in all industries. Offers students an opportunity to acquire the tools to engineer systems that adhere to existing and evolving regulatory frameworks. Highlights challenges around the issues of taxation, financial crimes, and money laundering, since blockchain technologies were designed to facilitate cross-border transactions.

INFO 7535. Digital Smart Contracts Product Innovations. (2 Hours)

Addresses the issue of how blockchain technology creates new ways of doing business. Blockchain technology uses bitcoin cryptocurrency to create value in a virtual setting. By linking the blockchain with real currency and the financial system, data, as well as business processes, a new breed of products and services can be realized. Explores innovative and disruptive applications of the blockchain.

INFO 7610. Special Topics in Natural Language Engineering Methods and Tools. (4 Hours)

Covers the latest techniques in natural language processing with applications to unstructured data.

Prerequisite(s): INFO 6205 with a minimum grade of B-

INFO 7750. Engineering Advanced Healthcare Information Exchange Platforms. (4 Hours)

Offers a deep dive into the realm of health information exchange systems, emphasizing their advantages, overcoming engineering challenges, and understanding the diverse HIE models. Addresses important safety concepts, eco-scale challenges, and systems and software engineering approaches to ensure robust, secure, and sustainable HIE implementations. Aims to develop a solid understanding of HIE's intricacies.

Prerequisite(s): CSYE 6200 with a minimum grade of B- or INFO 5100 with a minimum grade of B-

INFO 7945. Master's Project. (4 Hours)

Delves deeply into advanced concepts and methodologies within information systems. Emphasizes the development of critical thinking skills and the application of theoretical knowledge to practical challenges in the field. Through individual efforts, including laboratory work and/or literature review, students conduct a thorough investigation and analysis of various aspects of information systems. With guidance from their faculty advisor, students focus on a project tailored to their interests and goals. Students produce a detailed report outlining their findings, methodologies, and conclusions. Offers students an opportunity to present their work to peers and faculty, fostering scholarly discussion and collaboration.

INFO 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INFO 7976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated seven times for up to 8 semester hours.

INFO 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

INFO 7990. Thesis. (4 Hours)

Offers theoretical and experimental work conducted under the supervision of a departmental faculty. May be repeated once.

INFO 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues theoretical and experimental work conducted under departmental faculty supervision.

Prerequisite(s): INFO 7990 with a minimum grade of C-

Information Technology - CPS (ITC)

Courses

ITC 1000. Computer Applications. (3 Hours)

Offers a beginning course in computer productivity tools for those with little or no prior experience. Introduces basic elements of organizing computer files and folders and of creating word processing documents, spreadsheets, and presentations. Requires a Windows environment.

ITC 1200. Operating Systems Concepts. (3 Hours)

Introduces students to the basic structure and organization of computer operating systems. Examines the functional characteristics of major computer components and their relationship to control by software. Topics include general computer organization and configuration. Compares characteristics of different operating systems such as Windows and UNIX.

ITC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 2000. Principles of Systems Analysis and Design. (3 Hours)

Introduces the methodologies, models, tools, and techniques used in modern system development. Topics covered include project life-cycle models, project management techniques, requirements elicitation, use-case analysis, business rules, system design approaches, and graphic modeling with the Unified Modeling Language (UML). Offers students an opportunity to analyze and document a business case; complete a system analysis; and design, model, and prepare a project plan.

Attribute(s): NUpath Natural/Designed World

ITC 2016. End-User Data Analysis Tools. (3 Hours)

Focuses on technical skills used for acquiring and analyzing data with advanced spreadsheet tools and with end-user database software. Students use advanced word processing techniques to present the results of data analysis. Expects students to already have basic skills in word processing and spreadsheet applications. Course uses Windows-based applications.

Attribute(s): NUpath Analyzing/Using Data

ITC 2050. Designing the User Experience. (3 Hours)

Studies user experience (UX) design theory and practice, focusing on its interdisciplinary nature. Describes the principles of UX and the practice of user interface design. Discusses the major human information processing subsystems (perception, memory, attention, and problem solving), and introduces usability metrics and evaluation methods.

ITC 2100. Introduction to Programming (Java). (3 Hours)

Offers a hands-on first programming course for those with no prior programming experience. Covers basic programming logic and syntax. Uses object-oriented programming concepts, including arrays, methods, classes, and instantiation. Offers students an opportunity to code stand-alone computer applications with graphical user interfaces (GUI) using modern interactive development tools.

Prerequisite(s): MTH 2100 with a minimum grade of D- or MTH 2105 with a minimum grade of D- or MTH 2110 with a minimum grade of D- or MTH 2400 with a minimum grade of D-

ITC 2200. Networking Foundations. (3 Hours)

Introduces principles of computer networks, network architectures, network topologies, network protocols, and layering concepts. Addresses both theoretical aspects, such as performance modeling and analysis, and practical considerations of implementing Internet protocols.

Prerequisite(s): ITC 1200 with a minimum grade of D- ; ITC 2000 with a minimum grade of D-

ITC 2300. Database Management Systems. (3 Hours)

Introduces Structured Query Language (SQL). Topics include designing normalized data tables for use in a relational database management system, creating entity-relationship models, database transaction processing, and security.

Prerequisite(s): ITC 2000 with a minimum grade of D-

ITC 2400. Web and Mobile Development. (3 Hours)

Studies modern markup languages and standards (HTML5 and CSS) for cross-platform webpages and applications. Through lectures, discussions, and hands-on projects, offers students an opportunity to learn common best practices in graphical interface design and usability for different target audiences. They then have an opportunity to apply these design skills by refining creative designs into websites through an iterative process of creating hand-drawn storyboards, then coding wireframes, adding basic web content, and finally making pages responsive so that they are suitable for a variety of mobile devices. Webpage artifacts include tables, images, links, and simple apps.

Attribute(s): NUpath Creative Express/Innov

ITC 2430. E-Commerce Systems. (3 Hours)

Introduces the theory and practice of doing business on the Internet. Begins with the infrastructure that makes e-commerce possible, including Internet protocols, Internet applications, and Internet languages. Examines e-commerce software, e-commerce security issues, and e-commerce payment systems. Topics in business strategies for e-commerce include purchasing, electronic data interchange, supply chain management, virtual communities, and Web portals. Offers students an opportunity to understand how tools and strategies may be applied to e-business models, including business-to-business (B2B) and business-to-consumer (B2C). Examines international, legal, and ethical issues as they relate to e-commerce.

Prerequisite(s): MGT 1100 with a minimum grade of D-

ITC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 3100. Advanced Applications Development (Android). (3 Hours)

Focuses on developing complex end-user applications (for Android) that address a business problem or opportunity. Topics include utilizing database interfaces and managing user sessions.

Prerequisite(s): ITC 2100 with a minimum grade of D- or GET 2100 with a minimum grade of D- or CET 2200 with a minimum grade of D-

ITC 3150. Database Websites. (3 Hours)

Offers students an opportunity to integrate relational databases into webpages. Covers how to query, update, and manage databases. Emphasizes using basic programming techniques (loops, conditionals, built-in functions) to interact with existing relational databases. All software used in the course is open source and runs on a variety of platforms.

Prerequisite(s): ITC 2300 with a minimum grade of D- ; ITC 2400 with a minimum grade of D-

ITC 3220. Mobile and Wireless Networking. (3 Hours)

Covers technologies used for wireless and mobile business applications. Topics include wireless network protocols, cellular phone carriers, wireless platform operating systems, and wireless security issues.

Prerequisite(s): ITC 2200 with a minimum grade of D-

ITC 3250. UNIX Systems Administration. (3 Hours)

Covers the essential skills needed to manage the day-by-day operations of a UNIX computer system. Topics include techniques for adding new users and groups and management of the file system, focusing on access controls. Covers backup plans and techniques as well as job scheduling and basic networking in the UNIX environment. Offers students an opportunity to build shell scripting skills.

Prerequisite(s): ITC 1200 with a minimum grade of D-

ITC 3300. Structured Query Language (SQL). (3 Hours)

Covers concepts and techniques for manipulating relational databases. Offers students an opportunity to learn to code native SQL for creating and accessing data tables, indexing, arithmetic operations, loops, arrays, multiple table processing, I/P operations, data-type conversions, and views.

Prerequisite(s): ITC 2300 with a minimum grade of D-

ITC 3310. Exploring NoSQL Databases. (3 Hours)

Explores the capabilities and applications of NoSQL technology in today's fast-paced digital world. Covers essential topics such as database architecture, security, and data distribution techniques in a NoSQL context. Offers students an opportunity to obtain hands-on practice with the most common nonrelational databases used in contemporary applications development.

Prerequisite(s): ITC 2300 with a minimum grade of D-

ITC 3320. Data Warehousing Technologies. (3 Hours)

Offers students an opportunity to learn how organizations construct and maintain data warehouses built from operational databases. Topics include a comparison of data warehouse architectures, how to build a data warehouse, and how to structure databases for efficient data analysis.

Prerequisite(s): ITC 2300 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

ITC 3400. Web Design and Multimedia. (3 Hours)

Covers the history of multimedia technology, focusing on the uses of multimedia in website development. Examines the technical and design aspects of basic components of multimedia: text, audio, graphics, video, sound, animation, and virtual reality. Emphasizes the use of multimedia in user interfaces. This is a hands-on course in which students practice techniques throughout the course.

Prerequisite(s): ITC 2400 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

ITC 3500. IT Project Management. (3 Hours)

Covers the tools and techniques used to manage information technology (IT) projects. Topics include project planning, scheduling, and budgeting and project management tools (PERT/CPM/Gantt). Discusses all phases of IT projects from proposal evaluation through postimplementation reviews. Offers students an opportunity to plan and develop a project that provides a practical application of the topics covered in class.

Prerequisite(s): ITC 2100 with a minimum grade of D- ; ITC 2200 with a minimum grade of D- ; ITC 2300 with a minimum grade of D- ; ITC 2400 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

ITC 3620. Legal and Ethical Issues in Cybersecurity. (3 Hours)

Describes the legal and ethical issues associated with information security. Emphasizes national and international laws relating to information assurance and data use and emerging technologies for management of digital rights. Examines criminal activities such as computer fraud and abuse, desktop forgery, embezzlement, child pornography, computer trespass, and computer piracy.

Attribute(s): NUpath Ethical Reasoning

ITC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 4200. Network Security. (3 Hours)

Explores the theory and practice of computer security, focusing on the security aspects of multiuser systems and the Internet. Topics include cryptography concepts, firewalls; viruses; two-tier authentication; Trojan horses; password security; biometrics; VPNs; Internet protocols such as SSL, IPsec, PGP, SNMP, SSH; and others.

Prerequisite(s): ITC 2200 with a minimum grade of D-

ITC 4260. Database Administration. (3 Hours)

Offers students an opportunity to obtain a conceptual understanding of the database architecture and how the various components work and interact with each other. Topics include the creation and maintenance of a relational database. Practical hands-on training includes management of database instances, log files, control files, backup management, and an understanding of the data dictionary.

Prerequisite(s): ITC 3300 with a minimum grade of D-

ITC 4600. Information Security Management. (3 Hours)

Covers management issues occurring within the field of information security. Topics include asset classification and control (protecting the most valuable information of the organization); personnel security (employee awareness); security as a part of everyday communications and operations; business continuity management; and compliance (legal, internal/external, audit, and other concerns).

Prerequisite(s): ITC 2200 with a minimum grade of D- ; ITC 2300 with a minimum grade of D-

ITC 4640. Foundations of Cloud Computing. (3 Hours)

Introduces the concepts and foundation principles of cloud services as they relate to commercial cloud service provider offerings such as AWS (Amazon Web Services). Covers compute, storage, networking, and security, as well as a variety of tools to carry out infrastructure tasks. Offers content beneficial to system administrators, developers, project managers, or those seeking a basic understanding of cloud computing. Includes hands-on exercises in the cloud. Specific programming skills are not required for this course.

Prerequisite(s): ITC 1200 with a minimum grade of D-

ITC 4660. Encryption Concepts. (3 Hours)

Surveys the principles and the practices of encryption and cryptography and the core encryption algorithms used in digital communication. Discusses core information assurance building blocks—such as authentication, digital signatures, key management, and digital certificates—and applies these concepts to important security architectures, including the IP networks and the cellular system.

ITC 4670. Software Vulnerabilities. (3 Hours)

Seeks to help students to become aware of systems software security issues and to gain a basic understanding of software security measures. Discusses software in use today, their related vulnerabilities, and how they are exploited. Examines protection and detection techniques and the secure software development life cycle.

ITC 4680. Forensics in Information Technology. (3 Hours)

Explores the techniques used in computer forensic examinations. Examines computer hardware, physical and logical disk structure, and computer forensic techniques. Builds awareness of the tools and techniques to investigate, seize, and analyze computer-based evidence.

ITC 4690. Software Engineering and Security. (3 Hours)

Focuses on secure software engineering. Offers students an opportunity to practice the development of software that adheres to secure design principles and uses modern software engineering best practices throughout the Secure Systems Development Lifecycle.

Prerequisite(s): ALY 2100 with a minimum grade of D- or CET 2200 with a minimum grade of D- or ITC 2100 with a minimum grade of D- or ITC 3100 with a minimum grade of D- or ITC 3150 with a minimum grade of D-

ITC 4850. Information Technology Project. (3 Hours)

Offers students an opportunity to apply their knowledge of systems analysis to develop a comprehensive written business case for an IT project. Reviews the principles of developing a business case and high-level solution model. Working closely with the instructor, students are asked to identify a technological need of actual interest for local companies, communities, or students' workplace; research the legal, marketing, social, and organizational viability of providing a solution; and follow the systems analysis process to develop a comprehensive written proposal that documents user requirements, alternative solutions, and the selection of the most appropriate solution. A formal project plan is then developed for actual execution of the solution.

Prerequisite(s): ITC 3500 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

ITC 4955. Project. (1-4 Hours)

Provides students with an opportunity to demonstrate the skills they have learned throughout the program by developing an end-to-end proposal and plan for an IT application and the infrastructure it relies on. The project requires a justification, a budget, an architecture document, a presentation, and a project plan. May be repeated without limit.

ITC 4973. Topics in Emerging Information Technologies. (3 Hours)

Focuses on new and emerging technologies as they relate to information technology and software development. Specific topics vary based on developments in the field and include a discussion of the ethical effects of these developments.

Prerequisite(s): ITC 2100 with a minimum grade of D-

ITC 4983. Topics. (1-4 Hours)

Covers special topics in information technology. May be repeated without limit.

ITC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 5000. Database Management Systems. (2.25 Hours)

Covers the use and capabilities of modern database management systems with an emphasis on performance and reliability. After a brief review of conceptual data models and database design, the focus moves to the underlying technology—database engines, storage and indexing, memory use, the relational model, normalization/de-normalization, query processing, and SQL. Also discusses the need for and design of concurrency control, integrity, security, and recovery capabilities.

ITC 5010. Information Technology Strategy and Governance. (2.25 Hours)

Focuses on the strategic use of information technology (IT) from a business perspective at the enterprise level. Covers business fundamentals and a strategic framework for aligning organizational strategy, core competencies, and information systems. Covers strategic IT management, including IT policy and governance, accountability frameworks, financial analysis, risk management, and legal compliance issues.

ITC 5020. Information Systems Design and Development. (2.25 Hours)

Discusses the planning, analysis, design, and implementation of computer-based information systems, focusing on the methodologies and procedures used in organizational problem solving and systems development. Topics include the systems development life cycle; project management; requirements analysis and specification; feasibility and cost-benefit analysis; logical and physical design; prototyping; system validation, deployment, and postimplementation review. Additional topics may include platform and database selection and integration issues, CASE tools, end-user training, maintenance, and object-oriented analysis and design.

ITC 5035. Information Technology Project Management. (2.25 Hours)

Covers the tools and techniques used to manage information technology (IT) projects. Topics include project planning, scheduling, and budgeting; project management tools (i.e., PERT/CPM/GANTT); and human resources management. Discusses all phases of IT projects from proposal writing through post-release maintenance issues. Offers students an opportunity to plan and develop a project that provides a practical application of the topics covered in class.

ITC 5300. Foundations of Information Security. (2.25 Hours)

Offers an overview of the threats to the security of information systems, the responsibilities and basic tools for information security, and the levels of training and expertise needed in organizations to reach and maintain a state of acceptable security. Topics include an introduction to confidentiality, integrity and availability, authentication, encryption and access controls, intrusion detection and response, social engineering, physical security, policy formation and enforcement, legal and social issues, and risk management.

ITC 5345. Systems and Network Administration. (2.25 Hours)

Focuses on the skills, tools, and best practices required to provide and support computing infrastructure and services. Aims to prepare the student to be responsible, from an ethical and legal perspective, for the infrastructure and computing system administration in an organization. Offers students an opportunity to obtain advanced technology enterprise infrastructure skills to support data centers and administer websites, as well as to resolve incidents, conduct troubleshooting, practice system backup and disaster recovery skills, and address system security issues.

ITC 5355. Web Application Design and Development. (2.25 Hours)

Introduces the development of Web applications. Topics covered include Web servers, Web application servers, Web application development methods, client-side and server-side scripting, and Web application development techniques. Offers students an opportunity to learn to construct and maintain a well-designed Web site and use state-of-the-art Web application development tools and languages to develop Web applications. Other topics include Web application security, session management, design patterns, and reusable Web application components.

ITC 5400. Foundations of Informatics. (2.25 Hours)

Introduces the fundamental properties of information, technologies, and people within an increasingly complex infrastructure and social system. Offers students an opportunity to learn theoretical foundations and applications of informatics and to explore technical and social issues—including policy choices, ethical issues, and legal obligations—with IT applications and solutions in various specific settings, such as business, education, healthcare, and government. Offers students a broad perspective and understanding of informatics as both a scientific field as well as a highly applied discipline in specific contexts that may help direct them to future career concentrations.

ITC 5420. Introduction to Cloud Computing Applications and Management. (2.25 Hours)

Offers an overview of theoretical and practical aspects of distributed systems and cloud computing. Cloud computing and web services are creating a huge demand for IT professionals to manage large-scale infrastructure and vast networks. Examines frameworks, techniques, and existing IT solutions to manage internet services at different levels (infrastructure, platform, and software) and to support the key characteristics of cloud computing, including virtualization, requirement for high reliability and security, extendability, and versatility.

ITC 5450. Advanced Cloud Computing Applications and Management. (2.25 Hours)

Offers a comprehensive learning experience in advanced concepts within cloud computing. Cloud computing has become a disruptive technology that has dramatically transformed the IT industry by offering scalability and delivery options that had not existed previously. Offers students an opportunity to gain an in-depth knowledge of concepts, programming models, virtualization options, file systems, architectures, storage, and secure computation, as well as to learn contemporary industry trends and what the future holds in the advanced concepts of cloud computing.

Prerequisite(s): ITC 6420 with a minimum grade of C- or ITC 6420 with a minimum grade of C-

ITC 5460. Cloud Analytics. (2.25 Hours)

Introduces students to a set of techniques, tools, and applications to help clients extract and harvest information from massive data (e.g., social media sites, e-commerce websites) through a cloud platform adopted by a business. Also introduces techniques to help clients migrate historical data to cloud systems, as new cloud systems provide contemporary analytics solutions. Offers students an opportunity to gain the technical strength to assist data analytics process and business intelligence in the context of a cloud computing platform. Cloud analytics is an emerging topic that helps establish a cloud computing service mode, aiming to assist and facilitate data analytics process through a public or private cloud.

ITC 5480. Amazon Web Service (AWS) Cloud Architecting. (3 Hours)

Exposes students to advanced technical topics to assist in the development of expertise in AWS cloud computing. Offers students an opportunity to gain the skills needed to pursue certification as an AWS Certified Solutions Architect—Associate, one of the most valuable IT certificates. Includes reading materials provided by AWS Academy, guided instruction in the classroom, hands-on labs operated by AWS, project work, and free practice exam if students wish to pursue certification after completing the course. Successful students have the ability to demonstrate knowledge and skills of how to architect and deploy secure and robust applications on AWS technologies.

ITC 5490. Ethical Hacking. (2.25 Hours)

Exposes students to the different phases of hacking, specific skills for penetration/intrusion testing, and demonstrates hands-on techniques in ethical hacking. Offers students an opportunity to gain technical capabilities to secure information systems, conduct network scanning and enumeration, and learn social engineering skills and techniques to protect networks from hackers.

ITC 5520. Cloud Security Planning and Design. (2.25 Hours)

Presents a comprehensive overview of the principles and practices of cloud computing security. Topics include the fundamentals of cloud computing security; the latest threats and attack vectors targeting cloud-based systems; and best practices for securing cloud infrastructure, applications, and data. Covers technical tools to protect data, data privacy, information systems, and enterprise networks from external compromise. Explores the field of cybersecurity: the body of technologies, processes, and practices designed to protect networks, devices, programs, and data from attack, damage, or unauthorized access. Examines the components of a well-architected cybersecurity framework, identifies the tools required, and guides students to create plans that will protect the digital assets of the enterprise.

ITC 6000. Database Management Systems. (3 Hours)

Covers the use and capabilities of modern database management systems with an emphasis on performance and reliability. After a brief review of conceptual data models and database design, the focus moves to the underlying technology—database engines, storage and indexing, memory use, the relational model, normalization/de-normalization, query processing, and SQL. Also discusses the need for and design of concurrency control, integrity, security, and recovery capabilities.

ITC 6010. Information Technology Strategy and Governance. (3 Hours)

Focuses on the strategic use of information technology (IT) from a business perspective at the enterprise level. Covers business fundamentals and a strategic framework for aligning organizational strategy, core competencies, and information systems. Covers strategic IT management, including IT policy and governance, accountability frameworks, financial analysis, risk management, and legal compliance issues.

ITC 6015. Enterprise Information Architecture. (3 Hours)

Introduces the theory, framework/model, methodology, and tools that enhance business and organizations' ability to discover, access, and understand data and to integrate IT and information resources, with an ultimate goal to produce information needed to make critical decisions and support business functions. Data and information management is critical to modern businesses. Covers best practices using cases studies in a more practical, comprehensive approach to delivering the subject matter involving the application of tools.

ITC 6020. Information Systems Design and Development. (3 Hours)

Discusses the planning, analysis, design, and implementation of computer-based information systems, focusing on the methodologies and procedures used in organizational problem solving and systems development. Topics include the systems development life cycle; project management; requirements analysis and specification; feasibility and cost-benefit analysis; logical and physical design; prototyping; system validation, deployment, and postimplementation review. Additional topics may include platform and database selection and integration issues, CASE tools, end-user training, maintenance, and object-oriented analysis and design.

ITC 6030. Computer Systems and Networks. (3 Hours)

Introduces the basic concepts of computer systems and networks. Covers operating system services, file systems, resource management, synchronization, the concept of a process, and process cooperation and interference. Introduces networks, including network architectures, network protocols, and communication paradigms (point-to-point, multicast/broadcast, and connectionless vs. connection-oriented). Uses examples from real operating systems and networks (Unix, Linux, Windows, TCP/IP, and Ethernet) to reinforce the concepts.

ITC 6035. Information Technology Project Management. (3 Hours)

Covers the tools and techniques used to manage information technology (IT) projects. Topics include project planning, scheduling, and budgeting; project management tools (i.e., PERT/CPM/GANTT); and human resources management. Discusses all phases of IT projects from proposal writing through postrelease maintenance issues. Offers students an opportunity to plan and develop a project that provides a practical application of the topics covered in class.

ITC 6040. Informatics Capstone. (3 Hours)

Offers students an opportunity to produce a polished paper, presentation, or product that reflects their training and focus in the fields of information systems (IS) and information technology (IT). Emphasizes aspects of integrating IS systems, technical architectures, and enterprise functions. Also offers students an opportunity to incorporate issues involving research and development or business and market strategies. Strongly encourages students to create a portfolio piece that can be shown to potential employers or current supervisors.

Prerequisite(s): ITC 6000 with a minimum grade of C- ; ITC 6010 with a minimum grade of C- ; ITC 6020 with a minimum grade of C- ; ITC 6035 with a minimum grade of C- ; ITC 6400 with a minimum grade of C- ; INT 6940 with a minimum grade of C-

ITC 6045. Information Technology Policy, Ethics, and Social Responsibility. (3 Hours)

Explores the policy choices, ethical issues, and legal obligations faced by organizations in the information age. Topics include intellectual property, freedom of expression, privacy, national security, impact of information technology (IT) on the work and home lives of employees, and ethical codes of conduct for IT professionals. Intended to sensitize IT managers and professionals to the issues that arise when doing business in an interconnected world and to develop an understanding of how to ethically and legally operate and use modern computer systems and networks.

ITC 6080. Network Security Concepts. (3 Hours)

Focuses on security concepts, issues, terms, and definitions, as well as the strategic value of being secured. Key topics include planning for network security, security and network protocols, end-user and administrator training, and securing existing networks. Addresses management issues related to network security, including the ethical considerations that arise from decisions regarding access, reporting, monitoring, and use.

ITC 6082. Network Protection. (3 Hours)

Examines the technical methods used to ensure that information using wired and wireless media reaches only those for whom it was intended. Covers the technical tools to protect information from external compromise. Explores load balancing, wireless access, Web security issues, and network intrusion detection. Offers students an opportunity to develop a detailed understanding of authentication, firewall configuration, and rule sets and to learn to address and prevent security issues related to intranets, extranets, enterprise networks, and the Internet.

ITC 6300. Foundations of Information Security. (3 Hours)

Offers an overview of the threats to the security of information systems, the responsibilities and basic tools for information security, and the levels of training and expertise needed in organizations to reach and maintain a state of acceptable security. Topics include an introduction to confidentiality, integrity and availability, authentication, encryption and access controls, intrusion detection and response, social engineering, physical security, policy formation and enforcement, legal and social issues, and risk management.

ITC 6305. IT Infrastructure (Systems, Networks, Telecom). (3 Hours)

Introduces the elements of IT infrastructure—systems, networks, and telecommunications. Telecommunication fundamentals include data, voice, image, and video. Covers the concepts, models, architectures, protocols, standards, and security for the design, implementation, and management of digital networks. Discusses the essentials of local area networks (LANs), metropolitan area networks (MANs), and wide area networks (WANs).

ITC 6310. Information Security Governance. (3 Hours)

Covers the foundations for the policy, law, regulatory, and ethical accountability frameworks that information security risk managers must work within. Information security governance is an overarching consideration in all risk-management-related endeavors, and it is understood to be of supreme importance for information security since many issues have legal, regulatory, policy, and ethical considerations.

ITC 6315. Information Security Risk Management. (3 Hours)

Focuses on assessing, modeling, communicating, and addressing risk issues. Covers statistical, financial, technical, and other risk-assessment and risk-modeling techniques and tools. Explores policy and governance frameworks for information security risk management and the legal, behavioral, and social issues that arise in implementing security policies. Offers students an opportunity to develop risk assessments and present and justify mitigation proposals.

ITC 6330. CISSP Preparation. (3 Hours)

Includes all ten domains that make up the body of knowledge covered by the CISSP examination. Offers students an opportunity to obtain the knowledge and technical concepts required to achieve this certification. Topics include security management practices; access control systems; telecommunications and network security; cryptography; security architecture and models; operations security; applications and systems development; business continuity planning and disaster recovery planning; law, investigation, and ethics; and physical security. The CISSP certification is governed by the International Information Systems Security Certifications Consortium and is universally recognized as a key component in the selection process for management-level information security positions.

ITC 6345. Systems and Network Administration. (3 Hours)

Focuses on the skills, tools, and best practices required to provide and support computing infrastructure and services. Covers system installation and configuration, defining users and groups, user authentication, file systems, configuring and managing system and network services, client/server systems, and Web site administration. Also discusses troubleshooting, backup/recovery, security issues and policies, user/customer interaction, and the ethical and legal responsibilities of a system administrator.

ITC 6355. Web Application Design and Development. (3 Hours)

Introduces the development of Web applications. Topics covered include Web servers, Web application servers, Web application development methods, client-side and server-side scripting, and Web application development techniques. Offers students an opportunity to learn to construct and maintain a well-designed Web site and use state-of-the-art Web application development tools and languages to develop Web applications. Other topics include Web application security, session management, design patterns, and reusable Web application components.

ITC 6400. Foundations of Informatics. (3 Hours)

Introduces the fundamental properties of information, technologies, and people within an increasingly complex infrastructure and social system. Offers students an opportunity to learn theoretical foundations and applications of informatics and to explore technical and social issues—including policy choices, ethical issues, and legal obligations—with IT applications and solutions in various specific settings, such as business, education, healthcare, and government. Offers students a broad perspective and understanding of informatics as both a scientific field as well as a highly applied discipline in specific contexts that may help direct them to future career concentrations.

ITC 6410. Fundamentals of Human Behaviors for Interactive Systems. (3 Hours)

Introduces basic principles of cognitive and social psychology relevant to the design and use of interactive systems and applications. Offers students an opportunity to examine topics including human perception (e.g., how we identify, organize, and interpret information); human memory capacity and operation (e.g., how we recognize and recall information, and how we learn to develop skills and expertise); and human reasoning and decision making. Understanding how the human mind works and the limitation of our mental capacities may ultimately provide valuable insights to apply user-centered approaches in interface design as well as interactive systems development.

ITC 6420. Introduction to Cloud Computing Applications and Management. (3 Hours)

Offers an overview of theoretical and practical aspects of distributed systems and cloud computing. Cloud computing and web services are creating a huge demand for IT professionals to manage large-scale infrastructure and vast networks. Examines frameworks, techniques, and existing IT solutions to manage internet services at different levels (infrastructure, platform, and software) and to support the key characteristics of cloud computing, including virtualization, requirement for high reliability and security, extendability, and versatility.

ITC 6450. Advanced Cloud Computing Applications and Management. (3 Hours)

Offers a comprehensive learning experience in advanced concepts within cloud computing. Cloud computing has become a disruptive technology that has dramatically transformed the IT industry by offering scalability and delivery options that had not existed previously. Offers students an opportunity to gain an in-depth knowledge of concepts, programming models, virtualization options, file systems, architectures, storage, and secure computation, as well as to learn contemporary industry trends and what the future holds in the advanced concepts of cloud computing.

Prerequisite(s): ITC 6420 (may be taken concurrently) with a minimum grade of C-

ITC 6460. Cloud Analytics. (3 Hours)

Introduces students to a set of techniques, tools, and applications to help clients extract and harvest information from massive data (e.g., social media sites, e-commerce websites) through a cloud platform adopted by a business. Also introduces techniques to help clients migrate historical data to cloud systems, as new cloud systems provide contemporary analytics solutions. Offers students an opportunity to gain the technical strength to assist data analytics process and business intelligence in the context of a cloud computing platform. Cloud analytics is an emerging topic that helps establish a cloud computing service mode, aiming to assist and facilitate data analytics process through a public or private cloud.

ITC 6470. Enterprise Data Storage and Management Technologies. (3 Hours)

Provides a comprehensive learning experience in many domains that comprise data storage and storage management technologies. Students have an opportunity to gain in-depth knowledge of storage system architecture, business continuity, storage security, and storage infrastructure management processes. Technology trends such as shared-service infrastructures, cloud computing, Big Data, and the Internet of Things are all changing the way data is processed, stored, and used in enterprises. There is an increasing need for skilled data storage architects and managers to handle manage massive amounts of data in enterprise and cloud environments.

ITC 6480. Amazon Web Service (AWS) Cloud Architecting. (4 Hours)

Exposes students to advanced technical topics to assist in the development of expertise in AWS cloud computing. Offers students an opportunity to gain the skills needed to pursue certification as an AWS Certified Solutions Architect—Associate, one of the most valuable IT certificates. Includes reading materials provided by AWS Academy, guided instruction in the classroom, hands-on labs operated by AWS, project work, and free practice exam if students wish to pursue certification after completing the course. Successful students have the ability to demonstrate knowledge and skills of how to architect and deploy secure and robust applications on AWS technologies.

ITC 6490. Ethical Hacking. (3 Hours)

Exposes students to the different phases of hacking, specific skills for penetration/intrusion testing, and demonstrates hands-on techniques in ethical hacking. Offers students an opportunity to gain technical capabilities to secure information systems and protect networks from hackers.

ITC 6520. Network Protection and Cloud Security. (3 Hours)

Studies technical tools to protect data, data privacy, information systems, and enterprise networks from external compromise. As enterprises evolve to handle speed, volume and types of data, enterprises must protect data, detect system compromises, and provide strategies for damage recovery. Students will have the opportunity to explore the field of cybersecurity, the body of technologies, processes, and practices designed to protect networks, devices, programs, and data from attack, damage, or unauthorized access. Offers students an opportunity to understand the components of a well-architected cybersecurity framework; to identify the tools required; and to create a plan that will protect the digital assets of the enterprise.

Prerequisite(s): ITC 6420 with a minimum grade of C-

ITC 6530. Security Analytics. (3 Hours)

Focuses on the knowledge and skills necessary to successfully handle security incidents based on real-time experience. Offers students an opportunity to analyze security risks, threats, and intrusion types as they develop security measures to protect an organization's computer networks and information systems. Studies how security analytics provide small, medium, and large organizations with visibility into complex attack techniques, such as data exfiltration, lateral movement, and compromised credentials. These cybersecurity skills are in high demand by employers.

ITC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

ITC 7995. Project. (1-4 Hours)

Offers students a focused project experience to conduct in-depth research or produce a tangible product related to dominant topics in informatics. May be repeated up to three times for a maximum of 12 quarter hours.

Insurance - CPS (INS)**Courses****INS 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INS 6010. Insurance Finance. (3 Hours)

Designed to provide students with a rigorous combination of theory and practice in the fundamental principles of finance for insurance. Offers students an opportunity to become familiar with many of the core principles and concepts commonly applied in the insurance field on a daily basis. Identifies and reinforces work-related practices, such as analyzing financial statements, the application of time value of money concepts, asset valuation on a discounted cash flow (DCF) basis, cost benefit analysis (CBA), and the quantification of the multifaceted relationship between risk and return in financial markets.

INS 6020. Claims Management. (3 Hours)

Introduces how claims are adjudicated in the insurance industry, focusing on specific steps and processes of principled claims management. Addresses the shifting technological landscape, exploring analytics as a tool for claim resolution and fraud detection, as well as providing information about the operational and regulatory environment in which claims are processed and managed. Reviews and evaluates case studies of all types of insurance and reinsurance. Illustrates how insurance regulations and compliance requirements have a significant, influential impact on the products sold and insurance carrier behavior in risk.

INS 6030. Insurance Underwriting. (3 Hours)

Introduces fundamental underwriting objectives and techniques across multiple lines of the insurance business—including life, health, accident, annuity, property, and casualty. Offers students an opportunity to learn how to apply risk analysis methodologies to pricing, negotiating, and client service. Integrates the most current tools and trends in analytics that have and will become essential to the underwriting process. Analyzes the impact of insurtech on the insurance industry, identifying applied practices that may transform underwriting. Examines decision science principles, to enable students to better understand how to select data for underwriting evaluation.

INS 6040. Introduction to Insurance Data Analytics. (3 Hours)

Offers an overview of analytics concepts and practices. Uses case studies of successful analytics initiatives within the insurance industry to examine how the collection and analysis of data impacts decision making. Introduces statistics for business analytics from an analysis-of-data viewpoint. Topics include frequency distributions; measures of location; mean, median, mode; measures of dispersion; variance; graphic presentation; elementary probability; populations and samples; sampling distributions; categorical data; continuous probability distributions; confidence intervals; and hypothesis testing. Offers students an opportunity to engage with the current theories, practices, and debates in the field of analytics to critically examine its practice for insurance industry professionals.

INS 6050. Intermediate Insurance Analytics. (3 Hours)

Builds on the foundation laid by INS 6040. Introduces fundamental data due diligence, reliability, data correction, and recoding processes and practices as they apply to the insurance industry. Expands upon the earlier introduced approaches to discerning and validating patterns in data through sound applications of the scientific method. Emphasizes regression, chi-square and ANOVA testing, regularization, and generalized linear models. Offers students an opportunity to obtain the fundamental data management, review, reengineering, and exploration skills required to successfully develop the data analytical competencies in demand across the insurance industry.

Prerequisite(s): INS 6040 with a minimum grade of C-

INS 6080. Integrated Experiential Learning. (3 Hours)

Offers students an application-oriented practicum in the development and delivery of insurance technology/analytics and management projects for tactical and strategic decision making in insurance organizations undergoing digital transformation. Offers students an opportunity to apply the principles, approaches, and tools to real-world problems in domain knowledge areas of insurance organizations and to develop and present analytical and management insights and recommendations for successful implementation of the sponsor project.

INS 6110. Insurance Regulation and Law. (3 Hours)

Offers students an opportunity to learn about insurance regulation at the state and federal level. Topics include the history and evolution of insurance regulation, federal and state regulatory practices, underwriting and claims regulation, and international insurance regulation.

INS 6120. Macro Challenges in Insurance. (3 Hours)

Studies the macro challenges facing the planet—including an aging population, climate change, and pandemic risks—and the way in which the insurance industry adapts and changes to address those challenges. From its deep-rooted understanding of risk assessment to its extensive access to and grasp of data, the insurance industry must vigilantly assess and respond to macro risks that threaten populations.

Prerequisite(s): INS 6010 with a minimum grade of C- ; INS 6030 with a minimum grade of C- ; INS 6040 with a minimum grade of C-

INS 6130. Advanced Reinsurance. (3 Hours)

Analyzes the fundamental mechanics of reinsurance, explaining how to use reinsurance to better create, pursue, and achieve core and strategic business goals. Students research the capital markets and how those financing sources evaluate the industry for investment purposes. Explores core aspects of reinsurance contract administration, as well as the financial management benefits and risks associated with reinsurance vehicles, markets, and partners, applying acquired knowledge to examples of uses and pitfalls to reinsurance purchasing.

Prerequisite(s): INS 6010 with a minimum grade of C- ; INS 6030 with a minimum grade of C-

INS 6140. Distribution and Sales. (3 Hours)

Introduces students to the traditional distribution and sales models used by the insurance industry. Examines contemporary disruptions to the traditional distribution and sales models brought on by the integration of data, machine learning, AI, and the trend toward online customer engagement. Offers students an opportunity to examine the impacts of these changes for individuals working in the distribution and sales segments of the insurance industry.

Prerequisite(s): INS 6040 with a minimum grade of C-

INS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INS 6980. Capstone. (3 Hours)

Offers an advanced application-oriented practicum in the development and delivery of insurtech/analytics and management projects for tactical and strategic decision making in insurance organizations undergoing digital transformation. Offers students an opportunity to apply the principles, approaches, and tools to real-world problems in domain knowledge areas of insurance organizations. Expects students to present analytical and management insights and recommendations for a successful implementation of their capstone project.

INS 6983. Special Topics. (3 Hours)

Covers special topics relevant to the Insurance industry. May be repeated up to four times.

Interdisciplinary Studies - CPS (INT)**INT 2000. Experiential Project Preparation. (1 Hour)**

Designed to prepare students for an experiential learning placement. Encourages students to align academic goals with professional outcomes, course curriculum, and experiential learning opportunities. Offers students an opportunity to better understand key components of networks, business professionalism, and effective communication. Topics include resumé writing, defining a career field, assessing skills and abilities related to developing a career, and building cultural competency awareness. Asks students to develop a comprehensive, strategic job search plan along with effective related career documents. Introduces the College of Professional Studies' cooperative education and academic internship policies, procedures, and expectations.

INT 2964. Experiential Project. (0 Hours)

Offers students an opportunity to apply their curricular learnings in an applied project setting. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions from this review to improve and further develop their career development and professional plan. May be repeated twice.

Prerequisite(s): INT 2000 (may be taken concurrently) with a minimum grade of S

INT 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INT 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INT 5964. Projects for Professionals. (0 Hours)

Offers students an opportunity to apply their curricular learnings in an applied project setting. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions from this review to improve and further develop their career development and professional plan. May be repeated twice.

Prerequisite(s): INT 6200 with a minimum grade of S or EDU 6184 with a minimum grade of C-

INT 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner. May be repeated two times.

INT 6000. Writing Lab. (1 Hour)

Requires students to analyze and draft writing assignments from topics covered in graduate level courses.

Corequisite(s): CMN 6000

INT 6200. Experiential Project Preparation. (1 Hour)

Designed to prepare students for an experiential learning placement. Offers students an opportunity to better understand key components of networks, business professionalism, and effective communication. Offers instruction in resumé writing; defining one's career field; assessing skills and abilities related to developing a career; building cultural agility, knowledge, and skills; and developing a comprehensive, strategic job search plan, along with effective career documents. Emphasizes alignment of academic goals with professional outcomes, course curriculum, and experiential learning opportunities.

INT 6900. International Field Study Experience. (3,4 Hours)

Seeks to prepare students for an increasingly global workplace and to help them gain a deeper understanding of current issues in their fields of study in an international context. Includes a period of required on-site instruction in the region of study. Offers students an opportunity to conduct in-depth field study based on specific themes pertinent to the locality and to meet with representatives from local organizations such as schools, businesses, the arts, government officials, and others. Culminates in a professional-quality research project or presentation. May be repeated up to two times.

INT 6940. Experiential Learning Projects for Professionals. (1-4 Hours)

Offers students an opportunity to apply knowledge and skills gained through their master's program to work on challenging short-term projects under faculty supervision. Students are matched with discipline-specific consulting projects provided by a wide range of sponsoring organizations in the private and nonprofit sectors. Students develop a project plan, conduct research, develop and deliver recommendations to sponsoring organizations, and reflect on lessons learned. Mapping academic course concepts and skills to the consultative process is a primary learning goal. Requires an application process.

INT 6943. Integrative Experiential Learning. (3 Hours)

Offers students an opportunity to clarify their vision of a successful professional future, identify goals to achieve that vision, and assess career growth opportunities. Explores how to frame a growth strategy using internal and external scanning mechanisms, negotiation and persuasion, research, and critical reflection. Students refine an applied research topic, perform research, develop recommendations for addressing a key performance area within their existing workplace, and create a plan for implementing their recommendations. Students review "lessons learned" and incorporate suggestions from this review to improve and finalize their integrated plan. With permission from their host organization, students may go on to implement elements of their project in a current or upcoming project, where feedback is provided from stakeholders, including their corporate sponsor.

INT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Interdisciplinary Studies in Arts, Media, and Design (INAM)

Courses

INAM 1300. The Politics of Narrative in Theatre. (3 Hours)

Examines drama in everyday life—on stages, streets, and screens—and investigates the tribulations and promises of role-playing in ordinary narratives. Topics may include tragedy and trauma, identity and identification, catharsis and psychoanalysis, and the relationship between sacrifice and personal development. Interrogates how role-playing and drama—in all its forms—permeates our social relations. Experiments with rewriting the dramatic narrative of our everyday life experiences.

Corequisite(s): INAM 1301

Attribute(s): NUpath Ethical Reasoning

INAM 1301. The Politics of Narrative in Theatre Seminar. (1 Hour)

Accompanies INAM 1300. Engages in detailed discussions about the assigned readings and weekly topics.

Corequisite(s): INAM 1300

INAM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 2000. Ethics in Creativity. (4 Hours)

Studies the role of ethics in creative practice. Offers students an opportunity to reflect on many of the concerns creative professionals face, such as how creative practitioners manifest care as a social intervention for building intimacy, healing, and hope across communities and how to develop and articulate creative goals. From the rhetoric of trust and authenticity, to honesty and generosity, ethical concepts consistently make their way into creative practice. Examines (and affords students an opportunity to hone) strategies to systematically navigate uncertainty and iteration within creative practice, culminating in a student final creative project. Readings focus on ethical paradigms that illustrate how systems of power shape the role of creative practices in society.

Attribute(s): NUpath Creative Express/Innov, NUpath Ethical Reasoning, NUpath Writing Intensive

INAM 2183. Interdisciplinary Special Topics: Pop-up Course. (1,2 Hours)

Addresses timely trends, issues, and events as they unfold. Offers students an opportunity to learn about and respond to issues of the day in an immersive, interdisciplinary, short-course format. Content and instructors vary by offering. May be repeated seven times for a maximum of 16 semester hours.

INAM 2963. Topics. (1,2 Hours)

Offers undergraduate students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

INAM 2964. Experiential Project. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned', and incorporate suggestions from this review to improve and further develop their career development and professional plan.

INAM 2973. Topics in Making. (1-4 Hours)

Offers students an opportunity for early undergraduate-level examination of a subject in making. May be repeated for up to 16 SH.

INAM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INAM 3200. Creative Cognition. (4 Hours)

Offers a multidisciplinary exploration into the science of creativity. Many would agree that creativity is a cornerstone of human culture and innovation. But what is creativity, and how can humans cultivate it in life? Topics include idea generation and evaluation, problem solving and insight, psychometric measurements of creativity, the role of creativity in the arts and in human resource management, and the complex relationships between creativity and mental health. Synthesizing a variety of perspectives in creativity research, offers students an opportunity to train themselves to become more creative thinkers and practitioners.

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov

INAM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INAM 5000. Introduction to Creative Computing. (4 Hours)

Introduces foundational concepts of computational media art, focusing on the use of computational processes for the creation of interactive and generative experiences. Students use data and mathematical procedures to generate images, express ideas, and create meaning. Offers students an opportunity to obtain practice-based experience with the benefits and limitations of using computational processes, reflecting on what computers can and cannot do well. Uses computational procedures and concepts such as automation, recursion, and data processing for creative purposes. Students create computational media projects using code and/or other media such as photography, video, performance, installation, etc.

INAM 5300. Principles of Design. (2 Hours)

Introduces the foundational essential components of the design process, investigates key concepts in historical and contemporary design practice, and includes applied practice to illustrate the way expert designers think, collaborate, and create. Core content focuses on a broad range of design applications across industry sectors to improve intellectual dexterity and provide a range of interdisciplinary skills and knowledge.

INAM 5305. User Observation and Design Planning. (2 Hours)

Introduces the theory and methods of behavioral observation, description, and analysis. Covers the methodologies and tools for conducting quantitative and qualitative user research, including surveys, persona development, customer journey maps, and other industry-standard tools for studying user experience. Course content focuses on the general forces acting upon an organization, such as competition, technological breakthroughs, diverse information channels, demographic shifts, and how practitioners are using design to proactively respond to these forces.

Prerequisite(s): INAM 5300 with a minimum grade of C

INAM 5310. Principles of Creative Collaboration. (2 Hours)

Studies methods for recognizing and removing personal creative blocks, techniques for strengthening communication skills in a team-based environment, as well as active listening skills to amplify the ideas of others. Increasingly complex organizations require teams to boldly navigate uncertainty, leverage the power of diverse perspectives, and collaborate effectively to uncover innovative ideas. This course builds upon these concepts.

INAM 5400. Facilitating Creative Collaboration. (2 Hours)

Explores the different types of roles that individual contributors may take in team-based environments; methods for navigating challenging situations to improve team productivity; and techniques for strengthening leadership, communication, and collaborative skills. Successful leaders leverage a variety of techniques and tools to discover, understand, and maximize the ways in which teams interact, communicate, and collaborate. At the conclusion of the course, students should be able to develop and execute action plans by applying these practices for optimum team productivity and output.

Prerequisite(s): INAM 5310 with a minimum grade of C

INAM 5405. The Agile Mindset and Design-Led Innovation. (2 Hours)

Focuses on approaches to problem solving that are human centered and guided by the underlying principles of adaptability, collaboration, design, and creativity. Grounded in both theory and applied practice, offers students an opportunity to learn techniques for building their own adaptive capacity, crafting and communicating a strong vision, applying a framework for distributed leadership, engaging and empowering team members, and codesigning solutions that require shifts in beliefs and practice.

INAM 5410. Persuasion and the Power of Storytelling. (2 Hours)

Explores the basic theory of persuasive communication, including models of information processing, motivational appeals, message acceptance, fast and slow decision making, and rules of effective human interactions. Effective leaders across organizations possess the ability to engage, inspire, and challenge teams through authentic connection and clear communication. Compelling stories help to make sense of complexity, engage the audience emotionally, and call others to action. Offers students an opportunity to learn to frame the problem, consider audience motivations, utilize compelling and dramatic narrative construction, convey complex information orally and visually, and generate emotional appeal and action.

INAM 5415. Design Studio: Fundamentals of Iterative Prototyping. (2 Hours)

Analyzes the different types of prototypes and the logic for when and how to employ each technique when testing distinct assumptions. Covers prototype selection; the methods for prototyping ideas and testing underlying assumptions; implementing prototypes to discover, communicate, and validate; and techniques for executing and testing ideas. Offers students an opportunity to learn the need for rapid innovation, resiliency, and gracefulness in the face of frequent failure situations.

INAM 5420. The Creative Process. (4 Hours)

Explores several themes that stimulate creativity in individuals and teams. Analyzes the notion of creativity, including defining creativity, understanding how it is measured, and analyzing processes of creativity across multiple disciplines and industry sectors. Delves into the mechanics of creativity to explore how the most innovative thought leaders have revolutionized their industries and left a lasting impact on the world. Offers students an opportunity to explore their own creativity and professional applications to align their creative process with scientifically proven strategies. Students work with a variety of teams on assignments throughout the course to foster collaboration and learning.

INAM 5425. Design Methodology. (4 Hours)

Explores the mindset, skill set, and tool set associated with design. The content is oriented toward practical methods for approaching a design problem holistically to help frame and solve challenges with a wide range of applications across industry sectors. Includes approaches to noticing and observing, framing and reframing, imagining and designing, and experimenting and testing. Introduces concepts of user experience (UX) design, user interface (UI) design, and system design to provide a strong foundation for future coursework.

INAM 5430. The Improvisational Mindset. (2 Hours)

Studies the essential skills to becoming a more authentic and dynamic leader by learning to read situations accurately, make well-calibrated and appropriate responses for different audiences and circumstances, as well as lead with more confidence and empathy. Offers students an opportunity to develop a broader leadership tool kit, including the ability to adapt to shifting landscapes, business challenges, and unanticipated situations with agility, spontaneity, and creativity.

INAM 5435. Multidisciplinary Collaboration and Creative Engagement. (2 Hours)

Focuses on helping students conceive design solutions through analyzing assumptions, intuition, and working through iterative sequences in a team-based environment to generate creative outcomes. Central to this course is an acknowledgement of the limitations of individuals and singular disciplines and the need for collaboration that includes diverse perspectives. Successful leaders leverage a variety of techniques and tools to discover, understand, and maximize the ways in which teams interact, communicate, and collaborate. Topics include team formation, leading teams, decision making as a group, gathering diverse perspectives, testing assumptions, and managing conflict.

INAM 5440. Organizational Storytelling and Public Relations. (2 Hours)

Explores theoretical and practical competence in organizational branding, promotion, and public relations. Presents the practical and analytical skills needed to envision promotional strategies, community engagement efforts, and marketing materials by leveraging user experience design across both traditional and digital environments.

INAM 5445. Inclusive Communication and the Power of Diverse Networks. (2 Hours)

Offers students an opportunity to learn how to create a shared purpose, strengthen engagement, foster generative learning, and leverage the power of differences in a team-based environment where a diversity of ideas is actively encouraged. Matrixed companies are leveraging more cross-functional, flexible teams to work on short-term projects. Diverse networks of relationships provide webs of support while offering new perspectives that spur innovation and growth. This course explores these themes in depth through applied practice.

INAM 5500. Adaptive Leadership. (2 Hours)

Explores the power of discovery as a driving force for uncovering emergent strategies, how to adapt to changing circumstances in a team-based environment, methods for creating and articulating strategies that are flexible and scalable, and how to collaboratively lead teams in order to solve problems that address required change. Adaptive leadership enables managers and their organizations to rapidly and efficiently shift strategy in direct response to changing internal and external circumstances.

INAM 5505. Dynamic Multichannel Communication. (2 Hours)

Covers the practical tools to improve clarity when articulating new ideas, how to command the attention of any audience, and distinctive communication styles tailored to digital and virtual formats. New platforms and technology innovations have allowed individuals to share user-centered, dynamic, and practical information through personalized, engaging, and digestible messages. Video conferencing has also evolved to change the way we connect with peers, colleagues, and external audiences. Offers students an opportunity to learn how to hone more effective communication skills tailored to these evolving mediums using creative and adaptable techniques based upon research and proven methods.

INAM 5507. Foundations of Data Visualization. (1 Hour)

Establishes the conceptual models of data visualization and information design with respect to data analysis and examines the implications of these models for the visualization practice. Distinguishes and articulates what makes a successful visualization and which pitfalls to avoid. Draws insights from research in visual perception and examines design strategies to organize information. Identifies improvements to existing visualizations and formally evaluates visualizations in user studies.

INAM 5508. Visual Data Encodings. (1 Hour)

Examines visualization strategies for common data types, focusing on the visualizations that are appropriate for specific research questions and data types. Focuses on visualization methods for one-to-n-dimensional data sources and examines the many different ways to express time and duration. Identifies interactive techniques to support the discovery of patterns, filter through data to isolate meaningful data points, and explore connections between multiple data sources.

Prerequisite(s): INAM 5507 (may be taken concurrently) with a minimum grade of B or INAM 5507 (may be taken concurrently) with a minimum grade of B

INAM 5510. Data-Driven Storytelling. (2 Hours)

Offers practical methodologies for detecting and articulating the stories behind datasets and how to communicate data findings in visual, oral, and written contexts. Covers select topics in data-driven storytelling projects across industry sectors and provides practical tools for navigating the often-competing demands of rigorous analysis and accessible narrative and storytelling. Designed to foster moderate technical learning of applications and software. Incorporates theories from relevant fields in data visualization and data science and emphasizes storytelling for broad public audiences.

INAM 5515. Ethics and Creative Innovation. (4 Hours)

Explores questions of ethics and organizational responsibility as they relate to innovative and creative endeavors. Introduces the theories and methods used in ethical decision making with application across industry sectors. The heightened focus on fairness, trust, accountability, and transparency requires organizations to critically examine their innovative practices to ensure they are safe, inclusive, and socially responsible. Offers students an opportunity to learn about key strands of understanding in these areas, to reflect on their views in relation to current debates, and to hone strategies to systematically navigate uncertainty and iteration within creative practice. Focuses on ethical paradigms to illustrate how systems of power shape the role of creative practices in society. Requires a final creative project.

INAM 5520. User Experience and Emerging Technologies 1. (2 Hours)

Explores emerging digital interfaces and technology. Ongoing reliance on computer interfaces and emerging technologies—including virtual reality (VR), augmented reality (AR), voice user interfaces (VUI), and artificial intelligence (AI)—are growing rapidly and impacting the way we connect with colleagues and customers alike. The advances in artificial intelligence and voice technologies have enabled the creation of platforms and tools that support conversational interactions between people and devices. Offers students an opportunity to obtain an understanding of the tools that will continue to transform user experience across industries and how human-computer interaction has influence across application domains and industry sectors to improve their collaborative work with peers and colleagues, as well as their connection with customers.

INAM 5525. Fundamentals of Systems Design 1. (2 Hours)

Explores the structures and processes for the design of systemic relationships between people, artifacts, environments, and activities. Systems may be physical, virtual, social, or a combination. Covers the principles of systems theory and explores the connection between design methods and systems thinking. Addresses the questions that are fundamental to design practice: What is a system and what are the different types? How do we observe, analyze, and represent systems? What interactions can we have with systems and what are the different types of interaction?.

INAM 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering.

INAM 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned' and incorporate suggestions from this review to improve and further develop their career development and professional plan. May be repeated two times.

INAM 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner. May be repeated two times.

INAM 5973. Topics in Making. (1-4 Hours)

Offers students an opportunity for advanced undergraduate- or graduate-level examination of a subject in making. May be repeated for up to 8 SH.

INAM 5976. Directed Study. (1-4 Hours)

Offers directed study of a specific topic not normally contained in the regular course offerings but within the area of expertise of a faculty member. May be repeated seven times for a maximum of 32 semester hours.

INAM 5983. Interdisciplinary Special Topics. (3,4 Hours)

Addresses timely trends, issues, and events. Offers students an opportunity to learn about and respond to issues of the day in an immersive, interdisciplinary format. Content and instructors vary by offering. May be repeated seven times.

INAM 6000. Interdisciplinary Critique Studio. (4 Hours)

Builds critical analysis skills and introduces students to rigorous artistic dialog. Offers direct, focused feedback on specific student projects. Feedback is conceptual and technical, serving to push the work forward and give students a critical perspective on how their work functions in the world. Offers students the time and the resources to work on long-term projects and to research and develop a more individual body of work. Also provides an opportunity to network, providing an introduction to professional practices in the visual arts, such as exhibiting art works, applying for grants, and teaching.

INAM 6100. Critical Foundations of Creative Practice. (4 Hours)

Introduces core theoretical foundations of the creative practice and creativity studies fields. Considers interdisciplinary, contemporary, and critical frameworks alongside themes such as creative economies; performance and reception studies; placemaking; social and ecological justice; critical race and gender studies; and the intersection of ethics, culture, politics, and public policy around modes of creative practice.

INAM 6200. Topics in Communication Strategies. (4 Hours)

Explores methods and techniques of professional writing to build creative narratives for cultural leaders as well as written and nonwritten communication. Covers strategies for advocacy, including artists/program notes, grant opportunities, business plans, blogs, op-eds, new media, marketing/promotion, and strategic positioning. Offers students an opportunity to develop a portfolio of documents (written and nonwritten) to establish a core for future communication platforms.

INAM 6210. Projects in Interdisciplinary Creative Practice. (4 Hours)

Focuses on project management and assessment for creative projects and related entrepreneurial enterprises; critiques of creative work and creative organizing projects; analysis and application of multiple forms of assessment of the professional practice; and planning for intellectual property, branding, and marketing challenges. Offers students an opportunity to learn how to articulate and implement medium-to-long-range strategies for reaching next career stages and achieving larger goals in their creative enterprises.

INAM 6300. Models for Applied Inquiry in Creative Practice. (4 Hours)

Focuses on thoughtful engagement with diverse and emerging forms of critical inquiry, professional engagement, and creative practice for artists, entrepreneurs, and administrators. Through course work and interaction with leading practitioners, offers students an opportunity to gain an understanding of the impact that forms of production and business models have on potential contribution to fields of critical practice and their diverse culture, while developing innovative models for their own creative, critical, and entrepreneurial endeavors.

INAM 6301. Integrative Research Project. (4 Hours)

Offers students an opportunity to work independently on a research project of choice that integrates two or more creative disciplines. The research project results in students crafting their artist statement.

Prerequisite(s): INAM 6300 with a minimum grade of B-

INAM 6360. Ethnographic Methods and the Arts. (4 Hours)

Considers what ethnography might teach us about creative industries, what it contributes to marketplace research and decision making, and how it informs creative practice. Ethnography uses participant/observation and other methods of collecting qualitative data to research specific social groups and their cultures. Asks for what purposes ethnographic methods are best suited and how ethnography might contribute to cross-cultural understanding, arts leadership, and creative practice. Covers what unique methodological issues ethnographic research in the arts might pose. Offers graduate students an opportunity to develop, with faculty guidance, an original research proposal and independently practice ethnographic methods.

INAM 6430. AI and Creative Exploration. (4 Hours)

Offers students an opportunity to learn how to use off-the-shelf technologies (i.e., prompt engineering for generative AI platforms) and to design AI systems on their own using web interfaces, Python frameworks, cloud-based GPUs, etc. Combines technological training with a critical analysis of AI-based artworks. Designed to help students integrate AI tools and methods into their existing practice. The projects are student driven and should serve to further the students' own research and creative practice. No limitations are placed on the field of application (e.g., visual arts, moving images, games, sound, writing, dance, and movement); however, strongly emphasizes the ethical and socioeconomic impact of AI tools on society—both within and beyond the boundaries of art.

Prerequisite(s): INAM 5000 with a minimum grade of C

INAM 6500. Communication for Social Change. (2 Hours)

Examines the communication strategies employed by national and international organizations, including rhetorical messaging, public advocacy, grassroots organizing, fundraising, and media outreach efforts. Consumers are increasingly interested in an organization's stance on social and political issues. The digital age has provided new ways to access information and support brands that embody the values of diversity, equity, inclusion, and a net positive impact on social movements. Analyzes the platforms these organizations have chosen, the importance of authentic transparency, and how these concepts may be integrated into the core values of any organization regardless of industry sector.

INAM 6505. User Engagement and Experience Design. (2 Hours)

Examines the potential of interfaces as mediators between information and users. Covers the fundamentals of user experience design (UX) and the foundations for interaction design. Explores iterative prototyping and research methods to analyze patterns of behavior and implications of interface on effective communication. Includes utilizing observation, empathy, ethnography, and participatory design methods to offer students an opportunity to increase their understanding of audience and stakeholder motivations and expectations.

INAM 6510. User Engagement and Organizational Communication. (2 Hours)

Studies sensitivity to the needs and goals of various stakeholders in order to design integrated communication messaging to maximize impact and engagement across channels. New workplace trends and the changing technological landscape make it clear that connecting with others to exchange knowledge and ideas is a crucial element of success. New digital platforms, corporate team collaboration sites, and social media networks are making it easier than ever to connect with colleagues and external audiences across the globe.

INAM 6515. Design Studio: Multidisciplinary Projects. (2 Hours)

Focuses on the development of systems, artifacts, communication, and service offerings tailored to the unique personal experience of the audience. Covers a range of research methods, ideation processes, and theoretical frameworks to help students make reasoned judgments when facing complicated situations. Students work in research teams to solve complex multidisciplinary projects requiring iterative, collaborative, and innovative approaches.

Prerequisite(s): INAM 5415 with a minimum grade of C

INAM 6520. User Experience and Emerging Technologies 2. (2 Hours)

Continues the exploration of how immersive technology is revolutionizing the relationship between organizational storytellers and their audiences. Covers virtual reality video formats as a powerful tool providing a 360-degree view of the story to engage multiple audiences. Lab work explores new immersive augmented and mixed-reality formats for publication, exhibition, or other form of information distribution. Offers students an opportunity to learn immersive storytelling concepts using artificial intelligence and machine learning.

Prerequisite(s): INAM 5520 with a minimum grade of C

INAM 6525. Fundamentals of Systems Design 2. (2 Hours)

Introduces system modeling methods for representing different types and aspects of systems including continuous models, discrete models, probabilistic models, and structural models. System modeling and simulation software packages are used to understand and predict system behavior. Various forms of physical prototyping are also applied as complementary methods to understand, analyze, explore, and evaluate systems through the development process.

Prerequisite(s): INAM 5525 with a minimum grade of C

INAM 6530. Emerging Practices in Technology and the Arts in Context. (4 Hours)

Exposes students to a range of new tools and techniques for making art in a contemporary interdisciplinary framework. Explores how digital technology is reshaping artistic methodologies, affinities, and ways of making. Enriches existing student creative practices and encourages expansion into new, interdisciplinary territories. Includes guest lectures, performances, and off-site visits as well as studio workshops, discussions, and critiques.

INAM 6900. Interdisciplinary Capstone. (4 Hours)

Offers students an opportunity to work on real-world, open-ended projects proposed by industry partners and university research centers. Students work in diverse teams as they apply creativity, collaboration, and design concepts to conceptualize the problem, define functional requirements, identify risks and countermeasures, and prototype solutions.

Prerequisite(s): INAM 5415 (may be taken concurrently) with a minimum grade of C

INAM 6976. Directed Study. (1-4 Hours)

Offers directed study of a specific topic not normally contained in the regular course offerings but within the area of expertise of a faculty member. May be repeated without limit.

INAM 7000. Introduction to Research in Interdisciplinary Design and Media. (4 Hours)

Offers an overview of different forms of art and design research. Designed to guide students in crafting a plan for navigating their own individual path through the program. Creates a shared vocabulary for interdisciplinary research and sets expectations for the remainder of each student's highly individualized path. Throughout the semester, the class reads and discusses key texts on interdisciplinary arts and design and media research; researches and reports on case studies of other research that relates to the direction of their research, including dissertations by prior students from CAMD and other institutions; and participates in guest presentations/discussions by program faculty regarding the integration of research and practice.

INAM 7001. Research Methods in Interdisciplinary Design and Media. (4 Hours)

Offers an overview of research designs and methods across disciplines. Discusses how to select and use these methods and strategies and discusses IRB procedures. Includes guest presentations from faculty across the campus. This course is not meant as a comprehensive methodological training but rather an overview that should be complemented with at least one specialized methods course from a university-wide list of courses in the first semester of study and two others in the second semester of study.

INAM 7100. Thesis Proposal. (4 Hours)

Offers students an opportunity to develop and present a proposal for a topic of study/research based on their creative disciplines to a faculty committee for approval. Requires a definition of the scope of the project, a description of the interdisciplinary nature of the work, the methodologies for the research, and the assumptions being questioned or analyzed. The thesis research proposal must demonstrate the student's ability to carry out independent interdisciplinary creative practice research.

Prerequisite(s): INAM 6301 with a minimum grade of B-

INAM 7900. Research Seminar. (4 Hours)

Requires students to present their work in progress for feedback by their peers, faculty, and visitors. The work conducted in this seminar serves as the foundation for establishing the topic and method of study employed for the dissertation.

INAM 7901. Dissertation Writing Seminar. (4 Hours)

Introduces and discusses conventions in dissertation writing such as structure, contextualization, argumentation, tone, formality, and citation styles. Development of a thesis proposal and honing the project's methodology is the main function of this course. Offer students an opportunity to continue developing publishable scholarly work that is associated with the dissertation project.

INAM 7990. Thesis. (4 Hours)

Offers the candidate, working with a thesis advisor, an opportunity to continue to complete the research project defined and proposed in INAM 7100. The research is carried out in an independent manner, with periodic presentations to the thesis committee. These presentations define the benchmarks for determination of successful progress in the project. The ultimate result is an exhibition, screening, performance, or other form of public display or presentation, together with a thesis paper or written corollary.

Prerequisite(s): INAM 7100 with a minimum grade of B-

INAM 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continued work on the thesis project.

Prerequisite(s): INAM 7990 with a minimum grade of B-

INAM 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated up to three times.

INAM 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

INAM 9700. Dissertation Fieldwork. (0 Hours)

Offers students an opportunity to pursue experiential research outside the classroom and outside the university.

INAM 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by individual members of the department.

Prerequisite(s): INAM 9000 with a minimum grade of S

INAM 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by individual members of the department.

Prerequisite(s): INAM 9990 with a minimum grade of S

INAM 9996. Dissertation Continuation. (0 Hours)

Offers dissertation supervision by individual members of the department.

Prerequisite(s): INAM 9991 with a minimum grade of S

Interdisciplinary Studies in Science (INSC)

Courses

INSC 1000. Science at Northeastern. (1 Hour)

Introduces first-year students with majors in the College of Science to the liberal arts in general. Offers students an opportunity to become familiar with their college and majors; to develop the academic skills necessary to succeed (analytical ability and critical thinking); to become grounded in the culture and values of the University community; and to develop interpersonal skills—in short, presents students with the skills needed to become a successful university student.

INSC 1200. First-Year Research Project. (1 Hour)

Offers an opportunity for students to engage in supervised, project-based, group research.

INSC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSC 2963. Topics. (1,2 Hours)

Offers undergraduate students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

INSC 2964. Experiential Project. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned,' and incorporate suggestions from this review to improve and further develop their career development and professional plan.

INSC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSC 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INSC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSC 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INSC 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

INSC 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review "lessons learned", and incorporate suggestions from this review to improve and further develop their career development and professional plan.

INSC 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner.

Interdisciplinary Studies in Social Sciences and Humanities (INSH)

Courses

INSH 1000. Social Sciences and Humanities at Northeastern. (1 Hour)

Intended for freshmen in the College of Social Sciences and Humanities. Introduces freshmen to the liberal arts in general. Offers students an opportunity to become familiar with their major, to develop the academic skills necessary to succeed (analytical ability and critical thinking), to become grounded in the culture and values of the university community, and to develop interpersonal skills—in short, to become familiar with all the skills needed to become a successful university student.

INSH 1102. Food in Contemporary Context. (4 Hours)

Offers a multidisciplinary set of perspectives on an intrinsic part of daily life—food. Food is not just about survival—it is about being human. Producing it, making it, eating it, obsessing about it is woven throughout our lives. It defines, and is defined by, culture. It is the basis of economies, has produced great fortunes, defines entire communities, and is the cause of conflicts. It is at once natural and artificial, grown and manufactured. It nourishes us and makes us sick. It is the source of sublime pleasure and no small anxiety. Food defines us, as much as we define it. With these considerations, this course uses food as a lens into contemporary life.

Attribute(s): NUpath Societies/Institutions

INSH 1300. Introduction to Health and Humanities. (4 Hours)

Explores the ways in which narrative and other forms of creative and cultural expression help shape conceptions of illness, healing, and the body. Offers students opportunities to consider the health and humanities through a variety of interdisciplinary perspectives and genres. Includes small-group and classwide experiential field outings. Culminates in the composition of reflective responses, a medical ethics/medical journalism piece, and a team-based experiential e-portfolio project. Course objectives include differentiating between healing and curing; knowing how to elicit, listen to, and analyze stories to determine how participants in the healthcare system experience illness and healing; being able to articulate the ways health is a cultural construct; and using this analysis to identify an empathic response as a future professional.

Attribute(s): NUpath Interpreting Culture

INSH 1500. Digital Methods for Social Sciences and Humanities. (4 Hours)

Introduces programming skills and computational methods through application to topics in the social sciences and humanities. Methods include computational text analysis, network analysis, mapping software and analysis, computational approaches to data, big data, and/or social simulation. Offers students an opportunity to develop an understanding of the use and significance of computational tools for social sciences and humanities. No previous programming experience required.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

INSH 1600. Cultures of London - Abroad. (4 Hours)

Offers students in London an opportunity to learn about and interact with visual art and architecture and literary representations of the city. Examines how different peoples and different art forms have helped to shape the culture of this multicultural city over a span of some 400 years (from the Renaissance to contemporary London). Students read poetry, prose, and drama; attend theatrical events; and explore the city through walking tours and visits to historic sites. Seeks to develop familiarity with the critical, historical, and theoretical tools necessary to understand how imperial and colonial histories have shaped the cultures of London and the experiences of its citizens of diverse races, ethnicities, and regional or national identities.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

INSH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSH 2101. Love and Hate: Social, Psychological, and Literary Approaches. (4 Hours)

Studies materials that define and describe love and hate from the fields of literature and literary criticism, social psychology, and criminology and criminal justice. "Love" and "hate" are small words describing powerful emotions with profound effects on individuals and on social groups. Focusing largely on contemporary examples, offers students an opportunity to analyze the differences and areas of overlap in the above fields' approaches to love and hate, to discuss societal responses to these emotions, and to apply the methodologies of each field to research questions of their own. INSH 2101 and PSYC 2101 are cross-listed.

Prerequisite(s): ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

INSH 2102. Bostonography: The City through Data, Texts, Maps, and Networks. (4 Hours)

Uses Boston as a case study for integrating computational methods with the social sciences and humanities to provide new insights into major cultural, historical, and societal questions as they relate to and extend beyond the city of Boston. Through lectures, discussions, and labs, the course examines a variety of data sets that measure geographic, historical, literary, political, civic, and institutional landscapes. Offers students an opportunity to combine analytical tools, such as geospatial mapping, data visualization, and network science, with readings, hands-on class activities, and museum or site visits, enabling a comprehensive view of complex cultural and social phenomena.

Prerequisite(s): CS 2500 (may be taken concurrently) with a minimum grade of D- or (DS 2000 (may be taken concurrently) with a minimum grade of D- ; DS 2001 (may be taken concurrently) with a minimum grade of D-)

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

INSH 2300. Culture, Technology, and the Future of Health. (4 Hours)

Introduces the challenges posed by the data-heavy medicine of the future to privacy, the appropriate collection of medical data, and the ways that patients and healthcare workers alike think about health. Offers students an opportunity to learn how to use critical and ethical theories, analyze health narratives, and use historical and contemporary data about health disparities to forecast how new technologies might pose social and cultural challenges. Takes a humanities perspective to critically evaluate social and cultural aspects of a healthcare system shaped by emerging technologies and the data they produce.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

INSH 2963. Topics. (1,2 Hours)

Offers undergraduate students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

INSH 2964. Experiential Project. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned,' and incorporate suggestions from this review to improve and further develop their career development and professional plan.

INSH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSH 2992. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INSH 3101. Research Methods in the Social Sciences. (4 Hours)

Introduces the basic concepts involved in conducting research in the social sciences. Familiarizes students with the scientific methods that are necessary for systematic analysis of social behavior, societal trends, program effectiveness, and public attitudes through readings, lectures, group discussions, and research assignments. Offers students an opportunity to learn how to formulate a research question, investigate and critique how questions are researched, develop a research design, and obtain the critical thinking skills necessary to consume interdisciplinary research across the social sciences.

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

INSH 3102. Introduction to Statistics in the Social Sciences. (4 Hours)

Presents a foundation in different statistical techniques that may be utilized to answer research questions in the social sciences. Examines a range of computational social science techniques across data platforms to address societal problems. Emphasizes existing databases that may inform questions in the social sciences. Also introduces students to different ways to display or visualize quantitative data. Offers students an opportunity to learn how to produce and consume quantitative information.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

INSH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSH 4998. Research. (0 Hours)

Offers an opportunity to document student contributions to research projects or creative endeavors.

INSH 5183. Interdisciplinary Special Topics: Pop-up Course. (1,2 Hours)

Addresses timely trends, issues, and events as they unfold. Offers students an opportunity to learn about and respond to issues of the day in an immersive, interdisciplinary, short-course format. Content and instructors vary by offering. May be repeated three times for a maximum of six semester hours.

INSH 5301. Introduction to Computational Statistics. (4 Hours)

Introduces the fundamental techniques of quantitative data analysis, ranging from foundational skills—such as data description and visualization, probability, and statistics—to the workhorse of data analysis and regression, to more advanced topics—such as machine learning and networks. Emphasizes real-world data and applications using the R statistical computing language. Analyzing and understanding complex data has become an essential component of numerous fields: business and economics, health and medicine, marketing, public policy, computer science, engineering, and many more. Offers students an opportunity to finish the course ready to apply a wide variety of analytic methods to data problems, present their results to nonexperts, and progress to more advanced course work delving into the many topics introduced here.

INSH 5302. Information Design and Visual Analytics. (4 Hours)

Introduces the systematic use of visualization techniques for supporting the discovery of new information as well as the effective presentation of known facts. Based on principles from art, graphic design, perceptual psychology, and rhetoric, offers students an opportunity to learn how to successfully choose appropriate visual languages for representing various kinds of data to support insights relevant to the user's goals. Covers visual data mining techniques and algorithms for supporting the knowledge-discovery process; principles of visual perception and color theory for revealing patterns in data, semiotics, and the epistemology of visual representation; narrative strategies for communicating and presenting information and evidence; and the critical evaluation and critique of data visualizations. Requires proficiency in R.

INSH 5303. Machine Learning in the Social Sciences. (4 Hours)

Offers a comprehensive overview of machine learning as a tool as it applies to a number of social science domains, including political science, sociology, economics, criminal justice, and public policy. Compares machine-learning approaches and more traditional regression-based approaches in the social sciences. Examines key applications in the domain of the social sciences through cases and examples, using social science data sets.

INSH 5304. Social Network Analysis. (4 Hours)

Offers an overview of the analytic methods and conceptual perspectives of a social network approach to social science and humanities research. Using the R statistical computing language, covers techniques for collecting, formatting, and visualizing network data, as well as tools for calculating the mathematical properties of social networks, such as centrality, clustering, transitivity, and structural equivalence. Introduces statistical methods for social network analysis, such as exponential random graph models and stochastic actor-oriented models.

INSH 5500. Basic Principles of Statistical Analysis in the Social Sciences. (1 Hour)

Examines the basic principles of probability and statistical analysis. Investigates levels of measurement, measures of central tendency and dispersion, the central limit theorem, standard errors, and confidence intervals. Introduces statistical software and dataset visualization and manipulation. Designed to prepare students for entry-level graduate statistics courses.

INSH 5501. The R Statistical Computing Platform. (1 Hour)

Introduces the R statistical computing platform. Offers students an opportunity to learn the foundations of R, including installing R and using the RStudio graphical user interface; use built-in statistical functions and install new packages; write loops, scripts, and programs; work with data types and manipulate datasets; and visualize data.

INSH 5502. Introduction to Probability and Statistics. (1 Hour)

Introduces the fundamentals of probability and statistical tests. Offers students an opportunity to learn about the laws of probability; probability distributions; the central limit theorem; and using the normal and t distributions to estimate population parameters. The final portion of the course introduces hypothesis testing, including differences in means tests and chi-square tests.

INSH 5503. Multivariate Regression. (1 Hour)

Introduces multiple regression, the foundation of most multivariate statistical analysis. Offers students an opportunity to learn correlation and bivariate regressions between two variables; multiple regression with multiple independent variables; model estimation by hand and in R; and modeling with quadratic terms, interactions, and binary independent variables.

INSH 5505. From Data to Information: Making Sense of "Found" Data. (1 Hour)

Investigates how "found" or "naturally occurring" data can be leveraged to better understand the dynamics and behaviors of individuals, communities, and business processes. Offers students an opportunity to learn the skills to manipulate, analyze, and visualize the content of large, complicated datasets, as well as to think critically about the interpretation of the data, based on how it is generated and the biases that might follow.

INSH 5506. From Information to Measurement: Using "Found" Data to Describe Objects, People, and Places. (1 Hour)

Offers students an opportunity to work with "found" or "naturally occurring" data to generate knowledge, with a focus on how we use detailed records to describe the objects, people, and places that they reference. This includes building the skills of aggregation, analysis, and visualization in order to construct and communicate such measures and the patterns they capture. In doing so, the course encourages students to think critically about how the data are generated, what biases they might contain, and the implications for interpretation of the data.

INSH 5509. Spatio-Temporal Data Representations. (1 Hour)

Focuses on visualization methods for data that involve geographic and temporal information. Visualizing temporal processes in geographic space is a difficult problem that requires careful consideration of the specific goals and circumstances of the representation. Starts with the design principles of cartographic communication and examines how maps can help to communicate, persuade, and possibly mislead. Uses geographic information systems and explores interactive techniques for analyzing spatial data across multiple scales.

Prerequisite(s): INSH 5508 with a minimum grade of B or INSH 5508 with a minimum grade of B

INSH 5510. Visualizing Relational Data. (1 Hour)

Focuses on the visualization of relationships between entities. Involves tasks such as navigating hierarchical structures, assessing the properties and structure of networks, or extracting meaning from the relationships between words in textual analysis. Relational data can be challenging to visually organize, explore, and present; the course examines a wide range of interactive techniques for this purpose.

Prerequisite(s): INSH 5509 with a minimum grade of B or INSH 5509 with a minimum grade of B

INSH 5602. Documenting Fieldwork Narratives: Oral History, Ethnography, Archival Practices. (4 Hours)

Examines the ethics, politics, and social aspects of three primary areas of interdisciplinary research and knowledge production at the intersection of the social sciences and humanities: oral history, ethnography, and archiving. Offers students an opportunity to learn to conduct oral history, ethnography, and archiving; gain experience collecting and formatting information collected through these qualitative techniques; and be introduced to digital platforms for oral history, ethnography, and archiving. Offers instruction in critiquing examples of how researchers collect and analyze qualitative information. Studies the critical thinking skills necessary to build a research project from the formulation of a research idea through the research design planning process.

INSH 5603. Qualitative Methods. (4 Hours)

Introduces the principles and use of common qualitative methods with a particular focus on their application in the social sciences. Students practice designing qualitative research. Offers students an opportunity to gain experience using diverse analytic and theory building techniques, conducting field observations and interviews, and analyzing content. Examines the foundation of core concepts in research. Topics include objectivity, bias, empiricism, validity, triangulation, and ethical issues surrounding human subjects—such as confidentiality, anonymity, and vulnerable populations.

INSH 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

INSH 5964. Projects for Professionals. (0 Hours)

Offers students an applied project setting in which to apply their curricular learning. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. Seeks to benefit students with a curriculum that supports the development of key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review 'lessons learned', and incorporate suggestions from this review to improve and further develop their career development and professional plan.

INSH 5965. Engaging with Industry Partners for Rising Professionals. (0 Hours)

Offers students an enhanced applied project setting in which to apply their curricular learning. Working with a partner sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with the partner sponsor, and create a plan for implementing their recommendations. Curriculum supports students as they develop key business communication skills, project and client management skills, and frameworks for business analysis. Offers students an opportunity to learn from sponsor feedback, review lessons learned, and incorporate suggestions to improve and further hone their career development and professional plan. Career development opportunities through skill-building workshops, panels, and interview preparation are available. Partner-student interactions, including a culminating project presentation, allow partners to assess student potential for co-op, internship, or other employment opportunities with the partner.

INSH 6101. Agent-Based Modeling for Applied and Social Sciences. (4 Hours)

Introduces complexity-based models, most notably agent-based models, and their possible applications to a range of planning and public policy issues. Exposes students to complexity theory and methods, including interactions, adaptation, and evolution; cellular automata, agents, networks, and genetic algorithms; and epistemology—the meaning and applications of models. Focuses on modeling and software, including building on sample models; running experiments and analyzing results; and verification, sensitivity, and validation.

INSH 6300. Research Methods in the Social Sciences. (4 Hours)

Surveys methods of social research, including field study and participant observation techniques, survey techniques, interviewing and questionnaire construction, sampling procedures, experimental design, content analysis, and use of available data.

INSH 6302. Qualitative Methods. (4 Hours)

Introduces the principles and use of common qualitative methods with a particular focus on their application in the social sciences. Offers students an opportunity to engage in primary data collection and to learn how to use a variety of analytic techniques, including transcription, field-note preparation, memos, development of coding schemes and conceptual frameworks, and data-verifying techniques.

INSH 6304. Modeling and Analyzing Social Networks. (4 Hours)

Offers a high-level introduction to the analytic methods and conceptual perspectives of a social network approach. Introduces the social network perspective and computational tools for social network analysis (R, RStudio, and Gephi). Identifies the mathematical properties of social networks, including centrality, clustering, transitivity, and structural equivalence. Introduces exponential random graph models and stochastic actor-oriented models. Using these tools, studies social and cultural phenomena across the social sciences and humanities.

INSH 6406. Analyzing Complex Digitized Data. (4 Hours)

Introduces cutting-edge ways of structuring and analyzing complex data or digitized text-as-data using the open-source programming language Python. Scholars across multiple disciplines are finding themselves face-to-face with massive amounts of digitized data. In the humanities and social sciences, these data are often in the form of unstructured text and un- or under-structured data. Encourages students to think about novel ways they can apply these techniques to their own data and research questions and to apply the methods in their own research, whether it be in academia or in industry.

INSH 6500. Statistical Analysis. (4 Hours)

Studies the use of social science quantitative techniques, emphasizing applications of value to public-sector analysts and scholars alike. Introduces probability and statistical analysis. Topics include measures of central tendency and dispersion, probability and probability distributions, sampling distributions and hypothesis testing, bivariate correlation, regression, and forecasting. Examines how to generate and interpret statistical analyses.

INSH 6864. Experiential Integration. (1 Hour)

Offers an integration course providing an opportunity for students on experiential placement to connect conceptual course material to experiential components. Students are expected to: interact with students from other disciplines, apply knowledge and skills across educational and experiential contexts; connect experiential components to different disciplines and domains of knowledge; and situate experiential components in the context of their own field and beyond. Requires department signature. May be repeated once.

Prerequisite(s): CRIM 6964 (may be taken concurrently) with a minimum grade of S or CRIM 6965 (may be taken concurrently) with a minimum grade of S or ECON 6964 (may be taken concurrently) with a minimum grade of S or ECON 6965 (may be taken concurrently) with a minimum grade of S or ENGL 6964 (may be taken concurrently) with a minimum grade of S or POLS 6964 (may be taken concurrently) with a minimum grade of S or PPUA 6964 (may be taken concurrently) with a minimum grade of S or PPUA 6965 (may be taken concurrently) with a minimum grade of S

INSH 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated once.

INSH 7101. Qualitative Research Design. (4 Hours)

Introduces the logic of qualitative inquiry and various qualitative data collection strategies including field observation, in-depth interviews, focus groups, and archival materials. Suitable for students in a range of social scientific disciplines including anthropology, sociology, political science, public policy, criminal justice, population health, nursing, and applied psychology. Offers students an opportunity to obtain a foundation for essential aspects of research design as well as hands-on experience in data collection techniques around a topic of the student's choosing.

INSH 7102. Qualitative Data Analysis. (4 Hours)

The goal of this course is to introduce students to methods for analyzing different forms of qualitative data. The course will train students in developing coding strategies to analyze qualitative data and introduces them to qualitative data software. Students will learn how to apply deductive and inductive coding, how to develop coding structures appropriate for various genres (e.g., exploratory, descriptive, narrative), and how to theorize from qualitative data. Students will receive extensive training in writing up qualitative research findings, from analytic memos to a publishable paper or dissertation chapter.

Prerequisite(s): INSH 5603 with a minimum grade of C or INSH 7101 with a minimum grade of C

INSH 7103. Mixed Methods Research. (4 Hours)

Introduces the theory and practice of mixed method inquiry in the social sciences, broadly defined. Presents an overview of historical roots of mixed methods research, the major paradigms driving contemporary mixed methods research, and the four most common research designs applied in mixed methods research (concurrent, sequential, embedded, and multiphase). Studies how to evaluate the validity and quality of mixed methods research. Offers students an opportunity to develop a research protocol for a mixed methods research project.

INSH 7300. Advanced Research Methods in the Social Sciences and Humanities. (4 Hours)

Provides instruction in all aspects of research methodology in the social sciences and humanities, including causality; the measurement process; sampling procedures; scaling; use of available data; research designs, such as quantitative and qualitative survey methods, experimental design, and evaluation research; and methodological complexities such as mediation, moderation, and nonlinear processes.

INSH 7400. Quantitative Analysis. (4 Hours)

Studies the use of social science quantitative techniques and how to generate and interpret statistical analyses. Topics include measures of central tendency and dispersion, probability and probability distributions, sampling distributions and hypothesis testing, bivariate correlation, regression, and forecasting. Builds upon the concepts of correlation and inference to present analytic procedures involving several variables (including multiple regression, logistic regression, causal analysis, and multiway ANOVA) and introduces more advanced multivariate analytic methods.

Prerequisite(s): INSH 5301 with a minimum grade of C or INSH 6500 with a minimum grade of C

INSH 7500. Advanced Quantitative Analysis. (4 Hours)

Designed to build upon the foundations provided by INSH 6404, INSH 6500, or an equivalent introductory statistics course with the goal of students becoming proficient with selected quantitative multivariate analysis techniques. Covers the ordinary least squares (OLS) regression model and the assumptions underlying it in detail, as well as the techniques for analyzing data when OLS assumptions do not apply, such as simultaneous equation models, time-series models, and maximum likelihood techniques for limited and discrete dependent variables. Requires prior completion of INSH 6404, INSH 6500, or an equivalent introductory statistics course. PhD students only or by permission.

Prerequisite(s): INSH 7400 with a minimum grade of C

INSH 7600. Multilevel Theorizing and Analysis. (4 Hours)

Explores advanced data analysis tools for research. Offers students an opportunity to engage in multilevel theorizing and to become proficient in the foundations of multilevel analysis. The course is project based; students formulate a multilevel research question and engage multilevel theory, data, and analysis.

INSH 7910. NULab Project Seminar. (2 Hours)

Offers students an opportunity to learn and use digital humanities methods with others in groups and across disciplines in the collaborative space of the NULab seminar. May be repeated up to three times.

INSH 9980. Experiential PhD Research Residency. (0 Hours)

Comprises a research residency experience in an organization whose mission and activities are aligned with the College of Social Sciences and Humanities PhD programs. The research residency is designed to help develop dissertation ideas or research papers or to obtain access to resources helpful to dissertation development or research. A faculty member serves as an advisor for the residency experience, but individuals within the organization in which the student is working are asked to serve as formal mentors for the student residency experience. May be repeated two times.

Interdisciplinary Studies - Mills College at Northeastern (INMI)**INMI 1051. Introduction to Ethnic Studies. (4 Hours)**

Introduces students to the field of Ethnic Studies for students interested in learning about race, racial inequality, and social justice. Provides students with the theoretical and analytical tools to understand, deconstruct, and apply theories of race and ethnicity. Deeply reviews the historical context in which Ethnic Studies emerged as an academic discipline. In examining the major theories and concerns of Ethnic Studies and in particular the origins of racism and the relationship between academic learning and community activism, students are offered the opportunity to investigate the intersections of race, class, gender, and other axes of difference in shaping identities and political/structural conflict.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

INMI 1126. Theories of Race and Ethnicity. (4 Hours)

Exposes students to the cutting edge of critical thinking around issues of race and ethnicity. Examines how to unpack “commonsense” ideas about race and inequality. Uses theory as a tool to offer students an opportunity to develop critical thinking, a new vocabulary, and a framework for understanding the history and contemporary impact of race within the United States and in a global context. Analyzes how race has been theorized by a range of thinkers, and explores new knowledge about the interactions between race, ethnicity, immigration, gender, class, and sexuality. As a final project, students articulate their own intellectual and activist calling and consider how theory can inform their academic, political, and personal futures.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

INMI 1801. Technologies of Writing. (4 Hours)

Explores the role of creativity and creative writing and its relationship to technology. Addresses the largest question facing writers now: how will humanity adapt to a future increasingly shaped by machine learning and artificial intelligence? Mixes scholarly analysis with creative and innovative writing. Examines a wide range of works of literature, both those written with machines and those written about machines. Introduces the use of various state-of-the-art writing tools, collaborative platforms, artificial intelligence, and immersive storytelling techniques to offer students an opportunity to write their own poetry, stories, and other forms of literature. Class discussion focuses mainly on student writing and examines how machine-produced writing is reshaping understandings of creativity, authorship, and copyright.

Attribute(s): NUpath Integration Experience, NUpath Writing Intensive

INMI 1802. Gentrification and Strategies of Community Preservation. (4 Hours)

Delves into effective strategies employed by communities and city planners to mitigate the adverse impacts of gentrification. Explores the root causes and repercussions of gentrification, along with community-driven solutions and policy interventions. Focuses on the city of Oakland, emphasizing the intersection of race and the contentious relationship between gentrification and displacement. Addresses various forms of stratification associated with gentrification including class inequality, escalating housing costs, homelessness, and their interconnectedness with market forces and urban planning. Scrutinizes Oakland's decline and redevelopment within a broader structural context, contextualizing its gentrification process in relation to analogous trends observed in numerous cities across the United States and globally. Accentuates entrepreneurial approaches to addressing these issues.

INMI 1803. Technologies of Race and Gender. (4 Hours)

Presents an interdisciplinary U.S.-based study of technologies that develop and function, over time, to create, maintain, and enforce ideas about race and gender. Explores an understanding of these mutually informed systems of knowledge as technologies with both positive and harmful ideological and material effects. Topics include shifts in scientific and medical thinking, the rise in social scientific thought, trends in popular cultural representations, modes of state surveillance, and the contemporary rise of data science. Examines complex consequences of these technologies alongside critical responses, and resistance to, these forms of power. Builds on large-scale and national historical overview to consider case studies drawn from Bay Area political, social, and cultural histories. Culminates with group projects focused on complex, present-day intersections of race, gender, and technology.

INMI 1877. Race, Policy, and Storytelling. (4 Hours)

Explores the interrelated topics on race, policy, and storytelling. Investigates how narratives inform policymaking, racial implications within social problem conditions, and connections to public policy outcomes. Examines the role of storytelling for analyzing and presenting these topics. Offers students an opportunity to explore and generate diverse and creative policy solutions through their deep reflection and analysis of race relations and conditions, policymaking, and storytelling practices.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

INMI 2183. Interdisciplinary Special Topics: Pop-up Course. (1 Hour)

Addresses timely trends, issues, and events as they unfold. Offers students an opportunity to learn about and respond to issues of the day in an immersive, interdisciplinary, short-course format. Content and instructors vary by offering. May be repeated twice.

INMI 2220. Women, Gender, and Cultural Production in the Global South. (4 Hours)

Explores the intersections of race, class, gender, sexuality, power, and resistance. Critically engages students with cultural productions in the Global South. Studies the intellectual and social roots of cultural systems and the relationship between culture, gender, identity, and social change. Examines how various cultural mediums reject and resist identity, social change, and structural injustices. Analyzes transnational cultural dynamics by emphasizing the role of gender and sexuality in shaping cultural narratives and their societal impacts. Major topics include hijra activism and transgender identity, Dalit testimonials, antiwar documentary filmmaking, indigenous history, docudrama, grassroots organization, and decolonial artistic resistance.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

INMI 2500. California in Global Economy: Business, Policy, and Beyond. (4 Hours)

Examines the key sectors of California's economy and discusses their positionality within the global landscape. Presents conceptual foundations and frameworks drawing on strategic management, disruptive innovation, and political economy literatures. Provides students with in-depth sectoral knowledge and exposure to innovation diffusion trends relevant to California's economy and the world. Offers students an opportunity to learn about business and industry clusters specific to California and to develop an understanding of how California fits into and affects the world economy. Emphasizes the interactions of workforce diversity, radical innovation, and human resource management. Also discusses concepts relating to global talent flows, platform economies, network economies, and go-to-market strategies.

Prerequisite(s): ECON 1115 with a minimum grade of D- or ECON 1116 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

INMI 2510. China, Globalization, and the Environment. (4 Hours)

Explores the global impacts of China's reemergence as an economic, technological, and political leader. Takes a political ecology approach to examine chains of production and consumption connecting China with the rest of the global economic system. Discusses how global trade affects people and the environment where products are made, how U.S. and global trade policies shape international development, and how consumer choices can have wide-ranging environmental consequences.

Attribute(s): NUpath Societies/Institutions

INMI 2700. Transformative Justice Through Computing Technology. (4 Hours)

Explores social impact through the intersection of transformative justice and computer science. Examines how technology can be leveraged to confront issues related to justice, community empowerment, and social transformation. Actively engages students in applying transformative justice approaches to addressing institutionalized disparities suffered by previously incarcerated women and nonbinary individuals of color. Provides hands-on support through development and deployment of technology-based solutions such as extended reality to aid these individuals in successfully acclimating to life outside of prison and gaining equitable access to technology learning.

Attribute(s): NUpath Difference/Diversity

INMI 2710. Social Issues in Communities of Color. (4 Hours)

Actively engages students in critical social challenges seeking innovative solutions. Offers hands-on support to entrepreneurs, initiatives, and organizations in the local Oakland community. Focuses on student teams working directly with local mission-driven entities to provide analyses, recommendations, strategies, and assessments critical to growth, viability, and impact. Offers students an opportunity to gain a richer perspective on catalyzing social impact; develop skills in communication across social, cultural, and disciplinary boundaries; and apply sound leadership and decision-making principles within diverse environments.

INMI 3461. Quantitative Conservation Biology. (4 Hours)

Explores the foundational principles of the interdisciplinary field of conservation biology. Focuses on population biology, population genetics, community ecology, biogeography, and animal behavior. Relies on quantitative tools to answer important questions about species persistence in a rapidly changing world. Emphasizes developing and critiquing conservation solutions based on ecology, biology, genetics, and behavior, as well as recognizing differing perspectives and values.

Prerequisite(s): EEMB 1101 with a minimum grade of C- or EEMB 2302 with a minimum grade of C- or EEMB 2400 with a minimum grade of C- or ENVR 1101 with a minimum grade of C-

Attribute(s): NUpath Natural/Designed World

INMI 3650. Plant Ecology. (4 Hours)

Explores plant form and function, diversity and distribution, abundance and population dynamics, and interactions with individuals of the same or different species, as well their role in ecosystem processes. Views material through an evolutionary lens and at multiple levels of biological organization.

Prerequisite(s): EEMB 1101 with a minimum grade of C- or EEMB 2302 with a minimum grade of C- or EEMB 2400 (may be taken concurrently) with a minimum grade of C- or ENVR 1101 with a minimum grade of C-

Corequisite(s): INMI 3651

Attribute(s): NUpath Natural/Designed World

INMI 3651. Plant Ecology Lab. (1 Hour)

Accompanies INMI 3650. Includes various lab experiments that emphasize evolutionary and ecological principles, experimental design, and use and interpretation of statistics.

Corequisite(s): INMI 3650

Attribute(s): NUpath Natural/Designed World

Interdisciplinary Studies - Office of the Provost (INPR)**Courses****INPR 1000. First-Year Interdisciplinary Seminar. (1 Hour)**

Offers students an opportunity to advance their understanding of global citizenship, explore and meaningfully connect to the robust resources and programs of the university network, and apply design and systems thinking practices to address personal and academic challenges. Utilizes a global challenge as context and has both synchronous and asynchronous components led by faculty, peer mentors, academic advisers, and integration coaches.

INPR 1002. Global ConnEXions Residency. (0 Hours)

Offers a residential program for Global ConnEXions students in Boston, London, Seattle, or virtual. May be repeated once.

INPR 1500. Interdisciplinary Global Challenge Project. (4 Hours)

Offers students an opportunity to explore the learning community theme via a semester-long, interdisciplinary group project. Readings and activities are designed to assist students in understanding the nuances of the theme, after which students apply what they have learned to a challenge project that seeks to solve a real-world problem. Project milestones are scaffolded over the course of the semester. Seeks to benefit students with a curriculum that demonstrates the applications of academic scholarship in formulating solutions to current global issues. May be repeated once.

INPR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INPR 2183. Interdisciplinary Special Topics: Pop-up Course. (1,2 Hours)

Addresses timely trends, issues, and events as they unfold. Offers students an opportunity to learn about and respond to issues of the day in an immersive, interdisciplinary, short-course format. Content and instructors vary by offering. May be repeated three times for a maximum of six semester hours.

INPR 2255. Experiential Entrepreneurship. (4 Hours)

Examines the fundamental principles of experiential entrepreneurship and how those principles are used to identify unfulfilled market or societal needs, to solve social problems, and to innovate in public institutions. Offers students an opportunity to learn how to explore the context surrounding the need or problem; employ concepts of design thinking; examine various stakeholder groups (e.g., customers, constituents, potential partners, or beneficiaries); determine the size of the opportunity or problem; understand the landscape and intersectionality with other problems and stakeholders; and create a compelling value proposition, solution, or policy change that has the potential to capitalize on the unfulfilled need or solve the problem. Also guides students to reflect on why innovative and entrepreneurial endeavors often fail.

Attribute(s): NUpath Creative Express/Innov

INPR 2955. Interdisciplinary Project. (1-4 Hours)

Offers students an opportunity to work in an applied, interdisciplinary project setting on a research project, community or regional initiative, or industry-based solution. Students collaborate to define and refine the problem to be addressed, work toward one or more solutions, develop recommendations that are shared with a partnering project sponsor, and create a plan for implementation. An interdisciplinary team-based approach allows students to contribute their unique perspectives from multiple disciplines toward complex problems facing researchers, communities, and businesses. Offered on multiple Northeastern campuses as part of a semester-long program.

INPR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INPR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INPR 4100. Research-Visiting Student. (0 Hours)

Offers visiting students enrolled and in good standing at another institution an opportunity to work with a sponsoring faculty member on a topic related to current research. Detail of visit is described in the sponsoring faculty member's proposal approved prior to visit. Faculty member and student negotiate a written agreement as to what topic(s) are covered and what written or laboratory work forms the basis for the grade.

INPR 4955. Interdisciplinary Project. (1-4 Hours)

Offers students an opportunity to work in an applied, interdisciplinary project setting on a research project, community or regional initiative, or industry-based solution. Students collaborate to define and refine the problem to be addressed, work toward one or more solutions, develop recommendations that are shared with a partnering project sponsor, and create a plan for implementation. An interdisciplinary team-based approach allows students to contribute their unique perspectives from multiple disciplines toward complex problems facing researchers, communities, and businesses. Offered on multiple Northeastern campuses as part of a semester-long program.

INPR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INPR 5100. Foundations of Evidence-based Postsecondary Teaching. (4 Hours)

Explores evidence-based teaching practices through the backward design process to offer students an opportunity to learn how to develop a college-level course. Includes building a generative toolkit that can be used to design college-level courses and other learning experiences. Uses a microteaching session to gain practice and feedback on the student's teaching.

INPR 5110. Integrating Teaching Across Contexts. (4 Hours)

Offers students an opportunity to identify a specific future context in which they anticipate teaching (e.g., clinical rotation, industry research group, K-12 outreach). Connects students with educators to explore related educational research on a chosen context and discipline-specific practices. Documents the teaching experience while students practice and receive feedback on their teaching in a microteaching session designed for this context.

INPR 5120. Postsecondary Teaching Practicum. (4 Hours)

Engages students in a teaching role sponsored by the university (e.g., teaching assistant, instructor of record for a course, undergraduate supervisor in a research lab). As part of a mentored teaching experience, offers students an opportunity to apply principles of evidence-based teaching and gather formative and summative student feedback on their teaching.

Prerequisite(s): INPR 5110 with a minimum grade of C

INPR 5900. Global and Intercultural Communication for Doctoral Students. (2 Hours)

Focuses on the latest theories of global and intercultural communication and how they apply to doctoral research. Critically analyzes how concepts such as culture, power, privilege, and globalization arise in global research contexts. Designed to guide students to analyze their own identity and its role in framing their lived experiences as well as practice global and intercultural communication. Instruction and assessment include student reflections, writing assignments, a research-based project, and a self-assessment tool.

INPR 6100. Research-Visiting Student. (0 Hours)

Offers visiting students enrolled and in good standing at another institution an opportunity to work with a sponsoring faculty member on a topic related to current research. Detail of visit is described in the sponsoring faculty member's proposal approved prior to visit. Faculty member and student negotiate a written agreement as to what topic(s) are covered and what written or laboratory work forms the basis for the grade.

INPR 6200. Global Research Literacies. (2 Hours)

Offers students an opportunity, under the supervision of a faculty member, to investigate special-interest topics at a location other than the student's home campus. The topics, learning outcomes, assessments, course materials, course activities, and assessments are selected by the instructor. May be repeated up to three times for a maximum of 8 semester hours.

INPR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INPR 7900. Global Research Experience. (2 Hours)

Offers students an opportunity, under the supervision of a faculty member, to learn skills and methods for conducting full-time research at a location other than the student's home campus. Faculty member and student negotiate a written agreement outlining which topic(s) are covered and what type of written or laboratory work forms the basis for the grade. May be repeated up to three times for a maximum of 8 semester hours.

INPR 7970. Global Research Integration. (2 Hours)

Offers students an opportunity to reexamine concepts—such as culture, power, privilege, globalization, and intercultural communication—and to reflect on awareness and insights derived from their experiences conducting global doctoral research abroad. Culminates in a final project (written work or a presentation) separate from their doctoral dissertation.

INPR 7995. Global Experiential Project. (2 Hours)

Offers students an opportunity to apply their curricular learning at a location other than the student's home campus. Working with a sponsor, students refine an applied research topic, perform research, develop recommendations that are shared with a partner sponsor, and create a plan for implementing their recommendations. May be repeated up to three times for a maximum of 8 semester hours.

INPR 9100. Research-Visiting Student. (0 Hours)

Offers visiting students enrolled and in good standing at another institution an opportunity to work with a sponsoring faculty member on a topic related to current research. Detail of visit is described in the sponsoring faculty member's proposal approved prior to visit. Faculty member and student negotiate a written agreement as to what topic(s) are covered and what written or laboratory work forms the basis for the grade.

International Affairs (INTL)**Courses****INTL 1000. International Affairs at Northeastern. (1 Hour)**

Introduces first-year international affairs students to the majors, the departments servicing IAF, and the university as a whole; familiarizes students with the skills needed for success as a university student.

INTL 1101. Globalization and International Affairs. (4 Hours)

Offers an interdisciplinary approach to analyzing global/international affairs. Examines the politics, economics, culture, and history of current international issues through lectures, guest lectures, film, case studies, and readings across the disciplines.

Attribute(s): NUpath Societies/Institutions

INTL 1150. The Mediterranean World: An Overview. (4 Hours)

Introduces problems currently facing the nations of the Mediterranean region, the sources of these problems, how they are affecting the rest of the world, and what the future of the region may be. The Mediterranean is a region of significant international geopolitical importance where three major religions and continents meet, very different demographic patterns interact, the challenge of adapting to global economic and social forces is being faced, and security and terrorism are major problems. Surveys the Mediterranean region, its characteristics and significance, the changes it has experienced, and the ways in which societies around the Mediterranean currently interact and influence each other.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

INTL 1160. Middle East Studies. (4 Hours)

Concentrates on the history, politics, cultures, and economics of the Middle East and North Africa (MENA) countries in the 20th and 21st centuries. Explores topics such as empire, colonialism, revolutions, state-building, development, and social movements. Offers students an opportunity to obtain interdisciplinary skills to analyze dynamics of gender, class, race/ethnicity, and religion in MENA countries.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

INTL 1251. Dante's "Inferno" and Medieval Italian Culture. (4 Hours)

Presents an overview of Dante's "Commedia," with a focus on the first book, "Inferno." Explores the descending levels of hell, analyzing the historical and cultural context of Dante's time, including political events and social structures. Examines theological concepts such as sin, punishment, redemption, and the afterlife from the perspective of Christian theology. Through the literary analysis of selected chapters (canti), evaluates the potential relevance of the poem to the modern human condition and to the reader's own experiences. Taught in English.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

INTL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 2100. Modern Israel. (4 Hours)

Introduces students to an Israel rarely seen in the news: Films, art, music, short stories, food, and spiritual movements show Israel from a different point of view and expose students to the questions Israelis ask themselves in order to define their own identity. Modern Israel is a fascinating, vibrant, talented, imperfect nation of people from 100 different countries. Thus, conflicts, tensions and contradictions lie at its heart: Ashkenazi Jews complain the country is too Levantine; Sephardi Jews complain about deprivation; Israeli Arabs complain about their position in the nation; Orthodox Jews say the state is not sufficiently religious; seculars consider it antiquated in nature. Immigrants from Russia and Ethiopia, foreign guest workers, water crises, and the Arab-Israeli conflict also figure in the story.

INTL 2101. Law and Religion in Israel. (4 Hours)

Examines how religious diversity features into Israeli life, society, and laws. Israel maintains a unique form of legal pluralism in regulating its official religious communities and their courts. Considers how Israeli society, its religious and civil courts, and its government navigate the challenges that Israel faces as a self-defined "Jewish and democratic state" with a legal commitment to the religious autonomy of its officially recognized religious communities. Explores the complex interplay between religion and law in the daily life of Israel's citizens.

INTL 2200. America and the Middle East. (4 Hours)

Focuses on U.S. engagement with the Middle East, primarily with Muslim societies, and with the Christian and Jewish communities across the region. Emphasizes Egypt, Syria, Iran, Iraq, Turkey, Israel/Palestine, and Lebanon. From America's first proselytizing adventure to the Ottoman Empire in 1820 to the embrace of Saudi Arabia in the 1940s to the overthrow of the democratically elected prime minister in Iran in 1953 to the attacks of September 11, 2001, to the invasion and occupation of Iraq in 2003 to America's response to the "Arab Awakening" in 2011 and beyond, the course covers history, politics, oil, war, and peacemaking within the framework of U.S. involvement in the Middle East.

Attribute(s): NUpath Societies/Institutions

INTL 2464. Natural Resources and Sustainable Development. (4 Hours)

Examines the social dimensions of resource extraction. Focusing mainly on developing nations, studies global issues, including developments in industrial nations, to assess their impact on resource extraction and living and working conditions in resource-rich regions. Uses case studies of key countries producing oil/gas, minerals, and forest/agricultural commodities to illustrate the past/current causes of resource mismanagement; their social consequences; and how public policies, legislation, and financial and human resource management with industrialization can be used to avert or reduce the adverse effects of resource extraction, especially in poor countries. Major theories examined include the resource curse and alternative approaches to problems faced by resource-bearing developing nations. AFRS 2464 and INTL 2464 are cross-listed.

Attribute(s): NUpath Societies/Institutions

INTL 2480. Women and World Politics. (4 Hours)

Introduces a variety of issues facing women across the globe. Focuses on the gender dynamics of key issues in international affairs. These could include economic policy, conflict and war, human rights/women's rights, political power, and collective action. Draws on examples from various world regions since the twentieth century to analyze similarities and differences across cases around the globe. INTL 2480 and WMNS 2480 are cross-listed.

Prerequisite(s): INTL 1101 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

INTL 2500. Race and Global Human Mobility. (4 Hours)

Examines the relationship between race and the movement of people around the globe. Offers students an opportunity to acquire a concrete understanding of how race and ethnicity (as social constructions) have developed as people have migrated (under free will or forced circumstances) within and across geopolitical territories (i.e., colonies, countries) in the past (1400s) and through the present. Ethnoracial-related conflicts connected to migration (i.e., rebellions by the enslaved during the Atlantic slave trade, Rwandan genocide, Syrian civil war) may also be explored.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

INTL 2718. Research Methods in International Affairs. (4 Hours)

Introduces a range of research methods employed in the study of international affairs. Offers students an opportunity to develop competency in the most commonly used quantitative and qualitative research tools in the social sciences and related humanities. Topics include empirical and normative research traditions, generalizability, historical analyses, hypothesis testing, literature reviews, qualitative and quantitative approaches, research ethics, survey research, units of analysis, and more.

INTL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 3150. Global Philanthropy. (4 Hours)

Analyzes whether transnational philanthropy can solve problems of global poverty, development, and human welfare. Introduces students to relevant normative and empirical scholarship drawn from moral philosophy, postcolonial critical theory, development economics, and comparative politics. Offers students an opportunity to obtain the analytical tools needed to assess the promise and pitfalls of global philanthropy. Invites the application of these skills through a sustained funding simulation.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

INTL 3200. Cities in a Global Context. (4 Hours)

Examines the roots of the urbanization process, major ways of thinking about it, and the development of world cities and megacities. The twenty-first century will be a century in which urbanism is a central problem and opportunity. Considers the economic, political, cultural, and environmental dimensions of urbanism across the globe. Includes specific case studies from around the world. Encourages students to develop a knowledge of particular cities in order to examine the key themes of the course. INTL 3200, ANTH 3200, and SOCL 3200 are cross-listed.

INTL 3201. Cities in a Global Context (Abroad). (4 Hours)

Focuses on the character of space, place, and culture of a contemporary world (global) city. Explores the material transformations of the city and how people understand and imagine the places, spaces, times, and environments they inhabit. Addresses issues of global geographies of cultural change, especially the relationship between the local and the global; questions of place, identity, and landscape, especially at the local level; the significance of place and space in the invention of modern traditions, including places of memory (memorials, museums); the nature of public space and its relations to citizenship; gentrification and the role of art in the city and nature-society relations as expressed in urban parks. Includes a combination of lectures and guided and self-directed field trips in the selected global city. May be repeated without limit.

INTL 3300. Covering Conflicts: Peace, War, and the Media. (4 Hours)

Examines the media's portrayal of conflicts and the peace process in the Middle East, Northern Ireland, Bosnia, Rwanda, and elsewhere. Evaluates the limits of fairness, balance, and accuracy in the coverage. Looks at the U.S. and international media—print, broadcast, and online—and some of the major stories in recent years and attempts to put these stories in historical, political, and social context. Analyzes the wide-ranging criticism of coverage from a variety of perspectives. INTL 3300 and JRNL 3300 are cross-listed.

INTL 3350. Borders and Racial Security. (4 Hours)

Presents a comprehensive overview of governance of borders across the world. Addresses the disconnect and tension between the concept of a world without borders and the post-September 11 realities of increased border securitization. Explores the link between securitized borders and racism by unpacking the concept of racial security. Critically examines how borders are used to treat various groups and people differently, and introduces an intersectional analysis of race, ethnicity, gender, and class. Explores the geopolitics of securitized borders, border cities, and bordering practices beyond material border zones. Analyzes cross-border activities, transnational human rights activism, and freedom of mobility.

INTL 3400. International Conflict and Negotiation. (4 Hours)

Offers an interdisciplinary approach to analyzing international conflict and negotiations: how conflicts evolve, are managed, and/or resolved. In dealing with different types of regional and international conflicts, students focus on historical, ethnic, religious, geographic, and political aspects of a variety of conflicts and the consequences these conflicts hold for regional and international actors.

Prerequisite(s): INTL 1101 with a minimum grade of D- ; POLS 1160 with a minimum grade of D- ; (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

INTL 3406. International Law. (4 Hours)

Introduces international law and how it redefines and shapes world politics. Offers students an opportunity to learn about the cornerstones of this area of the law: the state, organizations and their legal personality, diplomatic relations, treaties, extraterritorial jurisdiction, extradition, human rights and humanitarian law, the law of the sea trade/economic law, and international criminal law with a focus on the world courts. Considers the degree to which international law is pervasive in the life of individuals and states alike.

Prerequisite(s): POLS 1160 with a minimum grade of D-

INTL 3430. Revolution, Civil War, and Insurrection. (4 Hours)

Explores various types of conflict settlements and their implications for peace and reconciliation. Why do civil wars break out in some places but not others? What does it take to start a revolution? Why do some conflicts last decades, and what can be done to mitigate their costs? Examines why civil conflicts begin, how they are fought, and how they end. Substantive topics include strategies of insurgency and counterinsurgency; the role of ethnicity, religion, and gender; and the relationship between economic factors and conflict. Students leverage fundamental concepts and theories in comparative politics to analyze civil conflicts in a wide range of country contexts.

Prerequisite(s): POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

INTL 3450. Security, Culture, Power. (4 Hours)

Offers a critical and interdisciplinary approach to the study of security. Analyzes the politics, culture, geography, and history of security as a major force shaping the contemporary world. Aims to develop a critical analysis of how power operates in and through security by examining questions of how security shapes cities, states, space, and society from the cultural and psychological terrain of fear to the international terrain of war, capitalism, migration, and transnational conflicts.

Prerequisite(s): INTL 1101 with a minimum grade of D- ; POLS 1160 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Societies/Institutions

INTL 3455. Russian Foreign Policy. (4 Hours)

Presents an analysis of the goals, methods, and achievements of Russian policy in the post-Soviet era toward Eastern Europe, Western Europe, the Middle East, Central and East Asia, and the United States against the background of Soviet behavior toward these areas in the recent past.

Prerequisite(s): POLS 1155 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

INTL 3470. Arab-Israeli Conflict. (4 Hours)

Explores the history and politics of the Arab-Israeli conflict, examining the origins of the conflict, its development over time, the key events that have shaped it, and the different narratives and perceptions of these events. Offers students an opportunity to learn about the conflict from the emergence of Zionism and Arab nationalism up to present day. Emphasizes the Israeli-Palestinian dimension of the conflict.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

INTL 3520. Global Political Economy. (4 Hours)

Examines how states, institutions, policy choices, and social forces shape—and are influenced by—the global economy and the world polity. Draws on historical patterns and empirical evidence of societal behavior to evaluate the evolution of global development policy over time and across space. Uses country illustrations and case studies to demonstrate how examining development policy trade-offs can provide guidance for formulating sustainable development policies at the global level. Focuses on global governance and how decisions about global rules related to industrial policy, foreign investment policy, and climate change policy are made at the level of several international institutions.

Attribute(s): NUpath Societies/Institutions

INTL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 4100. Forced Migration: Refugees, Exiles, and Displaced Persons. (4 Hours)

Analyzes the history and politics of forced migration, concentrating on the negative "push" factors that force people to migrate and the positive "pull" factors that motivate them to seek sanctuary in particular places. While millions of people worldwide are displaced by war and other forms of violence, the history of forced migration and processes of seeking and granting refuge are often poorly understood. Investigates the development of legal and institutional frameworks that govern forced migration and assesses its political and humanitarian implications. Rejecting dominant views of displaced people as "victims" or as "problems" to "solve," the course addresses displaced people as complex historical actors whose experiences are tied to legacies and processes of imperialism, state violence, war, and globalization.

INTL 4350. Ethnography of Southeast Asia. (4 Hours)

Offers a seminar on the societies and cultures of Southeast Asia. Uses an interdisciplinary approach to this diverse and dynamic geopolitical region, with readings from anthropology, history, political science, and literature. Covers the major political and cultural changes that have shaped Southeast Asia in relation to the world—from the age of colonial expansion, to the rise of nation-states, to the present global era. Examines central questions in the ethnography of Southeast Asia, emphasizing the postcolonial legacies of Southeast Asia, states and violence, culture and mobility, and pressing contemporary issues in globalizing Southeast Asia. ANTH 4350 and INTL 4350 are cross-listed.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

INTL 4500. Latin American Society and Development. (4 Hours)

Explores the processes of social, economic, and cultural change in Latin America. While concentrating on the present, traces class formation, agrarian structures, ethnic identity, ceremonial organization, gender roles, and political conflict since the colonial era in a range of countries. Emphasizes the relationship of communities and national political and economic systems. May emphasize Central America and Mexico or countries in South America through case studies. ANTH 4500 and INTL 4500 are cross-listed.

Prerequisite(s): (SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

INTL 4510. Anthropology of Africa. (4 Hours)

Explores Africa's changing place in the world. Studies the history of Africa and explores the role of ethnography in the making of colonial Africa and the cultural transformations and continuities produced by the emergence of African cities during and after colonialism. Studies postcolonial Africa to critically and comparatively engage with contemporary issues facing African societies. Considers the efflorescence of new cultural forms of music, art, film, and literature, in conjunction with new sources of identity such as nationality, religion, ethnicity, consumption, and migration.

Prerequisite(s): (ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

INTL 4520. Chinese Society and Culture. (4 Hours)

Introduces students to changes in society and economy in contemporary China. Examines changes in family, gender relations, rural life, work, and international relations. Draws on literature from a range of disciplines including sociology, political science, anthropology, and economics.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

INTL 4700. Senior Capstone Seminar in International Affairs. (4 Hours)

Offers a senior research and writing seminar that integrates and assesses the knowledge and skills developed by students participating in the international affairs curriculum, including both experiential (co-op, Dialogue of Civilizations, study abroad, internship, or other approved international experience) and classroom-based components. Requires student self-reflection as well as new research, analysis, and writing, which culminate in a final paper and presentation. Topics include contemporary global issues and draw on relevant literature in the disciplines relating to international affairs.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

INTL 4938. Dialogue of Civilizations: Globalization and Social Sciences. (4 Hours)

Engages students with the culture, civilization, and people of the countries studied and visited. The course provides students with an in-depth and on-site experience, learning the politics, sociology, journalism, human services, law, public policy, and/or economics and business in the country of study. Students connect with their peers in each country/society and gain a “global experience” that enhances their academic studies on campus in Boston. The experience culminates in an independent research project conducted by the students before, during, and after their time in-country. May be repeated without limit.

INTL 4944. Dialogue of Civilizations: Regional Engagement. (4 Hours)

Engages students with the cultures, societies, and peoples of particular countries and localities in one primary geographic region. Offers students an in-depth and on-site experience and an opportunity to learn about various aspects of the region, which may include politics, sociology, law, history, philosophy, culture, music, arts, literature, theatre, economics, and/or business. Students may connect with their peers in each locality and across societies, therein to gain an international experience designed to enhance their academic studies on campus in Boston. Culminating projects may include a research paper, an artistic expression piece (i.e., film or photos), or other assignment as determined by the professor. May be repeated without limit.

INTL 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

INTL 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): INTL 4970 with a minimum grade of D-

INTL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

INTL 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INTL 4994. Internship. (1-4 Hours)

Offers students an opportunity for internship work. May be repeated up to nine times for a maximum of 28 semester hours.

Attribute(s): NUpath Integration Experience

INTL 5010. International Human Rights Law and Policy. (4 Hours)

Examines the law, politics, policy, and advocacy practices of international human rights. Focuses on the dilemmas that ensue and the political, policy, and philosophical implications of human rights. Explores the role of international and domestic law in enacting and enforcing human rights claims, the institutions of international human rights law, and the relationships between different types of rights. Places human rights in the context of colonialism, racism, and economic inequality. Analyzes how and when human rights law and practice can adequately address global challenges as well as when they fall short.

INTL 5100. Climate and Development. (4 Hours)

Serves as an introduction to climate change and development processes in developing countries. Exposes students to key debates in the fields of climate change and international development. Offers students an opportunity to learn about the approaches to climate adaptation, the relationship between adaptation and development, and concepts of resilience and transformation. Using a comparative case study approach, explores the importance of the local context; the intersections of politics, economics, and culture; ecology and human-environment relationships; and the role (and challenges) of finance and development assistance. Climate impacts threaten to reverse many of the development gains of the last century, and the most vulnerable are likely to be the most impacted by climate change. At the same time, opportunities exist to ensure climate-compatible development pathways. Cross-listed with PPUA 5100.

Attribute(s): NUpath Societies/Institutions

INTL 5268. International Environmental Policy. (4 Hours)

Explores key environmental challenges and policy solutions from an international perspective. Emphasizes the complexity of human-natural systems for policy design, provides a history of international environmental politics, and discusses contemporary policy issues. Presents key paradigms for understanding environmental challenges and the analytical tools to look critically at important debates, understand the role of different actors, identify equity and justice considerations, and assess policy options from multiple perspectives. Focuses on global environmental governance and sustainable development diplomacy, natural resource management, and climate change policy. Addresses the role of science in policymaking, tensions between environment and development, the scale and complexity of international environmental governance, and equity and justice.

INTL 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

INTL 7990. Thesis. (4 Hours)

Offers thesis supervision by members of the department.

INTL 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continued thesis supervision by individual members of the program.

International Business (INTB)**Courses****INTB 1203. International Business and Global Social Responsibility. (4 Hours)**

Introduces the student to forces and issues confronted in our era of rapid globalization. Managers must understand forces from interconnected social, political, and economic national environments that affect their company's operations. At the same time they need to draw on their ethical foundations to address and act on social responsibility imperatives across national borders.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

INTB 1204. Living, Learning, and Leading Globally. (1 Hour)

Functions as a foundational, cornerstone course that frames the Global Engagement Program and assists students in mapping their way forward. Covers cultural and ethical frameworks for understanding the context of global business as an integrated whole. Introduces global leadership competencies combined with multiple assessments to help foster greater self-awareness and establish a baseline for subsequent development. Offers students an opportunity to create a four-year professional development plan (PDP), a living document designed to guide students' study and development throughout the program and to cultivate the mindset necessary for effective and authentic global leadership. May be repeated two times.

INTB 1205. The Global Business Environment. (4 Hours)

Describes the economic, political, regulatory, legal, cultural, international financial system, and geographic distance differences in the international business environment. Discusses how it differs from domestic business contexts and emphasizes the importance of international business to global enterprises. Offers students an opportunity to learn ethical reasoning in international business contexts, government-business relations, as well as the role of national interests and their impact on international business. Studies regional integration (e.g., the European Union), and introduces the role of foreign direct investment. Surveys how international business contributes to economic development. Portrays the antiglobalization movement and the rise of protectionism, nationalism, and industrial policy.

Attribute(s): NUpath Ethical Reasoning

INTB 1209. International Business and Global Social Responsibility. (4 Hours)

Does not count as credit for business majors. Counts as INTB 1203 for business minors only.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

INTB 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 2202. Analyzing the Global Business Environment. (4 Hours)

Analyzes the global business environment—political, economic, sociocultural—and the use of various frameworks to aid in analysis and decision making. Introduces the global business environment in which firms have to compete. Specifically examines contemporary issues over the political, social, and economic consequences of the globalization of markets and industries. Also examines the responses of multinational enterprises to the challenges of globalization. Offers students an opportunity to review and revise their professional development plans (PDPs).

Prerequisite(s): INTB 1202 with a minimum grade of D- or BUSN 1101 with a minimum grade of D-

INTB 2205. Business Decision Making in Developed Country Environments. (2 Hours)

Focuses on international business decisions in developed nations such as the European Union, Japan, and other OECD countries and the growing importance of e-commerce. Covers export/import operations, establishing overseas joint ventures and alliances, and analyzing foreign direct investment as a key choice. Discusses configuring global supply chains and establishing global manufacturing operations. Introduces international marketing and international human resource policies. Offers students an opportunity to learn about global teams and assessing international business performance.

Corequisite(s): INTB 2206

Attribute(s): NUpath Writing Intensive

INTB 2206. International Business Decision Making in Emerging Markets. (2 Hours)

Discusses how emerging markets fit into the global economy. Presents unique issues such as lack of infrastructure, limited affordability, volatile economies, political risk, and poverty alleviation. Describes how trade and foreign exchange policies affect emerging markets. Focuses on which emerging markets to invest in, why, and what market-entry strategies to use. Emphasizes the business opportunity in serving the poor in emerging markets. Covers the rise of digital commerce in emerging markets. Offers students an opportunity to learn about the outlook for emerging markets and implications for developed countries and the global economy.

Corequisite(s): INTB 2205

Attribute(s): NUpath Writing Intensive

INTB 2501. Competing to Win in Emerging Markets. (4 Hours)

Presents an introduction to emerging markets, focusing on the BRIC countries of Brazil, Russia, India, and China. Takes the perspective of U.S. companies and what they must do to be successful in emerging markets. Discusses the differences between doing business in an emerging vs. a domestic market, the opportunities and potential of an emerging market, and the risks of operating in such a market. Then looks at the world from the perspective of emerging markets and discusses steps that their governments, companies, and entrepreneurs must take to succeed in the world economy. Analyzes what emerging markets must do to raise wages and incomes, accelerate wealth creation, and reduce poverty.

INTB 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 3205. Understanding and Managing Cultural Differences. (4 Hours)

Emphasizes the importance of cultural differences in international business. Describes the value of developing cultural agility in a global career, and discusses startups in diverse cultural contexts. Focuses on learning from international experiences and highlights the science behind what makes people successful in different countries and with people from different cultures. Discusses how to use this science to facilitate cultural agility development. Presents frameworks to understand cultural values; explains cultural curiosity and tolerance of ambiguity; emphasizes cultural responses such as adaptation, minimization, and integration; and studies living and working in a host country. Offers students an opportunity to develop self-management and relationship-management competencies in diverse cultural environments.

Attribute(s): NUpath Interpreting Culture

INTB 3310. Cultural Aspects of International Business. (4 Hours)

Helps develop awareness of the hidden influence of culture on behavior, particularly with respect to management and management practices. With the increasing globalization of business, many managers find themselves being managed by, or collaborating with, people of different nationalities and cultures. Develops the ability to recognize, understand, and work with the cultural diversity that affects business conducted across national and cultural boundaries.

Prerequisite(s): INTB 1201 with a minimum grade of D- or INTB 1203 with a minimum grade of D- or INTB 1209 with a minimum grade of D- or INTB 2202 with a minimum grade of D- or INTB 3320 with a minimum grade of D-

INTB 3320. International Business Management and Environment. (4 Hours)

Examines contemporary issues that confront today's global managers. Explores the responses multinational enterprises have to the challenges of globalization. Seeks to build an understanding of the environment of international business while addressing the competencies required of global managers. Offers students an opportunity to develop a four-year professional development plan to guide their study and to help them develop the global mind-set necessary for becoming an effective global manager. Analyzes the political, economic, and sociocultural environment in which global businesses operate.

INTB 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 4202. Executing Global Strategy. (4 Hours)

Emphasizes global strategy and execution as well as the leadership requirements necessary to execute global strategy. Offers a capstone, "big picture" course that draws on and integrates all business fields and presents a global manager's perspective. Uses the knowledge acquired in core courses—such as finance, accounting, operations, marketing, and organizational behavior—along with their international dimensions, to study how global managers reach strategic management decisions for the firm and its role in society. Offers students an opportunity to review and revise their professional development plans (PDPs) following their return from the expatriate experience and begin to develop post-Northeastern PDPs.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

INTB 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

INTB 4983. Special Topics in International Business. (4 Hours)

Examines areas of current interest and special topics in the field of international business. May be repeated once.

INTB 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times for a maximum of 8 semester hours.

INTB 4998. International Business Undergraduate Thesis Continuation. (0 Hours)

Offers thesis continuation for students in the BSIB program who are working on their thesis as part of the dual-degree requirements. May be repeated once.

INTB 6200. Managing the Global Enterprise. (3 Hours)

Focuses on the international business environment, and examines the influence on global decision making of such areas as the international economy and trade issues, legal and political context differences, governmental actions, cultural and ethical system differences, exchange rates and international currency markets, international institutions like the World Trade Organization and the International Monetary Fund, and regional agreements like the European Union, NAFTA, and Mercosur. Also analyzes why firms internationalize their operations, how they can internationalize, and key areas such as international manufacturing, marketing, human resource management, and strategy.

INTB 6212. Cultural Aspects of International Business. (3 Hours)

Focuses on issues that arise when a firm operates in multiple countries with cultures that are different from its home country. Principally addresses the perspectives of U.S. firms operating overseas, but also explores other national firms operating in the United States and in third-country environments. A central issue is how corporate cultures evolve in the context of national cultures.

INTB 6224. Competing to Win in Emerging Markets. (3 Hours)

Offers students an opportunity to develop an understanding of emerging markets. Analyzes how U.S. firms enter emerging markets and compete with emerging market firms and how emerging market companies compete with developed market companies and with each other. Explores the future of emerging markets and the steps they need to take to ensure their future viability and success, as well as the threats they face.

INTB 6226. Becoming a Global Leader. (3 Hours)

Seeks to help students build the cross-cultural skills necessary to comfortably and effectively work in different cultures and with people from different cultures. Discusses the alignment between the firm's business strategy and the leader's responses in a multicultural environment along with the methods for leadership effectiveness in multicultural teams and virtual environments. Using online, experiential, and discussion-based methods, offers students an opportunity to gain the self-awareness needed to generate a plan for their own global leadership development.

INTB 6230. Global Field Study. (3 Hours)

Designed to give students intense exposure to the global business environment by immersing them in the business practices and culture of a designated country or region. The course is taught primarily in the country or region of interest and involves a mix of classes, company site visits, and cultural activities. May be repeated once.

INTB 6238. Global Project. (3 Hours)

Offers students an opportunity to work on faculty-led teams to address a current issue facing a global corporate partner organization. Students interact directly with organizational leaders and employees to scope the project and work as a consulting team, harnessing campus and corporate resources to solve a problem and/or make recommendations. Faculty travel with the students to an international site to continue research, interviews, etc., and report findings to local corporate representatives. Feedback on the project reports are incorporated, and the final project report takes place post-travel with the corporate/sponsoring organizations' representatives.

INTB 6249. Digitization of International Business. (3 Hours)

Exposes students to the opportunities and challenges that digitization presents for the core tenets and managerial practices of international business. New digital technologies have given rise to digitally born companies that internationalize through online platforms at an exponential pace. Companies from unrelated industries that may have traditionally not competed against each other now co-create value on digital platform ecosystems. Countries are increasingly implementing policies that aim to bridge the digital divide and alleviate poverty. A darker side of digitalization has also emerged. While some countries push for a global and open internet infrastructure, others engage in digital protectionism. Artificial intelligence can further be abused for digital authoritarianism purposes. Data privacy breaches are also rising globally. Examines how companies, industries, and governments should respond.

INTB 6260. Advanced Topics in Global Management and Strategy. (3 Hours)

Offers topics of current interest in the international business arena, emphasizing managing in emerging markets, analyzing global expansion, and developing analytical and quantitative modeling skills for the international business arena, often in the context of developing presentation and writing skills in a case competition format. Instructor interests will shape course format and meeting schedules. May be repeated without limit.

INTB 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Interpreting (INTP)**Courses****INTP 1000. American Sign Language at Northeastern. (1 Hour)**

Intended for freshmen and transfer students in the College of Social Sciences and Humanities who have interest in the ASL-English interpreting major and combined majors. Introduces freshmen to the liberal arts in general, campus and program resources, and the diverse makeup of the American Deaf Community. Offers students an opportunity to develop the academic skills necessary to become a successful university student (analytical ability and critical thinking); obtain grounding in the culture and values of the university community; and develop interpersonal skills.

INTP 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTP 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTP 3500. The Interpreting Profession. (2 Hours)

Presents an overview of the ASL-English interpreting profession. Discusses the emergence of sign language interpretation and translation; the responsibilities, ethics, and aptitudes of interpreters; professional associations; the bilingual and bicultural context; basic translation and interpretation; environments where interpreters work; special populations; and professional interpreter certifications.

Prerequisite(s): AMSL 2101 (may be taken concurrently) with a minimum grade of C

INTP 3510. Interpreting Inquiry Texts. (4 Hours)

Focuses on the practical skills required for effective translation and interpretation in dialogue-type inquiry texts (job interviews, case histories, and applications). Presents an overview of linguistic and sociolinguistic features and situational aspects of inquiry texts. Introduces theoretical models of interpretation to students' development of analytic and cognitive skills, in order that they may effectively identify message meaning and manage the cognitive processes of message transfer. Introduces intralingual translation and text analysis techniques. Offers students an opportunity to develop skills in translation, consecutive interpretation, and simultaneous interpretation and to gain decision-making skills and strategies to achieve cross-culturally effective and appropriate message mediation in contexts where interactive inquiry texts occur.

Prerequisite(s): AMSL 2102 with a minimum grade of D-

INTP 3515. Interpreting Narrative Texts. (4 Hours)

Focuses on the translation and interpretation of narrative texts (personal narratives, storytelling) and the development of strategic decision-making skills within the context of narrative texts. Presents an overview of linguistic and sociolinguistic features and situational aspects of narrative texts. Guides students in building cognitive processes and skills in translation, consecutive interpretation, simultaneous interpretation, and team interpretation. Offers students an opportunity to develop the decision-making skills needed for achieving cross-cultural, cross-linguistic message mediation in these settings.

Prerequisite(s): INTP 3510 with a minimum grade of D-

INTP 3550. Interpreting Scripted Texts. (4 Hours)

Guides students through the process of analyzing and interpreting frozen texts (plays, poems, and ceremonial scripts), from first read-through to final interpreted rendering of the performed text. Interpreting for theatrical or otherwise scripted communication is markedly different from other forms of interpreting. The availability of a script, ample time to rehearse, and the possibility of feedback makes this a hybrid practice—part interpreting, part translation, and part performance. Offers students an opportunity to learn how to analyze scripts for both content and interpreting issues; how to solve production problems of logistics, placement, and lighting; and how to interpret a series of performances for the Deaf Community. This course is offered in conjunction with or in advance of a theatre department production or other performed text.

Prerequisite(s): AMSL 2102 with a minimum grade of D- ; (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or

ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

INTP 3970. Research Methods for Interpreting and Translation. (4 Hours)

Offers an overview of research methodologies in interpreting and translation studies for students preparing for research capstone projects. Focuses on foundational theoretical knowledge and skills in research design, hypothesis testing, sampling and measurement, research ethics with deaf populations, as well as basic data analysis and interpretation. Offers students an opportunity to evaluate current literature in the discipline, write a project proposal to plan a research study or community-based project, and link social science research methods to sign language interpreting and translation practice.

Prerequisite(s): INTP 3500 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Writing Intensive

INTP 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTP 4510. Interpreting Expository Texts. (4 Hours)

Focuses on the interpretation of expository texts (lectures, procedural texts) and the development of strategic decision-making skills within the context of expository texts. Presents an overview of linguistic and sociolinguistic features and situational aspects of expository texts. Reinforces models of interpretation in students' practical development of analytic and cognitive skills, in order that they may effectively identify and transfer message meaning. Offers students an opportunity to further develop the cognitive processes and team interpretation skills to manage temporal constraints of simultaneous interpretation and to develop and apply the decision-making skills needed for achieving cross-cultural, cross-linguistic message mediation in these settings.

Prerequisite(s): INTP 3515 with a minimum grade of D-

INTP 4515. Interpreting Persuasive Texts. (4 Hours)

Focuses on the interpretation of persuasive texts (solicitation, political speeches) and the development of strategic decision-making skills within the context of persuasive texts. Presents an overview of linguistic and sociolinguistic features and situational aspects of persuasive texts. Offers students an opportunity to advance their analytic and cognitive skills for effectively identifying persuasive intent and meaning, in order to render accurate message transfer. Students practice and apply the cognitive processes and skills involved in translation, consecutive interpretation, and simultaneous interpretation with a goal of achieving effective cross-cultural, cross-linguistic message mediation in these settings.

Prerequisite(s): INTP 4510 with a minimum grade of D-

INTP 4650. Ethical Decision Making. (4 Hours)

Explores ethical standards and dilemmas in American Sign Language-English interpreting and other professions through discussions, hypothetical situations, and role-playing. Topics include culturally objective standards, ethics and professional principles, power relations within groups, and the Registry of Interpreters for the Deaf (RID) code of ethics. Compares various alternatives (i.e., consequence-based ethics) to a duty-based approach to the RID code and draws upon ethical fieldwork experience to analyze the principles that guide ethical decision making among professional interpreters.

Prerequisite(s): INTP 3515 with a minimum grade of C

Corequisite(s): INTP 4651

Attribute(s): NUpath Ethical Reasoning

INTP 4651. Ethical Fieldwork. (2 Hours)

Comprises the fieldwork component of INTP 4650. Places students in practical interpreting experiences in educational settings, agencies serving Deaf people, and with freelance interpreters. Focuses on ethical questions and dilemmas and decision making in a bi-weekly seminar format. Requires students to maintain a log and participate in online discussions. Fulfills the experiential education requirement for ASL majors.

Prerequisite(s): INTP 3515 with a minimum grade of D-

Corequisite(s): INTP 4650

INTP 4940. Interpreting Research Capstone. (4 Hours)

Requires students to undertake a research project focused on some aspect of American Sign Language-English interpretation. Students work individually or in research teams (with approval). In consultation with a faculty advisor, students select a research question, design and implement the data collection component of the project, analyze results, and write up their research findings. In addition to a written report, students also present their research results to ASL majors and community stakeholders at an annual ASL research symposium.

Prerequisite(s): INTP 3970 (may be taken concurrently) with a minimum grade of B-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

INTP 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTP 4995. Interpreting Practicum. (4 Hours)

Places students in practical interpreting experiences in educational settings, agencies serving Deaf people, and with freelance interpreters. Requires students to record a set number of hours interpreting with supervision and analyze their work with the supervising interpreter. Students maintain a log, participate in discussions, present case studies drawn from their supervised work experience in seminars, and create a professional development plan for postgraduation. Fulfills the experiential education requirement for ASL majors.

Prerequisite(s): INTP 4651 with a minimum grade of S or INTP 4651 with a minimum grade of D-

Attribute(s): NUpath Integration Experience

Italian (ITLN)**Courses****ITLN 1101. Elementary Italian 1. (4 Hours)**

Designed for students with very little or no prior knowledge of Italian. Provides a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Each lesson incorporates helpful information about daily life in Italy and the varied cultures within the world of Italian speakers. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

ITLN 1102. Elementary Italian 2. (4 Hours)

Continues ITLN 1101. Reviews and continues the study of grammar and basic language skills. Offers progressively more intensive practice in oral and written communication. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

Prerequisite(s): ITLN 1101 with a minimum grade of C- or ITLN 1301 with a minimum grade of C-

ITLN 1251. Dante's "Inferno" and Medieval Italian Culture. (4 Hours)

Presents an overview of Dante's "Commedia," with a focus on the first book, "Inferno." Explores the descending levels of hell, analyzing the historical and cultural context of Dante's time, including political events and social structures. Examines theological concepts such as sin, punishment, redemption, and the afterlife from the perspective of Christian theology. Through the literary analysis of selected chapters (*canti*), evaluates the potential relevance of the poem to the modern human condition and to the reader's own experiences. Taught in English.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

ITLN 1290. Realism and Modernism in Italian Film. (4 Hours)

Examines the significance of postwar Italian cinema as a crucial platform for cultural expression by exploring some of the most influential films and directors from the neorealism era to the 1970s. Analyzes neorealism film, considering its role in empowering marginalized groups and reshaping Italy's cinematic landscape. Explores how issues such as class divisions, culture conflicts, and ideological debates are portrayed in films, with the aim of influencing and redefining Italian unity and identity. Investigates the sociocultural repercussions of the economic boom of the 1950s and 1960s, particularly in the transition toward modernism in cinema. Offers students an opportunity to appreciate the aesthetic expressions within Italian cinema and to explore the connection between film styles and practices with their historical and cultural contexts. Conducted in English.

Attribute(s): NUpath Interpreting Culture

ITLN 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITLN 2101. Intermediate Italian 1. (4 Hours)

Emphasizes further vocabulary building and mastery of fine points of grammar through written composition, prepared oral reports, and reading and discussion from current Italian periodicals.

Prerequisite(s): ITLN 1102 with a minimum grade of C- or ITLN 1302 with a minimum grade of C-

ITLN 2102. Intermediate Italian 2. (4 Hours)

Continues ITLN 2101. Emphasizes further vocabulary building and mastery of fine points of grammar through written composition, prepared oral reports, and reading and discussion from current Italian periodicals.

Prerequisite(s): ITLN 2101 with a minimum grade of C- or ITLN 2301 with a minimum grade of C-

ITLN 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITLN 3101. Advanced Italian 1. (4 Hours)

Stresses the fundamentals of Italian to promote effective self-expression through speaking and writing and to explore the idiomatic aspects of the language. Through progressive class discussions and oral and written commentaries, students analyze a contemporary Italian novel or a Italian cultural reader, screenplay, or collection of short stories. The course strives, first, to help students read and comprehend modern Italian writing with confidence and to be able to talk and write about it in good Italian; and second, to provide preparation for advanced courses.

Prerequisite(s): ITLN 2102 with a minimum grade of C- or ITLN 2302 with a minimum grade of C-

ITLN 3102. Advanced Italian 2. (4 Hours)

Continues ITLN 3101. Enhances and reinforces language and communication skills that students encounter when they are abroad.

Prerequisite(s): ITLN 3101 with a minimum grade of C- or ITLN 3301 with a minimum grade of C-

ITLN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITLN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITLN 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

Attribute(s): NUpath Integration Experience

ITLN 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

Japanese (JPNS)

Courses

JPNS 1101. Elementary Japanese 1. (4 Hours)

Introduces basic grammar, sentence patterns, and vocabulary of Japanese with emphasis on spoken Japanese. Includes an introduction to the hiragana and katakana syllabaries in the written component. Designed for students with no previous knowledge of Japanese.

JPNS 1102. Elementary Japanese 2. (4 Hours)

Continues JPNS 1101. Emphasizes the development of oral skills; secondary emphasis is on reading. Offers students the opportunity to learn basic grammatical patterns, expand vocabulary, and improve communication skills in modern Japanese. Includes the introduction to kanji characters in the written component.

Prerequisite(s): JPNS 1101 with a minimum grade of C- or JPNS 1301 with a minimum grade of C-

JPNS 1944. Cultural Engagement: Dialogue of Civilizations. (4 Hours)

Engages students on-site with the culture(s) of Japanese-speaking regions and/or communities. Emphasizes the complexity, transnationalism, and interdisciplinary nature of culture(s). Employs a range of methodological approaches to describe and analyze how cultural practices, objects, texts, and meanings are created, distributed, and exchanged within particular social groups or geographic areas. Explores questions of cultural identity, meaning, representation, policy formations, and ideologies. In addition to regular in-class lectures and activities, offers students an opportunity to engage in a dialogue with members of the local communities about their perspectives on relevant cultural topics and everyday experiences. May be repeated once. Conducted in English.

JPNS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 2101. Intermediate Japanese 1. (4 Hours)

Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Japanese materials.

Prerequisite(s): JPNS 1102 with a minimum grade of C- or JPNS 1302 with a minimum grade of C-

JPNS 2102. Intermediate Japanese 2. (4 Hours)

Builds on JPNS 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Japanese materials.

Prerequisite(s): JPNS 2101 with a minimum grade of C- or JPNS 2301 with a minimum grade of C-

JPNS 2301. Intermediate Japanese Immersion 1. (4 Hours)

Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

JPNS 2302. Intermediate Japanese Immersion 2. (4 Hours)

Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

JPNS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 3101. Advanced Japanese 1. (4 Hours)

Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): JPNS 2102 with a minimum grade of C- or JPNS 2302 with a minimum grade of C-

JPNS 3102. Advanced Japanese 2. (4 Hours)

Builds on JPNS 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): JPNS 3101 with a minimum grade of C- or JPNS 3301 with a minimum grade of C-

JPNS 3301. Advanced Japanese Immersion 1. (4 Hours)

Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

JPNS 3302. Advanced Japanese Immersion 2. (4 Hours)

Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

JPNS 3800. Special Topics in Japanese. (1-4 Hours)

Focuses on a unique aspect of the Japanese language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health).

JPNS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

JPNS 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Jewish Studies (JWSS)

Courses

JWSS 1285. Jewish Religion and Culture. (4 Hours)

Explores some of the rich variety of Jewish cultural expressions and interpretive traditions, including the Jewish life cycle (birth through death) and the calendar cycle (holidays and daily rituals). Judaism is an ancient, living religious civilization that has evolved continuously over the millenia and around the globe. Offers students an opportunity to become familiar with the major periods of Jewish history and study exemplary formative Jewish texts (from the Bible and its interpreters through rabbinic, legal, and later literatures). Studies the global diversity of Jewish traditions, cultures, and identities, including how Jewish religion and culture have been influenced by the communities in which Jews have lived and live. No prior knowledge of Judaism is necessary or assumed.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

JWSS 1294. History of the Jews in the Modern World. (4 Hours)

Surveys the history of the Jews in the modern world, with an emphasis on global cultural exchange. Examines Jewish interaction with non-Jewish society from Europe to North Africa, the Middle East, the Soviet Union, Israel, and the United States and explores this relationship's creative and destructive consequences. Focuses on how Jewish society, culture, religious practice, and political definition changed in relation to a variety of processes now associated with modernity, such as urbanization, industrialization, state centralization, and the development of nationalism and secularism.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

JWSS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JWSS 2259. Sex, Gender, and Judaism. (4 Hours)

Introduces the representation of sex and gender in Jewish culture and religion. Explores varied representations of masculinity and femininity over time and place within Jewish communities; the role of biblical texts in the construction of Western conceptions of gender and sexuality; and how contemporary feminist, queer, and other sexual identities have influenced Jewish practices. Readings draw from a range of primary sources (memoirs, fiction, religious texts, etc.) and critical literature.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

JWSS 2282. The Holocaust and Comparative Genocide. (4 Hours)

Examines the origins of the Holocaust, perpetrators and victims, and changing efforts to come to terms with this genocide. The Holocaust, the murder of 6 million Jews by Germans in Nazi-occupied Europe during World War II, is one of the crucial events of modern history. Investigates the uniqueness of the Holocaust relative to other acts of ethnic cleansing or genocide, including mass death in the New World and mass murder in Armenia, Bosnia, and Rwanda.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

JWSS 2285. America and the Holocaust. (4 Hours)

Examines the American response to the Holocaust, in terms of both contemporaneous knowledge and actions and the lasting impact on policy and culture. Starts with early twentieth-century events, such as the Armenian genocide, that shaped later attitudes. Explores the prewar period, particularly U.S. immigration and isolationist policies. Assesses Americans' knowledge of European events as the extermination campaign unfolded and fights ensued over rescue possibilities. Examines changing depictions of the Holocaust that emerged in the postwar period as a result of critical events such as the Eichmann trial and popular television and film portrayals. Finally, considers how perceptions of the Holocaust have shaped subsequent U.S. responses to genocide. HIST 2285, JRNL 2285, and JWSS 2285 are cross-listed.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

JWSS 2430. Digital Histories of Ethnic Boston. (4 Hours)

Integrates history of ethnic groups in Boston with methods from the digital humanities (DH) through a semester-long collaborative student project focused on one particular ethnic group. Combines learning how to use DH technology (as well as its possible misuses) with learning about the history of particular ethnic groups in Boston, such as Jews, the Irish, African-Americans, etc. Uses hands-on approaches to study ethnic migration and history to and within Boston by touring neighborhoods and sites. Examines DH technologies through workshops introducing tools such as Omeka, Story Maps, and Tableau, among other possibilities. Also examines different techniques for data visualization, relationship mapping, network analysis, and text analysis.

Attribute(s): NUpath Analyzing/Using Data

JWSS 2431. Immigration and Identity in the American Jewish Experience. (4 Hours)

Examines Jewish political, social, and cultural history from the arrival of the first group of Jews at New Amsterdam in 1654 to the present. Themes include immigration, adaptation, family life, religion, anti-Semitism, Zionism, the Holocaust, and American-Israeli relations.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

JWSS 2610. Contemporary Literature and Art in Israel. (4 Hours)

Explores contemporary Israeli culture. Offers students an opportunity to meet with Israeli writers, visit sites of literary settings, and explore art galleries and museums. Visiting significant historical sites provides the context for understanding allusions to Israel from biblical times to the present. Readings include historical backgrounds, scriptures, short stories, and poetry by major Israeli and Palestinian writers from 1948 through the present. Offered via a faculty-led study abroad program.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

JWSS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JWSS 3678. Bedrooms and Battlefields: Hebrew Bible and the Origins of Sex, Gender, and Ethnicity. (4 Hours)

Considers stories from Hebrew Scripture in English translation, beginning with the Garden of Eden through the Book of Ruth, asking how these foundational narratives establish the categories that have come to define our humanity. Analyzes how the Bible's patterns of representation construct sexual and ethnic identities and naturalize ideas about such social institutions as "the family." ENGL 3678, JWSS 3678, and WMNS 3678 are cross-listed.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

JWSS 3685. Modern and Contemporary Jewish Literature. (4 Hours)

Surveys Jewish literature from the late modern (1880–1948) and contemporary (1948–present) periods. Considers themes of immigration and cross-cultural influences and issues of religious, ethnic, and gender identity. Emphasizes American and European literatures to begin to define an international Jewish literary canon, including Yiddish poets and playwrights, Russian Jewish writers, and modern writers. ENGL 3685 and JWSS 3685 are cross-listed.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

JWSS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JWSS 4660. Jewish Studies Module. (1 Hour)

Permits specialized Jewish studies topics to be studied as part of more general courses. May be repeated without limit.

JWSS 4992. Directed Study. (1-4 Hours)

Offers students an opportunity for special readings and research in Jewish studies. May be repeated for up to 8 total credits.

Journalism (JRNL)

Courses

JRNL 1000. Journalism at Northeastern. (1 Hour)

Intended for first-year students in the College of Arts, Media and Design. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

JRNL 1101. Journalism 1: Fundamentals of Reporting and Writing. (4 Hours)

Covers the foundations of newswriting, including leads, story structure, objective tone, and attribution. Introduces fundamental reporting skills such as interviewing, researching, and observation. Asks students, in their reporting, to step back and analyze the institutions they are writing about and the media itself in order to understand how societies and their institutions function and the validity of theories that explain these processes. Also explores how journalistic writing is leveraged on various publishing platforms and by different types of media organizations.

Corequisite(s): JRNL 1102

Attribute(s): NUpath Creative Express/Innov, NUpath Societies/Institutions, NUpath Writing Intensive

JRNL 1102. Journalist's Toolbox. (1 Hour)

Introduces the tools journalists use to tell stories that will be utilized in Journalism 1 and beyond. Covers introductory photo, audio, video, and data visualization skills. Exposes students to other journalistic tools including social media and blogging. Offers students an opportunity to become familiar with composition of photos, recording and editing audio and video on nonlinear software, and how data visualizations can enhance journalistic storytelling.

Corequisite(s): JRNL 1101

JRNL 1150. Understanding Today's News. (4 Hours)

Examines the media institutions that shape the news and how the challenges of economics, politics, diversity, and globalization change the function of the website, newspaper, news magazine, and news broadcasts. Examines stories and news decisions from different perspectives to evaluate national, political, local, foreign, sports, and science news in the U.S. media. Topics include responsibilities of the press and the changing ways news is gathered, processed, and disseminated. Explores how other societies in different parts of the world view the news; freedom of the press; and the role of reporters, producers, and editors.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

JRNL 1160. Science, Media, and the Public. (4 Hours)

Introduces students to the primary mechanisms behind science communication—how scientific knowledge is produced then disseminated to the public through both academic and popular media, and how this process involves tensions between actors with differing, sometimes contradictory imperatives. Focuses on the fraught relationship between a scientific establishment often beholden to powerful commercial interests and journalists who seek to advocate for public accountability and accurately communicate scientific knowledge while working within organizations that often put corporate profits above editorial integrity.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

JRNL 1949. Covering Race in Pop Culture and the Media. (4 Hours)

Engages and revisits how lyrics, songs, movies, articles, and books inform race and how race informs them. As journalists are required to cover a myriad of subjects, it is vital to recognize the various ways in which race informs a cultural awareness. How do people infuse that awareness into what journalists do? Students read, watch movies, and listen to music, all through a lens of critical revision. Examines pop culture and media outputs that have influence over the creation of our perceptions of race while, at the same time, revise how race does and should influence information accessed through the media. Offers students an opportunity to produce high-quality short as well as narrative, long-form, feature-length articles.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

JRNL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 2200. Writing for Public Relations. (4 Hours)

Immerses students in various kinds of writing required to conduct effective public relations on behalf of companies, organizations, and individuals, both to enhance their public images and protect their reputations. Explores communications theories and, in particular, how they influence writing in an era dominated by social and digital media. Covers various forms of public relations writing, including press releases, press conferences, media pitches, company histories, video scripts, speeches, and advertorials. Studies how to present client positions through op-eds, letters to the editors, newsletters, and other vehicles; how to adapt communications for company websites and social media channels; and how to draft communications for key company stakeholders, especially employees.

Prerequisite(s): ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

JRNL 2201. Journalism 2: Intermediate Reporting. (4 Hours)

Continues JRNL 1101. This is the second writing course for undergraduate journalism students with an emphasis on learning how to report news stories. Offers students the opportunity to find sources and interview them, do background research, and use public records. Developing story ideas using computer-assisted reporting will be covered. Examines how to develop a story idea and then focus and organize it. Covers basic principles of online journalism including writing, design, and integration of visuals and text for the Web. Introduces elements of design and layout.

Prerequisite(s): JRNL 1101 with a minimum grade of C

JRNL 2250. Spotlight: The Story of Journalism and Democracy. (4 Hours)

Offers an overview of groundbreaking stories and the journalistic methods used to produce them. Seeks to facilitate broad understanding of why a free press matters in a democratic society. Offers a behind-the-scenes look at examples of great investigative journalism that changed American history and explores the media's capacity to hold the powerful accountable. From Watergate to WikiLeaks and beyond, students critically analyze important news stories that helped reshape society. Reviews major stories, films, and interactive media and studies the methods used to report and produce such stories, including methods used by the Boston Globe Spotlight team and seen in the Oscar-winning movie "Spotlight." Focuses on researching documents as well as interviewing techniques.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

JRNL 2285. America and the Holocaust. (4 Hours)

Examines the American response to the Holocaust, in terms of both contemporaneous knowledge and actions and the lasting impact on policy and culture. Starts with early twentieth-century events, such as the Armenian genocide, that shaped later attitudes. Explores the prewar period, particularly U.S. immigration and isolationist policies. Assesses Americans' knowledge of European events as the extermination campaign unfolded and fights ensued over rescue possibilities. Examines changing depictions of the Holocaust that emerged in the postwar period as a result of critical events such as the Eichmann trial and popular television and film portrayals. Finally, considers how perceptions of the Holocaust have shaped subsequent U.S. responses to genocide. HIST 2285, JRNL 2285, and JWSS 2285 are cross-listed.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

JRNL 2301. Visual Storytelling in Journalism. (4 Hours)

Continues JRNL 2201. Covers basic principles of journalistic storytelling with video, sound, and still images. Introduces students to the foundations of writing with audio and video, and explores the concept of "convergence," preparing stories for presentation in different formats. Fulfils the Advanced Writing in the Disciplines requirement for journalism majors.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

JRNL 2350. The History of Journalism: How the News Became the News. (4 Hours)

Traces the development of American journalism from its European and English beginnings. Topics include the colonial press, the great personal journalists of the nineteenth century, and the impact of major technological changes in mass communications media in the twentieth century.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions, NUpath Writing Intensive

JRNL 2800. The Bigger Picture: Sports Journalism Beyond the Box Score. (4 Hours)

Explores the future of sports journalism, in particular how sports, society, and innovations in digital storytelling come together to stimulate important conversations around issues such as gender, race, class, and equity. Focuses on preparing students to research, formulate, and pitch stories to local and national media. Serves as a digital laboratory for class work, offering students experiential knowledge through direct practice. Issues of ethics, source diversity, audience engagement, and story construction decision-making will be central to the course.

Attribute(s): NUpath Creative Express/Innov

JRNL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 2991. Research in Journalism. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

JRNL 3300. Covering Conflicts: Peace, War, and the Media. (4 Hours)

Examines the media's portrayal of conflicts and the peace process in the Middle East, Northern Ireland, Bosnia, Rwanda, and elsewhere. Evaluates the limits of fairness, balance, and accuracy in the coverage. Looks at the U.S. and international media—print, broadcast, and online—and some of the major stories in recent years and attempts to put these stories in historical, political, and social context. Analyzes the wide-ranging criticism of coverage from a variety of perspectives. INTL 3300 and JRNL 3300 are cross-listed.

JRNL 3305. Special Topics. (4 Hours)

Offers specialized topics in journalism for the twenty-first century. Topic matter changes each semester. May be repeated up to eight times.

JRNL 3370. Podcast and Radio Journalism. (4 Hours)

Covers the fundamentals of audio journalism in a hands-on environment. Offers students an opportunity to learn how to record and edit audio, write for the ear, interview for broadcast, and experiment with a wide range of radio and podcast formats and narrative techniques. Listening sessions and assignments explore the different requirements of spot news, radio features, reporter debriefs, host interviews, and longer-form audio storytelling, including documentary and serial-style podcasts. Emphasizes journalistic principles and ethical considerations.

Attribute(s): NUpath Creative Express/Innov

JRNL 3455. Sports Writing. (4 Hours)

Provides practice in journalistic coverage of amateur and professional athletics. Focuses on the role of sports writing in the news media and examines such topics as game coverage, feature profiles, and opinion columns.

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

JRNL 3550. The First Amendment and the Media. (4 Hours)

Examines legal problems of libel, invasion of privacy, and access to government information; discusses the balance between private rights and the public's "need to know."

Attribute(s): NUpath Capstone Experience, NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

JRNL 3610. Digital Storytelling and Social Media. (4 Hours)

Offers students an opportunity to learn the fundamentals of digital journalism. Emphasizes hands-on instruction in multimedia skills. Topics may include blogging, photography, video and audio production, use of social media as a reporting tool, and mapping and data visualization. Guest speakers and a consideration of the future of news may also be part of the course. Requires students to produce a final project that consists of storytelling across a range of platforms—for example, a written article, a photo story, and a video.

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

JRNL 3630. Magazine Writing. (4 Hours)

Covers writing and freelancing magazine articles; analyzing magazines as markets; and selecting the best feature format—how-to-do-it, profile, personal experience, human interest, interpretive pieces, and others. Requires a firm grasp of journalistic concepts, including advanced reporting and writing skills; a prior journalistic co-op or internship or experience writing for a school, online, or professional publication is preferred.

JRNL 3650. Science Writing. (4 Hours)

Explores the role of journalism in delivering science news and information to a general audience through print and digital media. Through readings and analysis of a variety of news media, offers students an opportunity to learn how political debates intersect with and shape scientific developments and how scientific developments can be sensationalized or misunderstood. Students also have an opportunity to learn and apply best journalistic practices to communicate effectively in the media about science, health, environmental, and technology issues whether headed to a newsroom, corporate press office, or scientific institution.

Attribute(s): NUpath Writing Intensive

JRNL 3680. Advanced Reporting. (4 Hours)

Offers students an opportunity to learn and apply advanced reporting techniques of the kind that editors and producers expect of their best reporters, especially those who cover demanding beats such as politics, government, healthcare, education, science, and business. Studies how to see and apply data and data visualization techniques, to develop and interview sources, to locate and decipher public records, to identify and conceptualize important stories, and to discuss and apply ethical theories to reporting to justify choices that may inflame or antagonize sources or readers. An assignment to do substantial enterprise stories for publication in major media outlets is part of the course.

Attribute(s): NUpath Analyzing/Using Data, NUpath Ethical Reasoning

JRNL 3700. Data Storytelling. (4 Hours)

Explores select topics in data journalism and supports data-driven storytelling projects of various kinds. Course units foster moderate technical learning of applications and software; incorporate theories from relevant fields in data visualization and data science; and emphasize storytelling for broad public audiences. Seeks to foster knowledge of both the classic and cutting-edge forms for telling stories with data. Offers students an opportunity to obtain a sense of rigor in analyzing and using data and statistics and to build knowledge of a variety of tools to clean, analyze, and visualize data. Journalists are becoming more sophisticated in their approaches to quantitative information, drawing on the growing amount of open data sets and using software and techniques borrowed from the social sciences and data science.

Attribute(s): NUpath Analyzing/Using Data

JRNL 3945. Internship. (1-4 Hours)

Comprises academic credit for internship work in journalism. May be repeated without limit.

JRNL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 4370. Audio Storytelling. (4 Hours)

Offers students with prior experience in journalism or podcasting an opportunity to learn advanced reporting, production, and narrative skills specific to audio journalism. Focuses on building skills applicable to a wide range of digital audio workstations. Explores the evolution of a documentary project from blueprint through production. Coursework consists primarily of team-based investigations that analyze major societal issues, with the goal of highlighting both stakes and solutions. Reveals the way collaborative processes can deepen and enhance major audio storytelling projects.

Prerequisite(s): COMM 1450 with a minimum grade of C or JRNL 1101 with a minimum grade of C or JRNL 3370 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

JRNL 4650. Ethics and Diversity in the News Media. (4 Hours)

Discusses the responsibilities of news media and ethical problems confronting decision makers in different journalistic fields and the principles found in codes of various professional societies. Students read and discuss the news of the day as well as issues pertaining to diversity, technology, disinformation, objectivity, and professional standards. The final project consists of a major paper on an ethical issue in the news.

Attribute(s): NUpath Capstone Experience, NUpath Ethical Reasoning, NUpath Writing Intensive

JRNL 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

JRNL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

JRNL 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

JRNL 5250. Gender in the Newsroom. (4 Hours)

Explores the obstacles women in journalism face and examines how a lack of diversity can damage news organizations' credibility. Studies the historical underpinnings of journalism's gender gap and practical strategies to navigate identity politics in a modern newsroom. For decades, women have represented the majority of journalism and mass communication students, but they remain the minority at most U.S. news organizations. This gender gap is, of course, not unique to journalism, but the paucity of women in newsrooms negatively impacts society. When news narratives are constructed primarily by men, those narratives often perpetuate "symbolic annihilation"—a term commonly used by feminist and queer scholars to describe the ways the media overlooks or stereotypes women and other marginalized identities.

Attribute(s): NUpath Difference/Diversity

JRNL 5309. News Documentary Production. (4 Hours)

Offers students an opportunity to research, write, and produce a short news video documentary and acquaint themselves with a range of professional documentary styles through screenings and discussions. Emphasizes analyzing and addressing the ethical challenges facing documentary filmmakers and their interaction with subjects historically and in the new media age.

Attribute(s): NUpath Creative Express/Innov, NUpath Ethical Reasoning

JRNL 5310. Photojournalism. (4 Hours)

Covers camera procedures along with cropping, assignment techniques, theory, and photo-caption methods. Engages students in the ethical choices photojournalists face in covering wars, disasters, and vulnerable people in societies—both historically and in the new media environment.

Attribute(s): NUpath Creative Express/Innov, NUpath Ethical Reasoning

JRNL 5311. Design for Storytelling. (4 Hours)

Covers basic principles of print and digital design with lectures, skills training, and a maker's workshop. Introduces students to the foundations of typography, color, grids, and use of images for storytelling. Students design, prototype, and produce a print magazine and website.

Attribute(s): NUpath Creative Express/Innov

JRNL 5314. Video News Reporting and Producing. (4 Hours)

Engages students in the ethical challenges facing journalists historically and in the new media age. Students experiment with techniques used by TV and electronic news producers, including reporting, writing, videotaping, and editing on nonlinear digital editing equipment. Offers students an opportunity to create and produce news stories and upload them to their websites with a variety of software programs for dissemination across video and several multimedia platforms, in line with journalistic and ethical standards.

Prerequisite(s): JRNL 2201 with a minimum grade of C or graduate program admission

Attribute(s): NUpath Creative Express/Innov, NUpath Ethical Reasoning

JRNL 5316. The Newsroom. (4 Hours)

Immerses students in a real-life television newsroom experience. Exposes students to all aspects of TV news production: from news gathering, producing, and being in front of the camera to the behind-the-scenes work of operating multiple cameras, live switching, audio mixing, and studio lighting. Allows students to be an integral part of a newsroom team, working as reporters, anchors, videographers, and editors to gather content and work in the studio to produce a Northeastern newscast covering news on campus and beyond. Involves hands-on reporting and production where the stories are real and so are the deadlines.

Attribute(s): NUpath Creative Express/Innov

JRNL 5320. Practicing Photojournalism: Community and the Camera. (4 Hours)

Addresses current concerns in photojournalism including social justice, environmental justice, and diversity issues through the study of local/community photojournalism. Provides instruction in photographic and visual reporting skills through documenting ongoing concerns within the hyperlocal context of neighborhood and social communities. Guides students to produce original reporting with an emphasis on still photography and basic multimedia. Requires a firm grasp of basic photography concepts including manual exposure control, depth of field, and shutter function. Students should be able to comfortably operate a camera on the manual setting, recognize the differences between lenses, and be familiar with Adobe Photoshop and/or Adobe Lightroom, as well as possess basic writing and reporting skills, including approaching strangers for stories.

Attribute(s): NUpath Creative Express/Innov

JRNL 5360. Global Reporting. (4 Hours)

Discusses coverage of global issues and international public affairs and the function of the media in a global context. Topics include how news is gathered, processed, and disseminated by the various media abroad and how the media reflect culture, religion, and politics around the world. Focuses on practical, in-the-field experience with global governmental, business, and societal leaders. This course is part of the Dialogue of Civilizations program abroad. Graduate awards do not apply toward this program. International students wishing to register need to speak to the International Student and Scholar Institute prior to registration. May be repeated without limit.

Attribute(s): NUpath Difference/Diversity

JRNL 5400. Media and Advocacy in Theory and Practice. (4 Hours)

Examines time-tested and cutting-edge methods for shaping and presenting messages across multimedia platforms to effectively disseminate an organization's message, change a public conversation, or shift public opinion. Examines case studies in mainstream media, public advocacy, and strategic communications to explore the motivations and methods of the organizations as well as the tools and techniques used. Examines the practice of digital advocacy by exploring and applying pertinent findings from politics, advertising, and behavioral science that are increasingly employed by professionals looking to "micro-target" voters, "convert" customers, or "nudge" the public. One major component of the course is hands-on workshops through which students are offered an opportunity to learn how to leverage the latest digital tools for communicating across social media and online platforms.

JRNL 5410. Innovation in the News Media Business. (4 Hours)

Examines how the news media business has traditionally been run, how it has adapted (or not) to the digital tsunami, and what approaches show promise in the face of constant change. Presents readings in media theory, a thorough review of journalism business models, case studies in both traditional and digital media businesses, and guest lecturers from across the industry. Focuses on how digital advertising and subscription businesses have evolved during the digital transformation, including examination of the economics and practices of large social media platforms, digital streamers, new subscription tools, and industry consolidation.

Attribute(s): NUpath Creative Express/Innov, NUpath Integration Experience, NUpath Societies/Institutions

JRNL 5420. Public Relations Strategies for Managing Scandal in Business and Politics. (4 Hours)

Studies public relations strategy and tactics for predicting, preparing for, and responding to a variety of crisis scenarios, building on a foundation of basic crisis management principles. Focuses on how to provide sound counsel before, during, and after a crisis and on the tools available to mount an effective crisis response. More than ever, individuals and organizations—politicians, executives, corporations, nonprofits, and government agencies, among others—are facing serious issues and crises that threaten their reputations.

Attribute(s): NUpath Societies/Institutions

JRNL 5460. POV: The Art and Craft of Opinion Journalism. (4 Hours)

Offers students an opportunity to learn how to write a variety of opinion articles in a journalistic context. Articles may include blog posts, op-ed columns, personal essays, reviews, and magazine-style stories that combine reporting with a strong point of view. Students are also offered an opportunity to learn about the ethics of opinion journalism, become familiar with the best practitioners in the field, and use social media to inform and promote their work.

Attribute(s): NUpath Writing Intensive

JRNL 5480. Research for Media Strategy. (4 Hours)

Offers an overview of the concepts, methods, and tools for social science research with a focus on media strategy. Covers how social science methodologies—including developing skills in gathering, organizing, interpreting, and presenting research information using competent and ethically defensible methods—are critical to in-depth media advocacy research.

Attribute(s): NUpath Analyzing/Using Data

JRNL 5500. Coding for Digital Storytelling. (4 Hours)

Offers students an opportunity to learn essential skills in coding across a wide range of technologies commonly used today in data-driven, multimodal, web-based storytelling. Focuses on building skills in basic web development, as well as exploring additional topics and technologies that fit into the broader landscape of data storytelling practice (JavaScript visualization library D3.js, basic Python, working with APIs, and working with databases). Coursework consists primarily of team-based projects that focus on reverse-engineering real-world examples of data storytelling to demystify the question, "How did they do that?" Reveals the ways fluency in code can transform storytelling.

Attribute(s): NUpath Creative Express/Innov

JRNL 5550. Open-Source Investigations. (4 Hours)

Explores case studies of path-breaking open-source investigations—social media posts linking soldiers to war crimes, satellite images showing environmental disasters, and photos revealing a hidden code for police shootings—to demonstrate how to use innovative reporting techniques. Offers students an opportunity to develop knowledge of these tools and strategies while creating an original investigation project.

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov

JRNL 6100. Reporting and Writing Fundamentals. (1 Hour)

Introduces the basics of news reporting and writing. Runs for three weeks beginning in mid-August.

JRNL 6200. Enterprise Reporting 1. (4 Hours)

Defines and sharpens research, interviewing, and analytical skills necessary for good reporting. Focuses on learning to develop story ideas and conduct primary and secondary research for a major enterprise article. Skills are developed through an analysis of outstanding reportage, in-class discussion and exercises, and out-of-class assignments.

JRNL 6201. Enterprise Reporting 2. (4 Hours)

Builds on skills and concepts covered in JRNL 6200. Covers a variety of Web-based and traditional resources. Employs computer-assisted reporting methodologies to assist students in investigating areas such as government corruption, safety and environmental risks, criminal justice, education, healthcare, real estate, campaign financing, and business and financial transactions. Offers students an opportunity to learn how to access public databases, to reference materials, and to analyze the information.

Prerequisite(s): JRNL 6200 with a minimum grade of C-

JRNL 6202. Perspectives on News Media Ethics and Diversity. (4 Hours)

Engages with vital issues of ethics, diversity, and First Amendment law as it pertains to journalism, public relations, and related media fields. Topics include codes of ethics, disinformation, technology, conflicts of interest, corporate ownership, and the meaning of objectivity. Students read and review a combination of contemporary and classic books. Additional readings include selected articles pertaining to course topics as well as issues involving news coverage of current events.

JRNL 6300. First Amendment in Digital Age. (4 Hours)

Acquaints students with legal issues journalists encounter from the common law of libel to communicating on the Internet; from prior restraint to protecting sources. Also serves as an introduction to legal analysis, showing how law develops through statutes and judicial opinions.

JRNL 6305. Topics. (4 Hours)

Requires advanced work to develop media skills not covered in other classes. May be repeated without limit.

JRNL 6306. Media Innovation Studio 1. (4 Hours)

Constitutes the first of a two-course studio sequence designed to prepare experienced journalists to create new forms of journalism in the digital age. Offers students an opportunity to work with faculty members and peers via class exercises and peer-to-peer project collaboration to identify and develop the subject of a signature master's project. Incorporates lectures on emerging media practices, including parallax scrolling, and instruction on digital journalism tools, including DSLR cameras, as well as reviews and critiques of professional and studio work by faculty and guest speakers.

JRNL 6307. Media Innovation Studio 2. (4 Hours)

Offers students an opportunity to integrate knowledge and skills derived from foundation courses to develop a master's project. Creates a newsroom environment in which each student project is advanced through a journalistic collaborative process that features critiques from instructors and peers and integrates expertise from guest lecturers. Following the "teaching hospital" model, students work with the instructor, each other, and partnered media innovation visitors to develop their work.

Prerequisite(s): JRNL 6306 with a minimum grade of C-

JRNL 6340. Fundamentals of Digital Journalism. (4 Hours)

Offers students an opportunity to learn the fundamentals of digital journalism and to place those skills within the context of a changing media environment. Studies multimedia tools within an intellectual framework—i.e., offers students an opportunity to learn hands-on skills and also to study best practices and theory. May include guest speakers and a consideration of the future of news. Requires students to produce a final project that consists of storytelling across a range of digital platforms.

JRNL 6341. Telling Your Story with Data. (4 Hours)

Explores select topics in data journalism and support data-driven storytelling projects of various kinds. Offers students an opportunity to learn how to navigate the often-competing demands of rigorous analysis and accessible narrative and storytelling. Course units are designed to foster moderate technical learning of applications and software, incorporate theories from relevant fields in data visualization and data science, and emphasize storytelling for broad public audiences.

JRNL 6355. Seminar in Investigative Reporting. (4 Hours)

Introduces students to the world of investigative reporting as it is practiced at major metropolitan newspapers. Asks students to work as members of investigative reporting teams and introduces them to advanced reporting techniques and standards in the classroom. Provides an opportunity to learn how ideas for investigative reporting projects are developed; how to identify and interpret public records and online databases; and how to do interviews and write investigative stories. Working in small teams, the students are given an opportunity to develop and write investigative stories for publication.

JRNL 6460. AI in Media Industries. (4 Hours)

Offers students an opportunity to develop practical skills in leveraging artificial intelligence tools to tell stories for use cases such as public relations and communications, advocacy and social impact, journalism and news, and strategic social media campaigning/influencer-creator economy. Uses generative AI tools that span text, images, and multimodal domains, experimenting with and evaluating different models and platforms. Presents practical knowledge of tools and their functionality, including limitations and biases, covering how to apply ethical frameworks to AI-driven media. Uses AI tools to develop stories relevant to local communities and to prototype potential products and workflows that can advance civic and enterprise goals. Collaborates with an external media partner firm, engaging in a two-way learning process to produce a deliverable for the external client.

JRNL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

JRNL 6966. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience. May be repeated without limit.

JRNL 7976. Directed Study. (1-4 Hours)

Offers students work on individual projects under the supervision of an instructor. May be repeated without limit.

Korean (KORE)**Courses****KORE 1101. Elementary Korean 1. (4 Hours)**

Begins the integrated development of elementary language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of daily life, social norms, and family structure in Korea. Designed for students with little or no knowledge of Korean.

KORE 1102. Elementary Korean 2. (4 Hours)

Builds on KORE 1101 and continues the integrated development of elementary language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of the linguistic, cultural, and geographic diversity of the Korean peninsula.

Prerequisite(s): KORE 1101 with a minimum grade of C-

KORE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

KORE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

KORE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

KORE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

KORE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Landscape Architecture (LARC)

Courses

LARC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LARC 2130. Sustainable Urban Site Design. (6 Hours)

Focuses on site planning and design with an emphasis on parks and open-space systems in the adaptive reuse of urban sites. Projects focus on the creation and cultivation of public space, transformation of site conditions, and development of sustainable site materials. Emphasizes site analysis, development of an individual design process, and design communication strategies. This studio course introduces students to urban design precedents, site research, and remediation methods through case studies, lectures, site visits, and workshops.

Prerequisite(s): ARCH 1110 with a minimum grade of D- ; ARCH 1120 with a minimum grade of D-

LARC 2140. Designed Urban Ecologies. (6 Hours)

Continues LARC 2130. Focuses on sustainable community/campus/neighborhood design at the intersection of large-scale urban and environmental systems. Primary topics include mixed-use programming in relation to systems ranging from zoning and transit to the material flows of human and wildlife habitats. This studio course introduces basic geographical information systems (GIS) and application of landscape ecology principles. Projects examine the role of landscape systems and the formation and reformulation of land development scenarios.

Prerequisite(s): LARC 2130 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

LARC 2230. Introduction to Sustainable Site Planning and Design. (4 Hours)

Addresses fundamental techniques of sustainable site design in the built environment, including earthworks, water, and soils, using current-day storm events. Primary topics include topography, site grading, study models, universal accessibility, and storm water considerations in urban and other built environments. Introduces students to urban tree planting techniques, graphic communications, basic site materials, and construction details.

Attribute(s): NUpath Natural/Designed World

LARC 2240. Sustainable Site Construction and Detailing. (4 Hours)

Continues LARC 2230. Focuses on construction technologies, methods, and materials for sustainable site elements, including environmental performance infrastructures, circulation systems, and basic site structures. Introduces structural systems for site work via lecture and in-class exercises.

LARC 2330. Cities, Landscape, and Modern Culture. (4 Hours)

Seeks to instill basic landscape literacy enabling students to read urban landscapes and recognize different ways of knowing landscapes, including everyday landscapes. Presents key concepts, ethical debates, and iconic works that gave shape to modernism in landscape architecture and urbanism. Focusing on eighteenth-century through mid-twentieth-century projects and designers, examines contextual factors and resulting formal, spatial, organizational, and material characteristics of built works. Using case studies, challenges students to analyze the entangled histories of landscape preservation and urban segregation and to apply theories of environmental ethics and environmental justice to questions about the built environment and the relationship between natural and social systems. Offers students an opportunity to practice formulation of a critical design perspective and landscape interpretation via reading responses, project analysis, written work, podcasts, and StoryMaps.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

LARC 2340. Cities, Landscape, and Contemporary Culture. (4 Hours)

Presents the core themes, social theories, ethical debates, and iconic works that shape the field of contemporary landscape architecture and urban design, particularly in the context of environmental change and climate disruption. Focuses on contemporary projects and designers to examine formal characteristics of built works and contextual factors, including social, political, and economic systems and institutions. Challenges students to apply theories of environmental and climate justice to questions about the built environment and the relationship between natural and social systems. Designed to prepare students to address complex sociocultural and environmental issues through thoughtful inquiry and creative expression. Offers students an opportunity to formulate critical design perspectives via reading responses, project analyses, written work, and podcasts.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

LARC 2430. Plants, People, and Landscape Change. (4 Hours)

Uses the study of New England's plant communities and plant identification as a framework to consider the evolution of the New England landscape from European colonization to the present. Combines field study with lectures and class discussion. Human activity, land use, and settlement patterns all influence the development of landscape, and our cultural history is expressed in the species demographics, land forms, and ecosystem dynamics of our environment.

Attribute(s): NUpath Natural/Designed World

LARC 2440. Planting Design. (4 Hours)

Combines horticultural and ecological field study with studio design exercises to deliver introductory to advanced planting design techniques. Primary topics include how to design phytoremediation strategies for contaminated sites, seasonal planting considerations, strategic phasing, and maintenance techniques. This is a workshop-based course.

LARC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

LARC 3170. Landscape Planning and Urbanism Studio. (6 Hours)

Introduces sustainable landscape planning techniques with an emphasis on adaptive urbanism. Key topics include the designed and managed relationship of cities to their regional ecologies, such as sub/urbanized watersheds and coastal zones, as well as the spatial, material, and programmatic roles of environmental infrastructures in the civic landscape. Particularly emphasizes the market-based integration of recreation, transit, food, housing, and industrial networks with living systems such as urban forests, riparian corridors, managed habitats, and constructed wetlands.

Prerequisite(s): LARC 2140 with a minimum grade of D- or ARCH 2140 with a minimum grade of D-

LARC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

LARC 5110. Advanced Design for Urban Environments Studio. (6 Hours)

Focuses on ecological, economic, and social resiliency of designed urban environments in response to globalization. Contemporary case studies of urban change provide the basis for design investigation into issues such as the impact of shifting industries on Detroit (deurbanization) or Shenzhen (rapid densification); shifting weather and water patterns in densely populated regions; societal shifts, from generational demographics to political upheavals and militarization/demilitarization of the urban landscape. Emphasizes the integration of interdisciplinary perspectives and advanced design analysis, conceptualization, and visualization skills into development of a global perspective on managing change in the built environment.

Prerequisite(s): ARCH 3170 with a minimum grade of D- or LARC 3170 with a minimum grade of D- or SUEN 6110 with a minimum grade of C-

LARC 5120. Comprehensive Design Studio. (6 Hours)

Offers students an opportunity to design and develop a site or district including all of its requisite systems. Students draw on their landscape architectural education to produce a design both responsive to specific criteria and prototypical of ways to build sustainable and adaptable public landscapes—often described as “resilience.” Projects are expected to respond to and integrate their contexts (urban, environmental, climatic, and economic); meet spatial, performative, and programmatic requirements and technical demands (materials, implementation and management strategies); and dynamic processes at play within and around the project site.

Prerequisite(s): ARCH 3170 with a minimum grade of D- or LARC 3170 with a minimum grade of D- or SUEN 6110 with a minimum grade of C-

Attribute(s): NUpath Capstone Experience

LARC 5210. Landscape Ecology. (4 Hours)

Introduces fundamental-to-advanced concepts in the field of landscape and urban ecology. Focuses on the landscape-scale spatial structure, temporal patterns, and geographic ranges produced by the intersection of large-scale environmental and human processes. Emphasizes spatial taxonomies (patch, corridor, mosaic, granularity, edge, ecotone) produced across diverse landscape types influenced by human development and landscape dynamics in the built environment (disturbance, fragmentation, accumulation, and succession). Incorporates basic techniques in geographic-information-system software.

Attribute(s): NUpath Natural/Designed World

LARC 5220. Sustainable Landscape Practices. (4 Hours)

Offers a lecture/workshop/field-based course that builds upon landscape technology skills introduced in LARC 2230 and LARC 2240, with a focus on ecotechnologies operating in the built environment. Core topics include design and implementation metrics, material life-cycle management, funding models, and aesthetic and cultural aspects. Potential topics include green roofs, green walls, bioswales, pervious pavements, constructed wetlands, “complete street” elements, geosensor networks, alternative waste management, water detention and energy generation methods, and living infrastructures for coastal environments.

Prerequisite(s): LARC 2240 with a minimum grade of D- or ARCH 2240 with a minimum grade of D- or ARCH 2240 with a minimum grade of C- (Graduate)

LARC 5310. Urban Landscape Seminar. (4 Hours)

Offers a discussion-based seminar focusing on case studies of influential works in contemporary landscape, urbanism, and sustainable environmental design. Encourages students to seek interdisciplinary perspectives toward development of critical-thinking skills in relation to forces shaping urban environments in contemporary global culture. A diverse range of material from published design criticism to open-source social media engagement provides basis for discussion and written and oral presentations.

Attribute(s): NUpath Interpreting Culture

LARC 5420. Professional Practice in Landscape Architecture. (4 Hours)

Offers a lecture- and case-study-based course focusing on strategic planning, business models, organizational structures, logistics, and regulatory paradigms associated with professional practice in landscape architecture. Core topics provide an overview of common technical and business procedures, including RFQs; RFPs; marketing, public relations, and client management; hiring and human resource management; review board/regulatory boards; permitting; and licensure.

Latin American and Caribbean Studies (LACS)

Courses

LACS 1220. Latino, Latin American, and Caribbean Studies. (4 Hours)

Offers an interdisciplinary introduction to Latinos and people of Latin American and Caribbean origin in the United States as well as to the regions of Latin America and the Caribbean. Dispels a series of powerful myths associated with U.S. Latinos and in Latin American and Caribbean society, such as racial inferiority, poverty, machismo, and violence. Introduces the construction of Latino, Latin American, and Caribbean identities as well as the politics, economics, history, and culture.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

LACS 1261. Global Caribbean. (4 Hours)

Focuses on the culture and history of Caribbean societies in global perspective. Explores Caribbean creativity and resilience across English, French, and Spanish linguistic and political spheres with examples from literature, art, music, food, technology, and performance. Considers the global reach of Caribbean diasporas, highlighting the long local histories of Caribbean communities in Boston. Follows four key themes—indigeneity, blackness, diaspora, and creolization—to understand this unique point of entry for the study of race, gender, and sexuality in the Americas.

LACS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LACS 2365. Latinx Youthhood in the United States. (4 Hours)

Surveys topics related to Latinx youthhood. Includes historical, social, and cultural roots of Latinx youthhoods in the United States and how Latinx youthhood has been shaped within colonial, transnational, and global contexts. Emphasizes understanding the ways in which social institutions found in and across the United States and Latin American sending communities have structured Latinx youthhoods in relation to race, gender, class, and citizenship, as well as how Latinx youths have exercised agency to contest the social inequalities resulting from the practices and policies of these social institutions.

Attribute(s): NUpath Societies/Institutions

LACS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LACS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LACS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LACS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Law (for Non-Law School Students) (LW)

Courses

LW 5963. Topics. (1,2 Hours)

Offers students an opportunity to learn about timely issues, develop new skills, or explore areas of broad interest in an immersive, short-course format. Content and instructors vary by offering. May be repeated three times.

LW 6101. Introduction to Legal Studies 1: Law and Legal Reasoning. (3 Hours)

This course will provide students with an introduction to the American legal system and legal reasoning. The course materials will cover rights and obligations created by contracts, fundamental principles of property law, accident law, the regulation of criminal conduct, and the laws associated with business formation and relationships. Students will also complete writing exercises to enable them to synthesize their understanding, and to find and use legal sources in support of their work.

LW 6102. Introduction to Legal Studies 2. (3 Hours)

This course builds on LW 6101 with its emphasis on common law by introducing students to statutes and regulations. The setting involves federal administrative agencies governing employment, consumer protection, environment, labor, cyberlaw, intellectual property, and international trade. Exercises and discussions require finding, summarizing, applying and arguing about the applicability of statutes and regulations in concrete situations. The capstone of the course allows students to create a project to illustrate the lessons learned in the course.

LW 6110. Law of Information and Records. (3 Hours)

This course will present a comprehensive survey of procedural and evidentiary rules in the context of recordkeeping, document production, due diligence, and investigations. It will include an exploration of rights to privacy, issues of confidentiality and conflicts of interest, contractual and legal liability, evidentiary consequences in administrative and court settings resulting from work-place disputes, and other related areas.

Prerequisite(s): LW 6102 with a minimum grade of C-

LW 6120. Law and Strategy. (3 Hours)

Introduces students to the implications and impact of law on strategy, with attention to applying legal knowledge and resources to strategic planning and strategy implementation. Uses several examples of readily understood strategies to provide opportunities for students to identify the legal environment, consider the legal rights and requirements implicated by relevant law or regulation (e.g., intellectual property, contracts, administrative law) and their potential impact on management, incorporating law as a resource on the resource based view of the firm. Range of examples include considering law and strategy implementation in multiple contexts. Focuses on developing an appreciation of the legal environment and making effective use of legal resources and lawyers as advisors in strategic management aimed at attaining sustainable competitive advantage over rivals.

Prerequisite(s): LW 6400 with a minimum grade of C- or LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C-

LW 6130. Negotiation and Advocacy. (3 Hours)

Offers students an opportunity to learn core elements of negotiations that are the precursors to any final agreement or resolutions of informal disputes: negotiation planning from opposing sides and counseling; analysis of the bargaining range and opponent's needs; principled concession patterns; problem-solving strategies to avoid deadlock; information bargaining and authority clarification; principles of drafting; settlement; and ethics.

LW 6140. Data Regulation and Compliance. (3 Hours)

Covers the challenges facing organizations in building programs that ensure adherence with legal obligations, especially regarding data. Institutions increasingly face a host of regulatory compliance issues. Explores statutes covering a broad range of areas, especially when it involves data protection and privacy.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6150. Law and Organizational Management. (3 Hours)

Students will learn the rules governing organizations, including corporations, partnerships, governmental organizations, and non-profits. The focus will include relationships within the organizations and powers of members of organizations. In addition, the course will cover employment issues relevant to relationships in organizations. Topics will include rights of workers to be free of discrimination in the workplace, the importance of workplace rules, and policies governing the workplace.

LW 6155. Legal Foundations of Public Policy. (3 Hours)

Examines the legal framework for public policymaking at all levels of government. Topics include the role of law within the legislative, executive, and judicial branches of government and the contributions of local, state, and federal governments in crafting and implementing public policy. Explores the history of regulation and the rise of the administrative state. Reviews the landscape of current agency activities, including investigations and the imposition of sanctions. Introduces students to legislative and regulatory drafting processes. Offers students an opportunity to draft model legislation and participate in "notice and comment" rulemaking.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6160. Regulation and Global Business Strategies. (3 Hours)

This course provides an introduction to the international legal concepts, principles and institutions that define and shape international business relations. Globalization has increased the number of economic interactions across national borders. The globalization of production and consumption takes place in the background of an international monetary system and an international legal infrastructure facilitating and regulating transnational trade, international finance and global intellectual property and investment protection. The course specifically examines case studies of global governance based on codes of practice, certification and other regulatory initiatives.

Prerequisite(s): LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6170. Financial Transactions. (3 Hours)

In this course students will explore various aspects of corporate financial transactions, including vendor and supplier contracts, early stage financing, commercial loans, initial public offerings, mergers, and the sale of assets. Issues involving valuation of assets will be covered, and students will learn basic securities laws related to the transactions covered.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6180. Health Law Survey. (3 Hours)

Examines legal regulations governing the provision of healthcare services. Topics include access to health insurance and healthcare, healthcare financing, the organization and responsibility of healthcare institutions (especially hospitals), healthcare cost containment policies, public and private insurance programs, and the formulation of health policy. Provides an introductory overview of the major statutes, regulations, and case law related to health law, including an introduction to the Patient Protection and Affordable Care Act, otherwise known as Obamacare.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6181. Healthcare Regulation and Compliance. (3 Hours)

This course covers major regulatory issues related to the healthcare field, providing an in-depth regulatory overview of health programs. Statutory schemes covered will include HIPAA/HITECH, Stark/fraud and abuse. In addition, students will learn about compliance programs, including compliance operations, and the code of conduct for particular fields.

Prerequisite(s): LW 6102 with a minimum grade of C-

LW 6182. Patient Records, Privacy, and Security. (3 Hours)

This course explores the ethical and legal obligations respecting patient records, particularly electronic records. In addition to reviewing HIPAA's privacy and security rules, the course will cover professional ethics regarding confidentiality, common law and state protections for confidentiality, GINA, and the HiTech Act.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 6184. Healthcare Compliance 1. (2 Hours)

This course is the first of a two-course series that explores the basics of healthcare compliance. This course focuses on the relationships between various participants in the healthcare system and the compliance concerns and programs that exist because of these relationships. At the end of the course students should be able to identify basic compliance issues, consult relevant sources of guidance on achieving compliance, and propose initial resolutions to compliance issues that appropriately weigh business goals and legal risks.

LW 6190. Introduction to Healthcare Compliance. (1 Hour)

This course introduces students to the compliance function in health-related settings. Through preparatory work and on-the-ground sessions with faculty, students will have an opportunity to learn about the health care industry and familiarize themselves with vocabulary and concepts that are commonly used in connection with compliance programs.

LW 6192. Healthcare Compliance 2. (2 Hours)

This course will provide students with insights into the evolution of healthcare compliance programs and lessons learned by regulators and compliance officers. The course materials will provide an in-depth review of industry best practices for each of the 7 elements of effective compliance programs and risk assessment. Additionally, it will help students build the confidence needed to establish and maintain a business culture of ethics and compliance within a healthcare environment. Students will complete practical research assignments providing them with experiences expected of compliance professionals.

Prerequisite(s): LW 6191 with a minimum grade of C-

LW 6193. Healthcare Compliance Capstone. (1 Hour)

In this course, students will have the opportunity to deepen their knowledge of healthcare compliance through online exercises, a capstone project, and in-person class sessions that will introduce students to individuals with significant experience in the compliance field.

LW 6210. Special Topics in Employee Rights and Employer Obligations. (3 Hours)

Examines the legal relationship between employer and employee. Addresses issues and topics such as discrimination, affirmative action, the Americans with Disabilities Act, sexual harassment, health and safety, AIDS in the workplace, compliance issues, and legal issues related to downsizing and terminations. Today's HR manager works in a highly complex environment with constantly changing laws and legislation that govern employee rights and employer obligations. Course content may vary from term to term.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6211. Antidiscrimination Law. (3 Hours)

Provides an overview of antidiscrimination laws governing the workplace. Focuses on discrimination based on race and sex, but some attention will also be given to discrimination based on other characteristics, including age, sexual orientation, and disability. In addition to general issues of discrimination, also focuses on the specific topics of retaliation, harassment, and bullying in the workplace.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6212. Wages and Benefits. (3 Hours)

This course will cover topics related to wage and hour laws (federal and state), ERISA (pensions), health insurance benefits, the Affordable Care Act, and disability insurance.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6230. Intellectual Property Survey. (3 Hours)

Introduces the classic principles of copyright, patent, trademark, and trade secret law and explores the ways in which those principles are shifting and adapting in response to new technology. In our modern-day "information economy," the law of intellectual property (IP) has taken on enormous importance to both creators and users of creative works. Such IP law is the way we provide legal protection to encourage invention and creativity, by guaranteeing an opportunity for financial return to the originator of novel work.

Prerequisite(s): LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6231. Identifying and Securing Intellectual Property Rights. (3 Hours)

Focuses on intellectual property issues in employment, collaborative environments, and business transactions. Covers common issues for founders and startups, employers, and contractors; including non-compete agreements, crowd-sourcing, and open innovation practices.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6232. Intellectual Property and Media. (3 Hours)

This course will cover copyrights, trademarks, and unfair competition, with a focus on media, advertising, user-generated content, and other online activities.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6235. Current Issues in Law and Public Policy. (3 Hours)

Examines the evolving roles of courts, agencies, legislatures, citizen movements, and nonprofit organizations in policymaking through case studies of current debates in law and policy. Explores how businesses and advocacy groups combine the use of legal tools and other activities to achieve policy goals. Considers how law can be used to right past wrongs and how grassroots activities and individual actions can contribute to a fight against injustice. Focuses on a range of policy issues; possible topics include but are not limited to healthcare reform, criminal justice reform, racial justice, reproductive rights, marriage equality, and environmental justice.

Prerequisite(s): LW 6101 with a minimum grade of C- or LW 6102 with a minimum grade of C- or LW 6400 with a minimum grade of C-

LW 6400. Law, Policy and Legal Argument. (4 Hours)

This course explores the legal levers that drive policy change. Advocates often intend to alter public policy in support of an organization or a cause. But influencing policy requires understanding who sets policy in the first instance. Is the issue governed by federal, state or local law? Are key decision makers elected or appointed? Who is it most important to persuade and what sorts of arguments are likely to convince the key audience? This course will introduce students to the mechanisms of government that drive key policy debates across a wide range of issues, which may include health care, market regulation, environmental policy, housing, education, the internet, privacy, and social policy. Emphasis will be placed on tailoring arguments to different constituencies.

LW 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LW 7329. Environmental Law. (3 Hours)

This course focuses on federal and state environmental laws. Topics include pollution control, waste management, and cleanup of contaminated land and water. The course explores legislative policy and regulatory decisions as well as enforcement issues. We will give attention to questions of environmental justice and to the strategic use of legal tools in working to ensure safe and healthy surroundings for diverse groups of people.

LW 7333. Family Law. (3 Hours)

This is a basic course in family law and family policy. The first half of the course explores state regulation of intimate relationships, asking what purposes marriage serves, and looking at the law of incest, polygamy and same sex marriage. The second half of the course examines practical problems in family law: cohabitants' rights; common law marriage; and the many issues relating to divorce, with a particular focus on money and children.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7335. Health Law. (3 Hours)

This course examines the legal regulation of the provision of healthcare services. Much of the focus is on the relationship between law and healthcare policy. Topics include access to health insurance and healthcare, healthcare financing, malpractice liability, the organization and responsibility of healthcare institutions, especially hospitals, the regulation of the quality of care and the formulation of health policy. This course is highly recommended for all students enrolled in the JD/MPH dual degree program, but is open to others as well.

LW 7358. Social Welfare Law. (3 Hours)

This course examines American public assistance as a legal institution. After reviewing the historical, sociological and juridical roots of the welfare system, students examine the laws governing major assistance programs, especially eligibility requirements, rules governing grant determination, work and family rules, and procedural rights. Primary emphasis is on statutory and regulatory construction. The course explores methods by which lawyers can deal with the system: advocacy in the administrative process, litigation, legislative reform and representation of recipient organizations.

LW 7369. Intellectual Property. (3 Hours)

In our modern day information economy, the law of intellectual property has taken on enormous importance to both creators and users of intellectual creations. Introduces students to the classic principles of copyright, patent, trademark, and trade secret law and explores the ways in which those principles are shifting and adapting in response to new technology.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7394. Land Use. (3 Hours)

A survey of legal doctrines, techniques and institutions relating to regulation of the use of real property. Topics covered include constitutional questions of takings by public agencies, the scope of the police power as it affects land use and the basic techniques of zoning and subdivision control. Students study, among other issues, recent cases on exclusion of low income housing, current techniques to encourage housing development (inclusionary or "linkage" regulations) and First Amendment questions arising from land use controls.

Prerequisite(s): LW 6400 (may be taken concurrently) with a minimum grade of C-

LW 7424. Labor Law 1. (4 Hours)

A general introduction to the law of labor relations through an examination of the National Labor Relations Act and leading cases, in conjunction with historical, social and economic materials. Topics include organization, union recognition, unfair labor practices and collective bargaining.

LW 7469. Disability Law. (3 Hours)

This course explores how the law treats individuals with disabilities. We will analyze what is meant by the term "disability" and consider constitutional review of state actions discriminating against individuals with disabilities. Particular attention will be given to the rights and obligations created by the Rehabilitation Act, the Americans with Disabilities Act and the Individuals with Disabilities Education Act. The rights of individuals with disabilities to be educated, work, receive healthcare, and enjoy public accommodations will be considered in depth. This course is designed for students wishing to represent individuals with disabilities as well as students who may represent employers and public accommodations.

LW 7475. First Amendment. (3 Hours)

This course examines several rights protected by the First Amendment to the Constitution. The focus is on the principles and processes developed by the judiciary to protect various forms of speech, expression and association. The course does NOT deal with the free exercise of religion or the establishment clause. The course also focuses on integrating doctrine with the core values of the First Amendment as well as emphasizing the need for students to develop their own preferred approach to protecting free expression. The course does not, except tangentially, deal with other parts of the Bill of Rights.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7488. Sexuality, Gender and the Law. (3 Hours)

This course uses case law and theory to address doctrinal problems and justice concerns associated with gender and sexuality. The syllabus is organized around notions such as privacy, identity and consent, all of which are conceptual pillars upon which arguments in the domain of sexuality and gender typically rely. Doctrinal topics include same-sex marriage, sodomy, sexual harassment, discrimination, among others, but the course is not a doctrinal survey; it is a critical inquiry into key concepts that cut across doctrinal areas. Students should expect to write a paper and share some of what they have learned with the class.

LW 7491. International Human Rights and the Global Economy. (3 Hours)

This course surveys the international human rights legal system. It includes the promotion and protection of economic, social, and cultural rights (such as rights to health, food, water, and education) and civil and political rights (such as equality and non-discrimination, the right to human security, the prohibition on torture, and rights to religious and cultural expression). We begin by examining the history and theoretical origins of human rights law. We then engage the legal framework under international and regional human rights treaties and interpretations of them by international, regional and domestic courts and other actors. We examine international, regional and domestic mechanisms for monitoring compliance. Finally, we grapple with tensions among cultural and religious imperatives and traditional human rights.

LW 7494. Bioethics and the Law. (3 Hours)

Explores the intersection of law, medicine, and ethics in diverse contexts that call for the evaluation of policies and practices implicating individual or public health. Topics may include but are not limited to end-of-life care, reproductive technologies, vaccines and the management of public health emergencies, professional and research ethics, confidentiality in health information, and equitable access to health care.

LW 7512. Problems in Public Health Law. (3 Hours)

Explores the rationales for using law to protect and preserve the public's health, the legal tools that may be used to achieve that end, and the conflicts and problems that may result from legal interventions. Topics discussed include the use of law to reduce the spread of HIV and other infectious diseases, control of tobacco and other hazardous products, bioterrorism, and the threats to civil liberties and minority groups engendered by all such legal efforts. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7514. Natural Resources Law. (3 Hours)

This course addresses legal requirements and institutions dealing with animal and plant species, biological resources, habitats, and ecosystems. Major themes include biological diversity, endangered and threatened species, public and private rights in migratory resources, public trust doctrine, the allocation of power among federal, state, and local governments, and the roles of administrative agencies in ecosystem management. The course provides opportunities to explore specific topics of interest such as environmental ethics, wetlands protection, fisheries law, Native American hunting rights and fishing rights, and management of national parks, forests, and grazing lands.

LW 7525. Law and Economic Development. (3 Hours)

Examines the prevailing economic theories of and strategies for economic development since World War II and the legal and institutional frameworks devised to implement these strategies. Questions we will explore will include: What kinds of legal and institutional arrangements best facilitate economic growth? How does law structure and shape markets? What is development; and how can it best be measured? Can legal instruments be used effectively to address underdevelopment in a structural way? While the focus is on development in the so-called "developing world"; we will also explore some strategies for addressing development in a local community context. Course concludes by applying what we have learned to address several development case studies posing particular problems in particular regions and contexts.

LW 7526. Juvenile Courts: Delinquency, Abuse, Neglect. (3 Hours)

Examines the evolution of the juvenile court system and issues related to juvenile justice and child welfare. Includes the study of procedural and substantive principles related to court subject matter, including delinquency, youthful offender, status offense, and abuse and neglect jurisdiction. In attempting to focus on connecting theory to practice, the class employs a contextual lens by considering the larger communities and systems that affect children, families, and public safety. This entails consideration of the consequences of decisions and policies in and out of courtrooms. Related topics include adolescent development; racial, ethnic, and gender equity; access to educational and mental health services; and public health.

LW 7530. Education Law. (3 Hours)

Surveys current issues in U.S. education law. Topics may include high-stakes testing, school choice and the charter school movement, resegregation, special education, the school-to-prison pipeline, and school funding.

LW 7536. Employment Law - Safety and Health. (3,4 Hours)

Focuses on the legal issues relating to the primary and secondary prevention of injuries and illnesses at work. Includes a review of the Occupational Safety and Health Act, as well as discussions of other relevant aspects of employment, labor, compensation and tort law. With permission of instructor, students may be able to take the course for an additional credit by completing a substantial paper or equivalent writing project (in addition to other course requirements) as required by the instructor.

LW 7539. Employment Law—Job Security and Rights. (3 Hours)

This course surveys legal and policy issues concerning job security, focusing primarily on law governing the termination of private sector employment. Students develop an understanding of the history and scope of the underlying employment-at-will doctrine and the primary ways in which the at-will doctrine has been modified through common law and statute.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7550. Refugee and Asylum Law. (3 Hours)

This course will explore the law of asylum and refugees. The primary focus will be on U.S. law as it has evolved since passage of the Refugee Act of 1980. This will include legislation and case law—both administrative and federal court cases. It will also look at relevant international law and standards utilized in other countries by way of comparison with U.S. Law. We will also examine the process of asylum adjudications to analyze issues of due process, credibility, cross cultural communication and integrity of the various legal procedures. We will explore new and emerging theories of asylum eligibility and policy developments which impact asylum seekers in the United States.

Prerequisite(s): LW 6400 (may be taken concurrently) with a minimum grade of C-

LW 7588. Reproductive Rights and Health. (3 Hours)

Examines how sexual and reproductive health laws impede or increase access to sexual and reproductive healthcare and shape how we understand what constitutes sexual and reproductive health. Attention is paid to understanding legal doctrine, public health research, and critically assessing issues arising from sexual and reproductive health law. Draws on various tools of analysis including critical race theory, critical legal theory, human rights, and a range of public health methods. Topics covered include, amongst others, sexual and reproductive health law as it pertains to abortion, sexuality, pregnancy, marriage, healthcare in prisons, immigrants, HIV/AIDS, and sex education.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7597. Civil Rights and Restorative Justice Clinic. (1-6 Hours)

The CRRJ (Civil Rights and Restorative Justice) Clinic engages students in legal research, litigation and legislative initiatives relating to anti-civil rights violence in the United States. CRRJ clinic students assist law enforcement agencies considering criminal investigation and pursue civil litigation against government entities. One of CRRJ's projects, Reconstructing Cases of Racial Violence, involves researching cases where criminal prosecution may not be an option. Students reconstruct legal proceedings and conduct factual investigations. The project focuses on practical legal research skills and helps students integrate the law of torts, civil procedure, federal courts, criminal law, and constitutional law. Faculty will provide individual supervision of each student.

LW 7606. Drug Law and Policy. (3 Hours)

The field of Drug Law is vast, spanning the discovery, manufacture, distribution, and consumption of chemical agents designed to alter the human condition. This course focuses on three domains of the broader subject: the evolution and current state of the Federal Food, Drug, and Cosmetic Act; the architecture of the drug regulation system in the U.S., including the distinct space occupied by the Food and Drug Administration, the Department of Agriculture, and the Drug Enforcement Agency; and the role of regulation and tort litigation in harmonizing drug policy with science. Designed around legal and policy case studies, this course is intended for students expecting to become involved in clinical practice involving pharmaceuticals as well those generally interested in the interplay of law and public health.

Prerequisite(s): LW 6400 with a minimum grade of C

LW 7612. Wrongful Convictions and Post-Conviction Remedies. (3 Hours)

The emergence of DNA testing has not only assisted law enforcement in solving crimes, but it has also helped to expose a problem that many observers of the criminal justice system have long suspected: that a number of actually innocent prisoners have been convicted in the United States. Given that biological evidence suitable for post-conviction DNA testing is available in only a smattering of cases, the exonerations generated by DNA represent only the tip of the innocence iceberg, so to speak. This class will explore (1) the primary factors that contribute to the phenomenon of wrongful convictions, (2) the state and federal procedures through which post-conviction claims are litigated and (3) potential reforms to protect against the conviction of the innocent.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7620. Human Behavior, Legal Doctrine, and Policy Design. (3 Hours)

This course will compare accounts of human behavior, including the Utilitarian/Law and Economics view of man as a rational calculator of his self-interest, with classical and contemporary alternatives to that description, including Behavioral Economics. We will evaluate the reasons for doubting or crediting these competing accounts, and will then consider their implications for determining appropriate legal doctrines and regulatory approaches. For example, we may consider whether the views of human behavior which shape consumer protection case law and the Supreme Court's commercial speech doctrine are justified, and whether – and in what circumstances – regulations are appropriate which seek to help people by prescribing, proscribing, or “nudging” their behavior. Students are expected to participate in class and write a research paper which may satisfy the writing requirement.

LW 7634. Energy Law and Policy. (3 Hours)

Climate change and carbon emissions are the most important issues shaping energy law and policy in the United States today. This course will provide an introduction to U.S. energy law and policy in that context and will be organized around the regulated electricity sector which alone produces about 40% of all U.S. greenhouse gas emissions. We will explore the dynamics of natural monopoly markets, public utilities and their regulation, and the interplay of state and federal power in the energy space. We examine coal, natural gas, nuclear power, hydropower, renewables, storage, and efficiency for their impacts and potential as electrical energy sources in a carbon-constrained world. We conclude by investigating the legal potential to proactively foster and sustain a transition to a carbon-sustainable energy economy.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7635. Laboratory Seminar in Applied and Critical Legal Design. (4 Hours)

Offers students the opportunity to critically engage with design methods and principles in the development of new solutions and ideas for our legal systems, institutions, and problems. Examines methodologies derived from the fields of product, service, and critical design and emphasizes hands-on student engagement with structured creative processes, field observations, prototyping or other methods derived from a diversity of creative disciplines. Students apply these methodologies and skills in the formulation of a response to a timely design question. Students' exploration of critical design fosters a vision of a future world where everyone is empowered to use the law.

LW 7651. Human Rights in the United States. (3 Hours)

Explores the role of international human rights frameworks and strategies in social justice lawyering in the United States. On a range of issues, lawyers are bringing human rights home. They are using human rights mechanisms of the United Nations and Inter-American Human Rights system, drawing on international human rights and comparative foreign law in litigation before U.S. courts, and engaging in other human rights-based advocacy such as documentation, organizing, and human rights education. Advocates find that a human rights approach provides important strategic leverage and highlights the interdependence of economic, social, cultural, civil, and political rights. Uses skills exercises, assignments and real-world problems to develop practical skills to address policies on local, state and national levels, and to support social movements.

LW 7664. Law and Inequality. (3,4 Hours)

Explores inequality from a range of disciplinary perspectives and the difference that can make in a variety of legal, social, and economic contexts. Elaborates methodologies for mapping ways diverse legal regimes and concepts contribute to the production, recognition, reinforcement, and maintenance of hierarchies of privilege and disadvantage between individuals, groups, localities, regions, and nations. Identifies key legal drivers in the production of inequities and explores how they shift bargaining power, redistribute resources, or otherwise ameliorate inequities or their adverse consequences. Students research a circumstance of inequality and develop a legal map to engage it. With permission of instructor, students may register for an additional credit by completing a substantial paper or equivalent writing project (in addition to other course requirements) as required by the instructor.

LW 7666. Human Rights, the Environment, Development and Community Resilience. (3 Hours)

This course explores the interlinkages between human rights and the environment within the context of how unsustainable development, especially by businesses, is driving environmental degradation and global human rights violations. We will appraise how communities are responding with innovative lawyering utilizing emerging jurisprudence in comparative law and judicial, quasi-judicial, and non-judicial grievance mechanisms, with special attention to African examples. The course will emphasize practical approaches to environmental protection using human rights instruments. The power of corporations and financial institutions, the ways in which corporate activities often connect to abuses of human rights and the environment, and legal advances in the regulation of transnational corporate activity will be explored while also discussing corporate accountability, the global justice movement, and strategies being used to address these trends.

LW 7667. Law and Ethics of Advocacy. (3 Hours)

What limits are there on actions aimed at influencing public officials or public opinion? What limits should there be? Clearly, it is unlawful to offer a bribe to a public official to produce a desirable outcome. But what constitutes a bribe? Can a lobbyist send a wedding gift to a favorite legislator? Are the rules different when advocacy efforts reach beyond United States borders? Are there limits on what an advocate can say to promote a product or service? Where is the line between conduct that is legally permissible and conduct that is not? To what extent are legal boundaries and ethical boundaries aligned? This course will explore the ethical and legal issues that arise in connection with advocacy.

LW 7669. Law and Technology. (3 Hours)

Examines law and technology as both processes and artifacts endemic to human groups, who have been toolmakers and lawmakers since human history has been recorded. Yet, in recent times, development of technological things has outpaced development in the law, bringing about what we might describe as new "design challenges" within the law. Considers several disputes around ownership and property, and safety and risk, and offers students a conceptual framework from the social study of science and technology by which to understand technology and the law. Focuses on the regulation of "digital labor" and algorithmically convened labor markets, such as Uber.

Prerequisite(s): LW 6400 with a minimum grade of C-

LW 7687. First Amendment Seminar: The Religion Clauses. (3 Hours)

Examines the religion clauses of the First Amendment and related statutory regimes, emphasizing the U.S. Supreme Court's free exercise and establishment clause jurisprudence. Evaluates individual and institutional claims of religious liberty. Explores the implications of government funding of religious institutions and activities. Discusses government expression or endorsement of religious messages.

LW 7688. Social Policy and the Tax Code. (3 Hours)

Offers students an opportunity to obtain an understanding of how tax laws shape and are a major driver of social policy. Emphasizes the redistributive qualities and potentials of such policies and examines their design, implementation, and administration. Draws on legal methodologies as well as those from allied social sciences. May include such topics as healthcare, housing, and income support.

LW 7692. Collaborative Businesses. (2-3 Hours)

Examines the fundamental principles, structures, finance, management and governance associated with collaborative businesses (with a focus on co-operatives).

LW 7695. Drug and Device Innovation: Law and Policy. (3 Hours)

Introduces students to innovation law and policy in the context of drugs and devices regulated by the Food Drug Administration (FDA). Surveys the suite of incentives policymakers can use, purposefully or inadvertently, to shape drug and device development. Combines analysis from law, economics, and health policy.

LW 7697. Issues in Human Rights and Humanitarian Law. (3 Hours)

Examines cutting-edge issues in human rights and humanitarian law through presentations by leading scholars in the field and in-depth seminar discussions. Emphasizes both core concepts and sophisticated critiques of human rights in a range of areas including conflict and war, accountability and justice, race and racism, and colonialism and inequality.

LW 7699. Efforts in Criminal Law Minimalism. (3 Hours)

Examines several recent efforts in criminal legal reform. Introduces the recent abolition movement, emphasizing an understanding of critiques of policing and mass incarceration. Presents several efforts to change the criminal system including efforts to halt racialized policing; remove police from particular settings; reform pretrial detention; implement change within the trial process, such as Batson reform; and reform sentencing. These reform efforts include legislative reform, judicial challenges, community organization, and public media campaigns. Offers students an opportunity to develop their knowledge of advanced criminal procedure in the context of ongoing efforts to change a deeply flawed system.

LW 7700. Intellectual Property and Social Justice. (3 Hours)

Examines the social justice aspects of different forms of intellectual property. Combines a study of contemporary issues in law and society with appropriate readings that provide theoretical, doctrinal, and social context for the use of and resistance to intellectual property.

Prerequisite(s): LW 7369 (may be taken concurrently) with a minimum grade of C- or LW 7501 (may be taken concurrently) with a minimum grade of C-

LW 7976. Directed Study. (1-6 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated two times for a maximum of six semester hours.

Law (LAW)**Courses****LAW 3101. Introduction to Legal Studies 1: Law and Legal Reasoning. (4 Hours)**

Introduces the American legal system and legal reasoning. Covers rights and obligations created by contracts, fundamental principles of property law, accident law, the regulation of criminal conduct, and the laws associated with business formation and relationships. Requires students to complete writing exercises to enable them to synthesize their understanding and to find and use legal sources in support of their work.

LAW 3102. Introduction to Legal Studies 2: Statutes and Regulations. (4 Hours)

Builds on LAW 3101 by introducing statutes and regulations. Covers federal administrative agencies governing employment, consumer protection, environment, labor, cyberlaw, intellectual property, and international trade. Uses exercises and discussions to require students to find, summarize, apply, and argue about the applicability of statutes and regulations in concrete situations. The capstone of the course offers students an opportunity to create a project to illustrate the lessons learned in the course.

LAW 3120. Introduction to Law and Strategy. (4 Hours)

Introduces the implications and impact of law on business strategy. Emphasizes applying legal knowledge and resources to strategic planning and strategy implementation. Uses several examples of strategies to provide opportunities for students to identify the legal environment and to consider the legal rights and requirements implicated by relevant law or regulation. Examples consider law and strategy implementation in multiple contexts. Focuses on developing an appreciation of the legal environment and making effective use of legal resources and lawyers as advisors in strategic management.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3130. Introduction to Negotiation and Advocacy. (4 Hours)

Introduces core principles and practices of negotiations: negotiation planning from opposing sides and counseling, analysis of the bargaining range and opponent's needs, principled concession patterns, problem-solving strategies to avoid deadlock, information bargaining and authority clarification, principles of drafting, settlement, and ethics.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3140. Data Regulation and Compliance. (4 Hours)

Builds on LAW 3102. Covers the challenges facing organizations in building programs that ensure adherence with legal obligations, especially regarding data. Explores statutes covering a broad range of areas, especially involving data protection and privacy.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3150. Introduction to Law and Organizational Management. (3 Hours)

Introduces the rules governing organizations, including corporations, partnerships, governmental organizations, and nonprofits. Emphasizes relationships within organizations and powers of members of organizations. Covers employment issues relevant to relationships in organizations. Topics include rights of workers to be free of discrimination in the workplace, the importance of workplace rules, and policies governing the workplace.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3160. Introduction to International Regulations and Business Strategies. (3 Hours)

Introduces the international legal concepts, principles, and institutions that define and shape international business relations. Explores international monetary systems and legal infrastructures facilitating and regulating transnational trade, international finance and global intellectual property, and investment protection. Examines case studies of global governance based on codes of practice, certification, and other regulatory initiatives.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3170. Introduction to Financial Transactions. (3 Hours)

Explores various legal aspects of corporate financial transactions, including vendor and supplier contracts, early stage financing, commercial loans, initial public offerings, mergers, and the sale of assets. Covers issues involving valuation of assets. Offers students an opportunity to learn basic securities laws related to the transactions covered.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3181. Introduction to Healthcare Compliance. (3 Hours)

Explores regulatory issues related to the healthcare field including issues in the areas of HIPAA, fraud, and abuse. Topics include Medicare, corporate organizations, and integrated delivery systems. Focuses on compliance programs, including compliance operations.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3182. Introduction to Patient Records, Privacy, Security. (3 Hours)

Introduces ethical and legal obligations applicable to patient records. Reviews HIPAA's privacy and security rules. Covers professional ethics related to confidentiality, common law and state protections for confidentiality, 42 CFR Part 2, and the Genetic Information Nondiscrimination Act.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3210. Introduction to Employee Rights and Employer Obligations. (3 Hours)

Examines the legal relationship between employer and employee. Addresses discrimination, affirmative action, the Americans with Disabilities Act, sexual harassment, health and safety, AIDS in the workplace, compliance issues, and legal issues related to downsizing and terminations. Specific issues and topics covered may vary from term to term.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3211. Introduction to Antidiscrimination Law. (3 Hours)

Introduces antidiscrimination laws governing the workplace. Focuses on discrimination based on race and sex but also considers characteristics such as age, sexual orientation, and disability. Examines topics such as retaliation, harassment, and bullying in the workplace.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3212. Introduction to Wages and Benefits. (3 Hours)

Introduces laws and regulations that determine the rights and duties of employees and employers as they relate to wages and employment benefits. Topics may include wage and hour laws, the Employee Retirement Income Security Act (pensions), job-protected leaves, health insurance benefits, the Affordable Care Act, disability insurance, and unemployment benefits. Focuses primarily on federal law but also discusses state law and rights expanded under a union collective bargaining agreement.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3232. Introduction to Intellectual Property and Media. (3 Hours)

Introduces copyrights, trademarks, and unfair competition. Focuses on media, advertising, user-generated content, and other online activities.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3235. Issues in Law and Public Policy. (4 Hours)

Illustrates the roles of courts, agencies, legislatures, citizen movements, and nonprofit organizations in law and policy through case studies. Explores how businesses and advocacy groups use legal tools and other approaches to achieve their goals. Considers how law can be used to right past wrongs and how grassroots activities can fight injustice. Focuses on a range of issues.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3236. Introduction to Contract Drafting. (3 Hours)

Introduces the drafting of contracts. Dissects and examines contracts encountered in business relationships. Evaluates, explores, and interprets drafting style, techniques, and decisions in varied contexts. Class exercises are designed to help students draft and analyze contracts of increasing complexity.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3238. Introduction to Global Regulation of Artificial Intelligence. (3 Hours)

Examines regulation of artificial intelligence technologies on a global scale by introducing the legal, ethical, and policy challenges posed by AI's rapid advancement. Through readings, case studies, debates, and interactive discussions, considers various regulatory approaches, international collaborations, geopolitical significances, and potential future directions of AI governance.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3239. Introduction to Sports Law, Business, and Society. (3 Hours)

Examines the legal, business, and social structures that intersect with professional, collegiate, and amateur sports in the United States. Explores intellectual property law, labor law, antitrust law, employment law, agency law, constitutional law, broadcasting law, and private association law in relationship to the sports industry. Covers topics such as the business applications of the sports industry and the industry's relationship to antidiscrimination laws concerning race, sex, national origin, and other protected classes. Debates underlying principles to rethink the ethical boundaries that surround the sports industry.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3320. Introduction to Intellectual Property. (3 Hours)

Introduces the classic principles of copyright, patent, trademark, and trade secret law. Explores the ways in which those principles are shifting and adapting in response to new technology. Studies the law of intellectual property from the perspectives of creators and users.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3321. Introduction to Identifying and Securing Intellectual Property Rights. (3 Hours)

Introduces intellectual property issues in employment, collaborative environments, and business transactions. Covers common issues for founders and startups, employers, and contractors, including noncompete agreements, crowdsourcing, and open innovation practices.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3800. Reflections on Law. (1 Hour)

Offers students an opportunity to reflect on legal issues discussed in a law course in which they are concurrently enrolled. Through activities such as written reflections, discussions, and presentations, students closely examine legal topics and consider their broader implications. Explores how law shapes endeavors in students' areas of interest. May be repeated once.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 3801. Writing on Legal issues. (1 Hour)

Offers students an opportunity to further explore legal issues discussed in a law course in which they are concurrently enrolled. Writing assignments are designed to enable students to learn more about topics in their areas of interest while also honing communication skills. May be repeated once.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4335. Health Law and Policy. (4 Hours)

Examines the legal regulation of the provision of healthcare services. Focuses on the relationship between law and healthcare policy. Topics include access to health insurance and healthcare; healthcare financing; malpractice liability; the organization and responsibility of healthcare institutions, especially hospitals; the regulation of the quality of care; and the formulation of health policy.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4369. Advanced Intellectual Property. (3 Hours)

Explores the classic principles of copyright, patent, trademark, and trade secret law and how those principles are shifting and adapting in response to new technology. In our modern day "information economy," the law of intellectual property has taken on enormous importance to both creators and users of intellectual creations.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4501. Patent Law and Practice. (3 Hours)

Offers an in-depth review of patent law and practice. Covers the administrative process for obtaining patents, including the requirements for patentability, enforcement of patent rights, and the defense of patent infringement suits. Presents the content of the course in a simple, nontechnical manner so that students of all disciplines have an opportunity to learn and understand the concepts.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4525. Law and Economic Development. (3 Hours)

Examines prevailing theories of and strategies for economic development and the legal and institutional frameworks devised to implement these strategies. Considers what kinds of legal and institutional arrangements best facilitate economic growth, how law structures and shapes markets, what "development" is and how it can best be measured, and whether legal instruments can be used effectively to address underdevelopment in a structural way. Focuses on development in the so-called developing world while exploring some strategies for addressing development in a local community context. Analyzes several development case studies posing particular problems in specific regions and contexts.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4600. Issues in Health Law and Policy. (3 Hours)

Examines recent debates in health law and policy by discussing current events; legislation and/or regulation; and scholarly articles and commentaries in law, medicine, and other related disciplines. Topics depend in part on student interest but may include healthcare financing reform; public health; health disparities; reproductive care; health information; health technologies; artificial intelligence; malpractice liability reform; pharmaceutical pricing and promotion; and other issues related to healthcare access, quality, and financing.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4635. Legal Empowerment and Applied Design. (4 Hours)

Offers students an opportunity to critically engage with design methods and principles in the development of legal solutions in support of a future world where everyone is empowered to use the law. Examines methodologies derived from the fields of product, service, and critical design in a seminar setting. Emphasizes hands-on student engagement with structured creative processes, including field observations and prototyping. Students apply these methodologies and skills in the formulation of a response to a timely design question.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4640. Issues in Information Security Law. (3 Hours)

Examines the state of the legal art in information security law—what is known in DC policy circles as cybersecurity. Discusses why data breaches continue to run rampant, what duties of data care and code safety are owed to consumers, and how various government agencies are tackling the consumer protection and national security issues implicated by vulnerable computer code.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4664. Law and Inequality. (3 Hours)

Explores inequality from a range of disciplinary perspectives and the difference it can make in a variety of legal, social, and economic contexts. Elaborates methodologies for mapping ways diverse legal regimes and concepts contribute to the production, recognition, reinforcement, and maintenance of hierarchies of privilege and disadvantage between individuals, groups, localities, regions, and nations. Identifies key legal drivers in the production of inequities and explores how they shift bargaining power, redistribute resources, or otherwise ameliorate inequities or their adverse consequences.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4681. Issues in Law and Biotechnology. (4 Hours)

Identifies and explores important ethical, legal, and policy issues associated with the challenges resulting from developments in biotechnology and the life sciences. Examines existing legal approaches and instruments dealing with such critical issues as genetic discrimination, intellectual property rights in biotechnology, regulating new reproductive technologies, drug development, informed consent, responsible conduct of research, forensic uses of DNA, and privacy. Focuses particularly on human genetics.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 4700. Intellectual Property and Social Justice. (3 Hours)

Examines the social justice aspects of different forms of intellectual property. Combines a study of contemporary issues in law and society with appropriate readings that provide theoretical, doctrinal, and social context for the use of and resistance to intellectual property.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C); (LAW 4369 (may be taken concurrently) with a minimum grade of C or LAW 4501 (may be taken concurrently) with a minimum grade of C)

LAW 4983. Special Topics in Law. (1-4 Hours)

Covers special topics in law. May be repeated twice for a maximum of 6 semester hours.

Prerequisite(s): (COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S); (LAW 3101 with a minimum grade of C ; LAW 3102 with a minimum grade of C)

LAW 6100. Civil Procedure. (5 Hours)

Introduces students to the procedural rules that courts in the United States use to handle noncriminal disputes. Designed to provide a working knowledge of the Federal Rules of Civil Procedure and typical state rules, along with an introduction to federalism, statutory analysis, advocacy, and methods of dispute resolution. Examines procedure within its historical context.

LAW 6101. Constitutional Law. (4 Hours)

Studies the techniques of constitutional interpretation and some of the principal themes of constitutional law: federalism, separation of powers, public vs. private spheres, equality theory and rights analysis. The first part of the course is about the powers of government. The second part is an in-depth analysis of the 14th Amendment.

Attribute(s): NUpath Societies/Institutions

LAW 6102. Contracts. (5 Hours)

This course examines the legal concepts governing consensual and promissory relationships, with emphasis on the historical development and institutional implementation of contract theory, its relationship and continuing adaptation to the needs and practice of commerce, and its serviceability in a variety of non-commercial contexts. Topics covered include contract formation, the doctrine of consideration, remedies for breach of contracts, modification of contract rights resulting from such factors as fraud, mistake and unforeseen circumstances, and the modern adaptation of contract law to consumer problems. This course also introduces students to the analysis of a complex statute: the Uniform Commercial Code.

LAW 6103. Criminal Justice. (4 Hours)

In this course, students are introduced to the fundamental principles that guide the development, interpretation and analysis of the law of crimes. They are also exposed to the statutory texts—primarily the Model Penal Code, but also state statutes. In addition, students are introduced to the rules and principles used to apportion blame and responsibility in the criminal justice system. Finally, students examine the limits and potential of law as an instrument of social control.

LAW 6105. Property. (4 Hours)

This course covers the major doctrines in American property law, including trespass, servitudes, estates in land and future interests, landlord-tenant relationships, nuisance, and takings. Students are introduced to rules, policies, and current controversies.

LAW 6106. Torts. (4 Hours)

This course introduces students to theories of liability and the primary doctrines limiting liability, which are studied both doctrinally and in historical and social context. The course includes a brief consideration of civil remedies for intentional harms, but mainly focuses on the problem of accidental injury to persons and property. It also provides an introductory look at alternative systems for controlling risk and allocating the cost of accidents in advanced industrial societies.

LAW 6160. Legal Skills in Social Context. (2 Hours)

The LSSC Social Justice component immediately applies students' legal research and writing skills in using law as a tool for social change. LSSC links students' pre-law school thinking with the new legal culture in which they find themselves. In the first semester, they begin by forging their own team lawyering dynamic in discussing assigned readings and in preparing, and presenting, several advocacy exercises and written assignments. In the second semester, students apply and consolidate their new legal research and writing skills in addressing an intensive real-life social justice project for a selected client organization. LSSC student teams develop their legal and cooperative problem-solving skills and knowledge while producing real client work of a quality that far exceeds the ordinary expectations of first-year law students. May be repeated once.

LAW 6165. LSSC: Legal Research and Writing Component. (2 Hours)

Competent and effective legal research and writing skills are the foundation for students' success in law school and in their legal careers. In LSSC's Legal Analysis, Research and Writing component, students learn about the organization of the American legal system, the sources and construction of laws, and how the application of laws may vary with the specific factual situation. Students learn how to research the law to find applicable legal rules, how to analyze and apply those rules to a factual situation, and how to communicate their legal analysis clearly and concisely to different audiences. May be repeated once.

LAW 6301. Introduction to American Law and Legal Institutions. (2 Hours)

This course is a general introduction to the American legal system for graduates of law programs outside the United States. The focus will be on the distinctive features of the American system, including how the U.S. common-law system differs from the civil-law system in place in most other countries. The three branches of government, federalism, the federal-state relationship, the constitutional protection of individual rights, civil and criminal procedure, and statutory and regulatory law will all be discussed.

LAW 6302. Introduction to Legal Research and Writing for LLM Students. (2 Hours)

This course introduces graduates of law programs outside the United States to the principles of U.S. legal discourse and to the basics of manual and electronic U.S. legal research. Students will have an opportunity to practice researching complex questions of U.S. law and writing memoranda based on their research.

LAW 6313. Introduction to the Law of Contracts. (3 Hours)

This course is designed to provide international LLM students with an introduction to U.S. contract law, with a special focus upon contracts for the sale of goods. Topics may include formation of contracts, contract interpretation, performance, and breach, remedies, and Articles 1 and 2 of the Uniform Commercial Code. This course is especially recommended for LLM students who wish to take a U.S. bar exam. This course is not open to JD students.

LAW 6314. Introduction to U.S. Constitutional Law. (3 Hours)

Provides international LLM students with an introduction to U.S. constitutional law. The course is especially recommended for LLM students who wish to take a U.S. bar exam. Topics may include judicial review, separation of powers, federalism, equal protection, state action, due process and fundamental rights, and the First Amendment.

LAW 6315. Legal Research and Writing for LLM Students: Preparing for Co-op. (2 Hours)

Introduces graduates of law programs outside the United States to the practical application of U.S. legal discourse and legal research in the workplace. Offers students an opportunity to apply what they have learned about U.S. legal writing and research to the types of tasks that they will be called upon to complete during their co-op internship work experience.

Prerequisite(s): LAW 6302 with a minimum grade of MP

LAW 6316. Introduction to Civil Procedure. (3 Hours)

This course is designed to provide international LLM students with an overall introduction to U.S. civil procedure. Topics will include personal and subject-matter jurisdiction, pleadings, discovery, choice of law (the Erie Doctrine), finality and preclusion, and class actions. The course is designed to emphasize the practical application of civil procedure law, and is especially recommended for LLM students who wish to take a U.S. bar exam. Not open to JD students.

LAW 6400. Introduction to U.S. Law and Legal System. (3 Hours)

Introduces principles and structures of the legal system in the United States. Covers the U.S. system of government, the U.S. judicial systems at the federal and state levels, U.S. sources of law, common law methodology, and the roles of legal professionals. Designed to familiarize the student with the relevant and governing legal principles that are used in American jurisprudence, including substantive and procedural law. Emphasizes legal terminology in our contemporary legal system.

LAW 6401. Contracts. (3 Hours)

Surveys the application of contract law in various contexts with case law, relevant portions of the Uniform Commercial Code, the Restatements, and treatises. Introduces students to practical issues in contract law theories and doctrines. Explores the bases of contract law, creation and termination rights, problems in contract formation, contract interpretation theories, and damages.

LAW 6402. Torts. (3 Hours)

Offers students an opportunity to obtain a thorough working knowledge of the key concepts of tort law in the United States. Covers issues related to intentional torts and negligence and the defenses that relate to tort claims.

LAW 6403. Constitutional Law. (3 Hours)

Offers a broad overview of constitutional law. Emphasizes the subjects of federalism, judicial review, due process, and individual rights.

LAW 6404. Civil Procedure. (3 Hours)

Examines the procedural aspects of civil disputes in the United States under both state and federal systems, as well as the court systems and processes of bringing and defending cases. Studies the unique U.S. process of the discovery of evidence, including depositions and document production.

LAW 6405. California Professional Responsibility. (3 Hours)

Examines the rules that regulate the legal profession including the ABA Model Rules of Professional Conduct; the ABA Model Code of Judicial Conduct; the California Rules of Professional Conduct; relevant sections of the California Business and Professions Code; and leading case law, both federal and state, on the subject. Offers students an opportunity to gain a thorough understanding of the topics covered on the Multistate Professional Responsibility Examination and the California Bar Examination, including lawyer advertising; solicitation of clients; specialization; conflicts of interest; competence; legal malpractice; fees; confidentiality; and obligations to clients, the court, and society. Students apply applicable ethics rules to identify and resolve ethical problems within the practice of law.

LAW 6406. Criminal Law. (3 Hours)

Covers both federal and state criminal law in the United States. Reviews the entire time frame of a crime, from commission through prosecution and possible imprisonment. Examines multiple types of crime, including white-collar crime, as well as procedural rules of criminal cases. Covers provisions of the Bill of Rights that regulate the government's pursuit, prosecution, and punishment of criminal defendants, with emphasis on the Fourth, Fifth, Sixth, and Eighth Amendments to the U.S. Constitution.

LAW 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LAW 7000. Copyright. (3 Hours)

Surveys the domestic and international laws and policies of copyright law, with a secondary emphasis on related areas of law such as rights of publicity, unfair competition, and contractual protection of ideas in varying degrees. Topics covered include the subject matter of copyright; ownership and transfer of copyrights; the rights afforded to copyright owners in the United States and via international treaties and conventions; duration of protection; infringement; and the Digital Millennium Copyright Act and remedies. Includes guest speakers who are involved in cutting-edge issues in copyright, which will allow students to hear directly from and start networking with practitioners and others involved in copyright law.

LAW 7001. Corporate Finance. (3 Hours)

Offers students an opportunity to gain an understanding of the funding sources and the structure of corporate financial transactions. Focuses on the tools necessary for a lawyer to render legal opinions in the financial sector. Seeks to help students understand the finances behind transactions such as negotiating a merger, taking a client private through a leveraged buyout (LBO) or public through an initial public offering (IPO), or securing capital for expansion or operations. Topics covered include valuation, debt securities, preferred stock, convertible securities, and distributions in respect of equity securities.

LAW 7002. Intellectual Property. (3 Hours)

Offers an overview of trade secrets and the basics of patent law, copyright law, and trademark law in the United States as derived from the pertinent federal statutes and through case law and administrative actors. Intellectual property is all about human creativity and ingenuity. It includes inventions and know-how, art and music, designs and branding. Intellectual property law is the legal framework used to determine, apportion, secure, and leverage these rights in the marketplace. Examines the relationship between intellectual property and global development, as well as how intellectual property is used in the marketplace through competition and antitrust law.

LAW 7003. International Sales and Commercial Arbitration. (3 Hours)

Examines the laws and commercial rules governing international sales of goods and the law and practice of international commercial arbitration. Course topics include the United Nations Convention on Contracts for the International Sale of Goods (CISG) and the rules of private international law that address gaps in the CISG.

LAW 7004. Trademark. (3 Hours)

Examines the precepts of trademark and unfair competition law. Investigates issues of ownership, registration, misappropriation, infringement, and dilution in the context of words, phrases, symbols, slogans, product design, and trade dress. Explores related issues such as false and comparative advertising, rights of publicity, and parody and free speech.

LAW 7005. Mergers and Acquisitions. (3 Hours)

Explores legal issues related to corporate mergers and acquisitions. Topics covered include acquisition structures and mechanics, shareholder voting and appraisal rights, board fiduciary duties, federal securities law requirements, anti-takeover defenses, accounting and tax issues, and antitrust considerations.

LAW 7006. Secured Transactions. (3 Hours)

Examines the rules governing transactions in which personal property and fixtures are used as collateral to secure an obligation. The primary source of authority is Article 9 of the Uniform Commercial Code but also introduces other applicable laws, including primarily the U.S. Bankruptcy Code. This body of law addresses not only the rights of the debtor and creditor inter se but also the rights of third parties with an interest in the collateral.

LAW 7007. Securities Regulation. (3 Hours)

Examines how the stock market and other securities markets are regulated in the United States. The primary focus is the Securities Act of 1933 and, to a lesser extent, the Securities Exchange Act of 1934. Covers how companies raise capital through IPOs and other offerings, including private placements, and the complicated regulatory framework that applies. In addition to discussing disclosure requirements for companies that decide to offer to sell their stock or debt to investors, the course takes an in-depth look at insider trading rules. Also touches on how corporate director elections are regulated as well as the rules that apply to tender offers.

LAW 7009. Intellectual Property and Technology Law. (3 Hours)

Explores the interplay between intellectual property law and evolving technology. In particular, focuses on the challenges faced by courts when applying intellectual property laws to technology not in existence at the time the laws were passed and on the policy issues raised by such challenges.

LAW 7010. Insurance Law. (3 Hours)

Introduces students to the principles governing the creation, sale, and enforcement of the most common forms of insurance in the United States. Explores personal liability, professional liability, commercial general liability, homeowner's, automobile, life and casualty, and health insurance. Discusses the peculiarities of each line as well as the problems common to all lines: moral hazard, adverse selection, and outright fraud. Covers the social function of insurance, as well as historical anomalies, in order to give students the broadest possible exposure to the issues lawyers confront regularly in this area of practice.

LAW 7011. Personal Income Tax. (3 Hours)

Introduces students to the basic concepts contained in the Internal Revenue Code. Emphasizes taxation of individuals but includes significant content applying concepts to business entities as well. Offers students an opportunity to learn to analyze statutes and regulations.

LAW 7012. Introduction to Business Organizations. (2 Hours)

Examines the structure and operation of business organizations in the United States. Examines agency law (which applies to all business entities) and then focuses on general partnerships. Offers students an opportunity to obtain basic foundational knowledge of business organizations for later study of advanced topics.

LAW 7013. International Securities Regulation. (2 Hours)

Examines international securities regulation related to business organizations. Topics include the regulation of individuals and businesses that operate outside the United States and cooperative relationships between the Securities and Exchange Commission and regulators from other countries.

Prerequisite(s): LAW 7012 (may be taken concurrently) with a minimum grade of C- or LAW 7323 with a minimum grade of P

LAW 7014. Modern Privacy Challenges. (3 Hours)

Examines existing and proposed laws relating to evolving concepts of privacy and confidentiality in various sectors of society, including business, healthcare, and the home. Topics include the historical framework for privacy regulation, types of privacy, issues arising in the home and workplace, issues related to personal autonomy, state laws affecting privacy and confidentiality, contractual provisions related to privacy, and the impacts of new technology.

LAW 7015. Law, Technology, and Economic Development. (3 Hours)

Explains the basics of transaction costs and market failures which arise in banking and financial systems, particularly in developing countries. Explains how technological innovations can potentially ameliorate these problems but then create their own. Assists students in developing laws and policies to address these problems and better use technology to support the economic and social development of emerging economies.

LAW 7300. Administrative Law. (3 Hours)

This course provides an introduction to the legal doctrines designed to empower and constrain government agencies and officials in their daily practice of governance. Topics include the constitutional status of administrative agencies, due process, the Administrative Procedure Act and the availability and standards of judicial review of agency actions. The course emphasizes the historical evolution of the modern administrative state and the regulatory agency's peculiar role in our system of governance.

LAW 7301. Advanced Criminal Procedure: Adjudication. (3 Hours)

This course closely examines some of the constitutional complexities in the prosecution and defense of criminal cases in state and federal courts. Students investigate how the law fashions the adjudicatory process and how the law evaluates what is "fair" and what is "legitimate" in formally deciding on whom to impose punishment. The course covers, among other things, pretrial detention, right to counsel, plea bargaining, discovery, trial processes, and sentencing.

LAW 7303. Antitrust. (3 Hours)

Examines federal antitrust laws, which were created to break apart the powerful business "trusts" of the late 1800s and have since been applied to markets as diverse as utilities, ski areas, sports leagues, copy machine repair services, and computer hardware and software. Explores the core principles of antitrust law, emphasizing three substantive areas: monopolization, horizontal merger analysis, and agreements among competitors. Offers students an opportunity to develop an understanding of antitrust law doctrine in the current economic context and its overlaps with other branches of economic law.

LAW 7313. Secured Transactions. (3 Hours)

A survey of commercial lending transactions, with particular emphasis on Article 9 of the Uniform Commercial Code, consumer legislation, relationship to real estate mortgage transactions, relationship to bankruptcy problems, fraudulent conveyances, federal tax liens, etc.

LAW 7315. Consumer Bankruptcy. (3 Hours)

This course explores basic principles of consumer bankruptcy. We examine how the bankruptcy process works, the underlying policies that purport to justify the way the law is written and construed, and the mechanics of applying key sections of the federal Bankruptcy Code. To convey the liveliness and volatility of bankruptcy practice, and to provide an introduction to strategic thinking in bankruptcy, the course relies primarily on problem solving and discussion.

LAW 7320. Constitutional Litigation. (3 Hours)

In the first phase of the course, the class considers strategic and tactical decision-making in constitutional litigation. In the second phase, students report on the process of litigating cases involving constitutional issues. Relying on briefs, court records and interviews with counsel, students report to the class and prepare a research paper setting out their findings. The paper is a major commitment of time and energy; only students with a significant interest in litigation of constitutional questions should apply. Papers are eligible to satisfy the writing requirement.

LAW 7323. Corporations. (4 Hours)

This course relates to the formation, financial structure, and governance of business enterprises, especially incorporated businesses. Partnerships, limited partnerships, limited liability companies and limited liability partnerships are also explored, principally as they compare to the corporate form. The topics studied include: rights of creditors to hold principals of the enterprise liable; distribution of control within the corporation; fiduciary duties of directors and officers; key aspects of the federal securities laws (including the regulation of insider trading and proxies); organic changes (such as mergers); shifts in control (such as takeovers and freeze-outs); and legal implications of the roles of corporations in society. The course introduces some of the specialized concepts explored in detail in courses on Securities Regulation and Corporate Finance.

LAW 7324. Securities Regulation. (3 Hours)

Federal regulation of securities transactions originated in the New Deal investor protection legislation of the early 1930s and must now adapt to the changes and challenges of the 21st century. This course surveys major issues in the registration of initial public offerings ("IPOs") under the Securities Act of 1933 and relevant provisions of the Securities Exchange Act of 1934, civil liability provisions, and the major exemptions from registration. Students will engage in detailed statutory analysis, as well as analysis of judicial and administrative decisions. The material covered in the course also raises important public policy issues such as "market democracy" and the role of regulation, disclosure policy with regard to corporate accountability and social responsibility, and the implications of internet disclosure.

LAW 7329. Environmental Law. (3 Hours)

This course focuses on federal and state environmental laws. Topics include pollution control, waste management, and cleanup of contaminated land and water. The course explores legislative policy and regulatory decisions as well as enforcement issues. We will give attention to questions of environmental justice and to the strategic use of legal tools in working to ensure safe and healthy surroundings for diverse groups of people.

LAW 7331. Estate Planning. (3 Hours)

This basic upper-level course weaves together three strands that make up the discipline of estate planning. Strand 1 is an introduction to key elements of relevant law: property; creditor/debtor; wills, estates, and trusts; estate and gift tax; trust income taxation; and a touch of public benefits. Strand 2 introduces the tools and key components of an estate plan, such as Wills, Trusts, asset titling, and death beneficiary designations. Strand 3 weaves these together with and applies them to real-world frequently encountered situations using classroom hypotheticals to teach sound practice management, ethical considerations, blended family issues, and a mindset that plans for the knowable unknowns (e.g., not all potential beneficiaries may in the future be healthy, financially secure, still living, or even born yet).

LAW 7332. Evidence. (4 Hours)

This course examines how courtroom lawyers use the evidence rules to present their cases—notably, rules regarding relevance, hearsay, impeachment, character, and experts. The approach to the study of evidence will be primarily through the “problem” method—that is, applying the provisions of the Federal Rules of Evidence to concrete courtroom situations. Theoretical issues will be explored as a way to deepen the student’s appreciation of how the evidence rules can and ought to be used in litigation.

LAW 7333. Family Law. (3 Hours)

This is a basic course in family law and family policy. The first half of the course explores state regulation of intimate relationships, asking what purposes marriage serves, and looking at the law of incest, polygamy and same sex marriage. The second half of the course examines practical problems in family law: cohabitants’ rights; common law marriage; and the many issues relating to divorce, with a particular focus on money and children.

LAW 7335. Health Law. (3,4 Hours)

Examines the legal regulation of the provision of healthcare services. Focuses on the relationship between law and healthcare policy. Topics include access to health insurance and healthcare; healthcare financing; malpractice liability; the organization and responsibility of healthcare institutions, especially hospitals; the regulation of the quality of care; and the formulation of health policy. With permission of instructor, students may be able to take the course for an additional credit by completing a substantial paper or equivalent writing project (in addition to other course requirements) as required by the instructor.

LAW 7336. Immigration Law. (3 Hours)

This course is designed to give the student an overview of U.S. immigration law. The focus is on the day-to-day practice of immigration law, including an examination of the substantive and procedural aspects of this practice, and a historical analysis of the changes in our immigration laws and policies. Topics covered include non-immigrant and immigrant classifications, the preference system for immigrants, grounds of inadmissibility and deportability, relief from removal, asylum, citizenship, administrative and judicial review, and the immigration consequences of crimes.

LAW 7338. International Law. (3 Hours)

This course introduces students to fundamental concepts and unresolved problems in international law. We discuss historical and contemporary theoretical debates about the roles and utility of international law. Students are introduced to the sources of international law and to methods of international dispute resolution in domestic and international fora. This course explores the part that international law has played (or failed to play) in the prevention or conduct of war, the promotion of human rights and international economic development.

LAW 7344. Accounting/Finance for Lawyers. (3 Hours)

Accounting is described as the language of business. This course may be of interest to students seeking to understand accounting, finance, auditing, financial reporting, taxation, or exempt organization management commonly encountered by attorneys. The course introduces objectives and mechanics of financial reporting and accounting. In addition to traditional textual and case materials, we examine financial statements of a local public company including the balance sheet, income statement, statement of shareholders’ equity, statement of cash flows, footnotes and management disclosure and analysis. We perform fundamental comparative financial analysis from an investor’s viewpoint to determine each company’s financial strengths and weaknesses. The course addresses the relationship between lawyer and auditor and reviews and analyzes recent financial reporting and financial scandals and audit failures.

LAW 7350. Negotiation. (3 Hours)

Negotiation is a course where students engage in simulated disputes and transactions, which are then debriefed in class. Through frequent in-class mini-negotiations and major simulations, the course focuses on: (1) negotiation planning, (2) case preparation and evaluation, (3) client counseling and informed client consent, (4) analysis of the bargaining range and principled concession patterns, (5) competitive, cooperative and problem-solving strategies, (6) information bargaining, (7) ethics and (8) critiques of negotiation patterns and institutions. Students are required to turn in preparation materials and to keep weekly journals, reviewed by the instructor, addressing their experiences in, and thoughts about, negotiations. Students are encouraged to internalize habits of analysis, prediction, preparation, and flexibility and to become more self-evaluative for their future negotiating experiences.

LAW 7351. Prisoners' Rights Clinic. (8 Hours)

Focuses on learning the law and procedures of parole and prisons in Massachusetts. Students handle a parole release hearing for a state prisoner serving a life sentence, with the possibility of parole, before all seven members of the parole board at a public hearing. In preparing one of these cases, students gain hands-on experience in criminal law and procedure, sentencing law, probation, prison classification and disciplinary systems, and often immigration law. Offers students an opportunity to develop and refine important advocacy skills including interviewing and counseling, case strategy development, thorough investigation techniques, witness preparation, and making strong opening and closing statements. The clinic is a mix of seminar class, individualized supervision meetings, and direct casework, which requires approximately a 25-hour weekly commitment.

LAW 7358. Social Welfare Law. (3 Hours)

This course examines American public assistance as a legal institution. After reviewing the historical, sociological and juridical roots of the welfare system, students examine the laws governing major assistance programs, especially eligibility requirements, rules governing grant determination, work and family rules, and procedural rights. Primary emphasis is on statutory and regulatory construction. The course explores methods by which lawyers can deal with the system: advocacy in the administrative process, litigation, legislative reform and representation of recipient organizations.

LAW 7362. Poverty Law and Practice Clinic. (8 Hours)

Offers students an opportunity to provide direct representation to clients confronting legal challenges concerning government benefits as they balance family and work responsibilities. Students have personal responsibility for a range of individual clients and team responsibility for work for community organizations. Students interview, research, plan, investigate, counsel, negotiate, and advocate for their clients. The clinic maintains a client-centered focus and works to resolve problems on an individual and collective basis.

LAW 7369. Intellectual Property. (3,4 Hours)

Introduces the classic principles of copyright, patent, trademark, and trade secret law and explores the ways in which those principles are shifting and adapting in response to new technology. In our modern day "information economy," the law of intellectual property has taken on enormous importance to both creators and users of intellectual creations. With permission of instructor, students may be able to take the course for an additional credit by completing a substantial paper or equivalent writing project (in addition to other course requirements) as required by the instructor.

LAW 7377. Trusts and Estates. (4 Hours)

This basic course covers all aspects of inheritance, including intestacy, wills, common modern will substitutes, trusts, and future interests, with attention to rights of spouses and children, charitable interests, fiduciary duty, and other issues. The focus is practical, and students are required to write numerous short exercises—including analysis, planning advice, and formal drafting—to address realistic problems.

LAW 7394. Land Use. (3 Hours)

A survey of legal doctrines, techniques and institutions relating to regulation of the use of real property. Topics covered include constitutional questions of takings by public agencies, the scope of the police power as it affects land use and the basic techniques of zoning and subdivision control. Students study, among other issues, recent cases on exclusion of low income housing, current techniques to encourage housing development (inclusionary or "linkage" regulations) and First Amendment questions arising from land use controls.

LAW 7398. Federal Courts and the Federal System. (4 Hours)

The subject of this course is the distribution of power between the states and the federal government, and between the federal courts and other branches of the federal government as manifested in jurisdictional rules of the federal courts. The topics covered include the nature of the federal judicial function, the review of state court decisions by the United States Supreme Court, and the jurisdiction of federal district courts, with special emphasis on actions claiming constitutional protection against state official actions.

LAW 7400. Corporate Taxation. (3,4 Hours)

An introduction to Subchapter C of the Internal Revenue Code and an exercise in reading a short but difficult statute. Among topics covered are taxation of dividends, stock redemptions, liquidations, distributions, and taxable and tax-free sales of corporate stock and assets.

Prerequisite(s): LAW 7479 with a minimum grade of MP

LAW 7410. Domestic Violence Clinic. (8 Hours)

Offers students an opportunity to develop traditional lawyering skills—including interviewing and counseling clients and preparing and presenting cases in court—in the context of a busy community court that handles thousands of domestic abuse cases each year. The School of Law's Domestic Violence Institute offers an upper-level clinic focused on violence prevention and criminal intervention at Dorchester District Court. The clinic seeks to train students to participate in a broader community-based response to domestic violence and to work collaboratively in interdisciplinary teams with battered women survivors, advocacy groups, and police and law enforcement personnel.

LAW 7417. Entertainment Law. (3 Hours)

Examines legal issues in entertainment law. Explores how law and industry norms shape practices and outcomes in motion pictures, television, music, publishing, interactive digital media, and other creative industries. Topics may include rights of privacy and publicity, copyright law, trademark law, misappropriation of ideas, life rights, defamation, advertising and endorsement, constitutional issues, representation, insurance, labor and employment, and contracts.

LAW 7424. Labor Law 1. (4 Hours)

A general introduction to the law of labor relations through an examination of the National Labor Relations Act and leading cases, in conjunction with historical, social and economic materials. Topics include organization, union recognition, unfair labor practices and collective bargaining.

LAW 7428. State & Local Government. (3 Hours)

This course offers an introduction to the workings of state and local governments, and to the roles of law and of lawyers in shaping and controlling their operation. Topics to be covered include: the sources and scope of state and of local lawmaking authority, intergovernmental relationships, modes of citizen participation in and control over the governing process, and state and municipal fiscal structure and operations. In exploring these topics, the course will focus both on the practical roles played by attorneys (employed inside or outside of government) in the governmental processes and on the place of decentralized governmental units within the vision of a democratic polity.

LAW 7429. Labor Law 2. (3 Hours)

An advanced labor law course focusing on the law of the collective bargaining agreement. The course compares collective bargaining rights to other workplace rights systems, such as individual statutory entitlement and public employee constitutional rights.

LAW 7434. Secured Transactions. (4 Hours)

This course has as its principal focus the way that most credit in America is extended. The transactions covered range from the purchase by consumers of automobiles or large household goods on credit to mega-loans by banks to large corporations. The primary law studied is Article 9 of the Uniform Commercial Code as well as certain sections of the federal Bankruptcy Code. The course also seeks to introduce students to commercial law generally and to further their facility with issues of statutory construction.

LAW 7443. Professional Responsibility. (3 Hours)

This course focuses on the legal, ethical and professional dilemmas encountered by lawyers. Emphasis is on justice as a product of the quality of life that society provides to people rather than merely the process that the legal system provides once a crime or breach of duty has occurred. The course also provides students with a working knowledge of the American Bar Association's Model Rules of Professional Conduct and the Code of Professional Responsibility as well as an understanding of the underlying issues and a perspective within which to evaluate them. In addition, the course examines the distribution of legal services to poor and non-poor clients.

LAW 7448. Employment Discrimination. (3 Hours)

Explores the development of employment discrimination law, focusing on Title VII of the 1964 Civil Rights Act and its historical context and evolution. Analyzes issues including antidiscrimination laws, employee rights, employer responsibilities, and employment at will. Surveys landmark court decisions, legislative reforms, and policy developments in this ever-changing area of law and its ongoing impact on workplace practices and societal norms.

LAW 7449. Alternative Dispute Resolution. (3 Hours)

This course is designed to introduce the theory and practice of various dispute resolution mechanisms that are alternatives to the traditional litigation model for resolving disputes. Insofar as negotiation is the foundation of most ADR processes, the course begins there. We will analyze negotiation theory and strategy before adding mediation and collaborative law to the mix. We will look at how to represent clients in negotiation, mediation and collaborative law, how to prepare for these processes and how to develop effective strategies. The final weeks of the course will focus on understanding the essential attributes of arbitration.

LAW 7454. U.S. Legal Research. (2 Hours)

The course is designed to prepare law students for research in practice, clerkships, and legal scholarship. Students will evaluate legal research sources and use them effectively, expand skills in primary and secondary U.S. legal sources, become aware of non-legal information resources that could be useful to legal practice, and get an overview of public international law and foreign legal research. Since learning legal research requires a hands-on approach, students are required to complete assignments and in-class exercises. This course will emphasize cost-effective research, including print and Internet sources. The topics covered in this survey course will vary from year to year and may include immigration law, tax law, business law, environmental law and cultural property law among others.

LAW 7469. Disability Law. (3 Hours)

This course explores how the law treats individuals with disabilities. We will analyze what is meant by the term "disability" and consider constitutional review of state actions discriminating against individuals with disabilities. Particular attention will be given to the rights and obligations created by the Rehabilitation Act, the Americans with Disabilities Act and the Individuals with Disabilities Education Act. The rights of individuals with disabilities to be educated, work, receive healthcare, and enjoy public accommodations will be considered in depth. This course is designed for students wishing to represent individuals with disabilities as well as students who may represent employers and public accommodations.

LAW 7475. First Amendment. (3 Hours)

This course examines several rights protected by the First Amendment to the Constitution. The focus is on the principles and processes developed by the judiciary to protect various forms of speech, expression and association. The course does NOT deal with the free exercise of religion or the establishment clause. The course also focuses on integrating doctrine with the core values of the First Amendment as well as emphasizing the need for students to develop their own preferred approach to protecting free expression. The course does not, except tangentially, deal with other parts of the Bill of Rights.

LAW 7479. Basic Income Taxation. (4 Hours)

This introductory tax course covers the fundamental concepts and operations in income taxation. Tax issues are raised in the context of typical lawyer-client situations: the employment contract (fringe benefits, employee business expenses), buying and selling a house and other property, personal injury expenses and recoveries, and running a small business. An important aspect in understanding the details covered will be comprehension of the economic policy objectives, and unintended results, of specific tax provisions such as capital gains taxation. The course is focused on the statute, cases and administrative law that define the income tax base. Tax rates are also examined and tax unit issues are covered for individual wage-earners, married couples, children living in the home, pensioners and small businesses organized as sole proprietorships.

LAW 7488. Sexuality, Gender, and the Law. (3 Hours)

This course uses case law and theory to address doctrinal problems and justice concerns associated with gender and sexuality. The syllabus is organized around notions such as privacy, identity and consent, all of which are conceptual pillars upon which arguments in the domain of sexuality and gender typically rely. Doctrinal topics include same-sex marriage, sodomy, sexual harassment, discrimination, among others, but the course is not a doctrinal survey; it is a critical inquiry into key concepts that cut across doctrinal areas. Students should expect to write a paper and share some of what they have learned with the class.

LAW 7491. International Human Rights and the Global Economy. (3 Hours)

This course surveys the international human rights legal system. It includes the promotion and protection of economic, social, and cultural rights (such as rights to health, food, water, and education) and civil and political rights (such as equality and non-discrimination, the right to human security, the prohibition on torture, and rights to religious and cultural expression). We begin by examining the history and theoretical origins of human rights law. We then engage the legal framework under international and regional human rights treaties and interpretations of them by international, regional and domestic courts and other actors. We examine international, regional and domestic mechanisms for monitoring compliance. Finally, we grapple with tensions among cultural and religious imperatives and traditional human rights.

LAW 7494. Bioethics and the Law. (3 Hours)

Explores the intersection of law, medicine, and ethics in diverse contexts that call for the evaluation of policies and practices implicating individual or public health. Topics may include but are not limited to end-of-life care, reproductive technologies, vaccines and the management of public health emergencies, professional and research ethics, confidentiality in health information, and equitable access to healthcare.

LAW 7495. Advanced Criminal Procedure: Investigation. (3 Hours)

During this course, students will examine the law of criminal investigation. The primary focus of the course will be to present and discuss leading Supreme Court decisions in the field of constitutional criminal procedure. Students will study decisions which apply the Fourth, Fifth and Sixth Amendments and the Due Process Clause to the criminal justice process and the procedures through which criminal laws are enforced.

LAW 7501. Patent Law. (3 Hours)

This course will provide an in-depth review of patent law and practice. The course will cover the administrative process for obtaining patents, including the requirements for patentability. The course will also cover enforcement of patent rights and the defense of patent infringement suits. The course will be presented in a simple, non-technical manner so that students of all disciplines can learn and understand the concepts.

LAW 7503. Business Bankruptcy. (3 Hours)

This course deals with business reorganization under Chapter 11 of the Bankruptcy Code. The objective of Chapter 11 bankruptcy is to allow the debtor to modify and restructure its debt so that it can continue to operate its business. The course will cover matters that typically arise in a Chapter 11 case, such as the automatic stay, modification of debt, rejecting contracts, post-bankruptcy financing, creditors' claims, management of the debtor, and the plan of reorganization. The course will also address topical issues such as employee rights, retiree benefits, and mass tort claims, including asbestos and environmental claims.

LAW 7512. Problems in Public Health Law. (3 Hours)

This course will explore the rationales for using law to protect and preserve the public's health, the legal tools that may be used to achieve that end, and the conflicts and problems that may result from legal interventions. Topics discussed will include the use of law to reduce the spread of HIV and other infectious diseases, control of tobacco and other hazardous products, bioterrorism, and the threats TO CIVIL LIBERTIES AND MINORITY GROUPS engendered by all such legal efforts. This course is highly recommended for all students enrolled in the J.D./M.P.H. dual degree program, but is open to other students as well.

LAW 7514. Natural Resources Law. (3 Hours)

This course addresses legal requirements and institutions dealing with animal and plant species, biological resources, habitats, and ecosystems. Major themes include biological diversity, endangered and threatened species, public and private rights in migratory resources, public trust doctrine, the allocation of power among federal, state, and local governments, and the roles of administrative agencies in ecosystem management. The course provides opportunities to explore specific topics of interest such as environmental ethics, wetlands protection, fisheries law, Native American hunting rights and fishing rights, and management of national parks, forests, and grazing lands.

LAW 7516. Legal Writing Workshop. (3 Hours)

Focuses on strengthening and expanding writing and analytical skills through assignments and exercises that involve objective, advisory, and/or persuasive writing. Reviews essential skills of effective legal writing while simultaneously exposing students to the myriad documents that lawyers draft in practice. Asks students to draft an array of legal documents, which may include office memoranda, client letters, demand letters, jury instructions, pleadings, and/or trial or appellate briefs. Writing completed for this course that satisfies the upper-level writing requirement may be used to fulfill that requirement.

LAW 7525. Law and Economic Development. (3,4 Hours)

Examines prevailing economic theories of and strategies for economic development and the legal and institutional frameworks devised to implement these strategies. Considers what kinds of legal and institutional arrangements best facilitate economic growth, how law structures and shapes markets, what "development" is and how it can best be measured, and whether legal instruments can be used effectively to address underdevelopment in a structural way. Focuses on development in the so-called developing world while also exploring some strategies for addressing development in a local community context. Addresses several development case studies posing particular problems in specific regions and contexts. With permission of instructor, students may register for an additional credit by completing a substantial paper (in addition to other course requirements) as required by the instructor.

LAW 7526. Juvenile Courts: Delinquency, Abuse, Neglect. (3 Hours)

Examines the evolution of the juvenile court system and issues related to juvenile justice and child welfare. Includes the study of procedural and substantive principles related to court subject matter, including delinquency, youthful offender, status offense, and abuse and neglect jurisdiction. In attempting to focus on connecting theory to practice, the class employs a contextual lens by considering the larger communities and systems that affect children, families, and public safety. This entails consideration of the consequences of decisions and policies in and out of courtrooms. Related topics include adolescent development; racial, ethnic, and gender equity; access to educational and mental health services; and public health.

LAW 7527. Public Health Advocacy Clinic. (4 Hours)

Offers students an opportunity to gain experience in public interest law, health law, and litigation and to use innovative litigation or regulatory approaches to improve public health by working on real-world, clinical public health advocacy projects. Projects include demand letters, complaints, class actions, amicus briefs, legislative drafting, preparation of testimony, or submission of comments on issues ranging from tobacco products, e-cigarettes, sports betting, gun violence, occupational safety, unhealthy foods or beverages, and rapid responses to urgent public health developments. Serves clients including the Public Health Advocacy Institute; the Center for Public Health Litigation; and the Center for Health, Policy, and Law.

LAW 7530. Education Law. (3 Hours)

Surveys current issues in U.S. education law. Topics may include high-stakes testing, school choice and the charter school movement, resegregation, special education, the school-to-prison pipeline, and school funding.

LAW 7535. Legal Interviewing and Counseling. (2,3 Hours)

Students in this course will study the principles of interviewing and counseling, learning how to interview clients to identify their legal problems and to gather information on which solutions to those problems can be based. Students will also practice interviewing witnesses and students will be taught how to counsel clients—a process by which, having determined what the client's legal problems are, the lawyer helps clients make decisions by identifying potential strategies and solutions and their likely positive and negative consequences. Students will practice specific interviewing and counseling techniques and have the opportunity to receive feedback from classmates and the instructor.

LAW 7536. Employment Law - Safety and Health. (3,4 Hours)

Focuses on the legal issues relating to the primary and secondary prevention of injuries and illnesses at work. Includes a review of the Occupational Safety and Health Act, as well as discussions of other relevant aspects of employment, labor, compensation and tort law. With permission of instructor, students may be able to take the course for an additional credit by completing a substantial paper or equivalent writing project (in addition to other course requirements) as required by the instructor.

LAW 7539. Employment Law—Job Security and Rights. (3 Hours)

This course surveys legal and policy issues concerning job security, focusing primarily on law governing the termination of private sector employment. Students develop an understanding of the history and scope of the underlying employment-at-will doctrine and the primary ways in which the at-will doctrine has been modified through common law and statute.

LAW 7540. Employment Law—Compensation, Benefits, and Retirement. (3 Hours)

This course surveys legal, economic, and social policy issues concerning wages and working time, leave, unemployment insurance, and retirement income. The course provides detailed coverage of the Fair Labor Standards Act (FLSA), the Family Medical Leave Act (FMLA), and the Unemployment Insurance program, and also provides introductions to retirement and survivor income under the Social Security Act and to pension regulation under the Employee Retirement Income Security Act (ERISA). The problems of low-wage workers and women workers receive special emphasis, as well as tensions between the design of the older, statutory schemes and contemporary trends in business and work organization.

LAW 7550. Refugee and Asylum Law. (3 Hours)

This course will explore the law of asylum and refugees. The primary focus will be on U.S. law as it has evolved since passage of the Refugee Act of 1980. This will include legislation and case law—both administrative and federal court cases. It will also look at relevant international law and standards utilized in other countries by way of comparison with U.S. Law. We will also examine the process of asylum adjudications to analyze issues of due process, credibility, cross cultural communication and integrity of the various legal procedures. We will explore new and emerging theories of asylum eligibility and policy developments which impact asylum seekers in the United States.

LAW 7556. Corporate Finance. (3 Hours)

Corporate Finance considers sources of funding and capital structure of corporations, as well as decisions managers make to increase the value of a firm. This class is aimed at equipping lawyers with an ability to understand decision-making of business clients. The course introduces tools and methods used to evaluate projects and to allocate limited financial resources, as well as considerations regarding capital structure. We will cover valuation concepts, including present and future value computations, discount rates, net present value, the Efficient Capital Markets Hypothesis, relationship between risk and return, capital asset pricing model, as well as issues of leverage and capital structure. We will also examine the characteristics of financial instruments used by firms to raise capital, including common stock, preferred stock and debt instruments.

LAW 7559. International Trade. (3 Hours)

This course provides a comprehensive introduction to the legal framework for U.S. and international regulation of international trade. The course will include a brief introduction to the economics of trade and trade restriction measures. It will then focus on the World Trade Organization agreements regulating international trade in goods, services and intellectual property; it will provide an overview of the North American Free Trade Agreement; and it will examine U.S. trade laws particularly relief from "unfairly" traded imports, boycotts and trade sanctions.

LAW 7569. International and Foreign Legal Research. (2 Hours)

This course is designed to teach students how to research international and foreign legal materials. The course uses a combination of lectures, hands-on research exercises, and homework assignments. Students will have opportunities: to increase the quality of research by attaining substantive knowledge on international legal topics and the legal system in which their issue arises; to attain practical skills to brainstorm search terms, formulate issues, and evaluate legal research resources by reiterative process; and to increase flexibility and confidence in researching international and foreign law topics. Topics include: U.S. and Non-U.S. treaties, international custom, jurisprudence, and documents of the United Nations, the European Union, and NGOs. The class also explores research in topical areas such as human rights, immigration and refugee laws, and foreign laws.

LAW 7572. Transactional Drafting Seminar. (3 Hours)

This seminar will help students improve their writing in the context of transactional legal documents. The seminar will help students: adopt tools to achieve clear and concise writing; understand the purpose of each element of a contract and adopt the language that most clearly accomplishes that purpose; draft the operative provisions of a contract to express the agreement of the parties; and create an *architecture* for a contract to make individual provisions work together in a cohesive document. The seminar will address concepts applicable to a wide range of transactional legal documents, with emphasis on drafting in the context of corporate transactions, including employment issues, shareholders' rights, and mergers and acquisitions.

LAW 7582. Elder Law. (3 Hours)

In this course we will look at legal and policy questions related to aging individuals. Older Americans face an increasing number of legal questions involving entitlement to public benefits, protection of property, utilization of medical resources, healthcare decision-making, and interaction with legal and financial institutions. Topics that will be covered will include Medicaid benefits, Medicare benefits, Veterans Benefits for elderly veterans and their spouses, age discrimination, nursing home institutionalization, income maintenance (social security benefits, pensions etc.), elder abuse, consumer fraud targeted at older consumers, guardianships, conservatorships, competency and capacity, alternatives to guardianships and conservatorships, end of life issues, tax issues in elder law and estate planning for elders. Ethical issues that arise when representing the elderly will also be discussed.

LAW 7588. Reproductive Rights, Justice, and Health. (3 Hours)

Introduces topics in reproductive rights and justice and examines how laws and policy shape reproductive lives through an intersectional lens. Addresses legal doctrine, the science of reproduction, and public health research. Critically assesses issues arising from reproductive health law, with particular focus on a reproductive justice framework that centers social, racial, and economic justice. Topics covered may include sexual and reproductive health law as it pertains to forced sterilization, contraception, abortion, pregnancy discrimination, birth and maternal mortality, healthcare in prisons, fertility, social welfare programs, and gender-affirming care.

LAW 7590. Copyright Law. (3 Hours)

This course examines the law of copyright in the United States, with some reference to international aspects. We will discuss the scope of copyright protection, the formalities of securing copyright, the nature of the rights afforded by copyright law, the fair use doctrine, and copyright enforcement. The course will place copyright in historical perspective, and consider tensions created by emerging industries. The course is open to upper level students, without prerequisite.

LAW 7597. Civil Rights and Restorative Justice Clinic. (6 Hours)

The CRRJ (Civil Rights and Restorative Justice) Clinic engages students in legal research, litigation and legislative initiatives relating to anti-civil rights violence in the United States. CRRJ clinic students assist law enforcement agencies considering criminal investigation and pursue civil litigation against government entities. One of CRRJ's projects, Reconstructing Cases of Racial Violence, involves researching cases where criminal prosecution may not be an option. Students reconstruct legal proceedings and conduct factual investigations. The project focuses on practical legal research skills and helps students integrate the law of torts, civil procedure, federal courts, criminal law, and constitutional law. Faculty will provide individual supervision of each student.

LAW 7599. Pretrial Civil Practice and Advocacy. (2 Hours)

This course provides the foundation to manage the pretrial phase of a civil action. Each class will consist of a lecture concerning an aspect of pretrial practice, followed by student conducted pretrial advocacy. Using model civil cases, the students will engage in most types of pretrial practice, including an initial client interview and basic legal analysis to evaluate and assert potential legal claims and defenses, witness selection and preparation, deposition and written discovery practice, dispositive motions, pretrial memoranda and settlement positions.

LAW 7600. Current Issues in Health Law and Policy. (3 Hours)

Examines recent debates in health law and policy by discussing current events, proposed legislation, and scholarly articles in the legal, medical, and public policy literatures. Weekly topics depend in part on student interest, probably including federal healthcare reform; malpractice liability reform; obesity; health disparities; regulation of pharmaceutical promotion; and other issues related to healthcare access, quality, and financing. Requires weekly readings, weekly attendance and participation, a brief presentation of one health-law-related current event, a research paper of at least 20 pages on any approved health-law-related topic, and an oral presentation of the research paper. Previous health-related coursework or work experience is recommended but not required.

LAW 7603. International Business Transactions. (3 Hours)

This course deals with transnational commercial law. It addresses the legal framework for international sales transactions, including the commercial terms of the sales agreement, shipping contracts, insurance, financing arrangements, and customs documentation. It also examines foreign direct investment transactions, international franchise and distribution agreements, and contracts for the transfer of technology. Bribery of foreign officials and liability under US and international rules are also included. Dispute resolution will be considered briefly with emphasis on choice of law and forum, arbitration, and enforcement of arbitral awards and foreign judgments.

LAW 7606. Drug Law and Policy. (3 Hours)

The field of Drug Law is vast, spanning the discovery, manufacture, distribution, and consumption of chemical agents designed to alter the human condition. This course focuses on three domains of the broader subject: the evolution and current state of the Federal Food, Drug, and Cosmetic Act; the architecture of the drug regulation system in the U.S., including the distinct space occupied by the Food and Drug Administration, the Department of Agriculture, and the Drug Enforcement Agency; and the role of regulation and tort litigation in harmonizing drug policy with science. Designed around legal and policy case studies, this course is intended for students expecting to become involved in clinical practice involving pharmaceuticals as well those generally interested in the interplay of law and public health.

LAW 7607. Consumer Law. (3 Hours)

This course examines consumer transactions in formation, substance, and remedies. While the course will focus most on consumer credit, we will also examine consumer leasing, advertising; fraud; warranties; and product standards and safety.

LAW 7608. American Legal Thought: Traditional and Critical. (3 Hours)

This course contrasts critical-theoretic approaches to law (e.g., legal realism, critical legal studies, identity-based jurisprudence, socio-legal studies, transformative jurisprudence) with mainstream legal thinking. In part the course is an intellectual history of American law, and in part it addresses contemporary jurisprudence and legal theory. Drawing on students' personal experience, the course also examines American legal education and the professional socialization of law students. A "big" question underlying the course is whether legal work is a medium in which one can pursue projects oriented toward political and social change. There is no prerequisite for this course, and no prior background in legal theory, history, or jurisprudence is needed. All students are expected to read the assigned texts very closely and participate in discussing them in class.

LAW 7610. Community Business Law Clinic. (8 Hours)

Offers a unique opportunity to develop lawyering skills through the real-world experience of helping low-income and underserved entrepreneurs achieve their transactional goals and supporting community-led growth. Students, prepared and supported by an intensive seminar and close faculty supervision, assume the role of lawyers for their clients and their clients' community businesses on the often-complex legal issues that startups, entrepreneurs and small businesses face.

LAW 7612. Wrongful Convictions and Post-Conviction Remedies. (3 Hours)

The emergence of DNA testing has not only assisted law enforcement in solving crimes, but it has also helped to expose a problem that many observers of the criminal justice system have long suspected: that a number of actually innocent prisoners have been convicted in the United States. Given that biological evidence suitable for post-conviction DNA testing is available in only a smattering of cases, the exonerations generated by DNA represent only the tip of the innocence iceberg, so to speak. This class will explore (1) the primary factors that contribute to the phenomenon of wrongful convictions, (2) the state and federal procedures through which post-conviction claims are litigated and (3) potential reforms to protect against the conviction of the innocent.

LAW 7614. Law Practice Management: Access to Justice. (3 Hours)

This course challenges conventional law practice management by exploring means of methods of filling the market gap in the provision of legal services to middle class clients. Students will investigate and document ways to use improved marketing techniques, staffing patterns, technological innovations and a variety of other tools to provide legal services to underserved portions of the market in a sustainable and economically viable fashion. Students will conduct independent research to develop a law firm business plan; exploring a practice area of particular interest to them. This course is not solely geared toward the entrepreneurial attorney, but rather will assist anyone in the development of skills to bridge-the-gap between their theoretical education and its practical application to the practice of law.

LAW 7619. Healthcare Fraud and Abuse Law. (3 Hours)

This course provides an overview of the law relating to healthcare fraud. It will provide an overview of the healthcare fraud and abuse laws, emphasizing the role of whistleblowers, qui tam actions, criminal investigative techniques, trial issues inherent in white collar criminal prosecutions, innovative resolutions of corporate fraud including compliance programs, and sentencing. Topics will include an overview of the healthcare payment system, the frauds visited on that system, and the interplay of criminal prosecutions with the FDA regulation. This course is highly recommended for students in the JD/MPH program, LLM students specializing in health policy and law, and students interested in criminal law, but is open to others as well. Health Law is recommended but not required.

LAW 7620. Human Behavior, Legal Doctrine, and Policy Design. (3 Hours)

This course will compare accounts of human behavior, including the Utilitarian/Law and Economics view of man as a rational calculator of his self-interest, with classical and contemporary alternatives to that description, including Behavioral Economics. We will evaluate the reasons for doubting or crediting these competing accounts, and will then consider their implications for determining appropriate legal doctrines and regulatory approaches. For example, we may consider whether the views of human behavior which shape consumer protection case law and the Supreme Court's commercial speech doctrine are justified, and whether – and in what circumstances – regulations are appropriate which seek to help people by prescribing, proscribing, or "nudging" their behavior. Students are expected to participate in class and write a research paper which may satisfy the writing requirement.

LAW 7622. Whistleblower Law. (2 Hours)

This course provides an introduction to the legal issues related to whistleblowing, a dynamic new area in employment, corporate compliance, and anti-fraud law. It focuses on tort-like remedies and monetary rewards available to whistleblowers under the Dodd-Frank, Sarbanes-Oxley, Foreign Corrupt Practices and False Claims Acts, along with protections under tax law, the First Amendment, and common law. There will be a final exam and a short paper (approximately 2 pages in length).

LAW 7624. Advanced Legal and Interdisciplinary Research. (2 Hours)

Studies how to research specialized legal topics, highlighting both legal and nonlegal sources that reflect modern practice. Uses a combination of lectures, interactive hands-on sessions, real-life examples, and an in-depth final research and writing project. Students may explore state, federal, and international primary laws and regulations, as well as relevant nonlegal sources and how they interact with the law. Researches both print and electronic sources. Emphasizes different specialized topics such as health law, environmental law, etc.

LAW 7629. Inside Counsel. (2 Hours)

The legal departments of corporations represent a significant practice opportunity for lawyers interested in corporate and regulatory law. These corporate departments operate on a different model than law firms and regulatory agencies and offer careers that combine legal disciplines with business management skills. This course will examine the roles of corporate counsel inside U.S.-based corporations and not-for-profits, specifically: the value proposition of corporate counsel, common responsibilities, unique ethical issues, the implications of the Sarbanes-Oxley and Dodd-Frank acts, corporate governance, risk management and litigation. Students will be graded on their responses to mid-term and final essay questions and the demonstration of their comprehension of the subject matter in the classroom. Prior study of Corporate Law is preferred but not required.

LAW 7633. Intellectual Property Law Clinic. (8 Hours)

Requires students to provide intellectual property-related legal services to students, ventures, and other participants in the university's entrepreneurship and innovation ecosystem under the supervision of clinical faculty and staff. The clinic includes opportunities to address issues related to intellectual property rights, risks, and transactions for individuals and ventures in the university community; to collaborate with faculty and others on intellectual property learning modules, policies, presentations, or workshops for this community; to develop practice skills; and to participate in the organization and operation of a legal services office.

Prerequisite(s): LAW 7369 with a minimum grade of MP or LAW 7638 with a minimum grade of MP

LAW 7634. Energy Law and Policy. (3 Hours)

Climate change and carbon emissions are the most important issues shaping energy law and policy in the United States today. This course will provide an introduction to U.S. energy law and policy in that context and will be organized around the regulated electricity sector which alone produces about 40% of all U.S. greenhouse gas emissions. We will explore the dynamics of natural monopoly markets, public utilities and their regulation, and the interplay of state and federal power in the energy space. We examine coal, natural gas, nuclear power, hydropower, renewables, storage, and efficiency for their impacts and potential as electrical energy sources in a carbon-constrained world. We conclude by investigating the legal potential to proactively foster and sustain a transition to a carbon-sustainable energy economy.

LAW 7635. Laboratory Seminar in Applied and Critical Legal Design. (4 Hours)

Offers students an opportunity to critically engage with design methods and principles in the development of new solutions and ideas for our legal systems, institutions, and problems. Examines methodologies derived from the fields of product, service, and critical design. Emphasizes hands-on student engagement with structured creative processes, field observations, prototyping, or other methods derived from a diversity of creative disciplines. Students apply these methodologies and skills in the formulation of a response to a timely design question. Students' exploration of critical design is intended to foster a vision of a future world where everyone is empowered to use the law.

LAW 7638. Trademark Law. (3 Hours)

This course is about the intellectual property right known as a "trademark," a word or symbol that distinguishes source of goods or services from each other. Trademark law is part of unfair competition law, which protects against a variety of "deceptive" or "inequitable" business practices. The regulation of trademarks is considered a way to maintain a fair and efficient marketplace for businesses and consumers. This course will cover common and statutory law of trademark as well as deepening your legal analysis of intellectual property rights. The course will offer insight into how trademarks live and develop in culture so you can draw both on the black letter law and its nuances as well as on your experience as a consumer in order to advise clients.

LAW 7640. Information Security Law. (3 Hours)

This seminar will conduct a bleeding edge discussion of the state of the legal art in information security law – what is known in DC policy circles as "cybersecurity." While this field of law started in the 2000's by focusing on data breach notification, today the stakes are much higher. Consumer products that rely on computer code can now kill us, and one appropriately targeted zero day exploit could potentially devastate our economy. We will discuss why data breaches continue to run rampant, what duties of data care and code safety are owed to consumers, and how various government agencies are tackling the consumer protection and national security issues implicated by vulnerable computer code. You will never look at your gadgets the same way again.

LAW 7641. Amicus Curiae Project. (3 Hours)

Today more than ever, amici curiae ("friends of the court") appear in high-stakes litigation over everything from the right to bear arms to same-sex marriage. An amicus curiae is someone who, though not a party to a lawsuit, adds their voice because they have an interest in the outcome. Amicus briefs can influence judges by providing legal or policy analysis, or factual information, not supplied by the litigants. In this course, students research and draft amicus briefs for the Massachusetts Supreme Judicial Court, with guidance from experienced appellate counsel. Exceptional research and writing skills are required. Useful prerequisites are Legal Writing Workshop, Advanced Legal Research, or Appellate Practice. Students can apply by submitting a resumé and unofficial transcript to the instructor.

LAW 7644. Advanced Legal Research—Online Version. (2 Hours)

Focuses on advanced legal research methodologies. Includes coverage of secondary sources, statutes, cases and citators, administrative law, electronic databases, practice materials, and strategies for making sure that research is thorough. Designed to prepare law students for research in practice, clerkships, and legal scholarship. Teaches how to evaluate legal research sources and use them effectively, expanding skills in primary and secondary U.S. legal sources.

LAW 7647. Trial Practice. (2 Hours)

An introduction to the tactical and strategic problems commonly encountered in the trial of civil and criminal cases is the main objective of this course. Attention is given to the forensic aspects of trial practice, techniques of direct and cross-examination, and opening and closing summations. Prior course work in Evidence is a prerequisite.

Prerequisite(s): LAW 7332 with a minimum grade of MP

LAW 7651. Human Rights in the United States. (3 Hours)

This seminar explores the role of international human rights frameworks and strategies in social justice lawyering in the United States. On a range of issues, lawyers are bringing human rights home. They are using human rights mechanisms of the United Nations and Inter-American Human Rights system, drawing on international human rights and comparative foreign law in litigation before U.S. courts, and engaging in other human rights-based advocacy such as documentation, organizing, and human rights education. Advocates find that a human rights approach provides important strategic leverage and highlights the interdependence of economic, social, cultural, civil, and political rights. We will use skills exercises, assignments and real-world problems to develop practical skills to address policies on local, state and national levels, and to support social movements.

LAW 7652. Strategies for Bar Success. (3 Hours)

This course eases students into bar exam preparation by focusing on contextualized substantive review of the most heavily tested topics on the bar. It overlays skill instruction on reading comprehension, issue identification, rule mastery, critical thinking, legal analysis and recognition of distractor skills. Students gain a strong conceptual understanding and in-depth knowledge of highly tested doctrines across two MBE subjects and will be taught how to develop, use and apply a flexible but strong analytical framework to solve bar exam problems. Limited to third-year law students.

LAW 7656. Legal Research and Writing 2. (3 Hours)

Reviews the foundational skills necessary for effective legal writing, including legal and factual analysis, use of authorities, large- and small-scale organization, concision, citation, grammar and punctuation, and revision. Focuses on building skills through exercises and shorter assignments in order to increase student confidence and improve writing and analytical skills. Students may be asked to draft office memoranda, client letters, and a trial or appellate brief. Writing completed for this course that satisfies the upper-level writing requirement may be used to fulfill that requirement.

LAW 7657. Immigrant Justice Clinic. (8 Hours)

Offers students, under the supervision of clinical faculty and staff, an opportunity to provide legal services to noncitizen clients and to develop knowledge and skills in immigration law practice. Students interview, research, plan, investigate, write, counsel, negotiate, and advocate for their clients. Emphasizes client-centered lawyering, cross-cultural awareness, trauma-informed interviewing, and self-care.

LAW 7660. Disrupt the Cradle-to-Prison Pipeline—Restorative Justice. (3 Hours)

This course examines how we construct the cradle/school to prison pipeline while focusing on several pivotal points that channel largely poor Black and Brown students into it. With an eye toward practical application, students will learn about, critique, problem solve and create pipeline disrupting solutions looking to restorative justice as a time-honored justice paradigm alternative to our western constructions.

LAW 7662. Master Class in Legal Design. (3 Hours)

This three-credit upper level course pairs law students with students from a design discipline such as architecture, service design, user experience design, or game design to reimagine aspects of our legal system for the age of self-representation. Law students join interdisciplinary student teams to apply advanced discipline-specific design methodologies and frameworks in response to a specific system design challenge.

LAW 7664. Law and Inequality. (3,4 Hours)

Explores inequality from a range of disciplinary perspectives and the difference that can make in a variety of legal, social, and economic contexts. Elaborates methodologies for mapping ways diverse legal regimes and concepts contribute to the production, recognition, reinforcement, and maintenance of hierarchies of privilege and disadvantage between individuals, groups, localities, regions, and nations. Identifies key legal drivers in the production of inequities and explores how they shift bargaining power, redistribute resources, or otherwise ameliorate inequities or their adverse consequences. Students research a circumstance of inequality and develop a legal map to engage it. With permission of instructor, students may register for an additional credit by completing a substantial paper or equivalent writing project (in addition to other course requirements) as required by the instructor.

LAW 7666. Human Rights, the Environment, Development and Community Resilience. (3 Hours)

This course explores the interlinkages between human rights and the environment within the context of how unsustainable development, especially by businesses, is driving environmental degradation and global human rights violations. We will appraise how communities are responding with innovative lawyering utilizing emerging jurisprudence in comparative law and judicial, quasi-judicial, and non-judicial grievance mechanisms, with special attention to African examples. The course will emphasize practical approaches to environmental protection using human rights instruments. The power of corporations and financial institutions, the ways in which corporate activities often connect to abuses of human rights and the environment, and legal advances in the regulation of transnational corporate activity will be explored while also discussing corporate accountability, the global justice movement, and strategies being used to address these trends.

LAW 7669. Law and Technology. (3 Hours)

Examines law and technology as both processes and artifacts endemic to human groups, who have been toolmakers and lawmakers since human history has been recorded. Yet, in recent times, development of technological things has outpaced development in the law, bringing about what we might describe as new "design challenges" within the law. Considers several disputes around ownership and property, and safety and risk, and offers students a conceptual framework from the social study of science and technology by which to understand technology and the law. Focuses on the regulation of "digital labor" and algorithmically convened labor markets, such as Uber.

LAW 7672. Data Privacy Compliance in the 21st Century. (3 Hours)

Introduces the tools needed to navigate the complex world of data privacy regulation. By following the growth of a hypothetical startup company as it confronts new data privacy and security issues, offers students an opportunity to evaluate the principles grounding data privacy regulations around the world; examine emerging data privacy legal regimes of various countries; and consider privacy laws, why they matter, and what compliance concerns they raise. Encompasses privacy and security issues involved in regulatory compliance, data breach response, government and internal investigations, litigation, and mergers and acquisitions. Also considers special circumstances of cross-border litigation and transactions, the special problems raised by supply chains and corporate social responsibility, and emerging concerns arising from big data and increasingly sophisticated artificial intelligence.

LAW 7673. Immigrant Justice Practicum. (6 Hours)

Offers students an opportunity to investigate, research, analyze, draft, and learn the necessary skills to zealously advocate for clients at various stages of the immigration process. Examines the challenges facing immigrants and how to assist in the representation of noncitizens in a variety of humanitarian-based immigration matters. Examines new regulations, policies, and rules at the immigration court, the asylum office, and other courts and agencies. Explores the U.S. immigration system and historical context for it at a deeper level.

LAW 7675. Information Privacy Law. (3 Hours)

Information privacy law concerns the collection, use, and disclosure of personal information. This course will address the interrelated web of torts, statutes, crimes, contracts, property rules, administrative regulations, procedural rules, and constitutional provisions that implicate information privacy. Topics covered in this course include: the difficulty in conceptualizing privacy, justifications for protecting privacy, privacy and the press, conflicts between privacy and free speech, wiretapping and government surveillance, national and international data protection frameworks, privacy and social media, anonymity, and the rules for cross-border data flows.

LAW 7678. Legal Research Workshop. (1 Hour)

Designed to assist students in developing and executing research plans for writing projects. Requires students to identify an appropriate project early in the course; the project may be one that the student creates specifically for the course, or it could be one undertaken for a law review note, a seminar, or an independent study in which the student is concurrently enrolled. Includes readings, lectures, demonstrations, and in-class and homework exercises, as well as peer and instructor feedback focused on research strategies. Requires students to periodically present their research strategies and results for their writing projects.

LAW 7679. Race and the Law. (3 Hours)

This course examines the role of the law in perpetuating and alleviating racial inequality in the United States. We will interrogate historical and contemporary debates about the law and racial inequality. We will bear down on a question that is often asked by critical race scholars: why does inequality persist despite massive legal transformation especially following the civil rights movement? We will approach this question by examining how the law and legal institutions shape racial identity and how ideas about race shape legal institutions. The course will also consider tensions and debates within critical race theory and among race scholars. We will excavate the stakes of these debates and the consequences (intended and unintended) of various legal reform projects designed to address racial inequality.

LAW 7682. Historical Injustice and Reparation. (3 Hours)

Examines historical injustice and reparation with a focus on the Afro-diasporic experience. Explores the genealogy of reparation as a tool of law and politics and associated debates in law, political theory, ethics, and history. Considers themes such as the effect of the passage of time on claims; determination of who owes and who is owed; the responsibility of state and nonstate actors, collectives, and "implicated subjects"; the mechanics of reparations; and the role of state apologies, truth projects, and memory sites. Looks at the global movement to address slavery's legacy. Explores gendered practices, land redistribution claims, and design and implementation challenges. Uses case studies to deepen discussion and examine current movements for redress and reparation.

LAW 7684. Anatomy of Autonomy. (3 Hours)

Examines what it means to be a person in the eyes of the law and the rhetorical framing that infuses our conception of living subjects, legal persons, nonpersons, and things. The line between human and subhuman, or person and thing, is given new urgency when limits of incarceration, torture, human trafficking, medical experimentation, and right to due process turn on new meanings of words like enemy combatant, IQ, underclass, market choice, race, terror, or illegal immigration. Who we consider a person, who we label less than fully endowed, are questions that inform some of the most urgent legal and political questions of our time. Explores legal opinions; historical documents; and texts in philosophy, anthropology, linguistics, literary criticism, and popular culture.

LAW 7687. First Amendment Seminar: The Religion Clauses. (3 Hours)

Examines the religion clauses of the First Amendment and related statutory regimes, emphasizing the U.S. Supreme Court's free exercise and establishment clause jurisprudence. Evaluates individual and institutional claims of religious liberty. Explores the implications of government funding of religious institutions and activities. Discusses government expression or endorsement of religious messages.

LAW 7688. Social Policy and the Tax Code. (3 Hours)

Offers students an opportunity to obtain an understanding of how tax laws shape and are a major driver of social policy. Emphasizes the redistributive qualities and potentials of such policies and examines their design, implementation, and administration. Draws on legal methodologies as well as those from allied social sciences. May include such topics as healthcare, housing, and income support.

LAW 7690. Introduction to Writing for Litigation. (1 Hour)

Introduces students to litigation documents, including engagement and demand letters; complaints; answers; discovery requests (such as interrogatories, requests for the production of documents, and requests for admission); and motions. Considers audience, purpose, and components in drafting a document, taking into account relevant strategic considerations and general principles that apply to all litigation documents. Examines the protections associated with attorney-client privilege and attorney work product. Offers students an opportunity to review and draft a variety of litigation documents, to find and modify sample documents, and to find and apply the rules of the relevant jurisdiction.

LAW 7691. Housing Rights Advocacy Clinic. (8 Hours)

Offers students an opportunity to obtain hands-on experience in litigating housing-related matters, under the close supervision of clinical faculty. Students advise and represent clients facing housing insecurity, with opportunities to appear in court and before agency officials. Emphasizes ethical, client-centered representation; housing law and procedure; the practice of core litigation skills; and collaborative work with local community organizations advancing housing justice. Students attend weekly seminar and supervision meetings to develop their casework, as well as examine and think critically about the role of the lawyer, client, courts, and community in housing rights advocacy.

Prerequisite(s): LAW 7332 (may be taken concurrently) with a minimum grade of P

LAW 7692. Collaborative Businesses. (2-3 Hours)

Examines the fundamental principles, structures, finance, management, and governance associated with collaborative businesses (with a focus on co-operatives).

LAW 7693. Business Organizations. (4 Hours)

Exposes students to a broad range of fundamental entity, business, and planning concepts encountered when representing corporations, limited liability companies, and partnership entities. Includes choice of entity, agency law, ethical challenges, and corporate transition planning. Beyond core doctrinal issues, the course focuses on the practical and analytical challenges of the business planning and client counseling process. Additional topics may include oppression avoidance, controlling shareholder risks, hostile takeover bids, executive compensation, risk management, and more.

LAW 7695. Drug and Device Innovation: Law and Policy. (3 Hours)

Introduces students to innovation law and policy in the context of drugs and devices regulated by the Food Drug Administration (FDA). Surveys the suite of incentives policymakers can use, purposefully or inadvertently, to shape drug and device development. Combines analysis from law, economics, and health policy.

LAW 7696. Federal Indian Law. (2 Hours)

Explores the complex legal relations between Native American tribes and federal and state governments, with a particular emphasis on Indigenous voices. Topics include federal, state, and tribal jurisdictional issues; tribal sovereignty; the federal trust responsibility; treaties and broken promises; land and resource management; the concept of "federal recognition" of tribes; and the status of reservations, among others.

LAW 7697. Issues in Human Rights and Humanitarian Law. (3 Hours)

Examines cutting-edge issues in human rights and humanitarian law through presentations by leading scholars in the field and in-depth seminar discussions. Emphasizes both core concepts and sophisticated critiques of human rights in a range of areas including conflict and war, accountability and justice, race and racism, and colonialism and inequality.

LAW 7698. AI for Lawyers: Uses, Risks, and Regulation. (2 Hours)

Introduces law students to the evolving world of artificial intelligence. Designed to prepare law students to enter legal workplaces being rapidly transformed by AI. Presents a broad overview of the technology underlying AI tools. Focuses specifically on generative AI, and examines how the Rules of Professional Conduct govern lawyers' engagement with AI. Examines the sources and risks of bias and hallucinations in current generative AI, as well as the intentional and unintentional misuse of the technology. Covers current and proposed legislative and regulatory schemes governing development and implementation of AI at the international, federal, and state levels. Offers student teams an opportunity to imagine and propose generative AI tools for self-represented litigants.

LAW 7699. Efforts in Criminal Law Minimalism. (3 Hours)

Examines several recent efforts in criminal legal reform. Introduces the recent abolition movement, emphasizing an understanding of critiques of policing and mass incarceration. Presents several efforts to change the criminal system including efforts to halt racialized policing; remove police from particular settings; reform pretrial detention; implement change within the trial process, such as Batson reform; and reform sentencing. These reform efforts include legislative reform, judicial challenges, community organization, and public media campaigns. Offers students an opportunity to develop their knowledge of advanced criminal procedure in the context of ongoing efforts to change a deeply flawed system.

LAW 7700. Intellectual Property and Social Justice. (3 Hours)

Examines the social justice aspects of different forms of intellectual property. Combines a study of contemporary issues in law and society with appropriate readings that provide theoretical, doctrinal, and social context for the use of and resistance to intellectual property.

Prerequisite(s): LAW 7369 (may be taken concurrently) with a minimum grade of MP or LAW 7501 (may be taken concurrently) with a minimum grade of MP or LAW 7590 (may be taken concurrently) with a minimum grade of MP or LAW 7638 (may be taken concurrently) with a minimum grade of MP or LAW 7633 (may be taken concurrently) with a minimum grade of MP

LAW 7701. Strategies for Bar Success: Advanced Skills. (2 Hours)

Continues students' bar exam preparation by focusing on contextualized substantive review of the most heavily tested topics on the bar exam. Overlays advanced skill instruction on reading comprehension, issue identification, rule mastery, critical thinking, legal analysis, and recognition of distractor skills. Offers students an opportunity to gain a conceptual understanding and in-depth knowledge of highly tested doctrines across multistate bar exam subjects and to develop, use, and apply a flexible but strong analytical framework to solve bar exam problems. Graded on a pass/fail basis.

Prerequisite(s): LAW 7652 with a minimum grade of MP

LAW 7702. Crimmigration Law: The Intersection of Criminal Law and Immigration Law. (3 Hours)

Introduces students to the intersection of immigration law and criminal law, including the immigration consequences of criminal activity, the criminal consequences of immigration law violations, and the doctrine governing immigration detention. Offers students an opportunity to obtain the skills necessary to advise noncitizen criminal defendants regarding the immigration consequences of plea agreements and to advise noncitizens with prior involvement in the criminal justice system regarding immigration law matters.

LAW 7927. Applied Learning Experience for JD/MPH. (3 Hours)

Work completed for this individualized instruction course fulfills the capstone requirement for the Master of Public Health (MPH) portion of the Dual JD/MPH Program with Tufts University. The requirement is known as the Applied Learning Experience and it earns 3 Northeastern University Law school credits. Students fulfilling this required course spend a minimum of 160 hours in a public health agency completing a project related to public health and law. It is both an academic and practice experience where students use their legal and public health knowledge and skills to undertake a discrete project in a public health agency. A final paper and presentation are required.

LAW 7928. LSSC Lawyering Fellow Seminar. (1 Hour)

Offers additional support and training for students serving as Lawyering Fellows for the social justice component of the Legal Skills in Social Context (LSSC) class for first-year law students. Explores social justice topics covered in LSSC in greater depth. Offers students an opportunity to obtain training in the skills necessary to facilitate discussions of those topics. Examines theories of effective collaboration and group development and introduces techniques for fostering successful team dynamics. Provides guidance on how to engage in effective critique and feedback and how to supervise students in their project work.

Corequisite(s): LAW 7931

LAW 7929. Moot Courts and Legal Competitions. (1-4 Hours)

This individualized instruction program allows students to participate in a variety of professional competitions: moot court, mock trial, mediation, client counseling and writing competitions. Under the supervision of a faculty member, participants in these competitions devote substantial time and effort to researching, writing, and preparing for oral arguments or advocacy. In recognition of the effort required to participate in these competitions, participants are awarded up to three (3) credits for the experience, provided they satisfactorily (i) complete the required written submission, (ii) participate in a number of rounds of practice argument, and (iii) attend and participate in the competition. May be repeated up to five times for up to 6 total credits.

LAW 7931. LSSC Lawyering Fellow. (3 Hours)

Assists LSSC faculty in all aspects of the first-year LSSC course. Working closely with a supervising faculty member, Lawyering Fellows provide critique and feedback on first-year students' written and oral work, create legal research plans, identify areas for field research, communicate with representatives from the partner organizations, and help to foster strong team dynamics and development. May be repeated once.

LAW 7933. Scholarly Legal Writing. (2 Hours)

Introduces basic concepts and principles of scholarly legal writing. Requires students to produce a piece of legal writing on a complex legal issue of their choice. The scholarly writing is expected to meet the standards of the upper-level rigorous writing requirement and be of publishable quality, analyzing an original legal issue.

LAW 7934. Law Review - Senior Editor. (0.5,1 Hours)

Offers those who have completed one term of staff work as associate editor or who have otherwise been promoted at the discretion of the editorial board the position of senior editor at the Northeastern University Law Review. Senior editors work under the supervision of faculty advisors and editorial board members in support of the mission of the Law Review: to publish legal scholarship in its flagship print journal and online platforms. Tasks may include citation checking, editing, supervision of associate editors, assistance with the writing competition and new member selection, and other duties in support of publishing content. Students may take up to 1 credit in each of their second-year and third-year terms with permission of the instructor. Graded on a credit/fail basis. May be repeated three times for a maximum of two semester hours.

LAW 7935. Law Review - Editorial Board Member. (1,2 Hours)

The Northeastern University Law Review publishes legal scholarship in its flagship print journal and on-line platforms. Operations are managed by an Editorial Board. In addition to the three Executive Editors who lead the E-Board, members include Articles Editors, Extra Legal Editor, Forum Editor, Publications Editor, and Symposium Editor. E-Board members work under supervision of the Faculty Advisors and Executive Editors. Editors develop articles and content, facilitate events and the publication process, and work with staff and senior staff. Individual position descriptions define additional specific responsibilities for each position. This course is graded on a credit/fail basis. May be repeated two times for a maximum of three semester hours.

LAW 7936. Law Review - Executive Editor. (1-3 Hours)

The Northeastern University Law Review publishes legal scholarship in its flagship print journal and on-line platforms. Operations are managed by an Editorial Board, led by three Executive Editors per rotation: Editor-in-Chief, Managing Editor, and Executive Articles Editor. Executive Editors work under supervision of the Faculty Advisors. In the broadest sense, they manage operations, production, and staff, make editorial choices, and ensure ethical operation that meets legal and financial obligations. Though their specific roles require different specific actions, as defined in their position descriptions, Executive Editors often share work and are ultimately responsible for doing what is necessary to ensure a successful Law Review. This course is graded on a credit/fail basis. May be repeated two times for a maximum of five semester hours.

LAW 7937. Teaching Assistant. (1-3 Hours)

Working under the direct supervision of a full-time faculty member, an upper level student in good academic standing may serve as a teaching assistant for first year or upper level courses. Teaching assistants may be required to attend classes and complete all reading assignments. Other responsibilities may include, but are not limited to, conducting review sessions, classroom exercises or other forms of direct instruction; holding office hours or meetings with individual students taking the course; and assisting in the development of course materials and assessments. In addition, teaching assistants are expected to meet regularly with the professor. May be repeated three times for a maximum of six hours.

LAW 7938. Research Assistant. (1-3 Hours)

An upper level student in good standing may serve as a faculty Research Assistant. The student will work with a full-time faculty member on a supervised project relating to the faculty member's teaching or scholarly activities. The project will provide the student with supervised research and/or writing experience as well as an opportunity to engage in analytical discourse with the faculty member. May be repeated three times for a maximum of six hours.

LAW 7940. Reflections on Lawyering. (1 Hour)

Offers students an opportunity to reflect on their legal work experiences. Examines the roles of lawyers and the nature of legal work, drawing on assigned readings, lectures, and students' own experiences. Discusses the professional obligations of lawyers and identifies skills and knowledge needed for effective lawyering. Considers both how students' own legal careers may develop over time and how the legal profession itself may evolve.

Corequisite(s): LAW 7941

LAW 7941. Public Interest / Public Service Field Placement. (7 Hours)

Offers students an opportunity to complete a field placement of at least 350 hours with a public interest organization, a government entity, or a judge. Fieldwork may assist students in expanding both their legal knowledge and their understanding of the legal profession, as well as an opportunity to develop their skills related to research and writing on legal and policy matters, preparation of written and oral presentations, client interviewing and advocacy, and/or litigation preparation.

Corequisite(s): LAW 7940

LAW 7945. Field Placement Seminar. (2 Hours)

Offers students an opportunity for structured reflection on their individual experiences in a field placement. Specific topics may include ethical obligations, the nature of legal work, the social context of the changing legal profession, the role of interdisciplinary insights in legal problem solving, and the use of varying modes of communication in the legal workplace. Students reflect on the ways in which their field placement draws from or builds upon previous coursework and legal experience.

Corequisite(s): LAW 7946

LAW 7946. Field Placement. (6 Hours)

Offers students an opportunity to complete a 300-hour field placement under the supervision of an attorney. Fieldwork may assist students in developing skills related to tasks such as researching and writing on legal and policy matters, preparation of written and oral presentations, client interviewing and advocacy, and litigation preparation.

Prerequisite(s): LAW 7954 with a minimum grade of CR or LAW 7955 with a minimum grade of CR or LAW 7956 with a minimum grade of CR or LAW 7957 with a minimum grade of CR

Corequisite(s): LAW 7945

LAW 7949. Independent Field Placement. (2-4 Hours)

Offers students fieldwork under the supervision of an attorney in the public or judicial sector. Students have an opportunity to obtain substantial lawyering experience that is reasonably similar to the experience of a lawyer advising or representing a client or engaging in other lawyering tasks. Includes regular reflection on their work with their faculty supervisor. Comprises 50 hours of fieldwork per credit; students may enroll in the field placement for 2, 3, or 4 credits. May be repeated twice for a maximum of 6 credits.

LAW 7954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated once.

LAW 7955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Offers eligible students an opportunity for work experience abroad.

LAW 7956. Public Interest and Government Co-op Work Experience - Half-Time. (0 Hours)

Offers eligible students an opportunity for work experience in a public interest or government setting.

LAW 7957. Public Interest and Government Co-op Work Experience Abroad - Half-Time. (0 Hours)

Offers eligible students an opportunity for work experience in a public interest or government setting abroad.

LAW 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LAW 7964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

LAW 7965. Co-op Work Experience Abroad. (0 Hours)

Offers eligible students an opportunity for work experience abroad. May be repeated without limit.

LAW 7966. Public Interest and Government Co-op Work Experience. (0 Hours)

Offers eligible students an opportunity for work experience in a public interest or government setting. May be repeated without limit.

LAW 7967. Public Interest and Government Co-op Work Experience Abroad. (0 Hours)

Offers eligible students an opportunity for work experience in a public interest or government setting abroad. May be repeated without limit.

LAW 7976. Directed Study. (1-6 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

LAW 7979. Legal Technology and Legal Operations. (1 Hour)

Examines legal technology concepts and approaches that are currently used in legal practice and will become increasingly important in the future. Legal technology is rapidly transforming both the nature and practice of law. Explores this transformation and its implications. Topics include legal informatics; students consider where legal information resides and how it is manipulated and transmitted.

LAW 7983. Special Topics in Law. (1-4 Hours)

Covers special topics in law. May be repeated without limit.

Law and Policy - CPS (LWP)

Courses

LWP 6118. Historical Foundations of American Law. (3 Hours)

Explores important law and policy issues that are capturing the attention of our national policymakers, think tanks, and journalists by taking a deep dive into Supreme Court cases and constitutional jurisprudence. Topics include, but are not limited to, privacy, gun control, civil rights and civil liberties, higher education, and other issues.

LWP 6119. Current Law and Policy Debates: Our Nation's Capital and Beyond. (3 Hours)

Explores important law and policy issues that are currently capturing the attention of our national policymakers, think tanks, and journalists. Topics may include, but are not limited to, civil rights and civil liberties; the right to privacy; policy issues such as healthcare, gun control, immigration, and education reform; and global issues including foreign policy, among others. Includes a residency in Washington, D.C.

LWP 6120. Law and Legal Reasoning 1: Legal Reasoning, Methods, and Research. (2-3 Hours)

Introduces the U.S. lawmaking system, modes of legal reasoning, and legal research. Offers students an opportunity to obtain training in the skills and knowledge necessary to use legal resources and legal reasoning in academic and policy work. Explores basic legal and legislative concepts and terminology, the structures and functions of the federal legal and legislative systems, and different types of legal reasoning used in the three branches of the U.S. government. Examines how to read and understand key legal documents—including judicial opinions, statutes, and regulations—and how to use those materials in policy work.

LWP 6121. Law and Legal Reasoning 2. (2-3 Hours)

Introduces modes of legal reasoning used by lawmakers and policymakers, focusing on legislature and current administrative state. Examines the way Congress and administrative agencies develop and adopt statutes and regulations and how interpreting institutions analyze and apply these laws. At the course conclusion, students are expected to understand the organization of legislatures at multiple levels; how bills are developed and move through legislatures; the impact of various stakeholders and politics upon the legislative process; the different types of legal reasoning used in lawmaking; and to be able to read and understand statutes and regulations. Offers students an opportunity to add to their literature review by developing the ability to conduct legal research on their topic and understanding the role of relevant agencies to their topic.

LWP 6122. Law and Legal Reasoning 3. (2-3 Hours)

Introduces modes of legal reasoning, lawmaking, and policy influencing used by chief executives and their staffs and appointees in U.S. governments. Examines the constitutional role of the president and how the president employs delegated and implied powers to implement, make, and interpret law and otherwise influence policy. Explores how executive agencies promulgate regulations and how courts interpret and review regulatory processes and functions. Studies how to analyze and develop strategic insights into the organization of the executive branch; how legislation and other law is interpreted, implemented, and influenced by the executive; different executive strategies for influencing policy, including the federal budget process and informal methods of influencing policy; and how to read and comprehend regulations and regulatory materials.

LWP 6123. Law and Legal Reasoning 4. (2-3 Hours)

Offers a theoretical and practical overview of modes of legal reasoning, jurisprudence, and the application of such reasoning in contemporary legal cases. Topics include, but are not limited to, legal formalism and textualism, legal realism and pragmatism, critical legal studies, the living constitution, originalism, popular constitutionalism, and constitutional debates. Offers students an opportunity to apply these theories to historic and current cases and may offer opportunities for students to make comparisons across varied forms of government.

LWP 6401. The Policymaking Process. (3 Hours)

Introduces students to the basic structure of the political branches of government, as well as foundational theories of the policy cycle and policy theorists, types of public policy, and the dimensions of conflict in the creation and modification of public policy. Topics may include, but are not limited to, problem definition, policy heuristics, and policy decisions including street-level bureaucracy. Students engage in practical application of policy theory through course assignments e.g., to their own proposed thesis research area or case examples.

LWP 6402. Law and Policy Concepts 2: Strategizing for Public Policy. (2,3 Hours)

Offers an overview of policymaking in the 21st century. Topics may include agenda setting, historical institutionalism, and interbranch perspectives of law and policy, as well as the interaction between state- and federal-level policy.

LWP 6403. Law and Policy Concepts 3: Policy Case Studies. (2-3 Hours)

Reviews how modern policy scholarship is applied to public policy challenges. Topics may include, but are not limited to, healthcare, criminal justice, environmental policy, labor policy, economic development, housing, or social welfare. Offers comparisons allowing students a broader perspective of issues that surround law and policy domestically in the United States and globally in other sovereign states.

LWP 6404. Evaluation Research. (2-3 Hours)

Introduces commonly used policy evaluation methods and tools. Offers students an opportunity to become familiar with the concepts, techniques, and practices of evaluation research; to learn how to read evaluation research critically; and to develop an appropriate evaluation plan for an ongoing program. Topics include outcome and impact evaluation, as well as cost-benefit analysis. May include opportunities to engage in the further development of the literature review for the doctoral thesis project, conducting a short policy analysis, and critical review of a policy evaluation.

Prerequisite(s): LWP 6424 with a minimum grade of B

LWP 6410. Economics for Policy Analysis. (2-3 Hours)

Offers an overview of the use of various economic theories in policy analysis and the tools of public finance. Topics may include the theory of public choice; market failure; economic concepts of public and private goods; externalities; and theories of social welfare, political economy, behavioral economics, sources of revenue and expenditure, tax structures, and other contemporary efforts to incentivize private investment to support social goals. Offers students an opportunity to understand these theories and concepts and apply them to a range of public policy and legal issues.

LWP 6420. Quantitative Methods. (2-3 Hours)

Introduces students to quantitative research methodology, including techniques needed to explore the student's doctoral thesis questions from a quantitative perspective. Offers students an opportunity to learn how to move from designing a quantitative study to data collection through analysis and interpretation of quantitative data. Topics include the basic logic of statistical inference, the manipulation and description of data, survey techniques, and secondary data analysis. Covers a variety of statistical techniques used within policy research to calculate descriptive statistics and techniques to evaluate the relationship between variables, such as crosstabs, t-tests, correlation, and regression analysis. Students apply these techniques through assignments and performing quantitative data analysis.

Prerequisite(s): LWP 6424 with a minimum grade of B

LWP 6423. Qualitative Methods. (2-3 Hours)

Introduces students to qualitative research, including techniques needed to explore the student's doctoral thesis questions from a qualitative perspective. Offers students an opportunity to learn how to move from design to data collection through analysis of qualitative data, as well as how one interprets and draws conclusions from qualitative data. Topics include qualitative data collection techniques, including in-depth group interviews, archival research, observation, and focus groups; coding qualitative data; and proper presentation of qualitative analyses and conclusions in formal academic writing such as the doctoral thesis. Students apply these techniques through assignments and performing qualitative data analysis.

Prerequisite(s): LWP 6424 with a minimum grade of B

LWP 6424. Research Methods. (3 Hours)

Introduces students to systematic methods of inquiry in law and policy doctoral study. Covers qualitative, quantitative, and mixed-methods approaches to research. Seeks to immediately assist students in thinking through their doctoral thesis research question and the development of the research methodologies suited to answer their research question. Topics may include research design; logic of inquiry; data collection; data management, data quality, communication and dissemination of results, evaluation of evidence; qualitative, quantitative, and mixed-methods approaches for law and policy research and analysis. Offers a general introduction to research ethics and Institutional Review Board processes and policies.

LWP 6431. Political and Moral Ethics and Dilemmas. (2-3 Hours)

Examines the political and moral responsibilities of public policymakers in government by asking what governments should do—considering principles that guide good, just, legitimate public policy—and what political actors should do—considering the many and often competing obligations that guide them in contesting what is good, just, and legitimate public policy. Assignments focus on applications of theoretical concepts from scholarly readings in philosophy and political theory to practical issues of public policy. Expects students to research distinct political and moral scholars, make presentations of their research, and complete a term paper addressing these ideas and scholars as applied to their doctoral project.

LWP 6450. Public Policy Theory and Practice 1. (2,3 Hours)

Offers a practical and theoretical overview of how legislation and public policy are initially developed at the federal, state, and local levels, using a range of research and policy tools. After developing the technical aspects of a public policy proposal, those working for policy change face an array of strategic and tactical decisions about where and how to intervene in the complicated system of actors and institutions that establishes and implements public policies. Examines a wide range of policy topics to understand and evaluate how different policy strategies evolve in the interplay between branches and levels of government.

LWP 6451. Public Policy Theory and Practice 2. (3 Hours)

Focuses on crafting effective strategies for advancing and passing concrete public policy changes at the federal, state, and local levels. Potential topics include, but are not limited to, health policy, education policy, jobs and economic policy, national security policy, immigration policy, and housing policy. Expects students to analyze policy change options and evaluate which strategies are most likely to produce desired changes. Offers students an opportunity to develop a theory-based and pragmatic framework for developing effective strategies to achieve desired policy change across a broad spectrum of issues and at all levels of government.

LWP 6452. Public Policy Theory and Practice 3. (2-3 Hours)

Focuses on the passage and implementation of public policy changes at the federal, state, and local levels. Guest experts lecture and initiate class discussions. Expects students to analyze policy change options and propose strategies to produce desired policy changes. Selected students are asked to lead and moderate class debates. Offers students an opportunity to develop a theory-based and pragmatic framework for developing effective strategies to achieve and implement desired policy change across a broad spectrum of issues and at all levels of government. Students may also be asked to examine ideas and proposals related to their doctoral theses.

LWP 6500. Doctoral Research Design 1. (2-3 Hours)

Builds upon prior courses in the methods sequence. Offers students an opportunity to further develop their knowledge and skills in research methodology and design. Students refine and add to the literature review and law and policy review conducted in prior course work and utilize their updated literature review to refine their design for their thesis research project for their selected topic area and to define the research methodology. By the end of the course, successful students are expected to have a doctoral thesis project proposal in their topic of interest, be ready to defend the proposal, and have prepared their IRB application for review in alignment with university requirements.

Prerequisite(s): LWP 6424 with a minimum grade of C- ; LWP 6420 with a minimum grade of C- ; LWP 6404 with a minimum grade of C-

LWP 6501. Doctoral Research Design 2. (2-3 Hours)

Offers students an opportunity to continue to develop the doctoral thesis project; to refine the doctoral thesis proposal and IRB application completed in Doctoral Research Design 1; to defend the doctoral thesis proposal with the thesis committee; and submit the IRB application. In addition, offers students an opportunity to deepen the narrative around data analysis, ethical considerations and theoretical frameworks, and begin to build the doctoral thesis. Explores in-depth relationships with data collection, management, and analysis in alignment with standards of rigor.

Prerequisite(s): LWP 6500 with a minimum grade of C-

LWP 6502. Doctoral Research Design 3. (2-3 Hours)

Offers students an opportunity to continue to develop the thesis project in the data collection, analysis, and reporting phase of the research. Continues in-depth exploration of data: collection, management, analysis, and handling of ethical concerns and standards of rigor. Offers students an opportunity to explore the conclusions that are possible from the results of their data collection and analysis. Introduces concepts of display of qualitative or quantitative data for the purpose of communicating data findings in the thesis and best practices in academic writing and presentation of data.

LWP 6503. Doctoral Research Design 4. (2-6 Hours)

Offers students an opportunity to continue to develop the thesis project, including finalizing data analysis and reporting of results and conclusions from research. Expects students to work toward a complete five-chapter dissertation (or accepted alternative) that will be edited and submitted for publication in the university dissertation repository. Students prepare for the culminating activity of the thesis defense and disseminating findings through scholarly channels.

Prerequisite(s): LWP 6502 with a minimum grade of C-

LWP 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LWP 6995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

LWP 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

LWP 7994. Thesis Continuation—Part Time. (0 Hours)

Offers continued thesis supervision by members of the program. May be repeated up to three times.

Law and Public Policy (LPSC)**Courses****LPSC 1101. Introduction to Law. (4 Hours)**

Examines the role of law and society from a regulatory, constitutional, and judicial perspective, noting the role each of these has played in shaping the current legal framework in the United States. Introduces students to the relationship between law, societal organizations (both nongovernmental organizations and not-for-profit organizations), the private sector, and the separate branches of government (the judiciary, congressional, and executive branches). Provides students with the opportunity to learn to legally analyze judicial opinions, prepare legal memoranda, and present an oral argument before a "judge."

LPSC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 2301. Introduction to Law, Policy, and Society. (4 Hours)

Examines the relationship of society to its laws: how society creates changes in law or policy via societal pressure and social movements (such as the environmental, women's rights, and corporate accountability movements); how law and policy affect individual rights and behavior; whether a society needs laws in order to function; the relationship between some branches of our government in effectuating social change; and some of the fundamental differences between societies governed by seemingly similar but pragmatically different laws, such as the right to a jury trial.

LPSC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 3303. Topics in Law and Public Policy. (4 Hours)

Covers special topics in law, policy, and society to fulfill students' interests. May be repeated without limit.

Prerequisite(s): LPSC 2201 with a minimum grade of B or LPSC 1101 with a minimum grade of B

LPSC 3307. Understanding the Modern Supreme Court. (4 Hours)

Offers a historical overview of the Supreme Court's role in American life, focusing on the 20th century. As a legal, political, and policymaking institution, the Supreme Court plays a central role in U.S. legal, political, and policy disputes. The justices possess a wide range of social, cultural, political, and economic views.

Prerequisite(s): LPSC 1101 with a minimum grade of B

Attribute(s): NUpath Societies/Institutions

LPSC 3310. Law and Policy in the Nation's Capital. (1 Hour)

Offers students an opportunity to travel to Washington, D.C., to meet with attorneys in the government, nonprofit, and private sectors; witness hearings; and see the various ways law and policy are made in our nation's capital. Upon return, students write a reflective paper connecting some of the readings provided in advance (democratic theory, overview of each branch of government, adversarial legalism, law of agencies) to speaker(s) and events from the visit. May be repeated twice, based on annual unique theme.

Prerequisite(s): LPSC 1101 with a minimum grade of B

LPSC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

LPSC 5201. Law and the City. (4 Hours)

Examines key legal structures, court decisions, and social research to consider the ability of cities to make and implement public policies that directly affect the everyday lives of millions of people. American cities and their residents are frequently faced with similar legal and political questions.

Topics include federalism, land-use planning and development, business regulation, gun control, school choice, public health, and climate adaptation initiatives.

LPSC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 7311. Strategizing Public Policy. (4 Hours)

Provides a practical overview to crafting effective strategies for advancing public policy changes at the federal, state, and local level using a range of legislative, litigation, and other policy tools. Uses a series of case studies on a wide range of policy topics to understand and evaluate how different policy strategies evolve in the interplay between branches and levels of government. Takes an interbranch perspective on how policy is made and places particular emphasis on the role litigation and the courts play in policy making, an aspect of public policy formulation that is often downplayed or overlooked.

LPSC 7312. Cities, Sustainability, and Climate Change. (4 Hours)

Provides an overview of the various aspects of urban sustainability planning. Examines sustainability as an urban planning approach with both ecological and social justice goals. Covers sustainable planning and offers students an opportunity to understand it within the context of smart growth and the new urbanism. Focuses on the two areas in which cities can reduce energy consumption and greenhouse gas emissions—the built environment and transportation. From there, the course examines planning efforts to reduce demand on water and sewer systems and to create employment in renewable energy and other “clean-tech” occupations. The course ends by placing urban initiatives in the context of state and national policy.

LPSC 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 7976. Directed Study. (1-4 Hours)

Offers a supervised reading and research activity with faculty supervision approved by a committee of the Law, Policy, and Society faculty. May be repeated without limit.

LPSC 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

LPSC 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): LPSC 9000 with a minimum grade of S

LPSC 9996. Dissertation Continuation. (0 Hours)

Offers continued dissertation supervision by members of the department. May be repeated without limit.

Prerequisite(s): LPSC 9990 with a minimum grade of S or Dissertation Check with a score of REQ

Leadership Studies - CPS (LDR)

Courses

LDR 1200. Assessing Your Leadership Capacity. (3 Hours)

Introduces the methodologies and processes that are essential aspects of leadership: conceptualizing motivation, identifying traits, creating a vision, understanding influence, overcoming obstacles, developing character, and establishing a professional brand. Offers students an opportunity to focus on self-awareness, reflection, individual effectiveness, and self-assessment to learn how to recognize and utilize the differences between themselves and others. Students receive ongoing feedback from their peers and a chance to develop their own philosophy of leadership. The successful student should be able to answer the question, "What does it take to be a 21st-century leader?"

LDR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 3200. Leading and Managing Change. (3 Hours)

Offers students an opportunity to develop the knowledge base necessary to lead and manage organizational change in all sectors with an emphasis on a 360-degree approach to understanding the many facets of change. Uses case studies that address various aspects of implementing change, such as: addressing the human psychology of change through innovative technology, social media, theoretical frameworks, understanding change agents, and operations. Encourages students to develop their views from both a management and nonmanagement perspective. The successful student should be able to gain knowledge and practical skills in how to connect change with strategy, anticipate resistance, assess readiness, and measure sustainability.

Prerequisite(s): LDR 1200 with a minimum grade of D- or CMN 2210 with a minimum grade of D- or HRM 2350 with a minimum grade of D- or LDR 1203 with a minimum grade of D- or LDR 1501 with a minimum grade of D- or MGT 2100 with a minimum grade of D- or MGT 2310 with a minimum grade of D-

LDR 3250. Leading Teams Locally and Virtually. (3 Hours)

Covers the skills needed to manage teams in one office, in multisite locations, internationally or virtually. Topics include effective communication strategies, how to structure teams within an intergenerational environment, and how to leverage individual strengths to lead high-performance teams. Offers students an opportunity to identify barriers, study strategic methods for overcoming obstacles, leverage technology to build virtual spaces for people and ideas, and work to develop a strategy to optimize team effectiveness through a shared process and peer coaching by participating on a cohort team. The successful student should be able to understand their role as a catalyst, visionary, and leader in the formation and success of any team.

Prerequisite(s): LDR 1200 with a minimum grade of D- or CMN 2210 with a minimum grade of D- or HRM 2350 with a minimum grade of D- or LDR 1203 with a minimum grade of D- or LDR 1501 with a minimum grade of D- or MGT 2100 with a minimum grade of D- or MGT 2310 with a minimum grade of D-

LDR 3400. Evidence-Based Leadership and Decision Making. (3 Hours)

Examines the components of evidence-based leadership that have been tested in various settings, shown to be effective, operational, and able to be used in solving real-world dilemmas. Emphasizes using decision-making models to analyze behaviors, align organizational goals, determine consequences, and make recommendations for actions leaders can make to solve problems. Studies the relationship(s) between scientific data, academic theory, technological advances, and changes in society toward the goal of understanding ethical problems. The successful student should be able to demonstrate increased information literacy, identify strategies for decision making, and know where to seek evidence needed in order to make high-quality decisions on a wide range of issues.

Prerequisite(s): (LDR 1200 with a minimum grade of D- or CMN 2210 with a minimum grade of D- or HRM 2350 with a minimum grade of D- or LDR 1203 with a minimum grade of D- or LDR 1501 with a minimum grade of D-); (MTH 2300 with a minimum grade of D- or MTH 2310 with a minimum grade of D- or MTH 3300 with a minimum grade of D- or ALY 2010 with a minimum grade of D-)

Attribute(s): NUpath Writing Intensive

LDR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 4850. Strategic Decision Making (Capstone). (3 Hours)

Offers students an opportunity to examine and test leadership theory in practice. Students demonstrate their leadership knowledge gained during their undergraduate studies by completing an experiential action-oriented project. Under faculty guidance and approval, each student must present a body of work that addresses a critical leadership topic that will enhance their professional development as a 21st-century leader. Experiences can be undertaken within any industry sector or at the workplace with supervisor approval. Past projects have included research studies, case studies, new products, leadership development plans, publications, journals, magazines, media/films, training programs, etc. Requires students to deliver a presentation on their project and share a culmination of learned outcomes.

Prerequisite(s): LDR 3400 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

LDR 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

LDR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 4995. Practicum. (1-4 Hours)

Integrates theory and practice through a structured consulting experience working with organizations or conducting an applications-oriented research study. Introduces the problem-solving consulting model. From problem identification through recommendations, offers student teams an opportunity to work with decision makers to solve organizational leadership issues or conduct practical research studies.

LDR 5100. Developing Your Leadership Capability. (2.25 Hours)

Seeks to establish the premise that leadership is a developed capability by exposing students to theories and alternative perspectives, including contemporary collaborative models. This is the foundation of the master's degree program. Offers students an opportunity to demonstrate a holistic perspective of leadership by gaining an appreciation for the self and how it relates to the greater world around them. Students take a series of leadership and professional assessments/instruments designed to increase self-awareness and to develop practice of critical reflection. From careful consideration of these perspectives, successful students then build a personal model of leadership that can be put to immediate use in work, community, or personal settings.

LDR 5110. Leading Teams Strategically in a Global Environment. (2.25 Hours)

Examines principles of building highly effective teams by analyzing the variety of interrelated practices underlying group dynamics. Offers students an opportunity to learn how teams operate, the value of diversity in teams, leadership skills that best support teams, characteristics of successful teams, stages of group development, and the challenges associated with leading virtual teams. Combines learning through case studies, interactive discussions, reflective journaling, and an experiential team-based exercise.

LDR 6100. Developing Your Leadership Capability. (3 Hours)

Seeks to establish the premise that leadership is a developed capability by exposing students to theories and alternative perspectives, including contemporary collaborative models. This is the foundation of the master's degree program. Offers students an opportunity to demonstrate a holistic perspective of leadership by gaining an appreciation for the self and how it relates to the greater world around them. Students take a series of leadership and professional assessments/instruments designed to increase self-awareness and to develop practice of critical reflection. From careful consideration of these perspectives, successful students then build a personal model of leadership that can be put to immediate use in work, community, or personal settings.

LDR 6101. Leadership Challenge Lab. (1 Hour)

Offers students an opportunity to participate in an intensive, group leadership learning experience that is challenge-based and experiential. Provides the foundation for a series of reflective, feedback-based activities that inform the development of a personalized leadership development plan, supported by peer and faculty coaching during the lab and in subsequent courses.

LDR 6110. Leading Teams Strategically in a Global Environment. (3 Hours)

Examines principles of building highly effective teams by analyzing the variety of interrelated practices underlying group dynamics. Offers students an opportunity to learn how teams operate, the value of diversity in teams, leadership skills that best support teams, characteristics of successful teams, stages of group development, and the challenges associated with leading virtual teams. Combines learning through case studies, interactive discussions, reflective journaling, and an experiential team-based exercise.

LDR 6115. Developing Strategic and Authentic Leadership Communication. (3 Hours)

Introduces students to different communication approaches to help them develop their authentic leadership voice, because today's dynamic global work environment requires leaders to have a broad set of communication skills. Offers students an opportunity to use interpersonal, technology-mediated, and intercultural communication competencies and techniques; to develop a strategic approach for leadership communication; and to define an action plan for continuous growth.

LDR 6120. Developing Organizational Success through Leadership Development. (3 Hours)

Focuses on developing leadership capacity, or bench strength, throughout an organization. Understanding organizational dynamics and developing leadership capacity within the organization are two critical challenges facing leaders today. Studies best practices for onboarding, developing, coaching, and mentoring leaders, as well as the systems, practices, and procedures required to develop leaders throughout an organization. Students participate in a coaching exercise, where they give and receive coaching from their peers in the program and from faculty.

Prerequisite(s): LDR 6100 with a minimum grade of C-

LDR 6135. Ethical Leadership. (3 Hours)

Considers leadership dilemmas that can arise when the individual's values conflict with those of the organization, or when a situation requires decisions with conflicting value sets. Students use case studies, their own experiences, and current events to examine actions leaders have taken and consequences faced when confronted with ethical dilemmas. Requires work on a real-life ethical dilemma for understanding in-depth reasoning of the problem and developing an action plan for solving and preventing similar problems at the organizational and societal levels. From these exercises and discussions, students have an opportunity to develop a personal model for ethical leadership.

LDR 6140. Leadership Strategy, Design, and Practice. (3 Hours)

Offers students an opportunity to build an understanding of the core concepts of strategy making and to achieve a strategic mind-set. This involves analyzing industry dynamics, responding to competitive challenges, and assessing the impact of the future of innovation and of change. Addresses the concepts of organizational strategy as a dynamic process and strategic decision making as students implement a plan for strategy development for a real organization.

Prerequisite(s): LDR 6100 with a minimum grade of C- ; LDR 6120 with a minimum grade of C-

LDR 6145. Developing Sustainable Global Leadership. (3 Hours)

Explores changing demographics as they impact present and future organizations. Examines their best-in-class motivations to more fully appreciate the backgrounds, cultures, experiences, viewpoints, styles, and contributions of a diverse workforce. Students reflect on leadership from key ethical, legal, policy, business, political, and societal frameworks. In a global economy, leaders of best-in-class organizations understand that creating an inclusive work environment is essential for continued competitive advantage.

LDR 6150. Innovation and Organizational Transformation. (3 Hours)

Studies the framework for organizational transformation as well as the competencies required to develop and implement a holistic model of change. Offers students an opportunity to learn how to think innovatively, design a vision for change, assess the current situation in relation to the desired change, and manage the transition from the current situation to the desired future. Within this course, students serve in the role of consultants or change agents for real-life organizations, assisting managers in their endeavors for organizational transformation. From this experience and class discussions, students have an opportunity to develop a personal model for change leadership and define an innovative action plan for personal growth as change agents.

Prerequisite(s): LDR 6100 with a minimum grade of C- ; LDR 6110 with a minimum grade of C-

LDR 6190. Leadership Coaching for Purpose and Performance. (3 Hours)

Focuses on developing coaching competencies needed to advance resonant, impactful, coaching relationships that result in the coachee developing leadership expertise aligned with their vision and the achievement of specific performance goals. Emphasizes foundational coaching competencies combined with a leadership coaching model that can be used in a variety of real-world coaching scenarios. Offers a variety of experiential coaching activities and concludes with a coaching practicum, where students have an opportunity to demonstrate their coaching expertise in a recorded coaching session.

LDR 6195. Advanced Leadership Coaching: An Interdisciplinary Approach. (3 Hours)

Examines the use and impact of evidence-based theoretical models—such as positive psychology, adult learning, experiential learning, and leadership—in the practice of leadership coaching. Considers the relationship between key coaching competencies identified in the International Coaching Federation Core Competency model and existing theoretical models. Examines the use of the different coaching frameworks to integrate theoretical models and leadership competencies while conducting coaching sessions. Offers students an opportunity to practice applying the various coaching models and frameworks during their coaching sessions, thereby demonstrating the impact of their leadership coaching expertise.

Prerequisite(s): LDR 6190 with a minimum grade of C-

LDR 6323. Event Management. (3 Hours)

Examines strategies and techniques required to run successful events. Offers students an opportunity to learn how to manage logistics; the who, what, where, when, and how of running the event; how to develop checklists and manage processes to keep things running smoothly; and how to have contingency plans. Covers the basic details involved in running events—size, budget, venue, hospitality, marketing, publicity management—and working with vendors, community organizations, spectators, and celebrities.

LDR 6400. Sports Management. (3 Hours)

Provides an overview of management and administration pertaining to all levels of athletics. Focuses on basic theories of management and administration in athletic organizations. Addresses planning, scheduling, and financing aspects required to run a successful athletics program. Offers students an opportunity to learn to develop communication and management skills with an emphasis placed on decision making.

LDR 6405. Sport in Society. (3 Hours)

Examines the role sports plays in society. Emphasizes improving society through sports by creating and developing community service, drug awareness, and violence prevention programs. Discusses sports within sociological, economic, and political backgrounds. Topics include ethics, organizational code of conduct, and ethical behavior within competitive athletic settings.

LDR 6410. Leadership and Organization in Sport. (3 Hours)

Introduces a set of personal, interpersonal, and team-based skills and competencies required for leadership roles in sport organizations. These skills include self-awareness, managing stress, creative problem solving, communicating effectively, gaining power and influencing others, correcting performance and motivation problems, managing conflict, and delegation. Also explores the application of these skills in various contexts within the sports industry.

LDR 6427. Gender and Diversity in Sport. (3 Hours)

Examines gender and diversity in sport. Emphasizes creating equal opportunity for participants and administrative and leadership personnel. Explores affirmative action, human resources, and recruiting tactics and strategies.

LDR 6430. Sports Law. (3 Hours)

Addresses the legal aspects of sports, recreation, and leisure services, with a focus on tort and contractual liability. Covers legal concepts of negligence and principles of risk management, legal issues related to equipment use, facility management, and accommodation for special populations. Offers sports managers an opportunity to obtain the fundamental legal knowledge necessary to operate in the increasingly complex sports environment.

LDR 6435. Fiscal Practices in Sports. (3 Hours)

Examines the financial and regulatory issues confronting sports, fitness, and recreation industry managers. Covers accounting principles, financial statements, and related concepts that help determine the viability and strength of financial decision making.

LDR 6440. Sports Marketing and Promotions. (3 Hours)

Studies marketing and promotion strategies utilized in various aspects of the sports industry. Examines marketing sports as a product and marketing of nonsports products using sports as a promotional tool.

LDR 6441. Sports Media Relations. (3 Hours)

Studies the basic knowledge and understanding of media relations in sports. Emphasizes building and managing an effective media relations program on the intercollegiate and professional level. Examines news releases, hometown features, contest management, press conferences, statistics, and publications.

LDR 6442. Athletic Fund-Raising. (3 Hours)

Examines the fundamental tools and strategies necessary to raise funds within college athletics. Emphasizes annual fund-raising through solicitations via the mail, telephone, and interpersonal meetings and major gift and capital campaign solicitations and presentations. Discusses the role of the annual fund within the scope of an athletics department.

LDR 6443. Ticket Sales and Strategies. (3 Hours)

Provides an overview of ticket sales as a revenue source in athletics. Examines sales strategies for single-game, season ticket, and group sales; ticket office operations; and building a database for ticket sales.

LDR 6445. Corporate Sponsorships. (3 Hours)

Offers students an opportunity to develop a complete understanding of how sports properties can create effective commercial partnerships with corporations through the creation and execution of sponsorship agreements and how to prepare and critically evaluate the strategic implications of sponsorship proposals.

LDR 6455. NCAA Compliance. (3 Hours)

Provides a thorough study of the governing structure, rules, and legislative process within the NCAA. Examines compliance issues within a collegiate athletic department, including drug testing, self-reporting, and student-athlete eligibility.

LDR 6460. Risk Management in Athletics. (3 Hours)

Offers students an opportunity to develop the tools to conduct a thorough risk assessment for their organization and events by identifying potential risks, estimating their frequency and severity, determining how to control them, and developing safety policies and processes for staff and event participants. Emphasizes how to conduct a safety review and risk assessment and how to run an event that complies with health, safety, and security regulations.

LDR 6465. Title IX. (3 Hours)

Examines Title IX laws governing gender equity. Emphasizes managing an athletic department within the guidelines set forth by Title IX. Examines the original Title IX legislation, subsequent regulations issued by the Office of Civil Rights, and relevant court decisions.

LDR 6470. Bystander Strategies for the Prevention of Gender-Based Violence. (3 Hours)

Offers participants an opportunity to learn about the theoretical and practice models used to understand and respond to gender-based violence. Emphasizes bystander models of prevention. This interactive course is designed for students who are interested in research and practice directed at youth. Explores topics such as battery, gender roles, teen dating violence, sexual harassment, sexual assault/rape, and homophobia as facets of men's violence against women. Emphasizes trainer skill development for higher education, secondary education, public health, and social professionals. Offers participants an opportunity to learn how to effectively convene and facilitate public discourse about gender-based violence utilizing mentors in violence prevention curriculum with high school and college populations and to apply these concepts in service-learning opportunities.

LDR 6480. The Business of eSports. (3 Hours)

Introduces students to the basic concepts and evolution of the eSports industry. Investigates and explores the use of technology and social media platforms through sports. Explores the current state of this evolving sports enterprise, including trends relating to organizations that have entered this digital space to expand their global portfolios. Incorporates industry trends with appropriate readings that offer students an opportunity to understand this emerging sports industry segment.

LDR 6615. Academic Advising for Student-Athletes. (3 Hours)

Offers an overview of the foundations of academic advising and life-skill training as an essential component of student-athlete success and retention programs on higher education campuses. Topics include definitions and concepts for developmental advising; literature and research on the key concepts of academic advising; exploration of the various models and delivery systems for academic advising; skills for effective advising; advising diverse populations; and training, development, evaluation, assessment, and reward systems for advisers and advising programs.

LDR 6890. The Capstone: Demonstrating Leadership in Action 1. (2 Hours)

Offers students a culminating experience with several opportunities to further increase their impact and effectiveness as leaders and to demonstrate their leadership expertise, knowledge, and capability. Students work in teams, with a designated sponsor, on a leadership-in-action project. Requires students to critically reflect on the experiences they have gained through the leadership program, relate those experiences to their personal experiences, refine their personal leadership models, and provide the respective sponsor with a recommended solution to the problem that has been identified.

LDR 6895. The Capstone: Demonstrating Leadership in Action 2. (2 Hours)

Continues LDR 6890. Offers students a culminating experience with several opportunities to further increase their impact and effectiveness as leaders and to demonstrate their leadership expertise, knowledge, and capability. Students work in teams, with a designated sponsor, on a leadership-in-action project. Requires students to critically reflect on the experiences they have gained through the leadership program, relate those experiences to their personal experiences, refine their personal leadership models, and provide the respective sponsor with a recommended solution to the problem that has been identified.

Prerequisite(s): LDR 6890 with a minimum grade of C-

LDR 6961. Internship. (1-4 Hours)

Offers students an opportunity, while under the supervision of a sports professional and utilizing relationships with local college, professional, and amateur organizations, to work on a term basis in specific sports-related assignments. Students share their experiences through a discussion board forum as well as deliver a final paper and develop a Web portfolio. The Web portfolio highlights the student's skills, knowledge, development, quality of writing, and critical thinking by showcasing a comprehensive collection of work samples and artifacts from the student's experiences in the sports leadership program. May be repeated without limit.

LDR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 6980. Capstone. (1-4 Hours)

Offers students an opportunity to complete their academic experience with an in-depth, sports leadership internship. Students share their experiences through a discussion board forum as well as deliver a final paper and develop a Web portfolio. The Web portfolio highlights the student's skills, knowledge, development, quality of writing, and critical thinking by showcasing a comprehensive collection of work samples and artifacts from the student's experiences in the sports leadership program. By selecting an assignment of academic and professional interest, students are offered an opportunity to deepen their knowledge of a particular area of sports leadership through the senior project option. Intended for students already employed in the sports field.

LDR 6983. Topics. (1-4 Hours)

Covers special topics in leadership studies. May be repeated without limit.

LDR 6995. Project. (1-6 Hours)

Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

LDR 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

LDR 7980. The Capstone: Demonstrating Leadership in Action. (4 Hours)

Offers students a culminating experience with several opportunities to further increase their impact and effectiveness as leaders and to demonstrate their leadership expertise, knowledge, and capability. Real-life options for the capstone experience include a leadership in action project, an Experiential Network project, and a consulting case study. Students critically reflect on the experiences they have gained through the leadership program; relate those experiences to their personal experiences; and refine their personal leadership models.

Prerequisite(s): LDR 6100 with a minimum grade of C- ; LDR 6120 with a minimum grade of C- ; LDR 6140 with a minimum grade of C-

Legal Studies (LS)

Courses

LS 6101. Introduction to Legal Studies 1: Law and Legal Reasoning. (3 Hours)

This course will provide students with an introduction to the American legal system and legal reasoning. The course materials will cover rights and obligations created by contracts, fundamental principles of property law, accident law, the regulation of criminal conduct, and the laws associated with business formation and relationships. Students will also complete writing exercises to enable them to synthesize their understanding, and to find and use legal sources in support of their work.

LS 6102. Introduction to Legal Studies 2. (3 Hours)

This course builds on LS 6101 with its emphasis on common law by introducing students to statutes and regulations. The setting involves federal administrative agencies governing employment, consumer protection, environment, labor, cyberlaw, intellectual property, and international trade. Exercises and discussions require finding, summarizing, applying and arguing about the applicability of statutes and regulations in concrete situations. The capstone of the course allows students to create a project to illustrate the lessons learned in the course.

LS 6110. Law of Information and Records. (3 Hours)

This course will present a comprehensive survey of procedural and evidentiary rules in the context of recordkeeping, document production, due diligence, and investigations. It will include an exploration of rights to privacy, issues of confidentiality and conflicts of interest, contractual and legal liability, evidentiary consequences in administrative and court settings resulting from work-place disputes, and other related areas.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6120. Law and Strategy. (3 Hours)

This course will introduce students to the implications and impact of law on strategy, with attention to applying legal knowledge and resources to strategic planning and strategy implementation. The course will use several examples of readily understood strategies to provide opportunities for students to identify the legal environment, consider the legal rights and requirements implicated by relevant law or regulation (e.g., intellectual property, contracts, administrative law) and their potential impact on management, incorporating law as a resource on the resource based view of the firm. The range of examples will include considering law and strategy implementation in multiple contexts. The focus will be on developing an appreciation of the legal environment and making effective use of legal resources and lawyers as advisors in strategic management aimed at attaining sustainable competitive advantage over rivals.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6130. Negotiation and Advocacy. (3 Hours)

Students will learn core elements of negotiations that are the precursors to any final agreement or resolutions of informal disputes: negotiation planning from opposing sides and counseling, analysis of the bargaining range and opponent's needs, principled concession patterns, problem-solving strategies to avoid deadlock, information bargaining and authority clarification, principles of drafting, settlement, and ethics.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6140. Data Regulation and Compliance. (3 Hours)

Institutions increasingly face a host of regulatory compliance issues. This course (building on LS 6102) will cover the challenges facing organizations in building programs that ensure adherence with legal obligations, especially regarding data. We will explore statutes covering a broad range of areas, especially when it involves data protection and privacy.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6150. Law and Organizational Management. (3 Hours)

Students will learn the rules governing organizations, including corporations, partnerships, governmental organizations, and non-profits. The focus will include relationships within the organizations and powers of members of organizations. In addition, the course will cover employment issues relevant to relationships in organizations. Topics will include rights of workers to be free of discrimination in the workplace, the importance of workplace rules, and policies governing the workplace.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6155. Legal Foundations of Public Policy. (3 Hours)

Examines the legal framework for public policymaking at all levels of government. Topics include the role of law within the legislative, executive, and judicial branches of government and the contributions of local, state, and federal governments in crafting and implementing public policy. Explores the history of regulation and the rise of the administrative state. Reviews the landscape of current agency activities, including investigations and the imposition of sanctions. Introduces students to legislative and regulatory drafting processes. Offers students an opportunity to draft model legislation and participate in "notice and comment" rulemaking.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6160. Regulation and Global Business Strategies. (3 Hours)

This course provides an introduction to the international legal concepts, principles and institutions that define and shape international business relations. Globalization has increased the number of economic interactions across national borders. The globalization of production and consumption takes place in the background of an international monetary system and an international legal infrastructure facilitating and regulating transnational trade, international finance and global intellectual property and investment protection. The course specifically examines case studies of global governance based on codes of practice, certification and other regulatory initiatives.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6170. Financial Transactions. (3 Hours)

In this course students will explore various aspects of corporate financial transactions, including vendor and supplier contracts, early stage financing, commercial loans, initial public offerings, mergers, and the sale of assets. Issues involving valuation of assets will be covered, and students will learn basic securities laws related to the transactions covered.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6180. Health Law Survey. (3 Hours)

This course examines legal regulations governing the provision of healthcare services. Topics include access to health insurance and healthcare, healthcare financing, the organization and responsibility of healthcare institutions (especially hospitals), healthcare cost containment policies, public and private insurance programs, and the formulation of health policy. The course will also provide an introductory overview of the major statutes, regulations, and case law related to health law, including an introduction to the Patient Protection and Affordable Care Act, otherwise known as Obamacare.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6181. Healthcare Regulation and Compliance. (3 Hours)

This course covers major regulatory issues related to the healthcare field, providing an in-depth regulatory overview of health programs. Statutory schemes covered will include HIPAA/HITECH, Stark/fraud and abuse. In addition, students will learn about compliance programs, including compliance operations, and the code of conduct for particular fields.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6182. Patient Records, Privacy, and Security. (3 Hours)

This course explores the ethical and legal obligations respecting patient records, particularly electronic records. In addition to reviewing HIPAA's privacy and security rules, the course will cover professional ethics regarding confidentiality, common law and state protections for confidentiality, GINA, and the HiTech Act.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6210. Special Topics in Employee Rights and Employer Obligations. (3 Hours)

Examines the legal relationship between employer and employee. Addresses issues and topics such as discrimination, affirmative action, the Americans with Disabilities Act, sexual harassment, health and safety, AIDS in the workplace, compliance issues, and legal issues related to downsizing and terminations. Today's HR manager works in a highly complex environment with constantly changing laws and legislation that govern employee rights and employer obligations. Course content may vary from term to term.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6211. Antidiscrimination Law. (3 Hours)

This course will provide an overview of antidiscrimination laws governing the workplace. The focus will be on discrimination based on race and sex, but some attention will also be given to discrimination based on other characteristics, including age, sexual orientation, and disability. In addition to general issues of discrimination, the course will focus on the specific topics of retaliation, harassment, and bullying in the workplace.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6212. Wages and Benefits. (3 Hours)

This course will cover topics related to wage and hour laws (federal and state), ERISA (pensions), health insurance benefits, the Affordable Care Act, and disability insurance.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6230. Intellectual Property Survey. (3 Hours)

In our modern day "information economy," the law of intellectual property (IP) has taken on enormous importance to both creators and users of creative works. Such IP Law is the way we provide legal protection to encourage invention and creativity by guaranteeing an opportunity for financial return to the originator of novel work. This course introduces students to the classic principles of copyright, patent, trademark, and trade secret law and explores the ways in which those principles are shifting and adapting in response to new technology.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6231. Identifying and Securing Intellectual Property Rights. (3 Hours)

This course will focus on intellectual property issues in employment, collaborative environments, and business transactions. It will cover common issues for founders and startups, employers, and contractors—including non-compete agreements, crowd-sourcing, and open innovation practices.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6232. Intellectual Property and Media. (3 Hours)

This course will cover copyrights, trademarks, and unfair competition, with a focus on media, advertising, user-generated content, and other online activities.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6235. Current Issues in Law and Public Policy. (3 Hours)

Examines the evolving roles of courts, agencies, legislatures, citizen movements, and nonprofit organizations in policymaking through case studies of current debates in law and policy. Explores how businesses and advocacy groups combine the use of legal tools and other activities to achieve policy goals. Considers how law can be used to right past wrongs and how grassroots activities and individual actions can contribute to a fight against injustice. Focuses on a range of policy issues; possible topics include but are not limited to healthcare reform, criminal justice reform, racial justice, reproductive rights, marriage equality, and environmental justice.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6236. Contract Drafting. (3 Hours)

Examines strategies, objectives, and challenges of drafting contracts. Develops skills drafting contracts and factors influencing drafting style, technique, and content. Students dissect and examine a range of contracts encountered in business relationships, such as license agreements, employment agreements, real estate transactions, litigation settlements, and purchase and sale agreements. Students evaluate, explore, and interpret drafting techniques and decisions in varied contexts. Class exercises help students draft and analyze various contracts of increasing complexity.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6237. Insurance Law. (3 Hours)

Offers a comprehensive overview of the fundamental principles, regulations, and practical applications of insurance law. Examines the foundations of insurance law; types of insurance policies and coverages; policy language interpretation; and how certain statutes, regulations and case law have shaped modern insurance law. Emphasizes the interplay between insurance law and tort law.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6238. Regulating Artificial Intelligence. (3 Hours)

Examines the regulatory landscape of artificial intelligence technologies on a global scale by exposing students to the legal, ethical, and policy challenges posed by AI's rapid advancement. Uses readings, case studies, debates, and interactive discussions to offer students an opportunity to develop knowledge of the various regulatory approaches, international collaborations, geopolitical significances, and potential future directions of AI governance.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6239. Sports Law, Business, and Society. (3 Hours)

Explores the unique set of legal, business, and social structures that intersect with sports in the United States. Examines the professional, collegiate, and amateur sports industry and its key legal, business, and social aspects. Covers the foundations of intellectual property law, labor law, antitrust law, employment law, agency law, constitutional law, broadcasting law, and private association law in relationship to the sports industry. Studies the business applications of the sports industry and the industry's relationship to antidiscrimination laws concerning race, sex, national origin, and other protected classes. Examines pursuits of careers in sports law and sports business. Offers students an opportunity to debate underlying principles and rethink the ethical boundaries that surround the sports industry.

Prerequisite(s): LS 6101 with a minimum grade of C- or LS 6102 with a minimum grade of C-

LS 6300. Experiential Learning—MLS Field Project. (3 Hours)

Offers students an opportunity to develop, refine, and practice key business/nonprofit/government communications skills, project and client management techniques, and analytic approaches and learn how to distinguish between the role of lawyers and the role of other professional staff in an entrepreneurial, compliance, regulatory, or social justice context. Course requirements include an applied research project that involves recommendations and a plan for implementation, as well as reflection assignments. The coursework is designed to prepare students to apply analytic skills to specific professional challenges within a variety of legal and regulatory frameworks. Students also develop a professional plan for advancing their own academic and career development goals.

Prerequisite(s): LS 6102 with a minimum grade of C-

Liberal Studies - CPS (LST)**Courses****LST 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LST 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LST 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LST 4850. Capstone Project in Liberal Studies. (3 Hours)

Offers students an opportunity to complete an independent capstone research project, with faculty supervision and guidance, that addresses a research question in line with the student's curriculum plan.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

LST 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

LST 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

LST 4983. Topics. (1-4 Hours)

Covers special topics in liberal studies. May be repeated without limit.

LST 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LST 4991. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

LST 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic.

LST 4994. Internship. (1-4 Hours)

Provides students with an opportunity for internship work.

Attribute(s): NUpath Integration Experience

LST 4995. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience.

LST 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major.

Attribute(s): NUpath Integration Experience

LST 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Linguistics (LING)

Courses

LING 1000. Linguistics at Northeastern. (1 Hour)

Introduces first-year linguistics majors to the discipline, the department, and the University as a whole; offers students an opportunity to familiarize themselves with the skills needed for success as a university student.

LING 1150. Introduction to Language and Linguistics. (4 Hours)

Explores linguistics, the scientific study of language. Major topics include phonetics (production of speech sounds), phonology (sound systems in languages), morphology (structure of words), syntax (grammatical relationships between words and sentences), and semantics (meaning of words and sentences). Other topics may be surveyed such as the relationship between language and culture, language use within speech communities, languages in contact, the study of language change, language and brain, animal communication, and first language acquisition.

Attribute(s): NUpath Natural/Designed World, NUpath Societies/Institutions

LING 1449. English Now and Then. (4 Hours)

Introduces the field of linguistics from current and historical perspectives. Covers the scientific study of language: phonetics (production of speech sounds), phonology (sound systems in languages), morphology (structure of words), syntax (grammatical relationships between words and sentences), and semantics (meaning of words and sentences). These linguistic structures provide the basis for exploring the origins and development of the English language. Emphasizes both the major structural changes English has experienced over time, as well as the sociohistorical contexts that gave rise to these changes.

Attribute(s): NUpath Interpreting Culture, NUpath Natural/Designed World

LING 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 2350. Linguistic Analysis. (4 Hours)

Builds on the foundations of linguistic analysis developed in LING 1150. Offers students an opportunity to obtain a foundational basis for future study by focusing on four core areas of linguistics: phonetics, phonology, morphology, and syntax. Students hone their analytic abilities as they work with increasingly complex datasets. Adopting a descriptive, nontheoretical approach, students conduct linguistic research through a semester-long analysis of a world language.

Prerequisite(s): LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-

LING 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 3150. Field Linguistics. (4 Hours)

Exposees students to the basic techniques of field methods with the goal of reinforcing the fundamental skills used in linguistic analysis. Through readings, discussions, and practical experience, students explore best practices in conducting linguistic field work: working with a native speaker consultant, eliciting linguistic structures, managing data effectively, analyzing the data collected, and presenting findings formally. May be repeated two times.

Prerequisite(s): LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Integration Experience

LING 3250. Discourse Analysis. (4 Hours)

Introduces approaches to the analysis of interpersonal and institutional discourse and offers multiple opportunities to carry out small-scale analyses of talk-in-interaction. Major topics include conversational involvement and inference, conversation analysis, intertextuality, linguistic politeness, conversational style, framing, positioning, identity construction, epistemics, and conversations within institutional contexts.

Prerequisite(s): LING 1150 with a minimum grade of D- or LING 1449 with a minimum grade of D-

LING 3412. Language and Culture. (4 Hours)

Explores the complex, often inexplicit relationship between language and culture, using a variety of methods drawn from the fields of anthropological linguistics and sociolinguistics. Questions may include: How do language and thought interact? How is language used to create and maintain social institutions and individual personae? How is language used differently by and across gender, ethnicity, and social class?

Prerequisite(s): (LING 1449 with a minimum grade of D- or ENGL 1150 with a minimum grade of D- or LING 1150 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture, NUpath Writing Intensive

LING 3420. Phonetics. (4 Hours)

Surveys phonetics, the study of speech sounds, including articulatory, acoustic, and auditory phonetics. Articulatory phonetics topics include anatomy and physiology; cross-linguistic consonant and vowel articulation; aerodynamics of speech production; coarticulation phenomena; and phonetics of supersegmentals such as syllables, stress, tone, and pitch accent. Acoustic phonetics topics include the physics of sound waves, reading spectrograms, and performing acoustic analyses. Auditory phonetics topics include audition and speech perception.

Prerequisite(s): LING 2350 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

LING 3422. Phonology. (4 Hours)

Examines phonology, the study of the mental representation, organization, and patterning of sounds in human language. Major topics include phonological typology, phonemes, underlying and surface representations, phonological rules and alternations, natural classes of sounds, syllables and prosody, autosegmental phonology, rule-based vs. constraint-based approaches, morphophonology, diachronic phonology, and current theoretic models of sound systems.

Prerequisite(s): LING 2350 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

LING 3424. Morphology. (4 Hours)

Introduces morphology, the study of the structure, distributional behavior, and use of words. Covers descriptive methods of analysis, hierarchical word structure, morphological processes and rules, productivity, morphological change, and the interaction of morphology with phonology and syntax. Introduces major contemporary theories, including split morphology and single-component architecture.

Prerequisite(s): LING 2350 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

LING 3440. Language Acquisition. (4 Hours)

Examines the milestones and developmental patterns of typical first language acquisition across the linguistic system. Details the patterns and expected norms for the acquisition and development of speech perception and production, semantics, morphosyntax, pragmatics, and the lexicon. Considers biological, environmental, linguistic, and other factors that contribute to the processes of language acquisition, as well as major theories in the field. Students gain hands-on experience transcribing, analyzing, and evaluating child language data throughout the semester.

Prerequisite(s): LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-

LING 3442. Sociolinguistics. (4 Hours)

Focuses on why people choose to say things in different ways in different situations. Examines language behavior in its social context and outlines the linguistic constructs that allow conversation to occur, the types of variation that can occur in registers and dialects, and the possible reasons for choosing different linguistic varieties. Also explores linguistic variation in relation to social context, gender, socioeconomic class, race, and ethnicity.

Prerequisite(s): (ENGL 1150 with a minimum grade of D- or LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

LING 3446. Language Endangerment and Vitality. (4 Hours)

Examines the sociolinguistics of endangered languages. Major topics include global language vitality, language endangerment, ethnography, language death and its relation to loss of cultural identity within communities, and language planning and policy. Discusses these topics theoretically and in cross-linguistic perspective by examining various case studies.

Prerequisite(s): LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-

LING 3450. Syntax. (4 Hours)

Introduces syntax, the theory of sentence structure. Explores how to do syntactic analysis using linguistic evidence and argumentation. Focuses primarily on English, with some discussion on the syntax of other languages. Other topics include syntactic universals and the relation between syntax and semantics.

Prerequisite(s): LING 2350 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

LING 3452. Semantics. (4 Hours)

Focuses on meaning and how it is expressed in language—through words, sentence structure, intonation, stress patterns, and speech acts. Considers how content, logic, and speakers' and listeners' assumptions affect what sentences can mean and how linguistic meaning is determined by one's perceptual system or culture.

Prerequisite(s): LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

LING 3454. History of English. (4 Hours)

Surveys the linguistic and social history of the English language from its Indo-European beginnings to the present. Examines the changes that have occurred in the sound system, word and sentence structures, vocabulary, semantics, and spelling from a formal linguistic perspective. Considers issues in language change—the influence of foreign invasion and migration, differences in dialect, and the emergence of English as a “world” language.

Prerequisite(s): LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-

LING 3456. Language and Gender. (4 Hours)

Investigates the relationship between language and gender. Topics include how men and women talk; the significant differences and similarities in how they talk, why men and women talk in these ways, and social biases in the structure of language itself.

Prerequisite(s): (LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

LING 3458. Topics in Linguistics. (4 Hours)

Focuses on one of a range of topics from the perspective of current linguistics, such as American dialectics, contemporary syntactic theory, language and law, women's and men's language, words and word structures, or issues in linguistics and literature. May be repeated without limit.

Prerequisite(s): LING 1449 with a minimum grade of D- or LING 1150 with a minimum grade of D-

LING 3460. Historical Linguistics. (4 Hours)

Introduces diachronic linguistics, the study of language change over time. Surveys common changes in the areas of sound systems, word and sentence structure, and semantic meaning. Introduces methodologies to access earlier stages of language, including the comparative method and internal reconstruction. Other topics include linguistic borrowing, analogical change, linguistic paleontology, and areal diffusion.

Prerequisite(s): LING 2350 with a minimum grade of D-

LING 3462. Constructed Languages. (4 Hours)

Focuses on constructed languages (conlangs): linguistic systems that have emerged from conscious creation, rather than natural development. Surveys a number of well-known conlangs. Examines the motivations for their creation, their internal linguistic structures, and their status and effectiveness within the cultures (real or fictional) for which they were designed. Building on their knowledge of linguistic structure, offers students an opportunity to develop their own constructed languages.

Prerequisite(s): LING 2350 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

LING 3550. Syntax 2. (4 Hours)

Introduces topics in advanced syntax, building on students' knowledge of basic concepts in phrase and sentence structure. Explores a wide range of complex syntactic constructions, and considers how current theory can be applied to numerous cross-linguistic syntactic phenomena.

Prerequisite(s): LING 3450 with a minimum grade of D-

LING 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 4654. Seminar in Linguistics. (4 Hours)

Explores a topic in current linguistics research. Requires prior completion of either two 3000-level LING courses or one 3000-level LING course and permission of instructor. May be repeated without limit.

Prerequisite(s): LING 2350 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

LING 4891. Research Seminar in Linguistics. (4 Hours)

Offers individualized research experience on a chosen topic under the direction of a faculty member. Also includes group meetings of students and the faculty member to study relevant research methods, to discuss relevant research literature, and to present research progress and results. Research content and requisites depend on the instructor, and prior arrangements should be made with the faculty member well in advance of registration. May be repeated up to eight times.

Attribute(s): NUpath Integration Experience

LING 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

LING 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): LING 4970 with a minimum grade of D-

LING 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 4991. Directed Study Research. (4 Hours)

Offers individualized research experience on a chosen topic under the direction of a faculty member. Research content and requisites depend on the instructor, and prior arrangements should be made with the faculty member well in advance of registration.

Attribute(s): NUpath Integration Experience

LING 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated twice.

LING 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Fulfills the college's experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

Management (MGMT)

Courses

MGMT 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 3302. Negotiating in Business. (4 Hours)

Focuses on the nature of conflict, conflict resolution, and the structure and process of negotiations, negotiation ethics, as well as skills to deal with "difficult" negotiators. Negotiation is a lifelong skill that we use every day, not just a tactic to get a higher salary or a better deal. No matter what direction one's professional life takes, negotiation is an essential part of one's job and one's life. To be effective, one must be a skillful negotiator. While some of us are naturally gifted negotiators, most of us are not; the concepts and techniques of skillful negotiations can be learned and practiced in the classroom. Offers students numerous opportunities to develop and practice negotiating skills.

MGMT 3305. Power and Influence. (4 Hours)

Offers students an opportunity to learn how to use power and influence as effective tools for understanding their work surroundings, working with and managing people, and achieving their own professional goals. Studies conceptual models, tactical approaches, and practical tools to help make sense of on-the-job learning experiences. Seeks to equip students with basic diagnostic and action-planning skills that can be used to understand power dynamics unfolding in any organization, as well as how best to leverage these dynamics. Previous work experience (e.g., part-time job or co-op) is recommended but not required for enrollment in the course.

MGMT 3315. Managing Organizational Change and Disruption. (4 Hours)

Covers fundamentals of change leadership as a set of integrated skills, focusing on examples of both proactive change (leveraging opportunities to grow and improve), as well as reactive change (leading in times of crisis). Uses case studies, media coverage, simulations, and guest speakers to examine some of the most dramatic changes encountered by business leaders in recent times and to evaluate different approaches to managing change at all levels of the organization. Examines the psychology of change, including overcoming fear of and resistance to change, and introduces practical frameworks that students can leverage in their own change efforts. Requires a student-led change project.

MGMT 3340. Healthcare Management, Innovation, and Design. (4 Hours)

Offers an overview of key U.S. health system components and imperatives and how to manage and innovate within the system to improve performance and the customer experience. Designed for students interested in healthcare careers that may have meaningful managerial, analytical, or consulting-type responsibilities. Covers essential elements of how healthcare delivery is organized and delivered; how to implement change and innovation in healthcare organizations such as hospitals and physician offices; and the interrelationships between facets of the business such as the drive for value and efficiency, promoting high-quality care, and enhancing the patient experience. Analyzes and critiques cutting-edge changes in the industry. Offers students an opportunity to learn about and use skills in process improvement, performance management, talent management, quality improvement, and work redesign.

MGMT 3350. Managing a Diverse Workforce. (4 Hours)

Examines issues related to managing oneself and others in an increasingly diverse workforce. Organizations need to address diversity issues in some manner if they are to compete effectively in a global economy. Covers diversity-related issues with management implications including religion, social identity, socialization, employment decisions by applicants and organizations, team dynamics, leadership, sexual harassment, workplace romance, career development, work and family, accommodation of people with disabilities, and organizational strategies for promoting equal opportunity and a multicultural approach toward diversity. Offers students an opportunity to conduct self-assessments to monitor their own workforce needs as they relate to issues of diversity, careers, and work-life integration.

MGMT 3380. Leadership. (4 Hours)

Designed to help develop students' leadership skills and prepare themselves to lead with integrity. Uses discussion, case studies, exercises, and video/audio to explore both the science and the art of leadership. Topics include leadership theories, power and politics, counseling, communication, and followership. Additionally, this class includes a heavy focus on ethical philosophy and its application to leadership.

Prerequisite(s): COOP 3945 with a minimum grade of S or COOP 3948 with a minimum grade of S or COOP 3946 with a minimum grade of S or COOP 3947 with a minimum grade of S

MGMT 3420. Managing Human Capital. (4 Hours)

Offers an overview of the human resources management (HRM) function, including recruiting and hiring new employees, overseeing compensation and benefits, improving employee relations, and ensuring compliance with labor laws. Focuses on what a (non-HRM) manager needs to know about HRM and also seeks to provide a foundation for the HRM professional.

MGMT 3435. Social Networks and Organizations. (4 Hours)

Introduces students to social network analysis. Identifies and evaluates key elements of an individual's social network—including students' own networks—and familiarizes students with some tools and techniques for managing organizational networks. Examines different types and combinations of social relations, network structures of these relations, and institutional environments that impact them. The course combines lectures, case-based class discussions, and personal/organizational network analysis applications.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

MGMT 3530. Project Management. (4 Hours)

Discusses why good project management skills are essential to a wide variety of business careers. Covers why many important business projects fail due to poor planning, poor time management, going over budget, and/or ineffective communication. Includes a balance of strategic, technical, and behavioral issues in project management.

MGMT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 4310. The Management Practices of Great Organizations. (4 Hours)

Focuses on a wide range of management practices, many of which are “radical” and represent organizations that “dare to be different.” The course uses many teaching approaches, including case studies, class exercises, and “competitions” that require students—and seek to increase their ability—to debate, present, think on their feet, and ask tough questions. Some organizations seem “to work”; they provide high-quality products and services, they treat their employees with respect, they behave ethically, they are strong financially, and the like. Students study and debate the criteria for a great organization in order to answer the key question of this course: how do they do it; i.e., why do they work so well?.

MGMT 4410. Workforce Analytics. (4 Hours)

Introduces workforce analytics, including identifying the strategic work that is truly necessary to execute strategy, investing in differentiated management systems that support that work, and designing and implementing targeted measurement systems for strategic talent. Emphasizes shifting from levels or metrics (e.g., what is our cost per hire?) to analytics and impact (e.g., how might an increase in the quality of our project managers affect new product cycle time?). Relevant for students specializing in corporate finance, management, marketing, and international business. Many firms spend over 50 percent of their revenues on the workforce, but these investments are rarely well measured or managed.

MGMT 4550. Management Consulting in Organizations. (4 Hours)

Offers students an opportunity to gain practical experience in finding appropriate solutions for complex and dynamic client organizational issues using a structured curriculum and frequent in-class coaching sessions. Students work as pro bono consultants both onsite and virtually with organizations to help solve real client challenges in the managing and leading of an organization. Students employ management consulting as a framework in demonstrating proficiency in a wide range of knowledge and skill areas in both management and consulting. Structures course deliverables as challenging goals to be achieved within a set time frame by working with students' chosen consulting (Pod) group and through individual assignments.

Prerequisite(s): COOP 3945 (may be taken concurrently) with a minimum grade of S or COOP 3948 (may be taken concurrently) with a minimum grade of S

MGMT 4983. Special Topics in Management. (4 Hours)

Offers special topics in management. May be repeated once.

MGMT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times for a maximum of 8 semester hours.

MGMT 6211. Business Law and Professional Ethics. (2 Hours)

Examines the critical aspects of business essential in understanding the business and legal environment. Examines contract law and areas of the law that relate directly to the accountancy profession. Develops knowledge of the Uniform Commercial Code as it relates to the law of sales, commercial paper, and secured transactions. Also explores the importance of ethics in the business and accounting environment, and considers potential ethical dilemmas.

MGMT 6213. Managing Ethics in the Workplace and Marketplace. (3 Hours)

Offers practical guidance for improved decision making in business situations involving critical ethical issues, to stimulate creative and constructive thinking and learning for working professionals. Combines didactic instruction and a series of case studies, readings, and field study experiences to demonstrate how to assign ethical problems into categories and approach the problems using standard tools and techniques to be applied when working under conditions of uncertainty. Reexamines ideas about ethics and offers opportunity for students to reflect on their sense of moral suasion. Instructs how to identify what constitutes an ethical problem and how to view ethical issues as signposts for attention and not as impediments to moving forward.

MGMT 6214. Negotiations. (2,3 Hours)

Designed to improve students' understanding of the negotiations process and their ability to plan and conduct negotiations effectively. Includes such class activities as readings, lectures, and discussions as well as case discussions and role-playing negotiation exercises.

MGMT 6222. Healthcare Industry. (3 Hours)

Examines the evolution of the U.S. healthcare delivery system from early forms of organized institutional care through the current dynamic and increasingly integrated and managed care systems. Introduces students to the interactions of regulatory, economic, political, and social aspects of the healthcare system. Compares current policies and proposals for health reform. Students are asked to analyze the impact and consequences of actions in one era on the structure and function of healthcare practice in later years and to project these trends into the future.

MGMT 6223. Strategic Decision Making for Healthcare Professionals. (3 Hours)

Examines how healthcare organizations manage their resources and competitive environment to meet the goals of their many stakeholders. Applies three essential elements of strategic decision making—environmental analysis, strategic formulation, and strategy implementation—to the healthcare industry.

MGMT 6225. Sustainability and Leadership. (3 Hours)

Examines how organizational leaders influence decisions to advance an environmental agenda. Studies the scientific knowledge that organizational leaders must have to make effective sustainability decisions. Analyzes how a variety of organizations, including businesses, governments, government-sponsored enterprises, and nongovernment organizations, interact on environmental issues.

MGMT 6226. Sustainability and the Business Environment. (3 Hours)

Examines how the environment affects corporate strategy, public policy, and individual decision making. Exposes students to the skills and knowledge needed to help organizations understand and act upon the principles of sustainability. Examines a variety of environmental problems, including global warming, use and disposal of toxic substances, and depletion of natural resources. Also studies how companies solve these problems by reducing their impact on the environment through solutions such as zero emissions, green design, and corporate environmental reporting.

MGMT 6280. Innovation for Next-Generation Products and Systems. (3 Hours)

Focuses on next-generation products, systems, and services with an integrated framework that applies market innovation, user-centered design, architectural and platform innovation, and business model innovation. Offers students an opportunity to apply these concepts to new product/service/business process innovation opportunities in their own organization with executive sponsorship and faculty guidance.

MGMT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Management - CPS (MGT)**Courses****MGT 1100. Introduction to Business. (3 Hours)**

Offers students an opportunity to develop a business vocabulary, refine business decision-making skills, and foster critical and analytical thinking. Examines key external factors that influence business development, namely political, economic, legal, social, and technological forces. Explores the internal organization of business, analyzing major issues associated with the key management functions of marketing, strategy, finance, accounting, information systems, and operations.

MGT 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGT 2100. Principles of Management. (3 Hours)

Examines historical changes in workforce composition and the many effects of globalization, technological change, and new workforce arrangements. Offers students an opportunity to apply critical thinking to topics related to the managerial tasks of planning, organizing, leading, and controlling. Emphasizes discussions on diversity in organizations, social responsibility, managerial ethics, and the impact of globalization.

Prerequisite(s): MGT 1100 with a minimum grade of D- or CMN 1100 with a minimum grade of D- or CMN 1103 with a minimum grade of D- or CMN 2210 with a minimum grade of D- or HMG 1100 with a minimum grade of D-

MGT 2210. Information within the Enterprise. (3 Hours)

Addresses the central role of information management (IM) and information technology (IT) systems in running and managing a business and in infusing it with competitive advantage. Business leaders must have ready access to timely, accurate, and relevant information if they are to manage and compete effectively in the global economy. Explores how a wide range of enterprises around the world employ IM to operate, to manage and control, and to plan and innovate. Focuses on real business issues, analysis and problem solving, and out-of-the-box thinking in creating value to the enterprise by effectively applying IM and IT. Rather than focusing on specific technical content or skills, this course is entirely case driven.

Prerequisite(s): ITC 1000 with a minimum grade of D- or ITC 2016 with a minimum grade of D-

MGT 2220. Supply Chain Management. (3 Hours)

Explores the basic concepts of managing a supply chain that produces goods and/or services. Offers students an opportunity to examine the fundamental functions and processes of a fully integrated supply chain, identify the key business and economic drivers of supply chain performance, and understand the strategic decisions that enable a supply chain to directly support business objectives. Topics include basic functions within a supply chain—planning, sourcing, forecasting and demand planning, manufacturing, inventory management, logistics, just-in-time (JIT), lean, Six Sigma, outsourcing, and sustainability.

Prerequisite(s): AVM 1150 with a minimum grade of D- or MGT 1100 with a minimum grade of D-

MGT 2310. Organizational Behavior. (3 Hours)

Studies psychological, sociological, and organizational theories and principles underlying interpersonal communication in the organization. Through written analysis of case studies and role-playing, offers students an opportunity to analyze the impact of varying organizational decisions and dynamics on employee and management behavior. Discusses how embracing human differences and implementing diversity initiatives contribute to both organizational performance and the advancement of the society as a whole.

Prerequisite(s): HMG 1100 with a minimum grade of D- or MGT 1100 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity

MGT 2330. Business Law. (3 Hours)

Introduces the foundations and principles of American legal jurisprudence and aspects of the legal environment that impact business executives. Begins with an overview of the court system, litigation, and the U.S. Constitution. Emphasizes the roles of contract law, tort law, criminal law, and property rights in business. Focuses on the legal organization and operation of business entities such as corporations, limited liability companies, and partnerships, including corporate governance models, board of director liability, shareholder conflicts, proxy contests, and stakeholder rights. Special topics affecting business include intellectual property, employment laws, discrimination in the workplace, international law, and securities regulations.

MGT 2550. Sustainable Entrepreneurship. (3 Hours)

Seeks to help students assess the organizational benefits and the social implications of developing sustainable business models, starting from a definition of what a social enterprise is and how it differs from other types of business. Covers recent theories and frameworks on social and sustainable entrepreneurship, exploring best practices and case studies of purpose-driven companies. Offers students an opportunity to apply entrepreneurial business principles to provide social benefits in areas such as the environment, workforce development, education, health, community, and international development. Students develop a sustainable business idea by identifying challenges and opportunities and applying ethical reasoning needed to make business safer, fairer, and more positively impactful.

Prerequisite(s): MGT 1100 with a minimum grade of D-

MGT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGT 3220. International Business. (3 Hours)

Focuses on the principles and practices of international business, comparing domestic and international activities and managerial responsibilities. Examines the major facets of the international management environment (legal, political, economic, and cultural). Explores international strategies by assessing the main factors determining success and failure of international companies. Offers students an opportunity to describe and compare domestic and international management operations and issues such as managing a multicultural workforce, designing and executing global marketing strategies, designing global products and services, and managing global R&D.

Prerequisite(s): MGT 2100 with a minimum grade of D- or MGT 2310 with a minimum grade of D- or CMN 3050 with a minimum grade of D- or LDR 1501 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

MGT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGT 4210. Project Management. (3 Hours)

Focuses both on the analytical tools to manage projects as well as the people-management tools necessary for project success. Examines the entire process of implementing a project, from project definition to the evaluation of feasibility, scheduling, quality criteria, and financial and budgetary factors. Offers students an opportunity to apply contemporary management techniques based on Project Management Institute (PMI) current practices and to become familiar with current software options.

Prerequisite(s): MGT 2100 with a minimum grade of D- or MGT 2310 with a minimum grade of D- or CMN 3050 with a minimum grade of D- or LDR 1501 with a minimum grade of D-

MGT 4220. Innovation and Change Management. (3 Hours)

Offers students an opportunity to discuss and apply principles, tools, and methods to successfully implement change and innovation within organizations. The use of multiple perspectives to assess organizational performance seeks to ensure that students are not trapped by a "one-best-way" approach to change management. Discusses strategies to design, implement, communicate, and sustain change; techniques for mapping and assessing when and where change is needed in an organization; organizational development techniques; as well as barriers and enablers to fostering an environment conducive to change and innovation.

Prerequisite(s): MGT 4210 with a minimum grade of D- or (PJM 1100 with a minimum grade of D- ; PJM 1400 with a minimum grade of D-)

MGT 4230. New Venture Creation. (3 Hours)

Examines the theory and practice of developing and managing innovations in startups and in already established firms. Offers students an opportunity to apply frameworks, strategies, business models, idea-generation techniques, and funding methods for introducing new products and services. Examines such topics as the creative process, the formulation of a business plan, and the execution of the plan itself.

Prerequisite(s): ENG 3107 with a minimum grade of D- ; ENG 3108 with a minimum grade of S ; ((MGT 1100 with a minimum grade of D- ; MGT 2310 with a minimum grade of D-) or (PJM 1100 with a minimum grade of D- ; PJM 1400 with a minimum grade of D-) or MGT 4210 with a minimum grade of D-)

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

MGT 4850. Business Strategy. (4 Hours)

Examines how companies in different industries choose goals and strategically position themselves in the business environment. Examines the total management process from planning to execution. Offers students an opportunity to critically reflect about issues, including long-term planning, corporate social responsibility, diversification, and building dynamic capabilities through the application of strategic frameworks. As a capstone course, it relies on and combines skills from several business disciplines—marketing, finance and accounting, organizational behavior, operations, and management information systems.

Prerequisite(s): MGT 2310 with a minimum grade of D- ; ENG 3107 with a minimum grade of C ; ENG 3108 with a minimum grade of S

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

MGT 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

MGT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGT 4995. Experiential Management Practicum. (3 Hours)

Offers students an opportunity to test-drive a potential career, acquire marketable skills, and practice typical obligations of the professional work environment. Students apply knowledge and skills gained through their management degree program to work on challenging short-term projects under faculty supervision. Students are matched with discipline-specific consulting projects provided by a wide range of sponsoring organizations in the private and nonprofit sectors. Examples of projects include developing a project plan, conducting market research, and developing and delivering managerial recommendations to sponsoring organizations. Requires an application process through the experiential network platform.

Management Information Systems (MISM)**Courses****MISM 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MISM 2301. Introduction to Information Systems and Digital Technologies. (4 Hours)

Examines the strategic role of information systems in the enterprise and the functions, advantages, impacts, and risks that organization faces when they evaluate, implement, utilize, and upgrade modern technologies and platforms. Provides in-depth understanding about the nature of digital and disruptive technologies and how they are used to solve problems. Also discusses how information systems and information technologies are leveraged to gather and analyze data to create new uses. Explores the use of frameworks to analyze business situations and of productive software to tackle data analyses.

Attribute(s): NUpath Analyzing/Using Data, NUpath Ethical Reasoning

MISM 2420. Foundations of Business Analysis. (4 Hours)

Introduces skills and techniques that business analysts use during project processes. Business analysis is the practice of enabling change in organizations by framing problems, defining needs, understanding stakeholders, and recommending solutions that deliver value to customers and/or stakeholders. Offers students an opportunity to develop knowledge and business analysis skills such as planning, eliciting, communicating, analyzing, validating, and managing requirements. These practices enable business analysts to effectively contribute in teams that are charged with the implementation of product, process, technology, or strategic change.

Prerequisite(s): MISM 2301 with a minimum grade of D-

MISM 2510. Fundamentals of Information Analytics. (4 Hours)

Focuses on information analytics concepts and techniques needed by educated information analysts, designers, and consumers to lead organizations in the contemporary information age. Includes concepts, techniques, methods, and strategies for the entire information life cycle—collection, organization, exploration, analysis, manipulation, visualization, interpretation, and presentation of information for business. Each of these topics is introduced with real-world examples and data sets, grounded in relevant theory and principles, and is reinforced using various user-friendly software tools to gain the necessary analytical skills and knowledge.

MISM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MISM 3403. Data Management for Business. (4 Hours)

Offers students an introduction to and overview of the methodological frameworks and tool sets for the design, development, and implementation of data-management solutions. Today, almost no aspect of business operates without a strong reliance on the flow of information. Even small enterprises track huge volumes of data, from sales transactions and supply chain activities to Web site traffic. Knowledge workers and managers at all levels within the organization require an understanding of data management, database design and operations, and associated decision-support and data-analysis tools and systems to complete even day-to-day tasks. Offers students an opportunity to work hands-on, applying these methods and tools to solve actual business problems.

MISM 3405. Data Wrangling for Business Analytics. (4 Hours)

Covers data wrangling principles and novel techniques for business analytics. Key topics include data profiling, data retrieval, data cleansing, and data integration, as well as data extraction and exploration via APIs. Applies the principles of data wrangling for structured and unstructured data using industry tools such as Oracle, SQL, statistical programming languages (R/Python), and visualization tools (Tableau). Offers students an opportunity to learn data wrangling techniques to identify and solve real-world data challenges, creating business value from the vast amount and types of traditional and big data.

MISM 3460. Web Design and Development for Business. (4 Hours)

Introduces web design and development with a focus on client-side technologies. Covers topics such as website evaluation and analysis, website design, website development, content management systems, and website hosting. Uses hands-on projects to explore HTML5, CSS, JavaScript, and modern frameworks to support client-side web development. Also discusses the structure of dynamic, data driven, and interactive web applications and covers the characteristics of mobile apps/mobile-first websites.

Prerequisite(s): MISM 2301 with a minimum grade of D-

MISM 3501. Information Visualization for Business. (4 Hours)

Introduces the use of design, interaction, and visualization techniques and strategies to support the effective presentation and manipulation of business information. Based on principles from art, design, psychology, and information science, offers students opportunities to learn how to successfully choose appropriate methods of representing various kinds of business data to support analysis, decision making, and communication to organizational stakeholders.

MISM 3515. Data Mining for Business. (4 Hours)

Covers key concepts, techniques, methods, and applications of data mining in the context of business. Offers students opportunities to learn how to distill key insights from a large amount of unknown data, which techniques to choose from, how to apply the techniques and methods to get the answer and insights from the data, and how to interpret the results from the analysis. Example predictive analysis techniques include market basket analysis and principle component analysis. Covers all techniques using business examples and user-friendly tools.

Prerequisite(s): MGSC 2301 with a minimum grade of D- or ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or POLS 2400 with a minimum grade of D-

MISM 3525. Modeling for Business Analytics. (4 Hours)

Focuses on modern decision models in business analytics with applications to business process design, revenue management, pricing, inventory control, business network planning, and other topics. Introduces concepts including optimization, dynamic programming, cluster analysis, and consumer choice models. Emphasizes data-driven, real-world applications of the mathematical decision tools and concepts presented in the course.

Prerequisite(s): COMM 2301 with a minimum grade of D- or ECON 2350 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PHTH 2210 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-

MISM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MISM 4405. IT Requirements Analysis and Modeling for Business. (4 Hours)

Studies how to model and analyze stakeholder requirements in order to define a workable solution for a problem. Utilizes a small project development example to illustrate the process of requirements discovery, business problem scoping, functional requirements definition, and functional requirements modeling. Uses the Requirements Modeling Language as the modeling system. Also introduces iterative development of requirements and methods for communicating functional requirements.

Prerequisite(s): MISM 2420 with a minimum grade of D-

MISM 4501. Strategic Information Products. (4 Hours)

Examines significant improvements to business performance, which can be achieved through sharing information within the enterprise and with customers and suppliers. Realizing the full business benefits of shared information requires changing processes and organizational structures. This team- and project-based course offers students an opportunity to design and implement these strategies and to examine significant improvements to business performance.

Prerequisite(s): CS 2510 with a minimum grade of C- or IS 3500 with a minimum grade of D- or MISM 3403 with a minimum grade of D-

MISM 4983. Special Topics in Management Information Systems. (4 Hours)

Offers special topics in Management Information Systems. May be repeated once.

MISM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MISM 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times for a maximum of 8 semester hours.

MISM 6200. Introduction to Business Analytics. (3 Hours)

Provides a comprehensive approach to understanding how business analytics enable companies to become more competitive. Offers students an opportunity to learn how to apply value chain analysis and other strategic perspectives to determine how business analytics can be integrated effectively into a firm's operations. Interactive activities such as simulations and case studies allow students to explore how insights from data can improve business decisions. Examines real-world examples of how companies have used business analytics perspectives and tools to enhance different types of business processes, such as inventory prediction, customer service quality, and resolution of ethical dilemmas.

MISM 6201. Database Management for Business. (3 Hours)

Introduces the methodological frameworks and tool sets for the design, development, and implementation of data management solutions for business. Offers students an opportunity to work hands-on, applying these methods and tools to solve actual business problems. Almost no aspect of business operates without a strong reliance on the flow of data. Even small enterprises track huge volumes of data, from sales transactions and supply chain activities to website traffic. Knowledge workers and managers at all levels within the organization require an understanding of data management, database design and operations, and associated decision-support and data analysis tools and systems to complete even day-to-day tasks.

MISM 6202. Foundations of Data Analysis for Business. (3 Hours)

Covers basic principles and techniques of descriptive and predictive analytics. What are the essential data analysis concepts underlying business analytics? Topics include descriptive statistics, data visualization, probability and modeling uncertainty, sampling, estimation and confidence intervals, hypothesis testing, analysis of variance, simple and multiple regression analysis, time-series analysis, and forecasting. Emphasizes an understanding of how these tools can support decision making and analytics initiatives in a business context with real-world examples and case studies. Uses various software packages for analyzing data sets and creating visualizations.

MISM 6203. Business Analytics Methods. (3 Hours)

Introduces key analytics methods for using data through the perspectives of applied statistics and operations analysis. Covers application of these methods to business areas including marketing, supply chain management, and finance. Topics include business-analytic thinking; application of business analytics solutions to business problems; data mining, supervised and unsupervised machine learning; methods for detecting co-occurrences and associations; and achieving and sustaining competitive advantage by using business analytics methods.

MISM 6205. Data Wrangling for Business. (3 Hours)

Covers data wrangling principles and techniques for business. Key topics include data extraction, profiling, cleansing, integration, aggregation, transformation, and automating data processes for business purposes. Applies principles and techniques using data transformation tools, programming languages, and data process automation tools. Emphasizes embedding appropriate communication mechanisms for collaboration for identifying, solving, and resolving challenges revealed in datasets and business processes. Offers students an opportunity to learn data wrangling techniques to identify, solve, and resolve real-world data challenges, creating business value in today's disparate computing and dynamic business environment.

Prerequisite(s): MISM 6202 with a minimum grade of C-

MISM 6206. Modeling for Business. (3 Hours)

Focuses on modern decision models in business analytics, with applications to business process design, revenue management, pricing, inventory control, business network planning, and other topics. Includes optimization, simulation, and selected data mining techniques. Emphasizes data-driven, real-world applications of mathematical decision tools and concepts.

Prerequisite(s): MGSC 6100 with a minimum grade of C- or MISM 6202 with a minimum grade of C-

MISM 6210. Information Visuals and Dashboards for Business. (3 Hours)

Introduces design principles for creating meaningful displays of information to support effective business decision making. Studies how to collect and process data; create interactive visualizations; and use them to demonstrate or provide insight into a problem, situation, or phenomenon. Introduces methods to critique visualizations along with ways to identify design principles that make good visualizations effective. Discusses the challenges of making data understandable across a wide range of audiences. Provides an overview of data visualization, key design principles and techniques for visualizing data, and the fundamentals of communication that are required for effective data presentation. Other topics may include ethical uses of information displays, storytelling, infographics, immersive visualizations, and information dashboard design. Offers students an opportunity to use one or more software tools.

MISM 6211. Text Mining for Business. (3 Hours)

Focuses on learning concepts, techniques, and tools to deal with understanding and analyzing massive text content. A large portion of today's businesses data is unstructured and in text format. Covers primarily text mining and includes parsing text to complex topics such as classification, clustering, and topic modeling. Emphasizes natural language processing techniques for processing data using segmentation, stemming and lemmatization, and document representation. Also focuses on extracting actionable knowledge from data using text classification and clustering, sentiment analysis, social media analysis, probabilistic topic models, and text visualization.

Prerequisite(s): MISM 6202 with a minimum grade of C-

MISM 6212. Data Mining and Machine Learning for Business. (3 Hours)

Examines data mining perspectives and methods in a business context. Introduces the theoretical foundations for major data mining methods and studies how to select and use the appropriate data mining method and the major advantages for each. Students use contemporary data mining software applications and practice basic programming skills. Focuses on solving real-world problems, which require data cleaning, data transformation, and data modeling.

MISM 6213. Business Information Design, Quality, and Strategy. (3 Hours)

Covers the leading data practices from early adopters, focusing on innovative information design, data quality, data sharing, and data integration perspectives and methods for managing data and business analytics. Explores how data analytics and management can be strategically implemented to transform a company. Discusses theories and contemporary industry practice, and real-world data and cases are used for discussion and projects. Offers students an opportunity to prepare for problem identification and solution perspectives of data-related projects, gearing up for MISM 6214.

Prerequisite(s): MISM 6201 with a minimum grade of C- or MISM 6205 with a minimum grade of C-

MISM 6214. Business Analytics Capstone. (3 Hours)

Offers students an opportunity to engage in a real-world project that engages all concepts and methods covered over the course of the business analytics program. Students apply the business analytics knowledge they have gained to collect, visualize, analyze, and manage data from a real company (or companies). Based on their results, students present a proposal for strategic actions to be taken by the company with a viable scope. The project is reviewed by peers, faculty, and external judges from industry.

MISM 6250. Strategic AI for Business. (4 Hours)

Explores how artificial intelligence integrates with business strategy and empowers businesses to enhance competitiveness. Focuses on leveraging machine learning techniques like unsupervised, supervised, and reinforcement learning for data-driven insights. Analyzes the intersection of managerial practices and AI capabilities through real-world case studies. Offers students an opportunity to gain practical insights into implementation and ethical considerations, recommend business solutions through the integration of AI capabilities, and navigate the dynamic landscape of AI-driven business transformations.

Management Science (MGSC)

Courses

MGSC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 2301. Business Statistics. (4 Hours)

Offers students an opportunity to obtain the necessary skills to collect, summarize, analyze, and interpret business-related data. Covers descriptive statistics, sampling and sampling distributions, statistical inference, relationships between variables, formulating and testing hypotheses, and regression analysis in the context of business. Use of the SPSS statistical programming package is an integral part of the course.

Attribute(s): NUpath Analyzing/Using Data

MGSC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 6100. Quantitative Foundations of Finance and Data Analytics. (3 Hours)

Covers the quantitative skill sets that are crucial for success in data analytics and finance. Explores basic quantitative techniques of descriptive, predictive, and prescriptive analytics. Topics include descriptive statistics, data visualization, probability and modeling uncertainty, sampling, estimation and confidence intervals, hypothesis testing, and simple and multiple regression analysis. Uses various software packages for analyzing datasets and creating visualizations. Provides an in-depth overview of basic mathematics commonly used in finance. Topics include exponents and logarithms, systems of linear equations, compounding and geometric averages, evaluating large operators (e.g., summation expression), laws of natural logarithms, derivatives and first order conditions, and constrained maximizations. Uses Excel frequently but does not require prior experience with Excel.

MGSC 6200. Information Analysis. (3 Hours)

Provides students with basic information analysis skills and tools needed to manage effectively in today's information-intensive business climate. Exposes students to analytical problems from different areas of business and the quantitative concepts and techniques that can analyze them. Course objectives are to improve the information analysis skills of the students, to provide students with a working knowledge of important statistical tools, to help students become more critical evaluators of studies and reports involving statistical and quantitative methods, and to improve skills in communicating the results of analyses. Offers students the opportunity to learn how to evaluate, analyze, and interpret data, and present their findings and conclusions that will be most useful for managerial decision making through the use of business applications and analytical software.

MGSC 6201. Information Systems and Technology. (3 Hours)

Provides students with a fundamental understanding of the impact of technology on the organization and its financial systems. In particular, students are exposed to the new business models that technology enables and the control issues that these business models create. Discusses emerging technologies, digital business, supply chain, customer relationship management, and other technology subjects. Requires admission to MS/MBA program.

MGSC 6204. Managing Information Resources. (1.5 Hours)

Focuses on issues of the strategic uses of information technology for competitive advantage, support of business processes, information and control, digital business, integration of business with technology, organizational communication, and data management. Information has become a key resource in doing business. Managers must understand that high-quality information adds value to existing products and services, enhances the creation of new products, changes the efficiency and effectiveness of business processes, and affects relationships with customers, suppliers, and competitors.

MGSC 6221. Introduction to Health Informatics and Health Information Systems. (3 Hours)

Introduces the history and current status of information systems in healthcare: information architectures, administrative and clinical applications, evidence-based medicine, information retrieval, decision support systems, security and confidentiality, bioinformatics, information system cycles, the electronic health record, key health information systems and standards, and medical devices.

MGSC 6281. Service Innovation and Management. (3 Hours)

Examines innovation in services and the internal management of business processes. Uses a framework of service/process redesign. Emphasizes strategic initiatives and key organizational change elements critical for improving services to customers; increasing profitability; and building long-term customer loyalty across multiple industry sectors, including information technology, healthcare, financial services, and government. Introduces the various strategic aspects of process improvement in the delivery of services, including managing change and the resulting impact on the organization, supply-chain management in the service industry, process improvement, overcoming organizational resistance, customer involvement, empowerment, and the role of leadership in managing operations. Through guided project work, offers students an opportunity to apply these concepts to services and internal business processes at their own organizations.

MGSC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Managerial Economics (MECN)

Courses

MECN 6200. Global Competition and Market Dominance. (3 Hours)

Trains managers to understand the competitive implications of global economic policies, the business effects of technological change, and the commercial imperatives of alternative political systems at a macro level. At a micro level, it creates a framework for industry analysis in a global setting that combines economic analysis, competitive analysis, and business decision-making skills.

MECN 6205. Sustainability and the Economics of Markets. (3 Hours)

Examines the idea that building a sustainable business enterprise often involves correcting market failures. Examines the responsibilities of the business enterprise to society at large. Also explores the causes of and remedies for market failures, such as immigration, education, healthcare, climate change, and finance, and what these mean for governments, businesses, and individuals.

MECN 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Marketing (MKTG)

Courses

MKTG 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 2201. Introduction to Marketing. (4 Hours)

Provides an overview of the role of marketing in business and society. Considers the planning, implementation, and evaluation of marketing efforts in consumer and business-to-business companies, in service and goods companies, and in for-profit and nonprofit organizations. Also examines contemporary issues in marketing that can affect organizational success. A term project is used to enable students to apply their learning about the fundamentals of marketing.

MKTG 2209. Introduction to Marketing. (4 Hours)

Does not count as credit for business majors. Counts as MKTG 2201 for business minors only.

MKTG 2301. Marketing and Society. (4 Hours)

Examines the role of marketing and business in society's central contemporary problems as well as the way marketing can take a positive and influential role in the efforts to address these problems. Reviews some of our society's main problems and a critical view of marketing and business in today's world. Also examines changing marketing practices and roles for businesses as firms and institutions become more socially responsible and ethically aware. Finally, introduces and analyzes the role of prosocial marketing, how marketing can influence people's behavior for advancing a socially desirable change. Offers students an opportunity to better understand our society and enhance an ethical mind-set, while highlighting the ways marketers can contribute to societal well-being.

Attribute(s): NUpath Societies/Institutions

MKTG 2602. Quantitative Analysis of Consumer Data. (4 Hours)

Introduces the fundamental techniques of quantitative data analysis and visualization in the marketing context. Emphasizes real-world consumer data and applications using R. Offers students an opportunity to learn a wide variety of foundational data-driven inference methods and progress to more advanced coursework delving into analyzing and understanding complex behavioral data. No previous experience in data analysis or programming required.

MKTG 2720. Enabling Technologies for Consumer Engagement. (4 Hours)

Introduces how organizations use the latest technologies for enhancing consumer engagement. Uses case studies and exercises to offer a broad overview of creative marketing applications across multiple industries and touchpoints. Examples may include augmented reality, virtual reality, mixed reality, internet of things, real-time interactivity, geolocation tools, wearables, dynamic content personalization, automation, social media, chatbots, voice assistants, and artificial intelligence.

MKTG 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 3301. Marketing Management. (4 Hours)

Focuses on the marketing process through the use of case studies simulating actual business settings and marketing challenges. Develops skill in marketing decision making, critical analysis, and communication. Topics include techniques for undertaking market analysis, marketing strategy (segmentation and positioning), and marketing implementation (4 Ps). A marketing plan project is used to enable students to apply their understanding about the marketing process.

Prerequisite(s): (MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-)

MKTG 3401. Marketing Research. (4 Hours)

Offers students an opportunity to gain experience in the marketing research process, while working on a client-based project. Topics include problem definition, secondary research, exploratory research, experimental design, questionnaire design, sampling and recruitment, and data analysis and visualization. Exercises skills of project management, teamwork, and client relationship management. Seeks to prepare students for careers that utilize consumer insights to inform managerial decisions.

Prerequisite(s): (MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-); (MGSC 1201 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or MATH 2280 with a minimum grade of D- or ECON 2350 with a minimum grade of D- or MATH 3081 with a minimum grade of D- or POLS 2400 with a minimum grade of D- or IS 3500 with a minimum grade of D- or PSYC 2320 with a minimum grade of D- or PHTH 2210 with a minimum grade of D-)

MKTG 3402. Gaining Insights from Consumer Data. (4 Hours)

Examines how to capture, manage, analyze, and apply consumer data to gain a better understanding of consumer attitudes, preferences, and thought processes with the goal of helping organizations improve customer experience. Focuses on defining, designing, and solving marketing problems through data analysis and experimental design.

Prerequisite(s): (CS 2500 with a minimum grade of D- or DS 2000 with a minimum grade of D-); MKTG 2602 with a minimum grade of D-

MKTG 3501. Marketing Analytics. (4 Hours)

Examines a wide range of analytical approaches to support marketing decision making and performance measuring in organizations. Offers students an opportunity to learn how to implement such approaches in practice. Focuses on identifying and acquiring relevant data to address different marketing challenges, conducting relevant quantitative analyses, and communicating obtained insights across the organization to make better marketing decisions.

Prerequisite(s): MKTG 3401 (may be taken concurrently) with a minimum grade of D- or MKTG 3402 with a minimum grade of D-

MKTG 3720. Brand Management. (4 Hours)

Introduces students to the multifaceted responsibilities of a brand manager, including understanding market trends and the competitive landscape; developing the brand story; conducting and analyzing consumer research to identify brand opportunities; creating and maintaining a brand budget; establishing and implementing cross-platform brand communication strategy; measuring brand performance; and executing marketing and advertising campaigns. Brand managers in technology, consumer packaged goods (CPG), and service organizations shape the trajectories of global brands and products.

MKTG 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 4120. Undergraduate Research Practicum in Marketing. (4 Hours)

Offers students an advanced-level experiential learning opportunity working directly with a faculty mentor on an academic marketing research project. Depending on the mutual interests of students and faculty, research may be behavioral/experimental or quantitative/analytical in nature. Engages students in multiple aspects of a research project: literature review; theory development; hypothesis generation; research design; data analysis and visualization; and developing insights for managers, researchers, and policy. Students meet weekly with the course instructors for skill-building sessions and lab meetings.

MKTG 4220. Marketing in Asia. (4 Hours)

Studies the opportunities and challenges associated with the increasing globalization of Indian and Asian markets. During this Dialogue of Civilizations, students study key environmental forces shaping consumer needs and preferences, the impact of foreign political and economic factors on entering companies, the influence of international competition, market segmentation, and strategy decisions specific to Asian marketing. Analyzes the impact of cultural, social, political, and economic factors on marketing strategies. Offers students an opportunity to learn how to determine when to use different market entry and penetration strategies and how to examine the different skills and systems required to implement marketing strategies in India and broader Asia.

MKTG 4420. Sales Management. (4 Hours)

Focuses on the entire sales effort. Offers students the opportunity to apply a proven selling process and present compelling solutions to customers. Topics include how to translate product features into buyer benefits, how to handle customer objections, and how to close sales and deals. Covers team selling and relationship marketing. Intended for students interested in a sales career as well as future product managers who must rely on the sales force to introduce new products and promotions.

Prerequisite(s): MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-

MKTG 4502. Managing Customer Engagement in a Service World. (4 Hours)

Examines why people are essential to success, why expectations are important to consumers, and how physical and virtual environments influence delivery of value to customers. Focuses on active skill building and tool development in a practice-oriented approach that is quickly and directly applicable to students' future careers. The primary theme of the course is that both service organizations and product organizations require a distinctive approach to marketing strategy in a world where all organizations increasingly depend on service excellence and customer engagement for competitive advantage.

Prerequisite(s): MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-

MKTG 4504. Advertising and Brand Promotion. (4 Hours)

Focuses on developing a creative advertising strategy and brand plan that aligns with a company's overall marketing objectives. Topics include the business of brands, marketing strategy, ethical and legal considerations in advertising, advertising strategy development, media planning and buying, creative development and testing, identifying and measuring success on key performance indicators, historical foundations of advertising, and what's next in the industry. Students apply course concepts to develop a creative advertising strategy to address campaign objectives.

Prerequisite(s): MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-

MKTG 4506. Consumer Behavior. (4 Hours)

Incorporates the latest research in marketing, psychology, and other behavioral sciences to help students develop evidence-based strategies for predicting and influencing consumer behavior. Consumers are at the center of the business value creation process; therefore, an understanding of consumer thoughts, feelings, and actions is critical for business success. Offers students an opportunity to learn how to successfully target the right audience by conducting and interpreting market research; shape thoughts by getting consumers' attention and making a lasting impression; influence attitudes by applying principles of persuasion and social influence; and impact consumer decisions by harnessing motivations and drivers of behavior.

Prerequisite(s): MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-

MKTG 4508. Digital Marketing. (4 Hours)

Examines the impact of technology on the marketing of goods and services. Focuses on the Internet and the World Wide Web. Investigates recent trends in e-business and identifies marketing strategies that work in this new environment. Introduces students to frameworks that help explain current issues in electronic marketing. Although the focus is on Internet marketing strategy, phenomena such as television home shopping and database marketing are also explored. Readings, cases, discussions, lectures, guest speakers, student reports, and exercises on the World Wide Web are all utilized.

Prerequisite(s): MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-

MKTG 4510. New Product Development. (4 Hours)

Provides an overview of the new-product-development process, with an emphasis on customer involvement in this process. Detailed insights are provided on such topics as new-product strategy, idea generation, idea selection and evaluation, concept development and testing, product development and testing, and market testing and product launch.

Prerequisite(s): MKTG 3401 (may be taken concurrently) with a minimum grade of D-

MKTG 4512. International Marketing. (4 Hours)

Introduces those aspects of marketing that are unique to international business within the framework of traditional functional areas of marketing. Focuses on the environment and the modifications of marketing concepts and practices necessitated by environmental differences. Topics include cultural dynamics in international markets, political and legal environmental constraints, educational and economic constraints, international marketing research, international marketing institutions, and marketing practices abroad.

Prerequisite(s): MKTG 2201 with a minimum grade of D- or MKTG 2202 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-

MKTG 4520. Business-to-Business Marketing. (4 Hours)

Offers students an opportunity to acquire marketable skills in the areas of business buyer behavior and communication, customer relationship management (CRM) and marketing, sales call planning and presentations, negotiation, pricing, networking, and inbound marketing strategy. Business-to-business (B2B) marketing involves selling products and services to organizations (e.g., for-profit firms, government agencies, and institutions) and focuses on deeply contextual relationship development to effectively attract, develop, and retain business customers. Includes interactive lectures, learn-by-doing exercises, role-playing, guest speakers, and training sessions.

Prerequisite(s): MKTG 2201 with a minimum grade of D- or MKTG 2209 with a minimum grade of D-

MKTG 4604. Creating Business Value with Data and AI Technologies. (4 Hours)

Designed to prepare students for careers that demand an understanding of the intersection between the growing data-driven and technology-enabled possibilities and various ways in which they can be creatively leveraged for designing better digital products and markets. Rapidly emerging new digital ecosystems, platforms, products, and services have been fundamentally transforming business practices and market landscapes in almost every industry. Using real-life case studies and projects, students examine and apply fundamental economic principles and conceptual business frameworks that are essential for understanding how emerging data opportunities and new computing technologies can be used for value creation. Considers various approaches for establishing fair and appropriate rules, regulations, and policies to mitigate potential biases, ethical challenges, and discrimination arising due to the digital transformation.

MKTG 4606. Digital, Analytics, Technology, and Automation Research Practicum. (4 Hours)

Offers an advanced-level experiential learning opportunity for students who wish to gain exposure to solving problems facing businesses and other organizations using data analytics and digital technology applications. The practicum offers students an opportunity to learn through active participation in client-centric challenges in a DATA context. Faculty and organizations present a variety of such challenges, and students are guided through solving these challenges. Discusses how new technologies affect human behavior, examines how digital convergence impacts society and organizations, and studies how to apply state-of-the-art methods in machine learning to create value for businesses and organizations. Students practice communicating and enabling change within organizations. Focuses on building students' technical and managerial skills to develop capacities to situate a business problem in a wider research context.

MKTG 4720. Understanding the Platform Economy. (4 Hours)

Examines the key drivers and building blocks of digital business transformations underlying the best marketing practices of the platform economy and discusses how companies can successfully take advantage of emerging multisided platforms and market-driven network externalities. Offers students an opportunity to learn how platforms change the way firms and consumers transact; to identify customer groups whose affiliation with the platform is most valuable; to understand the dynamics and limitations of platform-based network effects; to design competitive platform-based marketing strategies; and to develop plans for turning products and services into sustainable platforms. Explores consumer-based perspectives to highlight potential biases and discrimination arising in the platform economy. Considers various approaches for establishing fair and appropriate regulations and policies to mitigate such issues.

MKTG 4983. Special Topics in Marketing. (4 Hours)

Offers special topics in marketing. May be repeated once.

MKTG 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times for a maximum of 8 semester hours.

MKTG 6120. Graduate Research Practicum in Marketing. (3 Hours)

Offers an advanced-level experiential learning opportunity for students considering an academic career in marketing. Research may be behavioral/experimental or quantitative/analytical in nature. Engages students in multiple aspects of a research project: literature review; theory development; hypothesis generation; research design; data analysis and visualization; and developing insights for managers, researchers, and policy. Students participate in formal research training; attend weekly meetings with the faculty leads for the course; present their research; and submit a research paper at the end of the semester.

MKTG 6200. Creating and Sustaining Customer Markets. (3 Hours)

Focuses on marketing analysis and planning. Emphasizes analysis of customer needs and company and competitor capabilities. This analysis forms the basis of a sound marketing strategy that provides value to customers in a way superior to competitors. Discusses how to deliver this strategy through the development of an integrated marketing program covering product offerings, pricing, promotion, and distribution. Includes professional accounting students.

MKTG 6210. Marketing Research. (3 Hours)

Provides an overview of the major qualitative and quantitative marketing research methodologies available to marketing managers. Explores customer relationship management (CRM) and multivariate statistical techniques including conjoint analysis, customer satisfaction, and service quality measurement.

Prerequisite(s): (MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-); (MGSC 6200 with a minimum grade of C- or MGSC 6207 with a minimum grade of C-)

MKTG 6212. International Marketing. (3 Hours)

Develops understanding of the opportunities and challenges facing the international marketing executive, the decision-making process in marketing goods abroad, and the environmental forces—economic, cultural, and political—affecting the marketing process in the international marketplace.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6214. New Product Development. (3 Hours)

Focuses on the challenges and decisions new-product managers face as they take ideas through the new-product-development process. Companies need to create, develop, and market new products and services continually to compete effectively in a rapidly changing environment. Provides an overview of the new-product-development process, with an emphasis on customer involvement in this process. Provides detailed insights on such topics as new-product strategy, idea generation, idea selection and evaluation, concept development and testing, product development and testing, and market testing.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6216. Market Focused Strategy. (3 Hours)

Offers an advanced course in defining and managing an organization's product-market strategy. Intended for marketing specialists and nonspecialists interested in incorporating a market focus from a general management or consulting perspective. Emphasizes using market information to choose and manage the company's relationships with customers and competitors in a complex, changing environment, as well as the practical concerns of implementing and evaluating marketing strategy.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6218. Managing Customer Engagement in a Service World. (3 Hours)

Examines how both service organizations and product organizations require a distinctive approach to marketing strategy in a world where all organizations increasingly depend on service excellence and customer engagement for competitive advantage. The world economy is dominated by services; in the United States, a large percentage of the labor force and the GDP is accounted for by services. Covers why people are essential to success, why expectations are important to consumers, and how physical and virtual environments influence delivery of value to customers. This practice-oriented course focuses on active skill building and tool development that is quickly and directly applicable to students' future careers.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6222. Digital Marketing. (3 Hours)

Explores the latest trends in technology and new media, their effect on marketing goods and services, and how to deliver value to the customer using the latest technological innovations. Examines the latest trends in digital marketing, such as mobile marketing, and how the mobile platform can be used for branding purposes and to enhance customer relationships. Explores topics such as branding and advertising via mobile phones, online social networks and communities, technology adoption in global emerging markets, and how the Internet empowers customers and enables firms to engage in customer advocacy. Also examines how marketing research is conducted for technological innovations and ethical concerns that arise with technology usage, such as privacy and security issues, identity theft, and the role of trust in digital marketing.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6223. Brand and Advertising Management. (3 Hours)

Offers students an opportunity to obtain an in-depth understanding of the brand-building process amid radical changes in today's marketing communications platforms. Exposes students to concepts, frameworks, and theories critical to developing branding and advertising strategy in the twenty-first century, including brand positioning, target audiences definition, creative advertising, integrated marketing communications, the influence of social media, and assessing marketing and media effectiveness.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6224. B2B and Strategic Sales. (3 Hours)

Covers business-to-business marketing and the key roles of managing relationships with large buyers, going to market, and the sales organization. Begins with an understanding of why and how firms, institutions, and organizations purchase products and services and the importance of the multifunctional buying center. Covers a proven selling process and presents compelling solutions to customers. Going-to-market topics include managing value-added resellers and distributors. Intended for all interested in marketing: future product managers who must rely on the sales force and distributors to introduce new products and promotions, future sales managers, and marketing executives who must manage the marketing-sales interface.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6226. Consumer Behavior. (3 Hours)

Focuses on the consumer as the key element of marketing strategy and application. Explores demographic, lifestyle, social, and cultural trends and their impact on consumer attitudes, motivations, and behavior. Other topics include group dynamics, family, learning, personality, and emotions and their impact on the business world. Offers an in-depth look at the consumer decision process as a model to guide the planning and evaluation of marketing strategies.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6230. Driving Marketing Performance: Measure, Analyze, Profit. (3 Hours)

Introduces how to measure, analyze, and evaluate the profit impact of marketing actions (MAP) by bringing together marketing, strategy, and finance. Your organization is going to spend millions on a new marketing or strategic initiative, but how will you know if it is working? Marketing performance measurement and feedback systems enable managers to take smarter risks by assessing experimental projects and forecasting the profit potential of bigger, bolder initiatives. Offers students an opportunity to explore systems that summarize marketing productivity and suggest steps for performance improvement in marketing strategy and tactics.

Prerequisite(s): MKTG 6200 with a minimum grade of C- or MKTG 6208 with a minimum grade of C- or MKTG 6210 with a minimum grade of C- or MKTG 6318 with a minimum grade of C-

MKTG 6232. Engaging Customers and Markets. (3 Hours)

Introduces informationcentric methods that help to choose which customer markets are worth pursuing; that identify what benefits would be most attractive to offer these customers; and that develop, communicate, and deliver products and services that provide value to both customers and organizations. In the current customercentric marketplace, every member within an organization is responsible for understanding and engaging customers, regardless of their specific functional role. Properly collecting and utilizing data from inside and outside the organization is necessary to support this process. Using real-world cases, scenarios, and data, offers students an opportunity to learn how customer relationships can be created and sustained.

MKTG 6234. Marketing Analytics. (3 Hours)

Offers students an opportunity to understand the importance of using an analytical approach to support marketing decision making in organizations and approaches to implementation practice. Focuses on identifying and acquiring the right data for addressing different marketing challenges; building skills necessary for conducting relevant quantitative analyses; and using insights to make better marketing decisions. Topics may include product innovation, market identification and segmentation, customer valuation, media attribution models, and assessment of digital and social media. Students are expected to apply statistical concepts and have the opportunity to use SPSS, Python, and/or R for analyzing marketing data sets.

MKTG 6280. Gaining Customer Insight. (3 Hours)

Introduces the substantive and procedural aspects of marketing strategy and customer markets. Topics include how to identify target markets, how to leverage data and analyses to enhance the development of a marketing strategy, and how to develop knowledge of various techniques for uncovering customer needs/wants. Studies the importance of customer insights to business success. Offers students an opportunity to develop and implement a concept test.

MKTG 6283. Marketing and Selling Innovation. (3 Hours)

Reviews the product portfolio concept, examining the need for balanced portfolios and focusing on issues related to product proliferation and simplification. Discusses market-based pricing strategies, sales efforts, distribution, and communication in the context of enhancing the firm's product position in the marketplace. Focuses on developing and executing sales. Explores business-to-business and business-to-customer strategies.

MKTG 6285. Creating Customer Value through Artificial Intelligence. (3 Hours)

Investigates how companies can create customer value through artificial intelligence. Studies companies from startups to large multinationals across a variety of industries. Analyzes the AI strategies implemented or attempted by these companies to understand drivers of success and identify future opportunities. Uses lectures, case discussions, team and individual exercises, and a project on creating a value-driven AI strategy to offer students an opportunity to begin to develop intuition behind modern AI technologies. Does not require coding or algorithm development.

MKTG 6286. Marketing Technology Management. (3 Hours)

Introduces opportunities and challenges related to managing diverse marketing technology applications such as multichannel marketing campaign management, marketing resource allocation, marketing automation, and content and social media marketing through case studies and exercises. Offers a broad overview of marketing technology applications across multiple industries and touchpoints. Examines strategies for identifying, selecting, and deploying marketing technologies in organizations and communicating with information technology colleagues and vendors.

MKTG 6287. Succeeding in the Platform Economy. (3 Hours)

Examines the key drivers and building blocks of digital business transformations underlying the best marketing practices of the platform economy. Discusses how companies can successfully take advantage of emerging multisided platforms and market-driven network externalities. Offers students an opportunity to learn how platforms change the way firms and consumers transact; identify customer groups whose affiliation with the platform is most valuable; understand the dynamics and limitations of platform-based network effects; design competitive platform-based marketing strategies; and develop plans for turning products and services into sustainable customer-centric platforms. Explores consumer-based perspectives to highlight potential biases and discrimination arising in the platform economy, and considers various approaches for establishing fair and appropriate regulations and policies to mitigate such issues.

MKTG 6294. Customer-Centric Research Methods for Marketing. (3 Hours)

Focuses on the marketing research process and the analysis of data using software applications. Marketing research helps businesses know their customers and aids in business decision making. Covers topics such as problem definition, research design, sampling, attitude measurement, survey design, data collection, and data analysis. Students apply course topics to their organizations and analyze real company customer satisfaction data to provide managerial insights for a decision maker. Cases highlight the research process, mobile qualitative methods, and practical decision-making skills. SPSS, Qualtrics, and IBM Watson Analytics may be used to develop and analyze the project components.

MKTG 6295. Customer Performance Modeling. (3 Hours)

Addresses the question of how you know if and when your company's marketing initiatives are impacting customers and creating profit. Covers customer performance measurement, modeling, and feedback systems managers can use to take smarter risks by assessing the marketing initiatives and forecasting profit potentials. Offers students an opportunity to learn how to develop marketing dashboards, through which marketing productivity and profits can be assessed and evaluated. Also covers strategy and tactics that can be developed and communicated, with accountability in mind.

MKTG 6318. Customer Value and the Enterprise. (2 Hours)

Examines the role of marketing as an organizational function and a set of processes to manage offerings that provide superior value to customers. Focuses on developing student skill in analyzing the customer and business environment and using that analysis to build an effective marketing strategy. Emphasizes methods for the identification, acquisition, and retention of customers in a way that provides mutual value to the customer and the organization.

MKTG 6320. Advanced Marketing Management. (3 Hours)

Examines the specific elements of marketing management, including market research, metrics, positioning, planning, and the marketing mix. Focuses on developing student skills in putting together a marketing plan based on a thorough understanding of the market. Emphasizes predicting consumer behavior, developing points of difference and parity, calibrating the different elements of the market offering, and going to market with clear performance indicators.

Prerequisite(s): MKTG 6318 with a minimum grade of C-

MKTG 6606. Digital, Analytics, Technology, and Automation Advanced Research Practicum. (3 Hours)

Offers students an advanced-level experiential learning opportunity to actively participate to solve client-centric challenges facing businesses and other organizations using data analytics and digital technology applications. Faculty and organizations present a variety of such challenges, and students are guided through solving these challenges. Discusses how new technologies affect human behavior, examines how digital convergence impacts society, and studies how to apply state-of-the-art methods in machine learning to create value for businesses. Students practice communicating and enabling change within organizations. Focuses on building students' technical and managerial skills to develop capacities to situate a problem in a wider research context and to develop a communication approach to deliver technical information to different audiences.

MKTG 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 7001. Interdisciplinary Research in Marketing Science. (4 Hours)

Exposes students to cutting-edge research in quantitative marketing to help them define and advance their interdisciplinary research interests. Explains the process of generating feasible, interesting, and managerially relevant research ideas. Focuses on research opportunities arising from applications of new algorithms and technologies to generate consumer insights and automate product recommendations; improve privacy-preserving personalization; understand the increasingly complex advertising landscape and smart devices ecosystem; capture and analyze large unstructured data such as biomarkers, geolocation, networks, video, voice, and text in order to improve consumer experiences. Designed for graduate students with a background in computational social science, computer science, data analytics, digital humanities, economics, engineering, and network science who are interested in consumer-focused interdisciplinary empirical research projects. Expects students to produce a major paper suitable for publication.

MKTG 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Marketing - CPS (MKT)**Courses****MKT 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 2100. Principles of Marketing. (3 Hours)

Introduces the fundamentals of marketing management, including marketing strategy, consumer decision making, market segmentation and targeting, product, promotion, distribution, and pricing strategies. Emphasizes the importance of ethical behavior in marketing in both profit and nonprofit organizations operating at a domestic or a global level.

Prerequisite(s): MGT 1100 with a minimum grade of D- or CMN 1100 with a minimum grade of D- or CMN 1103 with a minimum grade of D- or CMN 2210 with a minimum grade of D- or HMG 1100 with a minimum grade of D-

MKT 2220. Consumer Behavior. (3 Hours)

Examines the major theoretical approaches to consumer behavior. Examines how the concepts of affect and cognition, behavior, and learning can be used to design and execute an effective marketing strategy in an environment that is more consumer empowered. Understanding the decision-making process, attitude, and behavior of buyers, as well as the impact of the environment, is essential to developing marketing plans in which sophisticated customer relationship management approaches are dependent upon knowing the customer needs and motives. Offers students an opportunity to gain a better understanding of their own buying behavior.

Prerequisite(s): MKT 2100 with a minimum grade of D-

MKT 2700. Product Design and Development. (3 Hours)

Introduces the methods used by companies to design and develop new products. New product development is a process that requires cross-functional collaboration and inter-disciplinary skills, which requires students to be exposed to concepts and analytical methods from a variety of disciplines, including marketing, project management, supply chain management, design and manufacturing, and cost accounting. Students are provided an opportunity to work individually and in teams to solve real business challenges, designing and developing products, as well as formulating strategies on how to improve their market success.

MKT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 3010. Digital Marketing. (3 Hours)

Explores the transition of traditional marketing to human-centric marketing in the digital age. Addresses evolving customer needs requiring business to utilize ever-changing technology in digital marketing. Discusses human-centric concepts including power shifts, human connectivity, changes in human lives, and user experience for customers. Offers students an opportunity to develop greater understanding of customer paths, new marketing metrics and practices, omnichannel marketing, customer engagement, and the use of social media.

Prerequisite(s): MKT 2100 with a minimum grade of D-

MKT 3100. Marketing Analytics. (3 Hours)

Examines the basic principles, tools, and models associated with marketing analytics. Emphasizes the development of skills to acquire and monitor marketing data, select the correct analytical methods to solve marketing problems, generate marketing insights, and apply the results of analyses to positively impact an organization's approach to market challenges.

Prerequisite(s): MKT 3010 with a minimum grade of D- ; MTH 2300 with a minimum grade of D-

MKT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

MKT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Materials Engineering (MATL)

Courses

MATL 5380. Particulate Materials Processing. (4 Hours)

Covers the processing of metallic and ceramic materials from particulate form. Includes particulate fabrication, characterization, handling, and consolidation for alloys, ceramics, and composites. Other topics include the principles of sintering in the absence and presence of liquid, advanced materials processing by rapid-solidification powder metallurgy, and the processing and structures of advanced ceramics.

Prerequisite(s): ME 2340 with a minimum grade of B or graduate program admission

MATL 6250. Soft Matter. (4 Hours)

Introduces the relatively young field of soft matter, which encompasses the physical description of various states of soft materials including liquids, colloids, polymers, foams, gels, granular materials, and a number of biological materials. Soft matter (also known as "soft condensed matter" or "complex fluids") is less ordered than metals and oxides (hard condensed matter) and is more subject to thermal fluctuations and applied forces. Focuses on critical thinking, problem diagnosis, estimation, statistical analysis, and data-based decision making. Includes many in-class demonstrations from colloidal assembly to emulsion stability to cellular apoptosis. Highlights applications such as industrial processing, life sciences, and environmental remediation. Requires graduate study in related field or permission of instructor.

MATL 6270. Principles, Devices, and Materials for Energy Storage and Energy Harvesting. (4 Hours)

Introduces students to materials, devices, and mechanisms for clean and sustainable energy while providing a broad overview of energy storage and energy harvesting. Offers examples related to materials and devices used in energy storage and harvesting and delves into the principles that underlie the performance of advanced electrochemical storage and harvesting systems, for example solar energy and mechanical energy. Also covers efficient energy usage, such as energy-efficient lighting and building. Beyond course content, assignments provide students with opportunities to practice concise writing and peer review of abstracts, deliver scientific presentations, and explore optimum ways to present technical information. Students should have some prior knowledge of materials science, electrochemistry, and/or semiconductor physics.

MATL 6285. Structure, Properties, and Processing of Polymeric Materials. (4 Hours)

Provides an introduction to the organic chemistry of polymers, the effects of chemical composition on structure, melting point, and degradation, and the thermodynamics of polymers. Other topics include the mechanical properties of polymers, analysis and testing, the effects of processing on structures and properties, and the processing of industrial polymers, with applications.

MATL 6290. Fundamentals of Nanostructured Materials. (4 Hours)

Covers fundamentals of 1D and 2D nanomaterials such as carbon nanotubes, graphene, nanowires, 2D atomic crystals (transition metal dichalcogenides), nanostructured graphites and their novel physical properties, and related nanotechnology. Draws from various textbooks and from seminal scientific journal articles that paved the new era of nanomaterials and nanotechnology in the past couple of decades. Includes lab demonstrations and assignments for some nanomaterials synthesis and characterization. An introduction to materials science and engineering, solid-state physics, chemistry of materials, or any related materials engineering background is strongly recommended.

MATL 6300. Computational Material Science. (4 Hours)

Covers the principles and practice of modern computer simulation techniques used to understand solids, liquids, and gases. Reviews the statistical foundation of thermodynamics followed by in-depth discussion of Monte Carlo and molecular dynamics techniques, as well as their links to mesoscale and continuum computational techniques. Discusses intermolecular potentials; extended ensembles; and mathematical algorithms used in molecular simulations, parallel algorithms, and visualization. Requires knowledge of materials science.

Prerequisite(s): ME 6200 with a minimum grade of C-

MATL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATL 7350. Mechanical Behavior and Strengthening Mechanisms. (4 Hours)

Covers dislocation theory and includes such topics as crystalline defects, elastic properties of dislocation, movement of dislocations, multiplication, intersection, annihilation, dislocations in crystalline materials, and dislocation arrays and crystal boundaries. Examines application of dislocation theory to microplasticity, dynamic recovery and recrystallization, strengthening mechanisms, and high-temperature deformation. Requires knowledge of materials science.

MATL 7355. Thermodynamics of Materials. (4 Hours)

Covers fundamentals of materials thermodynamics that encompass the first, second, and third laws, entropy, enthalpy, and free energy. Emphasis is on phase stability and equilibria, phase diagram computation with applications to phases in metals, alloys, and ionic compounds. Requires knowledge of thermodynamics course and materials science course.

MATL 7360. Kinetics of Phase Transformations. (4 Hours)

Focuses on the different types of phase transformations that occur in materials in relation to theory and practice. Topics include the diffusion equations, mechanisms of diffusion in crystalline solids, random walk theory, ionic conduction, high-diffusivity paths, diffusional and nondiffusional phase transformations, and microstructural evolution in material processing.

Prerequisite(s): MATL 7355 with a minimum grade of C-

MATL 7365. Properties and Processing of Electronic Materials. (4 Hours)

Focuses on electronic principles and the processing techniques underlying the processing/structure/property relationships of materials. Covers metals and alloys, semiconductors, and insulators. Topics include electronic structures, band theory; thermal, electrical, and magnetic properties; and processing methods including film deposition.

MATL 7374. Special Topics in Materials Engineering. (4 Hours)

Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

MATL 7945. Master's Project. (4 Hours)

Offers theoretical or experimental work under individual faculty supervision.

MATL 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATL 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

MATL 7990. Thesis. (1-8 Hours)

Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. Requires first-year students to attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Requires successful completion of the seminar program. May be repeated without limit.

MATL 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continuing master's thesis supervision under individual faculty supervision.

Mathematics (MATH)

Courses

MATH 1000. Mathematics at Northeastern. (1 Hour)

Designed for freshman math majors to introduce them to one another, their major, their college, and the University. Students are introduced to our advising system, register for next semester's courses, and learn more about co-op. Also helps students develop the academic and interpersonal skills necessary to succeed as a university student.

MATH 1120. Precalculus. (4 Hours)

Focuses on linear, polynomial, exponential, logarithmic, and trigonometric functions. Emphasis is placed on understanding, manipulating, and graphing these basic functions, their inverses and compositions, and using them to model real-world situations (that is, exponential growth and decay, periodic phenomena). Equations involving these functions are solved using appropriate techniques. Special consideration is given to choosing reasonable functions to fit numerical data.

MATH 1130. College Math for Business and Economics. (4 Hours)

Introduces students to some of the important mathematical concepts and tools (such as modeling revenue, cost and profit with functions) used to solve problems in business and economics. Assumes familiarity with the basic properties of linear, polynomial, exponential, and logarithmic functions. Topics include the method of least squares, regression curves, solving equations involving functions, compound interest, amortization, and other consumer finance models. (Graphing calculator required, see instructor for make and model.)

MATH 1213. Interactive Mathematics. (4 Hours)

Develops problem-solving skills while simultaneously teaching mathematics concepts. Each unit centers on a particular applied problem, which serves to introduce the relevant mathematical topics. These may include but are not limited to polling theory, rate of change, the concepts behind derivatives, probability, binomial distributions, and statistics. The course is not taught in the traditional lecture format and is particularly suited to students who work well in collaborative groups and who enjoy writing about the concepts they are learning. Assessment is based on portfolios, written projects, solutions to "problems of the week," and exams.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

MATH 1215. Mathematical Thinking. (4 Hours)

Focuses on the development of mathematical thinking and its use in a variety of contexts to translate real-world problems into mathematical form and, through analysis, to obtain new information and reach conclusions about the original problems. Mathematical topics include symbolic logic, truth tables, valid arguments, counting principles, and topics in probability theory such as Bayes' theorem, the binomial distribution, and expected value.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

MATH 1216. Recitation for MATH 1215. (0 Hours)

Provides small-group discussion format to cover material in MATH 1215.

MATH 1220. Mathematics of Art. (4 Hours)

Presents mathematical connections and foundations for art. Topics vary and may include aspects of linear perspective and vanishing points, symmetry and patterns, tilings and polygons, Platonic solids and polyhedra, golden ratio, non-Euclidean geometry, hyperbolic geometry, fractals, and other topics. Includes connections and examples in different cultures.

Attribute(s): NUpath Creative Express/Innov, NUpath Formal/Quant Reasoning

MATH 1231. Calculus for Business and Economics. (4 Hours)

Provides an overview of differential calculus including derivatives of power, exponential, logarithmic, logistic functions, and functions built from these. Derivatives are used to model rates of change, to estimate change, to optimize functions, and in marginal analysis. The integral calculus is applied to accumulation functions and future value. Emphasis is on realistic business and economics problems, the development of mathematical models from raw business data, and the translation of mathematical results into verbal expression appropriate for the business setting. Also features a semester-long marketing project in which students gather raw data, model it, and use calculus to make business decisions; each student is responsible for a ten-minute presentation. (Graphing calculator required, see instructor for make and model.)

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1241. Calculus 1. (4 Hours)

Serves as both the first half of a two-semester calculus sequence and as a self-contained one-semester course in differential and integral calculus. Introduces basic concepts and techniques of differentiation and integration and applies them to polynomial, exponential, log, and trigonometric functions. Emphasizes the derivative as rate of change and integral as accumulator. Applications include optimization, growth and decay, area, volume, and motion.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1242. Calculus 2. (4 Hours)

Continues MATH 1241. Introduces additional techniques of integration and numerical approximations of integrals and the use of integral tables; further applications of integrals. Also introduces differential equations and slope fields, and elementary solutions. Introduces functions of several variables, partial derivatives, and multiple integrals.

Prerequisite(s): MATH 1231 with a minimum grade of D- or MATH 1241 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1245. Calculus with Applications. (4 Hours)

Covers differential and integral calculus of one variable and an introduction to differential equations. Includes applications that show how calculus is used to solve problems in science. Also includes a group project related to a real-world problem in students' areas of study. The project involves a differential equation and compares the solution with experiment. Previous examples of projects include modeling of coral reefs, analysis of an epidemic using the data of the World Health Organization, analysis of a two-component kinetic model of drug concentration, and gate analysis of hip to knee experiment and comparison with the solution of the pendulum equation. Prior exposure to high-school-level calculus is recommended.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1251. Calculus and Differential Equations for Biology 1. (4 Hours)

Begins with the fundamentals of differential calculus and proceeds to the specific type of differential equation problems encountered in biological research. Presents methods for the solutions of these equations and how the exact solutions are obtained from actual laboratory data. Topics include differential calculus: basics, the derivative, the rules of differentiation, curve plotting, exponentials and logarithms, and trigonometric functions; using technology to understand derivatives; biological kinetics: zero- and first-order processes, processes tending toward equilibrium, bi- and tri-exponential processes, and biological half-life; differential equations: particular and general solutions to homogeneous and nonhomogeneous linear equations with constant coefficients, systems of two linear differential equations; compartmental problems: nonzero initial concentration, two-compartment series dilution, diffusion between compartments, population dynamics; and introduction to integration.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1252. Calculus and Differential Equations for Biology 2. (4 Hours)

Continues MATH 1251. Begins with the integral calculus and proceeds quickly to more advanced topics in differential equations. Introduces linear algebra and uses matrix methods to analyze functions of several variables and to solve larger systems of differential equations. Advanced topics in reaction kinetics are covered. The integral and differential calculus of functions of several variables is followed by the study of numerical methods in integration and solutions of differential equations. Provides a short introduction to probability. Covers Taylor polynomials and infinite series. Special topics include reaction kinetics: Michaelis-Menten processes, tracer experiments, and inflow and outflow through membranes.

Prerequisite(s): MATH 1251 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1260. Math Fundamentals for Games. (4 Hours)

Discusses linear algebra and vector geometry in two-, three-, and four-dimensional space. Examines length, dot product, and trigonometry. Introduces linear and affine transformations. Discusses complex numbers in two-space, cross product in three-space, and quaternions in four-space. Provides explicit formulas for rotations in three-space. Examines functions of one argument and treats exponentials and logarithms. Describes parametric curves in space. Discusses binomials, discrete probability, Bézier curves, and random numbers. Concludes with the concept of the derivative, the rules for computing derivatives, and the notion of a differential equation.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1340. Intensive Calculus for Engineers. (6 Hours)

Contains the material from the first semester of MATH 1341, preceded by material emphasizing the strengthening of precalculus skills. Topics include properties of exponential, logarithmic, and trigonometric functions; differential calculus; and introductory integral calculus.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1341. Calculus 1 for Science and Engineering. (4 Hours)

Covers definition, calculation, and major uses of the derivative, as well as an introduction to integration. Topics include limits; the derivative as a limit; rules for differentiation; and formulas for the derivatives of algebraic, trigonometric, and exponential/logarithmic functions. Also discusses applications of derivatives to motion, density, optimization, linear approximations, and related rates. Topics on integration include the definition of the integral as a limit of sums, antiderivatives, the fundamental theorem of calculus, and integration by substitution.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1342. Calculus 2 for Science and Engineering. (4 Hours)

Covers further techniques and applications of integration, infinite series, and introduction to vectors. Topics include integration by parts; numerical integration; improper integrals; separable differential equations; and areas, volumes, and work as integrals. Also discusses convergence of sequences and series of numbers, power series representations and approximations, 3D coordinates, parameterizations, vectors and dot products, tangent and normal vectors, velocity, and acceleration in space. Requires prior completion of MATH 1341 or permission of head mathematics advisor.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 1365. Introduction to Mathematical Reasoning. (4 Hours)

Covers the basics of mathematical reasoning and problem solving to prepare incoming math majors for more challenging mathematical courses at Northeastern. Focuses on learning to write logically sound mathematical arguments and to analyze such arguments appearing in mathematical books and courses. Includes fundamental mathematical concepts such as sets, relations, and functions.

MATH 1465. Intensive Mathematical Reasoning. (4 Hours)

Introduces proofs and theoretical mathematics. Covers mathematical reasoning and problem solving to prepare math and computer science majors for theoretical mathematics and computer science courses. Focuses on learning to read and write logically sound mathematical arguments. Topics include logical reasoning, proof techniques, sets, the integers and modular arithmetic, relations, functions, cardinality, countable and uncountable sets, and elements of algebra and group theory. Intended for students seeking a more intensive version of MATH 1365.

MATH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 2201. History of Mathematics. (4 Hours)

Traces the development of mathematics from its earliest beginning to the present. Emphasis is on the contributions of various cultures including the Babylonians, Egyptians, Mayans, Greeks, Indians, and Arabs. Computations and constructions are worked out using the techniques and notations of these peoples. The role of mathematics in the development of science is traced throughout, including the contributions of Descartes, Kepler, Fermat, and Newton. More modern developments are discussed as time permits.

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Interpreting Culture

MATH 2280. Statistics and Software. (4 Hours)

Provides an introduction to basic statistical techniques and the reasoning behind each statistical procedures. Covers appropriate statistical data analysis methods for applications in health and social sciences. Also examines a statistical package such as SPSS or SAS to implement the data analysis on computer. Topics include descriptive statistics, elementary probability theory, parameter estimation, confidence intervals, hypothesis testing, nonparametric inference, and analysis of variance and regression with a minimum of mathematical derivations.

Attribute(s): NUpath Analyzing/Using Data

MATH 2321. Calculus 3 for Science and Engineering. (4 Hours)

Extends the techniques of calculus to functions of several variables; introduces vector fields and vector calculus in two and three dimensions. Topics include lines and planes, 3D graphing, partial derivatives, the gradient, tangent planes and local linearization, optimization, multiple integrals, line and surface integrals, the divergence theorem, and theorems of Green and Stokes with applications to science and engineering and several computer lab projects. Prior completion of Calculus 2 is strongly recommended.

Attribute(s): NUpath Formal/Quant Reasoning

MATH 2322. Recitation for MATH 2321. (0 Hours)

Provides small-group discussion format to cover material in MATH 2321.

MATH 2331. Linear Algebra. (4 Hours)

Uses the Gauss-Jordan elimination algorithm to analyze and find bases for subspaces such as the image and kernel of a linear transformation. Covers the geometry of linear transformations: orthogonality, the Gram-Schmidt process, rotation matrices, and least squares fit. Examines diagonalization and similarity, and the spectral theorem and the singular value decomposition. Is primarily for math and science majors; applications are drawn from many technical fields. Computation is aided by the use of software such as Maple or MATLAB, and graphing calculators.

Prerequisite(s): MATH 1342 with a minimum grade of D- or MATH 1242 with a minimum grade of D- or MATH 1252 with a minimum grade of D- or CS 1800 with a minimum grade of D-

MATH 2341. Differential Equations and Linear Algebra for Engineering. (4 Hours)

Studies ordinary differential equations, their applications, and techniques for solving them including numerical methods (through computer labs using MS Excel and MATLAB), Laplace transforms, and linear algebra. Topics include linear and nonlinear first- and second-order equations and applications include electrical and mechanical systems, forced oscillation, and resonance. Topics from linear algebra, such as matrices, row-reduction, vector spaces, and eigenvalues/eigenvectors, are developed and applied to systems of differential equations. Prior completion of Calculus 2 is strongly recommended.

MATH 2342. Recitation for MATH 2341. (0 Hours)

Provides small-group discussion format to cover material in MATH 2341.

MATH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 2991. Research in Mathematics. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated seven times.

MATH 3000. Co-op and Experiential Learning Reflection Seminar 1. (1 Hour)

Intended for math majors who have completed their first co-op assignment or other integrated experiential learning component of the NU Core. The goal is to examine the mathematical problems encountered in these experiences and relate them to courses already taken and to the student's future program. Faculty members and other guests contribute to the discussion. Grades are determined by the student's participation in the course and the completion of a final paper.

MATH 3081. Probability and Statistics. (4 Hours)

Focuses on probability theory. Topics include sample space; conditional probability and independence; discrete and continuous probability distributions for one and for several random variables; expectation; variance; special distributions including binomial, Poisson, and normal distributions; law of large numbers; and central limit theorem. Also introduces basic statistical theory including estimation of parameters, confidence intervals, and hypothesis testing.

Prerequisite(s): MATH 1342 with a minimum grade of D- or MATH 1252 with a minimum grade of D- or MATH 1242 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

MATH 3082. Recitation for MATH 3081. (0 Hours)

Provides small-group discussion format to cover material in MATH 3081.

MATH 3090. Exploration of Modern Mathematics. (4 Hours)

Offers students a research-minded, elementary, and intuitive introduction to the interplay between algebra, geometry, analysis, and topology using an interactive and experimental approach. Intended for math majors, math combined majors, and students pursuing a math minor; all others should obtain permission of instructor.

Prerequisite(s): MATH 1242 with a minimum grade of D- or MATH 1252 with a minimum grade of D- or MATH 1342 with a minimum grade of D-

MATH 3150. Real Analysis. (4 Hours)

Provides the theoretical underpinnings of calculus and the advanced study of functions. Emphasis is on precise definitions and rigorous proof. Topics include the real numbers and completeness, continuity and differentiability, the Riemann integral, the fundamental theorem of calculus, inverse function and implicit function theorems, and limits and convergence. Required of all mathematics majors.

Prerequisite(s): (MATH 1365 with a minimum grade of D- ; MATH 2331 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

MATH 3175. Group Theory. (4 Hours)

Presents basic concepts and techniques of the group theory: symmetry groups, axiomatic definition of groups, important classes of groups (abelian groups, cyclic groups, additive and multiplicative groups of residues, and permutation groups), Cayley table, subgroups, group homomorphism, cosets, the Lagrange theorem, normal subgroups, quotient groups, and direct products. Studies structural properties of groups. Possible applications include geometry, number theory, crystallography, physics, and combinatorics.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; MATH 2331 with a minimum grade of D-

MATH 3181. Advanced Probability and Statistics. (4 Hours)

Focuses on probability theory needed to prepare students for research and advanced coursework in the physical and data sciences. Examples and homework problems come from physics, chemistry, biology, computer science, data science, and electrical engineering. Topics include sample spaces; conditional probability and independence; discrete and continuous probability distributions for one and for several random variables; expectation; variance; special distributions including binomial, Poisson, and normal distributions; law of large numbers; and the central limit theorem. Introduces basic statistical theory including estimation of parameters, confidence intervals, and hypothesis testing. This course is proof-based and emphasizes developing students' abilities in mathematical proof writing.

Prerequisite(s): MATH 2321 with a minimum grade of D-

MATH 3275. Advanced Group Theory. (4 Hours)

Serves as an accelerated introduction to the theory of groups, intended for students who wish to take a more advanced version of MATH 3175. Prior knowledge of group theory is not assumed. Introduces homomorphisms, subgroups, normal subgroups, quotient groups, and group actions, illustrated with a variety of examples. Subsequent topics include the class equation, simple groups, the Sylow theorems, and their applications to the classification of finite simple groups. Discusses classical matrix groups, with an emphasis on $SU(2)$ and $SO(3)$ as fundamental examples, and introduces the notion of a Lie algebra. Develops representation theory of finite groups and its correspondence to the representation theory of compact Lie groups sketched, again using $SU(2)$ as an example. Students not meeting course prerequisites may seek permission of instructor.

Prerequisite(s): MATH 1365 with a minimum grade of B ; MATH 2331 with a minimum grade of B

MATH 3331. Differential Geometry. (4 Hours)

Studies differential geometry, focusing on curves and surfaces in 3D space. The material presented here can serve as preparation for a more advanced course in Riemannian geometry or differential topology.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; MATH 2331 with a minimum grade of D-

MATH 3341. Dynamical Systems. (4 Hours)

Studies dynamical systems and their applications as they arise from differential equations. Solutions are obtained and analyzed as parameterized curves in the plane and used as a means of understanding the evolution of physical processes. Applications include conservative systems, predator-prey interactions, and cooperation and competition of species.

Prerequisite(s): MATH 2341 with a minimum grade of D-

MATH 3527. Number Theory 1. (4 Hours)

Introduces number theory. Topics include linear diophantine equations, congruences, design of magic squares, Fermat's little theorem, Euler's formula, Euler's phi function, computing powers and roots in modular arithmetic, the RSA encryption system, primitive roots and indices, and the law of quadratic reciprocity. As time permits, may cover diophantine approximation and Pell's equation, elliptic curves, points on elliptic curves, and Fermat's last theorem.

Prerequisite(s): MATH 1342 with a minimum grade of D- or MATH 1242 with a minimum grade of D- or MATH 1252 with a minimum grade of D-

MATH 3530. Numerical Analysis. (4 Hours)

Considers various problems including roots of nonlinear equations; simultaneous linear equations: direct and iterative methods of solution; eigenvalue problems; interpolation; and curve fitting. Emphasizes understanding issues rather than proving theorems or coming up with numerical recipes.

Prerequisite(s): MATH 2331 with a minimum grade of D- or MATH 2341 with a minimum grade of D-

MATH 3533. Combinatorial Mathematics. (4 Hours)

Introduces techniques of mathematical proofs including mathematical induction. Explores various techniques for counting such as permutation and combinations, inclusion-exclusion principle, recurrence relations, generating functions, Polya enumeration, and the mathematical formulations necessary for these techniques including elementary group theory and equivalence relations.

Prerequisite(s): MATH 1342 with a minimum grade of D- or MATH 1242 with a minimum grade of D- or MATH 1252 with a minimum grade of D-

MATH 3535. Numerical Methods with Applications to Differential Equations. (4 Hours)

Covers numerical methods to solve ordinary differential equations that are otherwise not solvable using exact methods and that are useful in a variety of applications drawn from classical areas of science and engineering. Studies examples classified as initial and boundary value problems from fluid mechanics and heat transfer. The topics are of fundamental importance in many branches of applied mathematics, physical sciences, and engineering. Possible topics also include the finite element method, which is very useful in structural analysis involving complex geometry.

Prerequisite(s): MATH 2341 with a minimum grade of C-

MATH 3543. Dynamics, Chaos, and Fractals. (4 Hours)

Introduces one-dimensional discrete real and complex dynamics, chaotic dynamics, and fractals, with an emphasis on computational and graphical exploration. Studies orbits and periodic iteration behavior of real and complex-valued function, attracting cycles, itineraries, symbolic dynamics, chaos, classical fractal constructions, Minkowski dimension, Julia sets, and the Mandelbrot set.

Prerequisite(s): MATH 1342 with a minimum grade of D-

MATH 3545. Introduction to Graph Theory. (4 Hours)

Offers a mathematical introduction to networks and graphs, which find applications in social and natural sciences. Introduces paths, cycles, trees, bipartite graphs, matchings, colorings, connectivity, and network flows. Discusses special cases of planar, Eulerian, and Hamiltonian graphs; Tait's theorem; and possible advanced topics. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): MATH 1365 with a minimum grade of C- or MATH 2310 with a minimum grade of C- or MATH 3533 with a minimum grade of C- or CS 1800 with a minimum grade of C- or CS 3800 with a minimum grade of C-

MATH 3560. Geometry. (4 Hours)

Studies classical geometry and symmetry groups of geometric figures, with an emphasis on Euclidean geometry. Teaches how to formulate mathematical propositions precisely and how to construct and understand mathematical proofs. Provides a line between classical and modern geometry with the aim of preparing students for further study in group theory and differential geometry.

Prerequisite(s): MATH 2331 with a minimum grade of D- or MATH 2341 with a minimum grade of D-

MATH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 4020. Research Capstone. (4 Hours)

Offers students the experience of engaging in mathematical research that builds upon the math courses that they have taken and, possibly, their co-op assignments. Requires students to complete a research project of their own choosing. Focus is on the project and on the students presenting their work. Also requires students to write a reflection paper. Intended for juniors or seniors with experience or interest in mathematics research. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): MATH 3150 with a minimum grade of D- ; MATH 3175 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

MATH 4025. Applied Mathematics Capstone. (4 Hours)

Emphasizes the use of a variety of methods—such as optimization, differential equations, probability, and statistics—to study problems that arise in epidemiology, finance, and other real-world settings. Course work includes assigned exercises, a long-term modeling project on a topic of the student's choosing, and a reflection paper.

Prerequisite(s): MATH 3081 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

MATH 4525. Applied Analysis. (4 Hours)

Demonstrates the applications of mathematics to interesting physical and biological problems. Methods are chosen from ordinary and partial differential equations, calculus of variations, Laplace transform, perturbation theory, special functions, dimensional analysis, asymptotic analysis, and other techniques of applied mathematics.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; MATH 2331 with a minimum grade of D- ; (MATH 2341 with a minimum grade of D- or MATH 2351 with a minimum grade of D-)

MATH 4527. Number Theory 2. (4 Hours)

Continues MATH 3527. Topics include Diophantine approximation, the Gaussian integers, irrational numbers and transcendental numbers, nonlinear polynomial congruences, systems of linear congruences, mobius inversion, elliptic curves, modular curves, modular forms, and L-functions.

Prerequisite(s): (MATH 3527 with a minimum grade of D- or MATH 4575 with a minimum grade of D-); MATH 3175 with a minimum grade of D-

MATH 4541. Advanced Calculus. (4 Hours)

Offers a deeper and more generalized look at the ideas and objects of study of calculus. Topics include the generalized calculus of n-space, the inverse and implicit function theorems, differential forms and general Stokes-type theorems, geometry of curves and surfaces, and special functions.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; MATH 2331 with a minimum grade of D-

MATH 4545. Fourier Series and PDEs. (4 Hours)

Provides a first course in Fourier series, Sturm-Liouville boundary value problems, and their application to solving the fundamental partial differential equations of mathematical physics: the heat equation, the wave equation, and Laplace's equation. Green's functions are also introduced as a means of obtaining closed-form solutions.

Prerequisite(s): MATH 2351 with a minimum grade of D- or MATH 2341 with a minimum grade of D-

MATH 4555. Complex Variables. (4 Hours)

Provides an introduction to the analysis of functions of a complex variable. Starting with the algebra and geometry of complex numbers, basic derivative and contour integral properties are developed for elementary algebraic and transcendental functions as well as for other analytic functions and functions with isolated singularities. Power and Laurent series representations are given. Classical integral theorems, residue theory, and conformal mapping properties are studied. Applications of harmonic functions are presented as time permits.

Prerequisite(s): MATH 2321 with a minimum grade of D-

MATH 4565. Topology. (4 Hours)

Introduces the student to fundamental notions of topology. Introduces basic set theory, then covers the foundations of general topology (axioms for a topological space, continuous functions, homeomorphisms, metric spaces, the subspace, product and quotient topologies, connectedness, compactness, and the Hausdorff condition). Also introduces algebraic and geometric topology (homotopy, covering spaces, fundamental groups, graphs, surfaces, and manifolds) and applications. Other topics are covered if time permits.

Prerequisite(s): MATH 3150 with a minimum grade of D-

MATH 4570. Matrix Methods in Data Analysis and Machine Learning. (4 Hours)

Introduces concepts and methods of linear algebra for understanding and creating machine learning and deep learning algorithms. Topics include various matrix factorizations, symmetric positive definite matrices, inner product spaces, matrix calculus, applications to probability and statistics, and optimization in high-dimensional spaces. Explores the mathematics behind data analysis, machine learning, and deep learning, including gradient descents, Newton's methods, principal components analysis, linear regression and linear methods in classification, neural networks, and convolutional neural networks. Offers students opportunities to learn and practice Python skills with labs and the final project.

Prerequisite(s): MATH 2331 with a minimum grade of C- or MATH 2341 with a minimum grade of C-

MATH 4571. Advanced Linear Algebra. (4 Hours)

Provides a more detailed study of linear transformations and matrices: LU factorization, QR factorization, Spectral theorem and singular value decomposition, Jordan form, positive definite matrices, quadratic forms, partitioned matrices, and norms and numerical issues. Topics and emphasis change from year to year.

Prerequisite(s): MATH 2331 with a minimum grade of D-

MATH 4575. Introduction to Cryptography. (4 Hours)

Presents the mathematical foundations of cryptology, beginning with the study of divisibility of integers, the Euclidian Algorithm, and an analysis of the Extended Euclidian Algorithm. Includes a short study of groups, semigroups, residue class rings, fields, Fermat's Little Theorem, Chinese Remainder Theorem, polynomials over fields, and the multiplicative group of residues modulo a prime number. Introduces fundamental notions used to describe encryption schemes together with examples, which include affine linear ciphers and cryptanalysis and continues with probability and perfect secrecy. Presents the Data Encryption Standard (DES) and culminates in the study of the Advanced Encryption Standard (AES), the standard encryption scheme in the United States since 2001.

Prerequisite(s): MATH 2331 with a minimum grade of D- or MATH 3175 with a minimum grade of D- or MATH 3527 with a minimum grade of D-

MATH 4576. Rings and Fields. (4 Hours)

Introduces commutative rings, ideals, integral domains, fields, and the theory of extension fields. Topics include Gaussian integers, Galois groups, and the fundamental theorem of Galois theory. Applications include the impossibility of angle-trisection and the general insolvability of fifth- and higher-degree polynomials. Other topics are covered as time permits.

Prerequisite(s): MATH 3175 with a minimum grade of D-

MATH 4577. Commutative Algebra. (4 Hours)

Introduces the basics of commutative algebra. Emphasizes rigorously building the mathematical background needed for studying this subject in more depth. Seeks to prepare students for more advanced classes in algebraic geometry, robotics, invariant theory of finite groups, and cryptography. Covers geometry, algebra, and algorithms; Grobner bases; elimination theory; the algebra-geometry dictionary; robotics and automatic geometric theorem proving.

Prerequisite(s): (MATH 2331 with a minimum grade of C+ ; MATH 1365 with a minimum grade of C+) or MATH 3175 with a minimum grade of C+ or MATH 4576 (may be taken concurrently) with a minimum grade of C+

MATH 4581. Statistics and Stochastic Processes. (4 Hours)

Continues topics introduced in MATH 3081. The first part of the course covers classical procedures of statistics including the t-test, linear regression, and the chi-square test. The second part provides an introduction to stochastic processes with emphasis on Markov chains, random walks, and Brownian motion, with applications to modeling and finance.

Prerequisite(s): MATH 3081 with a minimum grade of D-

MATH 4606. Mathematical and Computational Methods for Physics. (4 Hours)

Covers advanced mathematical methods topics that are commonly used in the physical sciences, such as complex calculus, Fourier transforms, special functions, and the principles of variational calculus. Applies these methods to computational simulation and modeling exercises. Introduces basic computational techniques and numerical analysis, such as Newton's method, Monte Carlo integration, gradient descent, and least squares regression. Uses a simple programming language, such as MATLAB, for the exercises.

Prerequisite(s): PHYS 2303 with a minimum grade of D- ; MATH 2321 with a minimum grade of D- ; (MATH 2341 with a minimum grade of D- or MATH 2351 with a minimum grade of D-)

MATH 4681. Probability and Risks. (4 Hours)

Reviews main probability and statistics concepts from the point of view of decision risks in actuarial and biomedical contexts, including applications of normal approximation for evaluating statistical risks. Also examines new topics, such as distribution of extreme values and nonparametric statistics with examples. May be especially useful for students preparing for the first actuarial exam on probability and statistics.

Prerequisite(s): MATH 3081 with a minimum grade of D-

MATH 4682. Theory of Interest and Basics of Life Insurance 1. (4 Hours)

Reviews basic financial instruments in the presence of interest rates, including the measurement of interest and problems in interest (equations of value, basic and more general annuities, yield rates, amortization schedules, bonds and other securities). Examines numerous practical applications. Also introduces problems of life insurance with examples. May be especially useful for students preparing for the second actuarial exam on theory of interest.

Prerequisite(s): MATH 3081 with a minimum grade of D-

MATH 4683. Financial Derivatives. (4 Hours)

Presents the mathematical basis of actuarial models and their application to insurance and other financial risks. Includes but is not limited to financial derivatives such as options and futures. Techniques and applications may be useful for students preparing for actuarial Exam 3F (Society of Actuaries Exam MFE).

Prerequisite(s): MATH 4581 with a minimum grade of D-

MATH 4684. Theory of Interest and Basics of Life Insurance 2. (4 Hours)

Reviews actuarial models for life insurance, including survival models, life tables, life insurance, life annuities, premium and policy values, multiple state models, joint-life and last survivor models, pensions, and emerging costs for life insurance. Designed to be especially useful for students preparing for the fourth actuarial exam, LTAM (Long-Term Actuarial Mathematics), of the Society of Actuaries.

Prerequisite(s): MATH 4682 with a minimum grade of C-

MATH 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

Prerequisite(s): MATH 3081 with a minimum grade of D-

MATH 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): MATH 4970 with a minimum grade of D-

MATH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

MATH 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MATH 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

MATH 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to mathematics majors who are using it to fulfill their experiential education requirement; for these students it may count as a mathematics elective, subject to approval by instructor and adviser. May be repeated without limit.

Attribute(s): NUpath Integration Experience, NUpath Writing Intensive

MATH 5001. Accelerated Linear Algebra. (2 Hours)

Offers an intensive exploration of linear algebra. Covers linear algebra concepts at an accelerated pace including vector spaces, linear transformations, matrix operations, eigenvalues and eigenspaces, inner product spaces, orthogonal basis, least squares, positive semidefinite matrices, and singular value decompositions. Includes applications to statistics, dynamical systems, and machine learning.

MATH 5002. Accelerated Multivariable Calculus. (2 Hours)

Offers an intensive exploration of multivariable calculus. Covers vector calculus concepts at an accelerated pace including partial derivatives, level sets, gradient vectors, optimizations, Lagrange multipliers, multiple integrals, vector fields, line integrals, and surface integrals. Includes applications to statistics, engineering, and machine learning.

MATH 5003. Accelerated Probability and Statistics. (2 Hours)

Offers an intensive exploration of probability and statistics including both theoretical concepts and practical applications. Covers discrete and continuous random variables, probability distributions, expectation and variance, central limit theorem, estimation theory, maximum likelihood estimation, and hypothesis testing. Includes applications to machine learning and solving real-world problems.

MATH 5010. Foundations of Statistical Theory and Probability. (4 Hours)

Presents a comprehensive foundational overview of the probability theory and mathematical statistics critical to various methodologies needed to perform and interpret a statistical analysis. Explores probability distributions and the theoretical justifications around common statistical measures such as means, variances, and expected values. Introduces likelihood and Bayesian theory as tools to derive parameter estimates and begin to make inferences. Culminates with formal procedures for statistical inference including hypothesis testing, the construction of confidence intervals and credible intervals, and calculations of power and sample size. All topics are grounded in theory, with appropriate practice using a programming language and real-world datasets to communicate and visualize data and results.

MATH 5101. Analysis 1: Functions of One Variable. (4 Hours)

Offers a rigorous, proof-based introduction to mathematical analysis and its applications. Topics include metric spaces, convergence, compactness, and connectedness; continuous and uniformly continuous functions; derivatives, the mean value theorem, and Taylor series; Riemann integration and the fundamental theorem of calculus; interchanging limit operations; sequences of functions and uniform convergence; Arzelà-Ascoli and Stone-Weierstrass theorems; inverse and implicit function theorems; successive approximations and existence/uniqueness for ordinary differential equations; linear operators on finite-dimensional vector spaces and applications to systems of ordinary differential equations. Provides a series of computer projects that further develop the connections between theory and applications. Requires permission of instructor and head advisor for undergraduate students.

MATH 5102. Analysis 2: Functions of Several Variables. (4 Hours)

Continues MATH 5101. Studies basics of analysis in several variables. Topics include derivative and partial derivatives; the contraction principle; the inverse function and implicit function theorems; derivatives of higher order; Taylor formula in several variables; differentiation of integrals depending on parameters; integration of functions of several variables; change of variables in integrals; differential forms and their integration over simplexes and chains; external multiplication of forms; differential of forms; Stokes' formula; set functions; Lebesgue measure; measure spaces; measurable functions; integration; comparison with the Riemann integral; L₂ as a Hilbert space; and Parseval theorem and Riesz-Fischer theorem. Requires permission of instructor and head advisor for undergraduate students.

MATH 5110. Applied Linear Algebra and Matrix Analysis. (4 Hours)

Offers a robust introduction to the basic results of linear algebra on real and complex vector spaces with applications to differential equations and Markov chains. Introduces theoretical results along the way, along with matrix analysis, eigenvalue analysis, and spectral decomposition. Includes a significant computational component, focused on applications of linear algebra to mathematical modeling.

MATH 5111. Algebra 1. (4 Hours)

Discusses fundamentals of the theory of groups and some applications in Galois theory. Topics may include quotient groups and isomorphism theorems; group actions and Sylow theory; simplicity and solvability; permutations and the simplicity of the higher alternating groups; fields and polynomial rings; splitting fields; the Galois correspondence; computations of Galois groups; and applications of Galois theory, including non-solvability of polynomials by radicals.

MATH 5112. Algebra 2. (4 Hours)

Provides a comprehensive introduction to commutative algebra: rings and modules. Topics in commutative ring theory include ideals, prime and maximal ideals, ring homomorphisms, Euclidean domains, principal ideal domains, unique factorization domains, fields of quotients, polynomial rings, irreducibility criteria, and the Chinese Remainder Theorem. Topics in module theory include module homomorphisms, the structure theorem for modules over a PID and applications, and the Jordan and rational canonical forms.

MATH 5121. Topology 1. (4 Hours)

Provides an introduction to topology, starting with the basics of point set topology (topological space, continuous maps, homeomorphisms, compactness and connectedness, and identification spaces). Moves on to the basic notions of algebraic and combinatorial topology, such as homotopy equivalences, fundamental group, Seifert-VanKampen theorem, simplicial complexes, classification of surfaces, and covering space theory. Ends with a brief introduction to simplicial homology and knot theory. Requires permission of instructor and head advisor for undergraduate students.

Prerequisite(s): MATH 5111 with a minimum grade of C-

MATH 5122. Geometry 1. (4 Hours)

Covers differentiable manifolds, such as tangent bundles, tensor bundles, vector fields, Frobenius integrability theorem, differential forms, Stokes' theorem, and de Rham cohomology; and curves and surfaces, such as elementary theory of curves and surfaces in R₃, fundamental theorem of surfaces in R₃, surfaces with constant Gauss or mean curvature, and Gauss-Bonnet theorem for surfaces. Requires permission of instructor and head advisor for undergraduate students.

Prerequisite(s): MATH 5101 with a minimum grade of C- ; MATH 5111 with a minimum grade of C-

MATH 5131. Introduction to Mathematical Methods and Modeling. (4 Hours)

Presents mathematical methods emphasizing applications. Uses ordinary and partial differential equations to model the evolution of real-world processes. Topics chosen illustrate the power and versatility of mathematical methods in a variety of applied fields and include population dynamics, drug assimilation, epidemics, spread of pollutants in environmental systems, competing and cooperating species, and heat conduction. Requires students to complete a math-modeling project. Requires undergraduate-level course work in ordinary and partial differential equations.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

MATH 5352. Quantum Computation and Information. (4 Hours)

Introduces the foundations of quantum computation and information, including finite dimensional quantum mechanics, gates and circuits, quantum algorithms, quantum noise, and error-correcting codes. Assumes a working knowledge of linear algebra and matrix analysis, but no prior experience with quantum theory or algorithms is required.

MATH 6000. Professional Development for Co-op. (0 Hours)

Introduces the cooperative education program. Offers students an opportunity to develop job-search and career-management skills; to assess their workplace skills, interests, and values and to discuss how they impact personal career choices; to prepare a professional resumé; and to learn proper interviewing techniques. Explores career paths, choices, professional behaviors, work culture, and career decision making.

MATH 6241. Stochastic Processes. (2 Hours)

Reviews probability theory; conditional probability and expectations; discrete-time and continuous-time Markov chains; Poisson process and exponential distributions (renewal theory and its applications, queueing theory); Brownian motion; and stochastic systems. Examines applications to Monte Carlo simulation and various real-world scenarios. Involves practical applications through computer simulations by a language programming and/or project in real-world problems such as finance, biostatistics, machine learning, etc.

Prerequisite(s): MATH 5010 with a minimum grade of C-

MATH 6243. Statistical Learning. (4 Hours)

Presents fundamental principles of machine learning from a statistical standpoint. Focuses on supervised learning, including regression and classification methods. Topics include linear and polynomial regression, logistic regression, and linear discriminant analysis; cross-validation and the bootstrap, model selection, and regularization methods (ridge and lasso); nonlinear models, splines, and generalized additive models; tree-based methods, random forests, and boosting; and support-vector machines. Examines methods used to learn from data taking a deeper look at algorithms that may appear to be different but actually use similar principles. Discusses some unsupervised learning methods principal components and clustering. Uses a programming language to fit these models using modern techniques for visualization and reporting.

Prerequisite(s): MATH 5010 with a minimum grade of C-

MATH 6910. Master's Project. (1 Hour)

Offers the opportunity to conduct an experimental capstone project or a theoretical work project under faculty supervision. Students identify skills learned in the degree program and articulate their skills, knowledge, and abilities as a part of the course, as they transition to the field or advance in the field. May be repeated once.

MATH 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

MATH 6955. Co-op Work Experience Abroad - Half Time. (0 Hours)

Provides eligible students with an opportunity for work experience abroad.

MATH 6961. Internship. (1-4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

MATH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

MATH 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

MATH 7202. Partial Differential Equations 1. (4 Hours)

Introduces partial differential equations, their theoretical foundations, and their applications, which include optics, propagation of waves (light, sound, and water), electric field theory, and diffusion. Topics include first-order equations by the method of characteristics; linear, quasilinear, and nonlinear equations; applications to traffic flow and geometrical optics; principles for higher-order equations; power series and Cauchy-Kowalevski theorem; classification of second-order equations; linear equations and generalized solutions; wave equations in various space dimensions; domain of dependence and range of influence; Huygens' principle; conservation of energy, dispersion, and dissipation; Laplace's equation; mean values and the maximum principle; the fundamental solution, Green's functions, and Poisson kernels; applications to physics; properties of harmonic functions; the heat equation; eigenfunction expansions; the maximum principle; Fourier transform and the Gaussian kernel; regularity of solutions; scale invariance and the similarity method; Sobolev spaces; and elliptic regularity.

MATH 7203. Numerical Analysis 1. (4 Hours)

Introduces methods and techniques used in contemporary number crunching. Covers floating-point computations involving scalars, vectors, and matrices; solvers for sparse and dense linear systems; matrix decompositions; integration of functions and solutions of ordinary differential equations (ODEs); and Fast Fourier transform. Focuses on finding solutions to practical, real-world problems. Knowledge of programming in Matlab is assumed. Knowledge of other programming languages would be good but not required.

MATH 7205. Numerical Analysis 2. (4 Hours)

Covers numerical analysis and scientific computation. Topics include numerical solutions of ordinary differential equations (ODEs) and one-dimensional boundary value problems; solving partial differential equations (PDEs) using modal expansions, finite-difference, and finite-element methods; stability of PDE algorithms; elementary computational geometry and mesh generation; unconstrained optimization with application to data modeling; and constrained optimization of convex functions: linear and quadratic programming. Focuses on techniques commonly used for data fitting and solving problems from engineering and physical science. Knowledge of programming in MATLAB is assumed. Knowledge of other programming languages beneficial but not required.

MATH 7207. Algorithms for Optimization. (4 Hours)

Covers algorithms used to solve optimization problems, specifically algorithms used to optimize a set of continuous design variables. Presents classic algorithms such as gradient descent, Newton's method, simulated annealing, the simplex method, and others. Studies algorithms for both unconstrained and constrained optimization. Discusses optimization of both convex and nonconvex objective functions. Emphasizes hands-on and practical implementation of the algorithms presented by writing computer programs. Uses applications from business and industry to illustrate how the algorithms work and when they should be applied.

MATH 7221. Topology 2. (4 Hours)

Continues MATH 5121. Introduces homology and cohomology theory. Studies singular homology, homological algebra (exact sequences, axioms), Mayer-Vietoris sequence, CW-complexes and cellular homology, calculation of homology of cellular spaces, and homology with coefficients. Moves on to cohomology theory, universal coefficients theorems, Bockstein homomorphism, Künneth formula, cup and cap products, Hopf invariant, Borsuk-Ulam theorem, and Brouwer and Lefschetz-Hopf fixed-point theorems. Ends with a study of duality in manifolds including orientation bundle, Poincaré duality, Lefschetz duality, Alexander duality, Euler class, Lefschetz numbers, Gysin sequence, intersection form, and signature.

MATH 7223. Riemannian Optimization. (4 Hours)

Offers a self-contained introduction to optimization on smooth manifolds. Covers both theoretical foundations and practical computational methods that students can apply to their own work. Introduces the theory of Riemannian geometry. Emphasizes those elements that are relevant for the construction of optimization algorithms (tensor fields, metrics, connections, geodesics, retractions, and transporters). Applies this geometric machinery to devise first- and second-order smooth optimization methods on generic Riemannian manifolds. Focuses on the development of practical computational techniques, with applications to robotics, computer vision, and machine learning.

MATH 7233. Graph Theory. (4 Hours)

Covers fundamental concepts in graph theory. Topics include adjacency and incidence matrices, paths and connectedness, and vertex degrees and counting; trees and distance including properties of trees, distance in graphs, spanning trees, minimum spanning trees, and shortest paths; matchings and factors including matchings in bipartite graphs, Hall's matching condition, and min-max theorems; connectivity, such as vertex connectivity, edge connectivity, k-connected graphs, and Menger's theorem; network flows including maximum network flow, and integral flows; vertex colorings, such as upper bounds, Brooks' theorem, graphs with large chromatic number, and critical graphs; Eulerian circuits and Hamiltonian cycles including Euler's theorem, necessary conditions for Hamiltonian cycles, and sufficient conditions; planar graphs including embeddings and Euler's formula, characterization of planar graphs (Kuratowski's theorem); and Ramsey theory including Ramsey's theorem, Ramsey numbers, and graph Ramsey theory.

MATH 7234. Optimization and Complexity. (4 Hours)

Offers theory and methods of maximizing and minimizing solutions to various types of problems. Studies combinatorial problems including mixed integer programming problems (MIP); pure integer programming problems (IP); Boolean programming problems; and linear programming problems (LP). Topics include convex subsets and polyhedral subsets of n-space; relationship between an LP problem and its dual LP problem, and the duality theorem; simplex algorithm, and Kuhn-Tucker conditions for optimality for nonlinear functions; and network problems, such as minimum cost and maximum flow-minimum cut. Also may cover complexity of algorithms; problem classes P (problems with polynomial-time algorithms) and NP (problems with nondeterministic polynomial-time algorithms); Turing machines; and NP-completeness of traveling salesman problem and other well-known problems.

MATH 7235. Discrete Geometry 1. (4 Hours)

Discusses basic concepts in discrete and combinatorial geometry. Topics may include convex sets and their basic properties; theorems of Helly, Radon, and Carathéodory; separation theorems for convex bodies; convex polytopes; face vectors; Euler's theorem and Dehn-Sommerville equations; upper bound theorem; symmetry groups; regular polytopes and tessellations; reflection groups and Coxeter groups; regular tessellations on surfaces; abstract regular and chiral polytopes; and other topics at instructor's discretion.

MATH 7241. Probability 1. (4 Hours)

Offers an introductory course in probability theory, with an emphasis on problem solving and modeling. Starts with basic concepts of probability spaces and random variables, and moves on to the classification of Markov chains with applications. Other topics include the law of large numbers and the central limit theorem, with applications to the theory of random walks and Brownian motion.

MATH 7243. Machine Learning and Statistical Learning Theory 1. (4 Hours)

Introduces both the mathematical theory of learning and the implementation of modern machine-learning algorithms appropriate for data science. Modeling everything from social organization to financial predictions, machine-learning algorithms allow us to discover information about complex systems, even when the underlying probability distributions are unknown. Algorithms discussed include regression, decision trees, clustering, and dimensionality reduction. Offers students an opportunity to learn the implications of the mathematical choices underpinning the use of each algorithm, how the results can be interpreted in actionable ways, and how to apply their knowledge through the analysis of a variety of data sets and models.

MATH 7301. Functional Analysis. (4 Hours)

Provides an introduction to essential results of functional analysis and some of its applications. The main abstract facts can be understood independently. Proof of some important basic theorems about Hilbert and Banach spaces (Hahn-Banach theorem, open mapping theorem) are omitted, in order to allow more time for applications of the abstract techniques, such as compact operators; Peter-Weyl theorem for compact groups; spectral theory; Gelfand's theory of commutative C*-algebras; mean ergodic theorem; Fourier transforms and Sobolev embedding theorems; and distributions and elliptic operators.

Prerequisite(s): MATH 5102 with a minimum grade of C- or MATH 5102 with a minimum grade of C-

MATH 7311. Commutative Algebra. (4 Hours)

Introduces some of the main tools of commutative algebra, particularly those tools related to algebraic geometry. Topics include prime ideals, localization, and integral extensions; primary decomposition; Krull dimension; chain conditions, and Noetherian and Artinian modules; and additional topics from ring and module theory as time permits.

Prerequisite(s): MATH 5111 with a minimum grade of C-

MATH 7314. Algebraic Geometry 1. (4 Hours)

Concentrates on the techniques of algebraic geometry arising from commutative and homological algebra, beginning with a discussion of the basic results for general algebraic varieties, and developing the necessary commutative algebra as needed. Considers affine and projective varieties, morphisms of algebraic varieties, regular and singular points, and normality. Discusses algebraic curves, with a closer look at the relations between the geometry, algebra, and function theories. Examines the Riemann-Roch theorem with its many applications to the study of the geometry of curves. Studies the singularities of curves.

Prerequisite(s): MATH 5112 with a minimum grade of C-

MATH 7315. Algebraic Number Theory. (4 Hours)

Covers rings of integers, Dedekind domains, factorization of ideals, ramification, and the decomposition and inertia subgroups; units in rings of integers, Minkowski's geometry of numbers, and Dirichlet's unit theorem; and class groups, zeta functions, and density sets of primes.

Prerequisite(s): MATH 5111 with a minimum grade of C-

MATH 7317. Modern Representation Theory. (4 Hours)

Introduces students to modern techniques of representation theory, including those coming from geometry and mathematical physics. Covers applications of geometry to the representation theory of semisimple Lie algebras, algebraic groups and related algebraic objects, questions related to the representation theory of infinite dimensional Lie algebras, quantum groups, and p-adic groups, as well as category theory methods in representation theory.

Prerequisite(s): MATH 5111 with a minimum grade of C-

MATH 7320. Modern Algebraic Geometry. (4 Hours)

Introduces students to modern techniques of algebraic geometry, including those coming from Lie theory, symplectic and differential geometry, complex analysis, and number theory. Covers subjects related to invariant theory, homological algebra questions of algebraic geometry, including derived categories and complex analytic, differential geometric, and arithmetic aspects of the geometry of algebraic varieties. Students not meeting course prerequisites or restrictions may seek permission of instructor.

Prerequisite(s): MATH 7314 with a minimum grade of C- or MATH 7361 with a minimum grade of C-

MATH 7321. Topology 3. (4 Hours)

Continues MATH 7221 and studies classical algebraic topology and its applications. Introduces homotopy theory. Topics include higher homotopy groups, cofibrations, fibrations, homotopy sequences, homotopy groups of Lie groups and homogeneous spaces, Hurewicz theorem, Whitehead theorem, Eilenberg-MacLane spaces, obstruction theory, Postnikov towers, and spectral sequences.

Prerequisite(s): MATH 7221 with a minimum grade of C-

MATH 7338. Probability and Measure. (4 Hours)

Focuses on measure-theoretic probability theory, with an emphasis on proofs. Introduces measure spaces and the different notions of convergence that are relevant for random variables. Studies the classical limit theorems about sums of independent, identically distributed random variables. Proves both the law of large numbers and central limit theorem under optimal assumptions. Covers the theory of martingales, with applications toward random walks, Markov chains, and continuous time diffusion processes.

Prerequisite(s): MATH 5102 with a minimum grade of C-

MATH 7339. Machine Learning and Statistical Learning Theory 2. (4 Hours)

Continues MATH 7243. Further covers theory and methods for regression and classification, along with more advanced topics in machine learning, statistical learning, and deep learning. Reviews the basics of machine learning in a broader and deeper way. Additional topics are drawn from smoothing methods, clustering, latent variable models, mixture models, Markov decision process and reinforcement learning, and neural networks. Discusses recent research papers on image classification and segmentation, generative adversarial network, neural style transfer, natural language processing, and topological data analysis. Uses theory, models, and algorithms to analyze a variety of datasets.

Prerequisite(s): CS 6140 with a minimum grade of C- or DS 5220 with a minimum grade of C- or EECE 5644 with a minimum grade of C- or MATH 7243 with a minimum grade of C-

MATH 7340. Statistics for Bioinformatics. (4 Hours)

Introduces the concepts of probability and statistics used in bioinformatics applications, particularly the analysis of microarray data. Uses statistical computation using the open-source R program. Topics include maximum likelihood; Monte Carlo simulations; false discovery rate adjustment; nonparametric methods, including bootstrap and permutation tests; correlation, regression, ANOVA, and generalized linear models; preprocessing of microarray data and gene filtering; visualization of multivariate data; and machine-learning techniques, such as clustering, principal components analysis, support vector machine, neural networks, and regression tree.

MATH 7341. Probability 2. (4 Hours)

Continues MATH 7241. Studies probability theory, with an emphasis on its use in modeling and queueing theory. Starts with basic properties of exponential random variables, and then applies this to the study of the Poisson process. Queueing theory forms the bulk of the course, with analysis of single-server queues, multiserver queues, and networks of queues. Also includes material on continuous-time Markov processes, renewal theory, and Brownian motion.

Prerequisite(s): MATH 7241 with a minimum grade of C- or IE 6200 with a minimum grade of C-

MATH 7342. Mathematical Statistics. (4 Hours)

Introduces mathematical statistics, emphasizing theory of point estimations. Topics include parametric estimations, minimum variance unbiased estimators, sufficiency and completeness, and Rao-Blackwell theorem; asymptotic (large sample) theory, maximum likelihood estimator (MLE), consistency of MLE, asymptotic theory of MLE, and Cramer-Rao bound; and hypothesis testing, Neyman-Pearson fundamental lemma, and likelihood ratio test.

MATH 7343. Applied Statistics. (4 Hours)

Designed as a basic introductory course in statistical methods for graduate students in mathematics as well as various applied sciences. Topics include descriptive statistics, inference for population means, analysis of variance, nonparametric methods, and linear regression. Studies how to use the computer package SPSS, doing statistical analysis and interpreting computer outputs.

MATH 7344. Regression, ANOVA, and Design. (4 Hours)

Discusses one-sample and two-sample tests; one-way ANOVA; factorial and nested designs; Cochran's theorem; linear and nonlinear regression analysis and corresponding experimental design; analysis of covariance; and simultaneous confidence intervals.

MATH 7351. Mathematical Methods of Classical Mechanics. (4 Hours)

Overviews the mathematical formulation of classical mechanics. Topics include Hamilton's principle and Lagrange's equations; solution of the two-body central force problem; rigid body rotation and Euler's equations; the spinning top; Hamilton's equations; the Poisson bracket; Liouville's theorem; and canonical transformations.

MATH 7359. Elliptic Curves and Modular Forms. (4 Hours)

Introduces elliptic curves and modular forms. Examines elliptic curves as algebraic varieties over the complex numbers, finite fields, and local and global fields. Related topics include the j-invariant, the Tate module and the Weil pairing, zeta functions and the Weil conjectures, and the Mordell-Weil theorem. Modular forms are defined on moduli spaces of elliptic curves. Related topics include Eisenstein series, cusp forms, congruence subgroups of $\text{SL}_2(\mathbb{Z})$, modularity and the Taniyama-Shimura conjecture, and Fermat's Last Theorem.

Prerequisite(s): MATH 5111 with a minimum grade of C- or MATH 5112 with a minimum grade of C-

MATH 7362. Topics in Algebra. (4 Hours)

Focuses on various advanced topics in algebra, the specific subject matter depending on the interests of the instructor and of the students. Topics may include homological algebra, commutative algebra, representation theory, or combinatorial aspects of commutative algebra. May be repeated without limit.

MATH 7363. Topics in Algebraic Geometry. (4 Hours)

Focuses on various advanced topics in algebraic geometry, the specific subject matter depending on the interests of the instructor and of the students. Topics may include integrable systems, cohomology theory of algebraic schemes, study of singularities, geometric invariant theory, and flag varieties and Schubert varieties. May be repeated without limit.

MATH 7364. Topics in Representation Theory. (4 Hours)

Offers topics in the representation theory of the classical groups, topics vary according to the interest of the instructor and students. Topics may include root systems, highest weight modules, Verma modules, Weyl character formula, Schur commutator lemma, Schur functors and symmetric functions, and Littlewood-Richardson rule. May be repeated up to five times.

MATH 7371. Morse Theory. (4 Hours)

Covers basic Morse theory for nondegenerate smooth functions, and applications to geodesics, Lie groups and symmetric spaces, Bott periodicity, Morse inequalities, and Witten deformation.

Prerequisite(s): (MATH 5122 with a minimum grade of C- or MATH 5122 with a minimum grade of D-); MATH 7221 with a minimum grade of C- ; MATH 7301 with a minimum grade of C-

MATH 7375. Topics in Topology. (4 Hours)

Offers various advanced topics in algebraic and geometric topology, the subject matter depending on the instructor and the students. Topics may include Morse theory, fiber bundles and characteristic classes, topology of complex hypersurfaces, knot theory and low-dimensional topology, K-theory, and rational homotopy theory. May be repeated without limit.

Prerequisite(s): MATH 5121 (may be taken concurrently) with a minimum grade of C-

MATH 7381. Topics in Combinatorics. (4 Hours)

Offers various advanced topics in combinatorics, the subject matter depending on the instructor and the students. May be repeated without limit.

Prerequisite(s): (MATH 5122 with a minimum grade of C- or MATH 5122 with a minimum grade of D-); MATH 7222 with a minimum grade of C-

MATH 7382. Topics in Probability. (4 Hours)

Offers various advanced topics in probability and related areas. The specific subject matter depends on the interest of the instructor and students. May be repeated up to five times.

MATH 7721. Readings in Topology. (4 Hours)

Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7733. Readings in Graph Theory. (4 Hours)

Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7734. Readings in Algebra. (4 Hours)

Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7735. Readings in Algebraic Geometry. (4 Hours)

Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7736. Readings in Discrete Geometry. (4 Hours)

Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7741. Readings in Probability and Statistics. (4 Hours)

Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7755. Readings in Partial Differential Equations. (4 Hours)

Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated up to five times.

Prerequisite(s): MATH 7202 with a minimum grade of C-

MATH 7771. Readings in Geometry. (4 Hours)

Offers topics in geometry that are beyond the ordinary undergraduate topics. Topics include the regular polytopes in dimensions greater than three, straight-edge and compass constructions in hyperbolic geometry, Penrose tilings, the geometry and algebra of the wallpaper, and three-dimensional Euclidean groups. May be repeated without limit.

MATH 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 8450. Research Seminar in Mathematics. (4 Hours)

Introduces graduate students to current research in geometry, topology, mathematical physics, and in other areas of mathematics. Requires permission of instructor for undergraduate mathematics students. May be repeated without limit.

MATH 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

MATH 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

MATH 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

MATH 9984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

MATH 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): MATH 9000 with a minimum grade of S

MATH 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): MATH 9990 with a minimum grade of S

MATH 9996. Dissertation Continuation. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): MATH 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Mathematics - CPS (MTH)**Courses****MTH 1100. College Algebra. (3 Hours)**

Covers laws of exponents, factoring, inequalities, polynomials, roots, linear and quadratic equations, complex numbers, rational functions, systems of equations, exponential and logarithmic functions, and inverse functions. Requires students to communicate mathematical ideas using symbolic and written forms and to apply algebraic concepts to real-life applications. Seeks to provide students with a solid foundation of concepts and skills necessary to advance to statistics or precalculus. Requires prior knowledge of the manipulation and simplification of basic algebraic expressions.

Attribute(s): NUpath Formal/Quant Reasoning

MTH 1105. Quantitative Skills and Reasoning: Practical Math. (3 Hours)

Uses basic mathematics and statistics concepts to analyze, synthesize, and interpret quantitative data in the context of various disciplines and everyday applications. This is an introductory mathematics course.

MTH 1200. Precalculus. (3 Hours)

Combines algebraic, geometric, and trigonometric concepts and techniques to model real-world situations (that is, exponential growth and decay, periodic phenomena). Successful completion of this course should strengthen the student's conceptual understanding of mathematics and critical reasoning. Focuses on linear, polynomial, exponential, logarithmic, trigonometric functions and conic sections. Emphasizes understanding, manipulating, and graphing these basic functions, their inverses and compositions, and using them to solve applications drawn from the physical and natural sciences.

Attribute(s): NUpath Formal/Quant Reasoning

MTH 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 2100. Calculus 1. (3 Hours)

Focuses primarily on differential calculus. Using mathematical models, offers students an opportunity to make predictions and inferences in a variety of applications that relate to the fields of engineering, economics, biology, etc. For example, students can use differential calculus to determine what is the most cost-effective speed to drive a car, using the least amount of fuel. These types of problems, called optimization problems, require an understanding of the derivative as a rate of change. The course focuses on how to apply rules and properties of derivatives to model and solve application problems in science, engineering, and technology. As a prelude to MTH 2105, at the end of the semester, the concept of the integral is introduced as a limit of sums and antiderivatives.

Attribute(s): NUpath Formal/Quant Reasoning

MTH 2105. Calculus 2. (3 Hours)

Continues MTH 2100. Uses mathematical models to make predictions and inferences in a variety of applications that relate to the fields of engineering, economics, biology, etc. Focuses primarily on integral calculus and infinite sequences and series. Topics include definite and indefinite integration, the fundamental theorem of calculus, and the use of integration methods in the calculation of areas and volumes and other applications. Introduces improper integrals as well as the study of infinite sequences and series, power series, Taylor series, and techniques for determining convergence or divergence of sequences and series. This course offers an in-depth overview of the above concepts and applies them to solve problems in science, engineering, and technology.

Prerequisite(s): MTH 2100 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning

MTH 2120. Technical Math 1. (3 Hours)

Reviews topics of trigonometry, differential and integral calculus. Emphasis is placed on limits, continuity, derivatives and integrals of algebraic and transcendental functions of one variable. Upon completion, students should be able to select and use appropriate models and techniques for finding solutions to derivative-related problems with and without technology. This is an accelerated course designed for Advanced Manufacturing Systems and Engineering Technology students.

MTH 2220. Technical Math 2. (3 Hours)

Continuation of MTH 2120. Focuses primarily on integral calculus and differential equations. Topics include definite and indefinite integration, the fundamental theorem of calculus, and the use of integration methods in the calculation of areas and volumes, ordinary differential equations, and Laplace transforms.

Prerequisite(s): MTH 2120 (may be taken concurrently) with a minimum grade of D-

MTH 2300. Business Statistics. (3 Hours)

Offers students an opportunity to obtain the necessary skills to collect, summarize, analyze, and interpret business-related data. Covers descriptive statistics, sampling and sampling distributions, statistical inference, relationships between variables, formulating and testing hypotheses, and regression analysis in the context of business decision making.

Prerequisite(s): MTH 1100 with a minimum grade of D- or MTH 1200 with a minimum grade of D- or MTH 2100 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

MTH 2310. Statistics for the Behavioral and Social Sciences. (3 Hours)

Offers students an opportunity to obtain the necessary skills to collect, summarize, analyze, and interpret social and behavioral science data. Covers descriptive statistics, sampling and sampling distributions, statistical inference, relationships between variables, formulating and testing hypotheses, and regression analysis in the context of the social and behavioral sciences.

Prerequisite(s): MTH 1100 with a minimum grade of D- or MTH 1200 with a minimum grade of D- or MTH 2100 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

MTH 2400. Technology and Applications of Discrete Mathematics. (3 Hours)

Offers students experience with and exposure to ideas and techniques from discrete mathematics, which is at the foundation of the technological disciplines. Focuses on applications and practical use of discrete mathematics as it is applied to the computing sciences and engineering disciplines. Topics covered include sets; logic; Boolean algebra; machine representations of numbers (decimal, binary, octal, hexadecimal) and arithmetic; counting methods; graphs; and trees. Specific applications include algorithms and complexity, circuits and circuit diagrams, searching and sorting, networks, probability, and finite-state machines. Requires students to select and apply appropriate techniques from discrete math to address common problems found in modern technological systems, especially software and computing hardware design.

Prerequisite(s): MTH 1100 with a minimum grade of D- or MTH 1200 with a minimum grade of D- or MTH 2100 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning

MTH 2450. Discrete Structures. (3 Hours)

Covers the necessary foundations from discrete mathematics as widely applied to the computer science and engineering disciplines. Emphasizes appropriate techniques from discrete math to address complex problems found in modern computing science and computer engineering applications.

Prerequisite(s): MTH 1100 with a minimum grade of D- or MTH 1200 with a minimum grade of D- or MTH 2100 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning

MTH 2500. Statistical Quality Control. (3 Hours)

Introduces statistical analysis and concepts related to engineering manufacturing quality control, including process capability, control charts, acceptance sampling, and process improvement. Other topics include Six Sigma, statistical and graphical data summaries, quality engineering, and quality design.

Prerequisite(s): MTH 2120 with a minimum grade of D-

MTH 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 3300. Applied Probability and Statistics. (3 Hours)

Covers randomness, finite probability space, probability measure, events; conditional probability, independence, Bayes' theorem; discrete random variables; binomial and Poisson distributions; concepts of mean and variance; continuous random variables; exponential and normal distribution, probability density functions, calculation of mean and variance; central limit theorem and implications for normal distribution; purpose and the nature of sampling; nature of estimates, point estimates, interval estimates; maximum likelihood, least-squares approach; confidence intervals; estimates for one or two samples; development of models and associated hypotheses; nature of hypothesis formulation, null and alternate hypotheses, testing hypotheses; test statistics: t-test, chi-squared test; correlation and regression; Markov processes, discrete time systems, and continuous time systems; queuing theory, including system simulation and modeling, queueing methods.

Prerequisite(s): MTH 2100 with a minimum grade of D- or MTH 2105 with a minimum grade of D- or MTH 2110 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

MTH 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

MTH 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Mathematics - CPS Specialty (MATM)**Courses****MATM 1120. Precalculus. (4 Hours)**

Focuses on linear, polynomial, exponential, logarithmic, and trigonometric functions. Emphasis is placed on understanding, manipulating, and graphing these basic functions, their inverses and compositions, and using them to model real-world situations (that is, exponential growth and decay, periodic phenomena). Equations involving these functions are solved using appropriate techniques. Special consideration is given to choosing reasonable functions to fit numerical data.

MATM 1231. Calculus 1 for Business and Economics. (4 Hours)

Provides an overview of differential calculus including derivatives of power; exponential, logarithmic, logistic functions; and functions built from these. Derivatives are used to model rates of change, to estimate change, to optimize functions, and in marginal analysis. The integral calculus is applied to accumulation functions and future value. Emphasizes realistic business and economics problems, the development of mathematical models from raw business data, and the translation of mathematical results into verbal expression appropriate for the business setting. Also features a semester-long marketing project in which students gather raw data, model it, and use calculus to make business decisions; each student is responsible for a ten-minute presentation.

MATM 1341. Calculus 1 for Science and Engineering. (4 Hours)

Covers definition, calculation, and major uses of the derivative, as well as an introduction to integration. Topics include limits; the derivative as a limit; rules for differentiation; and formulas for the derivatives of algebraic, trigonometric, and exponential/logarithmic functions. Also discusses applications of derivatives to motion, density, optimization, linear approximations, and related rates. Topics on integration include the definition of the integral as a limit of sums, antidifferentiation, the fundamental theorem of calculus, and integration by substitution.

MATM 1342. Calculus 2 for Science and Engineering. (4 Hours)

Covers further techniques and applications of integration, infinite series, and introduction to vectors. Topics include integration by parts; numerical integration; improper integrals; separable differential equations; and areas, volumes, and work as integrals. Also discusses convergence of sequences and series of numbers, power series representations and approximations, 3D coordinates, parameterizations, vectors and dot products, tangent and normal vectors, velocity, and acceleration in space.

Mechanical and Industrial Engineering (MEIE)

Courses

MEIE 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MEIE 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MEIE 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MEIE 4701. Capstone Design 1. (1 Hour)

Offers the first in a two-course sequence that culminates the student's education and experience with the design process. Students form teams and are assigned their design project and faculty adviser. Projects can be industrially, departmentally, or externally sponsored. Students are expected to communicate with their faculty adviser, course coordinator, and sponsor using the Internet, teleconferencing, and other electronic methods. Topics include project management, ethics, cost analysis, Internet and library research methods, and engineering codes and standards. Students prepare written reports and make oral presentations. Students are expected to complete a thorough state-of-the-art report on their problem and a problem statement with specifications and requirements.

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

MEIE 4702. Capstone Design 2. (5 Hours)

Continues MEIE 4701. Students are expected to apply engineering principles acquired throughout their undergraduate academic and co-op experiences to the design of a system, component, or process. Each project includes the development and use of design methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, and detailed system descriptions. Projects include realistic constraints such as economic factors, safety, reliability, maintenance, aesthetics, ethics, and political and social impact. Students make oral presentations on their results in a series of design reviews. Students document their solutions using a written report that includes an executive summary. A working prototype or simulation, as appropriate, of their solution is required to complete the course.

Prerequisite(s): MEIE 4701 with a minimum grade of I ; ((ME 4550 with a minimum grade of D- or ME 4570 with a minimum grade of D-) or (IE 4510 with a minimum grade of D- ; IE 4515 with a minimum grade of D- ; IE 4516 with a minimum grade of D- ; IE 4530 with a minimum grade of D-))

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Writing Intensive

MEIE 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MEIE 6800. Technical Writing and Professional Development. (0 Hours)

Offers students an opportunity to increase their professional communication skills through intensive verbal practice and technical writing application. Students work together in groups and individually to practice verbal and written communication that can increase their English competency and comfort level for work in the United States. Passing of the language assessment at the end of this course can be used to waive the TOEFL/IELTS requirements for co-op eligibility within the Department of Mechanical and Industrial Engineering. This course does not count toward graduation requirements.

MEIE 6830. Graduate Traineeship 1, Technical Writing and Communications. (2 Hours)

Focuses on technical writing. Covers writing and preparation tips for technical papers. Includes effective communications, such as Ph.D. proposal preparation and presentation, and technical seminar presentation tips.

MEIE 6850. Research Seminar in Mechanical and Industrial Engineering. (0 Hours)

Offers a research seminar presenting topics of current interest in a variety of areas in mechanical and industrial engineering. May be repeated without limit.

MEIE 6860. Graduate Traineeship 2, Research Ethics and Professional Development. (2 Hours)

Focuses on responsible conduct of research, research misconduct (plagiarism, falsification, and fabrication), research ethics, and professional and personal development. Offers optional modules on grant proposal preparation, academic career preparation, faculty and professional jobs search, research and teaching statements preparation, how to become an effective teacher, mentorship, entrepreneurship, and industry insights and real-world experiences.

MEIE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Mechanical Engineering (ME)

Courses

ME 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 2340. Introduction to Material Science. (4 Hours)

Introduces the materials science field, which emphasizes the structure-processing property-performance relationships for various classes of materials including metals, ceramics, polymers, electronic materials, and magnetic materials. Topics include crystallography, structure of solids, imperfections in crystals, mechanical properties, dislocation theory, slip, strengthening mechanisms, phase equilibrium, phase transformations, diffusion, thermal and optical physical properties, and electrical and magnetic properties. Issues associated with materials selection, including economic and environmental consequences of materials choices, are also addressed. Laboratory experiments, with written memo and report submissions, are required. Includes individual and team-based projects.

Prerequisite(s): (CHEM 1151 with a minimum grade of D- or CHEM 1161 with a minimum grade of D- or CHEM 1211 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Corequisite(s): ME 2341

Attribute(s): NUpath Writing Intensive

ME 2341. Lab for ME 2340. (1 Hour)

Accompanies ME 2340. Covers topics from the course through various activities.

Corequisite(s): ME 2340

ME 2350. Statics. (4 Hours)

Introduces the vector representation of force and moment, the equivalent force systems, free body diagrams, and equations of equilibrium. Discusses centroids and center of gravity of rigid bodies. Examines applications to beams, trusses, and pin-connected frames and elementary concepts of friction. Discusses variation of internal forces and moments for beams and cable systems. Theory of dry friction is implemented in simple machine elements. Introduces the concepts of virtual work and potential energy. Includes a design project that demonstrates the fundamental concepts of equilibrium.

Prerequisite(s): (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-); MATH 1342 with a minimum grade of D-

ME 2355. Mechanics of Materials. (4 Hours)

Discusses concepts of stress and strain; transformation of stress and strain at a point; stress-strain relations material properties; second moments of cross-sectional areas; stresses and deformations in simple structural members due to axial torsional, and flexural loading for statically determinate and indeterminate cases; design of beams under combined loading; and stability of structures and buckling of columns with various supports. Laboratory experiments and written reports are required.

Prerequisite(s): ME 2350 with a minimum grade of D- or CIVE 2221 with a minimum grade of D-

Corequisite(s): ME 2356

ME 2356. Lab for ME 2355. (1 Hour)

Accompanies ME 2355. Covers topics from the course through various activities.

Corequisite(s): ME 2355

ME 2380. Thermodynamics. (4 Hours)

Defines and calculates thermodynamic properties such as energy, entropy, temperature, and pressure. Work and heat interactions are defined. The first and second laws of thermodynamics and concepts of thermodynamic equilibrium are introduced. Conservation of energy and mass and the entropy balance relation are discussed for open and closed systems. Irreversibility, energy, and the energy balance relation are introduced and applied in analyzing thermodynamic systems. Fundamentals of thermodynamics are used to model power generation and refrigeration systems. Covers thermodynamics of nonreacting gas mixtures with applications to air-water vapor mixtures for air-conditioning systems.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D-)

Corequisite(s): ME 2381

ME 2381. Recitation for ME 2380. (0 Hours)

Accompanies ME 2380. Offers demonstrations and opportunities for problem solving.

Corequisite(s): ME 2380

ME 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 3455. Dynamics. (4 Hours)

Treats the kinematics and kinetics of particles by using force, mass and acceleration, and energy and momentum methods. Investigates kinematics of rigid bodies in general plane motion. Introduces mass moment of inertia; kinetics of rigid bodies by using force-mass-acceleration, work and energy, and impulse and momentum methods; and free and forced vibration of undamped and damped one-degree-of-freedom systems.

Prerequisite(s): (ME 2350 with a minimum grade of D- or CIVE 2221 with a minimum grade of D-); MATH 2341 with a minimum grade of D-

Corequisite(s): ME 3456

ME 3456. Lab for ME 3455. (1 Hour)

Accompanies ME 3455. Covers topics from the course through various activities.

Corequisite(s): ME 3455

ME 3460. Robot Dynamics and Control. (4 Hours)

Covers fundamental components and mechanisms of robotic systems and their multidisciplinary nature. Introduces the robot's kinematics, dynamics, and control. Presents a quick overview of forward and inverse kinematics, robot dynamics, as well as path planning and control techniques. Topics also include dynamic modeling and analysis of mechanically, electrically, and magnetically driven hydraulic and pneumatic drives; kinematics and motion analysis of linkages; as well as sensing technologies (e.g., position, linear and angular displacements, velocity and acceleration, force and torque sensors) used in robotic systems. Presents kinematics and control of automatic machinery and manufacturing processes, automatic assembly, and inspection robotic systems as representative examples.

Prerequisite(s): CS 3650 with a minimum grade of D- or MATH 2331 with a minimum grade of D- or MATH 2341 with a minimum grade of D-

ME 3465. Introduction to Flight. (4 Hours)

Presents the fundamentals of aerospace engineering at the introductory level. Covers historical developments and background associated with aerospace engineering in parallel with technical discussions. Introduces thermodynamic analyses of flowing gasses and derivations of the governing equations accompanying the anatomy of airplanes and space vehicles. Studies basics of fluid dynamics such as continuity, momentum and energy equations, and isentropic flows. Discusses shapes, designs, characteristics, and usage of different aerodynamic shapes and their corresponding lift, drag, and momentum coefficients. Explores the elements of airplane performance in level flight, takeoff, and landing. Covers the introduction to the dynamics of flight, stability, and control of the airplanes and astronomic vehicles. Designed for students interested in an introductory course in aerospace engineering and the fundamentals and historical traditions of aerodynamics of flight.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D-); ME 2380 with a minimum grade of D-

ME 3470. Aeronautical Propulsion. (4 Hours)

Introduces basics for the analysis and design of aircraft engines and reviews the history of gas turbine engines. Introduces general conservation laws of mass, energy, and momentum for compressible flows and application to quasi-one-dimensional internal flows and shock waves in external flows. Reviews thrust and thermodynamic performance of the engines. Discusses designing parameters of the inlets in detail. Uses the principles of chemical equilibrium to calculate the composition of combustion products in a chemical reaction to find flame temperature and energy release, which drive the design of combustors and afterburners. Introduces physics and aerodynamics of compressors and turbines, and reviews basics of gas turbine blades cooling.

Prerequisite(s): ME 2380 with a minimum grade of D-

ME 3475. Fluid Mechanics. (4 Hours)

Studies fundamental principles in fluid mechanics. Topics include hydrostatics (pressure distribution, forces on submerged surfaces and buoyancy); Newton's law of viscosity; dimensional analysis; integral forms of basic laws (conservation of mass, momentum, and energy); pipe flow analysis; differential formulation of basic laws including Navier-Stokes equations; and the concept of boundary layer and drag coefficient. Includes a team-based independent project.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; ME 2380 with a minimum grade of D-

ME 3480. International Applications of Fluid Mechanics. (4 Hours)

Studies fundamental principles in fluid mechanics in an international setting. Students have an opportunity to travel to a foreign locale to develop theoretical understanding while experiencing the issues that affect applications of fluids engineering in a culture and environment different from their own. Topics include hydrostatics (pressure distribution, forces on submerged surfaces, and buoyancy); Newton's law of viscosity; dimensional analysis; integral forms of basic laws (conservation of mass, momentum, and energy); pipe flow analysis; differential formulation of basic laws including Navier-Stokes equations; and the concept of boundary layer and drag coefficient. Includes a team-based independent project that focuses on applications that allow students to delve into issues that affect engineering and technology development in their host country.

Prerequisite(s): MATH 2321 with a minimum grade of D- ; ME 2380 with a minimum grade of D-

ME 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 4505. Measurement and Analysis with Thermal Science Application. (4 Hours)

Introduces basic measurements and data analysis techniques. Offers students an opportunity to become familiar with various types of measurement systems and to set up and perform experiments according to a given procedure. Covers basic measurement methods of rotational frequency; temperature, pressure, and power; and analog-to-digital conversion techniques and data acquisition. Data analysis topics include statistical analysis of data, probability and inherent uncertainty, basic measurement techniques, primary and secondary standards, system response characteristics, and computerized data acquisition methods. Includes experiments in thermodynamics, fluid mechanics, and heat transfer. Topics include cycle performance, flow discharge coefficient and heat transfer coefficient measurements, and psychometric applications in the air-conditioning field.

Prerequisite(s): ME 2380 with a minimum grade of D-

Corequisite(s): ME 4506

Attribute(s): NUpath Analyzing/Using Data

ME 4506. Lab for ME 4505. (1 Hour)

Accompanies ME 4505. Covers topics from the course through various activities.

Corequisite(s): ME 4505

ME 4508. Mechanical Engineering Computation and Design. (4 Hours)

Highlights the role of finite element analysis in product development. Introduces the theory of finite elements in elastic/plastic, static, and transient problems. Emphasis is on solid modeling in design using available commercial finite element software. Also covers other numerical techniques such as finite difference schemes in the solution of systems of partial differential equations, and numerical solution to systems of linear and nonlinear equations.

Prerequisite(s): (ME 2355 with a minimum grade of D- ; MATH 2341 with a minimum grade of D-) or (BIOE 2350 with a minimum grade of D- ; (GE 2361 with a minimum grade of D- or MATH 2341 with a minimum grade of D-))

ME 4520. Mechanical Vibration. (4 Hours)

Covers concepts in mechanical vibration analysis. Topics include basic concepts of vibrations, vibration problems vs. dynamic problems, linear vs. nonlinear vibrations, vibrational elements, harmonic motion; free vibration of undamped SDOF systems, stability, Rayleigh's energy method, free vibration of viscously damped SDOF systems, free vibration of damped SDOF systems with Coulomb and hysteretic damping; harmonically forced SDOF systems, harmonic motion of base and rotating unbalance, forced vibrations of Coulomb-damped and hysteresis-damped SDOF systems, general (nonperiodically) forced vibrations; free and forced vibrations of 2 DOF systems, damped vibrations, general eigenvalue problem, vibration measuring instruments; tuned vibration absorbers, passive and active vibration absorbers, vibration-control systems (passive, semiactive, and active), modal analysis software, and illustrative examples.

Prerequisite(s): MATH 2341 (may be taken concurrently) with a minimum grade of D- ; ME 3455 (may be taken concurrently) with a minimum grade of D-

ME 4550. Mechanical Engineering Design. (4 Hours)

Explores development of the mechanical design process and its open-ended nature. Reviews fundamentals of stress and theories of failure including fatigue considerations in the analysis of various machine components. Treatment is given to shafts, springs, screws, connections, lubrications, bearings, gears, and tolerances. Includes team-based design projects that involve modeling and the design process.

Prerequisite(s): ME 2355 with a minimum grade of D-

ME 4555. System Analysis and Control. (4 Hours)

Presents the theoretical backgrounds for the analysis and design of simple feedback control systems, differential equations, and Laplace transforms. Treats system modeling, linear approximations, transfer functions, and block diagrams; and transient and frequency response and stability-frequency domain and root locus methods. Other topics may include linear systems with time lag and relay servomechanisms with small nonlinearities.

Prerequisite(s): ME 3455 with a minimum grade of D- or (BIOE 2350 with a minimum grade of D- ; BIOE 3380 with a minimum grade of D-)

ME 4565. Introduction to Computational Fluid Dynamics. (4 Hours)

Introduces numerical methods applied to solve fluid flow problems. Includes basic mathematics and physics related to computational fluid dynamics (CFD), together with practical assignments that use commercial CFD packages. Emphasizes finite difference and finite volume methods. Other topics include mathematical properties of partial differential equations, accuracy and stability analysis of numerical solution, CFD verification and validation, application to variety of fluid dynamics problems, grid generation, and turbulence modeling.

Prerequisite(s): (ME 3475 with a minimum grade of D- or ME 3480 with a minimum grade of D- or BIOE 3310 with a minimum grade of D-); (MATH 2341 with a minimum grade of D- or GE 2361 with a minimum grade of D-)

ME 4570. Thermal Systems Analysis and Design. (4 Hours)

Introduces theories of thermal energy transport, including conduction, convection, and thermal radiation, and the design of thermal systems. Solution methods are developed for steady-state and transient conduction problems including thermal circuit analogies, internal energy sources and extended surfaces. Convective heat transfer mechanisms are introduced and correlations to evaluate the heat transfer coefficient are discussed. Methodologies for calculating the thermal radiation heat transfer between surfaces are introduced. These theories are integrated with thermodynamics and fluid mechanics in the design of thermal systems, including heat exchangers. Includes an open-ended design project and students are expected to use computational methods throughout the course.

Prerequisite(s): ME 2380 with a minimum grade of D- ; (ME 3475 with a minimum grade of D- or ME 3480 with a minimum grade of D-)

ME 4630. Ceramic Science and Engineering. (4 Hours)

Examines the structure-property relationship of ceramics, focusing mostly on modern engineered ceramics and glasses. Ceramics are broadly defined as materials that are inorganic and nonmetallic and so encompass an extremely broad range of materials and material properties. Discusses their structures from the atomic through the microstructural level and properties from across the thermal, mechanical, optical, electrical, and chemical spectrum. Considers the ideal crystalline and glassy structures, as well as the crucial role of point, linear, and planar defects. Relates phase equilibria and transformations to a survey of modern techniques for ceramic and glass fabrication.

Prerequisite(s): ME 2340 with a minimum grade of D-

ME 4640. Mechanical Behavior and Processing of Materials. (4 Hours)

Continues studies of the physical basis for the mechanical behavior of solid materials including elasticity, plasticity, viscoelasticity, fracture, fatigue, and creep properties. Also covers materials processing and includes casting, forming, joining, and machining.

Prerequisite(s): ME 2340 with a minimum grade of D- ; ME 2355 with a minimum grade of D-

ME 4670. Internal Combustion Engine. (4 Hours)

Presents the concepts and theories of operation of internal combustion engines based upon the fundamental engineering sciences of thermodynamics, gas dynamics, heat transfer, and mechanics. Discusses the design and operating characteristics of conventional spark-ignition, compression-ignition, Wankel, and stratified charge. Explores the relationship between vehicle load and engine load through differential and transmission gear-ratio selections. Includes laboratory experiments.

Prerequisite(s): ME 2380 with a minimum grade of D- ; (ME 3475 with a minimum grade of D- or ME 3480 with a minimum grade of D-)

ME 4699. Special Topics in Mechanical Engineering. (4 Hours)

Focuses on an advanced mechanical engineering project agreed upon between the student and instructor. May be repeated without limit.

ME 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

ME 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): ME 4970 with a minimum grade of D-

ME 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated once.

Attribute(s): NUpath Integration Experience

ME 4992. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ME 5240. Computer Aided Design and Manufacturing. (4 Hours)

Covers basic aspects of computer graphics and CAD/CAM. Topics include hardware and software concepts, generic structure of CAD/CAM software and its modules, and CAD/CAM database structure. Also covers the parametric representations of curves, surfaces, solids, and features that are widely used in existing commercial CAD/CAM systems. Discusses geometrical transformations, CAD/CAM data exchange formats, prototyping techniques, and PDM. Presents applications such as mass properties calculations, assemblies, mechanical tolerancing, simulation, finite element mesh generation, process planning and CAPP, CNC part programming, and Web-based CAD/CAM.

Prerequisite(s): GE 1110 with a minimum grade of B or GE 1501 with a minimum grade of B or graduate program admission

ME 5245. Mechatronic Systems. (4 Hours)

Covers integration of electronic/electrical engineering, computer technology, and control engineering with mechanical engineering to provide a self-contained, modern treatment of mixed systems along with their computer simulation and applications. Topics include mixed-systems integration; sensors, actuation systems; brief overview of dynamic systems modeling, response characterization, and closed-loop controllers; interfacing; data presentation systems and processes; microprocessors; real-time monitoring and control; and applications of mechatronic systems. The course also offers numerous MATLAB/Simulink examples of select mechatronic systems and devices along with open-ended design projects and assignments.

Prerequisite(s): ME 4555 with a minimum grade of C or ME 5659 with a minimum grade of C or ME 5659 with a minimum grade of C

ME 5250. Robot Mechanics and Control. (4 Hours)

Covers kinematics and dynamics of robot manipulators, including the development of kinematics equations of manipulators, the inverse kinematics problem, and motion trajectories. Employs Lagrangian mechanics to cover dynamics of manipulators for the purpose of control. Covers control and programming of robots, steady state errors, calculations of servoparameters, robot vision systems and algorithms, as well as imaging techniques and the concept of mobile robots.

Prerequisite(s): ME 4555 with a minimum grade of D- or graduate program admission

ME 5374. Special Topics in Mechanical Engineering. (4 Hours)

Offers topics of current interest in mechanical engineering.

ME 5520. Fundamentals and Applications of Optics and Photonics. (4 Hours)

Introduces the basic knowledge and recent development in the field of optics and photonics. Explains the property of light from four perspectives: geometric optics, wave optics, electromagnetic optics based on Maxwell's equations, as well as quantum mechanics. Discusses the interactions between light and materials, ranging from bulk to nano and molecular level. Presents representative applications, particularly in the domain of mechanical engineering, which include imaging and microscopy, photolithography, 3D laser printing, solar desalination, radiative cooling, optical tweezers to manipulate micro/nano objects, and solar sails for spacecraft propulsion.

Prerequisite(s): (PHYS 1155 with a minimum grade of D or PHYS 1165 with a minimum grade of D) or graduate program admission

ME 5554. Robotics Sensing and Navigation. (4 Hours)

Examines the actual sensors and mathematical techniques for robotic sensing and navigation with a focus on sensors such as cameras, sonars, and laser scanners. These are used in association with techniques and algorithms for dead reckoning and visual inertial odometry in conjunction with GPS and inertial measurement units. Covers Kalman filters and particle filters as applied to the SLAM problem. A large component of the class involves programming in both the ROS and LCM environments with real field robotics sensor data sets. Labs incorporate real field sensors and platforms. Culminates with both an individual design project and a team-based final project of considerable complexity.

Prerequisite(s): ((MATH 3081 with a minimum grade of D- or EECE 3468 with a minimum grade of D-); (EECE 2160 with a minimum grade of D- or EECE 2210 with a minimum grade of D-)) or graduate program admission

ME 5600. Materials Processing and Process Selection. (4 Hours)

Covers the fundamentals and usage of processes and techniques for bulk, thick film, thin film, and patterned structures. Covers techniques for improvement of mechanical or functional properties, for reliability, or for operation in harsh environments. Includes case studies for which processes are selected based on efficacy, material input, and cost. Systems studied include biocompatible implants and materials for the telecommunication, semiconductor, energy, and aerospace industries.

ME 5620. Fundamentals of Advanced Materials. (4 Hours)

Offers a deep dive into the interdisciplinary field of materials science that addresses the discovery, design, and prediction of new materials, with an emphasis on solids. Offers students an opportunity to gain knowledge and practice in issues of materials science. Consists of fundamentals, properties (emphasis on electronic properties), applications, and advanced topics. Provides specific readings from the literature assigned to support the in-class lectures. Offers a variety of opportunities to practice and demonstrate comprehension and learning.

Prerequisite(s): ME 2340 with a minimum grade of D- or graduate program admission

ME 5630. Nano- and Microscale Manufacturing. (4 Hours)

Introduces students to nano- and microscale manufacturing of applications in electronics, energy, materials, and life sciences. Offers students an opportunity to understand conventional fabrication approaches to making today's consumer electronics (top-down). Presents new and emerging bottom-up manufacturing approaches, including additive manufacturing for making electronics and other applications.

ME 5640. Additive Manufacturing. (4 Hours)

Discusses fundamentals, process characteristics, and practical applications of various additive manufacturing (AM) processes. Covers digital workflow for AM, implications of AM on design, material for AM and material properties, energy sources and interaction with materials, AM processes, process characteristics and capabilities, process models, design of experiments and Taguchi methods for AM process parameter optimization, postprocessing of AM parts, process defects, and the Ansys AM module.

ME 5645. Environmental Issues in Manufacturing and Product Use. (4 Hours)

Explores environmental and economic aspects of different materials used in products throughout the product life cycle. Introduces concepts of industrial ecology, life cycle analysis, and sustainable development. Students work in teams to analyze case studies of specific products fabricated using metals, ceramics, polymers, or paper. These case studies compare cost, energy, and resources used and emissions generated through the mining, refining, manufacture, use, and disposal stages of the product life cycle. Debates issues in legislation (extended product responsibility, recycling mandates, and ecolabeling) and in disposal strategies (landfill, incineration, reuse, and recycling). Discusses difficulties associated with environmental impact assessments and the development of decision analysis tools to weigh the tradeoffs in technical, economic, and environmental performance, and analyzes specific case studies.

ME 5650. Advanced Mechanics of Materials. (4 Hours)

Covers stress, strain, and deformation analysis of simple structures including beams, plates, and shells. Topics include classical theory of circular and rectangular plates; combined effects of bending and in-plane forces; buckling of plates; effects of shear deformation and of large deflections; membrane theory of shells; analysis of cylindrical shells; introduction to energy methods with applications to beams, frames, and rings; Ritz method; and the concept of stability as applied to one and two degree-of-freedom systems buckling of bars, frames, and rings. Permission of instructor required for undergraduate students.

ME 5653. Inelasticity. (4 Hours)

Introduces models suitable for rate-independent and rate-dependent plasticity, creep, viscoplasticity, viscoelasticity, and damage. Emphasizes the interdisciplinary nature of nonlinear constitutive theories. Offers students an opportunity to understand the phenomenological aspects of nonlinear and time-dependent material behavior and to obtain the ability to develop and use mathematical models that describe inelastic deformation behavior.

Prerequisite(s): ME 2355 with a minimum grade of D- or graduate program admission

ME 5654. Elasticity and Plasticity. (4 Hours)

Covers stress and strain analysis in continuous media. Analyzes Cartesian tensors using indicial notation; stress and strain concepts; point stress and strain; relation to tensor concepts; equations of equilibrium and compatibility; constitutive laws for elastic, general, axisymmetric, plane stress, and plane strain formulations and solutions; the relation of elasticity to structural mechanics theories; physical basis of plastic/inelastic deformation of solids; and constitutive descriptions of plasticity including yielding, hardening rules, Prandtl-Reuss constitutive laws, and viscoplasticity.

Prerequisite(s): ME 4550 with a minimum grade of B- or graduate program admission

ME 5655. Dynamics and Mechanical Vibration. (4 Hours)

Covers dynamic response of discrete and continuous media. Topics include work and energy, impulse and momentum, Lagrangian dynamics, free and forced response to periodic and transient excitations, vibration absorber, free and forced response of multiple degree-of-freedom systems with and without damping, method of modal analysis, vibrations of continuous media such as extensional, torsional, and bending vibrations of bars, and approximate methods of analysis. Permission of instructor required for undergraduate students.

ME 5657. Finite Element Method 1. (4 Hours)

Focuses on numerical techniques for solving engineering problems. Topics include introduction to the finite element method; methods of approximations and variational methods; Rayleigh-Ritz method and Galerkin formulation; interpolation functions; truss, beam, plate, shell, and solid elements; stiffness matrix and assembly of element equations; application of finite element method in fluid and heat transfer problems; linear, nonlinear, and transient problems; numerical integration and methods of solving systems of equations for static and dynamic problems; and use of a finite element general-purpose commercial package. Permission of instructor required for undergraduate students.

ME 5658. Continuum Mechanics. (4 Hours)

Covers the stresses, strains, and displacements in general continuous media. Topics include vector and tensor calculus; definitions of stress, strain, and deformation; kinematics of a continuous medium; material derivatives; rate of deformation tensor, finite strain, and deformation; Eulerian and Lagrangian formulations; geometric measures of strain; relative deformation gradient, rotation, and stretch tensors; compatibility conditions; general principles; conservation of mass; momentum principles; energy balance; constitutive theories of materials (i.e., heat conduction, fluid mechanics, elastic solids, nonlinear elasticity, inelastic deformation of solids); variational principles; introduction to the nonlinear finite element formulations for solids, such as nonlinearities in solid mechanics, governing equations (strong form and weak form), finite element approximation, Newton-Raphson method, Lagrangian finite elements (total and updated Lagrangian approaches), and solution procedure.

Prerequisite(s): ME 4550 with a minimum grade of B- or graduate program admission

ME 5659. Control Systems Engineering. (4 Hours)

Covers concepts in design and control of dynamical systems. Topics include review of continuous-time system modeling and dynamic response; principles of feedback, classical and modern control analyses, and design techniques such as root locus, frequency response (e.g., Bode plots and Nyquist Criteria), and state-space feedback; dynamic analysis, design, and control of electromechanical systems; block diagram algebra or signal-flow graphs, effects of poles and zeros on system response characteristics; principles of controllability, observability, observer designs, and pole placement techniques; introduction to adaptive and learning control and digital implementation of control algorithms.

ME 5661. Composite Materials. (4 Hours)

Discusses the structure, composition, deformation, and failure analysis of composite materials. Topics include introduction to composite materials, constitutive relations and mechanical properties of particulate reinforced composites, anisotropic lamina and cellular composites, and micromechanical models of laminated composites; mechanical behaviors and properties of cellular composites and sandwich composites; and their design, manufacturing, computational modeling, and mechanical experimental characterizations.

ME 5665. Musculoskeletal Biomechanics. (4 Hours)

Using a three-part format, emphasizes the quantitative analysis of human musculoskeletal system statics and dynamics, including, in part I, gait analysis and estimation of the complex loads on human joint systems. Investigates how the form of connective tissue and bone is derived from function in part II, including a quantitative analysis of the material properties of bone, ligament, tendon, and cartilage. Working in groups in part III, students select and investigate a relevant, current topic in musculoskeletal biomechanics and present their findings to the class. Requires prior completion of an undergraduate course in biomechanics (Northeastern's BIOE 2350 or equivalent). Permission of instructor required for undergraduate students.

ME 5685. Solar Thermal Engineering. (4 Hours)

Develops a model for the hourly direct and diffuse radiation under a cover of scattered clouds and the transmission and absorption of this radiation by passive and active systems. Considers the design of air heating systems and the storage of the collected energy by a pebble bed, and considers elements of heater exchanger design. Makes a study of the economics of a domestic water and/or space heating system using f-chart analysis. Requires prior completion of ME 4570 or equivalent.

ME 5690. Gas Turbine Combustion. (4 Hours)

Offers students an opportunity to obtain an understanding of the basic physical, chemical, and aerodynamic processes associated with combustion in gas turbine engines and their relevance to combustor design and performance in applications ranging from aeronautical to power generation. Topics include the history and evolution of gas turbine engines, thermodynamic cycles, conventional and alternative aviation fuels, combustion fundamentals, fuel injection and atomization, advanced wall cooling techniques, mechanisms of combustion noise and approaches to noise control, and design and performance for ultra-low emissions.

Prerequisite(s): ME 4570 with a minimum grade of D- or graduate program admission

ME 5695. Aerodynamics. (4 Hours)

Focuses on topics of practical importance in applications of fluid mechanics to external flows over bodies. Covers compressible flow analysis in order to use the concepts of sound speed and Mach number and to design subsonic and supersonic nozzles, diffusers, and airfoils. Introduces normal and oblique shock waves and the Prandtl-Meyer expansion applied to supersonic flows over bodies and surfaces. Discusses Rayleigh and Fanno flows. Studies and applies the Bernoulli equation and potential flow theory to external flow analyses and the theory of lift generation on airfoils.

ME 5700. Multiphase Transport. (4 Hours)

Introduces multiphase flow and heat transfer. Presents insights of multiphase transport systems, tools to analyze the system in different scenarios, and exposes students to research frontiers and real-world applications. Topics include the fundamental principles governing the multiphase systems, capillary effect involving drops and bubbles, the dynamics of particles dispersed in fluid, phase change and heat transfer, and applications of multiphase systems. Discusses research topics at the frontier in this area.

Prerequisite(s): (ME 4570 with a minimum grade of D or CHME 3312 with a minimum grade of D) or graduate program admission

ME 5976. Directed Study. (1-4 Hours)

Offers students an opportunity to conduct theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to 11 times for a maximum of 12 semester hours.

ME 5984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

ME 6200. Mathematical Methods for Mechanical Engineers 1. (4 Hours)

Focuses on linear algebra, vector analysis, ordinary, and partial differential equations with mechanical engineering applications. Topics include linear algebra, linear vector spaces, matrices, and eigenvectors; vector field theory, curvilinear coordinates, and integral theorems; power series methods for second order linear ODEs, special functions, Sturm-Liouville theory, and orthogonal function expansions including Fourier series; second order linear PDEs including the Laplace, diffusion, and wave equations and solution techniques such as separation of variables and orthogonal function decomposition.

ME 6250. Wearable Robotics. (4 Hours)

Presents the design, control, and evaluation of prosthetics and exoskeletons based on core concepts in human movement, with special focus on assisting and rehabilitating pathological gait. Introduces the biological systems that enable human movement, biomechanical modeling and simulation, actuation design, control architectures, and key considerations for interfacing mechanical systems with the human body. Culminates with group projects in which teams either design, control, and analyze a wearable robotic system or write a perspective on a subtopic within the field of wearable robotics.

ME 6260. Introduction to Microelectromechanical Systems (MEMS). (4 Hours)

Provides an introduction to microelectromechanical systems including principles of sensing and actuation, microfabrication technology for MEMS, noise concepts, and packaging techniques. Covers a wide range of disciplines, from electronics to mechanics, material properties, microfabrication technology, electromagnetics, and optics. Studies several classes of devices including inertial measurement devices, pressure sensors, rf components, and optical MEMS. Devotes the last third of the semester largely to design projects, involving design of MEMS devices to specifications in a realistic fabrication process.

ME 6320. Mechanics of Soft Materials. (4 Hours)

Covers the fundamental continuum mechanics theory of finite elastic deformation in soft materials formed by crosslinked polymer networks such as gels and elastomers, as well as the coupling effects from other physical fields (chemical, electrical, thermal, etc.) that enable novel functionalities. Emphasizes continuum mechanics, interfacing statistical mechanics, polymer physics, thermodynamics, and other chemical and physical disciplines. Lectures incorporate state-of-the-art research in mechanics of soft materials to offer students a broad and contemporary overview of the field.

Prerequisite(s): ME 6200 with a minimum grade of B

ME 6340. Mechanics in New Engineering Frontiers. (4 Hours)

Offered for graduate students who are interested in mechanics in emerging engineering frontiers including mechanical metamaterials, bio-inspired engineering, additive manufacturing, and smart and functional materials. Provides an overview of the new interdisciplinary fields and the application of mechanics in these fields. Also examines advanced theories in mechanics and their applications in new engineering frontiers. Mechanics together with modern engineering technologies including computer aided design, computer simulations, and 3D/4D printing serve as tools to explore engineering solutions. Students practice how to apply physical principles to engineering innovations.

Prerequisite(s): (ME 5650 with a minimum grade of B or ME 5654 with a minimum grade of B or ME 7210 with a minimum grade of B); ME 6200 with a minimum grade of B

ME 6360. Boundary Value Problems in Linear Elasticity. (4 Hours)

Introduces the governing equations of linear isotropic elasticity and solves the boundary value problems associated with two-dimensional (planar) and three-dimensional elasticity. In two-dimensional elasticity, presents the use of Airy stress function in Cartesian and polar coordinates; asymptotic fields at discontinuities; forces and dislocations; contact and crack problems; and rotating and accelerating bodies. In three-dimensional elasticity, presents Galerkin and Papkovitch-Neuber solutions; singular solutions; spherical harmonics; thermoelasticity; axisymmetric contact and crack problems; and axisymmetric torsion.

Prerequisite(s): ME 6200 with a minimum grade of B ; (ME 5650 with a minimum grade of B or ME 5654 with a minimum grade of B)

ME 6420. Advanced Materials and Technologies in Manufacturing. (4 Hours)

Provides integrated coverage of how material properties influence process selection, how processes enable new designs, and how sustainable processes can be developed. Offers practical knowledge of contemporary manufacturing techniques along with skills to evaluate interactions between materials, process mechanisms, equipment, automation, and environmentally responsible practices.

ME 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 7232. Theory of Plates and Shells. (4 Hours)

Covers the mechanics of plates using classical theory (cylindrical bending, rectangular plates, and circular plates) and plate theory with shear deformation. Includes combined effects of bending and in-plane forces, buckling of plates, moderately large deflections, membrane theory of shells, analysis of thin cylindrical shells of revolution, and general theory of thin elastic shells.

Prerequisite(s): ME 6200 with a minimum grade of C- ; ME 6201 with a minimum grade of C-

ME 7238. Finite Element Method 2. (4 Hours)

Focuses on advanced techniques for solving engineering problems with the finite element method. Topics include review of finite element method; solution of linear and nonlinear algebraic problems; solution of dynamics problems; solution of contact problems using penalty and Lagrange multiplier methods; solution of nonlinear beams, plates, and shells; finite element formulations of solid continua including Lagrangian and updated Lagrangian formulations, material nonlinearities, and use of a commercially available finite element package.

Prerequisite(s): ME 5654 with a minimum grade of C- ; ME 5657 with a minimum grade of C-

ME 7247. Advanced Control Engineering. (4 Hours)

Covers topics in modern control engineering, including optimal control, optimal filtering, robust/nonlinear control, and model predictive control. The main theme of the course is how uncertainty propagates through dynamical systems and how it can be managed in the context of a control system. Emphasizes modern tools from computational linear algebra and convex optimization. Uses MATLAB for implementation.

Prerequisite(s): EECE 5580 with a minimum grade of C- or EECE 5580 with a minimum grade of C- or EECE 7200 with a minimum grade of C- or ME 5659 with a minimum grade of C- or ME 5659 with a minimum grade of C-

ME 7270. General Thermodynamics. (4 Hours)

Examines fundamentals of equilibrium thermodynamics. Topics include work, energy, heat, temperature, available energy, entropy, first and second law of thermodynamics, simple systems, closed and open systems, availability loss and irreversibility, heat engines, multicomponent systems, mixtures of gases, chemical reactions, and chemical equilibrium.

ME 7275. Essentials of Fluid Dynamics. (4 Hours)

Offers a fundamental course in fluid dynamics designed to prepare the student for more advanced courses in the thermofluids curriculum while providing a strong background in fluid mechanics. Topics include Cartesian tensors; differential and integral formulation of the equations of conservation of mass, momentum, and energy; molecular and continuum transport phenomena; the Navier-Stokes equations; vorticity; inviscid incompressible flow, the velocity potential, and Bernoulli's equation; viscous incompressible flow; the stream function; some exact solutions; energy equation including heat conduction and viscous dissipation, low Reynolds number flow, exact and approximate approaches to laminar boundary layers in high Reynolds number flows, stability of laminar flows and the transition to turbulence, and treatment of incompressible turbulent mean flow; and internal and external flows.

Prerequisite(s): ME 6200 with a minimum grade of C-

ME 7278. Complex Fluids. (4 Hours)

Covers the physical phenomena in complex fluids, including polymeric liquids, structured fluids, and cells and biofluids undergoing deformation and flow. Focuses on kinematics and material functions for complex fluids; techniques of viscometry, rheometry, and linear viscoelastic measurements for such fluids; mathematical expressions and constitutive laws describing rich and complex behavior of complex fluids under different flow conditions; continuum mechanics frame invariance and convected derivatives for finite strain viscoelasticity; differential and integral constitutive equations for viscoelastic fluids; the roles of non-Newtonian behavior, linear viscoelasticity, and time- and rate-dependent properties of a wide range of fluids, from cells and saliva, to oil and polymers, with examples on normal stresses; elastic recoil; stress relaxation in processing flows; molecular theories for dynamics of complex fluids; and more.

Prerequisite(s): ME 7275 with a minimum grade of C-

ME 7285. Heat Conduction and Thermal Radiation. (4 Hours)

Emphasizes analytical techniques in conduction and radiative transfer. Topics include formulation of steady- and unsteady-state one-dimensional and multidimensional heat conduction problems, solution techniques for linear problems including the method of separation of variables, Laplace transforms and integral transforms, approximate analytical methods, phase change problems, and nonlinear problems. Offers an introduction to thermal radiation heat transfer including the electromagnetic background of radiation, nature of thermal radiation, radiation intensity, black body intensity, and radiation through nonparticipating media. Discusses the fundamentals of radiation in absorbing, emitting, and scattering media including the equation of radiative transfer with methods of solution, pure radiative transfer in participating media, and interaction of radiation with conduction and/or convection. Requires undergraduate heat transfer course.

Prerequisite(s): ME 6200 with a minimum grade of C-

ME 7290. Convective Heat Transfer. (4 Hours)

Focuses on the fundamental equations of convective heat transfer including heat transfer in incompressible external laminar boundary layers, integral boundary layer equations, laminar forced convection in internal flows, and turbulent forced convection in internal and external flows. Develops analogies between heat and momentum transfer including the Reynolds, Taylor, and Martinelli analogies. Covers natural convection, heat transfer in high-speed flow, and transient forced convection.

Prerequisite(s): ME 7275 with a minimum grade of C-

ME 7295. Multiscale Flow and Transport Phenomena. (4 Hours)

Covers the fundamentals of flow and transport phenomena in multiscale systems. Begins with an overview of momentum, energy, and mass transport phenomena, emphasizing microscale phenomena such as the slip flow regime. Introduces other driving forces and transport processes relevant to microscale flows, such as surface tension (capillarity) and electrokinetics. These basic concepts provide the preamble for the presentation of the more complex multiphase and porous flow transport behavior. This course material is supplemented with class projects and presentations by the students. Requires knowledge of thermodynamics, fluid mechanics, and heat transfer.

ME 7300. Combustion and Air Pollution. (4 Hours)

Deals with the formation of pollutants during combustion processes and their subsequent transformations in the atmosphere. Emphasis is on the effects of design and operating parameters of combustion devices on the nature and composition of exhaust gases, improvements, postcombustion treatment of effluent gases, atmospheric chemistry, and atmospheric transport of pollutants, smog formation, acid rain, ozone formation, and destruction.

ME 7305. Fundamentals of Combustion. (4 Hours)

Provides an advanced course that is a comprehensive treatment of the problems involved in the combustion of liquid, gaseous, and solid fuels in both laminar and turbulent flow. Discusses the fundamentals of chemical kinetics. Examines the equations for the transport of mass, momentum, and energy with chemically reacting gases. Topics include diffusion and premixed flames, combustion of droplets and sprays, and gasification and combustion of coal.

Prerequisite(s): ME 7270 with a minimum grade of C-

ME 7310. Computational Fluid Dynamics with Heat Transfer. (4 Hours)

Offers an advanced course in numerical methods applied to fluid flows with heat transfer. Topics include finite difference and finite volume methods for solving partial differential equations, with particular emphasis on the equations of fluid dynamics and heat transfer. Other topics include mathematical properties of partial differential equations, accuracy and stability analysis of numerical solutions, applications to a variety of fluid dynamics and heat transfer problems, grid generation, and an introduction to turbulence modeling. Requires knowledge of computer programming.

Prerequisite(s): ME 7275 with a minimum grade of C-

ME 7374. Special Topics in Mechanical Engineering. (4 Hours)

Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

ME 7440. Mechanical Engineering Leadership Challenge Project 1. (4 Hours)

Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype with a mechanical engineering focus. Constitutes the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

ME 7442. Mechanical Engineering Leadership Challenge Project 2. (4 Hours)

Continues ME 7440, a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype with a mechanical engineering focus and to produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

Prerequisite(s): ME 7440 with a minimum grade of C-

ME 7945. Master's Project. (4 Hours)

Offers theoretical or experimental work under individual faculty supervision.

ME 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

ME 7990. Thesis. (4 Hours)

Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. May be repeated once.

ME 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues thesis work conducted under the supervision of a departmental faculty member.

ME 8960. Candidacy Preparation—Doctoral. (0 Hours)

Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision. Intended for students who have completed all required PhD course work and have not yet achieved PhD candidacy; students who have not completed all required PhD course work are not allowed to register for this course. May be repeated once.

ME 8986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

ME 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

ME 9986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

ME 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision under individual faculty supervision.

Prerequisite(s): ME 9000 with a minimum grade of S

ME 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): ME 9990 with a minimum grade of S

ME 9996. Dissertation Continuation. (0 Hours)

Offers continuing dissertation supervision under individual faculty supervision.

Prerequisite(s): ME 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Mechanical Engineering Technology - CPS (MET)

Courses

MET 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MET 2000. Engineering Computer-Aided Design and Tolerance Analysis. (3 Hours)

Covers design topics relative to the creation, modification, analysis, and optimization of engineering components and assemblies with extensive use of selected computer-aided design software (CAD). Concentrates on the use of contemporary parametric and/or explicit CAD modeling, management of associative relationships between geometries, and digital prototyping. Studies the role of CAD in product development and product life-cycle management. Involves extensive hands-on practice using commands and featured capabilities of the selected CAD software and completion of individual or team design projects. Projects focus primarily on mechanical systems design. Emphasizes accurate dimensioning, symbol interpretation, and accurate tolerancing of digital designs. Also includes introductory topics of graphical analysis of mechanical stress of elements and assemblies.

Prerequisite(s): GET 1150 with a minimum grade of D-

MET 2040. Engineering Manufacturing Process. (3 Hours)

Introduces learners to engineering materials, property enhancement technologies, metrology, assembly operations, and rapid prototyping. Discusses a variety of methods for improving bulk and surface properties based on materials compositions, structures, and desired performance. These include heat treatment, plasma surface engineering, and other vacuum technologies. Introduces industrial robotics, numeric control, and programmable logic controllers. Studies and discusses production systems, process planning and quality control, and production inspection based on various industrial applications.

MET 2100. Mechanics 1: Statics. (3 Hours)

Introduces the fundamental concepts and principles needed to analyze the mechanical equilibrium of engineering systems. Topics include Newton's fundamental laws, systems of units, vector operations, forces, mechanical equilibrium of particles and rigid bodies, moments of forces, moments of couples, free-body diagrams, 2D and 3D equilibrium of bodies, centers of gravity, centroids, concentrated and distributed loads, analysis of mechanical structures, dry friction, moments of areas and inertia, and an introduction to the concepts and definitions of mechanical work and potential energy.

Prerequisite(s): (MTH 2105 with a minimum grade of D- or MTH 2120 with a minimum grade of D-); PHY 1200 with a minimum grade of D-

MET 2200. Mechanics 2: Dynamics. (3 Hours)

Expands and uses the underlying principles and concepts of Newtonian mechanics to study, analyze, and solve problems relative to mechanical systems in motion. Explores approaches to analyze motion both neglecting and considering the cause of motion and their relationship to the design of engineering systems. Discusses subjects pertaining to the study of kinematics and dynamics of particles and rigid bodies in detail. Topics include linear, curvilinear, and rotational motion of particles and rigid bodies, as well as conservation principles and concepts and inherent definitions for the analysis and design of dynamic systems such as velocity, acceleration, linear and angular momentum, impulse, forces, work, kinetic and potential energy, total mechanical energy, and power.

Prerequisite(s): MET 2100 with a minimum grade of D-

MET 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MET 3300. Engineering Materials Science. (3 Hours)

Studies the foundation of physical and chemical characteristics, properties, behavior, and selection. Discusses the influence of fabrication and treatment methods on the characteristics of typical materials used in engineering applications including metals, ceramics, polymers, and composites. Topics include crystalline and noncrystalline structures, lattices, point defects, and dislocations. Also covers mechanical, thermophysical, and electrochemical characteristics of materials such as hardness, mass diffusion, and electroplating, as well as ferrous and nonferrous metal alloys, the structure and properties of ceramics, fundamentals of polymer science and technology, and synthetic and laminar composites.

Prerequisite(s): MET 2040 (may be taken concurrently) with a minimum grade of D-

MET 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MET 4100. Mechanical Engineering Systems Design. (3 Hours)

Covers the fundamental principles of mechanical design including details of the engineering design process, design factors, creativity, optimization, safety, and value engineering. Discusses properties and selection of common engineering materials used in design and manufacturing of mechanical components and machines. Focuses on analysis and design of typical machine elements that operate under mechanical loads and stresses, including shafts, gears, bearings, belt and chain drives, clutches, brakes, fasteners, springs, torsion bars, power screws, linear actuators, and joints. Integrates computer usage for efficient and rapid design, formulae evaluation, mathematical simulation, design selection and optimization, and virtual prototyping. Discusses additional elements of engineering design such as cost analysis, robustness, quality improvement, and environmental concerns.

Prerequisite(s): MET 2000 with a minimum grade of D- ; MET 3300 with a minimum grade of D-

MET 4950. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

MET 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

MET 4983. Topics. (1-4 Hours)

Covers special topics in mechanical engineering technology. May be repeated without limit.

MET 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MET 4991. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

MET 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic.

MET 4994. Internship. (1-4 Hours)

Provides students with an opportunity for internship work.

Attribute(s): NUpath Integration Experience

MET 4995. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience.

MET 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major.

Attribute(s): NUpath Integration Experience

Media and Screen Studies (MSCR)**Courses****MSCR 1000. Media and Screen Studies at Northeastern. (1 Hour)**

Intended for freshmen media and screen studies majors and combined majors. Introduces students to the liberal arts in general. Offers students an opportunity to become familiar with media and screen studies as a major discipline; to develop the academic skills necessary to succeed (analytical ability and critical thinking); to become grounded in the culture and values of the university community (including advising); and to develop interpersonal skills—in short, to become familiar with all the skills needed to become a successful university student.

MSCR 1100. Film 101. (4 Hours)

Focuses on the ways in which cinematic language and representations have developed since the late-nineteenth century, how representations of human difference vary in distinct cultural contexts, and how particular filmmakers and historical/national movements have challenged certain representations and ideologies. This range of representations and discourses includes blackface performance and other racist tropes, ethnographic studies of indigenous people as “exotic” curiosities, films noir that demonize independent women, postwar Italian neorealism’s revolutionary focus on the plight of the poor, films by and about marginalized ethnicities in the U.S. and the global south, banned films that highlight the condition of women in post-revolution Iran, and contemporary Hollywood’s treatment of homosexuality and masculinity.

Attribute(s): NUpath Difference/Diversity

MSCR 1220. Media, Culture, and Society. (4 Hours)

Introduces the study of media, including print, radio, film, television, and digital/computer products. Explores the ideological, industrial, political, and social contexts that impact everyday engagements with media. To accomplish this, students examine how media products are developed, how technological changes impact the production and consumption of media, how political processes are influenced by media, how people interpret and interact with media content, and how media influence cultural practices and daily life.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

MSCR 1230. Introduction to Film Production. (4 Hours)

Offers an introduction to production that blends theory and practice of film/video production through an examination of exemplary works, aesthetic strategies, production techniques, and the dynamic relationship between media makers, subjects, viewers, and technology. Offers students an opportunity to gain fundamental moving-image fluency using widely accessible media production tools including camcorders, mobile phones, and digital single-lens-reflex cameras.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MSCR 1320. Media and Social Change. (4 Hours)

Explores media's role in movements for social, economic, and cultural change. Specifically examines how people use media technologies to organize themselves and communicate their message to wider audiences in order to achieve social change. As a way to develop and improve ethical reasoning, students are asked to think about the accountability of media institutions and actions of groups and individuals who use media technologies and tactics in the name of social change.

Attribute(s): NUpath Ethical Reasoning

MSCR 1420. Media History. (4 Hours)

Examines the historical relationships between media, culture, and society with a focus on the role of media technologies as tools of communication. Emphasizes the broad social and cultural conditions that shape media and the ways in which people experience culture and understand meaning. Introduces the concept of mediation to analyze how different forms of communication have emerged in different historical moments. Critically examines past interactions between media and culture, and also examines the emergence of historically specific conceptions of audience, identity, content, industry, information, perception, and so forth.

MSCR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCR 2160. Narrative Filmmaking. (4 Hours)

Introduces narrative filmmaking without synch sound. Offers students an opportunity to create several short projects without dialogue. The successful student leaves the course with a portfolio of work, a basic knowledge of video cameras, and one editing software program (either Avid or Final Cut Pro). Focuses on storytelling through visuals.

Attribute(s): NUpath Creative Express/Innov

MSCR 2220. Understanding Media. (4 Hours)

Designed to give students a foundation in the theories and methods of analysis in cultural and media studies. Positioned between the introductory MSCR classes and the higher-level theory classes. Offers students an opportunity to learn the how and why of media and cultural studies, focusing on the foundational assumptions, theories, and methods of the discipline.

Prerequisite(s): MSCR 1220 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture

MSCR 2300. Television: Text and Context. (4 Hours)

Introduces students to critical television studies. Topics include visual language (use of image, music, graphics, editing, and sound); narrative structure; and genre. Specific critical approaches include semiotics, narrative and genre analysis, feminist analysis, and ideological analysis of representation.

Attribute(s): NUpath Interpreting Culture

MSCR 2302. Advertising and Promotional Culture. (4 Hours)

Investigates advertising and promotional culture by closely studying its history, industry, and means of communication. Examines print, television and internet advertisements, and campaigns.

Attribute(s): NUpath Interpreting Culture

MSCR 2325. Global Media. (4 Hours)

Covers global dynamics of media and media systems. Specifically seeks to introduce students to the nuances of globalization and cultural performance through media structures. Introduces a wide variety of topics that fall in the intersection between globalization and media and the ways in which they operate socially and culturally. The course focuses broadly on understanding—in both theoretical and practical ways—how and why global media function as they do and how they contribute to knowledge formation and social justice within various cultural contexts.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

MSCR 2330. Film Genres. (4 Hours)

Examines a number of foundational texts on genre analysis. Addresses how and why films are classified according to particular iconographies, tropes, and narrative structures and the ways in which audiences coalesce around and appropriate particular genres for building communities. Studies some of the most iconic of genres—the Western (the mythologized and preindustrial past), film noir (the present time of industrial and postindustrial capitalism and urbanization), and science fiction (the imagined future)—from their origins; through their classical period; and, ultimately, to generic revision, self-reflexivity, hybridity, and parody.

Attribute(s): NUpath Interpreting Culture

MSCR 2335. Race and Social Justice in American Film. (4 Hours)

Offers an in-depth analysis of and reflection upon films and how they influence our perceptions of race in the United States. Examines how race and its representation shapes the development, production, distribution, and marketing of American documentaries and dramas. Uses screenings, readings, lectures, discussions, and writing to explore the power of films to reflect and reinforce long-standing ideologies of race and analyze how traditionally underrepresented groups have historically shaped counter-narratives.

Attribute(s): NUpath Difference/Diversity

MSCR 2336. American Film and Culture. (4 Hours)

Surveys the rise of American film from the late nineteenth century to the present. Examines key films, directors, major themes, and film forms and techniques. Includes lectures, screenings, and discussions. Students who do not meet course prerequisites may seek permission of instructor.

Attribute(s): NUpath Interpreting Culture

MSCR 2337. True Crime Media. (4 Hours)

Analyzes the narrative conventions of the true crime genre and explores the historical and cultural origins of true crime as a storytelling mode. Examines the industry conditions that affect true crime coverage and analyzes the social and political dynamics that shape and are shaped by true crime narratives in commercial media.

Attribute(s): NUpath Interpreting Culture

MSCR 2450. Sound Cultures. (4 Hours)

Explores the density and complexity of sound as a medium. Focuses on the intertwined relationship of technology and culture and their role in the mediation of sound. Draws from sound studies, a new interdisciplinary research area, and begins with the assumption that sound is an often neglected but rich area of analysis through which we can hear the intersection of culture, power, and technology, using the research that media studies scholars bring to the study of sound.

Attribute(s): NUpath Interpreting Culture

MSCR 2455. Disinformation and Other Media Disorders. (4 Hours)

Examines the long history of new media that have been said to threaten existing social orders—from 18th-century pamphlets to Nazi propaganda films and astrology columns to generative AI. Illuminates the central role that media genres, technologies, practices, and institutions have played in creating the modern category of “society” itself. Explores the relationship between media and private life, markets, and the state using a diverse set of case studies. Canonical and contemporary theories introduce key concepts ranging from stereotypes, ideology, and publicity to moral panic, agnotology, and disinformation.

Attribute(s): NUpath Societies/Institutions

MSCR 2505. Digital Feminisms. (4 Hours)

Explores the unique ways that feminist activism and theory are impacted by the increasing digital nature of our world. From hashtags to Tumblr, feminists are using digital tools and platforms to aid in the pursuit of social justice. Offers students an opportunity to develop a timeline that traces feminists’ engagement with the Internet, new media, and technological innovations from the late seventies to the present. Examines the strengths and challenges that the digital world creates for feminist engagement. MSCR 2505 and WMNS 2505 are cross-listed.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture, NUpath Writing Intensive

MSCR 2600. Cloud, Closet, (Drop)Box. (4 Hours)

Explores the multiple and complicated ways in which our lives and ways of thinking are impacted by what things we decide to keep and how we organize access to them, i.e., storage, defining media as technologies that help organize information. Uses readings, podcasts, short films, and TV shows to examine storage to understand the emergence of the cloud and other contemporary media "containers." Considers what the future of storage holds as individuals and institutions try to find space and time to store and retrieve our data, memories, clothes, food, and more.

Attribute(s): NUpath Writing Intensive

MSCR 2895. Film Analysis. (4 Hours)

Introduces the ways in which films are produced, marketed, and distributed, along with the basic elements of film grammar, from shot construction to editing to sound. Offers students an opportunity to learn how film analysis is conducted, including an introduction to the study of film genre, film history, and film theory. Covers basic concepts regarding the relationship between film and culture, including national and regional identity; the relationship between a film "text" and the audience; and the relationship between film and other forms of cultural production such as art, literature, music, and theatre. Aims to provide a nuanced understanding of a variety of cinematic works as products of specific cultures, times, and places.

Attribute(s): NUpath Interpreting Culture

MSCR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCR 2991. Research in Media and Screen Studies. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

MSCR 3210. Special Topics in Media and Screen Studies. (4 Hours)

Addresses issues in communication and media as well as developments in the production of television and video. Course content may vary from year to year. Students who do not meet course prerequisites may seek permission of instructor. May be repeated up to four times.

MSCR 3389. Screenwriting. (4 Hours)

Approaches the unique narrative form of the dramatic short film, with the goal of having students produce a short film screenplay (under twenty minutes in length) which could eventually be shot. Takes students through the storytelling process, from conception to visualization, dramatization, characterization, and dialogue, ending in a project which should reflect the student's own personal voice and unique vision. Offers students an opportunity to work on many writing exercises involving free association, visualizations, and character explorations, and to evaluate and critique each other's work in a workshop setting.

Attribute(s): NUpath Creative Express/Innov

MSCR 3390. Screenwriting: Feature Films. (4 Hours)

Features an array of screenwriting tools and techniques used in the process of developing ideas into screenplays for feature films. Offers instruction in writing highly effective scenes; building compelling and dimensional characters; crafting authentic dialogue; and a variety of methods to add texture, depth, and meaning to a story. Students develop an outline for a feature film that they refine through ongoing in-class workshops based on informed and supportive collaboration. The cumulative nature of the course encourages students to learn, practice, and demonstrate a wide range of foundational skills they can continue to build upon to finish their feature film screenplay and apply to any future screenplay ideas.

MSCR 3392. Gender and Film. (4 Hours)

Examines the representation of gender in film. Uses concepts and research from film and media studies to investigate the influences and consequences of gender representations in film. WMNS 3392 and MSCR 3392 are cross-listed.

Attribute(s): NUpath Difference/Diversity

MSCR 3420. Digital Media Culture. (4 Hours)

Investigates social and cultural dynamics emerging parallel to the spread of digital technologies, from the 1960s to the present. Analyzes the impact of technologies (such as computers, mobile phones, and video games) on media products and practices (such as remix culture, social media, and surveillance). Offers students an opportunity to develop the skills that are necessary to critically examine and write about digital media content and the technologies necessary for their consumption.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

MSCR 3422. Media Audiences. (4 Hours)

Explores how mass media audiences interpret and actively use media messages and products as listeners, readers, and consumers. Examines the different stages of ethnographic research, audience meanings and interpretations, pleasure and fanship, the role of media in everyday life, and the use of ethnographic research methods in communication studies. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): ENGW 1111 with a minimum grade of D- or ENGW 1102 with a minimum grade of D- or ENGL 1111 with a minimum grade of D- or ENGL 1102 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

MSCR 3435. Media Industries. (4 Hours)

Offers an overview of media industries studies. Uses a critically informed approach to media industries that offers students an opportunity to learn to identify and analyze the variety of companies that collaborate to produce, distribute, and market media texts. Explores different approaches to studying the life cycle of media, considering such factors as ownership, regulation, marketing, branding, and the impact of new technologies.

Attribute(s): NUpath Societies/Institutions

MSCR 3437. Media and Identity. (4 Hours)

Examines representations of identity (race, gender, sexuality, and class) in the media, investigates their influences, and considers their repercussions. The class especially focuses on understanding identity as a construction, rather than as inherently "natural." Broadly, we discuss the relationship between identity and media representations; more specifically, we look at cultural texts, sites, and practices where the existing racial categories mix, merge, and/or rub up against each other in ways that problematize the naturalness of essentialized identities. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): MSCR 1220 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity

MSCR 3446. Documentary Production. (4 Hours)

Focuses on single-camera video production in service of crafting documentary stories. Offers students an opportunity to learn nonfiction storytelling by examining documentary history and theory as well as participating in screenings, workshops, and hands-on projects designed to prepare them to take an idea and develop it into a final five-to-seven-minute final documentary short. Requires supplemental technical assignments for students with no previous production experience.

Attribute(s): NUpath Creative Express/Innov

MSCR 3600. Film Theory. (4 Hours)

Explores the movement from modernist concern with the art object to postmodern concerns with subjectivity and spectatorship, race, and gender. Requires a paper using formalist analysis and later revision using cultural analysis, psychoanalysis, philosophy of perception, race studies. Also offers students an opportunity to learn research methods in cinema studies and perform a metacritical review of their own work and to present their findings from film journals, databases, Web sites, blogs. Presents the relation of perception to reality; levels of representational realness; reception theory; digitalization in its relation to movement and meaning. Seeks to enable students to recognize structures and problems for analysis in a film and to apply appropriate theoretical models to analyze these structures.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

MSCR 3700. Queer Media. (4 Hours)

Examines queer representation within media, ranging from film and television to social networks and video games. Offers students an opportunity to read, present, and write about theories of difference from a diverse range of perspectives within the interdisciplinary fields of queer theory and media studies.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Writing Intensive

MSCR 3920. Topics in Film Studies. (4 Hours)

Focuses on a specific issue and topic in film studies. Course content varies from semester to semester.

MSCR 3973. Special Topics in Media and Screen Studies. (4 Hours)

Addresses issues in communication and media as well as developments in the production of television and video. Course content may vary from year to year. Students who do not meet course prerequisites may seek permission of instructor. May be repeated up to four times.

MSCR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCR 4208. TV History. (4 Hours)

Explores U.S. network television in the “precab” era, which ranges from 1949 to the 1980s. Studies television programming through its historical, cultural, and industrial contexts. The media studies component of the class considers topics such as aesthetics, narrative, genre, and representation.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

MSCR 4623. Media and Screen Studies Capstone. (4 Hours)

Focuses on key concepts and ideas from media and screen studies to prepare students to complete a final project in a format of the student's choice: research paper, short narrative film, documentary, podcast, photo essay, or short film screenplay.

Prerequisite(s): MSCR 1220 with a minimum grade of D- or COMM 1220 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience

MSCR 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

MSCR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCR 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MSCR 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

MSCR 5300. Media and Technology Ethics. (4 Hours)

Studies technology ethics from the perspective of media and technology studies. Case studies raise specific issues such as selfhood, autonomy, privacy, as well as the implications of such technology for important moral concepts such as agency, responsibility, and privacy; inclusion and opportunity; surveillance and security; and truth, deliberation, public rationality, and disinformation. Offers students an opportunity to identify and distinguish ethical challenges particular to information and media technology.

Attribute(s): NUpath Ethical Reasoning

MSCR 6100. Digital Media: Theory and Practice. (4 Hours)

Introduces the practice of media making for graduate students with little to no experience producing media. Covers the foundational language of images, movement, editing, and sound by creating work in stand-alone media such as short fiction and documentary, serial (multipart) media, and sound editing for podcasting. Examines the theories of power and representation that are integral to media making. No previous experience with media production is necessary.

MSCR 6310. Critical Data Studies. (4 Hours)

Raises critical questions about how society and culture interact with data, acknowledging that data is at the core of our culture and social organization. Emphasizes how data is produced, circulated, and used in different ways, taking an interdisciplinary approach rooted in media studies critiques of technology and power. Case studies discuss what it means to locate the making and using of data within social relations of power, that is, to critically analyze data.

MSCR 6320. Digital Technologies and Global Society. (4 Hours)

Presents key empirical and conceptual foundations to provide tools to address the complex challenges that digital technologies pose in a global context of social relations of power. Emphasizes the origins of the contemporary internet in imperial and military history and explores alternative possibilities that never came to be realized. A series of case studies, drawn primarily from the Global South, analyze power dynamics to highlight the pressing ethical and political questions raised by cutting-edge technologies.

MSCR 6330. Democracy, Technology, and Equality. (4 Hours)

Considers via an interdisciplinary approach how the development and use of digital technology by different political actors shapes and transforms democratic societies. Uses case studies to emphasize debates about the type and quality of information in democracies, as well as concerns about polarization and a general fraying of social cohesion.

MSCR 6340. Race and Technology. (4 Hours)

Investigates how individual and collective beliefs about what it means to be a human of a particular race, ethnicity, or caste is reflected in contemporary and emergent technologies. From biometric scanners at the airport to social media interfaces, the tech tools people use every day are shaped by the sociocultural constructs of race and racial hierarchies, with an array of consequences. Grounded in the theories of communication and media studies, it is an expansive interdisciplinary investigation of how our understanding of who we are shapes what we create and how what we create, re-creates us.

Medical Sciences (MSCI)**Courses****MSCI 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCI 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCI 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

MSCI 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCI 5001. Human Factors and Situational Awareness. (3 Hours)

Investigates the human factors and stressors that may be encountered by professionals engaged in expedition medicine and clinical practice. Explores several core concepts including collaboration and lateral thinking, time-pressured tasks, incentivizing, sleep deprivation, and debriefing. Offers team-based activities that utilize didactics, group work, and gaming to accomplish an array of tasks.

MSCI 5002. Crisis Resource Management and Case Studies. (3 Hours)

Investigates the history of crisis resource management and reviews the characteristics of high-performance teams. Explores expectation violation; surprise; cognitive bias; cognitive unloading; clinical decision making; and methods for debriefing, mitigation, and planning.

MSCI 5003. Humanitarian Aid Practice and Principles. (3 Hours)

Explores the principles and concepts of the provision of humanitarian aid. Reviews the context of humanitarian crises, using a case-based approach. Covers international organizational structures and NGOs, as well as methods of deployment, communication, and longitudinal follow-through. Explores safety issues and the ethics of humanitarian and disaster response.

MSCI 5004. Humanitarian and Disaster Response Ethics. (3 Hours)

Explores the principles that govern disaster and humanitarian response. Examines the basic tenets of ethics, as well as overarching theories and principles. Utilizes a case-based approach to build on ethical issues that have emerged in humanitarian and disaster response, including medical tourism, lack of longitudinal care, and human trafficking.

MSCI 5005. Care During Conflict. (3 Hours)

Investigates the role of medical and humanitarian aid providers in zones of conflict. Addresses issues specific to working in conflict zones, including safety, working with the military, and international laws on war zones and conflict. Covers special circumstances including human trafficking, children in conflict, and trauma-informed care. Emphasizes moral distress and psychological issues.

MSCI 5400. Experiential Reflections: Bridging Theory and Experience. (1-4 Hours)

Delves into contemporary training in austere medicine to explore its fundamental principles. Investigates the latest evidence-based practices and supports self-reflection on prior or current practical experiences in extreme conditions. Suggested for individuals currently enrolled in or who have successfully finished an extreme medicine experience.

MSCI 5401. Human Factors and Situational Awareness Experience. (2 Hours)

Offers students an experiential opportunity to apply and investigate foundational knowledge and skills regarding human factors and stressors that may be encountered by professionals engaged in expedition medicine and clinical practice. Explores core concepts including collaboration and lateral thinking, time-pressured tasks, incentivizing, sleep deprivation, and debriefing. Offers team-based activities that utilize didactics, group work, and gaming to accomplish an array of tasks.

MSCI 5402. Expedition and Cold Weather Medicine Experience. (2 Hours)

Provides experiential opportunities led by a multidisciplinary team. Explores the intersection of medicine, cold weather, and wilderness environments to enhance clinical skills and highlight the role of an extreme healthcare provider. Offers students an opportunity to obtain thorough preparation for practicing medicine in extreme situations—whether in support of local adventures or for long-term treks—through group activities and simulations. Participants must be medical or allied health professionals or in their last two years of study in a medical or allied health professional program.

MSCI 5403. Expedition and Wilderness Medicine Experience. (2 Hours)

Provides a comprehensive, experiential opportunity led by a multidisciplinary team. Employs hands-on practical skills training essential to all medical or allied health professionals. Covers dentistry (the first aid management of dental abscess and fractured, intruded, or avulsed teeth in the austere or wilderness environment), tropical medicine, environmental heat and cold exposure, mental health, and expedition planning.

MSCI 5404. Tactical Medicine Practicum. (2 Hours)

Provides experiential opportunities led by an expert team of tactical medics with experience in special weapons and tactics, emergency medical service, and law enforcement. Offers participants an opportunity to learn how to respond to high-risk major incidents through a case-based approach, multiple skills stations, and simulation scenarios. Participants must be certified as an EMT, paramedic, or a state-certified law enforcement officer.

MSCI 5405. Humanitarian Medicine Experience. (2 Hours)

Provides a comprehensive and impactful introduction to the broad sector of humanitarian medicine including theory, essential skills, and key medical aspects of health intervention. Offers students an opportunity to enhance skills to adapt a professional practice to a new setting and provide real-world impact on human welfare locally and globally. Participants must be medical or allied health professionals or in their last two years of study in a medical or allied health professional program.

MSCI 6001. Principles of Healthcare Advocacy. (3 Hours)

Seeks to prepare healthcare leaders in legislative advocacy and self-advocacy. Legislative advocacy examines relevant health policy research and analysis. Explores self-advocacy aspects within an organization, including communication, interpersonal relationships, and project leadership. Offers students an opportunity to successfully engage in political discussion and advocate for ideas as leaders.

MSCI 6002. Workforce Metrics: Measuring, Comparing, and Privileging the Interprofessional Healthcare Team. (3 Hours)

Introduces fundamentals of metrics and analysis surrounding productivity, outcomes, competencies, and retention in a healthcare workforce. Emphasizes applied methodology. Examines dashboard anatomy, metric categories, dashboard analysis, the clinical competency-dashboard relationship, and special considerations for healthcare metric tracking.

MSCI 6003. Healthcare Leadership Seminar. (3 Hours)

Surveys general leadership theory, knowledge, and skills to gain insight into differing leadership theories. Emphasizes knowledge and skill in essential healthcare leadership practices such as vision, planning, decision making, communication, interpersonal skills, conflict resolution, motivating and developing others, mentorship, ethical practice, and culture change.

MSCI 6900. Research Methods and Design. (3 Hours)

Surveys the principles essential to conduct ethical research in medical sciences. Explores and critically evaluates the concepts, methods, and applications of research and research methods. Offers students an opportunity to propose and develop a research project to inform an important healthcare issue influencing the practice, administration, or policies of healthcare.

MSCI 6901. Doctoral Writing Seminar. (3 Hours)

Offers the opportunity to develop and initiate the introduction and background sections of the Doctor of Medical Science thesis. The thesis project focuses on healthcare-related leadership challenges or other approved topics. Designed to support the thesis writing process.

Prerequisite(s): MSCI 6900 with a minimum grade of B-

MSCI 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCI 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated.

MSCI 7990. Thesis. (3 Hours)

Offers students an opportunity to develop and complete the Doctor of Medical Science thesis. The thesis project focuses on healthcare-related leadership issues or other approved topics.

Prerequisite(s): MSCI 6900 with a minimum grade of B-

MSCI 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continuing thesis supervision by members of the department.

Prerequisite(s): MSCI 7990 with a minimum grade of IP

Mills College Transfer (MILS)

Courses

MILS 1990. Elective. (1-4 Hours)

Provides elective credit for coursework of students continuing their studies from Mills College.

MILS 6962. Elective. (1-4 Hours)

Provides elective credit for coursework of students continuing their studies from Mills College.

Music (MUSC)**Courses****MUSC 1000. Music at Northeastern. (1 Hour)**

Intended for freshmen in the College of Arts, Media and Design. Introduces freshmen to the liberal arts in general. Offers students an opportunity to become familiar with their major; to develop the academic skills necessary to succeed (analytical ability and critical thinking); grounding in the culture and values of the university community; and to develop interpersonal skills—in short, to become familiar with all skills needed to become a successful university student.

MUSC 1001. Music in Everyday Life. (4 Hours)

Dedicated to exploring, expanding, and exploding traditional meanings of what music is; of what it means to be a composer, performer, and audience member; and of what it means to listen. The overarching goal is to provide students with the tools and opportunities necessary for determining for themselves what place music holds in everyday life.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MUSC 1002. Music in Everyday Life. (3 Hours)

Explores and expands on traditional meanings of what music is; of what it means to be a composer, performer, and audience member; of what it means to listen; why music is special; and what gives music the power to sway so dramatically. The overarching goal is to provide students with the tools and opportunities necessary for determining for themselves what place music holds in their everyday lives.

Corequisite(s): MUSC 1003

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MUSC 1003. Lab for MUSC 1002. (1 Hour)

Accompanies MUSC 1002. Involves discussions of readings, brief writing assignments, and listening exercises introduced in MUSC 1002 .

Corequisite(s): MUSC 1002

MUSC 1004. Basics of Western Music Notation. (1 Hour)

Prepares students to gain fluency reading and writing standard Western music notation and gain facility with singing and performing rhythms and melodies in various meters, keys, and styles.

MUSC 1100. Topics in Western Music. (4 Hours)

Explores select musical forms and styles drawn from the Western art music canon, from the Middle Ages to the present. Introduces fundamental musical concepts and vocabulary. Analyzes selected works in terms of sound, style, and performance practice. These works are contextualized in relation to their sociohistorical context, expectations of patrons and audiences, composer's life and oeuvre, and musical and cultural significance, among other factors. May be repeated once.

Attribute(s): NUpath Interpreting Culture

MUSC 1111. Rock Music. (4 Hours)

Examines the development of rock-and-roll and its relationship to blues, rhythm and blues, country, folk, and other styles of music. Considers themes such as the role of rock as youth music, the reflections of social realities in rock songs, the relationship of rock to the recording industry and the mass media, and the changing styles of rock. Emphasizes listening skills.

Attribute(s): NUpath Interpreting Culture

MUSC 1112. Jazz. (4 Hours)

Examines the evolution of the creative improvisational musical styles commonly called jazz, from its African-American roots to its status as one of America's classical musics and an internationally valued art form. Explores the contributions of African and European musical traditions and African-American spirituals, work songs, and blues. Examines major contributors and stylistic development and change through selected audio and audio-visual presentations. Also considers the sociocultural dynamics that have affected musical evolution and acceptance.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

MUSC 1113. Film Music. (4 Hours)

Emphasizes the various ways that music is used in film, including music depicted on-screen and musical scores. Music is a crucial element of meaning in film, yet its presence is easy to ignore. Offers students an opportunity to learn basic approaches to the analysis of music and sound in film, to develop the ability to think critically about film, and to become knowledgeable about key historical developments in film music and sound. No musical background is necessary.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MUSC 1118. Music Therapy 1. (4 Hours)

Examines the application of music as a therapeutic vehicle to release suppressed emotions, to encourage self-expression in psychiatric patients, and to treat a wide variety of disorders. Examines music therapy, in a modern approach to health services, as a supplement to other treatments.

MUSC 1119. Fundamentals of Western Music Theory. (4 Hours)

Introduces students with little or no musical experience to all the major and minor key signatures and the following scales: major, natural minor, harmonic minor, and melodic minor. Topics include how to read music in treble clef, bass clef, and various C-clefs; how to identify and construct intervals, triads, and seventh chords; how melody and harmony work together to create a piece of music; roman numeral analyses; and various small forms. Short excerpts are analyzed, and students are required to write musical compositions.

Attribute(s): NUpath Creative Express/Innov

MUSC 1129. Music of the Middle East. (4 Hours)

Introduces the music of selected Near Eastern and Arab cultures (such as Persian in the East and Ethiopic and Berber in Africa), as well as the cantillation styles and practices of various chants of the Hebrew, Christian, and Islamic traditions.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

MUSC 1134. Guitar Class. (4 Hours)

Provides an introduction to the fundamentals of classical guitar playing for those with or without prior knowledge of the guitar. Covers music reading and theory. Requires students to perform alone and in ensemble with other members of the class. Augments the syllabus by live performances from outside professional and student classical guitarists. Bases final grades on several written examinations and student performance.

Attribute(s): NUpath Creative Express/Innov

MUSC 1136. What's Playing at Symphony?. (4 Hours)

Offers students an opportunity to attend several performances of the Boston Symphony Orchestra (BSO) at Symphony Hall. Discusses each piece of music from a variety of perspectives, including the history of a given composer and his or her relationship to music history and the history of a given composition and its relevance to the symphonic repertoire. Analyzes program pieces in order to provide a deeper appreciation for their musical construction; however, no musical background is required to participate in this course—it is designed for nonmusic majors and music majors alike. Requires students to purchase BSO College Cards (for a nominal fee) for the current BSO concert season.

Attribute(s): NUpath Interpreting Culture

MUSC 1137. Topics in Diverse Musical Cultures. (4 Hours)

Introduces students to select musical practices from around the world, with some semesters focusing on a geographic region (i.e., music of Asia) or topic (i.e., music and politics) addressed from a cross-cultural and interdisciplinary perspective. Presents the field of ethnomusicology—"the study of people making music"—and explores musical practices in relation to their sociocultural context and other intersections of the human experience, such as religion, economics, identity, gender, social justice, and politics. Offers students an opportunity to obtain an appreciation of a diverse array of musical traditions and aesthetics and a critical understanding of music as a meaningful form of human expression.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

MUSC 1141. Wired for Sound. (4 Hours)

Explores the use of electronics in music of various styles and genres from a historical perspective, beginning in the early twentieth century and moving to the present. Examines the methods and means of electronic sound production. Throughout history, technological innovations have influenced music. Starting in the early twentieth century, electricity and, later, electronics, became a key motivating force in music, both in composing and performing and even in listening. Covers the social and cultural conditions under which electric sound was able to evolve.

Attribute(s): NUpath Interpreting Culture

MUSC 1142. Pop, Jazz, and Rock Singing. (4 Hours)

Focuses on singing techniques used in pop, rock, and jazz. Techniques taught, discussed, and applied in class include breathing, tone and vowel production, singing with power without strain, developing range, improvising, and creating one's own style. Offers students an opportunity to apply these techniques in class, learning through vocal demonstrations in class and through the study of recordings. Singers/songwriters are encouraged to enroll. All levels of singers are welcome; students who enroll should already have the ability to sing generally in tune.

Attribute(s): NUpath Creative Express/Innov

MUSC 1201. Music Theory 1. (4 Hours)

Introduces melodic and harmonic practices in tonal music with additional work in chord and melody construction. Develops ear training and sight-singing skills.

Prerequisite(s): MUSC 1119 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

MUSC 1202. Music Theory 2. (4 Hours)

Continues MUSC 1201. Focuses on harmonic practices in tonal music. Examines the role and function of harmony through analysis of musical examples and composition of four-voice chorales. Introduces study of advanced harmony. Further develops ear training and sight-singing skills.

Prerequisite(s): MUSC 1201 with a minimum grade of C

MUSC 1205. Piano Class 1. (4 Hours)

Provides introductory-level study of piano designed for students with or without previous experience. Combines skills in reading music with improvisation and functional piano. Introduces some basic theory to help clarify the structure of class repertoire. Allows students to progress at their own pace. Determines grades by the amount of repertoire mastered during the semester.

MUSC 1901. Music Lessons 1. (1 Hour)

Offers private instruction in voice or in an instrument. Arranges weekly lessons on a half-hour basis. Contact the music department for arrangements. Requires lab fee. May be repeated without limit.

MUSC 1902. Music Lessons 2. (1 Hour)

Offers private instruction in voice or in an instrument. Arranges weekly lessons on a half-hour basis. Contact the music department for arrangements. Requires lab fee. May be repeated without limit.

MUSC 1903. Composition Lessons. (1 Hour)

Offers private instruction in music composition. Contact the music department for arrangements. Requires lab fee. May be repeated without limit.

MUSC 1904. Chorus. (1 Hour)

Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. *Prereq: Audition or permission of instructor.* May be repeated without limit.

MUSC 1905. Concert Band. (1 Hour)

Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. May be repeated without limit.

MUSC 1906. Orchestra. (1 Hour)

Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. *Prereq: Audition or permission of instructor.* May be repeated without limit.

MUSC 1907. Wind Ensemble. (1 Hour)

Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. *Prereq: Audition or permission of instructor.* May be repeated without limit.

MUSC 1911. Jazz Ensemble. (1 Hour)

Designed to serve both music majors and nonmajors, this is a performance/theory/history offering of the varied styles and techniques of performance in the jazz tradition of African-American music. Students are drawn from all segments of the University. Repertory is taken from the standard jazz literature as well as investigations of new works. Improvisational and interpretational technique are the core content of the course. Both the NU Jazz Ensemble and the NU Jazz Combo are represented together in this course. *Prereq: Audition or permission of instructor.* May be repeated without limit.

MUSC 1912. Rock Ensemble. (1 Hour)

Offers students an opportunity to participate in an intermediate-/advanced-level performance group consisting of vocalists, horn section (woodwinds and brass), electric bass and six-string guitar, keyboard, and drum set. Repertoire includes rock, pop, and RB styles. Requires audition or permission of instructor. May be repeated up to eight times.

MUSC 1913. Blues/Rock Ensemble. (1 Hour)

Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. *Prereq: Audition or permission of instructor.* May be repeated without limit.

MUSC 1914. Create Your Own Music. (1 Hour)

Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. May be repeated without limit.

MUSC 1915. Chamber Ensemble. (1 Hour)

Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. *Prereq: Audition or permission of instructor.* May be repeated without limit.

MUSC 1917. Jazz Choir and Combo. (1 Hour)

Designed to give students who sing jazz and blues the opportunity to rehearse and perform in a small vocal group. Offers students an opportunity to work on singing in harmony and be featured in solos. The group is also accompanied by a student jazz combo. Members of the combo may register for the course for credit. Requires audition. May be repeated without limit.

MUSC 1918. World Music Ensemble. (1 Hour)

Explores music-making traditions from selected world cultures through performance on percussion, voice, and other instruments. No previous music-making experience required. May be repeated up to eight times.

MUSC 1919. Fusion Ensemble. (1 Hour)

Offers students an opportunity to participate as performers in one or more ensembles under the direction of a faculty conductor. Focuses on instrumental rock, blues, funk, and jazz repertoire. *Prereq: Audition or permission of instructor.* May be repeated up to eight times.

MUSC 1920. Pep Band. (1 Hour)

Offers students an opportunity to participate as performers in one or more ensembles under the direction of a faculty supervisor. The pep band performs at sporting events and other university functions. May be repeated up to eight times.

MUSC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSC 2101. Black Popular Music. (4 Hours)

Surveys, investigates, and analyzes black popular music from the end of the 19th century to the present. Through critical listening habits and analytical thinking skills, offers students an opportunity to explore black popular culture as a means of expression, communication, and collective identity, attending to issues of representation, identity, values, and aesthetics through a wide range of interdisciplinary sources and methodologies. Emphasizes intersections of creativity, technology, and performance, along with the impact of music industry, audience reception, and cultural politics. Expects students to complete daily exercises and weekly discussion forums in which they must apply critical thinking to synthesize material, complete comparative analyses, relate individual lessons to key course themes, and connect the curriculum to their own experiences and musical listening practices.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

MUSC 2105. Songs That Made History. (4 Hours)

Explores the history of the genre of song through a set of examples that have had enormous impact and influence, songs that have "made history." Using songs selected by the faculty based on their expertise, this course aims to identify the social, cultural, musical, and poetic threads that have woven their way through song repertoires, influencing song composition from its origins to the present day. Establishes commonalities and trends in order to understand how "song" has taken on an important cultural status that is unique to a specific time and place and is widespread, linking various songs together.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture, NUpath Writing Intensive

MUSC 2111. Algebra and Geometry of Music. (4 Hours)

Engages mathematical thinking in music with regard to its symbolic (how we represent music using numbers and signs); sonic (how mathematical thinking might create insights into musical sound); and grammatical (the logic by which music proceeds from one time to the next) expressions. Music and mathematics both contain objects that exhibit similar properties, such as circularity, similarity, objecthood, spatial dimensionality, dynamics, and processuality. Draws upon various branches of mathematics, including number theory, set theory, algebra, geometry, and statistics. Such representations highlight fundamental musical principles invoked in the process of improvisation, performance, and composition. As such, musical listening is a key component of the course. Ability to read musical notation or musical experience preferred.

Attribute(s): NUpath Creative Express/Innov, NUpath Formal/Quant Reasoning

MUSC 2150. Making a Musical: Analysis, Craft, and Creation. (4 Hours)

Explores how great musicals are constructed and what tools are needed, focusing on how effective lyrics are built; how songs function in musicals; and how book writers, lyricists, and composers create new works and adapt existing works from other media to the musical theater stage. Offers students an opportunity to transform analytical techniques and discoveries into creative strategies, building short musicals in collaborative teams. Students need not be musicians to participate in this class. Aspiring actors, composers, lyricists, authors of all styles, technical theater artists and designers, and all those with a curiosity about the history of musicals and how musicals are made are strongly encouraged to enroll.

Attribute(s): NUpath Creative Express/Innov

MUSC 2208. Jazz Improvisation. (4 Hours)

Focuses on repertory as well as performance. Examines the great improvisational artists in American music, such as Charlie Parker, Miles Davis, and John Coltrane. Approaches analysis from a theoretical as well as a practical perspective. Explores the use of rhythm, chords, scales, and modes in the creative improvisation process.

MUSC 2209. Conducting. (4 Hours)

Provides instruction in the basic gestures used in conducting vocal and instrumental ensembles. Topics include beat patterns, conveying phrasing and articulation, cueing, controlling tempo and dynamics, score study, and rehearsal techniques. Provides an opportunity for students to constitute a laboratory ensemble for regular practicum.

MUSC 2210. Introduction to Songwriting. (4 Hours)

Offers an opportunity to learn to construct songs with forward motion and memorable "hooks." Topics include time-proven song forms, melody writing, harmonic tools, lyric writing, collaboration, and production techniques. Emphasizes the craft of writing songs for use in film and television.

Attribute(s): NUpath Creative Express/Innov

MUSC 2211. Advanced Songwriting. (4 Hours)

Builds on the skills covered in MUSC 2210. Seeks to advance the student's songwriting toolbox via a combination of analysis/transcription, writing, production, critiquing, and analysis. In order to maximize the amount of professional opportunities afforded to the songwriters, this course is highly collaborative in order to model the writing processes most commonly used in the industry. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): MUSC 2210 with a minimum grade of D- ; (MUSC 1119 with a minimum grade of D- or MUSC 1201 with a minimum grade of D-)

Attribute(s): NUpath Creative Express/Innov

MUSC 2310. Popular Music Since 1945. (4 Hours)

Surveys the evolution of popular music styles in the United States, from the end of World War II to the present day. Examines popular music's development and transformation, highlighting interactions with a wide array of factors including ethnic and gender identities, music business practices, race relations, social and political movements, and technological innovations. Offers students an opportunity to gain a broad overview of the field of popular music studies, its theoretical perspectives and methodologies, and its research sources and materials.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

MUSC 2311. Topics in American Music. (4 Hours)

Explores the musical heritage of the United States through a range of instructor-selected case studies. Offers students an opportunity to learn to identify various styles of music and relate them to larger discourses on a range of topics, i.e., democracy, cultural pluralism, identity, and other themes in American musical life. Uses weekly instructor lectures, readings of both primary and secondary texts, listening/viewing of multimedia, peer discussion and feedback, and hands-on exercises to analyze and explore the varied role of music in American life.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

MUSC 2312. Topics in Western Art Music. (4 Hours)

Examines how musical culture works in, and in relation to, the Western art music canon. Explores music selected from the Middle Ages to the present to consider musical structure, style, and performance together with the conditions that shape them, approaches to analyzing and interpreting them, and questions of how music is meaningful within a given time and place. Topics change from semester to semester and may center on such themes as a genre (e.g., the symphony); a historical or style period (e.g., music between the world wars); a set of musicians (e.g., women composers); or an issue or concept (e.g., fantasy). May be repeated once.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

MUSC 2313. Topics in Global Music Cultures. (4 Hours)

Explores a selection of musical traditions in order to gain an appreciation of musical diversity in terms of aesthetics and meanings. Interrogates the concept of "world music"/"global music" as a way of sustaining binaries between the West and "the rest." Studies the historical, political, economic, social, and aesthetic contexts of varied musical practices to offer students an opportunity to learn how music both reflects and shapes its cultural setting. Through varied pedagogical techniques, presents an informed and critical understanding of music as a meaningful form of human expression.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture, NUpath Writing Intensive

MUSC 2316. Historical Traditions: History of the Music Industry. (4 Hours)

Offers students an opportunity to obtain a thorough grounding in the history of the music industry. Following intensive study of the electronic and print tools available to those interested in researching the music industry, the course initiates historical work in the nineteenth century, when many aspects of the modern music industry took root and blossomed. The remainder of the course is organized around topics drawn from the twentieth and twenty-first centuries, including record companies and marketing, television and the music industry, and the Internet and the music industry. Each unit is accompanied by the most recent and cutting-edge research in the field.

Prerequisite(s): MUSC 2308 with a minimum grade of D- ; (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

MUSC 2317. Punk Rock. (4 Hours)

Explores punk rock as a music genre and a lifestyle, an attitude and a philosophy, a political orientation and a commodified fashion. Everyone's perspective on punk is different, but it also has rules and boundaries. Although it emerged in the 1970s as a reaction against very specific social, cultural, and musical moments in the United States and the United Kingdom, punk has become larger than itself in the intervening decades, spawning sub-subcultures and subgenres that would be unrecognizable to its originators. Addresses punk's long narrative: protopunk genres including garage rock and glam rock; punk's origins in New York City and London; its transformation into postpunk, hardcore, anarcho-punk, and straightedge; and its legacy outside the United States/United Kingdom nexus and in genres such as riot grrrl, grunge, and pop-punk.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

MUSC 2320. 40,000 Years of Music Technology. (4 Hours)

Surveys the relationship between music and technology from the Paleolithic Age to the present. Examines the origins and impact of diverse musical instruments, with attention to connections between musical and technological developments; the reasons instruments are accepted, modified, or abandoned; and debates about the effects of new technologies on music. Considers such forces as standardization, institutionalization, and commodification, as well as experimentation, hacker, and DIY cultures. Asks whether music technologies are "just tools" or rather carry with them ethical values and ramifications. By studying the sociocultural history of such instruments as the violin, piano, electric guitar and synthesizer, offers students an opportunity to gain an understanding of the interplay between technological change and the enduring human need for music.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

MUSC 2330. Musical Communities of Boston. (4 Hours)

Combines ethnomusicology and experiential learning by exploring the diverse communities of Boston and their music. Since 17th-century encounters between the Wampanoag Nation and English Puritans, Boston has been characterized by intercultural contact and exchange. Discusses the history and legacies of such encounters, as well as present-day issues of diversity and belonging in Boston. Focuses on how communities reinforce their own cultural bonds through music and discusses alliances formed through shared experiences of diasporic, exilic, refugee, immigrant, and minority status. Through interdisciplinary, ethnographic analysis and practice, offers students an opportunity to explore how these inherently intersectional social dynamics—which engage issues of race, gender, class, ethnicity, etc.—play out through collective and individual musical practices.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

MUSC 2331. Topics in Musical Communities. (4 Hours)

Introduces students to diverse local communities of the surrounding area through texts and media, in-class workshops with local musicians and arts workers, experiential activities, and students' own semester-long research projects. Explores a range of musical practices and intersecting issues, which might include music and urban spatial politics; music and gentrification; music, immigration, and diaspora; etc. Offers students an opportunity to engage with music through experiential learning activities, which might include soundwalks, conducting interviews, attending performances, or documenting music through photographs and audio recordings. May be repeated three times.

Attribute(s): NUpath Interpreting Culture

MUSC 2336. The Festival Experience. (4 Hours)

Examines the ways in which music festivals shape and are shaped by the human desire to gather and celebrate. Through texts, guest lectures, class discussions, festival attendance (as ethnographic researchers), and service-learning alongside festival professionals, offers students an opportunity to learn how organizers make artistic, financial, and administrative decisions to deliver a unique festival experience. Explores the significance, widespread presence, and complex impacts of music festivals. Topics include how festivals shape musical life; what needs and desires festivals meet for producers and attendees; how festivals impact local communities and the natural environment; who defines the social, cultural, economic, and aesthetic values of the festival experience; and what festivals reveal about our history, present circumstances, and future potential.

Attribute(s): NUpath Integration Experience, NUpath Societies/Institutions

MUSC 2340. Divas, DJs, and Double Standards. (4 Hours)

Examines the significance of gender to the experience of and access to participation in music making, listening, the music industries, and cultural recognition. Surveys how gender differences have been constructed, enacted, and contested in historical and contemporary musical cultures and develops critical lenses for analyzing musical representations of gender difference and their social impact. Considers how gender intersects with racial and sexual identities in music and its institutional structures. Uses case studies drawn from a variety of contexts, such as classical (Bizet's "Carmen"), popular (Beyoncé), film ("Star Wars"), and avant-garde (Yoko Ono).

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

MUSC 2350. Acoustics and Psychoacoustics of Music. (4 Hours)

Introduces students from a variety of disciplines to the fundamentals of sonic production, transmission, and reception. Topics include impedance, refraction and diffraction, wave mechanics, frequency spectrum, and resonance. Applies core concepts to the understanding of the acoustics of musical instruments and loudspeakers. Explores basic auditory psychophysics. Offers students an opportunity to investigate real-life applications in the domains of music, sonic art, sound design, instrumental design, and recording.

Attribute(s): NUpath Natural/Designed World

MUSC 2351. Music, Sound, and the Screen. (4 Hours)

Examines the function of music and sound design in contemporary visual media: how they are used in relation to images, and how they work with images to generate meaning and shape experience. Topics include film, television, video games, and the internet; and intermedial forms such as title sequences, trailers, music videos, and commercials.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MUSC 2380. The World of Choral Music. (4 Hours)

Presents the genre of choral music and its relevance and practical application in choral communities today. Studies a broad list of choral repertoires of both sacred and secular genres (including, but not limited to, Mass, Requiem Mass, cantatas, choral symphony, oratorios) from the Renaissance to the 21st century, as well as music influences derived from multiple cultures. Offers students an opportunity to learn music analysis and apply repertoire analysis in a practical manner of ensemble work. Students experience live performances of works studied, with performances by local choral ensembles, and discuss and reflect on modern-day performance practices/society.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MUSC 2420. Music Composition Seminar 1. (4 Hours)

Exposes students to the basic methods of music composition. Analyzes examples from music literature to gain an understanding of the methods employed; students complete several compositions of their own.

Prerequisite(s): MUSC 1201 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MUSC 2973. Special Topics in Music. (4 Hours)

Focuses on various topics related to music. May be repeated twice for a maximum of 12 semester hours.

MUSC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSC 2991. Research in Music. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

MUSC 3300. Music Perception and Cognition. (4 Hours)

Offers an overview of the perceptual, cognitive, and brain bases of performing, composing, and listening to music for enjoyment and for human benefit. Topics include acoustics and biological processing of sound; theories and empirical research on pitch, rhythm, harmony, melody, timbre, orchestration; similarities and differences between music and language; evolution and development of musical ability; and special populations in musical functions. Includes laboratory demonstrations and exercises in experiment design and data analysis. Requires a final project (paper and in-class presentation). Offers students an opportunity to learn how to design and conduct their own research study in music perception and cognition.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

MUSC 3337. Writing about Music. (4 Hours)

Provides an overview of various types of musical journalism including criticism, reviews, feature articles, program notes, promotional material, and so on. Offers students significant opportunity to develop their own skills in writing, editing, research, and interview techniques as they apply to writing about music and the music industry.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

MUSC 3352. Sounding Human. (4 Hours)

Explores how people have used music to answer the question of what it means to be human and how boundaries between the human and nonhuman (animal, machine, angel, alien, etc.) have been inscribed, dissolved, and reconfigured by means of music. Examines historically how certain musical traits have served as signifiers of humanity, while others have signified nonhumanity. Studies musicians who deliberately present themselves or their work as nonhuman as a means to critique limited conceptions of mankind. Develops historical, critical, and ethical perspectives on what it means to be human by focusing on contexts where music has played a role in testing and contesting conventional wisdom (including colonial encounters, technological changes, scientific studies, and science fiction).

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Writing Intensive

MUSC 3353. Music and the Racial Imagination. (4 Hours)

Addresses the history of the concept of race, taken as a cultural construct and a lived reality, long used to justify social, economic, and political inequality. Examines the relationship between musical sound and processes of racialization, addressing this relationship through a series of select historical and contemporary case studies, alongside grounding texts drawn from critical race studies, gender and sexuality studies, and ethnomusicology and popular music studies. Explores how the construction and everyday lived experience of race influenced music production, performance, reception, and analysis and how categories of race have been represented and questioned through the sonic and embodied acts of performers.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

MUSC 3354. Sound and the Sacred. (4 Hours)

Considers the ways in which religious beliefs, ethics, meaning, and practices are embodied within music and what music contributes to faith identities in a variety of religio-cultural contexts, both present-day and historical. Music plays important roles in religious contexts: Among other things, it connects worshippers to spiritual realms; centers practitioners within continuous traditions; distinguishes between sacred and secular spaces (and places); enables communal cohesion; facilitates transcendent experiences; imbues everyday activities with religious intent; orients believers to ritual practices; and contributes to religious identities, both at the individual and at the collective (or congregational) levels. Approaches the study of music and religion as one that benefits from intense attentional investment, using detailed scholarly works to provide intricately nuanced perspectives.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture, NUpath Writing Intensive

MUSC 3355. Music, Noise, Silence. (4 Hours)

Using an ethnomusicological focus, examines listening as a critical cultural practice. Combines analysis with practice-based explorations of listening to address sonic practices from around the globe in order to decolonize our assumptions about how we listen, what we listen for, and how we categorize, analyze, and assign value to the sounds we hear. Engages themes across and beyond ethno/musicology, popular music studies, music cognition, and sound studies, focusing on the social implications of listening in relation to (de)colonization, race, gender, (dis)ability, technology, environmental crisis, and human-animal interactions; and through activities including listening experiments, sound walks, and sonic art.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture, NUpath Writing Intensive

MUSC 3360. Ethnography and the Arts. (4 Hours)

Considers what ethnography might teach us about creative industries, what it contributes to marketplace research and decision making, and how it informs creative practice. Ethnography uses participant/observation and other methods of collecting qualitative data to research specific social groups and their cultures. Asks for what purposes ethnographic methods are best suited and how ethnography might contribute to cross-cultural understanding, arts leadership, and creative practice. Covers what unique methodological issues ethnographic research in the arts might pose. Offers students an opportunity to develop and practice their own research skills, designing and conducting self-defined ethnographic research.

Prerequisite(s): ENGW 1111 with a minimum grade of C or ENGW 1110 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Societies/Institutions, NUpath Writing Intensive

MUSC 3410. Recital 1. (1 Hour)

Offers preparation for and performance of a minirecital (twenty to thirty minutes of music) under the guidance of the student's primary instrumental or vocal instructor. Minirecitals are usually shared by more than one student.

MUSC 3541. Music Analysis Seminar. (4 Hours)

Exposes students to advanced methods of musical analysis. Focuses on techniques for analyzing large musical forms from the baroque period to the present day.

Prerequisite(s): MUSC 1202 with a minimum grade of C

MUSC 3550. Historical Traditions: Special Topics. (4 Hours)

Provides an advanced seminar examining topics and issues surrounding musical cultures and histories. Topics vary with each offering. May be repeated without limit.

Prerequisite(s): MUSC 2311 with a minimum grade of C or MUSC 2312 with a minimum grade of C or MUSC 2313 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

MUSC 3973. Special Topics in Music. (4 Hours)

Focuses on various topics related to music. May be repeated twice for a maximum of 12 semester hours.

MUSC 3983. Special Topics in Music Analysis. (4 Hours)

Focuses on advanced topics in theory and analysis. Topics vary with each offering. May be repeated twice for a maximum of 12 semester hours.

MUSC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSC 4510. Music and the Brain Research. (4 Hours)

Offers an overview of the perceptual, cognitive, and neural bases of performing, composing, and listening to music. Topics include acoustics and biological processing of sound; theories and empirical research on pitch, rhythm, harmony, melody, timbre, orchestration; similarities and differences between music and language; evolution and development of musical ability; and special populations in musical functions. Meetings include laboratory demonstrations and exercises in experiment design and data analysis. Requires a final project (paper and in-class presentation).

Prerequisite(s): MUSC 2350 with a minimum grade of C or MUSC 3300 with a minimum grade of C or PSYC 2320 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Capstone Experience, NUpath Natural/Designed World

MUSC 4622. Recital 2. (1 Hour)

Offers preparation for and performance of a senior recital (40 to 60 minutes of music) under the guidance of the student's primary instrumental or vocal instructor.

Prerequisite(s): MUSC 3410 with a minimum grade of C

MUSC 4651. Music Research Capstone. (4 Hours)

Offers students an opportunity to complete an original research-based project on a musical topic. Organized around a shared theme such as music and entertainment, music and globalization, or music and creativity. Includes seminar-style discussions of readings that introduce students to the state of knowledge on the theme, in addition to a range of research methods and conceptual frameworks. Guides students through the research process from the formulation of questions through finding and interpreting sources, developing arguments, and crafting the presentation of results in oral and written form. Students also have the opportunity to integrate research with multimedia, performance, and/or other creative components.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

MUSC 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

MUSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSC 4992. Directed Study. (1-4 Hours)

Focuses on independent work in a selected area of music under the direction of a member of the department. Enrollment is limited to qualified students by special arrangement with the supervising faculty member and with the approval of the department chair. May be repeated without limit.

MUSC 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated twice.

Attribute(s): NUpath Integration Experience

MUSC 5973. Special Topics in Music. (3,4 Hours)

Focuses on various topics related to music. May be repeated twice for a maximum of 12 total semester hours.

MUSC 6300. Music Perception and Cognition Research. (4 Hours)

Offers an overview of the perceptual, cognitive, and brain bases of performing, composing, and listening to music for enjoyment and for human benefit. Studies how and why music stimulates our senses and how it can promote health and well-being. Topics include theories and empirical research on pitch, rhythm, harmony, melody, timbre; music and language; development of musical ability; and special populations in musical functions. Meetings include demonstrations and exercises in experiment design and data analysis. Requires an in-depth research project (paper and in-class presentation), in consultation with the instructor. By the end of this course, students should be able to design and conduct their own research study in music perception and cognition.

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

MUSC 6510. Music and the Brain Advanced Research. (4 Hours)

Reviews contemporary studies in cognitive neuroscience of music, specifically in speech, language, and music. Offers students an opportunity to obtain in-depth training on the methods of cognitive neuroscience of music. Students design and implement a group project, analyze the data, and write up the results in an end-of-term paper.

Music - CPS (MUS)**Courses****MUS 1100. Sound Health: Music and Relaxation. (3 Hours)**

Offers students an opportunity to gain a heightened awareness of the power of music to effect physical and emotional change and to examine the effects of music on the body, mind, and spirit. Explores awareness of sound and the physiological changes caused by music. Covers sound pollution, the effects of vibrations on the body, guided imagery, and music and meditation.

MUS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUS 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

MUS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Music Industry (MUSI)

Courses

MUSI 1204. Analyzing Popular Genres. (4 Hours)

Examines the role and function of various musical elements by analyzing examples from popular music. Examines structure, lyrics, and instrumentation in popular music. Offers students an opportunity to further develop ear training and sight-singing skills.

Prerequisite(s): MUSC 1201 with a minimum grade of D- or MUSI 1203 with a minimum grade of C

MUSI 1230. Introduction to Music Industry. (4 Hours)

Examines business-related areas of the music industry. Topics include music publishing, copyright, the function of performing rights organizations (ASCAP and BMI), talent agents, artist management, concert promotion, and royalties and contracts.

MUSI 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSI 2101. Demo Production for Songwriters. (4 Hours)

Offers students an opportunity to learn the necessary techniques to utilize current Musical Instrument Digital Interface (MIDI) and audio technology in the production of professional-quality song demos, including intermediate to advanced skills and concepts of MIDI, synthesis, multitrack recording, mixing, and sound processing. Covers musical approaches to the effective assembly and arranging of sound materials using professional digital audio workstations (DAWs). Focuses on techniques to import and export both MIDI and audio data to greater facilitate collaboration within the virtual classroom as well as using external collaborators (across a variety of DAWs and platforms). Songwriting skills are also critiqued.

Attribute(s): NUpath Creative Express/Innov

MUSI 2231. Music Licensing for Media. (4 Hours)

Examines a variety of music usages in film, advertisements, TV shows, and other media types or venues that require music licensing. Offers students an opportunity to examine licenses and agreements in an effort to enable them to customize boilerplate forms to reflect accurately the needed licenses with any and all customized terms. Stresses teamwork, defining roles within a team, and assertiveness in an effort to enable students to function at their highest level for the demanding team-based final project. The final project stresses resourcefulness, meeting deadlines, creative excellence, along with open and sustained communication between the production side and the creative side.

Prerequisite(s): MUSI 1230 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

MUSI 2232. Music Production and Recording 1. (4 Hours)

Introduces the modern commercial and popular music production process including music creation, editing, arrangement, and mixing. Emphasizes core techniques in operating industry-standard music production software, critical listening for assessment purposes, and mixing and editing audio. No prior production experience is required. Weekly practical assignments culminate in a final music production project, for which students may use their own creative work.

MUSI 2234. Festivals. (4 Hours)

Examines the multiple ways in which festivals affect musical life. Analyzes festivals both as music communities concentrated into limited temporal and geographic frames as well as social and cultural institutions situated within particular historical and cultural contexts. Studies what a festival does; what we can learn from the history of music festivals; how festivals have impacted social, cultural, economic, and aesthetic hierarchies; and what festival organizers consider when making artistic, financial, and administrative decisions. By the end of the semester, successful students should have a comprehensive understanding of both the business and the cultural contexts of music festivals, which they should be able to demonstrate through individual written, multimodal creative, and group assignments.

Attribute(s): NUpath Creative Express/Innov

MUSI 2235. Copyright in the Creative Industries. (4 Hours)

Explores the balance of interests at the heart of copyright law, including enhancing the public interest, supporting innovation, and protecting private property rights. Offers students an opportunity to gain an appreciation of the significance of copyright in the structure, operation, and customs of the creative industries. Focuses on the unique character of music-related copyright issues and addresses the music industries' outsized impact on the development of copyright policy in the United States.

Attribute(s): NUpath Societies/Institutions

MUSI 2330. Performing Arts Administration. (4 Hours)

Introduces music management including the structure of nonprofit organizations (such as arts service organizations, arts centers, symphony orchestras, chamber orchestras, ensembles, opera companies, and university arts programs) and the structure of for-profit enterprises. Examines financial management, funding, and audience development.

MUSI 2331. Music Production and Recording 2. (4 Hours)

Explores modern commercial and popular music production processes including workflows, production chronology, and microphone techniques. Emphasizes intermediate techniques in operating industry-standard music production software and critical listening for assessment purposes. Weekly practical assignments augment a course-long production project.

Prerequisite(s): MUSI 2232 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

MUSI 2332. Music Publishing and Royalties. (4 Hours)

Focuses on music publishing, which plays a pivotal role in the music industry. Not only does this field generate billions of dollars worldwide in revenue, but it has become an essential part of the recording, live performance, and merchandising sectors of the music industry. Examines the concepts and current issues of music publishing as it pertains to recording, film, television, print, and other media. Topics include licensing, royalty collection, and the art of negotiating music copyrights.

Prerequisite(s): MUSI 1230 with a minimum grade of C

MUSI 2341. Music Supervision 1. (4 Hours)

Covers the field of music supervision, which has become an in-demand field due to the increased use of songs in TV shows, films, live events, advertisements, websites, and other forums. Discusses the whole process, from choosing the perfect song/lyric to strategies for securing licensing with artists and publishers. Offers students a hands-on opportunity to make music selections fit a variety of media and also to structure licensing/contract deals for composers, publishers, and record companies. Final project involves networking with Green Line Records and external rights holders to license and place music into a series of scenes and advertisements.

Prerequisite(s): MUSI 1230 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

MUSI 2973. Special Topics in Music Industry. (1-4 Hours)

Focuses on various topics related to the music industry. May be repeated twice for up to 12 total semester hours.

Prerequisite(s): MUSI 1230 with a minimum grade of C

MUSI 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSI 2991. Research in Music Industry. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

MUSI 3332. Artist Management. (4 Hours)

Provides an in-depth investigation of the field of musical artist management. Explores the artist-manager relationship, the management contract, artist evaluation, image formulation, the artist's development team, achieving a recording contract, merchandising, endorsements, sponsorships, touring, and financial management.

Prerequisite(s): MUSI 1230 with a minimum grade of C

MUSI 3333. The Record Industry. (4 Hours)

Examines the domestic and international record industry. Topics include industry structure, business and legal affairs, the recording contract, royalties, manufacturing, distribution, promotion, publicity, advertising, licensing, and piracy. Offers students the opportunity to explore major record labels and independent labels. Addresses the past, present, and future.

Prerequisite(s): MUSI 1230 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov

MUSI 3338. Music Industry Marketing and Promotion. (4 Hours)

Provides a thorough examination of the principles and applications of marketing and promotion within the music industry. Students explore how music companies successfully conduct product, pricing, distribution, and communication management. Approaches music marketing issues using readings, specific music marketing case studies, lectures, guest speakers, and projects.

Prerequisite(s): MUSI 1230 with a minimum grade of C

MUSI 3340. Concert Promotion and Venue Management. (4 Hours)

Provides an in-depth exploration of the principles and practices of concert promotion and venue management. Focuses on areas such as concert promotion, venue advertising, talent buying, contractual requirements, insurance, government regulation, American Society of Composers, Authors, and Publishers (ASCAP)/BMI licenses, personnel management, and concert production and administration.

Prerequisite(s): MUSI 1230 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Creative Express/Innov

MUSI 3341. Music Production and Recording 3. (4 Hours)

Focuses on the final stages of the modern commercial and popular music production process: mixing and mastering. Emphasizes advanced techniques in operating industry-standard music production software and advanced critical listening for making decisions about levels, equalization, dynamics, time-based effects, and spatial positioning when mixing and mastering. Weekly practical assignments in listening and analysis are designed to augment hands-on practice using both students' current productions and current professional music productions.

Prerequisite(s): MUSI 2331 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

MUSI 3351. Music and Social Justice. (4 Hours)

Introduces theories of ethics, morality, and equality and strategies to advance social justice—to ensure equality and human dignity for all people—through music. Explores the music industry as both a microcosm of society and amplifier of our collective ethics. On stage, on the record, and through direct action, musicians worldwide use their art and renown to serve social movements. Many also face equality and equity challenges within the music industry. As future professionals, students may either challenge or reinforce the injustices they encounter in their professional and personal lives. Through critical discourse on professional ethics in the music business and service-learning projects requiring direct community engagement, seeks to empower students to make a lifelong commitment to ethical decision making and advancing social justice.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

MUSI 3360. Global Music Industries in Context. (4 Hours)

Offers students an opportunity to obtain the cultural curiosity and adaptive dexterity needed to analyze diverse global music industries in their historical, cultural, economic, and political contexts. Through the labels, scenes, and digital spaces that form the professional settings for today's global music professionals—explored in course readings, creative case studies, and summative research projects—identifies the many ways in which diverse industries consolidate music production, distribution, and consumption. Students encounter and analyze diverse professional practices and creative products and critique music's value—financial, social, political, ideological, and personal. In addition, students practice critical reading and observation and identify traditions within the social sciences and cultural criticism that provide valuable theoretical lenses for the interpretation of global music industries in context.

Prerequisite(s): MUSI 1230 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

MUSI 3401. Hip Hop in the Music Industry. (4 Hours)

Focuses on black popular music as art, activism, and commodity from the post-Civil Rights era to today. Studies the immediate musical, historical, cultural, and industry-based precedents for rap music, which emerged in opposition to the music industry—and many other institutions that perpetuated the inequalities against which early hip-hop artists were protesting. The contemporary moment provides a unique opportunity for refocusing on the origins of hip-hop and black protest music as they relate to the industry's embrace and commodification of certain aspects of hip-hop culture. Explores the dynamic tensions between rap music as aesthetic object, countercultural expression, social commentary, and industry commodity, engaging with current expressions of all of these in the Boston area.

Prerequisite(s): ENGW 1111 with a minimum grade of D-

MUSI 3973. Special Topics in Music Industry. (4 Hours)

Focuses on various topics related to the music industry. May be repeated twice for up to 12 semester hours.

MUSI 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSI 4530. Music Entrepreneurship. (4 Hours)

Designed to provide students with the knowledge, skills, and abilities necessary to plan, finance, develop, and operate a new music venture. Topics include attributes of music entrepreneurs and entrepreneurial careers, evaluating opportunities, writing business plans, financing the venture, and long-term management and planning.

Prerequisite(s): MUSI 1230 with a minimum grade of C ; (ACCT 1201 with a minimum grade of D- or ACCT 1209 with a minimum grade of D-); ECON 1116 with a minimum grade of D-

MUSI 4601. Seminar in Music Industry. (4 Hours)

Presents a capstone course for music industry students. Offers advanced students the opportunity to explore contemporary events and issues in the music industry. Allows students to reflect upon, distill, and apply knowledge accumulated in prior courses and previous experiential learning. This reflection and application occurs through substantial writing assignments and classroom discussion. Fulfills the college's experiential education requirement for music industry majors.

Prerequisite(s): MUSI 1230 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Societies/Institutions, NUpath Writing Intensive

MUSI 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSI 4992. Directed Study. (1-4 Hours)

Focuses on independent work in a selected area of music under the direction of a member of the department. Enrollment is limited to qualified students by special arrangement with the supervising faculty member and with the approval of the department chair. May be repeated without limit.

MUSI 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated twice.

Attribute(s): NUpath Integration Experience

MUSI 5220. The Independent Performing Songwriter: Creation, Commerce, and Well-Being. (4 Hours)

Explores the evolving terrain of the independent music industry for songwriters who write, perform, and release music independently. Examines songwriting, production, performance, and how to navigate the digital music landscape effectively. Covers the business side of music including rights, royalties, and branding strategies. Studies best practices to manage one's own career. Emphasizes the artist's well-being, exploring mindfulness, time management, and resilience to maintain a sustainable and fulfilling career. Offers students an opportunity to enhance artistic skills and obtain a holistic understanding of the music industry.

Attribute(s): NUpath Creative Express/Innov

MUSI 5973. Special Topics in Music Industry. (3,4 Hours)

Focuses on various topics related to the music industry. May be repeated up to two times for up to 12 total credits.

MUSI 6360. Investigating Global Music Industries in Context. (4 Hours)

Supports graduate students' development of the investigatory and explicatory acumens necessary to put their new knowledge to work. Students encounter and compare diverse global music industries in their historical, cultural, economic, and political contexts. Explores the professional practices of and cultural contexts for today's global music professionals in course readings, creative case studies, and summative research projects. Identifies the ways in which diverse industries consolidate music production, distribution, and consumption. Analyzes diverse creative products and critiques music's value—financial, social, political, ideological, and personal. Students practice critical reading and interpretation and apply theories within the social sciences and cultural criticism for the interpretation of global music industries in context.

MUSI 6700. Advanced Licensing Techniques for Music Management. (4 Hours)

Identifies and explores advanced licensing strategies, techniques, and transactions for various intellectual properties, including music publishing, sound recordings, trademarks/service marks, and likeness/publicity rights. Examines complex or hybrid licenses that cover more than one aspect of IP in the same license and approaches, strategies, and tactics (both successful and unsuccessful) that have been applied to licensing. Offers students an opportunity to develop a dynamic and effective licensing methodology and practice.

MUSI 6964. Co-op Work Experience. (0 Hours)

Offers eligible students an opportunity for work experience.

MUSI 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

MUSI 7980. Capstone. (4 Hours)

Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project. Offers students an opportunity to work in partnership with local, state, or national leaders to produce an operational music company. This is a faculty-guided project for students completing course work in music industry leadership studies.

Music Technology (MUST)**Courses****MUST 1220. Introduction to Music Technology. (4 Hours)**

Provides students with instruction in the use of a computer for composing original music. Topics include MIDI sequencing, digital audio processing, and sound synthesis. Students use music hardware and software to complete a variety of projects.

Attribute(s): NUpath Analyzing/Using Data

MUST 1301. Introduction to Composition. (4 Hours)

Designed as the first step in the education of a student composer. The art and craft of composing music is grounded in knowledge of fundamental concepts and hands-on experience. Offers students an opportunity to acquire competence in the notation and layout of a score; develop basic compositional skills (control of melody, harmony, rhythm); and obtain a wide and deep knowledge of the musical repertory.

Prerequisite(s): MUSC 1201 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

MUST 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 2102. Composing with Digital Technologies. (4 Hours)

Offers students an opportunity to create compositions using a digital audio workstation (DAW) as the principal tool. Standard Western music notation may be used in examples of certain techniques but will not be necessary for the creation of work in the course. Explores various composition topics such as periodicity, form, texture, timbre, and contour in the digital domain. Consists of a number of short composition and listening assignments culminating in the creation of compositions of moderate duration.

Prerequisite(s): MUST 1220 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

MUST 2320. Sound Design. (4 Hours)

Instructs students in the art of producing and designing musical accompaniments for a variety of media including film, TV commercials, industrial video, animation, games, theatre, and radio drama. Focuses on abstract thinking regarding sound theory and practice and includes hands-on skills. Restricted to music majors and combined majors; all other students require permission of instructor.

Attribute(s): NUpath Creative Express/Innov

MUST 2431. Computer Music Fundamentals. (4 Hours)

Focuses on the creation and implementation of standard time-domain audio synthesis routines and effects, as well as standard frequency-domain processing routines. MaxMSP is the principal programming environment used in the course. Begins with programming protocols, as well as data structures and storage, and list processing in the MaxMSP environment before moving on to standard synthesis and audio processing routines. Examines how the techniques learned in the course can be applied using a variety of synthesis and spectral processing software applications that are standard in the field.

Prerequisite(s): MUST 1220 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

MUST 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 3300. Musical Interactions in Extended Reality. (4 Hours)

Explores the immersive world of extended reality—a general term that includes augmented reality, virtual reality, and mixed reality—with a specialized focus on musical interactions. Offers students an opportunity to gain the skills and knowledge to leverage XR software and hardware for the design of interactive musical applications. Introduces scripting, sensing, and interaction paradigms tailored for XR, with a unique lens on the integration of musical elements including sampling, real-time synthesis and processing, 3D/spatialized audio, as well as musical performance.

Prerequisite(s): MUST 2431 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Natural/Designed World

MUST 3601. Digital Audio Signal Processing. (4 Hours)

Introduces students to digital signal processing as it relates to offline or non-real-time audio processing. Covers fundamental engineering concepts and mathematics. Examines implementation details of common digital audio processing routines using the C programming language, the industry standard for audio software engineering.

Prerequisite(s): MUST 2431 with a minimum grade of C

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

MUST 3602. Electronics for Music. (4 Hours)

Introduces analog electronics in the context of audio synthesis and control. Topics include the basics of electronics and analog audio signals; passive components, transistors, operational amplifiers, and sensors; analog audio synthesis, filters, amplification, and modulation; and the basics of hacking and circuit bending. In-class activities center on designing, building, analyzing, and testing sound-emitting circuits.

Prerequisite(s): MUST 2431 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Natural/Designed World

MUST 3603. Embedded Audio Programming. (4 Hours)

Explores embedded computers and their employment for the design of interactive audio applications. Studies how to program audio applications that take advantage of the unique features of these systems, which is accomplished by transferring the coding skills acquired on general-purpose computers to the languages and the programming rationales of embedded hardware. Primarily covers low-latency, real-time audio synthesis/processing, but also offers an in-depth introduction to physical computing, sensors, and simple electronics. Offers students an opportunity to gain experience with the full design-development-test cycle of software and hardware interactive audio technologies through a final project.

Prerequisite(s): MUST 2431 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Natural/Designed World

MUST 3973. Special Topics in Music Technology. (1-4 Hours)

Focuses on topics related to current trends in the area of music technology. Topics vary with each offering. May be repeated up to two times for up to 12 total credits.

Prerequisite(s): MUST 1220 with a minimum grade of C

MUST 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 4610. Composition for Electronic Instruments. (4 Hours)

Instructs students in the composition of original music for electronic and computer-based instrumentation. Students create music to accompany video, animation, and film, and study suitable methods for creating original music for the Internet. Also surveys examples of music written for similar contexts.

Prerequisite(s): MUST 2431 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

MUST 4611. Music Technology Capstone. (4 Hours)

Guides students in the research, preparation, and presentation of their own work in music technology. Projects may include music compositions, multimedia pieces, novel software or hardware tools for composition/performance, interactive sound installations, or other projects that bridge students' cumulative educational careers with future professional pathways. Offers students an opportunity to present their work to a public audience in an on-campus interdisciplinary event at the end of the semester.

Prerequisite(s): MUSC 4510 with a minimum grade of C or MUST 3300 with a minimum grade of C or MUST 3601 with a minimum grade of C or MUST 3602 with a minimum grade of C or MUST 3603 with a minimum grade of C or MUST 3973 with a minimum grade of C or MUST 4610 with a minimum grade of C or MUST 5973 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

MUST 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated twice.

Attribute(s): NUpath Integration Experience

MUST 5973. Special Topics in Music Technology. (3,4 Hours)

Focuses on various topics related to music technology. May be repeated up to two times for up to 12 total credits.

MUST 6603. Embedded Programming for Digital Musical Instruments. (4 Hours)

Explores embedded computers and their employment for the design of digital musical instruments. Studies how to program low-level audio applications that take advantage of the responsiveness and the interactive features of embedded systems. Starts with an overview of high-level embedded audio programming; then transitions into a deep exploration of low-level C++ programming techniques, specific for the design of digital musical instruments. Primarily covers low-latency real-time audio synthesis/processing, yet includes an in-depth introduction to physical computing, sensors, and simple electronics. Offers students an opportunity to gain experience with the full design-development-test cycle of software and hardware components of digital musical instruments within the confines of a final project. Requires knowledge of audio and programming.

Nanomedicine (NNMD)

Courses

NNMD 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated twice.

Attribute(s): NUpath Integration Experience

NNMD 5270. Foundations in Nanomedicine: Therapeutics. (3 Hours)

Offers an interdisciplinary, state-of-the-art introduction to nanotechnology-based therapeutics. Covers the foundations of nanoparticle synthesis, characterization, scale-up, translation, and regulatory approval. Discusses disease-specific considerations for in vivo transport, targeting, and drug delivery. Offers students an opportunity to blog about enabling innovations in nanomedicine related to a disease of their choice. Features weekly case studies presented by Northeastern faculty and guest experts from academia, hospitals, and industry.

Attribute(s): NUpath Natural/Designed World, NUpath Writing Intensive

NNMD 5271. Foundations in Nanomedicine: Diagnostics. (3 Hours)

Offers an interdisciplinary, state-of-the-art introduction to nanotechnology-based diagnostics. Covers the foundations of in vitro diagnostics and in vivo imaging, including considerations for designing diagnostic tests, device research and development, innovation vs. invention, contrast agents, companion diagnostics, medical device regulation, device reporting requirements, and challenges unique to devices for global health. Highlights examples of diagnostic technologies currently in clinical trials through talks by Northeastern faculty and guest experts from academia, hospitals, and industry.

NNMD 5272. Nanomedicine Seminar. (1 Hour)

Presents examples of research and innovation in the field of nanomedicine, with a focus on emerging technologies to solve pressing problems in human health. Features both medical case studies and rotating talks from experts in hospitals, government, academia, and industry. Offers students opportunities to practice scientific and professional skills through interactive nanomedicine activities. This course may be repeated up to three times for credit.

NNMD 5370. Nanomedicine Research Techniques. (4 Hours)

Offers an in-depth look at laboratory methods and tools for studying nanomaterials used in biology and medicine. Includes hands-on sessions with experts in nanoparticle synthesis, electron microscopy, optical microscopy, magnetic resonance imaging, high-performance liquid chromatography, in vitro measurements of nanoparticle bioactivity and cytotoxicity, and in vivo measurements of treatment efficacy.

NNMD 5380. Electron Microscopy Techniques. (4 Hours)

Offers an in-depth look at scanning and transmission electron microscopy techniques for materials characterization at the nanoscale in science, engineering, and medicine applications. Provides fundamental theory as well as comprehensive hands-on lab experience in imaging, diffraction, and spectroscopy. Studies both organic and inorganic specimen preparation including block face sectioning, fixation, and sputter coating.

NNMD 5470. Nano/Biomedical Commercialization: Concept to Market. (3 Hours)

Offers a comprehensive overview of the commercialization process for nano- and biomedical technologies. Discusses the key elements of a successful business plan, including scientific innovation, market assessment, customer discovery, intellectual property protection, business modeling, and value extraction. Also covers regulatory processes and market-specific strategies for raising capital. Offers students an opportunity to gain entrepreneurship skills through the creation of a team business proposal. Students have opportunities to interact with guest entrepreneurs.

Attribute(s): NUpath Creative Express/Innov

NNMD 5570. Preclinical and Clinical Study Design. (3 Hours)

Offers an in-depth look at preclinical and clinical considerations for drug discovery and development. Emphasizes identifying and addressing challenges associated with animal models, evaluation of drug-tissue interactions, qualifying for good laboratory practices, clinical trial design, patient stratification, and clinical trial management. Identifies key terminology and statistical considerations used in preclinical and clinical settings. Students practice steps of preclinical and clinical translation through a combination of case studies, data analysis, discussions, and a team project.

NNMD 6272. Professional Nanomedicine Seminar. (0 Hours)

Presents examples of research and innovation in the field of nanomedicine, with a focus on emerging technologies to solve pressing problems in human health. Features both medical case studies and rotating talks from experts in hospitals, government, academia, and industry. Offers students opportunities to practice scientific and professional skills through interactive nanomedicine activities. May be repeated up to three times.

NNMD 6370. Nanomedicine Experiential Capstone. (4 Hours)

Offers hands-on experience in the design, synthesis, and optimization of a nanoparticle using high-throughput microfluidics. Students work in teams to rationally design and synthesize a therapeutic nanoparticle, as well as develop and implement in vitro nanocharacterization protocols. Involves iterative collection, analysis, and interpretation of laboratory data to optimize nanoparticle synthesis.

Prerequisite(s): NNMD 5370 with a minimum grade of B

NNMD 6500. Professional Development for Co-op. (0 Hours)

Introduces the cooperative education program. Presents co-op policies, procedures, and expectations of the program and co-op employers. Covers career paths, choices, professional behaviors, work culture, and career decision making. Offers students an opportunity to assess their workplace skills, interests, and values and discuss how they impact personal career choices; prepare a professional-style resumé; study proper interviewing techniques; and gain an understanding of the opportunities available to them for co-op. Familiarizes students with workplace issues relative to their field of study and presents how to use NUworks in the job-search and referral process.

NNMD 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NNMD 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated thrice.

Prerequisite(s): NNMD 6500 with a minimum grade of B

NNMD 6984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated once.

Network Science (NETS)

Courses

NETS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NETS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NETS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NETS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NETS 5050. Fundamentals of Complex Networks. (4 Hours)

Presents an interdisciplinary introduction to the science of complex networks and the starting point for students looking to develop an expertise in network science. Explores the mathematical foundation of networks (graph theory) and examines common tools for describing and analyzing networks. Discovers the origin of complex networks throughout our world, examining properties such as the degree distribution, centrality measures, path lengths, clustering, homophily, and robustness. Investigates evolving networks, growing networks, and network null models. Introduces common applications of network science in a variety of domains including biology, medicine, sociology, technology, and finance. Requires students to conduct their own analysis of a real network dataset of their choosing as part of the final project.

NETS 5051. Analyzing Complex Network Data. (4 Hours)

Presents an overview of the core data scientific skills required to analyze complex networks. Through hands-on lectures, labs, and projects, exercises actionable skills about network analysis techniques using Python (in particular, the NetworkX library). Covers the basics of network analysis including data input/output, network statistics, and visualization. Explores instruction in random graph models and algorithms for computing network properties such as path lengths, clustering, degree distributions, and community structure. Offers students an opportunity to develop web scraping skills and introduces the vast landscape of software tools for analyzing complex networks. Concludes with a large-scale final project to demonstrate proficiency in network analysis.

NETS 5052. Advanced Tools for Complex Network Analysis. (4 Hours)

Delves into more advanced techniques for analyzing large, complex networks such as filtering, backboning, and embedding. Demonstrates how the presence of extra network features, such as a temporal dimension, requires more advanced and computationally demanding techniques. Presents a more formal treatment of network generative models, such as the stochastic block model; exponential random graphs with particular focus on sampling from such models; and the basics of network reconstruction involving appropriate statistical/inference methods.

Prerequisite(s): NETS 5051 with a minimum grade of C

NETS 5116. Network Science 1. (4 Hours)

Introduces network science and the set of analytical, numerical, and modeling tools used to understand complex networks emerging in nature and technology. Focuses on the empirical study of real networks, with examples coming from biology (metabolic, protein interaction networks), computer science (World Wide Web, Internet), or social systems (e-mail, friendship networks). Shows the organizing principles that govern the emergence of networks and the set of tools necessary to characterize and model them. Covers elements of graph theory, statistical physics, biology, and social science as they pertain to the understanding of complex systems.

Prerequisite(s): PHYS 2303 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Natural/Designed World

NETS 5126. Spreading on Networks: From Epidemics to Memes. (4 Hours)

Explores fundamentals of contagion on networks, starting with simple disease dynamics in mean field systems and building to spreading processes on complex networks. Examines a variety of contagion modeling techniques, which include state-of-the-art techniques for using networks to forecast the trajectory of an infectious disease, the emergence of a best-seller, predicting elections, or even modeling cascading failures in infrastructure networks. Introduces a diverse range of datasets and case studies, which students may draw from for their final modeling/analysis project. From biological pathogens like SARS-CoV-2, Ebola, and influenza to social contagions like fake news, memes, and influencers, complex network analysis gives us powerful tools to understand contagion processes in our modern world.

Prerequisite(s): NETS 5050 with a minimum grade of C ; NETS 5051 with a minimum grade of C

NETS 5311. Physical and Digital Human Traces. (3 Hours)

Examines how to use physical and digital human traces to understand how people interact with each other and their environment to gain fresh insights into human behavior. These traces can be captured from data sources such as mobile phones, social media posts, smart sensors, and transportation networks. The unprecedented availability of these data traces enables us to delve into theoretical and practical aspects of spatiotemporal data analysis techniques to characterize human behaviors. Studies technical proficiency required for investigating human dynamics to identify factors that determine how humans interact in physical spaces. Examines data science and statistical methods commonly employed in urban analytics to offer students an opportunity to obtain a robust comprehension of the methodologies, models, and data pertinent to study human dynamics.

Prerequisite(s): INSH 5301 with a minimum grade of C ; NETS 5050 with a minimum grade of C

NETS 5314. Complexity in Social Systems. (3 Hours)

Offers an in-depth exploration of complex systems and networks. Emphasizes the modeling of social phenomena using physical models. Focuses on quantitative phenomenology to understand and describe emergent features observed in large-scale social phenomena. Aims to identify general behavioral classes, not based on microscopic definitions but on universal, large-scale characteristics. This approach is used to uncover mechanisms behind various social dynamics such as opinion consensus, cultural dissemination, collective motion, and social hierarchies. Examines a range of contagion phenomena, from biological disease spread to social and technological contagions, highlighting the impact of complexity inherent in social, biological, and cultural aspects on these propagation processes.

Prerequisite(s): NETS 5050 with a minimum grade of C

NETS 5360. Research Design for Social Networks. (4 Hours)

Presents an in-depth exploration of experimental design in the context of social network analysis and a guide to the craft of research. Explores the knowledge and skills necessary to design and implement experiments that investigate social phenomena through the lens of network structures and dynamics. Every study is the result of a myriad of choices: What are the compelling questions and what data are needed to answer them? What exactly should you measure and how do you collect that data? What are the best ways to analyze these data? Considers digital trace, survey, qualitative data, and ethical considerations for each choice. Offers students an opportunity to develop a solid foundation in both social network analysis principles and experimental research methodologies.

Prerequisite(s): INSH 5301 with a minimum grade of C

NETS 5411. Financial and Economic Networks. (3 Hours)

Identifies the complex web of financial and economic interactions that shape our global economy. Examines a wide range of relevant and emerging topics of today's interconnected world and approaches to studying these networks. Investigates the integration of techniques, applications, and the impact of network theory in these fields. Explores in-depth three main topics: trade, financial, and socioeconomic networks. Delves into network models of trade, leveraging input-output data to understand production, as well as firm-level supply chain analysis. Considers topics of finance, including banking and online systems, as well as financial transactions. Draws insights into microeconomic topics of knowledge creation, the labor market, and income inequality.

Prerequisite(s): NETS 5050 with a minimum grade of C

NETS 5515. Complex Network Analysis for Biological Systems. (4 Hours)

Covers the properties of diverse biological networks and foundational computational methods for analyzing, visualizing, and performing statistical investigations of networked data. Investigates how physicists have uncovered remarkable regularities in networked systems by applying approaches from scaling theory to biological networks. Explores the diversity of biological networks and provides the foundational tools needed to study networks derived from real-world data, including tools from machine learning. Focusing on a series of case studies, studies how to elucidate the structure and function of biological networks using empirical data.

Prerequisite(s): NETS 5050 with a minimum grade of C ; NETS 5051 with a minimum grade of C

NETS 5901. Visualizing Complex Networks. (2 Hours)

Studies the knowledge and skills necessary to effectively visualize complex network data. Covers foundational principles of network data visualization and effective strategies to present core network properties to a range of different audiences. Offers students an opportunity to obtain experience using various network visualization tools such as Networkx and matplotlib, Gephi, and other web-based tools. Examines case studies to explore diverse network visualization approaches to effectively convey scientific insights, advance policy, and inform the public, including examples from such diverse fields as brain science, supply chains, epidemiology, and urban analytics. Students give and receive feedback, collectively building competency in how to create and interpret visualizations of complex data. Final projects are designed to prepare students for working with clients and collaborators from industry, nonprofits, government agencies, and research.

Prerequisite(s): NETS 5050 with a minimum grade of C ; NETS 5051 with a minimum grade of C

NETS 5902. Communicating Network Data. (2 Hours)

Examines critical aspects of conveying complex network data effectively and ethically. Explores not only how to simplify and articulate complex network concepts to various audiences but also grapples with the ethical implications of the work, ensuring that communication is not just effective but also responsible and legally compliant. This is done through a combination of lectures and reading, as well as through guest lecturers and case studies. Requires a final project presentation that is based on a previous project selected by the student and that offers new presentations of the material designed for two (imagined) audiences: a general audience and a technically trained audience. Designed to help students bridge the gap between technical network analysis and effective, ethical communication.

Prerequisite(s): NETS 5051 with a minimum grade of C

NETS 6000. Professional Development for Co-op. (1 Hour)

Introduces the cooperative education program. Offers students an opportunity to develop job-search and career-management skills; to assess their workplace skills, interests, and values and to discuss how they impact personal career choices; to prepare a professional resumé; and to learn proper interviewing techniques. Explores career paths, choices, professional behaviors, work culture, and career decision making.

NETS 6061. Analyzing Higher-Order Networks. (2 Hours)

Delves into specialized network structures including temporal networks, higher-order networks (such as simplicial complexes and hypergraphs), and multilayer networks. Explores the dynamic aspects of temporal networks, the rich representation of relationships in higher-order networks, and the interconnected systems modeled by multilayer networks. By mastering the analysis and modeling of these advanced network structures, aims to equip students to address complex real-world challenges across various domains, ranging from epidemiology and social sciences to transportation planning and resilience analysis.

Prerequisite(s): NETS 5050 with a minimum grade of C ; NETS 5051 with a minimum grade of C

NETS 6063. Probabilistic Mathematics of Networks. (2 Hours)

Introduces advanced probabilistic tools and statistical methodologies within the realm of network science. Offers students an opportunity to obtain the skills needed to navigate and analyze the complexities and inherent uncertainties of networked systems. Introduces basic probabilistic computing with probability generating functions, the development of message-passing algorithms, and their various applications in the field of network science. Focuses primarily on modeling complex dynamical systems and tackling statistical inference problems using real-world network data, demonstrating the depth and versatility of these techniques.

Prerequisite(s): INSH 5301 with a minimum grade of C ; NETS 5050 with a minimum grade of C

NETS 6099. Special Topics in Complex Networks. (2 Hours)

Delves into advanced and specialized topics within the interdisciplinary field of network science. Network science explores the structure, behavior, and dynamics of complex systems represented as networks, encompassing social, technological, biological, and physical systems. Examines in-depth cutting-edge research, theoretical frameworks, and practical applications to offer students an opportunity to obtain a deeper understanding of the current trends and challenges in network science.

Prerequisite(s): NETS 5050 with a minimum grade of C ; NETS 5052 with a minimum grade of C

NETS 6107. Complex Network Analysis Research Rotation. (2 Hours)

Offers students up to three lab rotations and self-directed exploration of how network science can model social, technical, physical, and epidemiological systems and solve applied societal problems. Diverse topics could include disease spreading, effects of public policies and health interventions, drug efficacy, improvement of health and security of human populations, science of success, shaping of social behavior, formulation of political beliefs, group decision making, geometry of networks, topological data analysis on graphs, anomaly detection, algorithmically infused societies, and unifying the physics of networks with the mining of graphs. After research rotations, students independently explore areas to apply their skill set and utilize research community to engage in outreach for workforce opportunities. May be repeated once.

Prerequisite(s): INSH 5301 with a minimum grade of C ; NETS 5001 with a minimum grade of C ; NETS 5002 with a minimum grade of C ; NETS 5103 with a minimum grade of C

NETS 6108. Complex Network Analysis Capstone. (2 Hours)

Offers students an opportunity to apply network analytic tools and network science concepts to a project that further develops skills and expands understanding of how to approach problems using network analytics and principles. Students may propose a topic or choose projects presented by a sponsoring organization or agency. Topics must be approved by the instructor, and students are expected to provide regular updates and present their final project. May be repeated once.

Prerequisite(s): INSH 5301 with a minimum grade of C ; NETS 5001 with a minimum grade of C ; NETS 5002 with a minimum grade of C ; NETS 5103 with a minimum grade of C

NETS 6116. Network Science 2. (4 Hours)

Continues an exploration of network science and the set of analytical, numerical, and modeling tools used to understand complex networks emerging in nature and technology. Focuses on the empirical study of real networks. Investigates the organizing principles that govern the emergence of networks and the set of tools necessary to characterize and model them. Offers students an opportunity to obtain a deeper understanding of complex systems.

Prerequisite(s): PHYS 5116 with a minimum grade of C or NETS 5116 with a minimum grade of C

NETS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NETS 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated up to seven times.

NETS 6990. Thesis. (2 Hours)

Offers analytical, research, and/or experimental work conducted under the auspices of the department. May be repeated once.

Prerequisite(s): INSH 5301 with a minimum grade of B- ; NETS 5001 with a minimum grade of B- ; NETS 5002 with a minimum grade of B- ; NETS 5103 with a minimum grade of B-

NETS 7332. Machine Learning with Graphs. (4 Hours)

Covers a number of advanced topics in machine learning and data mining on graphs, including vertex classification, graph clustering, link prediction and analysis, graph distance functions, graph embedding and representation learning, deep learning for graphs, anomaly detection, graph summarization, network inference, adversarial learning on networks, and notions of fairness in social networks. Seeks to familiarize students with state-of-the-art descriptive and predictive algorithms on graphs. Requires a foundational understanding of calculus and linear algebra, probability, machine learning or data mining, algorithms, and programming skills.

Prerequisite(s): PHYS 5116 with a minimum grade of C

NETS 7334. Social Networks. (4 Hours)

Offers an overview of the literature on social networks, with literature from political science, sociology, economics, and physics. Analyzes the underlying topology of networks and how we visualize and analyze network data. Key topics include small-world literature and the spread of information and disease. Students who do not meet course prerequisites may seek permission of instructor.

NETS 7335. Dynamical Processes in Complex Networks. (4 Hours)

Immerses students in the modeling of dynamical processes (contagion, diffusion, routing, consensus formation, etc.) in complex networks. Includes guest lectures from local and national experts working in process modeling on networks. Dynamical processes in complex networks provide a rationale for understanding the emerging tipping points and nonlinear properties that often underpin the most interesting characteristics of sociotechnical systems. Reviews the recent progress in modeling dynamical processes that integrates the complex features and heterogeneities of real-world systems.

Prerequisite(s): NETS 5116 with a minimum grade of C- or PHYS 5116 with a minimum grade of C-

NETS 7341. Network Economics. (4 Hours)

Covers seminal works in the economics of information and networks, including Akerlof, Arrow, Spence, Stiglitz, and von Hayek. Proceeds through concepts of information, its value, and measurement; search and choice under uncertainty; signaling, screening, and how rational actors use information for private advantage; strategy-given network effects; two-sided (or multisided) network effects, organizational information processing, learning, and social networks; and other micro- and macroeconomic effects such as matching markets. Although primarily a theory course, it may be of interest to any student applying information economics and network economics in academic, commercial, or government policy contexts. Expects students to produce a major paper suitable for publication or inclusion in a thesis. Requires prior completion of graduate coursework in microeconomics and mathematics at the level of introductory calculus and statistics.

NETS 7350. Bayesian and Network Statistics. (4 Hours)

Introduces advanced quantitative methods including maximum likelihood, hierarchical models, sampling, and network modeling. Offers students an opportunity to learn to estimate and develop models from the probabilistic and Bayesian perspective and pursue their own research project, focusing on the methodological challenges. Reviews probability and examines maximum likelihood methods for estimating regression models with continuous and categorical dependent variables. Examines a variety of procedures for sampling from posterior distributions, including grid, quadratic, Gibbs, and Metropolis sampling. Applies these methods to hierarchical modeling and other simple probabilistic models, then takes a closer look at the statistical modeling of networks as it has been developed in the social sciences, beginning with the exponential random graph model (ERGM) and finishing with the temporal SIENA model.

NETS 7360. Research Design for Social Networks. (4 Hours)

Analyzes the architecture of research—how to design ethical research projects that empower the researcher to make useful and interesting claims about the world. Topics include design research about social networks and how to measure such varied relational concepts such as friendship, love, and proximity; the effective study of "recycled" data—data not collected for research—such as Twitter, cell phone, or email data, and the ethical constraints in using this data; and how to design data collection so as to make robust causal claims.

NETS 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of a member of the program on a chosen topic. Course content depends on instructor. May be repeated without limit.

NETS 7983. Topics. (4 Hours)

Covers various topics in network science. May be repeated up to two times for up to 12 total credits.

NETS 8941. Network Science Literature Review Seminar. (2 Hours)

Critically evaluates recent articles in the academic literature surrounding topics and applied research in network science. May be repeated up to three times.

NETS 8984. Research. (1-4 Hours)

Offers advanced students an opportunity to work with an individual instructor on a topic related to current research. Instructor and student negotiate a written agreement as to what topic(s) are covered and what written or laboratory work forms the basis for the grade. Viewed as a lead-in to dissertation research. May be repeated without limit.

NETS 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

NETS 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

NETS 9990. Dissertation Term 1. (0 Hours)

Offers experimental and theoretical work for PhD candidates. Requires written dissertation and final oral exam.

Prerequisite(s): NETS 9000 with a minimum grade of S

NETS 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): NETS 9990 with a minimum grade of S

NETS 9996. Dissertation Continuation. (0 Hours)

Offers experimental and theoretical work for PhD candidates. Requires written dissertation and final oral exam.

Prerequisite(s): NETS 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Nonprofit Management - CPS (NPM)

Courses

NPM 6100. Strategic Management for the Nonprofit Sector. (3 Hours)

Introduces the nature and major trends of the nonprofit sector, both in the United States and internationally. Aims to deepen student understanding of the nature of the nonprofit world and its organizations by looking at the intersection between managerial practices and policy decisions. Offers students an opportunity to identify and interpret key issues and challenges of sustainability experienced by stakeholders of the nonprofit world and to consider their implications for managerial practice.

NPM 6110. Legal and Governance Issues in Nonprofit Organizations. (3 Hours)

Examines the U.S. federal and state laws under which nonprofit organizations operate and considers their effect on the establishment and operation of nonprofit organizations. Offers students an opportunity to learn about incorporation and tax-exempt status, general liability, regulatory compliance/reporting, and contracts. Emphasizes the roles, responsibilities, processes, and powers of boards of directors.

NPM 6120. Financial Management for Nonprofit Organizations. (3 Hours)

Introduces students to the major financial management concepts and techniques required for effective management of nonprofit organizations. Managing one's budget well is an essential skill for the nonprofit manager because the organization's core mission cannot be served if the financial health of the organization is in jeopardy. Offers students an opportunity to learn about nonprofit accounting, budget management, revenue forecasting, financial statements and reports, tax issues, grant compliance, internal expenditure control, audits, cash flow management, long-term financial planning, endowment management, and capital financing.

NPM 6125. Promoting Nonprofit Organizations. (3 Hours)

Explores the uses of traditional and nontraditional ways to promote nonprofits to an array of actual and potential audiences for a variety of purposes. All nonprofit organizations at some point must be visible to the public in order to fulfill their missions; nonprofit managers must know how to promote their organizations to current and potential supporters, the broader public, and the mass media. Topics include program and organizational branding, targeting respective audiences, and preparing materials for greatest effect.

NPM 6130. Fundraising and Development for Organizations. (3 Hours)

Examines sources of funding and strategies for development planning, including donor profiles, proposals and case statements, foundation and corporate philanthropy, government grant and contract programs, special events, marketing and public relations functions, direct mail and membership campaigns, planned giving, major gifts, and capital campaigns. Fundraising and development are essential skills for managers because nonprofit organizations depend upon individual, government, and foundation resources to fulfill their mission.

NPM 6140. Grant and Report Writing. (3 Hours)

Introduces grants and grant proposal writing. Knowledge of the grant writing cycle allows nonprofit professionals to use their time productively. Topics include effective research, creating a plan for the program, elements of a good proposal, components of the proposal package, and strategies for getting a proposal read by a foundation or corporation. Offers students an opportunity to research an RFP or identify a foundation, write a grant proposal, and ready it for submission to a funding source.

NPM 6150. Human Resources Management in Nonprofit Organizations. (3 Hours)

Examines methods of developing, supervising, motivating, and recognizing volunteers and staff; communicating effectively within an organization; staff-volunteer relations; and stress, conflict, and crisis management. Managers in nonprofit organizations face the challenge of working with both paid and unpaid stakeholders in the organization's future. Explores HRM topics such as legal employment issues, recruiting and hiring practices, diversity in the workplace, compensation and benefits, performance appraisal, and discipline.

NPM 6210. Social Value Investing and Effective Partnerships. (3 Hours)

Explores cross-sector partnerships as an effective way to build social impact and serve the greater good. Research has proven that government alone cannot address the major societal challenges; new kinds of collaboration have emerged between the public and private sectors. Leaders from nonprofit organizations are engaging in implementing new approaches that require innovation, inclusivity, shared value, and sustainable solutions. Specifically examines the reasons parties come together, the collaborative approach in which they build their agreements, and the measurement of their social impact.

NPM 6220. Donor Research and Management. (3 Hours)

Offers students an opportunity to obtain the tools to research new donor linkage as well as current donor interest and capacity. Seeks to increase students' understanding of donor movement, from identification through annual support, both significant and legacy giving. Examines donor engagement best practices and the importance of articulating excellent charitable gift stewardship.

Prerequisite(s): NPM 6100 with a minimum grade of C-

NPM 6230. Measuring Social Impact. (3 Hours)

Introduces students to global standards and practical tools for measuring the social impact of a nonprofit organization. Offers students an opportunity to learn how to plan and control for short-term outcomes and long-term goals and to understand how to connect the goals to quantifiable metrics that support a sustainable decision-making system. Students experience data analysis as a way to support the organization's operations and mission and ultimately create social impact.

NPM 6240. Managing the Annual Fund. (3 Hours)

Builds on the fundamentals of fundraising and development by focusing on the annual fund, the foundation of an integrated development program. Examines the annual cycle for generating critical operating support to fulfill the nonprofit's mission. Students have the opportunity to learn the methods for identifying new donors, cultivation strategies, solicitation methods best practices, and continued donor engagement toward repeat and increased gifts.

NPM 6310. Social and Sustainable Entrepreneurship. (3 Hours)

Seeks to introduce students to the meaning of social entrepreneurship. Exposes students to the social entrepreneurship term that has come to be applied to the activities of grassroots activists, NGOs, policymakers, international institutions, and corporations, among others, which addresses a range of social issues in innovative and creative ways. Offers students an opportunity to learn how to address complex sustainability challenges using experiential problem-based learning, current research, and best practices connected to social/sustainable enterprises. Topics include the design of social and sustainable enterprises, frameworks for problem solving and planning, analysis of social and environmental impact, and private-public partnerships.

NPM 6320. New Ventures in Social Entrepreneurship. (3 Hours)

Focuses on entrepreneurial ideas that generate social impact. Offers students an opportunity to explore social entrepreneurship and test ideas for social innovation in a rigorous and supportive environment. Covers how to generate an innovative business idea, how to address social issues and have an impact, and how to develop an action plan and consequently measure for results. Offers insights on communication, business plans, and presentation skills.

NPM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NPM 6980. Capstone. (3 Hours)

Integrates theory, practice, case studies, and experiential learning with operational and organizational concepts including, but not limited to, nonprofit law, financial management, human resource management, fund-raising and development, promotions, and grant writing. Aims to synthesize learning in a practical manner. Offers students an opportunity to prepare for working in or volunteering at a nonprofit organization. Presents an interrelationship of student learning and real-world practice through a series of pedagogical paradigms.

Prerequisite(s): NPM 6110 with a minimum grade of C- ; NPM 6120 with a minimum grade of C- ; NPM 6125 with a minimum grade of C- ; NPM 6130 with a minimum grade of C- ; NPM 6140 with a minimum grade of C- ; NPM 6150 with a minimum grade of C-

NPM 6995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Nursing (NRSG)**Courses****NRSG 1000. College: An Introduction. (1 Hour)**

Provides an introduction to the University, college, and health professions to enhance students' understanding of self and the decisions they make academically and socially as members of the University's diverse, multicultural community. Group activities and individual assignments along with active participation in a learning community help students adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

NRSG 1205. Wellness. (4 Hours)

Explores the concept of wellness and examines behaviors and lifestyle choices that lead to a high level of physical, emotional, and spiritual well-being. Topics include health risk, behavioral change, lifestyle analysis, the life cycle, and stress management through self-analysis.

NRSG 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 2000. Professional Development for Co-op. (1 Hour)

Introduces the Bouvé Cooperative Education Program. Offers students an opportunity to develop job-search and career-management skills. Students perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Offers students an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Familiarizes students with workplace issues relative to their field of study and presents the MyNEU COOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

NRSG 2001. Foundations of Professional Nursing Practice. (2 Hours)

Introduces students to professional nursing practice. Offers students an opportunity to envision how nurses can shape the future of the profession while developing personal strategies for success. Students explore essential tools that professional nurses employ to meet healthcare delivery challenges and begin their journey toward establishing their professional identities as caregivers, scholars, and leaders.

NRSG 2150. Ethical Healthcare: Genetics and Genomics. (4 Hours)

Presents an overview of bioethics and, more specifically, the application of ethics including the implication of genetics/genomics in healthcare across the life span. Students apply the Code of Ethics for Nurses to case studies that address dilemmas in multiple settings with a diverse patient population. Considers issues related to biomedical, clinical, genetic/genomic, social, and legal aspects and integrates such considerations into ethical decision making. Offers students an opportunity to work as a team and be encouraged to respect alternative viewpoints to address realistic ethical dilemmas encountered in contemporary healthcare. Appropriate and relevant for all students interested in expanding their view and appreciation of health dilemmas.

Attribute(s): NUpath Ethical Reasoning

NRSG 2210. Influences on Health and Illness: A Nursing Perspective. (3 Hours)

Offers a context within which students have an opportunity to begin to understand, develop, and nurture a professional nursing identity. Through situated learning within a model of whole-person care, the student may utilize clinical imagination and reasoning to explore culturally mediated behaviors and meanings that are ascribed to health and illness experiences across the life span. Empirical, personal, ethical, and aesthetic ways of knowing create a framework for personal reflection and reflexivity. Integrated learning strategies guide the beginner's study of communication and relationships with patients, families, and providers. Guiding course principles include foundations of the nursing profession, nursing self-care and well-being, compassionate care, social justice, and quality and safety.

Prerequisite(s): ((BIOL 1117 with a minimum grade of C or BIOL 2217 with a minimum grade of C); (BIOL 1121 with a minimum grade of C or BIOL 2221 with a minimum grade of C); (ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C)) or graduate program admission

Attribute(s): NUpath Difference/Diversity, NUpath Creative Express/Innov

NRSG 2220. Health Assessment and Fundamental Nursing Skills. (3 Hours)

Introduces the concepts of wellness and caring utilizing the nursing clinical judgment model and the nursing process as the frameworks for nursing practice. Outlines the ethnic, cultural, psychosocial, and developmental gender-specific and physical aspects of health in the context of client-centered care. Offers the learner an opportunity to acquire a range of beginning assessment techniques and nursing skills that support appropriate nursing care planning and interventions for clients. Explores nurses' engagement with therapeutic communication.

Prerequisite(s): ((BIOL 1119 with a minimum grade of C or BIOL 2219 with a minimum grade of C); (BIOL 1121 with a minimum grade of C or BIOL 2221 with a minimum grade of C); (CHEM 1101 with a minimum grade of C or CHEM 1161 with a minimum grade of C or CHEM 1211 with a minimum grade of C); HSCI 1105 with a minimum grade of C; (MATH 1215 with a minimum grade of C or MATH 1241 with a minimum grade of C); (PSYC 1101 with a minimum grade of C or PSYC 1101 with a minimum grade of C)) or graduate program admission

Corequisite(s): NRSG 2221

NRSG 2221. Lab for NRSG 2220. (1 Hour)

Designed to provide the foundation for students' mastery of beginning assessment techniques and nursing skills for future application in clinical settings and the delivery of safe care of clients. Develops assessment and intervention skills by supervised practice and student demonstration in the nursing laboratory. Provides additional opportunities for students to enhance their skills to provide quality care, to communicate effectively, and to develop critical thinking through simulated case studies.

Corequisite(s): NRSG 2220

NRSG 2350. Integrated Pathophysiology and Pharmaceutical Interventions for Nursing Practice. (6 Hours)

Provides the fundamentals of pharmacology and pathophysiology for nursing students. Focuses on the disruption of physiological processes that produce disease states and the use of drugs to prevent or ameliorate these disruptions. Discusses pathophysiologic concepts from a systems approach and includes alterations in cellular growth and proliferation and immune, cardiovascular, respiratory, gastrointestinal, genitourinary, integumentary, musculoskeletal, reproductive, neurological, hematologic, sensory, and endocrine function. Presents major drug classifications used to treat common medical disorders. Examines the indications, mechanism of action, drug metabolism, and adverse effects. Discusses the application of pharmacologic therapies as well as relevant nonpharmacologic interventions. Also considers the influence of genetics, environmental factors, and life span considerations.

Prerequisite(s): (BIOL 1117 with a minimum grade of C or BIOL 2217 with a minimum grade of C); (BIOL 1119 with a minimum grade of C or BIOL 2219 with a minimum grade of C); (BIOL 1121 with a minimum grade of C or BIOL 2221 with a minimum grade of C); (CHEM 1101 with a minimum grade of C or CHEM 1161 with a minimum grade of C or CHEM 1211 with a minimum grade of C)

NRSG 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 2991. Research in Nursing. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

NRSG 3302. Nursing with Women and Families. (3 Hours)

Emphasizes the promotion of health for childbearing women and their families. The nursing process provides the framework for students to assess and therapeutically intervene in promoting healthy childbearing and health during the life span. Self-care and empowerment are an integral focus in examining women's health from a developmental perspective. Examines the nursing role of the professional nurse in the context of concepts of human development of individual, family, and community. Discusses the effects of cultural, social, economic, and ethical influences and the impact of healthcare technology.

Prerequisite(s): (NRSG 2220 (may be taken concurrently) with a minimum grade of C or NRSG 2220 (may be taken concurrently) with a minimum grade of C or NRSG 2220 (may be taken concurrently) with a minimum grade of C); (NRSG 2221 (may be taken concurrently) with a minimum grade of C or NRSG 2221 (may be taken concurrently) with a minimum grade of C); ((NRSG 2350 (may be taken concurrently) with a minimum grade of C or NRSG 2350 (may be taken concurrently) with a minimum grade of C) or (NRSG 5117 (may be taken concurrently) with a minimum grade of B ; NRSG 5126 (may be taken concurrently) with a minimum grade of B)); (PSYC 3404 with a minimum grade of C or PSYC 3404 with a minimum grade of C or graduate program admission)

Corequisite(s): NRSG 3303

NRSG 3303. Clinical for NRSG 3302. (2 Hours)

Emphasizes the application of theories, principles, and concepts studied in NRSG 3302 to provide nursing care with a focus on childbearing individuals and their families. Offers students an opportunity to develop specialized skills in addressing the unique healthcare needs of childbearing individuals during pregnancy, childbirth, and postpartum periods and to gain proficiency in assessments, interventions, and delivering holistic care.

Corequisite(s): NRSG 3302

NRSG 3320. Nursing Care of Adults 1. (4 Hours)

Focuses on the care of adults experiencing common health problems. Builds on the conceptual foundation learned in sciences, nursing practice, physical assessment, pharmacology, nutrition, and growth and development. Emphasizes the acute care of adults and application of the nursing process. Explores expanding concepts of health and illness, including management of patients transitioning from acute care to the home or rehabilitation settings.

Prerequisite(s): ((NRSG 2210 with a minimum grade of C or NRSG 2210 (may be taken concurrently) with a minimum grade of C or NRSG 2210 (may be taken concurrently) with a minimum grade of C); (NRSG 2220 with a minimum grade of C or NRSG 2220 with a minimum grade of C or NRSG 2220 with a minimum grade of C); (NRSG 2221 with a minimum grade of C or NRSG 2221 with a minimum grade of C or NRSG 2221 with a minimum grade of C); (NRSG 3323 (may be taken concurrently) with a minimum grade of C or NRSG 3323 (may be taken concurrently) with a minimum grade of C or NRSG 3323 (may be taken concurrently) with a minimum grade of C); (NRSG 3324 (may be taken concurrently) with a minimum grade of C or NRSG 3324 (may be taken concurrently) with a minimum grade of C)); ((NRSG 2350 with a minimum grade of C or NRSG 2350 with a minimum grade of C) or (NRSG 5117 with a minimum grade of B ; NRSG 5126 with a minimum grade of B)); (PSYC 3404 with a minimum grade of C or PSYC 3404 with a minimum grade of C or graduate program admission)

Corequisite(s): NRSG 3321

NRSG 3321. Clinical for NRSG 3320. (2 Hours)

Emphasizes clinical skills that focus on the application of knowledge learned in NRSG 3320.

Corequisite(s): NRSG 3320

NRSG 3323. Advanced Assessment and Interventions. (1 Hour)

Focuses on principles and concepts that support nursing assessment and the performance of advanced nursing skills in the adult patient. Health assessment, nursing interventions, and communication techniques that support clinical decision making are discussed within the nursing process framework. Emphasis is placed on critical analysis of the appropriateness of, and accurate performance of nursing interventions to ensure the provision of safe quality care. The delivery of culturally competent care and the professional development of the nurse as an inter-professional team member are discussed.

Prerequisite(s): ((NRSG 2220 with a minimum grade of C or NRSG 2220 with a minimum grade of C or NRSG 2220 with a minimum grade of C); (NRSG 2221 with a minimum grade of C or NRSG 2221 with a minimum grade of C or NRSG 2221 with a minimum grade of C)); ((NRSG 2350 with a minimum grade of C or NRSG 2350 with a minimum grade of C) or (NRSG 5117 with a minimum grade of B ; NRSG 5126 with a minimum grade of B))

Corequisite(s): NRSG 3324

NRSG 3324. Lab for NRSG 3323. (1 Hour)

Introduces the student to the practice and application of advanced nursing skills, health assessment, and communication techniques. The course offers the opportunity to develop and master advanced assessment and intervention skills by supervised practice and demonstration. Participation in simulated patient care experiences allows the student to engage in clinical reasoning based on patient interaction and assessment that leads to the identification of appropriate nursing interventions.

Corequisite(s): NRSG 3323

NRSG 3400. Nursing and the Promotion of Mental Health. (3 Hours)

Focuses on psychiatric mental health (PMH) nursing, a process used by the professional nurse in facilitating adaptive responses and goal attainment of human systems. Emphasizes an overview of concepts and theories of personality development, therapeutic relationships, psychiatric terminology, the nursing process as it relates to patients with psychiatric problems, the study of self-concept, role functioning, and interdependence as it relates to families and groups. Explores critical thinking, health assessment, and a variety of intervention strategies. Compares various paradigms for the study of group and community assessment, therapeutics, and outcome measures.

Prerequisite(s): ((NRSG 3323 (may be taken concurrently) with a minimum grade of C or NRSG 3323 (may be taken concurrently) with a minimum grade of C); PSYC 3404 (may be taken concurrently) with a minimum grade of C) or graduate program admission

Corequisite(s): NRSG 3401

NRSG 3401. Clinical for NRSG 3400. (2 Hours)

Focuses on applying the theories, principles, and concepts learned in NRSG 3400 in providing psychiatric mental health (PMH) nursing care.

Corequisite(s): NRSG 3400

NRSG 3420. Nursing Care of Adults 2. (4 Hours)

Focuses on the care of adults and their families experiencing complex physiological insults across the lifespan. Builds on the conceptual foundation established in NRSG 3320. Offers students an opportunity to improve their organizational skills through the expanding complexity of patient acuity levels and workloads in an advanced health care setting. Emphasis is on complex decision and critical thinking through collaboration and the use of evidence-based practices in high acuity and critical care settings. Seeks to help the student to conceptualize care of the ill patient from admission to discharge and beyond, as a means of holistic practice that demonstrates knowledge of prevention, promotion, maintenance, and restoration of the clients with complex health problems.

Prerequisite(s): (NRSG 3320 with a minimum grade of C or NRSG 3320 with a minimum grade of C or NRSG 3320 with a minimum grade of C); (NRSG 3321 with a minimum grade of C or NRSG 3321 with a minimum grade of C or NRSG 3321 with a minimum grade of C); (NRSG 3323 with a minimum grade of C or NRSG 3323 with a minimum grade of C or NRSG 3323 with a minimum grade of C); (NRSG 3324 with a minimum grade of C or NRSG 3324 with a minimum grade of C or NRSG 3324 with a minimum grade of C); (NRSG 3302 with a minimum grade of C or NRSG 3302 with a minimum grade of C); (NRSG 3303 with a minimum grade of C or NRSG 3303 with a minimum grade of C or NRSG 3303 with a minimum grade of C)

Corequisite(s): NRSG 3421

NRSG 3421. Clinical for NRSG 3420. (2 Hours)

Focuses on applying the theories, principles, and concepts covered in NRSG 3420 in providing nursing care to adults in increasingly complex situations. Builds upon clinical skills established in NRSG 3321.

Corequisite(s): NRSG 3420

NRSG 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 4502. Nursing Care of the Child. (4 Hours)

Builds on developmental and family theory. Focuses on the principles of nursing care of children experiencing acute and/or complex, chronic health problems and their families. The complex health issues are analyzed within the context of the individual, family, and community. Offers students an opportunity to explore evidenced-based practices within the framework of the nursing process. The therapeutic role is addressed in partnership with the family and resources available within a collaborative and interdisciplinary environment.

Prerequisite(s): (NRSG 3420 (may be taken concurrently) with a minimum grade of C or NRSG 3420 (may be taken concurrently) with a minimum grade of C or NRSG 3420 (may be taken concurrently) with a minimum grade of C); (NRSG 3421 (may be taken concurrently) with a minimum grade of C or NRSG 3421 (may be taken concurrently) with a minimum grade of C or NRSG 3421 (may be taken concurrently) with a minimum grade of C)

Corequisite(s): NRSG 4503

NRSG 4503. Clinical for NRSG 4502. (2 Hours)

Focuses on applying the theories, principles, and concepts learned in NRSG 4502 in providing nursing care for acutely and/or chronically ill children and their families in a pediatric clinical setting.

Corequisite(s): NRSG 4502

NRSG 4604. Public Health Community Nursing. (3 Hours)

Introduces population-focused nursing and applies the nursing process to the community as client. Examines evidence-based health-promotion strategies in a variety of community settings. Addresses core functions and essential services of public health, and introduces epidemiological and economic concepts and models. Emphasizes the involvement of the community/public health nurse in ethical issues and health policy, focusing on vulnerable populations in giving cultural and linguistic-competent care. Examines community-based strategies and interprofessional collaboration to care for underserved populations in both urban and suburban communities. Emphasizes the community/public health nurse as a population-focused care provider, case manager, deliverer of quality nursing care, care coordinator, critical thinker, liaison between agencies, and nursing researcher.

Prerequisite(s): (NRSG 3400 with a minimum grade of C or NRSG 3400 with a minimum grade of C or NRSG 3400 with a minimum grade of C); (NRSG 3401 with a minimum grade of C or NRSG 3401 with a minimum grade of C or NRSG 3401 with a minimum grade of C)

Corequisite(s): NRSG 4605

Attribute(s): NUpath Interpreting Culture

NRSG 4605. Clinical for NRSG 4604. (2 Hours)

Seeks to facilitate the student's socialization to population-focused nursing and to plan care for the community as client. Emphasizes the application of knowledge when addressing core functions and essential services of public health, epidemiology, and economic concepts and models. Students engage in cultural and linguistic-appropriate health assessment, health promotion, and illness-prevention strategies in a variety of community settings. This may include acting as a community/public health nurse for ethical issues, health policy, coordination of care, interprofessional collaboration, liaison between agencies, and facilitation of healthcare research. Examines and evaluates types of community-based strategies used to serve underserved and vulnerable populations to ensure quality care for those living in both urban and suburban communities.

Corequisite(s): NRSG 4604

Attribute(s): NUpath Integration Experience

NRSG 4610. Managing and Leading in Healthcare. (4 Hours)

Introduces various theoretical frameworks that support principles of leadership and management in nursing in all types of organizational settings. Emphasizes developing, enhancing, and demonstrating leadership skills, competencies, and aptitudes. Exposes students to practical situations in the management of current and practical patient care in diverse healthcare settings. Integrates organizational structure; methods of nursing care delivery; comparison of management and nursing processes; decision making; change; communication skills; interprofessional collaboration; team building; ethical considerations; interpersonal skills of effective nursing leadership and management; and organizational issues related to the quality of client, family, and personal outcomes.

Prerequisite(s): NRSG 3420 with a minimum grade of C or NRSG 3420 with a minimum grade of C or NRSG 3420 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

NRSG 4611. Managing and Leading in Healthcare—An International Perspective. (4 Hours)

Introduces varied theoretical frameworks in all types of organizational settings that support principles of healthcare leadership and management within a nursing management context. Emphasizes developing, enhancing, and demonstrating leadership skills, competencies, and aptitudes. Exposes students to practical situations in the management of healthcare in global settings. Offers upper-level students an opportunity to investigate healthcare leaders' roles and to prepare for a leadership role within various health settings. Integrates organizational structure, healthcare delivery methods, comparison of management processes, decision making, change, interprofessional communication and collaboration, team building, ethical considerations, interpersonal skills of effective healthcare leadership and management, and organizational issues related to quality outcomes.

Prerequisite(s): ENGW 3302 with a minimum grade of C or ENGW 3303 with a minimum grade of C or ENGW 3304 with a minimum grade of C or ENGW 3305 with a minimum grade of C or ENGW 3306 with a minimum grade of C or ENGW 3307 with a minimum grade of C or ENGW 3308 with a minimum grade of C or ENGW 3309 with a minimum grade of C or ENGW 3310 with a minimum grade of C or ENGW 3311 with a minimum grade of C or ENGW 3314 with a minimum grade of C or ENGW 3315 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

NRSG 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

NRSG 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): NRSG 4970 with a minimum grade of D-

NRSG 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

NRSG 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

NRSG 4995. Comprehensive Nursing Practicum. (2 Hours)

Prepares students to synthesize nursing knowledge, skills, and experience and facilitate their transition to professional nursing practice and case management of clients with health problems. Assists students to demonstrate leadership and collaborative skills in working with other members of the health-care team through a weekly precepted relationship with a RN. Includes clinical learning experiences within hospital and community settings. Classwork includes a review of professional domains in all previous clinical courses in the nursing curriculum to prepare students for licensure.

Prerequisite(s): (NRSG 3420 with a minimum grade of C or NRSG 3420 with a minimum grade of C or NRSG 3420 with a minimum grade of C); (NRSG 3421 with a minimum grade of C or NRSG 3421 with a minimum grade of C or NRSG 3421 with a minimum grade of C); (NRSG 4502 with a minimum grade of C or NRSG 4502 with a minimum grade of C or NRSG 4502 with a minimum grade of C); (NRSG 4503 with a minimum grade of C or NRSG 4503 with a minimum grade of C or NRSG 4503 with a minimum grade of C); (NRSG 4604 (may be taken concurrently) with a minimum grade of C or NRSG 4604 (may be taken concurrently) with a minimum grade of C or NRSG 4604 (may be taken concurrently) with a minimum grade of C or NRSG 4604 (may be taken concurrently) with a minimum grade of C); (NRSG 4605 (may be taken concurrently) with a minimum grade of C or NRSG 4605 (may be taken concurrently) with a minimum grade of C or NRSG 4605 (may be taken concurrently) with a minimum grade of C)

Corequisite(s): NRSG 4996

NRSG 4996. Clinical for NRSG 4995. (3 Hours)

Offers students an opportunity to synthesize nursing knowledge, skills, and experience and facilitate their transition to professional nursing practice and case management of clients with health problems. Designed to assist students to demonstrate leadership and collaborative skills in working with other members of the healthcare team through a weekly precepted relationship with an RN. Includes clinical learning experiences within hospital and community settings.

Corequisite(s): NRSG 4995

NRSG 4998. Nursing Skills Continuation. (0 Hours)

Continues skills training requirements. May be repeated five times.

NRSG 4999. Clinical Continuation. (0 Hours)

Continues clinical requirements. May be repeated five times.

NRSG 5000. Advanced Perspectives in Wellness. (4 Hours)

Offers students an opportunity to explore wellness through both theoretical and experiential pathways. Introduces theories and models of holism, wellness, stress, health promotion, health belief, and change as operational frameworks by which the student has an opportunity to reflect upon personal history, health and risk-taking behaviors, and lifestyle choices that influence health and well-being. Studies the art and science of self-care through both the emic and etic perspectives. Course topics include holistic lifestyle and health analysis, behavioral change, decision making, and stress/stress reduction. Embodied learning methodologies inform course delivery.

NRSG 5117. Advanced Pharmacology. (2 Hours)

Focuses on principles of pharmacology and the major drug classifications in relation to the treatment of health problems across the life span. Examines the effects of selected medications on pathophysiology and psychopathology. Emphasizes dose response, side effects/drug interactions, route of administration, and place in clinical therapy.

NRSG 5118. Healthcare System and Professional Role Development. (3 Hours)

Examines the role of the advanced practice nurse within the context of today's healthcare system. Focuses discussion on dimensions of the advanced practice nursing role, including intra/interdisciplinary collaboration, consultation, leadership, diversity, and accountability for quality care. Examines the healthcare system with special focus on social, political, economic, ethical, regulatory, research, and legal trends. Students are expected to evaluate the interaction between healthcare system issues and advanced practice role dimensions.

NRSG 5120. Statistics for Health Science. (3 Hours)

Focuses on applying formal reasoning to understand the underlying principles of statistics; how to select and conduct statistical tests; and how to interpret and use the results of data analysis in relation to research questions and research hypotheses.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

NRSG 5121. Epidemiology and Population Health. (3 Hours)

Examines the theoretical basis for identification and analysis of the distribution and determinants of health problems at community, national, and international population levels. Considers health disparities that exist among specific populations and the role of government in setting policies for health promotion and disease prevention. Covers three topical areas: basic principles and population measures of epidemiology; epidemiologic study methods; and application of epidemiologic tools in interdisciplinary settings. Complements planned topics with current examples of population health issues. The goal is to understand the principles and practice of monitoring population health. Skills acquired assist advanced practice nurses, other clinicians, or administrators in critically evaluating new epidemiologic literature and in using the basic tools of epidemiology to assess population health and develop strategies for monitoring health improvement.

NRSG 5126. Pathophysiology for Advanced Practice. (3 Hours)

Covers content that provides current understanding of major disease processes across the life span. Builds on the knowledge of anatomy, physiology, biochemistry, microbiology, and immunology. Focuses on physiologic dysfunction; physiologic adaptation in maintaining the internal environment; and feedback mechanisms at the cellular, organ, and systems level. Seeks to provide students with a way of thinking about disease for each body system. Provides a comprehensive study of underlying concepts common to major pathophysiologic processes of the body, including specific diseases affecting the cardiovascular, endocrine, gastrointestinal, hematological, immunological, nervous, pulmonary, and renal systems.

NRSG 5220. Introduction to Research Methods and Application for Healthcare. (4 Hours)

Introduces students to the different types of research methodologies used by healthcare disciplines. Emphasizes designing research studies and application of research findings to practice within the student's particular discipline. Topics include foundations of research, ethical conduct of research, research methodologies, concepts of measurement, qualitative and quantitative research design, and the analysis and dissemination of research findings. Discusses the importance of research to both healthcare practitioners and consumers with an emphasis on patient-centered outcomes.

Attribute(s): NUpath Natural/Designed World, NUpath Writing Intensive

NRSG 5976. Directed Study. (1-4 Hours)

Allows student to develop an individualized plan to attain specific knowledge and skills related to professional goals. May consist of library study and reading, individual instruction, research, practicum, or other appropriate activity as approved by instructor and academic adviser. May be repeated without limit.

NRSG 6115. Health Assessment. (3 Hours)

Focuses on human physiology and the development of advanced health assessment knowledge and skills related to performing regional and comprehensive examinations of the client across the life span. Includes variables among cultural groups. Students synthesize knowledge from nursing, physical, social, and health sciences as they analyze data collected in the assessment process. Focuses on interviewing skills and systematic performance, analysis and documentation of health assessment process. Differentiation of normal and abnormal findings is emphasized utilizing critical thinking. Introduces the student to diagnostic reasoning within the scope of practice of the nurse in the advanced practice role. *Nursing degree students only.*

NRSG 6116. Advanced Health Assessment of the Neonate and Infant. (3 Hours)

Focuses on human physiology and the development of advanced health assessment skills to build a knowledge base with which to perform a thorough assessment and examination of the neonate and infant. Offers students an opportunity to learn to evaluate family history through chart review and direct interviewing to gain knowledge of the neonate and to anticipate certain findings based on information gained through a thorough assessment and physical examination. Emphasizes identifying normal from abnormal findings through critical thinking, introducing the student to diagnostic reasoning, which is the basis of the advance practice nurse role.

NRSG 6220. Nursing Management: Acute Episodic Illness. (3 Hours)

Addresses the assessment, preventive, and health maintenance theories of healthcare utilized by the acute-care advanced practice nurse. Includes common problems causing episodic and acute illnesses and the advanced nursing management skills needed to address them and implement initial management skills. Uses current theories and research from nursing and the physical and behavioral sciences as a basis for clinical decision making, with an emphasis on critical thinking and diagnostic reasoning. The nursing process and life cycle are integral frameworks used to structure the delivery of course content. Restricted to students in selected nursing programs or with permission of instructor.

Prerequisite(s): NRSG 6115 with a minimum grade of B ; (NRSG 5126 with a minimum grade of B or NRSG 5126 with a minimum grade of B); (NRSG 6222 with a minimum grade of B or NRSG 6325 with a minimum grade of B)

Corequisite(s): NRSG 6420

NRSG 6221. Nursing Management: Critical and Chronic Illness. (3 Hours)

Emphasizes the acquisition of theoretical knowledge essential to understanding the common life-threatening and chronic, long-term pathophysiological problems, differential diagnosis, and related advanced nursing care of critically and chronically ill individuals and families. Addresses common problems causing critical, life-threatening illnesses, the chronic sequelae from these problems, and the advanced nursing management skills needed to address them. Uses current theories and research from nursing and the physical and behavioral sciences as a basis for clinical decision making, with an emphasis on critical thinking and diagnostic reasoning. The nursing process and life cycle are integral frameworks used to structure the delivery of course content. Restricted to students in selected nursing programs or with permission of instructor.

Prerequisite(s): NRSG 6220 with a minimum grade of B ; (NRSG 6222 with a minimum grade of B or NRSG 6325 with a minimum grade of B)

Corequisite(s): NRSG 6421

NRSG 6222. Pharmacology of Adults and Older Adults. (2 Hours)

Covers age-related changes in pharmacokinetics and pharmacodynamics and the prescription, administration, and monitoring of medications for older adults. Includes a detailed discussion of the most common drugs and classes of drugs prescribed for the elderly, as well as the signs and symptoms of drug toxicity particular to older adults. Investigates the impact of race/ethnicity on prescribing practices. Also discusses medication history guidelines for older adults, age-related considerations in prescribing for the elderly, and methods to support drug compliance and prevent inappropriate drug use and adverse drug reactions. Examines over-the-counter drug use among older adults. Emphasis is on the problem of polypharmacy for the older adult and the prevention, recognition, and treatment of drug interactions among older adults.

Prerequisite(s): NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B

NRSG 6230. Nursing Management: Critically Ill Neonatal 1. (3 Hours)

Focuses on the acquisition of knowledge about complex physiological concepts essential to the care of the critically ill neonate. Begins with the actual and potential alterations in fetal/neonatal well-being, adaptation to extrauterine life, and factors that interfere with adaptation to extrauterine life. Also emphasizes the acquisition of theoretical knowledge essential to understanding the neonate's response to life-threatening problems. Discusses neonatal pathophysiologic disorders in terms of the nursing process and management of the neonate and their families. Uses current theories and research from nursing, biomedical, physical, and behavioral sciences as a basis for clinical decision making. The nursing process and developmental theory are frameworks utilized to structure the delivery of course content.

NRSG 6231. Nursing Management: Critically Ill Neonatal 2. (3 Hours)

Continues NRSG 6230. Covers the acquisition of theoretical knowledge essential to understanding the neonate's response to life-threatening problems. Discusses neonatal pathophysiologic disorders in terms of the nursing process and management of the neonate and their families. Uses current theories and research from nursing, biomedical, physical, and behavioral sciences as a basis for clinical decision making. The nursing process and developmental theory are frameworks utilized to structure the delivery of course content.

Prerequisite(s): NRSG 6230 with a minimum grade of B

NRSG 6232. Neonatal Pharmacology. (2 Hours)

Focuses on building upon basic knowledge in pharmacology and providing content essential for nurses in the expanded role. Examines the principles of pharmacology and major drug classifications as they relate to the causes and treatment of health and illness problems affecting critically ill neonates.

Prerequisite(s): NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B

NRSG 6241. Acute-Care Concepts in Nursing Practice. (3 Hours)

Focuses on the analysis and application of core physiological, behavioral, environmental, and psychosocial concepts essential for advanced nursing care of acute and critically ill individuals. Topics include the utility and clinical implications of monitoring technology available in the acute-care setting, the acute-care environment and its impact on patient and family systems, and the concepts of stress, grief, and coping. Also addresses the advanced nursing management of the multiple trauma patient and the related physiologic and clinical concepts. Opportunity is provided for exploration and development of concepts unique to each student's area of concentration within the acute-care specialization. Restricted to students in selected nursing programs or with permission of instructor.

Prerequisite(s): NRSG 6221 with a minimum grade of B ; (NRSG 6222 with a minimum grade of B or NRSG 6325 with a minimum grade of B)

Corequisite(s): NRSG 6422

NRSG 6243. Diagnostic Reasoning and Clinical Decision Making in Acute Care. (2 Hours)

Explores the ideas and concepts of diagnostic reasoning and clinical decision making. Examines decision making theory, cognitive bias, and resource management to scaffold the learning. Analyzes diagnosis through tests using current evidence. Reviews radiologic studies including x-rays, ultrasound and Computed Tomography (CT) imaging, as well as metabolic panels and microbiologic data that impact the patient management of patients in the acute care setting.

Prerequisite(s): NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B

NRSG 6245. Advanced Practice Colloquium in Acute Care. (2 Hours)

Explores current evidence-based practices, new advances, and ongoing research on topics in the field of advanced practice nursing across specialties. Includes ethical principles; licensure and practice issues; cancer; and respiratory, cardiovascular, and endocrine disorders. Discusses social justice issues involved in the management of the acute care patient, navigating disparities in healthcare, as well as culturally competent care and considerations that impact the care and management of patients in the acute care setting.

NRSG 6246. Acute Care Pharmacology. (2 Hours)

Explores the pharmacological agents used in the management of critical illness. Reviews pharmacokinetic and pharmacodynamic principles, as well as mechanism of action and elimination, that serve as the foundation for several classes of critical care pharmacologic agents.

Prerequisite(s): NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B

NRSG 6249. Health Promotion of Adult/Older Adult. (3 Hours)

Focuses on the assessment, preventative, and health maintenance and promotion theories utilized by advanced practice nurses. Includes the impact of political, psychological, sociological, and physiological factors on the healthcare continua of the adolescent/adult/older adult. Explores self-modeling of health behaviors and institution of primary and secondary preventative strategies in the home, community, workplace, and primary care facility. Discusses and utilizes theoretical and strategic approaches to behavior change necessary for health promotion.

Prerequisite(s): NRSG 6115 with a minimum grade of B or NRSG 6115 with a minimum grade of B

Corequisite(s): NRSG 6449

NRSG 6253. Primary Care of Adult/Older Adult Health Problems. (3 Hours)

Building upon NRSG 6252, seeks to further develop the intellectual and attitudinal competencies necessary for successful performance as a primary healthcare provider. Focuses on assessment, diagnosis, and management of adolescents/adults/older adults with minor acute and stabilized chronic illness in the community and long-term care facility. Emphasizes the nurse practitioner role functions of collaborative interdisciplinary management, consultation, and referral skills.

Prerequisite(s): NRSG 6249 with a minimum grade of B

NRSG 6254. Primary Care of Adult/Older Adult Complex Patients. (3 Hours)

Focuses on the assessment and intervention of adults/older adults with complex multisystem health problems/diseases in primary care and long-term care settings. Utilizes knowledge from pathophysiology, pharmacology, and psychosocial sciences to increase knowledge and skill of the advanced practice nurse in the care of adults/older adults with complex problems. Teaches students about the role and expertise of advanced practice nurses and other professionals in diverse settings.

Prerequisite(s): NRSG 6253 with a minimum grade of C-

NRSG 6262. Pediatric Pharmacology. (2 Hours)

Focuses on the principles of pharmacology and the major drug classifications in relation to the treatment of health problems during childhood and adolescence. Examines the effects of selected medications on pathophysiology and psychopathology. Discusses the implication of practice.

Prerequisite(s): NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B

NRSG 6264. Care of Well Child/Adolescent Health Promotion. (3 Hours)

Focuses on the health assessment on newborns, well children, adolescents, and their families within a community. Discusses issues most pertinent to the various ages of the well child within a community-based primary care framework of anticipatory guidance and health promotion. Emphasizes the utilization of a comprehensive approach to preventative healthcare by examining the impact of psychological, sociological, developmental, behavioral, cultural, and physiological factors on the child's health status within the family and community. Includes routine healthcare maintenance, screening, developmental issues, genetic implications, family dynamics, confidentiality, self-care, and common health concerns encountered in primary care settings.

Prerequisite(s): NRSG 6115 with a minimum grade of B

Corequisite(s): NRSG 6460

NRSG 6265. Care of Child/Adolescent Health Problems. (3 Hours)

Builds upon the knowledge and skills gained in NRSG 6264. Seeks to further develop within the student the intellectual and attitudinal competencies necessary to successfully perform as a primary healthcare provider. Focuses on acute and chronic health problems seen in infants through young adults. Encompasses assessment, diagnosis, and management of children with acute and stabilized chronic illness, genetic and reproductive health issues, nutritional concerns, dermatology, sports and activity-related injuries, and perinatal care. Considers family, cultural, and community context. Emphasizes the nurse practitioner role, including the development of consultation and referral skills.

Prerequisite(s): NRSG 6264 with a minimum grade of B

Corequisite(s): NRSG 6461

NRSG 6267. Care of the Critically Ill Child. (3 Hours)

Using a combined didactic and clinical approach, examines the specific issues in the care of children with critical conditions. Designed to provide students with the knowledge and skills necessary to meet the unique needs of fragile children, including urban children who are at risk for poor health outcomes. Offers students clinical experience caring for these children.

Prerequisite(s): NRSG 6265 with a minimum grade of B

Corequisite(s): NRSG 6463

NRSG 6275. Health Promotion and Preventative Care in Pediatrics in the Context of Community Health. (4 Hours)

Examines issues in caring for patients at risk for poor health outcomes, using a combined didactic with an indirect and direct clinical approach and utilizing the framework of the Healthy People Indicators. Explores emerging trends of healthcare practices in high-risk settings across the continuum of care and within its social and environmental context by integrating this unique, collaborative experience. Offers mentoring to students to consider current issues inherent in caring for underserved populations through utilization of innovative strategies. Delivery of care to families and children in the community poses challenges to nurse practitioners, including the need to gain new knowledge, develop nonbiased attitudes, and master skills and competencies to address health promotion and prevention needs.

Prerequisite(s): NRSG 6115 with a minimum grade of B

NRSG 6276. Diagnostic Reasoning and Clinical Decision Making in PNP Practice. (2 Hours)

Builds on a foundation of comprehensive health assessment of the child and family and associated pediatric nurse practitioner competencies. Explores how to synthesize patient health information through advanced diagnostic reasoning and clinical decision making to deliver a sound plan of care for pediatric patients with acute and chronic health problems. Focuses on expanding differential diagnosis skills, diagnostic test result interpretation, and embracing a more autonomous pediatric nurse practitioner role for transition into practice. Considers ethical, cultural, and community context and wellness principles.

NRSG 6281. Dimensions of Clinical Psychiatric Practice. (3 Hours)

Focuses on psychodiagnostic history taking, mental status evaluation, case formulations, and designs of psychiatric treatment contracts for clients. Studies the major forms of psychopathology, clinical theory, and the use of diagnostic treatment criteria to aid clinical decisions with clients across the life span. Addresses prevention and treatment approaches for populations at risk. Identifies outcome indicators and goal-setting strategies.

NRSG 6282. Clinical Psychopharmacology. (3 Hours)

Presents a comprehensive overview of major classes of psychotropic medications and the related psychiatric disorders associated with medication prescriptions for diverse clients across the life span. Emphasizes advanced practice clinical nursing decision making related to the choice of medication, differential diagnosis, drug interactions, and safe monitoring. Covers side effects and integration of medication management into a holistic comprehensive psychiatric treatment plan.

Prerequisite(s): NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B

NRSG 6283. Psychobiological Bases of Mental Health. (3 Hours)

Focuses on biological and psychological correlates of major psychiatric disorders. Studies anatomical and functional aspects of the brain and central and autonomic nervous systems. Considers cellular, genetic, neurotransmitter, circuitry, neurochemical, and neuroendocrine dimensions of emotions, behaviors, and psychiatric symptoms. Reviews the psychiatric accompaniments of physical illness and the need to differentiate medical and psychiatric conditions. Emphasizes the integration of biological with psychosocial approaches across the life span.

NRSG 6286. Contemporary Psychotherapies—Theory and Practice. (3 Hours)

Introduces the theory and practice of various forms of psychotherapy. Discusses theory and techniques associated with each therapy with regard to theoretical underpinnings, therapeutic action, techniques, and relationship between the advanced practice nurse therapist and client. Explores therapy application of individual, family, and group theories to different diagnostic populations across the life span. Compares and contrasts different psychotherapeutic perspectives on case formulation.

Prerequisite(s): NRSG 6281 with a minimum grade of B

NRSG 6287. Child and Adolescent Psychopharmacology. (2 Hours)

Provides a comprehensive overview of major classes of psychotropic medications for pediatric populations. Relates psychiatric disorders associated with medication prescription, differential diagnosis and drug interactions, safe monitoring with attention to side effects, and integration of medication management into a treatment regimen for various patient populations. Uses clinical cases to illustrate complex issues related to prescribing psychiatric medications for children.

NRSG 6288. Geriatric and Aging Adult Psychopharmacology. (2 Hours)

Offers a comprehensive overview of psychiatric disorders and the biopsychosocial issues associated with medication prescription, differential diagnosis, drug interactions, and safe monitoring with attention to side effects for geriatric and aging adult populations. Also offers a comprehensive overview of major classes of psychotropic medications and integration of medication management into a treatment regimen for geriatric and aging adult clients. Uses clinical cases to illustrate complex issues related to prescribing psychiatric medications for the geriatric population.

NRSG 6300. Healthcare Finance and Marketing. (3 Hours)

Covers healthcare economics and the financial and marketing functions and responsibilities of healthcare leaders. Emphasizes the decision-making process involved in assuring financial management and management of the exchange process between an organization and its "publics" by which both parties satisfy their needs and wants (marketing). Focuses on the integration of clinical and business aspects of healthcare into decision making for the advanced practice nurse leader.

NRSG 6302. Health Policy and Law. (3 Hours)

Examines health policy and health laws by advanced practice nurses from the perspective of issues pertinent to public health, populations, communities, their healthcare, and its coordination. Reviews and criticizes court decisions, legislation, federal, and state regulatory activities relevant to healthcare and health policy initiatives. Discusses the concept of continuous quality improvement through the development of standards of care and evaluation outcomes. Explores healthcare as a vital part of a national care agenda. Concepts are presented for application through the manager-as-developer model, which includes influence, vision, two-way communication, autonomy, team building, and development.

NRSG 6306. Health Informatics. (3 Hours)

Seeks to prepare students to use information systems and technology to support and improve patient care and healthcare systems. Examines the meta-structures (data, information, knowledge, and wisdom), concepts and tools of nursing, and healthcare informatics. Focuses on information literacy, including a critical examination of both electronic patient health information and provider decision support resources. Covers ethical and legal issues, including privacy and security, related to electronic systems. Database concepts, including data mining, warehousing, electronic data collection, and aggregation for research and patient care, are important components of this course. Examines the role of the nurse as a change agent during health information technology implementation. Students who do not meet course prerequisites may seek permission of instructor.

NRSG 6341. Teaching Nursing: The Art and Science. (3 Hours)

Explores various learning theories and their application to practice disciplines. Emphasis is on efforts to enhance critical thinking and problem solving, with assessment of technological aids for learning. Examines teaching modalities as they are related to increasing levels of complexity of information, and offers an introduction to the assessment of teaching effectiveness.

NRSG 6390. Family Care of the Adult/Older Adult Patient. (4 Hours)

Focuses on the assessment, diagnosis, and management of minor acute and stabilized chronic conditions in the adult and older adult populations in the community and long-term-care facilities. Explores theories of health promotion and health maintenance. Discusses the impact of political, psychological, sociological, and physiological factors as they impact the care of the adult and older adult. Emphasizes the role of the advanced-practice nurse practitioner as a member of collaborative teams, consultant, and model of health behaviors.

Prerequisite(s): NRSG 6115 with a minimum grade of B

NRSG 6391. Practicum for NRSG 6390. (4 Hours)

Offers a clinical practicum focusing on the adult and older adult with risk for premature morbidity and mortality and family centered health promotion. Emphasizes the care of the adult with complex multisystem health problems and conditions. Explores care of individuals in acute- and long-term-care settings.

Prerequisite(s): NRSG 6390 (may be taken concurrently) with a minimum grade of B

NRSG 6392. Family Theory. (2 Hours)

Focuses on the assessment and management of the changing family structure across the life span of the family. Emphasizes the identification of families at risk for premature morbidity and mortality. Presents guiding principles and strategies for assessing the family, various theories of family structure and process, and techniques for engaging and connecting with families. Explores the family as an emotional unit, the individual patient as a member in his or her family of origin, and strategies for applying this knowledge in a clinical setting.

NRSG 6393. Family Care of the Pediatric and Adolescent Patient. (4 Hours)

Focuses on the health assessment of individuals from the newborn stage into young adulthood. Emphasizes the utilization of an evidence-based approach to acute and chronic health conditions. Considers family, cultural, and urban community context and anticipatory guidance and health promotion within a culturally competent framework.

Prerequisite(s): NRSG 6392 with a minimum grade of B

Corequisite(s): NRSG 6394

NRSG 6394. Practicum for NRSG 6393. (4 Hours)

Offers a clinical practicum focusing on providing students with clinical learning experiences in the performance of comprehensive health assessments of children and families within the urban community. Using an evidence-based and culturally competent approach, emphasizes health promotion, health maintenance, and protection, as well as identification of children and families at risk. Offers students an opportunity to learn to assess, diagnose, and manage chronic conditions and acute illnesses commonly encountered in childhood, adolescence, and young adulthood. Builds on a foundation of practice behaviors in health assessment, health promotion, and disease prevention with a particular focus on urban health.

Corequisite(s): NRSG 6393

NRSG 6395. Healthcare of Women in Family Practice. (2 Hours)

Discusses health assessment, promotion, and care of women through the life span. Emphasizes the perinatal time period.

Prerequisite(s): NRSG 6393 with a minimum grade of B

Corequisite(s): NRSG 6396

NRSG 6396. Practicum for NRSG 6395. (4 Hours)

Focuses on the assessment, diagnosis, and management of acute and chronic health conditions of women and families. Emphasizes the care of women during the perinatal and postpartum periods. Explores family health as the family structure changes across its life span. Emphasizes the role of the advanced-practice nurse practitioner as a member of collaborative teams, as a consultant, and as a model of health behaviors.

Corequisite(s): NRSG 6395

NRSG 6397. Healthcare of Women and the Pregnant Individual in Family Practice. (3 Hours)

Focuses on the care of adolescent, adult, and elderly female-bodied individuals, and those identifying as female, in various healthcare settings. Presents a general review of health assessment and health promotion for these populations. Includes the diagnosis, monitoring, and treatment of commonly occurring conditions encountered by female-bodied individuals and those identifying as female. Emphasizes care throughout the perinatal period.

NRSG 6398. Prescribing Considerations in the Pediatric and Adolescent Populations. (2 Hours)

Focuses on prescribing considerations in the pediatric and adolescent populations, including prescribing for the pregnant and lactating individual and across the life span of the child from birth to adolescence. Discusses prescription of over-the-counter medications and common herbal supplements. Presents factors influencing prescriptive habits such as adolescent agency, implicit bias, and family dynamics.

Prerequisite(s): (NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B); NRSG 6222 with a minimum grade of B

NRSG 6420. Adult-Gerontology Acute-Care Nursing Practicum 1. (2 Hours)

Focuses on the assessment, preventative, and health-maintenance aspects of acute and episodic healthcare to adults (including older adults). The clinical practice emphasizes the multiple factors affecting the adult patient across the life span. The application of theory to the care of these patients through participation, observation, and research is facilitated by assignment to a clinical preceptor. Weekly seminars focus on an array of issues surrounding the role of the advanced practice nurse. Requires students to practice in the clinical setting a minimum of eight hours per week.

Corequisite(s): NRSG 6220

NRSG 6421. Adult-Gerontology Acute-Care Nursing Practicum 2. (4 Hours)

Continues NRSG 6420. Offers students individualized experiences in the role of practitioner, educator, and manager. Facilitated by assignment to a clinical preceptor, students focus on the provision of care to adults (including older adults) experiencing complex, critical, and chronic health problems. Demonstrates how to assess, diagnose, and manage illnesses in the acute-care, chronic, or rehabilitation setting. Uses concurrent weekly seminars to focus on the roles of the advanced practice nurse. Requires students to practice in the clinical setting a minimum of twenty hours per week.

Prerequisite(s): NRSG 6420 with a minimum grade of B

Corequisite(s): NRSG 6221

NRSG 6422. Adult-Gerontology Acute-Care Nursing Practicum 3. (4 Hours)

Continues NRSG 6421. Offers students an opportunity to synthesize their previous learning experiences; to plan, deliver, and evaluate advanced nursing care to patients with complex healthcare problems; and to acquire the skills necessary to manage clients in an acute-care setting. Uses concurrent weekly seminars to analyze the impact of the advanced practice role on long-term patient care, interdisciplinary relationships, and healthcare policy. Requires students to practice in the clinical setting a minimum of twenty hours per week.

Prerequisite(s): NRSG 6421 with a minimum grade of B

Corequisite(s): NRSG 6241

NRSG 6430. Neonatal Clinical Practicum 1. (4 Hours)

Focuses on the skills necessary for management of the high-risk neonate and family. Students have the opportunity to provide direct care under the supervision of NNP preceptors in the hospital neonatal intensive care unit (NICU), responsible for daily management of a specified caseload of neonates and their families, including therapeutic and diagnostic procedures. Supervised delivery room management of the high-risk neonate is expected, where available. Seeks to familiarize the student with respiratory distress syndrome, transient tachypnea, pneumonia, pulmonary hypertension, congenital heart disease, and patent ductus arteriosus, with appropriate management strategies. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6431. Neonatal Clinical Practicum 2. (4 Hours)

Continues NRSG 6430. Offers the second in a series of three courses focusing on the acquisition of clinical skills necessary for patient management of the high-risk neonate and family. Students have the opportunity to provide direct care under the supervision of NNP or neonatologist preceptors in the hospital neonatal intensive care unit (NICU), responsible for daily management of a specified caseload of neonates and their families, including therapeutic and diagnostic procedures. Supervised delivery room management of the high-risk neonate is expected, where available. Seeks to familiarize the student with disease processes commonly encountered in the term and preterm infant populations and appropriate management strategies. Requires students to practice in the clinical setting a minimum of twenty hours per week.

Prerequisite(s): NRSG 6430 with a minimum grade of B

NRSG 6432. Neonatal Clinical Practicum 3. (2 Hours)

Continues NRSG 6431. Offers the final course in the series focusing on the acquisition of clinical skills and expertise necessary for patient management of the high-risk neonate and family. Provides the student with intensified experience in the hospital neonatal intensive care unit (NICU) providing direct care under the supervision of NNP or neonatologist preceptors. The student is responsible for daily management of a specified caseload of neonates and their families. Proficient delivery room management of the high-risk neonate is an expectation. The student should exhibit the ability to function as an independent novice practitioner with preceptor support.

Prerequisite(s): NRSG 6431 with a minimum grade of C-

NRSG 6449. Health Promotion of Adult/Older Adult Practicum. (1 Hour)

Applies knowledge acquired in NRSG 6249. Focuses on the assessment and health promotion of adults/older adults in the primary care settings. Utilizes selected clinical experiences to increase and apply health and risk-assessment skills with adult populations in the community. Also offers students an opportunity to acquire a beginning knowledge of the role of the adult/older adult nurse practitioner in primary care settings.

Prerequisite(s): NRSG 6115 with a minimum grade of B or NRSG 6115 with a minimum grade of B

Corequisite(s): NRSG 6249

NRSG 6450. Adult/Older Adult Practicum 1. (5 Hours)

Provides a clinical learning experience that correlates with the content presented in NRSG 6250. Focuses on assessment of the adult life span within a holistic framework. Emphasizes identification of individuals at risk for premature morbidity and mortality, as well as focusing on advanced health assessment techniques and interpretation of abnormal findings on physical examination and developing a client/family health-promoting plan of care within the advanced practice role of the nurse practitioner. Requires students to practice in the clinical setting a minimum of sixteen hours per week.

Prerequisite(s): NRSG 6249 with a minimum grade of B ; NRSG 6449 with a minimum grade of B

NRSG 6451. Adult/Older Adult Practicum 2. (5 Hours)

Continues NRSG 6450. Focuses on providing the student with clinical learning experiences in the coordination and delivery of primary healthcare nursing services to adults and their families, with emphasis on underserved populations. Studies how to assess, diagnose, and manage acute and chronic conditions and illnesses commonly encountered in adult populations. Students build on a foundation of practice behaviors in health assessment, health promotion, and disease prevention. Requires students to practice in the clinical setting a minimum of sixteen hours per week.

Prerequisite(s): NRSG 6450 (may be taken concurrently) with a minimum grade of C-

NRSG 6459. Pediatric NP Practicum 1. (2 Hours)

Provides students with clinical learning experiences in the delivery and coordination of primary-care services to well infants, children, adolescents, and young adults and their families. Focuses on how to perform a comprehensive health assessment of the child and family utilizing a holistic approach while considering social determinants of health and caring for underserved populations. Emphasizes child development; health promotion; health maintenance; and identification of individuals, families, and communities at risk.

NRSG 6460. Pediatric NP Practicum 2. (5 Hours)

Provides the student with clinical learning experiences in the delivery and coordination of primary-care services to well infants, children, adolescents, and young adults and their families. Focuses on performing a comprehensive health assessment of the child and family utilizing a holistic approach. Emphasis is on health promotion, health maintenance, and identification of individuals or families at risk. The utilization of two clinical sites provides the opportunity for the student to evaluate interdisciplinary role responsibilities and clinical practice standards. Weekly seminar discussion fosters critical analysis of clinical experiences and the integration of theory, research, and primary practice. Requires students to practice in the clinical setting a minimum of twenty hours per week.

Prerequisite(s): NRSG 6275 with a minimum grade of B

Corequisite(s): NRSG 6264

NRSG 6461. Pediatric NP Practicum 3. (5 Hours)

Focuses on providing the student with clinical learning experiences in the coordination and delivery of primary-care nursing services to infants, children, adolescents, and young adults and their families within the context of their culture and community. Studies how to assess, diagnose, and manage stable chronic conditions and acute episodic illnesses commonly encountered in childhood, adolescence, and young adulthood. Students build on a foundation of practice behaviors in health assessment, health promotion, and disease prevention. Requires students to practice in the clinical setting.

Corequisite(s): NRSG 6265

NRSG 6463. Care of the Critically Ill Child Practicum. (5 Hours)

Designed to accompany NRSG 6267, this course focuses on providing the student with clinical learning experiences in the coordination and delivery of critical care to infants, children, adolescents, and young adults and their families within the context of their culture and urban community. The goal of continued clinical practice experiences across settings and continuum of acuity care is to facilitate the development of knowledge and attitudinal competencies and skills in the delivery of care to children with a focus on critical health issues. Requires students to practice in the clinical setting a minimum of twenty hours per week.

Prerequisite(s): NRSG 6461 with a minimum grade of B

Corequisite(s): NRSG 6267

NRSG 6480. Psychiatric Practicum across the Life Span 1. (5 Hours)

Provides clinical experience with individuals and families throughout the life span in a psychiatric mental health setting in the advanced practice nursing role. Includes a didactic seminar that focuses on assessment of psychopathology and mental health, psychodiagnostic history taking, mental status evaluation, differential diagnosis, and treatment for various aged diverse clients. Requires students to develop a caseload, and to practice in the clinical setting a minimum of twenty hours per week with an agency preceptor. Integration of theory and practice is emphasized, utilizing the data from the students' clinical placement as they apply to the specific diagnoses presented in clinical work. Also requires students to draft a needs assessment proposal to be completed in NRSG 6481.

Prerequisite(s): NRSG 6281 (may be taken concurrently) with a minimum grade of C-

NRSG 6481. Psychiatric Practicum across the Life Span 2. (5 Hours)

Continues NRSG 6480. Provides clinical experiences with individuals and families throughout the life span in a mental health setting. Requires students to continue to treat a caseload of clients and to practice a minimum of twenty hours per week with an agency preceptor. The focus is on planning and providing care, utilizing various treatment modalities, applying theoretical frameworks, prevention of psychiatric problems and promotion of mental health, group process, termination issues, and evaluation of clients' progress. Clinical cases provide the basis for discussion in didactic seminar. Requires students to complete the activity proposed in NRSG 6480 to meet an identified need in their community or clinical setting.

Prerequisite(s): NRSG 6480 with a minimum grade of C-

NRSG 6541. Advanced Clinical Experiences in Nurse Anesthesia 2. (1 Hour)

Offers second integration and synthesis course of advanced knowledge and skills for interdisciplinary anesthesia nursing care for complex problems and conditions across the life span. Selected topics and clinical case studies include collaborative decision making, effective communication, and root cause/adverse event analysis. With moderate guidance, students are expected to assume greater responsibility in planning and evaluation of anesthesia care. Requires students to practice in the clinical setting approximately thirty-six hours per week.

Prerequisite(s): NRSG 6540 with a minimum grade of B ; NRSG 6336 with a minimum grade of B

NRSG 6542. Advanced Clinical Experiences in Nurse Anesthesia 3. (1 Hour)

Offers third and final integration and synthesis course of advanced knowledge and skills for interdisciplinary anesthesia nursing care for complex problems and conditions across the life span. Selected topics and clinical case studies include collaborative decision making, effective communication, and root cause/adverse event analysis. With minimal guidance, students are expected to assume greater responsibility in planning and evaluation of anesthesia care. Requires students to practice in the clinical setting approximately thirty-six hours per week.

Prerequisite(s): NRSG 6541 with a minimum grade of B

NRSG 6555. Elective Practicum. (1 Hour)

Provides an individualized field experience in an appropriate agency or community setting. Focuses on a selected client population to allow observation and practice of specific therapeutic skills, with supervision by the course instructor. May be repeated three times.

NRSG 6560. Nurse Practitioner Clinical Intensive. (1 Hour)

Offers the graduate nurse practitioner student learning activities to demonstrate clinical competency when obtaining a health history and performing a comprehensive physical examination on an adult. Emphasizes clinical critical thinking and decision making in a simulation learning environment in preparation for Advanced Practice Registered Nurse (APRN) patient management. Offers students an opportunity to perform in-person patient assessments to incorporate concepts of advanced pathophysiology and pharmacology into clinical decision making and care planning via case review.

Prerequisite(s): NRSG 6115 (may be taken concurrently) with a minimum grade of B

NRSG 6561. Advanced Nurse Practitioner Clinical Intensive. (1 Hour)

Offers the graduate nurse practitioner student an opportunity to prepare for national certification. Focuses on refinement of clinical skills. Includes in-person patient assessments to determine therapeutic interventions, review diagnostic reasoning, and incorporate prescriptive authority via case presentations. Emphasizes clinical critical thinking and decision making in a simulation learning environment in preparation for role transition to Advanced Practice Registered Nurse (APRN).

NRSG 6864. Professional Preparation Seminar. (0 Hours)

Seeks to prepare the newly graduated BSN student to take necessary steps for entry into the professional nursing role and workforce prior to beginning master's specialization. Focuses on strategies for the transition from student nurse to professional nurse.

NRSG 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

NRSG 7100. Leadership in Advanced Practice Nursing. (3 Hours)

Seeks to provide a solid foundation for providing leadership. Analyzes the principles of transformational leadership and organizational behavior pertinent to healthcare systems. Seeks to prepare nursing leaders at the practice doctorate level to use critical thinking skills and evidence-based decision making to effect systems and organizational change. Discusses leadership skills and characteristics of leadership styles within the broader framework of interprofessional collaboration and innovations in healthcare delivery. Presents information from a variety of disciplines and perspectives (legal, fiscal, ethical, cultural, and political) for purposes of improving quality of care for patients, populations, and communities in healthcare settings across the continuum of care. Restricted to students enrolled in the Doctorate of Nursing Practice Program only.

NRSG 7104. Foundations in Nursing Research. (3 Hours)

Addresses the development of nursing science with specific emphasis on the importance of developing theory-based research. Includes a broad review of the various types of research studies (e.g., descriptive, causal, and relational); the steps of the research process; and the related analytic strategies and/or issues associated with each type of research study. Also reviews the guidelines for conducting critical literature reviews (i.e., systematic or meta-analyses) and how the results are used to determine the type of research study to employ. Discusses the scientific principles and integrity related to the conduct of responsible research and the means for assuring ethical integrity of research on human subjects.

NRSG 7105. Translating Research Evidence into Practice. (3 Hours)

Offers opportunities for students to examine strategies and tools for retrieval, compilation, critical appraisal, and application of empirical, reflective, and practice-based information to improve quality of care and health outcomes for populations of interest. Uses systematic reviews, case studies emphasizing use of quality improvement methods, clinical guidelines, collaborative interprofessional practice networks, and information technology. Includes program evaluation strategies and interpretation of biostatistical concepts relevant to population-based advanced practice. Offers students an opportunity to explore techniques that support their professional presence and voice as a leader. This course meets the requirements of the following DNP Essentials of Doctoral Education for Advanced Practice Nursing: (1): Scientific Underpinnings for Practice; (3): Clinical Scholarship and Analytical Methods for Evidence-Based (AACN, 2006).

NRSG 7110. Evidence-Based Practice Research Application. (2 Hours)

Offers graduate nursing students an opportunity to work singly or in groups of two with an experienced researcher in an area related to their clinical specialization or other professional interest. The student's individual contribution depends on the stage of the research project and is determined jointly by the student, faculty liaison, and researcher. Evaluation includes the student's individual effort, participation in the collaborative research process, and appraisal of the learning experience as a research assistant. By participating in an established, scientifically significant project, offers students an opportunity to actively experience the "real-life" aspects of conducting research and to be socialized to the role of the researcher.

Prerequisite(s): NRSG 7105 with a minimum grade of B

NRSG 7220. Acute Care Practicum 1 (Adult-Gerontology). (4 Hours)

Offers the DNP adult-gerontology acute nurse practitioner student an opportunity for experiential integration and synthesis of knowledge and skills for advanced practice. Emphasizes the provision of care to adults across the spectrum, experiencing complex acute and chronic health problems. Focuses on honing history and physical exam skills, making evidence-based decisions regarding ordering labs, imaging and other diagnostic studies, and developing strong clinical-decision making skills, differential diagnosis, and treatment plans.

Prerequisite(s): NRSG 6115 with a minimum grade of B ; (NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B)

NRSG 7221. Acute Care Practicum 2 (Adult-Gerontology). (4 Hours)

Offers the DNP adult-gerontology acute nurse practitioner student an opportunity for experiential integration and synthesis of knowledge and skills for advanced practice. Focuses on the provision of care to adults across the age spectrum, experiencing complex acute and chronic health problems. Emphasizes proficiency in history and physical exam skills, making evidence-based decisions regarding ordering labs, imaging and other diagnostic studies, and developing strong clinical-decision making skills, differential diagnosis, and treatment plans. Examines indications, contraindications, and complications for commonly performed procedural skills.

Prerequisite(s): NRSG 7220 with a minimum grade of B

NRSG 7222. Acute Care Practicum 3 (Adult-Gerontology). (4 Hours)

Offers the DNP adult acute nurse practitioner student individualized experiences in the roles of practitioner, educator, and manager. Focuses on the synthesis of acquired knowledge and skills proficiency for the advanced practice acute care practitioner. Offers students an opportunity to assume increasing responsibility for overall patient care independently. Emphasizes managing a larger case load, developing care plans, engaging in discharge planning, and coordinating care across disciplines, actively working with, and consulting, specialists.

Prerequisite(s): NRSG 7221 with a minimum grade of B

NRSG 7433. Neonatal Clinical Practicum 3. (4 Hours)

Synthesizes knowledge and interventions for advanced practice neonatal nursing to support high-quality care. Emphasizes the improvement of outcomes for premature and newborn infants. Offers direct-care hours and indirect clinical learning and, with continual guidance, offers students an opportunity to assume increasing responsibility for care of the high-risk neonate and family.

Prerequisite(s): NRSG 6231 with a minimum grade of B

NRSG 7440. Adult/Older Adult Gerontology Primary Care Nursing Practicum 1. (4 Hours)

Offers an opportunity for experiential integration and synthesis of knowledge and skills for advanced practice adult gerontology primary care nursing care concepts. Examines selected topics including advanced pathophysiology, health promotion, diagnostic reasoning, differential diagnosis, and interprofessional healthcare communication, and collaboration. Emphasizes assessment, medical decision-making, and development of best practice in health promotion, health and wellness, treatment and management for diverse clients ages 13 and up including the old-old, and end-of-life care. Direct care hours are completed toward certification eligibility. Offers an opportunity to demonstrate achievement of entry-level advanced practice skills and competencies.

Prerequisite(s): (NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B); NRSG 6115 with a minimum grade of B

NRSG 7441. Adult/Older Adult Gerontology Primary Care Nursing Practicum 2. (4 Hours)

Offers an opportunity for continued analysis, synthesis, and application of knowledge, skills, and competencies for entry level advanced practice adult gerontology primary care nursing. Applies foundational knowledge and concepts safely in the novice adult gerontology primary care nurse practitioner role while caring for individuals and populations with common acute and chronic care. Provides opportunity to make primary care diagnoses in a primary healthcare setting under direct supervision of a clinical preceptor and a clinical nursing faculty member. Direct care hours are completed toward certification eligibility. Offers an opportunity to demonstrate achievement of entry-level advanced practice skills and competencies.

Prerequisite(s): (NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B); NRSG 6115 with a minimum grade of B ; NRSG 6249 with a minimum grade of B ; NRSG 6222 with a minimum grade of B ; NRSG 7440 with a minimum grade of B

NRSG 7442. Adult/Older Adult Gerontology Primary Care Nursing Practicum 3. (4 Hours)

Culminates in the synthesis of knowledge, clinical skills, and competencies as an adult gerontology primary care nurse practitioner in an advanced practice nurse role in primary healthcare. Facilitates and focuses on the independent, safe, and accountable role of the adult gerontology primary care nurse practitioner in preparation for entering practice. Offers an opportunity to provide safe, evidence-based quality care to improve outcomes for persons aged 13 and older. Direct care hours are completed toward certification eligibility.

Prerequisite(s): (NRSG 5121 with a minimum grade of B or NRSG 5121 with a minimum grade of B); (NRSG 5118 with a minimum grade of B or NRSG 5118 with a minimum grade of B); NRSG 6253 with a minimum grade of B ; NRSG 7105 with a minimum grade of B ; NRSG 7441 with a minimum grade of B

NRSG 7480. Advanced Psychiatric Nursing Practicum 1. (4 Hours)

Offers an opportunity for experiential integration and synthesis of knowledge and skills for advanced practice psychiatric nursing care. Covers selected topics including psychopathology, mental health, psychodiagnostics, differential diagnoses, and therapeutic alliance building. Emphasizes psychotherapy and psychopharmacology treatments for diverse clients across the lifespan. Direct care hours are completed toward certification eligibility. Offers an opportunity to demonstrate achievement of entry-level advanced practice skills.

Prerequisite(s): NRSG 6281 with a minimum grade of B ; NRSG 6282 with a minimum grade of B ; NRSG 6283 with a minimum grade of B ; NRSG 6286 with a minimum grade of B

NRSG 7481. Advanced Psychiatric Nursing Practicum 2. (4 Hours)

Offers an opportunity for continued synthesis of knowledge and application of theoretical concepts and skills for advanced practice nursing care. Emphasizes psychotherapy and psychopharmacology treatments for diverse clients across the lifespan. Direct care hours are completed toward certification eligibility. Offers an opportunity to enhance advanced practice skills through increased clinical experiences.

Prerequisite(s): NRSG 7480 with a minimum grade of B

NRSG 7482. Advanced Psychiatric Nursing Practicum 3. (4 Hours)

Enhances the synthesis of acquired knowledge and proficiency in interventions for advanced practice psychiatric nursing care. Emphasizes high-quality care, and improving outcomes for diverse clients across the lifespan. Direct care hours are completed toward certification eligibility. With continued guidance, offers students an opportunity to assume increasing responsibility for care of clients of clients and families.

Prerequisite(s): NRSG 7481 with a minimum grade of B

NRSG 7500. Role/Practice Issues in Nurse Anesthesia. (3 Hours)

Analyzes new developments and current trends in nurse anesthesia practice, education, and research. Includes the historical, legal, legislative, and professional role issues associated with advanced practice anesthesia nursing. Emphasizes professional responsibilities, ethical issues, diversity, cultural competency, quality assurance, continuing education, and professional involvement. Emphasizes the historical events that have impacted the development of both the profession and the organizational structure of the American Association of Nurse Anesthetists (AANA). Discusses professional standards established by the organization. Reviews other agencies, at the federal and state levels, that affect the legal recognition of CRNA practice. Presents an overview of the educational accreditation process and certification.

NRSG 7503. Pharmacotherapeutics in Anesthesia and Critical Care Nursing. (3 Hours)

Designed to help the DNP student in anesthesia develop an understanding of the pharmacologic principles and associated application to clinical anesthesia and critical care advance practice nursing. Reviews the basic principles of the pharmacokinetics and pharmacodynamics of commonly used drugs in anesthesia and critical care. The prescription, administration, and monitoring of medications for the critically ill and patients undergoing anesthesia serves as the organizing framework for the course. Content includes the most common agents and classes of drugs prescribed for the critically ill and patients undergoing anesthesia, the signs and symptoms of drug toxicity, and interventions utilized to resolve adverse drug reactions.

Prerequisite(s): NRSG 5117 with a minimum grade of B or NRSG 5117 with a minimum grade of B

NRSG 7506. Applied Chemistry, Physics, and Cardiopulmonary Physiology of Anesthesia. (3 Hours)

Designed to help the DNP student in anesthesia to integrate nursing science with basic biophysical sciences and to prepare for the highest level of advanced nursing practice in the specialty of anesthesia. Offers students an opportunity to correlate biochemical and physics principles as they apply to the physiology, pathophysiology, and pharmacology of anesthesia nursing. Also provides in-depth discussion and integration of the knowledge related to the principles of chemistry, physics, and pharmacology of general anesthesia. Emphasizes the physiological mechanisms related to operation and regulation of the cardiopulmonary system. Discusses physiological information mostly related to anesthesia.

NRSG 7509. Advanced Concepts in Nurse Anesthesia Practice. (3 Hours)

Focuses on the pharmacodynamic, pharmacokinetic, and physiologic principles related to the delivery of anesthetics and adjunctive drugs in advanced nurse anesthesia practice. Emphasizes pharmacologic management of patients with complex health problems, including multisystem failure and multidrug therapy. Studies anesthetic management for extensive surgeries performed on adults and children to develop safe intra-operative and perioperative care plans. Covers integration of pharmacological data, anesthesia administration, monitoring technology, and comprehensive advanced nursing care to return patients to their optimal state of health. Includes an overview of pain and regional anesthesia with an emphasis on anesthetic indications, management, and complications. Presents fundamental principles governing obstetrical anesthesia, emphasizing normal physiological changes associated with pregnancy, anesthetic considerations, complications inherent in pregnancy, and approaches to anesthesia.

Prerequisite(s): NRSG 7503 with a minimum grade of B ; NRSG 7540 (may be taken concurrently) with a minimum grade of B

NRSG 7511. Applied Gross Anatomy and Physiology of Anesthesia. (3 Hours)

Designed to help the DNP student in anesthesia to develop the fundamental knowledge and skills necessary for entry into advanced practice anesthesia nursing. Emphasizes study of the head and neck (multiorgan systems including the nervous system) and the back, including the spinal cord, the thorax (with focus on the respiratory and cardiovascular systems), the abdomen, pelvis, and extremities. Companion laboratory periods, during which students examine the same region in a prospected human cadaver, follow lectures. Presents ultrasound, radiography, computer tomograms (CT scans), and magnetic resonance images (MRIs) of normal and diseased organs in lectures and labs to emphasize the importance of integrating the principles of anatomical knowledge in understanding the human body in health and disease.

NRSG 7520. Conceptual Basis of Nurse Anesthesia Practice 1. (3 Hours)

Aims to help the DNP student in anesthesia to develop the fundamental knowledge and skills necessary for entry into advanced practice anesthesia nursing. Areas of focus include patient assessment, essential anesthesia techniques, monitoring and equipment, pharmacologic interventions, development of case/disease-specific anesthesia management plans, cultural competence, and safe practice across the life span. This is the first course in the nurse anesthesia program conceptual basis of practice clinical series.

Prerequisite(s): NRSG 7105 with a minimum grade of B

NRSG 7523. Conceptual Basis of Nurse Anesthesia Practice 2. (3 Hours)

Aims to help the DNP student in anesthesia to develop foundational skills in the management of highly specialized problems and conditions requiring anesthesia or surgical interventions. Key concepts include patient assessment, evaluation, and differential diagnosis. Offers students an opportunity to demonstrate the ability to plan and implement anesthesia care and pharmacologic interventions for patients with disorders of the cardiovascular and pulmonary systems across the life span. This is the second course in the nurse anesthesia program conceptual basis of practice clinical series.

Prerequisite(s): NRSG 7520 with a minimum grade of B

Corequisite(s): NRSG 7533

NRSG 7526. Conceptual Basis of Nurse Anesthesia Practice 3. (3 Hours)

Designed to help the DNP student in anesthesia engage in integration of the knowledge and skills associated with highly specialized problems and conditions requiring anesthesia or surgical interventions. Offers students an opportunity to demonstrate the ability to conduct well-informed discussion concerning physiology and pathophysiology of the nervous, endocrine, renal, and hepatic systems. Key competencies include conducting focused assessment, anesthetic planning, and selection of pharmacologic interventions for patients with disorders of the nervous, endocrine, renal, and hepatic systems across the life span. This is the third course in the nurse anesthesia program conceptual basis of practice clinical series.

Prerequisite(s): NRSG 7523 with a minimum grade of B

Corequisite(s): NRSG 7536

NRSG 7530. Nurse Anesthesia Practicum 1. (3 Hours)

Offers the DNP student in anesthesia an opportunity for experiential integration and synthesis of basic knowledge and skills for anesthesia nursing care. Selected topics and clinical case plans reinforce the principles of collaborative decision making, effective communication, cultural sensitivity, use of equipment and techniques, use of evidence, planning for routine and emergent events, and evaluation of various conditions for patients across the life span. Students have an opportunity to demonstrate achievement of entry-level practice skills by the end of the course.

NRSG 7533. Nurse Anesthesia Practicum 2. (3 Hours)

Offers the DNP student in anesthesia an opportunity to apply theoretical concepts and skills obtained in the lab to the clinical setting. With supervision, students create a plan of care for induction, maintenance, emergence, and postanesthesia. Offers students an opportunity to enhance these skills through clinical experiences, lab skills development, and seminar discussions.

Prerequisite(s): NRSG 7530 with a minimum grade of B

Corequisite(s): NRSG 7523

NRSG 7536. Nurse Anesthesia Practicum 3. (4 Hours)

Aims to help the DNP student in anesthesia to refine and enhance their growing anesthesia knowledge and skill. Students progress under supervision at clinical sites to more independent management of basic cases and begin exposure to complex and specialty cases. Seminars meet to discuss issues related to complex clinical practice with emphasis on patients with cardiac disease, cardiac anesthesia, management of critically ill patients, glycemic management, blood management, coagulation management, cerebral oximetry, and renal protection.

Prerequisite(s): NRSG 7533 with a minimum grade of B

NRSG 7540. Advanced Clinical Experiences in Nurse Anesthesia 1. (1 Hour)

Aims to help the DNP student in anesthesia to begin development of advanced skills and to integrate comprehensive cumulative knowledge into anesthesia and perioperative care for complex patients having major and specialty surgery across the life span. Focuses on patient-centric care and includes development of an understanding of how nurse anesthetists can deliver high-quality care to improve patient outcomes and the safety environment adherence to individual and systemic safety processes. Students incorporate didactic knowledge into developing anesthesia management plans for patients across the acuity and age continuum. With continual guidance, offers students an opportunity to assume increasing responsibility for more care of increasingly complex patients and surgical procedures.

NRSG 7543. Advanced Clinical Experiences in Nurse Anesthesia 2. (2 Hours)

Mentors students to develop skills in crisis management, patient safety, and independent anesthetic management. The role of the senior SRNA demands demonstration of leadership, interprofessional communication, collaboration, and use of resources in all settings and situations, including crisis events. Students integrate information from prior classroom and clinical experiences into individualized plans of care for all ages and complexity of patients.

Prerequisite(s): NRSG 7540 with a minimum grade of B

NRSG 7546. Advanced Clinical Experiences in Nurse Anesthesia 3. (2 Hours)

Aims to help the DNP student in anesthesia to utilize knowledge and skill gained during increasingly complex clinical experiences to refine the skills necessary to function as an independent professional clinician and member of the healthcare system. Designed to support integration and synthesis of advanced knowledge and skills for interdisciplinary anesthesia nursing care of patients across the life span who have complex health problems and who are undergoing a wide range of surgical procedures. Selected topics and clinical case studies focus on higher-level professional skills, including collaborative decision making, utilization of evidence to inform practice, and effective communication. With minimal guidance, students assume greater responsibility in planning, implementing, and evaluating anesthesia care.

Prerequisite(s): NRSG 7543 with a minimum grade of B

NRSG 7700. The Science of Nursing. (3 Hours)

Introduces basic concepts in philosophy of science and the development of knowledge. Explores the historical development and themes for knowledge building in nursing and healthcare. Offers students an opportunity to analyze different ways of knowing and world views as they relate to the development of programs of research in nursing. Content from this course is applied to each student's area of research interest. The examination of the scientific literature, identification of gaps in knowledge, and the development of research questions are completed to begin the process of developing a research plan.

NRSG 7705. Theoretical and Conceptual Foundations in Nursing Science. (3 Hours)

Examines the nature of nursing science by critically analyzing the current relevance of nursing theories and conceptual models to the advancement of nursing's scientific development. Emphasizes various approaches to concept/theory development, analysis, and synthesis. Expects students to develop skills in concept/theory analysis and synthesis and to apply these skills to a formal analysis of concept relevant to their phenomena of interest. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): NRSG 7700 (may be taken concurrently) with a minimum grade of C-

NRSG 7709. Qualitative Research Methods. (3 Hours)

Examines published qualitative research in nursing and related disciplines. Emphasizes major strategies of qualitative inquiry, including ethnography, grounded theory, phenomenology, narrative inquiry, and case study. Offers students an opportunity to begin to develop mastery in critiquing qualitative research, ethical issues, data analysis techniques, and proposal development.

Prerequisite(s): NRSG 7700 with a minimum grade of B

NRSG 7712. Quantitative Research Methods. (3 Hours)

Introduces different types of quantitative research methods as they relate to investigation of phenomena in nursing and healthcare. Begins with a focus on defining research problems, theory testing, and causal inference, then explores a range of research designs and methodologic techniques that are available for empirical research. Quantitative techniques include sampling, data collection, analysis, and interpretation.

Prerequisite(s): NRSG 7700 with a minimum grade of B

NRSG 7715. Measurement in Clinical Research. (3 Hours)

Examines the concepts of measurement, sources of measurement error, control, and instrumentation as they relate to variables in clinical research. Students have an opportunity to explore the procedural aspects of measurement, criterion-referenced and norm-referenced measures, as well as the reliability and validity of measurement techniques. Discusses methods and statistical procedures used in instrument design and testing, such as instrument blueprints, factor analysis, and item response theory. Emphasizes the measurement of variables to evaluate the effectiveness of clinical interventions.

Prerequisite(s): NRSG 7700 with a minimum grade of B

NRSG 7750. Healthcare of Urban Populations. (3 Hours)

Provides students with an opportunity to explore the body of urban health research to identify key themes, conceptual foundations, and contemporary research findings. Examines integration of cultural and community contextual factors that affect the health status of urban populations. These include racial, ethnic, and economic health disparities; influences of the urban physical environment and the urban social environment; and the availability of and access to health and social services. Studies the influence of concepts such as vulnerability, underserved, culture, ethnicity, poverty, discrimination, disparities in healthcare, urbanization, diversity, social determinants of health, environmental justice, and migration on health status.

NRSG 7755. Intervention Research: Development, Implementation, and Evaluation. (3 Hours)

Examines theory-based intervention research for individuals, groups, populations, and systems. Offers an overview of the types of theory-based interventions across the health spectrum. Reviews the development and testing of theory-based interventions. Emphasizes understanding the strengths and challenges of integrating technology across the development, testing, and implementation of a theory-based intervention. Also emphasizes the selection of existing interventions, the process of adaption, and the valid and reliable execution of the selected theory-based intervention by examining such issues as treatment, fidelity, intervention duration, context, and interventionist expertise. Compares and contrasts intervention research developed for efficacy, effectiveness, and implementation. Restricted to students enrolled in a PhD program or with permission of instructor.

Prerequisite(s): NRSG 7705 (may be taken concurrently) with a minimum grade of C- ; NRSG 7709 (may be taken concurrently) with a minimum grade of C-

NRSG 7770. Research Colloquium. (1 Hour)

Offers doctoral students an opportunity to explore in-depth key concepts in nursing and healthcare research. Led by a faculty expert, offers students an opportunity to engage in meaningful dialogue and analysis to examine the concept from multiple perspectives. May be repeated up to four times.

NRSG 7911. DNP Project Immersion 1. (1 Hour)

Provides individualized mentorship for the application of knowledge and competencies to guide the formulation of a scholarly project to completion. Focuses on problem identification, project scope and methodology, IRB approval, and data collection strategies.

NRSG 7912. DNP Project Immersion 2. (1 Hour)

Provides individualized mentorship for the application of knowledge and competencies to progress scholarly project to completion. Focuses on individualized project data analysis and statistical review, exploration of study findings and strategies for dissemination. Guides the scholarly project towards completion of review of findings, implications for clinical practice and scholarly dissemination.

NRSG 7920. The Steps to Practice Inquiry: Analyze, Evaluate, Synthesize, and Apply the Evidence. (3 Hours)

Designed as a complement to NRSG 7105 or equivalent. Offers students an opportunity to obtain skills and competencies needed for a practice doctorate—ability to generate new knowledge from practice, evaluate current practice approaches, analyze current knowledge, and adapt/translate knowledge into usable clinical strategies that improve practice and lead to better outcomes.

NRSG 7921. DNP Scholarly Project 1: Design and Ethical Consideration of Practice Application. (3 Hours)

Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. In this seminar, students are mentored through the process of evidence-based project development, including formulation of goals and objectives; refinement of project design and implementation strategies; and development of tools and/or forms for data collection, identification of resources (personnel and fiscal), ethical review, and evaluation. Offers students an opportunity to participate in a process of peer consultation and critique in support of project refinement. Requires a minimum total of 250 scholarly practice hours.

Prerequisite(s): NRSG 7920 with a minimum grade of B

NRSG 7922. DNP Scholarly Project 2: Applying Practice Knowledge—Implementation/Outcomes. (3 Hours)

Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. In this seminar, students are guided through the process of completing an evidence-based project. Emphasizes the acquisition of reflective practice skills and competencies needed to assess and implement evaluation of evidence and outcomes. Requires a minimum total of 250 scholarly practice hours.

Prerequisite(s): NRSG 7921 with a minimum grade of B

NRSG 7923. DNP Scholarly Project 3: Dissemination of Practice Inquiry. (3 Hours)

Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. In this seminar, students are guided through the process of summarizing and disseminating the results of the project. Requires a minimum total of 250 scholarly practice hours.

Prerequisite(s): NRSG 7922 with a minimum grade of B

NRSG 7924. Applied Epidemiology for Advanced Nursing. (3 Hours)

Examines the scientific foundations integral to the competencies outlined in the Essentials of Doctoral Education for Advanced Nursing Practice (2006). Course content and accompanying practice opportunities, grounded in clinical prevention and population health, seek to enable students to analyze epidemiological, biostatistical, occupational, and environmental data in the development, implementation, and evaluation of clinical prevention and population health. Emphasizes current concepts of public health, health promotion, evidence-based recommendations, determinants of health, environmental/occupational health, and cultural diversity and sensitivity needed to guide advanced nursing practice. In addition, emerging knowledge regarding infectious diseases, emergency/disaster preparedness, and intervention frame the exercises and practice opportunities focused on clinical prevention and population health.

Prerequisite(s): NRSG 7100 (may be taken concurrently) with a minimum grade of B

NRSG 7925. Health Policy and Advocacy. (3 Hours)

Examines the scientific foundations integral to meeting the competencies outlined in The Essentials of Doctoral Education for Advanced Nursing Practice (2006). Seeks to provide students with the knowledge and opportunity to develop skills and competencies essential to assuming leadership roles in the development of health policy. Contrasts the major contextual factors and policy triggers that influence health policymaking at the various levels. Exercises are aimed at developing skill in the design, implementation, and advocacy for healthcare policy to address issues of social justice and equity in healthcare. Additionally, the course integrates practice experiences with two additional skill sets—the ability to analyze the policy process and the ability to engage in politically competent action.

Prerequisite(s): NRSG 7100 with a minimum grade of B

NRSG 7926. Applied Data Management. (2 Hours)

Studies the application and use of quantitative and qualitative statistical methods including inferential statistics. Focuses on accurate analysis and interpretation of research designs and statistical tests relevant to types of variables and levels of measurement utilizing selected quantitative and qualitative statistical software. Reviews basic application of selected spreadsheets and proper use of tables and figures for accurate data and outcome reporting.

NRSG 7976. Directed Study. (1-4 Hours)

Allows PhD students to develop an individual plan to attain specific knowledge related to research goals or specific research technique/approach. May consist of library study and reading, preparation of scholarly presentation or publication, mentored research experience, or other appropriate activity as approved by professor and academic advisor. May be repeated without limit.

NRSG 7990. Thesis. (1-4 Hours)

Allows students to implement a research proposal with the guidance of a thesis adviser. Requires data collection and analysis, writing the thesis, and presentation of the findings. May be repeated up to three times.

NRSG 8960. Exam Preparation—Doctoral. (0 Hours)

Offers the student the opportunity, under faculty supervision, to prepare for the PhD qualifying exam.

NRSG 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to four times.

NRSG 8986. Research. (0 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

NRSG 9000. Comprehensive Exam. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

NRSG 9845. Dissertation Seminar 1. (3 Hours)

Guides students through the beginning of the research process as they prepare their dissertation proposals, including writing the literature review and outlining the research design for their projects. Students have an opportunity to work with their dissertation advisors both individually and in small groups.

Prerequisite(s): NRSG 7700 with a minimum grade of B

NRSG 9846. Dissertation Seminar 2. (3 Hours)

Provides students with an opportunity to finalize their dissertation proposals and make the necessary arrangements to begin their investigations by completing the design and methods and obtaining Investigative Review Board approval. Students have an opportunity to work with their dissertation advisors both individually and in small groups.

Prerequisite(s): NRSG 9845 with a minimum grade of B

NRSG 9984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

NRSG 9986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

NRSG 9990. Dissertation Term 1. (0 Hours)

Offers research/experimental work for PhD thesis on a full-time basis. Restricted to Doctoral candidacy students only.

Prerequisite(s): NRSG 9000 with a minimum grade of S

NRSG 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): NRSG 9990 with a minimum grade of S

NRSG 9996. Dissertation Continuation. (0 Hours)

Offers continuation of PhD dissertation research.

Prerequisite(s): NRSG 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Nutrition - CPS (NTR)**Courses****NTR 6100. Advanced Nutrition and Metabolism. (4 Hours)**

Examines the metabolism, physiological actions, and interrelationships of carbohydrates, protein, fats, vitamins, minerals, and water. Discusses the regulation of the biochemical pathways and the nutritional principles of macronutrient and micronutrient metabolism; absorption, excretion, transport, and cellular metabolism; nutritional and toxicological standards for humans and animal models; and bioavailability of minerals.

NTR 6101. Nutrition Program Planning. (4 Hours)

Focuses on individual and community nutritional assessment. Emphasizes development, implementation, and evaluation of nutrition intervention programs. Offers students an opportunity to practice setting realistic goals that produce outcomes that improve health and support wellness. Explores changing nutritional behavior and the barriers to such change. This course is intended for graduate students in nutrition or other health sciences and/or human services graduate students interested in developing, implementing, and evaluating community-based nutrition programs.

NTR 6105. Foundations of Integrative Health. (4 Hours)

Introduces the foundational concepts and tools within integrative health and wellness. Integrative health is centered around an ecosystem of relationships, strategies, and tools. Focuses on the unique characteristics of the mind, body, spirit, and environment and their interplay. Offers students an opportunity to obtain an understanding of the impact that culture and belief systems have on wellness practices and to appreciate that people are active partners in healing. Seeks to help empower students to engage fully with opportunities to cultivate resilience and foster holistic well-being.

NTR 6110. Medical Nutrition Therapy. (4 Hours)

Explores the application of nutrition principles to the treatment and prevention of diseases. This treatment can range from changes in diet to providing specialized therapies such as intravenous or tube feeding. Discusses lifestyle strategies and therapeutic nutrient intervention to correct nutritional insufficiencies; promote optimal health; and prevent, manage, or correct medical problems.

Prerequisite(s): NTR 6100 with a minimum grade of C-

NTR 6112. Research Methods in Nutrition. (4 Hours)

Examines the varying techniques and methods used in nutritional research. Offers students an opportunity to learn how to critically analyze and interpret research literature.

NTR 6115. Health Promotion/Disease Prevention. (4 Hours)

Examines health promotion—the science and art of helping people change their lifestyle to move toward a state of optimal health. Lifestyle changes can prevent chronic diseases, such as heart disease, cancer, and diabetes, which are the leading causes of death and disability in the United States. Reviews and critically assesses current efforts to influence lifestyle change, at both the individual and population levels. Offers students an opportunity to plan, organize, and conduct lifestyle change programs.

NTR 6118. Clinical Health Behavior Change. (4 Hours)

Explores health behavior theories to facilitate the adoption of healthful behaviors to various groups. Includes motivational interviewing; practice of nonverbal, active listening; goal assessment; and group counseling. Explores the evaluation of nutrition education interventions.

NTR 6119. Pediatric Nutrition. (4 Hours)

Explores the nutritional requirements of the healthy child from infancy through adolescence. Covers the assessment, treatment, and management of a variety of pediatric diseases and conditions, including prematurity, growth failure, food allergies and intolerances, developmental disabilities, diabetes, and obesity. Explores the global issues affecting children today, including malnutrition, obesity, and environmental health.

NTR 6120. Healthy Aging: Nutrition Strategies for Optimal Longevity. (4 Hours)

Offers a general survey of the impact of aging on the nutritional status of older adults. Covers the relationship between nutrition, body composition, and activity level and their impact on rehabilitation of older adults. Encourages students to look for the clinical signs and symptoms in aging clients that may require nutritional interventions. Offers students an opportunity to acquire strategies for the treatment and prevention of diseases and conditions that are associated with aging and become familiar with various cultures known for their longevity.

NTR 6125. The Process of Health and Healing: Exploring Systems in the Body—Part 1. (4 Hours)

Focuses on applying research to understand the process of health and healing. Recognizes that each person's body is its own unique ecosystem and the path toward health and wellness may differ for each individual. Examines the phenomenon of epigenetics and helps students understand that genetic makeup is not the only factor in the expression of health and wellness. Explores the systems of the body and how to identify factors that may interfere with the healing process or disrupt individual well-being. Explores the metabolic, endocrine, and cardiovascular systems, among others.

Prerequisite(s): NTR 6105 with a minimum grade of C-

NTR 6130. Healthcare and Nutrition Communication. (4 Hours)

Examines cutting-edge research and current theories in health and nutrition communication. Studies empirically proven health campaigns, offering students an opportunity to understand the key qualities of messages that can best influence health-related decision making. Analyzes the mechanisms for transmitting key knowledge to a target audience, including the potential utility of social networking tools in developing nutrition as an applied science. Offers students an opportunity to test their own messages using print and electronic media. Seeks to help nutrition scientists create communities of "healthy practice" among populations that would benefit the most from improved nutrition.

NTR 6135. The Process of Health and Healing: Exploring Systems in the Body—Part 2. (4 Hours)

Offers an advanced exploration of the process of health and healing and a continued examination of various systems in the body, including the immune, gastrointestinal, and nervous systems. Leverages this knowledge to consider the range of evidence-based practices influencing various health and wellness outcomes.

Prerequisite(s): NTR 6125 with a minimum grade of C-

NTR 6148. Exercise Physiology. (3 Hours)

Covers the advanced study of concepts, principles, and research in the field of exercise physiology. Discusses advanced concepts in the muscular/neuromuscular, cardiovascular, ventilatory, endocrine, and metabolic responses to exercise and exercise training. Specific study of the physiological control mechanisms regulating these systems are also addressed during periods of rest, acute exercise, and following chronic exercise training.

NTR 6150. Sports Psychology. (3 Hours)

Covers topics such as eating disorders among athletes, female athlete triad, and weight management. Discusses performance enhancement, motivation, and stress management of athletes. Offers students an opportunity to develop skills to counsel athletes, as well as sports teams, and to develop an understanding of behavioral change theory as it relates to sports psychology.

NTR 6155. Nutrition Entrepreneurship. (3 Hours)

Includes advanced analysis of the problems and considerations involved in establishing, organizing, and operating a nutrition-based business or clinical nutrition practice. Focuses on tools, techniques, and resources necessary for establishing a business, including developing a business plan, marketing and advertising, and reimbursement and legal and regulatory matters.

NTR 6160. Survey of Integrative Practices and Interventions. (4 Hours)

Uses an evidence-based approach from multiple sources of information to explore the realm of integrative holistic practices. Examines current scientific literature; medical and technological advances; and the intersections between conventional, ancient, and healing practices. Offers an overview of holistic practices including, but not limited to, somatic, qi gong, energy medicine, yoga, massage, and acupuncture. Identifies a wide range of approaches that leverage familial, social, and community supports that are culturally appropriate, strengths-based, and developmentally appropriate to support whole health.

Prerequisite(s): NTR 6105 with a minimum grade of C-

NTR 6165. Food and Society. (4 Hours)

Covers healthy food trends and food products that affect how we live. Includes advanced analysis of food in our society and environment. Examples are the organic movement, product and meal trends in supermarkets and restaurants, food and the economy, food politics, food labeling, and culinary nutrition trends. Focuses on how one can implement the findings into one's practice and/or area of expertise.

NTR 6170. Epidemiology. (4 Hours)

Introduces students to the background, basic principles, and methods of public health epidemiology. Epidemiology is the study of the distribution and determinants of health and disease in different human populations and the application of methods to improve disease outcomes. As such, epidemiology is the basic science of public health. Discusses the biological, behavioral, sociocultural, and environmental factors associated with the etiology and distribution of health and disease. Topics include basic principles of epidemiology; measures of disease frequency; epidemiologic study designs: experimental and observational; bias; confounding; outbreak investigations; screening; causality; and ethical issues in epidemiologic research. Offers students an opportunity to develop skills to read, interpret, and evaluate health information from published epidemiologic studies.

NTR 6200. Nutrition Education. (4 Hours)

Presents methods for creating and evaluating nutrition content for educational presentations. Offers students an opportunity to develop educational materials with an eye toward audience and context-appropriate language. Encourages students to reflect on the purpose of particular educational materials and then fashion nutrition messages that have the best chance of eliciting meaningful behavioral changes. Requires students to produce highly effective educational materials from start to finish and, in the process, practice the commonly used methods for writing, editing, and designing appropriate educational tools.

NTR 6201. Commercialization of Nutrition and Nutritional Information. (3 Hours)

Examines the commercialization of food from the perspectives of the marketers and consumers. In the United States, the consumption of food and nutritional information is mediated by advertisements and infomercials. In contemporary society, the market shapes what we eat and what we think that we should eat. This course offers students an opportunity to evaluate the role that commercial enterprises play in influencing notions of healthy nutrition and nutrition education. Features images and copy found in print advertisements, television, popular online sources, and movies and product placements.

NTR 6202. The Financing of Nutrition and Wellness. (3 Hours)

Assesses the impact that public and private funding has on health communication and nutrition campaigns. In the United States, health campaigns are determined, in part, by the funding that they receive. Unfortunately, private and public funding of healthcare has traditionally embraced a pathological model, one in which payment was driven by curing the sick rather than maintaining the healthy. With a greater focus on controlling healthcare costs, policymakers, employers, and insurance companies have sought to promote health through nutritional information and wellness programs. The challenge is to find ways of financing these efforts. Offers students an opportunity to develop policy recommendations for supporting better nutrition practices among a diverse population.

NTR 6866. Applied Research in Nutrition. (1-4 Hours)

Offers graduate students in applied nutrition an opportunity to obtain experience in the formal presentation of research results. Emphasizes the components of quality research. Offers students an opportunity to conduct, analyze, and present an evaluative or applied research project in a clear, concise, and logical manner.

Prerequisite(s): NTR 6112 (may be taken concurrently) with a minimum grade of C-

NTR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NTR 7130. Overweight and Obesity 1. (4 Hours)

Addresses the epidemiology of obesity, as well as the etiology and possible causes. Discusses the medical management and complications of obesity in-depth. Students review and critically assess current treatment strategies, such as pharmacotherapy, bariatric surgery, and behavioral approaches. Considers new research and paradigms for the causes and treatment of obesity.

NTR 7132. Overweight and Obesity 2. (4 Hours)

Examines a variety of topics in the current literature, some controversial, related to the etiology, management, treatment, and psychosocial ramifications of obesity. Offers students an opportunity to conduct an extensive review of the existing literature on various topics connected with obesity. The goal is to critically analyze and draw conclusions on how particular topics affect certain key areas in obesity, including clinical management, health promotion and disease prevention, and policy, as well as individual perceptions.

Prerequisite(s): NTR 7130 with a minimum grade of C-

NTR 7135. Eating Disorders in Children and Adults. (4 Hours)

Examines eating disorders in children and adults, including the definition and clinical presentation of eating disorders. Considers the medical complications of eating disorders, as well as the relationship between eating disorders and obesity. Examines family issues, especially for children and adolescents, in the etiology and treatment of eating disorders. Analyzes existing approaches to treatment, as well as new and experimental treatments.

NTR 7140. Wellness and Nutrition. (4 Hours)

Debates the notion that ideas of wellness are culturally contingent and socially constructed. As part of that investigation, the course surveys the nexus among nutrition habits and public health, primary education and lifelong healthy habits, and emerging trends toward corporate wellness and nutrition coaching. Offers students an opportunity to study and apply the latest research and theories relating to health maintenance and preventative nutrition. Requires students to carefully reflect upon the various definitions of wellness. Explores the construction of nutrition expertise and its involvement in large public and private programs designed to motivate individuals to engage in healthy lifestyles.

NTR 7147. Sports and Fitness Nutrition. (3 Hours)

Focuses on understanding the specific role of energy and nutrients in fitness and athletic performance. Additional topics include the role of fluid and electrolytes, ergogenic aids, and special diets in physical activity. Explores tools for assessing body composition (body fat, muscle mass), unique dietary concerns across the life span and in special population groups (heart disease, diabetes, obesity), and the effect of diet on endurance.

NTR 7880. Wellness in Practice. (1-4 Hours)

Presents a guided experience that offers students an opportunity to link theory and practice. Students gain experience in the field of nutrition, integrative health, and wellness, either in-person or online, and develop or work on an established project or program that is relevant to the student's specialization. Seeks to help students construct a "portfolio" piece that can be included in job application packages and applied in their place of practice.

NTR 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Operations Research (OR)

Courses

OR 6205. Deterministic Operations Research. (4 Hours)

Introduces the theory, computation, and application of deterministic models to represent industrial operations. Includes linear programming formulation and solution using spreadsheet and algebraic languages software; simplex, big-M, two-phase, revised simplex, and dual simplex algorithms for solving linear programs; introduction to the theory of simplex, fundamental insight, duality, and sensitivity analysis; transportation, assignment, and transshipment problems; shortest path, minimum spanning tree, maximum flow, minimum cost network flow problems and project networks; and discrete-state and continuous-state dynamic programming models and applications. Requires knowledge of linear algebra.

OR 6500. Metaheuristics and Applications. (4 Hours)

Focuses on solving large combinatorial optimization problems. Metaheuristic search aims to find a "very good" solution that satisfies the problem constraints. Describes multiple metaheuristic search methods such as simulated annealing (SA), tabu search (TS), genetic algorithms (GA), particle swarm optimization (PSO), and multiobjective methods. Uses algorithms to find values of discrete and/or continuous variables that optimize a system's performance. Discusses the application of metaheuristics to a variety of different problems, including hub location allocation, parallel machine scheduling, travelling salesman problem (TSP), curve fitting, clustering, n-queen, min one, etc. Incorporates practical experiments to demonstrate the advantages and disadvantages of metaheuristic search methods for different applications.

Prerequisite(s): OR 6205 with a minimum grade of C-

OR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

OR 7230. Probabilistic Operation Research. (4 Hours)

Introduces the theory and use of stochastic models to represent industrial operations. Topics include discrete-state Markov chains and applications, state transitions and properties, first passage probabilities, steady-state analysis; absorbing chains and absorption probabilities; introduction to continuous-time Markov chains, transition rates and steady-state analysis; basic elements of queuing systems, birth-and-death process, and special cases; steady-state analysis of simple queuing models including M/M/s, M/M/s/K, M/M/s/N/N and their special cases; and queuing models involving nonexponential distributions.

Prerequisite(s): IE 6200 with a minimum grade of C or MATH 7241 with a minimum grade of C

OR 7235. Inventory Theory. (4 Hours)

Considers the nature and characteristics of inventory systems. Examines techniques of constructing and analyzing mathematical models of inventory systems with a view toward determining operating policies for such systems.

Prerequisite(s): OR 6205 with a minimum grade of C

OR 7240. Integer and Nonlinear Optimization. (4 Hours)

Covers important families of mathematical programming problems and optimization methods. Discusses the cutting plane and the branch and bound algorithm for binary and mixed integer programming problems. Introduces nonlinear programming including unconstrained optimization, the Kuhn-Tucker conditions, gradient methods, and separable, quadratic, and geometric programming.

Prerequisite(s): OR 6205 with a minimum grade of C

OR 7245. Network Analysis and Advanced Optimization. (4 Hours)

Considers concepts of advanced linear programming and network flows. Includes theory of the simplex method, the revised simplex algorithm using LU factorization, and simplex for bounded variables and primal-dual methods; methods for solving large-scale models such as Danzig-Wolfe decomposition, Bender's partitioning, Lagrangian relaxation, and subgradient optimization; computational complexity and Karmarkar's algorithm; minimum cost network flows, network simplex, and generalized and multicommodity network flow problems; and special types of network problems including the traveling salesman, routing, network location, and reliability problems.

Prerequisite(s): OR 6205 with a minimum grade of C

OR 7270. Convex Optimization and Applications. (4 Hours)

Studies convex optimization, a branch of optimization techniques that deals with convex problems. Convex optimization problems appear in many real-world applications and at the same time are theoretically very interesting. Offers students an opportunity to obtain the skills required for solving convex problems and using techniques of convex analysis in solving nonconvex problems. Covers convex analysis, convex optimization problems, second-order cone programming, semidefinite programming, optimality conditions and duality theory, convex geometric problems, theory of computational complexity and convergence rate of algorithms, interior point methods, and relaxations and approximation algorithms. Applications include convex optimization, nonconvex quadratic optimization, combinatorial and network optimization problems, and optimal control problems.

Prerequisite(s): OR 6205 with a minimum grade of C-

OR 7310. Logistics, Warehousing, and Scheduling. (4 Hours)

Explores the determination of needs and requirements for logistics within large-scale manufacturing and business environments. Examines warehousing and scheduling in the context of a business logistics system. Introduces managerial, mathematical, and software tools and techniques for modeling and optimizing various aspects of the business supply chain. Considers approaches to examining warehousing operations and the associated algorithms.

Prerequisite(s): (IE 6200 with a minimum grade of C or MATH 7241 with a minimum grade of C); OR 6205 with a minimum grade of C

OR 7374. Special Topics in Operations Research. (4 Hours)

Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

OR 7945. Master's Project. (4 Hours)

Offers theoretical or experimental work under individual faculty supervision.

OR 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

OR 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

OR 7990. Thesis. (1-8 Hours)

Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. Requires first-year students to attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Requires successful completion of the seminar program. May be repeated without limit.

OR 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues thesis work conducted under the supervision of a departmental faculty member.

Organizational Behavior (ORGB)

Courses

ORGB 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ORGB 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ORGB 3201. Organizational Behavior. (4 Hours)

Provides an overview of the actions and behaviors of people in organizations. Uses case studies, videos, experiential exercises, lectures, and discussions to explore the effects of individual, interpersonal, group, organizational, and cross-cultural factors on human behavior. Topics include groups and teams, motivation, leadership, organizational change, organizational culture, structure, conflict resolution, and communication. Both the underlying theories and principles of these topics, as well as their practical applications and implications for organizations, are covered.

Prerequisite(s): (COOP 3945 (may be taken concurrently) with a minimum grade of S or COOP 3946 with a minimum grade of S or COOP 3947 with a minimum grade of S or COOP 3948 (may be taken concurrently) with a minimum grade of S); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

ORGB 3209. Organizational Behavior. (4 Hours)

Does not count as credit for business majors. Counts as ORGB 3201 for business minors only.

ORGB 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ORGB 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ORGB 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times for a maximum of 8 semester hours.

Pharmaceutical Science (PHSC)**Courses****PHSC 1001. Introduction to Contemporary Pharmaceutical Sciences. (1 Hour)**

Introduces multiple aspects of the contemporary pharmaceutical sciences. Explores how these disciplines are used to solve real-world medical problems. Offers students an opportunity to learn about foundational concepts in pharmacology; drug development and translational medicine; and the nexus of biotechnology, engineering, industry, entrepreneurship, and the career landscape for scientists. Discussion-based classes that introduce fundamental concepts are followed by student-driven classes that explore the real-world application and societal context of the material. Seeks to help students interested in pharmaceutical sciences to identify and interact with like-minded students and faculty researchers.

PHSC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 2000. Professional Development for Pharmaceutical Sciences Co-op. (1 Hour)

Introduces students to the pharmaceutical sciences cooperative education program and professionalism in the field. Students assess their workplace skills, interests, and values and discuss how these impact personal career decisions. Offers students an opportunity to develop effective job search and career management skills, prepare a professional resumé, learn proper interviewing techniques, develop a strong online professional profile, and learn how to use the Northeastern job database and referral process.

PHSC 2100. Lab Research Rotation. (4 Hours)

Offers students an opportunity to conduct laboratory research under the direct supervision of a laboratory mentor, generally a faculty member or laboratory director, gain experience in research techniques, and develop good laboratory practices as they learn about research topics under investigation in the laboratory of their choice. Students attend seminars, departmental events, and other activities relevant to the mentor's laboratory. The time commitment is at least eight hours a week. Mentor expectations and grading criteria are decided upon between the student and the mentor prior to the start of the rotation and must be approved by the course director. Students prepare a presentation that encompasses the research performed by the student that includes description, experimental design, data generated, data interpretation, and discussion of their research project. May be repeated once.

PHSC 2301. Human Physiology 1. (3 Hours)

Provides students with an understanding of the principles of physiology. Discusses physiological information mostly related to cardiovascular, respiratory, digestive, urinary, and endocrine systems. Focuses on the physiological mechanisms of the major organ systems. Physiological information is related to the specific areas of pharmacology.

Prerequisite(s): BIOL 1113 with a minimum grade of C-

Corequisite(s): PHSC 2302

PHSC 2302. Human Anatomy Lab. (1 Hour)

Accompanies PHSC 2301. Focuses on the anatomy of the major organ systems. Digital images allow each student to study the structure of each organ system in-depth.

Prerequisite(s): BIOL 1113 with a minimum grade of C-

Corequisite(s): PHSC 2301

PHSC 2303. Human Physiology 2. (3 Hours)

Continues PHSC 2301. Provides students with an understanding of the principles of physiology. Discusses physiological information mostly related to cell physiology, muscle physiology, and physiology of the nervous system. Focuses on the physiological mechanisms of the major organ systems. Physiological information is related to the specific areas of pharmacology.

Prerequisite(s): PHSC 2301 with a minimum grade of C ; PHSC 2302 with a minimum grade of C

Corequisite(s): PHSC 2304

PHSC 2304. Human Physiology Lab. (1 Hour)

Accompanies PHSC 2303. Covers topics from the course through various experiments.

Prerequisite(s): PHSC 2301 with a minimum grade of C ; PHSC 2302 with a minimum grade of C

Corequisite(s): PHSC 2303

PHSC 2320. Biochemistry. (4 Hours)

Introduces the structures, functions, and metabolism of amino acids, proteins, carbohydrates, lipids, and nucleic acids. Discusses the mechanisms of enzyme reactions, enzyme kinetics, vitamins, biological oxidation-reduction reactions, and bioenergetics, as well as various inborn errors of metabolism.

PHSC 2330. Immunology. (3 Hours)

Provides students with an understanding of the principles, mechanisms, organs, cells, and molecules of the innate and adaptive immunity. Monoclonal antibodies, organ transplant immunity, hypersensitivity, tolerance, tumor immunity, autoimmunity, and immunodeficiencies are discussed in light of potential therapeutic interventions. Weekly journal club-style presentation of related assigned topic is required.

Prerequisite(s): ((PHSC 2303 with a minimum grade of C or BIOL 2219 with a minimum grade of C); PHSC 2320 with a minimum grade of C) or graduate program admission

PHSC 2400. Research Ethics for Beginning Health Scientists. (4 Hours)

Explores various dimensions of ethical research. Introduces ethical foundations and controversies that are central to understanding and developing appropriate ethical frameworks for engaging in research. Requires students to work collaboratively to carefully develop essential skills for ethical analysis and evaluation of professional code of conduct concerns.

Attribute(s): NUpath Ethical Reasoning

PHSC 2650. Introduction to Health Science Research. (4 Hours)

Surveys research methods and topics relevant to health science research with the goal of engaging undergraduate students to commit to research training throughout at least one semester and possibly continuing throughout their undergraduate program. Exposes students to lectures addressing the benefits of a research experience and readings of original literature. Health science faculty from across the university present their lines of research focusing on projects that would be available to students. Seeks to familiarize students with use of the scientific method in addressing unsolved problems and to prepare them to select the most appropriate research laboratory to engage in research.

Prerequisite(s): BIOL 1111 (may be taken concurrently) with a minimum grade of D- ; (CHEM 1161 (may be taken concurrently) with a minimum grade of D- or CHEM 1211 (may be taken concurrently) with a minimum grade of D-); (MATH 1241 (may be taken concurrently) with a minimum grade of D- or MATH 1245 (may be taken concurrently) with a minimum grade of D-)

PHSC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 2991. Research in Pharmaceutical Science. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

PHSC 3411. Pharmaceutics 1. (4 Hours)

Develops an understanding of pharmaceutical dosage forms, with emphasis on solids, liquids, semisolids, parenterals, inhalation, and novel drug delivery systems. Combines the discussion of pharmaceutical products developed in industry and those compounded in local pharmacies. Focuses on application of mathematical principles and problem-solving skills in pharmaceutical compounding.

Prerequisite(s): (MATH 1241 with a minimum grade of C- or MATH 1245 with a minimum grade of C- or MATH 1341 with a minimum grade of C-); CHEM 2313 with a minimum grade of C ; (PHYS 1145 with a minimum grade of C or PHYS 1149 with a minimum grade of C or PHYS 1161 with a minimum grade of C) or graduate program admission

PHSC 3412. Pharmaceutics 2. (4 Hours)

Continues PHSC 3411. Examines the physical and chemical properties of the drug as it relates to pharmaceutical product development. Covers concepts of thermodynamics, colligative properties, ionic equilibria and buffers, solubility, complexation and protein binding, reaction kinetics, mass transport, interfacial phenomena and dispersion, and rheology.

Prerequisite(s): PHSC 3411 with a minimum grade of C

PHSC 3419. Pharmaceutics Laboratory. (1 Hour)

Formulates pharmaceutical dosage forms such as powders, capsules, solutions, suspensions, emulsions, ointments, gels, creams, lotions, and suppositories, and tests the quality of the products in the lab using approved methods of analysis. Also provides an understanding of the physical and chemical properties of drugs as they relate to formulation development through experimental observation of dissolution, stability, and effects of pH and co-solvent on solubility of drugs.

Prerequisite(s): PHSC 3411 with a minimum grade of C

PHSC 3430. Pharmacokinetics and Biopharmaceutics. (3 Hours)

Focuses on the basic principles and methods of biopharmaceutics and pharmacokinetics. Covers the kinetics of drug absorption, distribution, metabolism, and excretion; linear and nonlinear pharmacokinetics; general concept of one- and two-compartment models with instantaneous (i.v. bolus), zero order (i.v. infusion), or first order (oral administration or i.m. injection) input; evaluation of bioavailability and investigation of the factors affecting drug availability; influence of the route of administration, dosage form, and regimen on bioavailability of drugs; bioequivalence study; multiple dosing kinetics; general approaches to dosage adjustment in renal disease; noncompartmental analysis; and pharmacokinetic-pharmacodynamic modeling.

Prerequisite(s): PHSC 3412 with a minimum grade of C or graduate program admission

Attribute(s): NUpath Analyzing/Using Data

PHSC 3510. Medicinal Cannabis and Translational Cannabinoid Research. (4 Hours)

Introduces fundamentals of medical cannabis and cannabinoid research. Includes foundational concepts of medicinal and psychoactive ingredients of marijuana, the human endocannabinoid system (ECS), cannabinoid receptors, and endocannabinoids. Reviews the growing nationwide acceptance of cannabis; the federal and state laws/policies regulating cannabis supply chain; research and product development along with effectiveness, safety, and side effects of cannabis for various ailments; and advances in the discovery/development of ECS-targeting drugs. Promotes the preparedness for conducting research, providing patient consultation, and working with healthcare providers and policymakers in this field. Alumni and external guests are invited to share clinical and industrial insights.

Prerequisite(s): (CHEM 2311 with a minimum grade of D- or CHEM 1104 with a minimum grade of D- or CHM 2110 with a minimum grade of D-); (BIOL 1111 with a minimum grade of D- or BIOL 1113 with a minimum grade of D-)

PHSC 3801. Principles of Pharmacology and Medicinal Chemistry 1. (4 Hours)

Introduces the principles and basic concepts of pharmacology and medicinal chemistry and the general mechanisms of drug action, including drug receptor interactions. Discusses the major functional groups and their contributions to receptor interactions, metabolism, and toxicity. Covers drug classes affecting the peripheral autonomic and central nervous systems. Considers therapeutic uses, mechanisms of drug action, and undesirable actions, including side effects and adverse reactions.

Prerequisite(s): (PHSC 2303 with a minimum grade of D or BIOL 2219 with a minimum grade of D); CHEM 2313 with a minimum grade of D

PHSC 3802. Principles of Pharmacology and Medicinal Chemistry 2. (4 Hours)

Continues PHSC 3801 and covers the principles and basic concepts of pharmacology and medicinal chemistry and the general mechanisms of drug action, including drug receptor interactions. Discusses the major functional groups and their contributions to receptor interactions, metabolism, and toxicity. Considers therapeutic uses, mechanisms of drug action, and undesirable actions, including side effects and adverse reactions.

Prerequisite(s): PHSC 3801 with a minimum grade of D

PHSC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 4501. Pharmacology/Medicinal Chemistry 1. (5 Hours)

Introduces the principles and basic concepts of pharmacology and the general mechanisms of drug action including drug receptor interactions. Discusses the major drug classes affecting the peripheral autonomic and central nervous systems including anxiolytics, sedative-hypnotics, anesthetics, anticonvulsants, neuroleptics, antidepressants, and antimanic agents. Considers therapeutic uses, mechanisms of drug action, and undesirable actions including side effects and adverse reactions.

Prerequisite(s): ((PHSC 2303 with a minimum grade of C or BIOL 2219 with a minimum grade of C); CHEM 2313 with a minimum grade of C) or graduate program admission

PHSC 4502. Pharmacology/Medicinal Chemistry 2. (5 Hours)

Continues PHSC 4501. Covers the mechanisms of action, structure-activity relationships, therapeutic uses, and adverse effects of drugs including cardiovascular agents, hormones, anticancer drugs, antibiotics, and antiinflammatory agents.

Prerequisite(s): PHSC 4501 with a minimum grade of C

PHSC 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PHSC 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): PHSC 4970 with a minimum grade of C

PHSC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 4995. Practicum. (1-4 Hours)

Offers eligible students an opportunity for practical experience. May be repeated without limit.

PHSC 4997. Senior Thesis. (4 Hours)

Offers students an opportunity to prepare an undergraduate thesis under faculty supervision.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHSC 4998. Senior Thesis Continuation. (4 Hours)

Offers students an opportunity to execute a project as described in PHSC 4997, which involves laboratory work; skill development; and the ability to generate, analyze, and report valid and reproducible data with the highest level of honesty and integrity. Students write and defend a thesis project to a public audience that describes the scientific background and context of the research, the hypothesis tested, methods utilized, and experimental results obtained. The thesis also includes interpretation of data, its contribution to the field, and future directions for the research. Students are expected to demonstrate motivation and initiative and to develop skills necessary to work cooperatively with a faculty mentor and other lab personnel.

Prerequisite(s): PHSC 4997 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

PHSC 5100. Concepts in Pharmaceutical Science. (2 Hours)

Introduces new students in the Pharmaceutical Science Graduate Program to important concepts in medicinal and combinatorial chemistry as they relate to drug discovery, and a brief overview of pharmacology, drug metabolism, pharmacokinetics, and toxicology. Also introduces the major drug receptor families and their signaling pathways.

PHSC 5102. Concepts in Pharmaceutical Science 2. (2 Hours)

Presents key concepts and challenges of drug design, development, and evaluation. Integrates the principles of drug design, development, and delivery in a discussion of both small-molecule formulations and biologics. Contextualizes the hallmarks along the path of preclinical drug design to clinical translation. Components of the course include Team-Based Learning (TBL) and professionalism. The TBL sessions offer students an opportunity to work on course-related team applications and include graded peer evaluations.

PHSC 5110. Integrated Science and Therapeutics 1. (4 Hours)

Integrates foundational concepts of pharmacology, medicinal chemistry, pathophysiology, and pharmacotherapeutics to treat patients with hypertension, diabetes, and hyperlipidemia. Studies knowledge, skills, and attitudes pertaining to drug action, drug-receptor interactions, structure-activity relationships, dose-response relationships, drug mechanisms of action, therapeutic uses, and adverse effects. Offers students an opportunity to develop patient evaluation skills using the Pharmacists' Patient Care Process and identification of drug therapy problems. Emphasizes self-care, patient education, assessment, medication administration, management and monitoring, and preventative health and population-based health outcomes.#.

Prerequisite(s): (PHSC 2303 with a minimum grade of D- ; PHSC 2304 with a minimum grade of D- ; ENGW 3306 with a minimum grade of D-) or graduate program admission

PHSC 5130. Foundations of Pharmaceutical Sciences 1. (4 Hours)

Examines physical and chemical properties of drugs and discusses pharmaceutical products developed in industry and compounded in pharmacies. Focuses on application of mathematical principles and problem-solving skills in pharmaceutical compounding of dosage forms including solids, liquids, parenterals, inhalation, and novel drug delivery systems. Discusses thermodynamics, colligative properties, ionic equilibria and buffers, solubility, protein binding, and reaction kinetics.##.

Prerequisite(s): ((MATH 1241 with a minimum grade of D- or MATH 1245 with a minimum grade of D- or MATH 1341 with a minimum grade of D-); CHEM 2313 with a minimum grade of D-) or graduate program admission

PHSC 5181. Integrated Learning Lab 1. (1 Hour)

Offers students an opportunity to develop and assimilate knowledge, skills, and attitudes related to the pharmaceutical care of patients to supplement and augment pharmacy curricular topics within an immersive learning experience. Includes pharmaceutics, healthcare systems, professional communication skills, research methods, drug information, jurisprudence, patient counseling, and aseptic technique/compounding. Uses innovative digital tools, environments, equipment, learning materials, and pedagogical methods that promote the development and refinement of problem-solving skills, adaptability/resilience, and a team mindset that can be applied during experiential activities (co-op/introductory pharmacy practice experience/ advanced pharmacy practice experience), as well as future careers.

PHSC 5205. Integrated Science and Therapeutics 3. (4 Hours)

Integrates foundational concepts of pharmacology, medicinal chemistry, pathophysiology, immunology, and pharmacotherapeutics to treat patients with acute and chronic rheumatologic, immune-mediated, dermatologic, and oncologic diseases. Offers students an opportunity to develop knowledge, skills, and attitudes pertaining to drug action, drug-receptor interactions, structure-activity relationships, dose-response relationships, drug mechanisms of action, therapeutic uses, and adverse effects. Focuses on developing patient evaluation skills using the Pharmacists' Patient Care Process and identification of drug therapy problems. Emphasizes self-care, patient education, assessment, medication administration, management, and monitoring, as well as preventative health and population-based health outcomes.

Prerequisite(s): (PHMD 5115 with a minimum grade of D- ; PHMD 5182 with a minimum grade of D- ; PHMD 5192 with a minimum grade of D-) or graduate program admission

PHSC 5212. Research Skills and Ethics. (2 Hours)

Teaches students the basics of laboratory safety, safekeeping laboratory data, and the process of writing a grant proposal. Also, case studies explore the concepts of data distortion or fabrication, conflicts of interest, confidentiality, ethical aspects of peer review, and the attribution of credit in science.

PHSC 5230. Foundations of Pharmaceutical Sciences 2. (4 Hours)

Introduces fundamental concepts and applications of biopharmaceutics and pharmacokinetics. Offers students an opportunity to integrate knowledge, skills, and concepts to clinically treat patients. Discusses pharmacokinetic analysis and modeling; one-compartment, two-compartment, and three-compartment models; multiple dosing kinetics; methods of calculation; dosage adjustment in renal impairment; and noncompartmental analysis.

Prerequisite(s): (PHSC 5130 with a minimum grade of D- ; PHSC 5181 with a minimum grade of D-) or graduate program admission

PHSC 5300. Pharmaceutical Biochemistry. (2 Hours)

Offers students an opportunity to obtain an understanding of the principles of physiological chemistry. Focuses in-depth on the major topics of physiological chemistry, including general chemistry and biomolecules, peptide synthesis and protein structure, carbohydrates and nucleic acids, thermodynamics and kinetics of molecular interactions, and colloids and micelles. Relates biochemical information to the specific areas of pharmacology, pharmaceutics, and drug discovery/development.

PHSC 5305. Professional Development for Pharmaceutical Sciences. (1 Hour)

Introduces and examines the goals, expectations, policies, and procedures of the Masters' in Pharmaceutical Sciences internship program and professionalism in the field. Discusses the role and involvement of internship employers. Offers students an opportunity to develop job search and career management skills; assess their workplace skills, interests, and values; discuss how those qualities impact career decisions; prepare a professional resumé; and learn proper interviewing techniques. Issues of ethics and professionalism are designed to inform students of issues they will face in the pharmaceutical field. Content of this course is geared to students' participation in the internship program and overall professional development in pharmaceutical sciences.

PHSC 5310. Cellular Physiology. (2 Hours)

Focuses in-depth on the major cellular physiological mechanisms, including physiology of the cell membrane, ion channels and transport phenomena, energy production, signal transduction, synapses, and physiological processes in the cytosol. Relates physiological information on the specific areas of pharmacology, pharmaceutics, and drug discovery/development. Offers students an opportunity to obtain an understanding of the principles of cellular physiology.

PHSC 5360. Anti-Infectives. (4 Hours)

Reviews the structure and physiology of bacteria, fungi, and viruses and surveys significant organisms of medical importance. Introduces specific antibiotic, antifungal, and antiviral agents and classes of agents once a foundation of knowledge of the microorganisms that cause disease is established. Discusses concepts of pharmacology, pharmacokinetics, antimicrobial resistance, pharmacodynamics of antimicrobial agents, and spectra of activity.

Prerequisite(s): PHSC 4502 with a minimum grade of D-

PHSC 5400. Principles of Drug Design. (3 Hours)

Studies important aspects of drug discovery and development with a focus on drug design. Covers basic organic medicinal chemistry concepts and seeks to build students' skills in lead compound discovery, structure-activity relationship studies, and lead optimization strategies. Topics include the fundamentals of pharmacology, pharmacokinetics, and pharmacodynamics of therapeutic agents relevant to the drug-structure optimization. These skills often help develop a strong foundation in the concepts that govern the multidisciplinary process of drug discovery. Uses lectures and peer-reviewed seminar presentations to help students to incrementally increase their knowledge required to identify new, marketable therapeutic agents. Requires organic or medicinal chemistry at the undergraduate level.

PHSC 5450. Contemporary Approaches to Drug Design. (3 Hours)

Introduces current and emerging trends and concepts in drug discovery in the context of targeted disease therapy and structure-based drug design. Reviews and discusses topics on target selection and validation, computational drug design tools, kinase inhibitors, proteolysis targeting chimeras and molecular glues, covalent drugs, cannabinoid receptors, RNA-targeting small molecule agents, and protein-protein interaction modulators. Exemplifies the applications of general medicinal chemistry and pharmacology principles to real-world drug discovery and development.

PHSC 5500. Repurposing Drugs for Cancer Immunotherapies. (2 Hours)

Offers a multidisciplinary course targeted to students interested in recent advances in biomedical research, clinical practice, and personalized medicine as related to cancer immunotherapies. Describes current promises and disappointments with cancer immunotherapies and recent FDA drug approvals for personalized cancer therapies. Explains the role of immunological and physiological negative regulators of antitumor and tumor biology as needed. Explains underlying principles of immunology, biochemistry, genetics, and preclinical and clinical studies when introducing new concepts. Assigned detailed study of specific areas and discussion of assigned papers are designed to complement classroom material.

PHSC 5555. Pharmaceutical Toxicology. (3 Hours)

Covers fundamental concepts of toxicology and technical methods in toxicology along with comprehensive analysis of both in-vitro and in-vivo toxicity in drug discovery and development. Through lectures given by experts in various fields in toxicology on several topics required for specialized work in research, industrial, and clinical settings, offers students an opportunity to become familiar with methods and analyses including in-vitro and in-vivo toxicity assessments and toxicokinetic-toxicodynamic models and analyses. Includes mechanistic basis of toxicity, methods of toxicological analysis, and case studies pertinent to topics. Requires undergraduate physiology or biochemistry.

PHSC 5560. Nanotoxicity. (3 Hours)

Studies nanotoxicity, the adverse health effects of nanoparticles. Due to their small size, nanoparticles easily cross biological barriers, entering body fluids and cells. Nanoparticles toxicity may cause chronic and acute pathologies. Offers students an opportunity to develop and understand the principles of nanotoxicity. Focuses on mechanisms of cellular and organ damage by nanoparticles. Discusses ports of nanoparticle entry and detrimental effects upon blood, CNS, lungs, and GI system. Stresses mechanisms of intracellular degradation of nanoparticles and toxic effects of nanoparticles upon human cells and major organ systems. Reviews mechanisms of cellular and organ damage including oxidative stress, inflammation, and DNA, as well as toxic effects on nonmammalian cells.

PHSC 5619. Mass Spectrometry in Drug Development. (3 Hours)

Offers students an opportunity to obtain a fundamental understanding of modern mass spectrometers, to conceptually operate these instruments, and the ability to prepare biological samples. Undoubtedly the most popular analytical method in science, mass spectrometry is utilized in fields ranging from subatomic physics to biology. Focuses on the analysis of proteins, with applications including biomarker discovery, tissue characterization, detection of blood doping, drug discovery, and the characterization of protein-based therapeutics. By the end of the course, the student is expected to be able to solve a particular chemistry- or biology-related problem by choosing the appropriate sample preparation methods and mass spectrometer.

PHSC 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Prerequisite(s): PHSC 5100 with a minimum grade of C or PHSC 5100 with a minimum grade of C

PHSC 5984. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision. May be repeated up to nine times.

PHSC 6213. Ethical Problems in Health Sciences Research. (2 Hours)

Focuses on a series of cases that raise ethical and professional code of conduct concerns and engages with them collaboratively and carefully to develop essential skills for ethical analysis and evaluation. Scientific practice presents researchers and citizens with myriad ethical challenges. Engaging with those ethical challenges in ways that help yield the benefits of research while respecting ethical boundaries is furthered by not only understanding ethical frameworks but by carefully analyzing and evaluating ethical concerns in context.

Prerequisite(s): PHSC 6212 (may be taken concurrently) with a minimum grade of C- or PHSC 5212 with a minimum grade of C- or PHSC 2400 with a minimum grade of C-

PHSC 6214. Experimental Design and Biostatistics. (2 Hours)

Discusses fundamental principles of experimental design and statistical analysis, with emphasis on clinical research. Topics include descriptive statistics, hypothesis testing, analysis of variance, correlation, regression, chi-square test, and nonparametric methods.

PHSC 6216. Human Physiology and Pathophysiology. (2 Hours)

Introduces major topics in human physiology, emphasizing knowledge essential to health-related laboratory research. Topics include neurophysiology, immunology, cardiovascular, respiratory, renal, and gastrointestinal physiology and endocrinology.

PHSC 6222. The Chemistry and Biology of Drugs of Abuse. (2 Hours)

Provides an interdisciplinary introduction to substance abuse, including the medicinal chemistry and neurobiology of drugs that act through the opioid, dopamine, acetylcholine, and cannabinoid systems. Compares and contrasts neurochemical mechanisms that are common to many addictive agents and those that are specific to individual drug classes. Highlights the involvement of the brain dopamine system and differences and discusses similarities between the pharmacology of abused and therapeutic drugs, together with the development of medications for treating drug dependence. Includes lectures by experts on particular topics of their own recent research. Introduces students to key aspects of biological and chemical research as they pertain to drug abuse and its treatment.

PHSC 6224. Behavioral Pharmacology and Drug Discovery. (2 Hours)

Designed to prepare students to understand the advantages, shortcomings, and pitfalls of the use of live, behaving animals in drug discovery. Covers an in-depth analysis of ethical issues in animal research, as well as aspects of animal behavioral models, behavior and brain biochemistry, and methods of behavioral analysis. Specific topics include psychopharmacology; fear and anxiety; pain and stress; depression and reward; general arousal and tolerance; drug abuse and habitual behaviors. The ways in which animal behaviors can be described in a quantitative manner and the effects of medications and abused drugs quantified and related to human diseases and drug responses are an important component of the course.

PHSC 6235. Magnetic Resonance Imaging in Drug Discovery 1. (4 Hours)

Integrates physics, mathematics, and neuroscience with the cutting-edge technology of magnetic resonance imaging (MRI) to address drug discovery in the treatment of CNS disorders. Students design their own experiments guided by knowledge of the literature and technical and statistical limitations. Offers students an opportunity to run a state-of-the-art 7.0 Tesla MR animal scanner housed in the Center for Translational NeurolImaging (CTNI) at Northeastern and set parameters for anatomical and functional imaging protocols. Original imaging data is collected and analyzed. This is a discovery-based research course that encourages critical thinking and transdisciplinary learning skills involving an original research project in magnetic resonance imaging related to early drug discovery.

Prerequisite(s): PHSC 5100 with a minimum grade of C or PHSC 5100 with a minimum grade of C

PHSC 6237. Magnetic Resonance Imaging in Drug Discovery 2. (2 Hours)

Continues PHSC 6235. Offers students an opportunity to continue their research work in early drug discovery using original imaging data that was previously analyzed. Focuses on manuscript preparation and submission to a peer-reviewed journal.

Prerequisite(s): PHSC 6235 with a minimum grade of C

PHSC 6290. Biophysical Methods in Drug Discovery. (2 Hours)

Provides an interdisciplinary introduction to biophysical methods used in modern drug discovery, including hit generation and lead optimization. Emphasizes key experimental methods, including nuclear magnetic resonance (NMR) spectroscopy and X-ray crystallography, as well as computer modeling as applied to ligand- and structure-based drug design. Includes lectures by experts on related topics from their recent drug-discovery research. Presented under the auspices of the Center for Drug Discovery. Requires permission of instructor for students of junior or senior standing.

PHSC 6300. Pharmaceutical Science Seminar. (1 Hour)

Teaches students to evaluate critically the scientific literature in a journal club format. Several sections may be offered each semester to accommodate different specializations or interest groups. May be repeated without limit.

PHSC 6401. Pharmaceutical Science Internship. (1 Hour)

Offers an experiential component of the graduate curriculum that fosters professional development through internship in drug discovery, development, and/or regulatory affairs in a pharmaceutical or biotechnology company. Requires students to work in a company for a minimum of twenty hours per week. Offers students an opportunity to engage in pharmaceutical science research or to work in an environment outside the University but under the supervision of a faculty instructor. May be repeated up to three times.

Prerequisite(s): PHSC 5305 with a minimum grade of C-

PHSC 6760. Doctoral Pharmaceutical Science Research 1. (2 Hours)

Offers PhD research in preparation for thesis proposal.

PHSC 6810. Pharmaceutical Science Colloquium. (1 Hour)

Requires students to present one formal seminar on their research. This presentation is open to all those interested.

Prerequisite(s): PHSC 9681 with a minimum grade of S

PHSC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

PHSC 6984. Pharmaceutical Science Research. (2 Hours)

Offers students laboratory research under the guidance of an adviser. May be repeated once for up to 4 total credits.

PHSC 6990. Thesis. (2 Hours)

Offers research/experimental work for master's thesis. Students may register twice. May be repeated once.

PHSC 6996. Thesis Continuation. (0 Hours)

Offers continued registration while student completes master's thesis or other research project to meet the research requirement in pharmaceutical science.

PHSC 7010. Pharmaceutical Sciences Laboratory. (4 Hours)

Offers a hands-on graduate laboratory course that introduces students to the investigative approaches and laboratory methods used in contemporary pharmaceutical sciences research. Laboratory exercises have a practical relationship to essential techniques in modern drug discovery, drug targeting and delivery, and determining mechanisms of drug action. These exercises cover basic laboratory skills, the rationale for and application of standard laboratory methods, training in the use of equipment and techniques central to pharmaceutical sciences research, how to maintain a laboratory notebook, statistical analysis and interpretation of data, and how to present research results in technical laboratory reports.

PHSC 7020. Scientific Writing: Thesis Proposal. (2 Hours)

Presents the principles of writing a proposal based on the NIH R01 grant proposal template used by the department. Participants develop their own proposal in collaboration with their faculty advisor or the immediate project supervisor designated by their faculty advisor (the project principle investigator). Offers students an opportunity to meet with their own project principle investigators to develop content and map out the project aims and experimental design and to produce a revised draft of their thesis proposal. Each student must have initiated MS or PhD thesis research and have some preliminary data; PhD students must have passed their qualifying exam; MS students must petition the graduate committee in writing for permission to enroll.

PHSC 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

PHSC 8940. Doctoral Training and Research. (1 Hour)

Intended to show full-time status for pharmaceutical science PhD students in the semester in which they are taking the comprehensive exam. In addition to successfully completing the comprehensive exam, students are expected to perform research in preparation for the doctoral proposal; the grade for this course documents successful performance.

PHSC 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to four times.

PHSC 8986. Doctoral Full-Time Research. (0 Hours)

Expect student to conduct full-time research in an adviser's laboratory. May be repeated without limit.

PHSC 9000. Comprehensive Exam. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

PHSC 9681. Doctoral Proposal. (2 Hours)

Offers preparation of PhD dissertation proposal and proposal defense before dissertation committee. Requires passing of comprehensive exam. May be repeated without limit.

Prerequisite(s): PHSC 8940 with a minimum grade of S

PHSC 9990. Dissertation Term 1. (0 Hours)

Offers research/experimental work for PhD thesis.

Prerequisite(s): PHSC 9681 with a minimum grade of C ; PHSC 9000 with a minimum grade of S

PHSC 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): PHSC 9990 with a minimum grade of S

PHSC 9996. Dissertation Continuation. (0 Hours)

Offers continuation of PhD dissertation research.

Prerequisite(s): PHSC 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Pharmaceutics (PMST)**Courses****PMST 6250. Advanced Physical Pharmacy. (2 Hours)**

Covers the physical and chemical principles in drug formulation design, with emphasis on such topics as solutions of nonelectrolytes and electrolytes, ionic equilibria, drug complexation, reaction kinetics, mass transport, and interfacial phenomena.

PMST 6252. Pharmacokinetics and Drug Metabolism. (3 Hours)

Focuses on concepts of one- and two-compartment linear and nonlinear pharmacokinetics and compartmental modeling with plasma and/or urinary data. Discusses principles and methods of metabolic biotransformation and disposition of xenobiotics in biological system.

PMST 6254. Advanced Drug Delivery Systems. (3 Hours)

Examines in-depth the role of sustained, controlled, and site-specific delivery systems for drugs and genetic materials using polymeric systems, colloidal drug delivery systems, and vectors for gene therapy.

PMST 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Pharmacology (PMCL)**Courses****PMCL 6250. Ion Channel Physiology and Pharmacology. (3 Hours)**

Focuses on ion channel proteins, their structure and function, as well as pharmacology. Drug action is pursued based on mechanisms used to control the gating/trafficking of ion channels that modulate their activity and cell surface localization. Introduces students to molecular modeling and dynamic simulations that can capture the gating process and ion permeation of ion channels and provide a mechanistic guide of structure-based drug design. Reviews ion channels and the drugs that target them that apply to a wide variety of medical conditions, such as arrhythmias, hypertension, epilepsy, pain, local anesthesia, cystic fibrosis, and depression. Offers students an opportunity to perform simulations on ion channels with known drugs to establish models for future lead design and development studies.

PMCL 6252. Small-Molecule Target and Ligand Pharmacology. (4 Hours)

Focuses on ligand-gated ion channel proteins, G-protein coupled receptors and enzymes, their structure and function, as well as pharmacology. Drug action is pursued based on mechanisms used to control cell signaling and gene expression. Offers students an opportunity to apply physiologic systems and drugs used to treat related pathologies, as well as in silico modeling, to study these effects.

PMCL 6260. Pharmacology 1. (2 Hours)

Surveys the chemical and pharmacological basis of the major classes of drugs and their use in the treatment of disease. Characteristics of drugs studied include indications, adverse reactions, contraindications, structure-activity relationships, metabolism, mechanism of action, and clinically significant interactions.

PMCL 6261. Pharmacology 2. (2 Hours)

Continues PMCL 6260, although in a format that is not contingent that PMCL 6260 precedes this course.

Prerequisite(s): (PHSC 5100 with a minimum grade of C or PHSC 5100 with a minimum grade of C)

PMCL 6262. Receptor Pharmacology. (2 Hours)

Reviews receptors for drug substances and for endogenous ligands in a format that combines lecture presentations and discussion. Focuses on the evaluation of current literature. Covers techniques available to study receptors, various models for receptor-ligand interactions, stereochemical aspects of receptor interactions, receptor-mediated coupling mechanisms, and evaluation of several specific receptor systems.

Prerequisite(s): PHSC 5100 with a minimum grade of C- or PHSC 5100 with a minimum grade of D-

PMCL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Pharmacy Practice (PHMD)**Courses****PHMD 1000. College: An Introduction. (1 Hour)**

Introduces the University, college, and health professions to enhance students' understanding of self and the decisions they make academically and socially as members of the University's diverse, multicultural community. Offers students an opportunity to engage in group activities and individual assignments along with active participation in a learning community to help them adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

PHMD 1001. Introduction to the Profession of Pharmacy. (1 Hour)

Introduces the profession of pharmacy. Addresses professionalism, pharmacists' responsibilities, and the education and training of pharmacists.

PHMD 1201. Introduction to Pharmacy Practice. (2.5 Hours)

Seeks to prepare pharmacy students for their first introductory pharmacy practice experience (IPPE)/co-op. Introduces students to the policies, procedures, and expectations of the Cooperative Education Program. Offers students an opportunity to develop the skills needed to be successful in the preparation, activity, and reflection components of the pharmacy co-op program; to prepare their first résumés; and to learn proper interviewing techniques. Exposes students to the various co-op opportunities available to them as well as potential career paths within the pharmacy profession. Covers workplace issues including diversity, sexual harassment, ethics, and confidence of information. Introduces students to the technical knowledge and skills required for their first pharmacy experiences in both community and institutional pharmacy practice and to drug information resources. Offers students an opportunity to develop basic communication skills to aid them in successful completion of their first IPPE.

Corequisite(s): PHMD 1202

PHMD 1202. Lab for PHMD 1201. (0.5 Hours)

Offers students an opportunity to learn several skills needed for future patient-care experiences. Supplements lecture content and provides practical reinforcement of concepts. Students apply knowledge learned in the classroom related to the appropriate and effective use of communication strategies and basic sterile techniques/manipulations. Labs related to the learning of communication skills support a patient-centered approach in assessing, adapting, and evaluating patient medication use needs.

Corequisite(s): PHMD 1201

PHMD 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHMD 2100. Entrepreneurship in Health Sciences. (4 Hours)

Addresses principles and applications of entrepreneurship in the healthcare industry, focusing on healthcare ventures and technology. Explores different business organizations, including sole proprietorships, partnerships, corporations, joint ventures and not-for-profit enterprises. Such explorations offer students an opportunity to identify and evaluate business skills and commitment necessary to successfully operate an entrepreneurial venture and address the challenges and rewards of entrepreneurship. Considers the requirements, costs, and benefits of various forms of financial options open to entrepreneurs. Presentations and discussions are led by accomplished entrepreneurs and practitioners engaged in healthcare teaching, research, and business. Case studies identify the challenges and rewards of successful entrepreneurial ventures that set positive examples for budding entrepreneurs in leading change and innovation.

PHMD 2310. Professional Communication in Pharmacy Practice. (2 Hours)

Offers pharmacy students an opportunity to learn the principles for understanding, applying, evaluating, and creating successful verbal and nonverbal communication interactions in a variety of pharmacist and interprofessional settings. Through a patient-centered approach, reviews and builds on core communication skills learned in the foundational introduction to pharmacy practice courses. Topics include using effective communication approaches to detect and intervene to improve adherence, facilitate behavioral change, collaborate with other professionals, and tailor communication to special and culturally diverse patient populations.

Corequisite(s): PHMD 2311

Attribute(s): NUpath Difference/Diversity

PHMD 2311. Lab for PHMD 2310. (0.5 Hours)

Supplements lecture content from PHMD 2310. Designed to provide pharmacy students with several skills needed for future patient-care experiences and provide practical reinforcement of concepts. Students apply knowledge learned in the classroom related to the appropriate and effective use of communication strategies. Labs related to the learning of communication skills support a client-centered approach in assessing, adapting, and evaluating patient medication use needs. Specifically offers students an opportunity to learn and practice six core communication skills: listening, asking questions, providing empathy, understanding and managing confusion, understanding and managing conflict, and understanding and analyzing nonverbal behavior.

Corequisite(s): PHMD 2310

PHMD 2350. Healthcare Systems. (3 Hours)

Examines the evolution of the American healthcare delivery system from the early forms of organized institutional healthcare through the dynamic, and increasingly integrated, delivery systems of the present. Explores the interactions of regulatory, economic, political, and social aspects of the healthcare system with particular emphasis on pharmacy practices. Compares current policies and proposals for health reform and pharmacy benefit coverage. Analyzes the impact and consequences of national and international actions in one era on the structure, function, and outcomes of healthcare and professional pharmacy practice in later years. Major emphases include factors affecting American population health, health disparities, and strategies, including pharmacy/pharmacists, to improve the nation's health.

PHMD 2550. Innovation, Entrepreneurship, and Drug and Medical Device Development. (4 Hours)

Introduces the process of innovation and entrepreneurship within drug and medical device development. Explores the perspectives of the pharmaceutical industry and medical device industry, as well as regulatory agencies, within the United States. Presents drug/device discovery, development, deployment, and life cycle as it pertains to business development and planning. Examines the roles of individuals in innovation and entrepreneurship across the industry.

PHMD 2900. A Global Appreciation of Self-Care Approaches and Strategies. (4 Hours)

Develops a basic understanding of self-care and preventive health strategies that consumers use in United States and other cultures/countries. Examines the similarities and differences of the role of over-the-counter (OTC) medications and pharmacy in the healthcare environment through the use of the internet and contemporary media, observations in other countries, and discussions with guest speakers. Explores the clinical use, safety and efficacy of common OTC medications and complementary alternatives (vitamins, minerals, supplements, herbs, homeopathic remedies, etc.) available in the US compared to what is available in other countries. Explores historical and modern community pharmacy environments and other culturally relevant venues in other cultures.

PHMD 2940. History of Pharmacy and Professional Leadership. (2 Hours)

Explores the history of the profession of pharmacy, with a particular focus on the development of patient care aspects of the profession from the mid-20th century to the present. Engages in comparative reviews of major historical events that shaped the post-industrialization clinical pharmacy movement and the leaders and groups responsible for advancing the movement. Offers opportunities for students to identify and refine their own leadership abilities and prepare to influence the future of the profession with perspectives gained from historical and current events along with emerging opportunities.

PHMD 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHMD 2991. Research in Pharmacy Practice. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

PHMD 3450. Research Methodology and Biostatistics. (3 Hours)

Offers an interactive course covering aspects of research designs used in experimental and observational studies, hypothesis testing, and an introduction to basic biostatistics. Offers students an opportunity to critically examine selected articles from the clinical literature, to analyze the framing of the research question and the methods used to insure the validity and generalizability of the study's findings, and to assess for potential ethical issues in research design and conduct. Clinical trials, observational studies, and problem sets illustrate principles of research design, conduct, and data analysis.

Prerequisite(s): (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C) or graduate program admission

Attribute(s): NUpath Ethical Reasoning, NUpath Natural/Designed World

PHMD 3600. Leadership and Advocacy in Health Professions. (2 Hours)

Designed to help facilitate successful careers of young healthcare professionals and expand students' knowledge of their leadership potential. Consists primarily of topic discussions that include a variety of issues related to professional development, focusing on leadership, organizational and relational skills, and advocacy. Covers global issues in leadership and advocacy. Encourages students to recognize the need for leadership in health professions and the ability of practitioners to influence change regardless of whether they have a title or position of authority. Seeks to be valuable to students with interests in administrative positions in various settings, including in high-level clinical positions, and to students who plan to pursue postgraduate training.

PHMD 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHMD 4350. Exploring Academic Careers. (2 Hours)

Designed to prepare students to become more confident and effective as educators for many audiences, including peers, colleagues, clients, and patients. Offers students an opportunity to increase their awareness of teaching and learning principles and related roles and responsibilities as they apply to academic careers and faculty in the classroom, in experiential settings, and in university units. Discusses and explores knowledge, skills, and attitudes that are applicable across professions.

PHMD 4581. Cancer Chemotherapy. (2 Hours)

Emphasizes the role of chemotherapy in the management of malignant disease. Reviews specific antineoplastic agents, specific malignancies, and related topics. Focuses throughout the course on supportive care for the cancer patient.

PHMD 4585. Research Methods in Health Systems. (2 Hours)

Exposes students to research skills and methods used by health system pharmacists when planning and conducting research. Builds on content from prior courses. Designed for students planning to pursue a career in a health system or the pharmaceutical industry. Focuses on discussion and application; taught by healthcare-system-based pharmacists actively involved in clinical research. Emphasizes the process used to generate robust research questions and research plans throughout. Uses practice statements/guidelines, published studies, patient databases, and faculty's current research projects to illustrate course topics.

PHMD 4611. Comprehensive Disease Management 1. (6 Hours)

Covers foundational concepts of pharmacy practice, including patient evaluation; identification of drug-related problems; pathophysiology; and clinical management of diseases of the respiratory, cardiovascular, and endocrine systems. Specifically covers asthma and COPD, hypertension, hyperlipidemia, diabetes, fluids/electrolytes, and renal disorders. Reviews, system-by-system, the mechanisms of these diseases and their evidence-based prevention and treatment strategies. Offers students an opportunity to apply scientific knowledge and principles of medicinal chemistry, pharmacology, pharmaceutics, and pharmacokinetics to the design of rational, evidence-based therapeutic strategies to provide care to patients in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

Prerequisite(s): PHSC 4502 with a minimum grade of D- ; PHSC 3412 with a minimum grade of D- ; PHMD 2350 with a minimum grade of D-

Corequisite(s): PHMD 4612

PHMD 4612. Comprehensive Disease Management 1 Seminar. (1 Hour)

Designed to provide students with opportunities to apply concepts from PHMD 4611 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice, identification of drug-related problems, and diseases of the respiratory, endocrine, cardiovascular, and renal systems. Accompanies PHMD 4611 and seeks to facilitate accomplishment of course objectives using an active learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work.

Corequisite(s): PHMD 4611

PHMD 4621. Comprehensive Disease Management 2. (6 Hours)

Covers the pathophysiology and clinical management of diseases of the renal, cardiovascular, neurological, and gastrointestinal systems. Reinforces foundational concepts of pharmacy practice and diseases covered in PHMD 4611, while completing a system-by-system review of the mechanisms of renal, cardiovascular, neurological, and gastrointestinal disorders and their evidence-based prevention and treatment strategies. Offers students an opportunity to design rational therapeutic strategies to provide care to patients with these disease states in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

Prerequisite(s): PHSC 3430 with a minimum grade of D- ; PHMD 4611 with a minimum grade of D-

Corequisite(s): PHMD 4622, PHMD 4623

PHMD 4622. Comprehensive Disease Management 2 Seminar. (1 Hour)

Designed to provide students with opportunities to apply concepts from PHMD 4621 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice; identification of drug-related problems; and diseases of the renal, cardiovascular, neurological, and gastrointestinal systems. Accompanies PHMD 4621 and seeks to facilitate accomplishment of course objectives using an active-learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work. Activities in seminar are reinforced by laboratory skill-building exercises in PHMD 4623.

Corequisite(s): PHMD 4621, PHMD 4623

PHMD 4623. Comprehensive Disease Management 2 Skills Lab. (0.5 Hours)

Offers a self-paced, blended learning experience designed to provide the student with functional knowledge and skills in the area of physical assessment, patient education, and counseling in the ambulatory clinic and community pharmacy settings. Uses discussions, videos, podcasts, simulations, and hands-on learning activities in the lab. Offers students an opportunity to apply information gained in previous and concurrent courses to clinical situations. While completing laboratory work, students are expected to review, discuss, integrate, and apply information presented in the closely aligned PHMD 4621 and PHMD 4622 as well as previous and concurrent course work.

Corequisite(s): PHMD 4621, PHMD 4622

PHMD 4631. Comprehensive Disease Management 3. (6 Hours)

Covers the pathophysiology and clinical management of infectious diseases, solid organ transplant, dermatology, and otic/ophthalmic disorders. Reinforces foundational concepts of pharmacy practice and diseases covered in PHMD 4611 and PHMD 4612, while completing a system-by-system review of the mechanisms of infectious diseases and their evidence-based prevention and treatment strategies. Offers students an opportunity to design rational therapeutic strategies to provide care to patients with these disease states in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

Prerequisite(s): PHMD 4621 with a minimum grade of D-

Corequisite(s): PHMD 4632, PHMD 4633

PHMD 4632. Comprehensive Disease Management 3 Seminar. (1 Hour)

Designed to provide students with opportunities to apply concepts from PHMD 4631 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice, identification of drug-related problems, and management of the infectious diseases and dermatologic and oral/otic disorders. Accompanies PHMD 4631 and seeks to facilitate accomplishment of course objectives using an active-learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work. Activities in seminar are reinforced by laboratory skill-building exercises in PHMD 4633.

Corequisite(s): PHMD 4631, PHMD 4633

PHMD 4633. Comprehensive Disease Management 3 Skills Lab. (0.5 Hours)

Teaches and assesses various skills, including interpretation, processing, and verification of medication orders; detection and resolution of drug-related problems; use of current pharmacy software programs; and patient education and counseling in the community pharmacy setting. Uses discussions, videos, podcasts, simulations, and hands-on learning activities in the lab. While completing laboratory work, students are expected to review, discuss, integrate, and apply information presented in the closely aligned PHMD 4631 and PHMD 4632 as well as previous and concurrent course work.

Corequisite(s): PHMD 4631, PHMD 4632

PHMD 4641. Comprehensive Disease Management 4. (6 Hours)

Covers the pathophysiology and clinical management of men's and women's health issues and neurological, psychiatric, and oncologic disorders. Reinforces foundational concepts of pharmacy practice and diseases covered in PHMD 4611, PHMD 4612, and PHMD 4613, while completing a system-by-system review of the mechanisms of infectious diseases and their evidence-based prevention and treatment strategies. Offers students an opportunity to design rational therapeutic strategies to provide care to patients with these disease states in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

Prerequisite(s): PHMD 4631 with a minimum grade of D-

Corequisite(s): PHMD 4642, PHMD 4643

PHMD 4642. Comprehensive Disease Management 4 Seminar. (1 Hour)

Designed to provide students with opportunities to apply concepts from PHMD 4641 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice, identification of drug-related problems, and management of women's and men's disease, psychological disorders, and cancers. Accompanies PHMD 4641 and seeks to facilitate accomplishment of course objectives using an active-learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work. Activities in seminar are reinforced by laboratory skill-building exercises in PHMD 4643.

Corequisite(s): PHMD 4641, PHMD 4643

PHMD 4643. Comprehensive Disease Management 4 Skills Lab. (0.5 Hours)

Teaches and assesses various skills, including interpretation, processing, and verification of medication orders; detection and resolution of drug-related problems; use of current pharmacy software programs; medication reconciliation; presentation of hospitalized patients; and management of sterile compounding systems in the hospital pharmacy setting. Uses discussions, videos, podcasts, simulations, and hands-on learning activities in the lab. While completing laboratory work, students are expected to review, discuss, integrate, and apply information presented in the closely aligned PHMD 4641 and PHMD 4642 as well as previous and concurrent course work.

Corequisite(s): PHMD 4641, PHMD 4642

PHMD 4700. Principles in General Medicine. (2 Hours)

Offers students an opportunity to apply concepts learned in comprehensive-disease-management modules to patient cases, special projects, and other medication-related problems in an active-learning environment. Creates an environment similar to that of acute care advanced pharmacy practice experiences (APPEs) to enable students to gain familiarity and confidence in disease-state management, oral communication skills, and professional behavior and interactions. Focuses on oral presentations and communication skills, which is similar to how students are evaluated on clinically based rotations; students are also evaluated by quizzes and exams to measure mastery of content-specific objectives.

PHMD 4890. Contemporary Issues in Geriatric Pharmacy. (2 Hours)

Focuses on the physiological and practical aspects of medication use in the elderly; healthcare delivery systems; the role of healthcare professionals in providing geriatric care; and the management of geriatric syndromes. Caring for the aging population requires a patient-centered approach that encompasses the patient's health goals, a complex psychosocial landscape, as well as the physiologic changes associated with aging. It is imperative for healthcare professionals to understand the interplay of these factors in order to appropriately assess, treat, and improve outcomes for the older adult population. Offers students an opportunity to utilize problem-based learning (PBL), where students work in groups to analyze patient cases, identify problems, and develop action plans to resolve problems.

PHMD 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PHMD 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): PHMD 4970 with a minimum grade of D-

PHMD 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHMD 5115. Integrated Science and Therapeutics 2. (4 Hours)

Integrates foundational concepts of pharmacology, medicinal chemistry, pathophysiology, and pharmacotherapeutics to treat patients with acute and chronic cardiovascular, renal, and gastrointestinal diseases. Studies knowledge, skills, and attitudes pertaining to drug action, drug-receptor interactions, structure-activity relationships, dose-response relationships, drug mechanisms of action, therapeutic uses, and adverse effects.

Offers students an opportunity to develop patient evaluation skills using the Pharmacists' Patient Care Process and identification of drug therapy problems. Emphasizes self-care, patient education, assessment, medication administration, management and monitoring, and preventative health and population-based health outcomes.#.

Prerequisite(s): (PHSC 5110 with a minimum grade of D- ; PHSC 5181 with a minimum grade of D- ; PHMD 5191 with a minimum grade of D-) or graduate program admission

PHMD 5120. Principles of Pharmacy Practice. (4 Hours)

Introduces policies, procedures, and expectations of the experiential program. Offers students an opportunity to prepare for their first introductory pharmacy practice experience by developing knowledge, attitudes, and communications skills needed to be successful in all components of the experiential program. Exposes students to various IPPE/co-op opportunities, as well as potential career paths, within pharmacy. Covers workplace issues including diversity, sexual harassment, ethics, and confidence of information; resumé preparation; and interviewing techniques. Introduces technical knowledge and skills required for IPPE/co-op in community and institutional settings and drug information resources.

PHMD 5140. Integrated Social and Administrative Sciences 1. (4 Hours)

Explores foundational concepts in social and administrative sciences, examining the organization and function of American healthcare systems.

Assesses the impacts of system-level actions on individual patients. Offers students an opportunity to build skills in understanding specific drug information needs and finding and conveying this information. Compares and contrasts approaches for successful verbal and nonverbal communication among pharmacists, patients, and other health professionals across diverse situations. Evaluates American legal frameworks that establish standards for pharmacy practice today.

Prerequisite(s): ENGW 3306 with a minimum grade of D- or graduate program admission

PHMD 5182. Integrated Learning Lab 2. (1 Hour)

Offers students an opportunity to develop and assimilate knowledge, skills, and attitudes related to the pharmaceutical care of patients to supplement and augment pharmacy curricular topics within an immersive learning experience. Includes pharmacology, medicinal chemistry, pathophysiology, and therapeutics of cardiovascular diseases. Uses innovative digital tools, environments, equipment, learning materials, and pedagogical methods that promote the development and refinement of problem-solving skills, adaptability/resilience, and a team mindset that can be applied during experiential activities (co-op/introductory pharmacy practice experience/advanced pharmacy practice experience), as well as future careers.

PHMD 5191. Concepts in Practice 1. (1 Hour)

Applies concepts through activities designed to develop knowledge, skills, and attitudes focused on foundational aspects of pharmacy practice.

Covers identification of drug-related problems, problem solving, and disease state management. Focuses on patient assessment and common cardiovascular diseases. Reviews, discusses, synthesizes, and applies information from current and previous coursework and experiential activities in an active-learning format.

PHMD 5192. Concepts in Practice 2. (1 Hour)

Applies concepts through activities designed to develop knowledge, skills, and attitudes focused on foundational aspects of pharmacy practice.

Covers identification of drug-related problems, problem solving, and disease state management. Focuses on advanced cardiovascular diseases such as myocardial infarction, arrhythmias, and renal and gastrointestinal diseases. Reviews, discusses, synthesizes, and applies information from current and previous coursework and experiential activities in an active-learning format.

PHMD 5210. Integrated Science and Therapeutics 4. (4 Hours)

Integrates foundational concepts of pharmacology, medicinal chemistry, pathophysiology, immunology, microbiology, and pharmacotherapeutics to treat patients with acute and chronic bacterial and fungal infectious diseases. Offers students an opportunity to develop knowledge, skills, and attitudes pertaining to drug action, drug-receptor interactions, structure-activity relationships, dose-response relationships, drug mechanisms of action, therapeutic uses, and adverse effects. Focuses on developing patient evaluation skills using the Pharmacists' Patient Care Process and identification of drug therapy problems. Emphasizes self-care, patient education, assessment, medication administration, management, and monitoring, as well as preventative health and population-based health outcomes.#.

Prerequisite(s): (PHSC 5205 with a minimum grade of D- ; PHMD 5283 with a minimum grade of D- ; PHMD 5293 with a minimum grade of D-) or graduate program admission

PHMD 5215. Integrated Science and Therapeutics 5. (4 Hours)

Integrates foundational concepts of pharmacology, medicinal chemistry, pathophysiology, immunology, and pharmacotherapeutics to treat patients with viral infectious diseases, organ transplant, and self-care therapeutics. Offers students an opportunity to develop knowledge, skills, and attitudes pertaining to drug action, drug-receptor interactions, structure-activity relationships, dose-response relationships, drug mechanisms of action, therapeutic uses, and adverse effects. Focuses on developing patient evaluation skills using the Pharmacists' Patient Care Process and identification of drug therapy problems. Emphasizes self-care, patient education, assessment, medication administration, management, and monitoring, as well as preventative health and population-based health outcomes.##.

Prerequisite(s): (PHSC 5205 with a minimum grade of D- ; PHMD 5283 with a minimum grade of D- ; PHMD 5293 with a minimum grade of D-) or graduate program admission

PHMD 5220. Integrated Science and Therapeutics 6. (4 Hours)

Integrates foundational concepts of pharmacology, medicinal chemistry, pathophysiology, and pharmacotherapeutics to treat patients with acute and chronic pain and neurologic and psychiatric diseases. Offers students an opportunity to develop knowledge, skills, and attitudes pertaining to drug action, drug-receptor interactions, structure-activity relationships, dose-response relationships, drug mechanisms of action, therapeutic uses, and adverse effects. Focuses on developing patient evaluation skills using the Pharmacists' Patient Care Process and identification of drug therapy problems. Emphasizes self-care, patient education, assessment, medication administration, management, and monitoring, as well as preventative health and population-based health outcomes.##.

Prerequisite(s): (PHMD 5210 with a minimum grade of D- ; PHMD 5215 with a minimum grade of D- ; PHMD 5284 with a minimum grade of D- ; PHMD 5294 with a minimum grade of D-) or graduate program admission

PHMD 5223. Evidence-Based Medicine. (2 Hours)

Studies the principles of evidence-based medicine and how to apply them to patient-centered care. Offers students an opportunity to develop skills in critical appraisal of the scientific literature and practical application of the evidence to clinical decision making. Consists of didactic instruction, in-class group projects, and a group-based written assignment. Applies principles of research methodology, biostatistics, and professional writing.

Prerequisite(s): (ENGW 3306 with a minimum grade of C or graduate program admission)

Attribute(s): NUpath Writing Intensive

PHMD 5225. Medical Writing. (2 Hours)

Introduces concepts and principles of effective scientific writing and communication of clinical information to health professionals and the scientific community. Examines a variety of scientific genres that provide context to common writing techniques and conventions employed. Emphasizes developing expertise in critical research, data evaluation and synthesis, audience analysis, peer review, revision, and evidence-based summaries and conclusions. Provides opportunity to develop necessary skills to effectively synthesize scientific evidence and write and communicate to a variety of scientific audiences. Designed for those who will encounter a spectrum of scientific writing throughout their careers.

Prerequisite(s): ENGW 3306 with a minimum grade of C or graduate program admission

PHMD 5240. Integrated Social and Administrative Sciences 2. (4 Hours)

Provides a foundation in research methodology, drug information skills, and evidence-based medicine in an interactive format. Emphasizes research designs used in experimental and observational studies, hypothesis testing, and basic biostatistics, along with the critical examination of articles to analyze research questions and methods related to validity, generalizability, and ethical issues in design and conduct. Uses clinical trials, observational studies, and problem sets to illustrate principles of research design, conduct, data analysis, and evaluation. Emphasizes development of applied drug information skills in formulary support, health informatics, medication error and adverse event reporting, and quality assurance, as well as writing for a variety of audiences (pharmacists, healthcare providers, and the lay public) and use of peer review.

Prerequisite(s): (PHMD 5140 with a minimum grade of D- ; PHMD 5182 with a minimum grade of D- ; PHMD 5192 with a minimum grade of D-) or graduate program admission

Attribute(s): NUpath Ethical Reasoning, NUpath Natural/Designed World, NUpath Writing Intensive

PHMD 5245. Integrated Social and Administrative Sciences 3. (4 Hours)

Describes managerial, administrative, and leadership skills essential for a contemporary pharmacist. Uses general business principles as a foundation for applications to common pharmacy practice settings, with an emphasis on community and hospital pharmacy. Offers students opportunities to participate in projects and group work designed to facilitate understanding and applications of managerial, administrative, leadership, and entrepreneurship principles to pharmacy practice. Emphasizes enhanced development of applied drug information skills important to the pharmacist in areas of formulary support, health informatics, medication error and adverse event reporting, and quality assurance. Covers analysis and evaluation of laws, rules, and regulations controlling pharmacy practice related to medication dispensing.

Prerequisite(s): (PHMD 5240 with a minimum grade of D- ; PHMD 5283 with a minimum grade of D- ; PHMD 5293 with a minimum grade of D-) or graduate program admission

PHMD 5250. Pharmacy Care Management. (4 Hours)

Focuses on the managerial and administrative skills required by a contemporary pharmacist practicing in either a community or hospital setting. Covers classical management principles of planning, decision making, organizing, hiring, and controlling. Case study methods are used as an interactive teaching tool. Also covers pertinent current events.

Prerequisite(s): PHMD 2350 with a minimum grade of C

PHMD 5270. Economic Evaluation of Pharmaceuticals and Pharmacy Practice. (2 Hours)

Introduces the principles of economic theory of healthcare markets and economic evaluation of health products and services. Economic theory topics include fundamentals of supply and demand, market structure, market failure, and the role of government. Economic evaluation topics include measuring costs and benefits of a specific treatment, types of formal decision analysis, ethical considerations, and implementation in the real world. Restricted to students with fifth-year PharmD standing.

Prerequisite(s): (PHMD 4631 with a minimum grade of C- or PHMD 4631 with a minimum grade of D-); (PHMD 4632 with a minimum grade of C- or PHMD 4632 with a minimum grade of D-)

PHMD 5282. Integrated Learning Lab 2. (1 Hour)

Offers students an opportunity to develop and assimilate knowledge, skills, and attitudes related to the pharmaceutical care of patients to supplement and augment pharmacy curricular topics within an immersive learning experience. Includes pharmacology, medicinal chemistry, pathophysiology, and therapeutics of cardiovascular diseases. Uses innovative digital tools, environments, equipment, learning materials, and pedagogical methods that promote the development and refinement of problem-solving skills, adaptability/resilience, and a team mindset that can be applied during experiential activities (co-op/introductory pharmacy practice experience/advanced pharmacy practice experience), as well as future careers.

PHMD 5283. Integrated Learning Lab 3. (1 Hour)

Offers students an opportunity to develop and assimilate knowledge, skills, and attitudes related to the pharmaceutical care of patients to supplement and augment pharmacy curricular topics within an immersive learning experience. Includes pharmacokinetics; professional communication skills; drug information; jurisprudence; research methods; patient counseling; and pharmacology, immunology, medicinal chemistry, pathophysiology, and therapeutics of chronic rheumatologic, immune-mediated, dermatologic, and oncologic diseases. Uses innovative digital tools, environments, equipment, learning materials, and pedagogical methods that promote development and refinement of problem-solving skills, adaptability/resilience, and a team mindset that can be applied during experiential activities (co-op/introductory pharmacy practice experience/advanced pharmacy practice experience), as well as future careers.

PHMD 5284. Integrated Learning Lab 4. (1 Hour)

Offers students an opportunity to develop and assimilate knowledge, skills, and attitudes related to the pharmaceutical care of patients to supplement and augment pharmacy curricular topics within an immersive learning experience. Includes professional communication skills; drug information; management; jurisprudence; patient counseling; aseptic technique/compounding; and pharmacology, immunology, medicinal chemistry, pathophysiology, and therapeutics of acute and chronic infectious diseases. Uses innovative digital tools, environments, equipment, learning materials, and pedagogical methods that promote the development and refinement of problem-solving skills, adaptability/resilience, and a team mindset that can be applied during experiential activities (co-op/introductory pharmacy practice experience/advanced pharmacy practice experience), as well as future careers.

PHMD 5285. Integrated Learning Lab 5. (1 Hour)

Offers students an opportunity to develop and assimilate knowledge, skills, and attitudes related to the pharmaceutical care of patients to supplement and augment pharmacy curricular topics within an immersive learning experience. Includes professional communication skills; drug information; jurisprudence; patient counseling; pharmacology, medicinal chemistry, and pathophysiology; and therapeutics of acute and chronic neurologic, pain, and psychiatric diseases. Uses innovative digital tools, environments, equipment, learning materials, and pedagogical methods that promote the development and refinement of problem-solving skills, adaptability/resilience, and a team mindset that can be applied during experiential activities (co-op/introductory pharmacy practice experience/advanced pharmacy practice experience), as well as future careers.

PHMD 5293. Concepts in Practice 3. (1 Hour)

Applies concepts through activities designed to develop knowledge, skills, and attitudes focused on foundational aspects of pharmacy practice. Covers identification of drug-related problems, problem solving, and disease state management related to the pharmaceutical care of patients with a focus on pharmacokinetics and chronic rheumatologic, immune-mediated, dermatologic, and oncologic diseases. Reviews, discusses, synthesizes, and applies information from current and previous coursework and experiential activities in an active learning format.

PHMD 5294. Concepts in Practice 4. (1 Hour)

Applies concepts through activities designed to develop knowledge, skills, and attitudes focused on foundational aspects of pharmacy practice. Covers identification of drug-related problems, problem solving, and disease state management related to the pharmaceutical care of patients with a focus on acute and chronic infectious diseases. Reviews, discusses, synthesizes, and applies information from current and previous coursework and experiential activities in an active learning format.

PHMD 5295. Concepts in Practice 5. (1 Hour)

Applies concepts through activities designed to develop knowledge, skills, and attitudes focused on foundational aspects of pharmacy practice. Covers identification of drug-related problems, problem solving, and disease state management related to the pharmaceutical care of patients with a focus on acute and chronic neurologic pain and psychiatric diseases. Reviews, discusses, synthesizes, and applies information from current and previous coursework and experiential activities in an active learning format.

PHMD 5320. APPE Readiness. (4 Hours)

Designed to prepare students for Advanced Pharmacy Practice Experiences. Builds upon and assesses knowledge, skills, and attitudes developed during the first three years of the Doctor of Pharmacy curriculum. Offers learning activities and assessments that simulate student responsibilities during an APPE including interprofessional collaborations, caring for diverse patient populations in different settings, communicating with care team members, and assessing evidence to support informed recommendations and educational interventions for patients. Utilizes a continuous professional development and lifelong learning plan and reflection on skill development to set goals for APPE and postgraduation.

Corequisite(s): PHMD 5335

Attribute(s): NUpath Capstone Experience

PHMD 5330. Jurisprudence. (3 Hours)

Examines how federal and state regulatory bodies, statutes, laws, regulations, policies, guidance, and practice guides set the standard for the present-day practice of pharmacy.

Prerequisite(s): PHMD 4611 with a minimum grade of C- or PHMD 4611 with a minimum grade of C-

PHMD 5335. Integrated Science and Therapeutics 7. (4 Hours)

Integrates foundational concepts of pharmacology, medicinal chemistry, pathophysiology, and pharmacotherapeutics to treat patients with acute and chronic conditions with men's and women's health, endocrine, and thyroid disorders. Offers students an opportunity to develop knowledge, skills, and attitudes pertaining to drug action, drug-receptor interactions, structure-activity relationships, dose-response relationships, drug mechanisms of action, therapeutic uses, and adverse effects. Focuses on developing patient evaluation skills using the Pharmacists' Patient Care Process and identification of drug therapy problems. Emphasizes self-care, patient education, assessment, medication administration, management, and monitoring, as well as preventative health and population-based health outcomes.#.

Prerequisite(s): (PHMD 5220 with a minimum grade of D- ; PHMD 5285 with a minimum grade of D- ; PHMD 5295 with a minimum grade of D-) or graduate program admission

PHMD 5345. Integrated Social and Administrative Sciences 4. (4 Hours)

Introduces the principles of economic theory of healthcare, pharmaceutical markets, and economic evaluation of health products and services. Economic theory topics include fundamentals of supply and demand, market structure, market failure, and the role of government, with a focus on pharmaceutical products and market. Economic evaluation topics include measuring costs and benefits of a specific treatment, types of formal decision analysis, ethical considerations, and implementation in the real world. Studies advanced development of applied drug information skills important to the pharmacist in areas of formulary support, health informatics, medication error and adverse event reporting, and quality assurance. Covers analysis and evaluation of laws, rules, and regulations controlling pharmacy practice related to medication dispensing.

Prerequisite(s): (PHMD 5245 with a minimum grade of D- ; PHMD 5285 with a minimum grade of D- ; PHMD 5295 with a minimum grade of D-) or graduate program admission

PHMD 5386. Integrated Learning Lab 6. (1 Hour)

Offers students an opportunity to develop and assimilate knowledge, skills, and attitudes related to the pharmaceutical care of patients to supplement and augment pharmacy curricular topics within an immersive learning experience. Includes professional communication skills, drug information, jurisprudence, patient counseling, pharmacoeconomics, pharmacology, medicinal chemistry, pathophysiology, and therapeutics of acute and chronic conditions with men/women's health, endocrine, and thyroid disorders. Uses innovative digital tools, environments, equipment, learning materials, and pedagogical methods that promote the development and refinement of problem-solving skills, adaptability/resilience, and a team mindset that can be applied during experiential activities (co-op/introductory pharmacy practice experience/advanced pharmacy practice experience), as well as future careers.

PHMD 5396. Concepts in Practice 6. (1 Hour)

Applies concepts through activities designed to develop knowledge, skills, and attitudes focused on foundational aspects of pharmacy practice. Covers identification of drug-related problems, problem solving, and disease state management related to the pharmaceutical care of patients with a focus on acute and chronic conditions with men/women's health, endocrine, and thyroid diseases. Reviews, discusses, synthesizes, and applies information from current and previous coursework and experiential activities in an active-learning format.

PHMD 5450. Advanced Pharmacy Practice Experience Preparatory Seminar. (1 Hour)

Offers students an opportunity to collect relevant information to make informed decisions concerning the selection of advanced pharmacy practice experiences (APPEs). Designed to provide new knowledge (e.g., what is expected of a P4 student) and to strengthen existing knowledge (e.g., from didactic courses) to offer a smooth transition from the didactic courses to APPEs.

PHMD 5560. Applied Drug Information. (2 Hours)

Offers students an opportunity to obtain the skills necessary to become effective providers of drug information. An effective provider assesses drug information needs and evaluates, applies, and communicates data from the published literature and other sources to optimize patient care. Designed to help students develop applied drug information skills important to the pharmacist in areas of formulary support, health informatics, medication error and adverse event reporting, and quality assurance. Students complete a variety of active learning exercises, including multiple evidence-based written drug information responses and a current events analysis. Emphasizes writing for a variety of audiences, including pharmacists, other healthcare providers, and the lay public, as well as use of peer review.

Prerequisite(s): ENGW 3306 with a minimum grade of C or graduate program admission

Attribute(s): NUpath Writing Intensive

PHMD 5571. Pharmaceutical Industry—An Introduction. (1 Hour)

Presents a general overview of pharmaceutical industry functional areas. Focuses on areas that host national postgraduate training programs. Introduces all major functions of industry, such as clinical research, medical affairs, regulatory affairs, health economic and outcomes research, marketing, sales, medical science liaisons, business development, and pharmacovigilance. Explores the phases of drug development and how these phases interact with different departments.

PHMD 5575. Pharmaceutical Industry. (2 Hours)

Offers a global overview of pharmaceutical industry career options and pathways. Focuses on all major functions of the industry, such as clinical research and medical affairs. Additional areas covered include regulatory affairs, health economic and outcomes research, marketing, sales, scientific liaisons, and pharmacovigilance. Explores the phases of drug development and how these phases interact with different departments.

PHMD 5600. Pharmacy Capstone. (4 Hours)

Acts as a final integrator of the major, general education, and experiential aspects of the student's education. Expects students to demonstrate motivation and initiative and to work cooperatively with their faculty mentor, community partners, and fellow students (where applicable) in order to complete a comprehensive, high-quality scholarly work (e.g., a research project, educational project, administrative project, business plan, case report, or community-service learning project or professional manuscript) appropriate for dissemination to the university and professional community. The timeline for completion is set by the faculty mentor and agreed to by the individual or all members of the student group. May be repeated once.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHMD 5675. Ambulatory Care Pharmacy Practice in Urban Health. (2 Hours)

Introduces various aspects of ambulatory care pharmacy practice and social, economic, cultural, and psychological intricacies. Covers chronic disease management and prevention and wellness. Offers students an opportunity to gain insight into the pharmacist's role as part of a patient-centered medical home model and/or an interdisciplinary primary care team, with an emphasis on urban health.

Prerequisite(s): PHMD 4621 with a minimum grade of D- or PHMD 4621 with a minimum grade of C- (Graduate)

PHMD 5900. Self-Care and Nonprescription Medications: A Team-Based Approach. (2 Hours)

Focuses on the clinical use, safety, and efficacy of common nonprescription medications and complementary alternatives (vitamins, minerals, supplements, herbals, etc.) used in the outpatient setting to treat minor medical problems. Pharmacists are often approached by members of the community to recommend treatments for common ailments. It is important for pharmacists to quickly and accurately assess patients to determine if they are candidates for self-care or if a referral to another healthcare provider is warranted. Offers students an opportunity to develop the necessary skills to determine if self-care treatment is an option for patients and to make appropriate self-care and nonprescription product selection recommendations based on the assessment of a patient's health status, medical problems, and current practice of self-treatment through case-based examples.

PHMD 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated for up to 4 total credits.

PHMD 5984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PHMD 6440. Internal Medicine Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in the hospital setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6441. Acute Care Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6442. Ambulatory Care Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in an ambulatory clinic environment. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6443. Community Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a community setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6444. Internal Medicine Elective Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in the hospital setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated once.

PHMD 6445. Ambulatory Care Elective Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in an ambulatory clinic environment. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6446. Psychiatry Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients under psychiatric care. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6447. Community Elective Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a community setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6448. Long-Term Care Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a nursing home or rehabilitation center. Under the supervision of a clinical preceptor and, when appropriate, in conjunction with other members of the healthcare team, identifies appropriate drug therapy and monitoring requirements for common pathophysiologic processes and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated up to nine times.

PHMD 6449. Geriatrics Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a geriatric practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6450. Pediatrics Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a pediatric practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6451. Neonatology Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a neonatal practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6452. Critical Care Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a critical-care practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6453. Surgery Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a surgical practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6454. Cardiology Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a cardiology practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6456. Drug Information Advanced Pharmacy Practice Experience. (6 Hours)

Applies drug information skills to site-specific drug information requests under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the site team. Using appropriate sources, the student analyzes drug information findings, such as dosing, monitoring, indications, efficacy, and adverse drug reactions. May be repeated without limit.

PHMD 6457. Oncology Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in an oncology practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6461. Infectious Disease Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients on an infectious disease consult service. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6462. Pharmacy Industry Advanced Pharmacy Practice Experience. (6 Hours)

Focuses on the application of regulatory affairs and healthcare principles in the pharmaceutical industry. Under the supervision of a preceptor, and, when appropriate, in conjunction with other members of the site team, participates in appropriate activities, such as drug research and development, marketing, medical affairs, regulatory affairs, and information service. May be repeated without limit.

PHMD 6463. Pharmacy Administration Advanced Pharmacy Practice Experience. (6 Hours)

Applies healthcare and management principles, with emphasis on pharmacy administration, under the supervision of a preceptor, and, when appropriate, in conjunction with other members of the site team. May be repeated without limit.

PHMD 6464. Regulatory Advanced Pharmacy Practice Experience. (6 Hours)

Participates in appropriate activities including but not limited to principles of and compliance with pharmacy law and review of regulations governing the FDA's mandatory reporting of adverse drug reactions under the supervision of a preceptor, and, when appropriate, in conjunction with other members of the site team. In addition, students may have the opportunity to be given a step-by-step introduction to public record laws, Board Regulations at 247 CMR, and pharmacy statutes at Massachusetts General Laws, Chapter 112, 24(A)-42(A). May be repeated without limit.

PHMD 6465. Managed Care Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a managed-care practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6466. Transplantation Advanced Pharmacy Practice Experience. (6 Hours)

Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a transplantation unit. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6467. Directed Practice Advanced Pharmacy Practice Experience. (6 Hours)

Offers nontraditional experience with an approved preceptor at an appropriate site. Based on availability. May be repeated without limit.

PHMD 6468. International Advanced Pharmacy Practice Experience. (6 Hours)

Offers an international experience with an approved preceptor at an appropriate site. Based on availability. May be repeated up to nine times.

PHMD 6469. Management Advanced Pharmacy Practice Experience. (6 Hours)

Offers students an opportunity to apply healthcare and management principles, with an emphasis on pharmacy management, under the supervision of a preceptor and, when appropriate, in conjunction with other members of the site management team. May be repeated up to two times.

PHMD 6470. Education Advanced Pharmacy Practice Experience. (6 Hours)

Offers students an opportunity to teach in the pharmacy curriculum under the supervision of a faculty member. Students have an opportunity to examine how teachers use experience-based and problem-based approaches to engage the range of student learners (third- through fifth-year pharmacy students) to attain their learning goals. May be repeated up to two times.

PHMD 6471. Research 1 Advanced Pharmacy Practice Experience. (6 Hours)

Offers students interested in gaining basic or clinical research experience an opportunity to work under the direction of an experienced researcher at an appropriate site. Students can elect either a basic science (lab-based) preceptor or a clinical (patient-based) preceptor. Students can expect to be an active participant in a variety of different research activities and experiences that are deemed appropriate by the preceptor. The research efforts of the student may result in a peer-reviewed research abstract and/or presentation. May be repeated up to two times.

PHMD 6473. Radiopharmacy Advanced Pharmacy Practice Experience. (6 Hours)

Offers students an opportunity to examine the application of radiopharmaceuticals in medical imaging methods. Includes but is not limited to computed tomography (CT), magnetic resonance imaging (MRI), positron emission tomography (PET), and single-photon tomography (SPECT). Students completing this course may cover aspects of product preparation, administration, and data interpretation. May be repeated up to two times.

PHMD 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHMD 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

PhD Experiential Leadership (PHDL)**Courses****PHDL 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHDL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHDL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHDL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHDL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHDL 7600. Leading Self and Others. (4 Hours)

Inculcates students with knowledge, self-awareness, skills, and attitudes to effectively influence others, to lead teams, and to be productive team members by leading from the middle. Requires engagement with an outside organization to scope a project with organizational value that is complementary to the PhD dissertation requiring the PhD student to move out of their comfort zones. At completion of this course, successful students should demonstrate the ability to Influence others in leading teams and producing reliable and practical value to a sponsoring organization; appropriately apply methods in defining clear objectives, desired outcomes, and identifying and addressing customer needs in solving problems requiring breadth and depth in scientific and technical realms; and articulate the purpose, goals, and milestones of their Experiential PhD Leadership Challenge project. Requires acceptance into the Experiential PhD Leadership Certificate program.

PHDL 7660. Experiential PhD Challenge Project 1. (4 Hours)

Offers PhD students an opportunity to use research expertise in an authentic setting and with authentic consequences to develop and present a plan for the demonstration of an organizational challenge. This challenge can consist of a technology solution, a policy analysis with recommendations, or a review of organizational processes that involve higher-order critical thinking. Requires engagement and training with a sponsoring organization to improve a process, assess opportunity, or propose a solution that is of significant value to the organization and demonstrates a measurable impact while enhancing the PhD student's PhD education and intellectual agility while fostering leadership development. Requires acceptance into the Experiential PhD Leadership Certificate program.

Prerequisite(s): PHDL 7600 (may be taken concurrently) with a minimum grade of C-

PHDL 7662. Experiential PhD Challenge Project 2. (4 Hours)

Continues PHDL 7660. Offers an authentic experience in an authentic setting to develop and present a plan for the demonstration of an organizational challenge and produce a written documentary report on the project to the satisfaction of an advising committee. Requires engagement and training with a sponsoring organization to improve a process and assess opportunity or a proposal solution that is of significant value to the organization and demonstrates a measurable impact while enhancing the PhD student's PhD education and intellectual agility while fostering leadership development. Requires acceptance into the Experiential PhD Leadership Certificate program.

Prerequisite(s): PHDL 7660 (may be taken concurrently) with a minimum grade of C-

PHDL 7664. Experiential PhD Challenge Project Continuation. (0 Hours)

Continues PHDL 7662. Offers an authentic experience in an authentic setting to develop and present a plan for the demonstration of an organizational challenge and produce a written documentary report on the project to the satisfaction of an advising committee. Requires engagement and training with a sponsoring organization to improve a process and assess opportunity or a proposal solution that is of significant value to the organization and demonstrates a measurable impact while enhancing the PhD student's PhD education and intellectual agility while fostering leadership development.

PHDL 7666. Contextual Integration. (0 Hours)

Reflects on the manifestation of leadership styles, power and influence, and situational leadership observed through the Leadership Challenge. While executing the Challenge Project, students complete a series of self-directed modules providing opportunities for learning, growth, and interaction within their sponsoring organization. Modules include organizational leadership, leadership characteristics, developing project management skills, challenges to enhance leadership skills, report on experience and accomplishments, impact of academic research groups on external world, and vice versa. At the completion of their project and modules, students reflect on their development and accomplishments as part of a formal presentation to program faculty and fellow students. This presentation is available for incorporation into the student's PhD defense, and the accompanying report becomes a chapter in the student's dissertation. Requires acceptance into the Experiential PhD Leadership Certificate program.

Prerequisite(s): PHDL 7662 (may be taken concurrently) with a minimum grade of C- or PHDL 7664 (may be taken concurrently) with a minimum grade of C-

PHDL 8950. Applied Teaching Fundamentals. (0 Hours)

Offers new, intermediate-, or terminal-level PhD students who are engaged in teaching activities an opportunity to obtain the knowledge, skills, and competencies needed to design and facilitate engaging and meaningful student-centered learning experiences. Consists of a teaching practicum, pedagogical training, and structured peer and mentor support. Offers students an opportunity to reflect upon the practice of teaching, as well as hands-on experience engaging in all of the typical activities associated with teaching a course. Requires English proficiency at the level set by individual program and/or college guidelines. May be repeated four times.

Philosophy (PHIL)**Courses****PHIL 1000. Philosophy at Northeastern. (1 Hour)**

Intended for freshmen in the College of Social Sciences and Humanities. Introduces freshmen to the liberal arts in general; familiarizes them with their major; helps them develop the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps them develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

PHIL 1101. Introduction to Philosophy. (4 Hours)

Introduces students to philosophy by acquainting them with the theories and arguments of classical and contemporary philosophers and by teaching skills of constructing and analyzing arguments. Emphasizes philosophical inquiry. Topics include the basis of morality, free will vs. determinism, the existence of God, the problem of suffering, and the nature of knowledge.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1102. Introduction to Contemporary Moral Issues. (4 Hours)

Focuses on current controversial issues and moral debates. Specific topics vary but include subjects like abortion, euthanasia, global poverty, economic justice, affirmative action, gender relations, animal rights, the environment, the death penalty, war, cloning, and same-sex marriage. Offers an opportunity to learn to apply both the methods of philosophical analysis and various ethical and political theories to these controversies.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1104. Goddesses, Witches, Saints, and Sinners: Women and Religion. (4 Hours)

Introduces and examines the theory that Near Eastern and European religions were originally goddess centered through analyses of image, text, and ritual in the ancient world. Explores scholarship about the patriarchalization of these primal religions. Includes a consideration of scripture such as the Hebrew Bible, Greek Testament, and Qu'ran, as well as noncanonical texts.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 1105. Science and Pseudoscience. (4 Hours)

Examines the distinction between science and pseudoscience, how scientific theories change over time, the limits of scientific explanation, and whether or not scientific practice is rational and objective. What makes a theory scientific? Does culture influence scientific reasoning? What separates Einstein's theory of relativity and astrological horoscopes? Covers a variety of topics in the history of science such as the Copernican revolution and the practice of psychoanalysis. Also covers contemporary issues regarding the scientific status of IQ tests, intelligent design theory, and others.

Attribute(s): NUpath Interpreting Culture, NUpath Natural/Designed World

PHIL 1106. Ethics and Politics of Work. (2 Hours)

Offers students an opportunity to explore the ethical challenges people face as employees, managers, founders, business owners, board members, stockholders, and clients. Aims to identify a set of ethical challenges people in these positions face. Explores how ethical and political theory helps us to understand and perhaps even resolve questions such as what it means to work ethically and the political dimensions of our working lives. Introduces philosophical tools for making sense of the differences between individual and collective responsibilities people have within both their workplace and their political communities.

Corequisite(s): BUSN 1106

Attribute(s): NUpath Ethical Reasoning

PHIL 1110. Introduction to Religious Studies. (4 Hours)

Examines the methods, disciplines, and theories employed in the academic study of religion. Focuses on major theories of religion employed in the discipline of religious studies, including historical, psychological, anthropological, and sociological approaches. Introduces students to the primary methods of research in the academic study of religion.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 1111. Introduction to World Religions. (4 Hours)

Offers a historical and thematic overview of the most widely recognized religions in the world today: Christianity, Judaism, Islam, Hinduism, and Buddhism. Focuses on the formative periods and historical developments of the great religions, ritual practices, and the differing ways in which they answer the fundamental religious questions. Considers ways in which religious practitioners have attempted to understand the nature of the world, human society, and a person's place within them.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

PHIL 1112. Debating Ethical Controversies. (4 Hours)

Introduces students to the fundamentals of moral theory; ethical reasoning; social and political philosophy; as well as theories of social, political, and institutional change. Emphasizes in-depth ethical analysis and evaluation of the issues studied, their social and historical sources and context, as well as the way in which responses to them can and should lead to institutional and policy changes. Offers students an opportunity to be selected for an off-campus competitive debate experience. This course is modeled after the Intercollegiate Ethics Bowl debates on current social and ethical issues.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1115. Introduction to Logic. (4 Hours)

Covers the fundamentals of (formal) deductive and inductive logic. Begins with a thorough treatment of Boolean (i.e., truth-functional or propositional) logic, which provides the foundation for both mathematical and statistical reasoning. Discusses various applications of Boolean logic, including the reconstruction and evaluation of (natural language) deductive arguments. Covers inductive-logical reasoning, such as the fundamentals of the probability calculus and its applications to inductive (ampliative) inference. Offers students an opportunity to understand both deductive (e.g., mathematical) and inductive (e.g., statistical) reasoning.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

PHIL 1120. Understanding the Bible. (4 Hours)

Introduces students to the Old and New Testaments of the Bible in its social, political, and cultural contexts.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

PHIL 1130. Comparative Ethics. (4 Hours)

Focuses on how traditions imagine the moral life in cross-cultural contexts. Topics may include ideals of human flourishing, notions of virtue and vice, and conceptions of self and community. Offers students an opportunity to learn methods of philosophical analysis and argumentation in cross-cultural contexts.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

PHIL 1133. Selling Spirituality. (4 Hours)

Emphasizes the ethical consequences of extracting religious practices from racialized communities (including communities associated with Indigenous and Asian traditions). Explores how the marketing of religious practices as "spiritual" contributes to systematic forms of racism and Orientalism. Discusses a wide range of case studies including yoga, mindfulness, and plant psychedelics. Readings include social history, court cases, ethnographies, and media analysis.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

PHIL 1145. Technology and Human Values. (4 Hours)

Studies philosophy of technology, as well as ethics and modern technology. Considers the relationship between technology and humanity, the social dimensions of technology, and ethical issues raised by emerging technologies. Discusses emerging technologies such as biotechnology, information technology, nanotechnology, and virtual reality.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1160. Introduction to Economic Justice. (4 Hours)

Explores questions of economic justice from a philosophical perspective. Examines capitalism, what it is and what its ethical virtues and limitations are; if there are changes or alternatives to capitalism that would make our economic system more just; how much economic inequality we should consider morally acceptable; and in what ways racism and gender discrimination impact the fairness of our economy. Considers these questions by reading works in the history of philosophy while also engaging with contemporary philosophers writing about current challenges to economic justice, such as racism, gender discrimination, and economic inequality.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1162. Ethics and Philosophy through Sport. (4 Hours)

Introduces issues in ethics, epistemology, and metaphysics through sports. Each topic consists of a case study from the domain of sports in which an ethical or philosophical issue arises, paired with a classical or contemporary reading on the issue. Thus, this course uses examples from sport that exemplify core philosophical topics that arise as well in domains beyond sport. Studies justice and fairness, ability and disability, conceptual clarity/definition, individual vs. collective welfare, social goods, punishment, animal welfare, and the rationality of group identification. Uses data analysis, prediction models, and rational expectations in sports to illustrate several central issues in epistemology, including the problem of induction, counterfactual reasoning, decision theory, and game theory.

Attribute(s): NUpath Analyzing/Using Data, NUpath Ethical Reasoning

PHIL 1165. Moral and Social Problems in Healthcare. (4 Hours)

Introduces ethical theories and moral principles, and then uses these theories and principles to analyze the moral problems that arise in the medical context. Topics include euthanasia, medical paternalism, informed consent, patient confidentiality, the right to die, the ethics of medical research, abortion, the right to healthcare, distribution of scarce medical resources, and the ethical implications of health maintenance organizations.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1170. Business, Ethics, and Human Rights. (4 Hours)

Examines the moral, social, and human rights implications of business for individuals and communities, both globally and domestically. Topics include corporate social responsibility, stakeholder theory, advertising, and gun violence, diversity and racism, CEO activism, affirmative action in the tech sector, the gig economy and employee rights, as well as human rights violations by multinational companies, including sweatshops and environmental harms. Examines the contributions of both big and small businesses to making the world a better place and considers policy that can work to that end.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1180. Environmental Ethics. (4 Hours)

Focuses on a current ecological crisis and addresses the values that underlie our concern over this crisis, whether the values at issue are anthropocentric or biocentric. Explores the ethical implications these ecological concerns have for our individual lifestyles, and for our role as members of communities.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1185. The Ethics of Food. (4 Hours)

Introduces the ethics of food. Elucidates a wide range of ethical issues associated with food production, processing, distribution, and consumption. Offers students an opportunity to develop skills in ethics and values analysis that can be applied to evaluate food-related practices and policies. Includes topics such as the ethics of different food systems, genetically modified crops, meat eating, hunting, food security, food justice, sustainability, synthetic meat, food advertising, food safety, and foodie culture.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1195. Research Ethics. (4 Hours)

Addresses how to engage in scientific, medical, and technological research in an ethically responsible manner. Research is crucial to understanding social, environmental, and health problems, as well as to developing effective responses to them. If the paradigm of responsible research is too restrictive, the benefits of scientific progress and technological innovation can be delayed or unrealized. At the same time, researchers have a responsibility to protect research subjects, to appropriately engage with members of the community, and to avoid behaving in ways that undermine scientific research in the long run. Explores the many ethical dimensions of research, and introduces students to the ethical foundations and controversies that are central to developing appropriate ethical frameworks for engaging in research.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1220. The Meaning of Death. (4 Hours)

Offers an inquiry into different philosophical and religious perspectives on death and life after death, including an examination of some powerful contemporary accounts of personal confrontation with death along with investigations into attitudes toward death in other traditions (for example, Hinduism and Buddhism).

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

PHIL 1260. Apocalypticism in Film. (4 Hours)

Begins with an investigation of biblical texts that give rise to apocalypticism, definitions of apocalypticism, and an introductory exploration of the various ways in which apocalypticism has manifested itself in Western culture. Examines the diverse and changing presentation of apocalypticism in film and includes titles such as 'The Book of Eli,' 'The Day the Earth Stood Still,' 'Independence Day,' 'The Seventh Seal,' and 'Blade Runner.'

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 1271. Sex in Judaism, Christianity, and Islam. (4 Hours)

Explores approaches to gender, social organization of sexuality and gender, sexual ethics, and marriage in Judaism, Christianity, and Islam. Explores various sources within each tradition that serve as normative foundations, contemporary cultural and sociological dynamics that challenge those foundations, and psychological/existential considerations for understanding the general nature of human sexuality. Addresses how these traditions understand gender and gender roles, seek to shape and control interactions between men and women, regulate sexual relations outside of and within marriage, view sexuality education, regard homosexuality, and examine historical and contemporary approaches to marriage, divorce, and parenting. PHIL 1271 and WMNS 1271 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

PHIL 1275. Hinduism, Buddhism, and Beyond. (4 Hours)

Examines Hinduism, Jainism, Theravada Buddhism, Mahayana Buddhism, Confucianism, Taoism, and Shinto within South Asia (India) and east Asia (China and Japan). Combines readings in primary source materials (the religious texts of these traditions) with secondary examinations of the historical and doctrinal developments within each tradition and region. This course intends to give students a context in which to examine the ways in which religions develop in interlocking sociocultural and political contexts and to provide a grounding in the lived experiences of these religious traditions.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

PHIL 1280. Islam: Rituals, Traditions, and Debates. (4 Hours)

Explores Islam through its foundations narrative, rituals, doctrines, and ethical teachings. Presents Islam in terms of its diversity by focusing on a series of key debates in Islamic thought and practice from its early history to the present day in cross-cultural perspectives.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 1285. Jewish Religion and Culture. (4 Hours)

Explores some of the rich variety of Jewish cultural expressions and interpretive traditions, including the Jewish life cycle (birth through death) and the calendar cycle (holidays and daily rituals). Judaism is an ancient, living religious civilization that has evolved continuously over the millennia and around the globe. Offers students an opportunity to become familiar with the major periods of Jewish history and study exemplary formative Jewish texts (from the Bible and its interpreters through rabbinic, legal, and later literatures). Studies the global diversity of Jewish traditions, cultures, and identities, including how Jewish religion and culture have been influenced by the communities in which Jews have lived and live. No prior knowledge of Judaism is necessary or assumed.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

PHIL 1290. Chinese Philosophy and Religion. (4 Hours)

Surveys the origins and development of the indigenous religious traditions of China, from the oracle bone divinations of the Shang Dynasty to the philosophical and religious traditions of Confucianism, Mohism, Yangism, Daoism, and Legalism. Identifies and elucidates those elements of ancient Chinese thought that have had the most lasting influence on the Chinese ethos and worldview. Studies the foundational texts of ancient China and also examines the relevant practices that helped to define the various traditions of thought. Focuses on how religious and philosophical ideas influenced the larger culture of Chinese life in regard to the arts, medicine, the social order, and government.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

PHIL 1300. Knowledge in a Digital World. (4 Hours)

Examines the impact that information technologies (such as the internet, search engines, blogs, wikis, and smartphones); information processing techniques (such as big data analysis, machine learning, crowdsourcing, and cryptography); and information policies (such as privacy norms and speech restrictions) have on what we know and how much we know, as individuals and as a society. The digital world can enhance our ability to acquire knowledge by providing us with fast and cheap access to huge amounts of information. However, it can also undermine our cognitive abilities and provide us with inaccurate or misleading information. Studies normative frameworks from epistemology and ethics (such as epistemic value theory, the extended mind hypothesis, and moral rights) to evaluate these technologies and policies.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 1666. The Problem of Evil in Film. (4 Hours)

Seeks to answer the question, "What is evil?" Uses a variety of film genres to examine the definitions of evil in relation to concepts such as power, sin, hate, greed, envy, murder, neglect, fear, terror, tragedy, and "the Other." Studies the problem of evil from the perspectives of religious studies and philosophy. Examines the various explanations for evil from a variety of Western religious traditions and explores the presentation of ethical dilemmas and moral theory to assess the content of a variety of films. Studies film titles such as *The Dark Knight*, *The Exorcist*, *Silence of the Lambs*, *Frankenstein*, *Life Is Beautiful*, *Rear Window*, *Dr. Strangelove*, *Phone Booth*, *Crash*, *Star Wars*, and *The Wizard of Oz*.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

PHIL 1667. Science Fiction and Film: Moral Dilemmas and Ethical Analysis. (4 Hours)

Explores how science fiction films function as mythical cautionary tales about moral dilemmas of the twentieth and twenty-first centuries and as projections about how these dilemmas may be resolved or continue in the future. Provides a framework for an ethical analysis and examines how themes such as manifest destiny, nationalism, utopia, good vs. evil, war, and concepts of "the Other" are presented in classic and contemporary film. Also shows how science fiction film sometimes reinterprets pre-existing stories from world cultures and world religious traditions, updating earlier moral dilemmas to the contemporary situation.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

PHIL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHIL 2001. Ethics and Evolutionary Games. (4 Hours)

Surveys the basic ideas and principles from evolutionary game theory and how they can be applied to philosophical questions about ethical and social norms. Investigates how cooperation evolves and is maintained; where our sense of fairness comes from and how it affects the way we interact with others; why individuals are altruistic; and whether there is a rational basis for our most basic social norms. Basic ethical norms can involve cooperation, altruism, mutual aid, fairness, coordination, and communication. Evolution and game theory, the formal study of social interaction, have recently been applied to these areas in order to better understand how these norms can arise naturally. Prior completion of PHIL 1115, PHIL 1215, or the NU Core requirement for mathematical/analytical thinking level 1 recommended.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 2016. The Philosophy and Ethics of Lying and Deception. (4 Hours)

Examines lying and other forms of deception in a wide range of modern contexts from advertising to politics, using different theoretical approaches. Offers students an opportunity to use philosophical and economic theories to investigate what lying is, why people lie, when and why it is wrong to lie, how we can learn from other people even though they might be lying, and how social institutions affect—and are affected by—all of this lying. In modern society, we are confronted with lies, spin, fake news, and even "BS" on a daily basis. Since these forms of deception play such a central role in human life, many philosophers—including Plato, Augustine, and Kant—have studied the ontology, ethics, epistemology, economics, and logic of lying and deception.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 2143. Philosophy for Children. (4 Hours)

Explores big questions in philosophy—how should one conduct oneself, what does it mean to know something, are there object values in an aesthetic domain such as art? Offers students an opportunity to learn methodologies and tools of philosophical inquiry and apply them to works of children's literature in order to be able to facilitate philosophical discussions in the elementary school classroom. Emphasizes creating a community of inquiry and learning how to devise and communicate different answers to philosophical questions at the elementary level. Students develop lesson plans to help engage young children in philosophical discussion and reflection.

Attribute(s): NUpath Creative Express/Innov

PHIL 2155. Human Rights. (4 Hours)

Offers students an opportunity to obtain a solid understanding of the political, philosophical, and legal dimensions of human rights as well as an overview of some of the current debates in human rights. Discusses the intellectual history of human rights and explores their philosophical and historical roots. Examines their legal and political dimensions and human rights laws and institutions. Explores in-depth a number of contemporary human rights issues including genocide, women's rights, children's rights, refugees, and torture.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 2230. Music and Religion. (4 Hours)

Explores the relationship between religion, sound, and musical expression using the lenses of gender studies, cultural studies, and performance theory. Emphasizes the interpretive and symbolic understandings of sonic expressions of religiosity, including chanting, mantra use, choir and congregational singing, and speaking in tongues. Seeks to familiarize students with some of the key sonic expressions within the Christian, Islamic, Hindu, and Buddhist traditions; to explore the methods of studying musical and sonic theology; and to analyze these traditions' own debates about the use of sound and music in religious practice.

Attribute(s): NUpath Difference/Diversity, NUpath Integration Experience, NUpath Interpreting Culture, NUpath Writing Intensive

PHIL 2259. Sex, Gender, and Judaism. (4 Hours)

Introduces the representation of sex and gender in Jewish culture and religion. Explores varied representations of masculinity and femininity over time and place within Jewish communities; the role of biblical texts in the construction of Western conceptions of gender and sexuality; and how contemporary feminist, queer, and other sexual identities have influenced Jewish practices. Readings draw from a range of primary sources (memoirs, fiction, religious texts, etc.) and critical literature.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 2301. Philosophical Problems of Law and Justice. (4 Hours)

Focuses on general questions about the law: What is the nature and proper scope of the law? How should the law be enforced and are there alternatives to punishment? How can laws be properly interpreted? Examples of legal controversies are related to the theories studied.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 2302. Philosophical Problems of War and Peace. (4 Hours)

Concentrates on ethical and philosophical issues about war and peace. Focuses on the nature and justification of war, moral questions about tactics in war, ideas for avoiding war, concepts of and strategies for attaining peace, and the morality of relations between nations.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 2303. Social and Political Philosophy. (4 Hours)

Focuses on basic questions about the nature of the state and the relationship of individuals to the state. What basis is there for individuals to obey the laws of the state? What conditions must a government meet to be legitimate? What justification can be given for democratic forms of government? Also examines what sorts of controls the state should exert over citizens, and what benefits citizens have a right to expect from the state. Includes readings from both classical and contemporary sources. Not open to freshmen students.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 2325. Ancient Philosophy and Political Thought. (4 Hours)

Examines the philosophers of classical Greece, primarily Socrates, Plato, and Aristotle. These philosophers examined the nature of the material world, of the city, and of the person. The course takes up both the moral and political writings as well as the metaphysical writings. Devotes considerable attention to major works such as Plato's *Republic*. Some time is given to early Greek philosophers, to the Sophists, and to later developments. Requires written analysis of philosophical texts. PHIL 2325 and POLS 2325 are cross-listed.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture, NUpath Writing Intensive

PHIL 2330. Modern Philosophy. (4 Hours)

Focuses on philosophical works written during the 17th and 18th centuries and considers their historical, social, and political contexts. Tackles fundamental questions about the nature of reality, self-knowledge, injustice, and the good life through the work of figures like René Descartes, Princess Elisabeth of Bohemia, Margaret Cavendish, John Locke, Jean-Jacques Rousseau, Mary Wollstonecraft, and others. Considers the contributions of women and other underrepresented figures and philosophical developments in the Americas. Requires prior completion of one philosophy course.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions, NUpath Writing Intensive

PHIL 2390. Cults and Sects. (4 Hours)

Examines radical religious innovation in the United States from historical, legal, and cultural analytic perspectives. Focuses on minoritized groups such as the Shakers, Peoples Temple, the Nation of Islam, and the Church of Scientology. Offers students an opportunity to acquire critical investigative tools with which to better understand the complexities of lived religion.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 2395. Japanese Buddhism. (4 Hours)

Surveys the major forms of Japanese Buddhism, from the earliest transmission of Buddhism to the maturation of Buddhist thought and practice during the Kamakura and Muromachi periods. Focuses not only on the major schools and figures of each period but also the ways in which Buddhism influenced and shaped Japanese culture. Examines, in particular, the formative influence of Buddhism on Japanese aesthetic sensibilities, samurai culture, and ritual. Focuses thematically on the religious practices that defined each school and how those practices were incorporated into a holistic religious vision.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture, NUpath Writing Intensive

PHIL 2410. Possession, Sacrifice, and Divination in African Diasporic Religions. (4 Hours)

Examines religious thought and rituals and its Diaspora in a comparative context. Topics include traditional religions, Islam, Christianity, and Judaism in Africa, and the Diaspora. Emphasizes the transformation of religions practiced in Africa when African captives were forced into the three slave trades affecting the continent of Africa: trans-Saharan, Indian Ocean, and transatlantic.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

PHIL 2492. Indigenous Philosophy. (4 Hours)

Explores the work of philosophers from a variety of indigenous traditions. Showcases the diverse and rich contributions of these various traditions by engaging with film, poetry, and argumentative prose. Considers topics such as storytelling as philosophical method, locality as an ethical concept, struggles for tribal sovereignty, politics of blood quantum, environmental justice, decolonizing sex and gender, and indigenous futurism. Examines the place of indigenous thought in the modern nation-state and an increasingly global world. Requires prior completion of one philosophy course.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 2619. Race and Religion in Film. (4 Hours)

Explores how relationships between historical and contemporary representations of African Americans, other persons of the African Diaspora, and the continent of Africa have been presented in film in relation to religious themes. Offers an interdisciplinary study in how race and religion are represented in ways that reflect and actively contribute to real-world faith beliefs, experiences, and actions. Critically examines how representations of "the Other" compared to "the chosen" relate to the intersectionality of race, religion, class, national origin, gender, sex, and sexuality. Provides a framework for ethical analysis of how societal institutionalized systems of power influence beliefs about racialized identities and religion.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHIL 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

Attribute(s): NUpath Integration Experience

PHIL 3000. Interdisciplinary Methods for Politics, Philosophy, and Economics. (4 Hours)

Offers students an opportunity to learn to think, research, and write in an interdisciplinary way and bring together the core methods of the three disciplines constituting the PPE major: philosophy, political science, and economics. Examines issues such as housing, environmental justice, and immigration, among others, through an interdisciplinary lens. Students analyze how systemic racism, gender, and other power structures have created asymmetrical distribution of resources, power, and political opportunities and shaped institutions, policies, and outcomes. Includes a service-learning requirement that takes place across the semester. PPE majors should plan to take this course when the majority of the major core courses are complete.

Prerequisite(s): PHIL 1160 with a minimum grade of D-

Attribute(s): NUpath Integration Experience, NUpath Writing Intensive

PHIL 3050. Information and Uncertainty. (4 Hours)

Introduces the foundations of probabilistic inference, information theory, and their uses for drawing conclusions from noisy data. Applications include diagnosing diseases with inconclusive medical tests, locating autonomous vehicles when sensors are imperfect, and how best to make inferences with incomplete or partial information. Central topics include distinguishing deductive and probabilistic inference, philosophical interpretations of probability, fundamental justifications for the rules of probability, and key concepts of information theory. Introduces analytic and mathematical methods of analysis in these cases and contemporary computational (i.e., programming) techniques for implementing and applying theories of information and probabilistic inference.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

PHIL 3065. Bioethics in the Age of Big Data. (4 Hours)

Explores the ethical issues that arise in the application of emerging applications of AI and Big Data in health and healthcare, especially the ways in which those applications challenge and force us to rethink traditional bioethical frameworks and norms.

PHIL 3100. The Religious Worlds of Boston: Faith and Devotion in Urban Life. (4 Hours)

Examines the nature of religion and religious life in Boston, emphasizing the lived experience of the sacred in an urban setting. Offers students an opportunity to develop research methods based in ethnography, the analysis of texts, and the interpretation of material culture. Readings include works in the method and theory of religious studies, the practice of ethnography, and case studies of lived religion, especially those that focus on urban religion. Expects students to engage in fieldwork in Boston, examining the implicit religious dimensions of everyday life and particular religious communities. Assignments include field reports, analysis of the religious landscape of Boston, and a research paper on a designated religious community. Requires prior completion of one introductory-level course in the social sciences or humanities.

Attribute(s): NUpath Integration Experience, NUpath Interpreting Culture, NUpath Societies/Institutions

PHIL 3305. Philosophy of Emotions. (4 Hours)

Explores central philosophical questions about the emotions. Analyzes what an emotion is and if an emotion is more like a feeling, a belief, or a perception. Discusses if it is irrational to have an emotion that you think that you should not have and what it means for an emotion to be rational in the first place. What does it mean for an emotion to be morally good? How can we know when to trust an emotion? Emphasizes moral psychology and the contributions of neuroscience. Requires prior completion of two philosophy courses.

Attribute(s): NUpath Ethical Reasoning

PHIL 3333. Intercollegiate Ethics Bowl Competition. (1 Hour)

Offers students an opportunity to participate as members of Northeastern's Ethics or Bioethics Bowl team. Students work with their teammates in preparing for regional and national competitions. Preparation includes devising novel arguments for each competition's cases and weekly meetings with teammates leading up to the competition where students polish their arguments, rebuttals, and questions. Culminates with the option of traveling and participating in a regional and possible national debate competition. May be repeated up to seven times.

PHIL 3343. Existentialism. (4 Hours)

Examines existentialist philosophy in its greatest representatives, such as Kierkegaard, Nietzsche, Heidegger, Camus, and Sartre. Focuses on central themes including self-alienation, inauthenticity, authenticity, and existential experiences. Requires prior completion of two philosophy courses.

PHIL 3360. Scientific Approaches to Philosophy. (4 Hours)

Explores scientific approaches to traditional philosophical questions and to what extent these classic questions can be addressed by contemporary scientific theories and methods. Surveys recent studies in psychology and neuroscience and their relation to free will, consciousness, and the self. Examines the connections between contemporary physics and philosophical questions about determinism, causality, and the nature of reality. Considers the role of scientific methods in addressing skepticism and the connection to the theory of knowledge. Finally, explores the relevance of the social and biological sciences in answering questions about society, ethics, and morality. Requires prior completion of two philosophy and/or science courses.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 3435. Moral Philosophy. (4 Hours)

Explores two basic questions: What sorts of things are good or bad? What actions are right or wrong? Covers major philosophical theories about the nature of morality—whether it is relative or absolute, whether it accords or conflicts with self-interest. Such classic theories as utilitarianism and Kant are examined as well as contemporary developments and debates. Requires prior completion of two philosophy courses.

PHIL 3460. Philosophy and Literature. (4 Hours)

Provides the student the opportunity to learn to recognize, appreciate, and criticize philosophical themes in literature. Includes readings from acknowledged classics by philosophical authors. Requires prior completion of two philosophy courses.

PHIL 3500. Sexuality, Gender, and the Law. (4 Hours)

Examines the legal regulation of gender and sexuality. Investigates concrete legal cases to study the history of constitutional interpretation and the current status of rights for women and sexual minorities. Focuses on important theoretical issues emerging in the writings of diverse feminist and queer legal scholars. Addresses debates over the value of conventional equality approaches in legal doctrine; equality vs. difference perspectives; ways in which legal language constructs gender and sexuality; the incorporation of sexuality and gender in ideologies of law; and the intersections of gender, sexuality, and race in legal doctrine and legal theory. PHIL 3500, POLS 3500, and WMNS 3500 are cross-listed.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

PHIL 3512. Religion, Race, and Politics. (4 Hours)

Engages the intersections of religion, race, and political power through cultural history, ethnography, and lived religions. Explores the social and cultural categories of our historical and contemporary worlds. Examines how some peoples' histories have been centered, while others' histories have been marginalized. Explores religion as a social category that reproduces existing relations of power while alternatively supporting social revolution and change. Class engagements are centered on theories of power, understandings of difference, and changes in social structures over time, from the colonial period to the present (1500s–2000s).

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHIL 3822. Philosophy of Race and Racism. (4 Hours)

Considers how philosophical tools can help us to understand the issues of race and racism. Controversies about these issues continue to play a crucial role in the public domain. Explores questions such as what is meant by the term race as a biological category; how has the meaning of "race" shifted with time and culture; what is racism (as well as racial injustice and racial discrimination) and how should we understand its persistence in areas such as housing and policing); and what steps should be taken to end racism. Examines related phenomena, including xenophobia, ethnocentrism, and imperialism, as well as intersecting forms of oppression, such as sexism. Readings draw on both historical and contemporary sources. Requires two prior courses in philosophy or department permission to register.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

PHIL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHIL 4050. Artificial Intelligence and Society. (4 Hours)

Examines the societal impact of artificial intelligence technologies and prominent strategies for aligning these impacts with social and ethical values. Offers multidisciplinary readings to provide conceptual lenses for understanding these technologies in their contexts of use.

PHIL 4500. Theory of Knowledge. (4 Hours)

Focuses on questions about the nature and justification of claims to knowledge. Is there genuine knowledge? How do we tell when a belief or theory is sufficiently justified to count as knowledge? Discusses theories such as various forms of rationalism, empiricism, and skepticism. Requires careful reading of works by such influential thinkers as René Descartes, Bertrand Russell, A. J. Ayer, and T. S. Kuhn. Requires prior completion of three philosophy courses.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHIL 4510. Philosophy of Science. (4 Hours)

Focuses on the nature of scientific method, scientific theories, and scientific explanations. Examines the central question of why science is thought to provide the most reliable account of the nature of reality. Requires prior completion of three philosophy courses (PHIL 1115 or PHIL 1215 recommended) or permission of instructor.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHIL 4515. Advanced Deductive Logic. (4 Hours)

Examines central results of formal deductive logic with a focus on first-order (predicate) logic. Topics include proof systems, decidability, computability, and metatheory.

Prerequisite(s): MATH 1215 with a minimum grade of D- or MATH 1365 with a minimum grade of D- or PHIL 1115 with a minimum grade of D-

PHIL 4516. Advanced Inductive Logic. (4 Hours)

Examines major views and results in contemporary inductive logic. Focuses on Bayesian epistemology including belief and credence, probability, updating, principles of rationality, theory of confirmation, and decision theory.

Prerequisite(s): PHIL 1115 with a minimum grade of D- or MATH 1215 with a minimum grade of D- or MATH 1365 with a minimum grade of D-

PHIL 4535. Philosophy of Mind. (4 Hours)

Seeks to show what puzzles and problems result from an honest attempt to answer these questions in a reasonable way: What is the relation between mind and body? Is the mental merely a function of bodily process and behavior, or does it somehow exist "over and above" the material? How are self-knowledge and knowledge of other minds achieved, and what is the relation between words and thoughts? Examines classical sources, such as Descartes and Locke, and contemporary sources, such as Wittgenstein and Putnam. Also seeks to arrive at some answers-however tentative or provisional-to these questions. Constantly challenges students to think and write well about these difficult subjects. Requires prior completion of three philosophy courses or permission of instructor.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHIL 4550. Philosophy of Economics. (4 Hours)

Explores the philosophy behind economics. Surveys central ideas in the foundations of economics and formal methods in economics, including utility theory, rational choice theory, game theory, and social choice. Explores applications of economic modeling to institutions, markets, and social interactions. Examines the philosophical significance of economic inquiry, including fact/value distinctions, the ideal of economic rationality, the nature of economic modeling, and the place of economics among the sciences. Requires prior completion of at least three philosophy and/or economics courses.

Attribute(s): NUpath Capstone Experience, NUpath Societies/Institutions, NUpath Writing Intensive

PHIL 4555. Philosophy of Biology. (4 Hours)

Explores the conceptual foundations of evolution, ecology, and genetics, with special attention to outstanding philosophical questions. Surveys central philosophical and theoretical issues on topics such as the units of selection, the concept and nature of evolutionary fitness, biological functions, causation, biological individuality, the concept of a species, the biology of social behavior, and the explanatory role of natural selection. Also examines the relationship between biology, the physical sciences, and the social sciences. Requires prior completion of three philosophy and/or biology courses.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHIL 4901. Topics in Philosophy Seminar. (4 Hours)

Focuses on one specific problem or issue in philosophy. Topics vary, and students may register for the course more than once. Requires prior completion of three philosophy courses. May be repeated without limit.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHIL 4903. Seminar in Religion. (4 Hours)

Examines topics including theodicy, cosmogony, contemporary issues in religion, and comparative ethics. Topics vary, and students may register for the course more than once. Requires prior completion of three philosophy or religion courses. May be repeated without limit.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PHIL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHIL 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHIL 4994. Internship. (4 Hours)

Offers an opportunity for an internship. May be repeated without limit.

Attribute(s): NUpath Integration Experience

PHIL 5001. Global Justice. (4 Hours)

Explores the theoretical, political, and philosophical foundations of the obligations that underlie global justice. Theoretical approaches include human rights, human capabilities, cosmopolitanism, particularism, and universalism. Examines nationalism and the particular set of obligations that it generates. Following the theoretical component, the course considers social issues that arise in a global context: (1) the duties to the distant poor, (2) global philanthropy and problems of donee accountability, (3) global health and essential medicines and issues in environmental justice, and (4) issues in international law.

Attribute(s): NUpath Capstone Experience, NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

PHIL 5002. Ethics and Public Policy. (4 Hours)

Offers students from multiple disciplines an opportunity to obtain training in basic methodology in analytic ethics and political philosophy. Focuses on the intersection of ethical analysis and policy evaluation. Organized around different policy areas, such as energy production and distribution, urban planning, healthcare provision, criminal justice, and artificial intelligence. Engages broad issues involving the relationship between ethics and public policy, as well as the scope and limits of legitimate government authority. Looks at specific policies and policy domains and offers students multiple theoretical frameworks for approaching ethical questions embedded in those policy areas.

Attribute(s): NUpath Capstone Experience

PHIL 5005. Information Ethics. (4 Hours)

Covers issues of justice and the public good in relation to the creation, collection, storage, analysis, processing, dissemination, and use of information. Discusses theories of justice and human rights, as well as ethical theories such as utilitarianism and principlism. Topics include intellectual and cultural property, freedom of expression, access to information, fair representation, and information privacy. Discusses how to create and use information technologies that promote individual flourishing and the public good while avoiding bias, exploitation, and manipulation.

Prerequisite(s): PHIL 1145 with a minimum grade of D- or PHIL 1300 with a minimum grade of D- or IS 1300 with a minimum grade of D- or graduate program admission

PHIL 5010. AI Ethics. (4 Hours)

Discusses artificial intelligence and the host of ethical issues it raises: decisions turned over to machine-learning algorithms can be opaque and unfair; autonomous vehicles promise to increase safety but raise challenges for assigning responsibility for accidents; diffusion of AI is likely to transform the labor market in unpredictable ways; and the data that powers machine-learning algorithms raise questions about privacy and security. In order to realize the benefits of AI while responsibly developing and implementing it, it is necessary to identify the ethical issues at stake and work to resolve them. This course takes up the philosophical and ethical questions essential to this project.

Prerequisite(s): PHIL 1145 with a minimum grade of D- or PHIL 1300 with a minimum grade of D- or IS 1300 with a minimum grade of D- or graduate program admission

PHIL 5110. Responsible AI. (4 Hours)

Covers the design, development, and deployment of artificial intelligence and how it interacts with a wide range of values including fairness, privacy, transparency, autonomy, and well-being. Offers students an opportunity to develop an understanding of the robust legal, regulatory, and ethical landscape of AI applications across domains and sectors to realize the promise of AI while promoting and protecting values, as well as instruction in the tools necessary to responsibly engage with AI.

PHIL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Philosophy - CPS (PHL)**Courses****PHL 1100. Social and Political Philosophy. (3 Hours)**

Examines theories of social change, social institutions, and major contemporary political theories. Asks general questions, such as what constitutes a good state, what actions are right or wrong, and explores differing answers to those questions. Contrasts Immanuel Kant's view that actions are intrinsically moral to John Stuart Mill's theory that the end result determines the rightness or wrongness of an act. Includes material from social theorists such as Paley, Nietzsche, B. F. Skinner, and Ayer.

PHL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHL 2100. Business Ethics. (3 Hours)

Focuses on basic ethical viewpoints as a foundation and examines specific characteristics of business life through cases and examples. The fact that there is not one universal set of behaviors one considers ethical and no guidelines to follow to determine ethical behavior poses unique challenges to managers today. Yet, managers are daily faced with situations where individual values may conflict with those of teams or organizations. Explores topics such as corporate responsibility and conflict of interest, employee rights, and advertising and information disclosure.

Attribute(s): NUpath Ethical Reasoning

PHL 2120. Ethical Issues in Communication. (3 Hours)

Examines ethical issues in communication. Discusses how ethical choices affect communication to internal and external audiences, management transparency, strategic ambiguity, and employee privacy.

Prerequisite(s): CMN 1100 with a minimum grade of D- or CMN 1103 with a minimum grade of D- or CMN 2210 with a minimum grade of D-

Attribute(s): NUpath Ethical Reasoning

PHL 2130. Ethical Issues in Healthcare. (3 Hours)

Considers biomedical, clinical, social, and legal issues related to ethical issues and integrates such considerations into ethical decision making. Emphasizes the concepts of do no harm, quality of life, and conflict resolution. Other topics include patients' rights and the protection of their confidentiality, privacy, and personal prerogatives. Explores case studies and readings to assess the presence of ethical considerations.

Attribute(s): NUpath Ethical Reasoning

PHL 2140. Ethical Issues in Science and Engineering. (3 Hours)

Examines ethical principles and considerations involved in making moral decisions. Analyzes specific examples in medicine, science and engineering through case studies and readings.

Attribute(s): NUpath Ethical Reasoning

PHL 2310. Symbolic Logic. (3 Hours)

Introduces propositional and first-order quantification logic. Offers students an opportunity to evaluate the status of logical formulas and arguments, to create examples and counterexamples, and to construct both informal and formal proofs.

Attribute(s): NUpath Formal/Quant Reasoning

PHL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHL 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

PHL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Philosophy - CPS Specialty (PHLS)

Courses

PHLS 1101. Introduction to Philosophy. (4 Hours)

Introduces students to philosophy by acquainting them with the theories and arguments of classical and contemporary philosophers and by teaching skills of constructing and analyzing arguments. Emphasizes philosophical inquiry. Topics include the basis of morality, free will vs. determinism, the existence of God, the problem of suffering, and the nature of knowledge.

PHLS 1145. Technology and Human Values. (4 Hours)

Examines the changing values of the modern, technologically advanced world. Attempts to increase our understanding of the supposed breach between the literary and scientific cultures, the diverse approaches towards their reconciliation, and the human dimensions of science and technology. Topics include the neutrality of technology with respect to good or evil uses, technology as an instrument for human liberation, and the issue of proper and effective modes of controlling technology in today's world.

Physical Therapy (PT)

Courses

PT 1000. College: An Introduction. (1 Hour)

Provides an introduction to the University, college, and health professions to enhance students' understanding of self and the decisions they make academically and socially as members of the University's diverse, multicultural community. Group activities and individual assignments along with active participation in a learning community help students adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

PT 1880. Introduction to Sports Medicine. (4 Hours)

Offers an introductory course intended for students interested in sports, coaching, medicine, and exercise. Exposes students to the field of sports medicine. Emphasizes orthopedic anatomy, exercise principles, and a basic introduction to prevention of injury and illness related to athletes. Includes a cadaveric lab and lectures.

Attribute(s): NUpath Natural/Designed World

PT 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 2300. Sociocultural Aspects of Sports Injury. (4 Hours)

Examines sociocultural aspects of sports injury and rehabilitation including social beliefs, cultures, climates, processes, institutions, and societies. Provides cross-cultural learning opportunities through discussion of the main characteristics of sports injuries with health professional representatives across five different continents (Africa, Asia, Europe, Americas, and Oceania) and an opportunity to participate in an immersive sports medicine experience in a country outside of the United States. Includes various clinical and academic activities at an educational institution and visitation to sports clubs, hospitals, sports injury rehabilitation clinics, and universities.

Attribute(s): NUpath Integration Experience

PT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 2991. Research in Physical Therapy. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

PT 3300. Human Gross Anatomy. (3 Hours)

Covers the structure and function of the human body. Emphasizes the skeletal, muscular, digestive, cardiopulmonary, and peripheral nervous systems. Using a regional and systemic approach, explores the details of the limbs, thorax, abdomen, and pelvic regions of the body. Considers basic abnormalities of structure and function via clinical application of these systems.

Prerequisite(s): BIOL 1111 with a minimum grade of D- or BIOL 1113 with a minimum grade of D- or BIOL 2217 with a minimum grade of D-

Corequisite(s): PT 3301

PT 3301. Lab for PT 3300. (1 Hour)

Offers hands-on exploration of the human body utilizing cadaveric specimens and models. Covers the structure and function of the appendicular and axial skeletal systems of the body through prospected human cadavers and osteology. Emphasizes the skeletal, muscular, digestive, cardiopulmonary, and peripheral nervous systems.

Prerequisite(s): BIOL 1112 with a minimum grade of D- or BIOL 1114 with a minimum grade of D- or BIOL 2218 with a minimum grade of D-

Corequisite(s): PT 3300

PT 3400. Human Kinesiology. (4 Hours)

Studies normal movement through the analysis of muscle and joint function. Introduces fundamental examples of pathokinesiology, aberrant motions, and gait and posture. Emphasizes the analysis of the major joints and regions of the body.

Prerequisite(s): BIOL 2217 with a minimum grade of D- or BIOL 1117 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

PT 3500. Motor Control of Human Movement. (4 Hours)

Covers two broad areas that impact the human movement system: motor control and motor learning. Examines neural, behavioral, and physical mechanisms that contribute to the control of movement in humans. Focuses on motor control in healthy persons, with some discussion of alterations associated with musculoskeletal and neural impairment. Examines factors that influence the learning of new motor skills (motor learning) as a result of practice and/or experience.

Prerequisite(s): BIOL 2217 with a minimum grade of D- or BIOL 1117 with a minimum grade of D-

PT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PT 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

PT 5101. Foundations of Physical Therapy. (3 Hours)

Designed to provide a basic practical understanding of patient care procedures used in physical therapy practice. Covers body mechanics, therapeutic positioning, patient ambulation, transfer techniques, soft tissue mobilization, and documentation. Offers the learner an opportunity to obtain the information needed to use therapeutic modalities in a variety of clinical settings. Introduces physical therapy students to professional behaviors.

Corequisite(s): PT 5102

PT 5102. Lab for PT 5101. (1 Hour)

Accompanies PT 5101. Covers topics from the course through various experiments.

Corequisite(s): PT 5101

PT 5111. Professional Development for Bouvé Graduate Co-op. (1 Hour)

Introduces graduate students to the Bouvé Cooperative Education Program and offers an opportunity to develop job-search and career-management skills. Students perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Offers students an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Seeks to familiarize students with workplace issues relative to their field of study and to teach them to use myNEU COOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

PT 5133. Kinesiology. (3 Hours)

Studies normal movement through the analysis of muscle and joint function. Introduces fundamental examples of pathokinesiology, aberrant motions, and postures. Emphasizes analysis of the major joints and regions of the body as related to the field of physical therapy, including aspects of gait analysis. Encourages critical thinking and integrates material learned in prior course work, including, but not limited to, anatomy and physiology.

Attribute(s): NUpath Natural/Designed World

PT 5138. Neuroscience. (4 Hours)

Covers the structure and physiological function of the human nervous system with emphasis on the clinical aspects of motor and somatosensory systems. Studies the anatomy of the brain, brain stem, and spinal cord in specimens and on slides and integrated with the basic physiology of motor and sensory systems. The application of neuroscience to clinical neurological cases is a foundation of this course.

Prerequisite(s): (PT 5131 with a minimum grade of C or PT 5131 with a minimum grade of C) or (PT 6340 with a minimum grade of C ; PT 6341 with a minimum grade of C)

Corequisite(s): PT 5139

PT 5139. Lab for PT 5138. (1 Hour)

Accompanies PT 5138. Covers topics from the course through various experiments.

Corequisite(s): PT 5138

PT 5140. Pathology. (4 Hours)

Covers foundational knowledge of pathological processes of major body systems. Addresses general medicine, laboratory medicine, and pathophysiology as related to patient conditions that impact physical therapy management. Case-based discussion allows for integration of pathology and pharmacology content.

Prerequisite(s): (PT 5131 with a minimum grade of C or PT 5131 with a minimum grade of C) or (PT 6340 with a minimum grade of C ; PT 6341 with a minimum grade of C)

PT 5145. Introduction to the Healthcare System. (2 Hours)

Offers students an opportunity to obtain the foundation to understand and appreciate the framework of the U.S. healthcare system. Compares other selected global healthcare systems. Examines historical events, policy changes, and current issues that impact the delivery of healthcare services.

Prerequisite(s): PT 5101 with a minimum grade of C or PT 5101 with a minimum grade of C

PT 5150. Motor Control, Development, and Learning. (4 Hours)

Covers three broad areas—motor control, motor development, and motor learning. Examines neural, behavioral, and physical mechanisms that contribute to the control of movement in humans. Focuses on motor control in healthy persons, with some discussion of alterations associated with musculoskeletal and neural impairment. Addresses motor development and maturation from intrauterine life through old age (senescence). Considers the interaction of body-system development and growth on acquisition of and changes in typical skill development. Examines factors that influence the learning of new motor skills (motor learning) as a result of practice.

Prerequisite(s): PT 6340 with a minimum grade of C or (PT 5133 with a minimum grade of C ; PT 5138 (may be taken concurrently) with a minimum grade of C)

Corequisite(s): PT 5151

PT 5151. Lab for PT 5150. (1 Hour)

Offers students an opportunity to apply knowledge gained in PT 5150 to activities designed to illustrate various principles and concepts related to motor control, motor development, and motor learning. Uses a series of guiding questions/activities in each laboratory and analyzes associated literature to offer students an opportunity to apply class concepts to healthy individuals and to those with clinical problems related to motor control, motor development, or motor learning.

Corequisite(s): PT 5150

Attribute(s): NUpath Analyzing/Using Data

PT 5160. Psychosocial Aspects of Healthcare. (3 Hours)

Examines interpersonal relationships among patients, families, health professionals, and society, with reference to the impact of and reaction to illness and disability. Identifies personal and societal beliefs, values, and attitudes that affect the role of people with illness or disabilities in our culture and the healthcare system; how patients' beliefs, values, and experiences affect their expectations and interactions with healthcare professionals; and how beliefs, values, and experiences shape professional development and affect relationships with patients.

Attribute(s): NUpath Ethical Reasoning

PT 5165. Sports Medicine: Managing the Injured Athlete. (4 Hours)

Offers students an opportunity to obtain in-depth knowledge in sports medicine. Covers taping and bracing procedures and techniques to assess concussions with various current protocols. Exposes students to current common pathologies within the athletic population. Discusses return-to-play criteria for an athlete once an injury has occurred and has subsequently been treated and rehabilitated.

PT 5170. Motor Control. (3 Hours)

Focuses on the theories and models of neuromuscular control and learning of human movement. Examines the relationship between theory and practice and how motor function may be altered by a variety of factors.

Corequisite(s): PT 5171

PT 5171. Lab for PT 5170. (1 Hour)

Accompanies PT 5170. Covers topics from the course through various experiments.

Corequisite(s): PT 5170

PT 5209. Neurological Rehabilitation 1. (4 Hours)

Covers the foundations of the physical therapy examination, evaluation, and intervention for persons with neurological deficits. Presents examination skills, theoretical bases, and clinical applications of integrated intervention approaches for the patient with a neurological diagnosis. Includes the etiology, pathology, medical management, and physical therapy management of common neurology disorders affecting the adult population. Accompanied by PT 5210.

Prerequisite(s): PT 5150 with a minimum grade of C or PT 5150 with a minimum grade of C

Corequisite(s): PT 5210

PT 5210. Lab for PT 5209. (1 Hour)

Accompanies PT 5209. Covers the foundations of the physical therapy examination, evaluation, and intervention with patients with neurological deficits. Presents clinical procedures for examination skills, evaluation, and clinical applications of integrated intervention approaches for the patient with a neurological diagnosis.

Corequisite(s): PT 5209

PT 5226. Physical Therapy Professional Seminar 2. (2 Hours)

Continues PT 5135 and builds on concepts introduced in the earlier course. Affords students the opportunity to reflect on issues in experiential education and prepare for future experiential learning.

PT 5227. Physical Therapy Project 1. (3 Hours)

Provides students with the opportunity to conduct an independent project under the mentorship of physical therapy faculty in areas such as research, education, clinical practice, administration, or service learning.

Prerequisite(s): (PT 5515 with a minimum grade of C or PT 5515 with a minimum grade of C); (PT 5540 with a minimum grade of C or PT 5540 with a minimum grade of C); (PT 6243 with a minimum grade of C or PT 6243 with a minimum grade of C)

Attribute(s): NUpath Capstone Experience, NUpath Creative Express/Innov, NUpath Formal/Quant Reasoning, NUpath Writing Intensive

PT 5229. Physical Therapy Project 2. (2 Hours)

Provides students with an opportunity to work with individual faculty on scholarship activities to create a scholarly work in partial fulfillment of the requirement for a Doctor of Physical Therapy degree. Allows students to begin or continue their research or education project. Guides students as necessary to enable them to complete their capstone project.

Prerequisite(s): PT 5227 with a minimum grade of C or PT 5227 with a minimum grade of C or CAEP 5150 with a minimum grade of C or CAEP 5150 with a minimum grade of C

Attribute(s): NUpath Capstone Experience

PT 5230. Pediatric and Geriatric Aspects of Life Span Management. (3 Hours)

Incorporates analysis and comparison of methods of physical therapy (PT) management of selected populations across the life span, which includes pediatrics and geriatrics. Focuses on utilizing evidenced-based rationale for clinical decision making within the context of PT examination, evaluation, PT diagnosis, prognosis, and plan of care. Discusses how patient/client management seeks to reflect core professional values, as well as topics of prevention and wellness in these patient populations.

Prerequisite(s): (PT 5209 with a minimum grade of C or PT 5209 with a minimum grade of C); (PT 5505 with a minimum grade of C or PT 5505 with a minimum grade of C); (PT 6241 with a minimum grade of C or PT 6241 with a minimum grade of C)

PT 5321. Applications of Biomechanics in Human Function and Movement. (4 Hours)

Designed to help students develop an understanding of biomechanical concepts, as they apply to the analysis of human movement and function, through experiential learning. Introduces emerging methodologies and techniques in the field of biomechanics, particularly as they relate to human movement. Course activities require both computational analyses and conceptual understanding. Exposes students to types of data acquisition, reduction, analysis, and interpretations. Includes those factors that identify limitations to the action and measurement of human movement. Offers students an opportunity to integrate knowledge emerging from multiple disciplines, including biomechanics, movement sciences, biology, and physics, as those disciplines apply to functional human movement.

PT 5410. Functional Human Neuroanatomy. (4 Hours)

Examines the detailed structure of the human nervous system, linking structure to function at both the clinical and neurobiological level. Offers students an opportunity to obtain a solid functional anatomical foundation for neuroscience. Reviews basic neuroanatomy and then provides a detailed look into the structure of the nuclei within the central nervous system and their connectivity. Examines the role of these structures in motor and sensory function as well as in complex cognitive functions at a physiological and clinical level.

Prerequisite(s): ((BIOL 1113 with a minimum grade of D- or BIOL 2217 with a minimum grade of D- or BIOL 1117 with a minimum grade of D- or BIOL 2299 with a minimum grade of D-); (BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-)) or graduate program admission

Corequisite(s): PT 5411

PT 5411. Lab for PT 5410. (1 Hour)

Examines the detailed structure of the human nervous system in specimens of the human brain and spinal cord as well as in images of stained sections of these tissues and magnetic resonance images (MRI). The structure of individual nuclei and the main sensory and motor tracts of the nervous system are examined and discussed by students working in small groups. Although focusing on anatomical details, the lab introduces the student to clinical diagnosis of neurological cases.

Corequisite(s): PT 5410

PT 5450. Introduction to Therapeutic Activities. (2 Hours)

Offers students an opportunity for exposure to the biologic underpinnings of therapeutic activities, as well as to increase their skill in the application of such activities, including exercise prescription, therapeutic handling skills, and functional activity design. Skills taught in this course shape interventions used in the physical therapy treatment of people across the life span with a variety of impairments of body structure, function, and functional activity limitations.

Prerequisite(s): (PT 5133 with a minimum grade of C or PT 5133 with a minimum grade of C); (PT 5134 with a minimum grade of C or PT 5134 with a minimum grade of C)

PT 5500. Pharmacology for Physical Therapy. (2 Hours)

Offers a clinically oriented course covering knowledge of clinical pharmacology in the physical therapy profession. Discusses prescription and over-the-counter drugs and common herbal supplements. Drug classification, pharmacokinetics, pharmacodynamics, mechanism of action, drug interactions, and common side effects are brought into the clinical perspective of patient management. Explores recognition of expected drug effects, side effects, idiosyncratic reactions, and signs of abuse or nonadherence. Along with PT 5140, emphasizes the therapist's proper incorporation of pharmacotherapeutic knowledge into patient assessment, differential diagnosis, and design of treatment regimens.

Prerequisite(s): PT 5131 with a minimum grade of C or (PT 6340 with a minimum grade of C ; PT 6341 with a minimum grade of C)

PT 5503. Cardiovascular and Pulmonary Management. (4 Hours)

Discusses physical therapy examination evaluation, interventions, and outcome assessment of common cardiac and pulmonary dysfunctions. Discusses etiology and pathology of common cardiac and pulmonary disorders. Uses case-based learning to promote synthesis of the material.

Prerequisite(s): (PT 5140 with a minimum grade of C or PT 5140 with a minimum grade of C) or (PT 6340 with a minimum grade of C ; PT 6341 with a minimum grade of C)

Corequisite(s): PT 5504

PT 5504. Lab for PT 5503. (1 Hour)

Accompanies PT 5503. Covers topics from the course through various experiments.

Corequisite(s): PT 5503

PT 5505. Musculoskeletal Management 1. (4 Hours)

Discusses physical therapy examination evaluation, interventions, and outcome assessment of common musculoskeletal dysfunctions. Uses case-based learning to promote synthesis of the material.

Prerequisite(s): (PT 5515 with a minimum grade of C or PT 5515 with a minimum grade of C); (PT 5540 with a minimum grade of C or PT 5540 with a minimum grade of C)

Corequisite(s): PT 5506

PT 5506. Lab for PT 5505. (1 Hour)

Accompanies PT 5505. Covers topics from the course through various experiments.

Corequisite(s): PT 5505

PT 5515. Integumentary Systems. (2 Hours)

Applies anatomy, physiology, epidemiology, and pathology to explore the issues of medical, surgical, pharmacological, and psychological and physical therapy management of individuals throughout the life span with integumentary system impairments. Offers learners an opportunity to develop examination skills to derive diagnoses, prognoses, evaluations, and effective physical therapy interventions based on relevant evidence. Includes modalities for wound care and electrophysiological testing and interpretation. Uses case studies to integrate and apply the information obtained through readings, lectures, and lab.

Prerequisite(s): (PT 5101 with a minimum grade of C or PT 5101 with a minimum grade of C); (PT 5102 with a minimum grade of C or PT 5102 with a minimum grade of C)

Corequisite(s): PT 5516

PT 5516. Lab for PT 5515. (1 Hour)

Accompanies PT 5515. Covers topics from the course through various experiments.

Corequisite(s): PT 5515

PT 5540. Clinical Integration 1: Evidence and Practice. (2 Hours)

Designed to prepare physical therapy students to integrate previous courses taught in the curriculum to safely manage patients in the acute-care setting, including the intensive-care unit, the critical-care unit, and step-down settings. Uses a combination of lecture, instruction in the simulation center, and standardized patient interactions. Follows the "Guide to Physical Therapy Practice for Evaluation and Intervention" in these settings. Offers students an opportunity to learn to perform an examination; to evaluate examination data to formulate a plan of care; to provide interventions; to determine a discharge plan for individuals in the acute-care environment; and to demonstrate core professional values in classroom, recitation, and standardized patient interactions.

Prerequisite(s): (PT 5150 with a minimum grade of C or PT 5150 with a minimum grade of C); (PT 5500 with a minimum grade of C or PT 5500 with a minimum grade of C); (PT 5503 with a minimum grade of C or PT 5503 with a minimum grade of C)

PT 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PT 6000. Leadership, Administration, and Management. (2 Hours)

Offers students an opportunity to develop the ability to analyze and evaluate changes in the healthcare system, health policy, and the impact on the delivery of services with a focus on physical therapy. Appraises key business and management concepts, including personnel, insurance, finance, marketing, productivity, and financial and legal regulations within the context of ethical practice. Emphasizes and examines leadership concepts in the areas of advocacy, legislation, and the promotion of the profession.

Prerequisite(s): (PT 5145 with a minimum grade of C or PT 5145 with a minimum grade of C); (PT 6243 with a minimum grade of C or PT 6243 with a minimum grade of C)

PT 6055. Introduction to Sports Performance. (1 Hour)

Introduces students to injury prevention and covers illnesses related to athletes, management of athletic injury, roles of sports medicine providers, exercise and training principles, and career options in sports for physical therapists. Includes didactic and hands-on training. Offers additional material regarding NU-related DPT coursework and sports residency. This course is designed for Doctor of Physical Therapy students interested in sports medicine, strength and conditioning, and human performance.

PT 6123. Human Movement and Rehabilitation Experiential Residency 1. (4 Hours)

Offers students hands-on experience with biomechanical evaluation and educational intervention in a variety of workforce and athletic settings. Includes opportunities to develop the methods to evaluate worker health and safety interventions and skills to create an educational plan on biomechanical challenges.

Prerequisite(s): PT 5321 with a minimum grade of C or PT 5321 with a minimum grade of C

PT 6124. Human Movement and Rehabilitation Experiential Residency 2. (4 Hours)

Offers students hands-on experience with human movement rehabilitation measurement technology. Includes opportunities to conduct assessment of human movement and rehabilitation needs that can be further understood through technology measurement systems. Offers an opportunity to design a proposal for integrating technology into students' work to address a need within their industry.

Prerequisite(s): PT 7020 with a minimum grade of C

PT 6215. Assistive Technology. (3 Hours)

Studies theory and current practice in the use of prosthetics, orthotics, and assisted-living devices.

Prerequisite(s): (PT 5230 with a minimum grade of C or PT 5230 with a minimum grade of C); (PT 6221 with a minimum grade of C or PT 6221 with a minimum grade of C); (PT 6223 with a minimum grade of C or PT 6223 with a minimum grade of C)

Corequisite(s): PT 6216

PT 6216. Lab for PT 6215. (1 Hour)

Acompanies PT 6215. Covers topics from the course through various experiments.

Corequisite(s): PT 6215

PT 6221. Neurological Rehabilitation 2. (4 Hours)

Focuses on the physical therapy management of adults with neurological dysfunctions. Concentrates on management of functional activity limitations, participation restrictions, and impairments resulting from neurological disease and/or trauma. Offers students an opportunity to learn about the etiology, pathology, clinical signs, and medical management of adults with neurological disorders; to learn to perform an examination, evaluate the examination data to formulate a plan of care, and provide interventions; and to use evidence-based decision making.

Prerequisite(s): (PT 5209 with a minimum grade of C or PT 5209 with a minimum grade of C); (PT 5210 with a minimum grade of C or PT 5210 with a minimum grade of C)

Corequisite(s): PT 6222

PT 6222. Lab for PT 6221. (1 Hour)

Accompanies PT 6221. Covers topics from the course through various experiments.

Corequisite(s): PT 6221

PT 6223. Musculoskeletal Management 2. (4 Hours)

Provides an in-depth analysis of musculoskeletal management. Compares intervention protocols as an integral component of this course. Allows, in the lab component, for practical application of spinal joint mobilization, modalities, ergonomic assessment, functional training, and therapeutic exercise. Uses case-based learning to promote synthesis of the material.

Prerequisite(s): (PT 5505 with a minimum grade of C or PT 5505 with a minimum grade of C); (PT 6241 with a minimum grade of C or PT 6241 with a minimum grade of C)

Corequisite(s): PT 6224

PT 6224. Lab for PT 6223. (1 Hour)

Accompanies PT 6223. Covers topics from the course through various experiments.

Corequisite(s): PT 6223

PT 6230. Capstone Project: Human Movement and Rehabilitation Sciences. (4 Hours)

Offers students an opportunity for active engagement to shape the focus of the course and the capstone experience. Encourages production of high-quality written work and professional presentation methods. Students produce a peer-reviewed journal article that includes the methodology, results, limitations, and recommendations for further action based on the outcomes of their projects.

Prerequisite(s): PT 7010 with a minimum grade of C ; PT 7020 with a minimum grade of C

PT 6233. Advanced Physical Therapy Topics in Orthopedics. (2 Hours)

Provides students with an opportunity to obtain in-depth knowledge in orthopedics and physical therapy. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different. May be repeated without limit.

Prerequisite(s): PT 5505 with a minimum grade of C or PT 5505 with a minimum grade of C

PT 6237. Advanced Special Topics in Physical Therapy. (2 Hours)

Provides students with an opportunity to obtain in-depth knowledge in a specific physical therapy topic area. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different.

Prerequisite(s): PT 6305 with a minimum grade of C or PT 5505 with a minimum grade of C or PT 5505 with a minimum grade of C

PT 6241. Screening for Medical Conditions in Physical Therapy Practice. (4 Hours)

Designed to prepare physical therapy students to recognize the signs and symptoms of medical conditions and adverse drug reactions as they relate to patient examination and to triage appropriately. Emphasizes screening for medical conditions with the goal of recognizing red, yellow, and green flags as they relate to patient care. Stresses medical referral to other healthcare practitioners in an efficient and effective manner.

Prerequisite(s): (PT 5515 with a minimum grade of C or PT 5515 with a minimum grade of C); (PT 5540 with a minimum grade of C or PT 5540 with a minimum grade of C)

PT 6243. Health Education, Promotion, and Wellness. (3 Hours)

Covers health promotion, wellness, disease, impairment, functional limitations, disability, and health risks. Addresses the concept of human difference as a construct relative to behavior theories, lifestyle choices, and health and wellness. Offers learners an opportunity to develop an educational health promotion program for individuals as well as community groups, considering the impact of health disparities, epidemiology, learning styles, barriers, and resources. Offers learners an opportunity to explore a potential consultative role to business, schools, government agencies, and other organizations.

Prerequisite(s): PT 5160 with a minimum grade of C or PT 5160 with a minimum grade of C

Corequisite(s): PT 6245

Attribute(s): NUpath Difference/Diversity

PT 6244. Recitation for PT 6243. (0 Hours)

Provides small-group discussion format to cover material in PT 6243.

Corequisite(s): PT 6243

PT 6245. Seminar for PT 6243. (1 Hour)

Offers hands-on practice to apply course concepts from PT 6243, in particular health promotion programming for community-based groups. Simultaneously, learners intentionally address the needs/interests of community partners. Learners reflect on their service-learning during on-campus and online activities/assignments.

Prerequisite(s): PT 5160 with a minimum grade of C

Corequisite(s): PT 6243

PT 6250. Clinical Integration 2: Evidence and Practice. (2 Hours)

Offers students an opportunity to practice demonstrating core professional values in classroom, recitation, and standardized patient interactions and to learn how to skillfully manage complex patients across the life span and across practice patterns in a variety of clinical settings. Integrates evidence-based content from previous courses in the curriculum. Introduces special topics in physical therapy, including bariatric care, home care, and hospice.

Prerequisite(s): PT 5540 with a minimum grade of C or PT 5540 with a minimum grade of C

PT 6251. Diagnostic Imaging. (3 Hours)

Designed to integrate diagnostic imaging principles and techniques relevant to physical therapy practice. Reviews commonly used diagnostic imaging techniques and discusses clinical case studies in a case-based online course.

Prerequisite(s): PT 6250 with a minimum grade of C

PT 6305. Musculoskeletal Management I. (4 Hours)

Studies the theoretical basis and clinical application of examination and intervention of orthopedic dysfunction of the upper quarter and associated spine that are commonly encountered by physical therapists. Uses an evidence-based, problem-solving approach to prioritize and plan patient care, including medical screening and identifying need for referral. Includes selected topics that reflect the evidence-based philosophies of various noted practitioners in the field of orthopedic physical therapy.

Prerequisite(s): PT 5150 with a minimum grade of C ; PT 5151 with a minimum grade of C ; PT 6350 with a minimum grade of C

Corequisite(s): PT 6306

PT 6306. Lab for PT 6305. (1 Hour)

Accompanies PT 6305. Studies the theoretical basis and clinical application of examination, evaluation, diagnosis, prognosis, and interventions of orthopedic dysfunction of the upper quarter and associated spine that are commonly encountered by physical therapists. Uses an evidence-based, problem-solving approach to prioritize and plan patient care, including medical screening and identifying need for referral. Includes selected topics that reflect the evidence-based philosophies of various noted practitioners in the field of orthopedic physical therapy.

Prerequisite(s): PT 5150 with a minimum grade of C ; PT 5151 with a minimum grade of C ; PT 6350 with a minimum grade of C

Corequisite(s): PT 6305

PT 6330. Functional Anatomy 1. (2 Hours)

Covers the normal structure, function, and principles of biomechanics of the human body. Emphasizes the regions of the head, neck, and trunk. Also considers the basic abnormalities of structure and function.

Corequisite(s): PT 6331

PT 6331. Lab for PT 6330. (1 Hour)

Accompanies PT 6330. Covers the normal structure, function, and principles of biomechanics of the human body through cadaveric exploration, surface anatomy, and analysis of movement. Emphasizes the regions of the head, neck, and trunk.

Corequisite(s): PT 6330

PT 6340. Functional Anatomy 2. (4 Hours)

Covers the normal structure and function and principles of biomechanics of the human body, including the analysis of human movement. Emphasizes the upper and lower extremities. Considers basic abnormalities of structure and function.

Prerequisite(s): PT 6330 with a minimum grade of C ; PT 6331 with a minimum grade of C

Corequisite(s): PT 6341

PT 6341. Lab for PT 6340. (1 Hour)

Accompanies PT 6340. Covers the normal structure, function, and principles of biomechanics of the human body through cadaveric exploration, surface anatomy, and analysis of movement. Emphasizes the skeletal, muscular, nervous, and cardiovascular systems of the upper and lower extremities.

Prerequisite(s): PT 6330 with a minimum grade of C ; PT 6331 with a minimum grade of C

Corequisite(s): PT 6340

PT 6350. Foundations of PT Examination and Therapeutic Activities. (4 Hours)

Designed to educate the learner on how to apply, interpret, and perform introductory physical therapy tests and measures and therapeutic activity and exercise interventions. The tests and measures are components of the physical therapist examination process and examine human movement; and the introductory therapeutic activities and exercises are those that would be selected for treatment after those specific examination techniques. Provides an introductory framework to the patient/client professional relationship. Emphasizes the development of the learner's affective, psychomotor, and cognitive skills necessary to assure proper patient/client examination and intervention in the clinical environment.

Prerequisite(s): (PT 5101 with a minimum grade of C or PT 5101 with a minimum grade of C); (PT 5102 with a minimum grade of C or PT 5102 with a minimum grade of C)

Corequisite(s): PT 6351

PT 6351. Lab for PT 6350. (1 Hour)

Accompanies PT 6350. Provides an introductory framework to the patient/client professional relationship.

Prerequisite(s): (PT 5101 with a minimum grade of C or PT 5101 with a minimum grade of C); (PT 5102 with a minimum grade of C or PT 5102 with a minimum grade of C)

Corequisite(s): PT 6350

PT 6405. Musculoskeletal Management II. (4 Hours)

Studies the theoretical basis and clinical application of examination and intervention of orthopedic dysfunction of the lower quarter and associated spine that are commonly encountered by physical therapists. Uses an evidence-based, problem-solving approach to prioritize and plan patient care, including medical screening and identifying need for referral. Includes selected topics that reflect the evidence-based philosophies of various noted practitioners in the field of orthopedic physical therapy.

Prerequisite(s): PT 6305 with a minimum grade of C ; PT 6306 with a minimum grade of C

Corequisite(s): PT 6406

PT 6406. Lab for PT 6405. (1 Hour)

Accompanies PT 6405. Studies the theoretical basis and clinical application of examination, evaluation, diagnosis, prognosis, and interventions of orthopedic dysfunction of the lower quarter and associated spine that are commonly encountered by physical therapists. Uses an evidence-based, problem-solving approach to prioritize and plan patient care, including medical screening and identifying need for referral. Includes selected topics that reflect the evidence-based philosophies of various noted practitioners in the field of orthopedic physical therapy.

Prerequisite(s): PT 6305 with a minimum grade of C ; PT 6306 with a minimum grade of C

Corequisite(s): PT 6405

PT 6420. PT Administration and Management within the U.S. Healthcare System. (4 Hours)

Provides the foundation of physical therapy administrative management principles required of physical therapists within the U.S. healthcare system. Examines the current and historical practices of the U.S. healthcare system through the lens of physical therapist delivery, including key legislation and policy changes that have impacted physical therapist delivery over time. Comparative evaluation of selected global healthcare systems is undertaken to understand differences. Discusses and applies leadership fundamentals, advocacy skills, and business and management principles to help students develop administrative skills for contemporary physical therapist practice.

Prerequisite(s): PT 5160 with a minimum grade of C

PT 6441. Clinical Education 1. (6 Hours)

Provides students with opportunities to practice examination, evaluation, and intervention skills previously learned in the classroom and on co-op. Students work under the supervision and guidance of a licensed physical therapist.

Prerequisite(s): (PT 5230 with a minimum grade of C or PT 5230 with a minimum grade of C); (PT 6221 with a minimum grade of C or PT 6221 with a minimum grade of C); (PT 6223 with a minimum grade of C or PT 6223 with a minimum grade of C)

PT 6442. Clinical Education 2. (6 Hours)

Continues PT 6441. Provides students with additional opportunities to practice examination, evaluation, and intervention skills learned in the classroom and during the previous course. Students are expected to function at a higher level requiring less supervision and guidance from a licensed physical therapist than was needed during their first clinical education experience.

Prerequisite(s): PT 6441 with a minimum grade of S

PT 6448. Clinical Education 3. (9 Hours)

Designed to provide students with the opportunity to meet entry-level requirements to practice as physical therapists. Supervised and guided by a licensed physical therapist, students practice examination, evaluation, intervention, documentation, and administrative skills and are expected to function at the level of a new graduate by the completion of this experience. Includes a written assignment. Helps students, through reflection of what they have learned, identify who they are as professionals, establish early career goals, and provide insight for the need to be a lifelong learner.

Prerequisite(s): PT 6442 with a minimum grade of S

PT 6450. Clinical Education 3. (8 Hours)

Offers learners an opportunity to practice examination, evaluation, and intervention skills previously learned in the classroom and on co-op. Learners work under the supervision and guidance of a licensed physical therapist and function as members of the healthcare team providing consultation and educational services to others. Offers learners an opportunity to refine documentation skills, to develop administrative skills, and to supervise support personnel. Requires a written assignment designed to identify areas of practice that need to be strengthened during Clinical Education 1. Learners must have transportation available, since assignment to clinical sites outside of Boston and Massachusetts is likely. Learners are responsible for costs of all transportation, housing, background checks, uniforms, and other requirements of the clinical site.

Prerequisite(s): PT 6442 with a minimum grade of S

PT 6505. Musculoskeletal Management 3. (3 Hours)

Builds upon content from earlier musculoskeletal management courses to further provide students with the theoretical basis and clinical application of examination and intervention of more complex orthopedic patient presentations for the extremities, head, spine, and pelvic region. Uses an evidence-based, problem-solving approach to prioritize and plan patient care, including medical screening and identifying need for referral. Offers learners an opportunity to integrate selected topics that reflect the philosophies of various noted practitioners in the field of orthopedic physical therapy.

Prerequisite(s): (PT 6405 with a minimum grade of C ; PT 6406 with a minimum grade of C)

Corequisite(s): PT 6506

PT 6506. Lab for PT 6505. (1 Hour)

Accompanies PT 6505. Uses an evidence-based, problem-solving approach to prioritize and plan patient care, including medical screening and identifying need for referral.

Prerequisite(s): PT 6405 with a minimum grade of C ; PT 6406 with a minimum grade of C

Corequisite(s): PT 6505

PT 6510. Evidence-Based Practice and Research Design. (3 Hours)

Offers an overview of the research process and its application in clinical arenas. Emphasizes the role of the health professional as a consumer of research, with concern for the ethical management and treatment of patients and their families. Elements of research design and their implications in clinical settings provide the framework for the analysis of research. Also emphasizes the use of research findings for evidence-based practice. Encourages interdisciplinary approaches.

PT 6511. Research Methods and Statistics in PT. (2 Hours)

Offers students an opportunity to learn about statistical concepts that can be applied to the PT capstone project (PT 6512 and PT 6513). Additionally, understanding statistics helps students become adept consumers of studies, a necessary component of clinicians to keep informed of the latest research for their own practice.

Prerequisite(s): PT 6510 with a minimum grade of C

PT 6512. DPT Capstone 1. (1 Hour)

Offers students an opportunity to work directly with a faculty mentor(s) on scholarship activities to be disseminated (e.g., peer-reviewed journal article, conference poster) in the future. Students are assigned faculty mentor(s). Mentors determine the type of project students conduct for two semesters. Students are responsible for communicating with their mentor(s) throughout the semester and for completing the work that has been assigned by the specified deadlines. Additionally, students are expected to work cooperatively with fellow students assigned to the group to develop their project.

Prerequisite(s): PT 6511 with a minimum grade of C

PT 6513. DPT Capstone 2. (2 Hours)

Continues PT 6512. Faculty guide students through the completion of their capstone projects. Students are expected to be motivated and self-directed to complete a high-quality project suitable for dissemination.

Prerequisite(s): PT 6512 with a minimum grade of C

PT 6520. Prosthetic Management. (1 Hour)

Exposes the learner to current physical therapy clinical practices related to prosthetic rehabilitation as collaborative team members in the care for individuals with amputations. Discusses examination and implementation of physical therapy interventions in the management of individuals with an amputation. Uses a problem-solving approach to develop critical thinking skills to manage individuals with a variety of amputations and prosthetics, including an understanding of the bridge to robotics. Emphasizes prosthetics of the lower extremity and mobility impairments.

Prerequisite(s): PT 6350 with a minimum grade of C ; PT 6351 with a minimum grade of C

Corequisite(s): PT 6521

PT 6521. Lab for PT 6520. (1 Hour)

Accompanies PT 6520. Seeks to develop learners' hands-on application of examination and intervention for individuals with prosthetics. Uses a problem-solving approach to develop critical thinking skills and care strategies for individuals with a variety of amputations and prosthetics, including an understanding of the bridge to robotics. Emphasizes prosthetics of the lower extremity and individuals' mobility.

Prerequisite(s): PT 6350 with a minimum grade of C ; PT 6351 with a minimum grade of C

Corequisite(s): PT 6520

PT 6550. Pediatric Aspects of Life Span Management. (3 Hours)

Incorporates analysis and comparison of methods of physical therapy (PT) management of the pediatric population. Pediatric population is inclusive of the child, the child's parents, and/or caregivers. Focuses on utilizing evidenced-based rationale for clinical decision making within the context of PT examination, evaluation, PT diagnosis, prognosis, and plan of care. Patient/client management reflects core professional values. Also discusses topics of prevention and promotion of optimal health and wellness in this patient population.

Prerequisite(s): (PT 5209 with a minimum grade of C or PT 5209 with a minimum grade of C); (PT 5210 with a minimum grade of C or PT 5210 with a minimum grade of C)

PT 6555. Geriatric Aspects of Life Span Management. (2 Hours)

Incorporates a comprehensive analysis and comparison of methods of physical therapy (PT) management of the geriatric population. Focuses on utilizing an evidenced-based approach for clinical decision making within the context of PT examination, evaluation, PT diagnosis, prognosis, and plan of care. Patient/client management reflects core professional values. Also discusses topics of prevention and wellness.

Prerequisite(s): (PT 5209 with a minimum grade of C or PT 5209 with a minimum grade of C); (PT 5210 with a minimum grade of C or PT 5210 with a minimum grade of C)

PT 6600. Special Topics. (2 Hours)

Offers learners an opportunity to expand upon current evidence-based topics to reflect current advancements in physical therapist practice. Topics are determined by significant events and changes in the field across areas of clinical practice and in line with accreditation and National Physical Therapist Licensure Examination. Focuses on advanced patient management and complex case analysis that involves multiple systems across the life span. Learners use clinical reasoning theory and evidence-based practice to reflect on patient diagnosis and management.

Prerequisite(s): PT 6405 with a minimum grade of C ; PT 6406 with a minimum grade of C

PT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated once.

PT 7001. Core Concepts in Rehabilitation Science and Research. (3 Hours)

Exposes students to core concepts in rehabilitation science, including theory, experimental design, models of disablement, and knowledge transfer methods. Offers students an opportunity to develop the skills to critically evaluate models and theories used in rehabilitation science in order to apply select models/theories to their own programs of research. Students evaluate research designs and knowledge translation methods relevant to rehabilitation science and apply this information in planning the design, implementation, and dissemination of their own proposed research.

PT 7005. Experimental Design and Applied Statistics. (4 Hours)

Offers an introduction and overview to quantitative human subject research methods typical in movement and rehabilitation sciences as well as other fields. Refers to the set of tools used to develop, design, and complete a study to explore answers to questions through empirical approaches. Emphasizes development of research skills, including the ability to define research problems; write hypotheses; apply research designs; organize, analyze, and present data; perform statistical analyses; and draw relevant conclusions. Offers students an opportunity to formulate testable hypotheses, design experiments using principles of good experimental design, model and analyze experimental data, perform appropriate and valid statistical tests, and interpret the data and statistical outcomes.

PT 7010. Measurement and Analysis of Human Movement and Bioinstrumentation. (4 Hours)

Offers students an opportunity to learn how to measure kinematics, kinetics, and muscle activity using bioinstrumentation, including 3D motion capture system, force plates, and electromyography, as well as to learn signal conditioning and processing techniques and how to compute physiological variables such as joint angles, joint torques, ground reaction force, center of pressure, and center of mass. Topics include programming skills in LabVIEW and MATLAB. Students use this information to formulate solutions to biomechanical problems.

PT 7020. Technologies in Movement and Rehabilitation Science. (4 Hours)

Covers technologies that have relevance to rehabilitation of individuals with disorders of movement. Topics include measurement of human movement, electroencephalography (EEG), functional magnetic resonance imaging (fMRI), electromyography (EMG), virtual reality and gaming, robotics, neuroprosthetics, noninvasive brain stimulation, and peripheral stimulation. Exposes students to a historical perspective on how the technology evolved, applications of the technology, an overview of how the technology works, existing variants, strengths, limitations/gaps, and future directions.

PT 7030. Interdisciplinary Seminar in Rehabilitation Science. (1 Hour)

Engages PhD students in discussions and presentations related to human movement and rehabilitation research in order to help them gain important skills related to critiquing and communicating scientific work. Offers students an opportunity to learn how to provide constructive feedback to colleagues about completed works and works in progress, as well as their communications regarding conference presentations and manuscripts from (or for) peer-reviewed archival journals. Works reviewed include works by students and by world-renowned leaders in the field. Presentations include students, as well as internationally established researchers. May be repeated five times for a maximum of two semester hours.

PT 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated up to four times.

PT 8986. Research. (0 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PT 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

PT 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): PT 9000 with a minimum grade of S

PT 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): PT 9990 with a minimum grade of S

PT 9996. Dissertation Continuation. (0 Hours)

Offers continued dissertation work conducted under the supervision of a departmental faculty member. May be repeated up to five times.

Prerequisite(s): PT 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Physical Therapy - CPS (PTH)**Courses****PTH 6101. Medical Screening and Nutrition for Physical Therapists. (5 Hours)**

Offers students an opportunity to obtain the knowledge and skills to screen patients for non-neuromusculoskeletal conditions, interpret clinical findings, and make sound clinical judgments that include providing appropriate referral when beyond the scope of physical therapy practice. Emphasizes diagnostics theory and process skills for a physical therapist to perform a complete and thorough history and relevant regional physical examination. Examines the fundamental role of nutrition in promoting health, focusing on the physiological functions of energy-providing nutrients in the body and their interrelationships. Emphasizes clinical applications for the treatment of weight disorders, various medical disorders, and eating disorders. Addresses nutritional requirements needed to maintain good health and promote healing and rehabilitation.

PTH 6102. Cultural Competency for Healthcare Providers. (1 Hour)

Seeks to address the American Physical Therapy Association's mandate that physical therapists have the necessary skills, knowledge, and attitudes to treat patients with a wide range of differences. These differences are not limited to race or ethnicity alone; therefore, it is not sufficient to instruct students in the characteristics of a particular non-Anglo-European culture. As noted in the Code of Ethics, physical therapists must be able to understand, value, and individualize patient communication and interventions to reflect these differences. Offers students an opportunity to begin developing an understanding and respect for cultural and personal differences and to build a foundation for further professional growth.

PTH 6103. Consultation, Delegation, and Screening. (1 Hour)

Offers parameters for legal and ethical delegation to others. Offers students an opportunity to obtain the knowledge and skills to determine when a person requires further evaluation by a physical therapist or referral to another healthcare professional when the findings are beyond the scope of physical therapy practice. In addition, students are expected to acquire skills in providing consultation to nonpatient groups and to individuals who are responsible for the health needs of the community. This may involve working with groups of clients, policy makers, healthcare providers, and community-service workers.

PTH 6104. Integumentary System. (2 Hours)

Discusses the physical therapist patient management process as it applies to the integumentary system. Examines the process of normal wound healing and the role of the physical therapist in the management of wounds. Covers pressure ulcers, ulcers due to venous and arterial insufficiency, diabetic ulcers, and burns. Details the examination, evaluation, diagnosis, prognosis, intervention, and outcome assessment of each wound category. Incorporates the use of case studies to integrate the information. Requires permission of instructor for students without a physical therapy degree.

PTH 6105. Metabolic Disorders. (2 Hours)

Offers a clinically oriented course that discusses the physical therapist patient management process as it applies to metabolic disorders. Presents basic medical science and medical management of diabetes mellitus (DM), thyroid, parathyroid and bone disorders, steroid therapy, liver disease, and metabolic syndrome. Details the role of the physical therapist in examination, evaluation, diagnosis, prognosis, intervention, and outcome assessment involving the most common endocrine and metabolic problems encountered in physical therapy practice. Includes the use of case studies. Offers students an opportunity to synthesize their own physical therapy diagnosis and plan of care for patients with metabolic disorders. Requires prior completion of degree in physical therapy.

PTH 6110. Diagnostic Imaging. (4 Hours)

Introduces the practicing physical therapist to clinical interpretation of various medical imaging techniques, including plain film radiography, magnetic resonance imaging, and computerized tomography. Emphasizes developing familiarity with the visual appearance of various image modalities, recognition and appreciation of common views employed, assessment of normal and abnormal anatomy, and avoidance of common pitfalls in clinical interpretation within the scope of physical therapy practice.

PTH 6130. Pharmacology. (3 Hours)

Covers advanced concepts of pharmacologic management of patients/clients and the interrelationship of pharmacologic management with physical therapy interventions. This includes the physiological processes involved in pharmacodynamics as well as pharmacokinetics with nutrition, absorption, distribution, metabolism, and excretion. Offers students an opportunity to learn how to identify those drugs commonly taken by physical therapy patients and their side effects.

PTH 6140. Motor Control. (4 Hours)

Examines advanced topics in motor control and learning. Involves the study of mechanisms underlying the production, control, and rehabilitation of movement control and motor learning. The application of current research to clinical practice across a variety of settings is a vital component of this course. Discusses the behavioral, neural, cognitive, and physical components of motor control and learning, emphasizing the integration of these with physical therapy practice.

PTH 6200. Research Methods and Statistical Analysis. (5 Hours)

Presents a computer-oriented introduction to statistical methods with applications in life science. Incorporates descriptive statistics, correlation, probability and regression, and the fundamentals of statistical inference. Discusses the relevance of research and statistical analysis in determining the evidence for the effectiveness of physical therapy.

PTH 6235. Administrative and Management Keys for Contemporary Physical Therapist Practice. (4 Hours)

Introduces physical therapists to the latest delivery models of practice and offers the underlying rationale for recent and pending evolutionary reform changes affecting practice. Expounds upon both the clinical and administrative responsibility and accountability essential for all contemporary physical therapy practice success. Presents the clinical competencies that are essential and define direct-access physical therapy. Explores additional administration and management concepts with regard to developing a business plan; managing finances, facilities, and staff; assessing outcomes; and engaging in marketing and public relations. Reviews current trends in payment for physical therapy services as related to implementing the marketing strategies necessary to promote and defend autonomous, yet collaborative, models of physical therapy care.

PTH 6430. Educational Strategies for Effective Healthcare Delivery. (4 Hours)

Explores the diverse and growing teaching expectations and opportunities for physical therapists, including the roles of educator with students, patients/clients, family members, and in the community with an emphasis on cultural sensitivity. The role of physical therapist as educator requires an understanding of educational theory and pedagogy in various settings, from one-on-one sessions with a patient/client, to classroom situations, to public speaking in front of large and diverse crowds.

PTH 6480. Evidence-Based Exercise for the Older Adult. (4 Hours)

Seeks to supply the clinician with the most current and pertinent scientific evidence regarding the role of exercise in older adults. Offers students an opportunity to learn best practices to create an exercise prescription. Employs lectures, discussion boards, and case-study analysis to investigate the cardiopulmonary, musculoskeletal, integumentary, and neuromuscular systems involved in health of older adults. Offers students an opportunity to design exercise prescriptions for special populations, including those individuals with osteoporosis, diabetes, arthritis, and cardiopulmonary disease.

PTH 6490. Pediatric Physical Therapy: Emerging Topics and Evidence-Based Practice. (4 Hours)

Offers a forum for discussing current and pertinent scientific evidence on pediatric physical therapy. Topics include updated information on new medical diagnoses and the role of physical therapy (e.g., mitochondrial disorders), current evidence with regard to tests and measures, interventions, and adaptive equipment. Presents information on emerging and complementary and alternative therapies. Utilizes a variety of learning experiences, including online lecture, discussion, and case studies. Involves students in topic selection, literature presentations, and clinical case studies.

PTH 6563. Evidence-Based Examination and Outcomes for Lumbar Spine and Sacroiliac Joint. (4 Hours)

Reviews the anatomy and biomechanics of the lumbar spine and sacroiliac joint as it relates to musculoskeletal dysfunction. Presents an update on current medical and surgical interventions. Offers students an opportunity to use group case studies to improve their evidence-informed clinical decision making regarding the examination of the lumbar spine and sacroiliac joint. Analyzes the most current, pertinent scientific evidence and information regarding the rehabilitation of the lumbar spine and sacroiliac joint to include manipulation, imaging, and pharmacology.

Prerequisite(s): PTH 6560 with a minimum grade of C- or PTH 6100 with a minimum grade of C- or PTH 6101 with a minimum grade of C-

PTH 6564. Evidence-Based Examination and Outcomes for Lower Extremity: Hip, Knee, Foot, and Ankle. (4 Hours)

Reviews the anatomy and biomechanics of the hip, knee, ankle, and foot as it relates to musculoskeletal dysfunction. Offers students an opportunity to use case studies to gain advanced understanding of normal and abnormal gait as it relates to orthopedic dysfunction and to learn interventions to address faulty biomechanics. Seeks to provide clinicians with the most relevant information regarding evidence-informed rehabilitation for lower-extremity examination and treatment techniques.

Prerequisite(s): PTH 6560 with a minimum grade of C- or PTH 6100 with a minimum grade of C- or PTH 6101 with a minimum grade of C-

PTH 6900. Comprehensive Case Analysis. (4 Hours)

Offers students an opportunity to write a comprehensive and publishable case report, refine it, and analyze it with integration of the components of the patient/client management model, the processes of clinical decision making, and the effective and efficient use of resources. Cases include patients/clients from one of the four categories of conditions that make up the preferred practice patterns in the Guide to Physical Therapist Practice. This case includes information from all courses taken as part of the Doctorate in Physical Therapy and serves as a capstone for the program.

Prerequisite(s): PTH 6100 with a minimum grade of C- or PTH 6101 with a minimum grade of C-

PTH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PTH 6983. Topics in Physical Therapy. (4 Hours)

Provides students with an opportunity to study a specific area of interest that is not an elective already listed by completing a related course for credit as an elective in the DPT program. Requires the student to have the permission of the instructor as well as the director of the transitional DPT Program prior to taking the course.

Physician Assistant (PA)**Courses****PA 6200. Anatomy and Physiology 1. (3 Hours)**

Emphasizes the structure and function of the human body including cells, tissues, and organs. Highlights interrelationships among systems and regulation of physiological functions involved in maintaining homeostasis. Focuses on features of clinical importance. Covers musculoskeletal, neurologic, cardiovascular, respiratory, gastrointestinal, endocrine, immunologic, and renal systems. Requires cadaver laboratory sessions. This course is the first in a two-course sequence.

PA 6201. Anatomy and Physiology 2. (3 Hours)

Emphasizes the structure and function of the human body including cells, tissues, and organs. Highlights interrelationships among systems and regulation of physiological functions involved in maintaining homeostasis. Focuses on features of clinical importance. Covers musculoskeletal, neurologic, cardiovascular, respiratory, gastrointestinal, endocrine, immunologic, and renal systems. Requires cadaver laboratory sessions. This is the second of a two-course sequence.

Prerequisite(s): PA 6200 with a minimum grade of C

PA 6203. Physical Diagnosis and Patient Evaluation 1. (3 Hours)

Presents the techniques for eliciting an accurate history, performing an appropriate physical examination, making case presentations, and documenting patient information. Includes issues such as effective communication, confidentiality, cultural competence, and dealing with patients who are terminally ill or disabled. Emphasizes skill development. Students participate in all aspects of the clinical encounter.

PA 6204. Physical Diagnosis and Patient Evaluation 2. (3 Hours)

Presents the techniques for eliciting an accurate history, performing an appropriate physical examination, making case presentations, and documenting patients' information. Includes issues such as effective communication, confidentiality, cultural competence, and dealing with patients who are terminally ill or disabled. Emphasizes the correlation of pertinent physical findings with their respective clinical conditions. Students participate in all aspects of the clinical encounter.

Prerequisite(s): PA 6203 with a minimum grade of C

PA 6205. Pharmacology 1. (2 Hours)

Examines the classification, mechanisms of action, and use of a broad spectrum of therapeutic agents. Focuses on dose response, side effects, adverse reactions, and the role of patient concordance in medication effectiveness.

PA 6206. Pharmacology 2. (2 Hours)

Continues PA 6205. Examines the classification, mechanisms of action, and use of a broad spectrum of therapeutic agents. Focuses on dose response, side effects, adverse reactions, and the role of patient concordance in medication effectiveness.

Prerequisite(s): PA 6205 with a minimum grade of C

PA 6207. Clinical Laboratory and Diagnostic Methods. (4 Hours)

Covers a variety of diagnostic and therapeutic evaluations including clinical laboratory methods, radiologic studies, and electrocardiography. Includes basic principles of diagnostic and therapeutic patient evaluation, radiology, indications and interpretation of clinical laboratory studies, demonstration and practice of various diagnostic methods, and electrocardiography theory and interpretation.

PA 6208. Professional Issues for Physician Assistants. (2 Hours)

Offers students the opportunity to understand their professional environment, community resources, legal parameters, and ethical situations they may face. Also addresses interpersonal dynamics in working with physicians and other healthcare providers. Some material is covered in problem-based learning sessions.

PA 6209. Clinical Laboratory and Diagnostic Methods 1. (3 Hours)

Covers a variety of diagnostic and therapeutic evaluations including clinical laboratory methods of hematology, transfusion medicine, clinical chemistry, urinalysis and body fluids, radiologic studies inclusive of chest x-ray, and introduction to electrocardiography. Includes basic principles of diagnostic and therapeutic patient evaluation, radiology, indications and interpretation of clinical laboratory studies, demonstration and practice of various diagnostic methods, and electrocardiography theory and interpretation.

PA 6210. Clinical Laboratory and Diagnostic Methods 2. (1 Hour)

Covers a variety of diagnostic and therapeutic evaluations including hematology; microbiology; general chemistry and serology; radiologic studies including CT, MRI, and ultrasound; and advanced electrocardiography. Includes principles of diagnostic and therapeutic patient evaluation, radiology, indications and interpretation of clinical laboratory studies, demonstration and practice of various diagnostic methods, and electrocardiography theory and interpretation.

PA 6311. Principles of Medicine 1. (4 Hours)

Presents a systems approach to the principles of disease processes and includes such topics as physiology, pathophysiology, the natural history of disease, diagnostic procedures, and therapeutic measures. This course is the first of a three-semester series covering core medical concepts and knowledge grounded in scientific principles and evidence-based medicine on the diseases and conditions commonly encountered in clinical practice.

PA 6312. Principles of Medicine 2. (4 Hours)

Continues PA 6311. Presents a systems approach to the principles of disease processes and includes such topics as physiology, pathophysiology, the natural history of disease, diagnostic procedures, and therapeutics measures. This course is the second of a three-semester series covering core medical concepts and knowledge grounded in scientific principles and evidence-based medicine on the diseases and conditions commonly encountered in clinical practice.

Prerequisite(s): PA 6311 with a minimum grade of C

PA 6313. Principles of Medicine 3. (4 Hours)

Continues PA 6312. Presents a systems approach to the principles of disease processes and includes such topics as physiology, pathophysiology, the natural history of disease, diagnostic procedures, and therapeutics measures. This course is the third of a three-semester series covering core medical concepts and knowledge grounded in scientific principles and evidence-based medicine on the diseases and conditions commonly encountered in clinical practice.

Prerequisite(s): PA 6312 with a minimum grade of C

PA 6320. Principles of Obstetrics and Gynecology. (2 Hours)

Focuses on the management of women and fetuses from prepregnancy to term as, during much of that time, care is provided to both patients simultaneously. Gynecology attends to women's reproductive issues from prepuberty through senescence. Uses a variety of presentations, clinical case scenarios, and related readings as the basis for students' learning and development of critical thinking skills related to assessment and management of a woman's health. Students may be expected to read, discuss, acquire, and briefly write about women's health issues.

PA 6321. Principles of Surgery. (2 Hours)

Offers students an opportunity to explore the surgical environment, approach to the surgical patient, and management of surgical conditions with an emphasis on clinical presentation, operative and nonoperative intervention, and perioperative management. Students participate in clinical skills sessions on a variety of surgical techniques including suturing, knot tying, sterile technique, and other minor surgical procedures.

PA 6322. Principles of Orthopedics. (2 Hours)

Discusses common orthopedic problems, including those of the hand, knee, shoulder, and back. Examines special problems of acute trauma and managing uncomplicated orthopedic cases. Also considers such topics as how to complete an adequate patient medical history and perform a physical examination of an orthopedic patient.

PA 6323. Clinical Neurology. (2 Hours)

Presents the clinical application of neuroanatomy and neurophysiology. Offers the opportunity to develop an understanding of the nervous system's normal functioning as well as a clinical approach to assessing and managing nervous system disorders and disease states, and their effects on patients and their families.

PA 6324. Principles of Pediatrics. (2 Hours)

Presents the physiological and psychological fundamentals of child development. Focuses on the major common pediatric illnesses, including their signs, symptoms, and treatment regimens; various immunizations and medications used in pediatrics and their indication and dosage in relation to specific disorders; and management of pediatric emergencies.

PA 6325. Principles of Psychiatry. (2 Hours)

Provides an opportunity to understand how to work with patients and families exhibiting psychiatric problems. Includes such topics as psychological growth and development, psychiatric diagnoses, and the effect of social milieu on behavior, the psychological bases of drug and alcohol abuse, the dynamics of psychosomatic problems, the role of culture in self-concepts, and family attitudes toward mental illness as well as appropriate psychotropic medications.

PA 6326. Aspects of Primary Care. (4 Hours)

Studies approaches to and management of the patient in a primary care setting. Discusses specific diseases and medical conditions common to primary care, including HIV/AIDS. Considers psychosocial aspects of disease as well as aspects of prevention.

PA 6327. Emergency Medicine and Critical Care. (2 Hours)

Presents the principles of life-support techniques. Focuses on the initial management of acute medical and traumatic conditions in hospital and prehospital situations. Instructs students in basic cardiopulmonary resuscitation techniques including BLS and ACLS. Includes such topics as airway management, hemodynamic monitoring and management, dysrhythmia recognition and treatment, cardiac arrest, hypovolemic states and management, invasive procedures, multiorgan system failure, nutritional support, and metabolic management of the ICU patient.

PA 6328. Aging and Rehabilitation Medicine. (2 Hours)

Studies techniques of effective planning and decision making for patients with significant acute and chronic problems. Discusses the purposes, techniques, and potential of rehabilitation medicine. Also focuses on biological changes of aging and appropriate theories of management.

PA 6329. Healthcare Delivery. (2 Hours)

Explores the principal components of the healthcare delivery system, emphasizing its social, political, and economic evolution and development. Discusses trends and their implications.

PA 6330. Research Design. (2 Hours)

Considers research methods and designs used in varied professional settings. Emphasizes development of research techniques, including the ability to define research problems; write hypotheses; review and interpret literature; apply research designs; organize, analyze, and present data; and draw relevant conclusions.

PA 6400. Applied Clinical Study in Medicine. (5 Hours)

Offers supervised clinical practice experience that is designed to foster students' growth regarding general medical knowledge and clinical reasoning skills. Students may have the opportunity to review historical information, interview patients, perform physical exams, order and interpret studies, perform procedures, present assessments, develop differentials, educate patients, coordinate interdisciplinary communication, document encounters, develop professionalism skills, and improve the ability to triage and manage tasks efficiently.

PA 6401. Applied Clinical Study in Ambulatory Medicine. (5 Hours)

Offers supervised clinical practice experience. Allows students to further hone their content knowledge and clinical skills either in the area of primary care or in a selected subspecialty area of medicine. Offers students an opportunity to develop skills related to both the initial assessment, as well as the ongoing management of patients with established diagnoses, while working to develop their clinical reasoning skills given initial presentations. Emphasizes assessing and managing both acute and chronic medical problems.

PA 6402. Applied Clinical Study in Family Practice. (5 Hours)

Offers supervised clinical practice experience. Offers students an opportunity to evaluate and treat patients while emphasizing the patient as an individual and family member. Clinical rotation experience may include exposure to preventative medicine, patient education, integration of community services, and medical diagnosis and management for both acute and chronic conditions.

PA 6403. Applied Clinical Study in Emergency Medicine. (5 Hours)

Offers supervised clinical practice experience. Offers students an opportunity to gain experience triaging, evaluating, and managing patients in an emergency medicine setting. Clinical skills honed may include the ability to diagnose and manage patients who present with urgent and emergent complaints, ranging from acute illnesses and traumatic injuries to life-threatening issues.

PA 6404. Applied Clinical Study in Women's Health. (5 Hours)

Offers supervised clinical practice experience. Offers students exposure to clinical medicine as it relates to typical women's health issues. May include common gynecologic disorders, obstetrical complaints, and/or family planning.

PA 6405. Applied Clinical Study in Pediatrics. (5 Hours)

Offers supervised clinical practice experience. Offers students an opportunity to manage care of pediatric patients. Common components of this rotation may include exposure to both well child and urgent care visits, offering students an opportunity to develop interview and physical examination skills with children of all ages.

PA 6406. Applied Clinical Study in Surgery. (5 Hours)

Offers supervised clinical practice experience. Designed to allow students to gain experience in a surgical setting. Experiences may include preoperative, intraoperative, as well as postoperative patient care. Offers students an opportunity to hone their procedural and assessment skills, distinguish between surgical vs. nonsurgical presentations, and differentiate acute from elective complaints.

PA 6407. Applied Clinical Study in Mental Health. (5 Hours)

Offers supervised clinical practice experience. Exposes students to a variety of behavioral medicine patient care experiences. Emphasizes recognizing various types of mental health disorders that may require referral to a specialist and managing problems that can be handled by the nonspecialist. Offers students an opportunity to further their understanding of effective patient interactions and the mental health components of health, disease, and disability.

PA 6408. Applied Clinical Study Elective. (5 Hours)

Offers supervised clinical practice experience. Exposes students to a medical, surgical, or subspecialty of either field for further study. Offers students an opportunity to hone their ability to recognize and treat conditions within these fields of medicine to foster utilization or support of related specialists. Select students may participate in an elective that focuses on global health or on a clinical support role, such as administration, leadership, public health, or technology as it relates to healthcare.

PA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PA 6998. PA Practical Skill Boot Camp. (0 Hours)

Continues clinical requirements. Focuses on practice and assessment of clinical skills relevant to the physician assistant. May be repeated five times.

Physics (PHYS)**Courses****PHYS 1000. Physics at Northeastern. (1 Hour)**

Intended for freshmen in the College of Science. Introduces freshmen to the liberal arts in general; familiarizes them with their major; helps them develop the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps them develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

PHYS 1111. Introduction to Astronomy. (4 Hours)

Introduces modern astronomical ideas. Topics include an introduction to the cosmos, Earth and its relation to the universe, our solar system (planets, moons, asteroids, and comets), the sun and how it works, stars and their classification, and the life and death of stars. Introduces various tools of the astronomer (the nature of light and radiation, telescopes, the types of spectra, and what they tell us).

Attribute(s): NUpath Natural/Designed World

PHYS 1115. Life in the Universe. (4 Hours)

Explores the possibility of life in the universe from the astronomy, geology, biology, and chemistry point of view, emphasizing the recent astronomical discoveries of planets outside the solar system. Invites students to consider how planetary evolution affects life or the potential habitability of exoplanets. Analyzes environmental limits or “extremes” under which life can survive and what life might look like on another world. Guides the student on a quest to identify habitable—or even inhabited—worlds through the data of the most recent discoveries and observations.

Attribute(s): NUpath Natural/Designed World

PHYS 1122. Modern Science: A Voyage into Matter, Life, and Mind. (4 Hours)

Offers an intellectual voyage into matter, life, and mind—the three pillars of modern science. It is a mosaic of different themes that offer a concise overview of science's greatest minds, ideas, questions, discoveries, theories, and methods while placing all of them within their historical contexts. Emphasizes the profound scientific revolutions of the 20th century—quantum mechanics, biogenetics, and artificial intelligence—that unlocked the secrets of the atom, unraveled the molecule of life, and created the electronic computer. Recognizes significant trends across a wide range of subjects, including medicine, biotechnology, computing and communicating, artificial intelligence and artificial life, and robotics. Discusses the synergism of science, technology, and business on future scientific development.

Attribute(s): NUpath Natural/Designed World

PHYS 1125. Introduction to Network Science: From the Human Cell to Facebook. (4 Hours)

Introduces network science as a way to understand complex patterns of connections and relationships in increasingly complex social, infrastructure, transportation, information, and biological networks, as well as business and consumer networks. Describes basic conceptual and computational tools to model networks and discusses applications of those tools through a wide range of examples from the World Wide Web to protein and gene networks to massive social networks such as Twitter and Facebook. Discusses both network structures and dynamical phenomena on networks, such as spreading of information, rumors, gossip, and epidemics.

Attribute(s): NUpath Natural/Designed World, NUpath Societies/Institutions

PHYS 1130. Computing, Data, and Science. (4 Hours)

Introduces how to deal with data and computation problems through the use of computer languages commonly used in the sciences. Focuses on manipulating data, but symbolic calculations are also covered. Intended for science majors during the first summer, when such a course can act as a foundation for later work.

Attribute(s): NUpath Analyzing/Using Data

PHYS 1132. Energy, Environment, and Society. (4 Hours)

Seeks to provide nonscience students with a practical knowledge of our present use of the Earth's energy resources and the environmental consequences. Topics include fossil fuels for transportation and electrical power, global warming, nuclear energy, solar energy, wind power, biomass, electric and hybrid vehicles, and air pollution. No previous knowledge of physics is assumed; nevertheless, because of the nature of the subject, a significant part of the course includes simple quantitative reasoning.

Attribute(s): NUpath Natural/Designed World, NUpath Societies/Institutions

PHYS 1141. General Physics. (4 Hours)

Covers mechanics, fluids, and vibrations and waves. Emphasizes the application of physics to a variety of problems in structural engineering. Mechanics topics include one-dimensional motion, forces, vectors, Newton's laws, equilibrium, work, energy, and power. Fluids topics include density, pressure, buoyancy, and fluids in motion. Vibrations and waves topics include mechanical vibrations and sound. Requires knowledge of algebra.

Attribute(s): NUpath Natural/Designed World

PHYS 1145. Physics for Life Sciences 1. (4 Hours)

Covers mechanics, fluids, and temperature and kinetic theory. The application of physics to a variety of problems in the life and health sciences is emphasized. Mechanics topics include one-dimensional motion, forces, vectors, Newton's laws, equilibrium, work, energy, and power. Fluids topics include density, pressure, buoyancy, fluids in motion, viscosity, and surface tension. Temperature and kinetic theory topics include temperature, thermal equilibrium, gas laws, ideal gas law, kinetic theory, vapor pressure, and diffusion. A laboratory is included.

Corequisite(s): PHYS 1146

Attribute(s): NUpath Natural/Designed World

PHYS 1146. Lab for PHYS 1145. (1 Hour)

Accompanies PHYS 1145. Covers topics from the course through various experiments.

Corequisite(s): PHYS 1145

Attribute(s): NUpath Analyzing/Using Data

PHYS 1147. Physics for Life Sciences 2. (4 Hours)

Continues PHYS 1145. Covers heat, electricity, vibrations and waves, sound, geometrical optics, and nuclear physics and radioactivity. The application of physics to a variety of problems in the life and health sciences is emphasized. Electricity topics include electrostatics, capacitance, resistivity, direct-current circuits, and RC circuits. Vibrations and waves topics include simple harmonic motion and wave motion. Sound topics include wave characteristics, the ear, Doppler effect, shock waves, and ultrasound. Optics topics include reflection, mirrors, refraction, total internal reflection, fiber optics, lenses, the eye, telescopes, and microscopes. Nuclear physics and radioactivity topics include atomic nucleus, radioactivity, half-life, radioactive dating, detectors, nuclear reaction, fission, fusion, radiation damage, radiation therapy, PET, and MRI. A laboratory is included.

Prerequisite(s): PHYS 1145 with a minimum grade of D- or PHYS 1149 with a minimum grade of D- or PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-

Corequisite(s): PHYS 1148

Attribute(s): NUpath Natural/Designed World

PHYS 1148. Lab for PHYS 1147. (1 Hour)

Accompanies PHYS 1147. Covers topics from the course through various experiments.

Corequisite(s): PHYS 1147

Attribute(s): NUpath Analyzing/Using Data

PHYS 1149. Physics for Pharmacy. (4 Hours)

Offers an integrated lecture and laboratory course for pharmacy students.

Corequisite(s): PHYS 1150

Attribute(s): NUpath Natural/Designed World

PHYS 1150. Lab for PHYS 1149. (1 Hour)

Accompanies PHYS 1149. Covers topics from the course through various experiments.

Corequisite(s): PHYS 1149

Attribute(s): NUpath Analyzing/Using Data

PHYS 1151. Physics for Engineering 1. (3 Hours)

Covers calculus-based physics. Offers the first semester of a two-semester integrated lecture and laboratory sequence intended primarily for engineering students. Covers Newtonian mechanics and fluids. Stresses the balance between understanding the basic concepts and solving specific problems. Includes topics such as one-dimensional and three-dimensional motion, Newton's laws, dynamics friction, drag, work, energy and power, momentum and collisions, rotational dynamics, forces, torque and static equilibrium, pressure, fluids, and gravity.

Prerequisite(s): MATH 1241 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1340 (may be taken concurrently) with a minimum grade of D- or MATH 1341 (may be taken concurrently) with a minimum grade of D- or MATH 1342 (may be taken concurrently) with a minimum grade of D- or MATH 2321 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

PHYS 1152. Lab for PHYS 1151. (1 Hour)

Accompanies PHYS 1151. Covers topics from the course through various experiments. Requires concurrent registration in PHYS 1151 and PHYS 1153.

Attribute(s): NUpath Analyzing/Using Data

PHYS 1153. Interactive Learning Seminar for PHYS 1151. (1 Hour)

Offers interactive problem solving for PHYS 1151. Emphasizes organized approaches and use of mathematical techniques, including calculus, to solve a wide range of problems in mechanics. Topics include static equilibrium, applications of Newton's laws and conservation principles, rotational dynamics, and fluids. Requires concurrent registration in PHYS 1151 and PHYS 1152.

PHYS 1155. Physics for Engineering 2. (3 Hours)

Continues PHYS 1151. Offers integrated lecture and laboratory. Covers electrostatics; capacitors; resistors and direct-current circuits; magnetism and magnetic induction; RC, LR, and LRC circuits; waves; electromagnetic waves; and radiation.

Prerequisite(s): (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-); (MATH 1242 (may be taken concurrently) with a minimum grade of D- or MATH 1342 (may be taken concurrently) with a minimum grade of D- or MATH 2321 (may be taken concurrently) with a minimum grade of D-)

Corequisite(s): PHYS 1157

Attribute(s): NUpath Natural/Designed World

PHYS 1156. Lab for PHYS 1155. (1 Hour)

Accompanies PHYS 1155. Covers topics from the course through various experiments. Requires concurrent registration in PHYS 1155 and PHYS 1157.

Attribute(s): NUpath Analyzing/Using Data

PHYS 1157. Interactive Learning Seminar for PHYS 1155. (1 Hour)

Offers interactive problem solving for PHYS 1155. Emphasizes organized approaches and use of mathematical techniques, including calculus, to solve a wide range of problems in electricity, magnetism, and waves. Requires concurrent registration in PHYS 1155 and PHYS 1156.

Corequisite(s): PHYS 1155

PHYS 1161. Physics 1. (4 Hours)

Covers calculus-based physics. Offers the first semester of a two-semester integrated lecture and laboratory sequence intended primarily for science students. Covers Newtonian mechanics and fluids. Emphasizes the underlying concepts and principles. Takes applications from a wide variety of fields, such as life sciences and medicine, astro- and planetary physics, and so on. Includes topics such as forces, torque and static equilibrium, one-dimensional and three-dimensional motion, Newton's laws, dynamics friction, drag, work, energy and power, momentum and collisions, rotational dynamics, oscillations, pressure, fluids, and gravity.

Prerequisite(s): MATH 1241 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1341 (may be taken concurrently) with a minimum grade of D- or MATH 1342 (may be taken concurrently) with a minimum grade of D- or MATH 2321 (may be taken concurrently) with a minimum grade of D-

Corequisite(s): PHYS 1162, PHYS 1163

Attribute(s): NUpath Natural/Designed World

PHYS 1162. Lab for PHYS 1161. (1 Hour)

Accompanies PHYS 1161. Covers topics from the course through various experiments.

Corequisite(s): PHYS 1161, PHYS 1163

Attribute(s): NUpath Analyzing/Using Data

PHYS 1163. Recitation for PHYS 1161. (0 Hours)

Accompanies PHYS 1161. Offers an opportunity for interactive problem solving.

Corequisite(s): PHYS 1161, PHYS 1162

PHYS 1165. Physics 2. (4 Hours)

Continues PHYS 1161. Offers the second semester of a two-semester integrated lecture and laboratory sequence intended primarily for science students. Includes topics such as electrostatics; capacitors; resistors and direct-current circuits; magnetism and magnetic induction; RC, LR, and LRC circuits; waves; electromagnetic waves; and fluids.

Prerequisite(s): (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-); (MATH 1342 (may be taken concurrently) with a minimum grade of D- or MATH 2321 (may be taken concurrently) with a minimum grade of D-)

Corequisite(s): PHYS 1166, PHYS 1167

Attribute(s): NUpath Natural/Designed World

PHYS 1166. Lab for PHYS 1165. (1 Hour)

Accompanies PHYS 1165. Covers topics from the course through various experiments.

Corequisite(s): PHYS 1165, PHYS 1167

Attribute(s): NUpath Analyzing/Using Data

PHYS 1167. Recitation for PHYS 1165. (0 Hours)

Accompanies PHYS 1165. Offers an opportunity for interactive problem solving.

Corequisite(s): PHYS 1165, PHYS 1166

PHYS 1171. Physics 1 for Bioscience and Bioengineering. (3 Hours)

Designed for students in engineering and science majors with a biologically related curriculum. Studies the fundamentals of calculus-based physics through a relationship with living systems. Includes topics such as kinematics of living systems, stress/strain/strength of biomaterials, fluid flow and boundary layers, aspiration and circulatory models, diffusion and random motion, and thermodynamics with examples from living systems.

Prerequisite(s): MATH 1241 (may be taken concurrently) with a minimum grade of D- or MATH 1251 (may be taken concurrently) with a minimum grade of D- or MATH 1340 (may be taken concurrently) with a minimum grade of D- or MATH 1341 (may be taken concurrently) with a minimum grade of D- or MATH 1342 (may be taken concurrently) with a minimum grade of D- or MATH 2321 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

PHYS 1172. Lab for PHYS 1171. (1 Hour)

Accompanies PHYS 1171. Experiments include measurement and error, forces in one dimension, work and energy on an air track, fluid flow, Brownian diffusion, uniform circular motion, and ideal gas laws. Requires concurrent registration in PHYS 1171 and PHYS 1173.

Attribute(s): NUpath Analyzing/Using Data

PHYS 1173. Interactive Learning Seminar for PHYS 1171. (1 Hour)

Offers interactive problem solving for PHYS 1171. Emphasizes organized approaches to solve a wide range of problems in the course. Requires concurrent registration in PHYS 1171 and PHYS 1172.

PHYS 1175. Physics 2 for Bioscience and Bioengineering. (3 Hours)

Continues PHYS 1171. Includes topics such as wave motion and hearing; electric fields (including application to biological membranes); direct current electrical circuits (including biological circuits); RC circuit models of ion channels; bioelectricity in marine organisms; electromagnetic waves and optics; modern physics (including radioactive decay, applications of radioactivity in nuclear medicine, and carbon 14 dating).

Prerequisite(s): (PHYS 1151 with a minimum grade of D- or PHYS 1161 with a minimum grade of D- or PHYS 1171 with a minimum grade of D-); (MATH 1242 (may be taken concurrently) with a minimum grade of D- or MATH 1342 (may be taken concurrently) with a minimum grade of D- or MATH 2321 (may be taken concurrently) with a minimum grade of D-)

Attribute(s): NUpath Natural/Designed World

PHYS 1176. Lab for PHYS 1175. (1 Hour)

Accompanies PHYS 1175. Experiments include standing waves, electric charge/field, DC circuits, gel electrophoresis, geometric optics, light spectroscopy, and radioactive decay. Requires concurrent registration in PHYS 1175 and PHYS 1177.

Attribute(s): NUpath Analyzing/Using Data

PHYS 1177. Interactive Learning Seminar for PHYS 1175. (1 Hour)

Offers interactive problem solving for PHYS 1175. Emphasizes organized approaches to solve a wide range of problems in the course. Requires concurrent registration in PHYS 1175 and PHYS 1176.

PHYS 1191. Foundations of Theoretical Physics. (4 Hours)

Presents a comprehensive, self-contained introduction to the conceptual and mathematical foundations of theoretical physics. Commences with an integrated, first-principles approach to its five main areas: analytical dynamics, fields, statistical physics, relativity, and quantum theory. Focuses mostly on classical mechanics. Constitutes the first half of a two-semester calculus-based introductory physics sequence for science majors. Designed for students with preparation in Newtonian mechanics or those with advanced math preparation.

Prerequisite(s): (MATH 1241 with a minimum grade of D- or MATH 1242 (may be taken concurrently) with a minimum grade of D- or MATH 1341 with a minimum grade of D- or MATH 1342 (may be taken concurrently) with a minimum grade of D- or MATH 2321 (may be taken concurrently) with a minimum grade of D-)

Corequisite(s): PHYS 1192, PHYS 1193

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Natural/Designed World

PHYS 1192. Lab for PHYS 1191. (1 Hour)

Accompanies PHYS 1191. Covers topics from the course through various experiments.

Corequisite(s): PHYS 1191, PHYS 1193

Attribute(s): NUpath Analyzing/Using Data

PHYS 1193. Recitation for PHYS 1191. (0 Hours)

Accompanies PHYS 1191. Offers an opportunity for interactive problem solving.

Corequisite(s): PHYS 1191, PHYS 1192

PHYS 1211. Computational Problem Solving in Physics. (4 Hours)

Introduces students to computational problem-solving techniques with common computer languages used in the physical sciences. Begins with programming basics of data handling, visualization tools, random number generators, functions, and control statements and expands to more advanced topics of interpolation, numeric integration, numeric derivatives, ordinary differential equations, and some Monte Carlo techniques. Explores topics contextually using physical models and problems.

Prerequisite(s): (PHYS 1155 (may be taken concurrently) with a minimum grade of D or PHYS 1165 (may be taken concurrently) with a minimum grade of D or PHYS 1175 (may be taken concurrently) with a minimum grade of D); (MATH 1342 (may be taken concurrently) with a minimum grade of D or MATH 2321 (may be taken concurrently) with a minimum grade of D)

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World

PHYS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 2303. Modern Physics. (4 Hours)

Reviews experiments demonstrating the atomic nature of matter, the properties of the electron, the nuclear atom, the wave-particle duality, spin, and the properties of elementary particles. Discusses, mostly on a phenomenological level, such subjects as atomic and nuclear structure, properties of the solid state, and elementary particles. Introduces the special theory of relativity.

Prerequisite(s): (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-); MATH 2321 (may be taken concurrently) with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

PHYS 2371. Electronics. (3 Hours)

Covers the physics underlying computers and our modern electronic world. Focuses on principles of semiconductor devices (diodes, transistors, integrated circuits, LEDs, photovoltaics); analog techniques (amplification, AC circuits, resonance); digital techniques (binary numbers, NANDs, logic gates, and circuits); electronic subsystems (operational amplifiers, magnetoelectronics, optoelectronics); and understanding commercial electronic equipment. Lab experiments are designed to investigate the properties of discrete and integrated devices and use them to design and build circuits.

Prerequisite(s): PHYS 1165 with a minimum grade of D- or PHYS 1155 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-

Corequisite(s): PHYS 2372

Attribute(s): NUpath Natural/Designed World

PHYS 2372. Lab for PHYS 2371. (1 Hour)

Accompanies PHYS 2371. Illustrates topics from the lecture course through various hands-on experimental projects. Covers the process of electronics design from a goal-oriented perspective. Students are expected to consider their own electronics design project and build a prototype device that accomplishes a specific purpose.

Corequisite(s): PHYS 2371

Attribute(s): NUpath Creative Express/Innov

PHYS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 2991. Research in Physics. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated seven times.

PHYS 3111. Astrophysical Processes: Decoding the Universe. (4 Hours)

Introduces the important astrophysical processes happening in the universe, including interactions between astrophysical matter and radiation (scattering, absorption, refraction); interaction between astrophysical matter and space (Doppler effect and gravitational lensing); and emission of radiation from astrophysical sources (continuous and line). By the end of the course, successful students should be able to recognize the nature of an astrophysical source from the signal as detected on Earth or in space.

Prerequisite(s): (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D-); PHYS 2303 (may be taken concurrently) with a minimum grade of D-

PHYS 3211. Advanced Computational Problem Solving in Physics. (4 Hours)

Explores the application of scientific computing languages, such as Python, in modeling the physical world and advancing physics. Topics include linear and non-linear systems, eigensystems, ordinary differential equations, boundary value problems, Monte Carlo techniques, and machine learning. Contextualizes topics within natural phenomena, physics models, and physics problems. Emphasizes developing proficiency in computational methods for modeling nature and solving complex physical phenomena.

Prerequisite(s): (MATH 2331 with a minimum grade of C- or MATH 2341 with a minimum grade of C-); PHYS 2303 with a minimum grade of C-

Attribute(s): NUpath Analyzing/Using Data

PHYS 3600. Advanced Physics Laboratory. (4 Hours)

Introduces research through experiments that go beyond the simple demonstration of basic physical principles found in introductory physics courses. Data are taken to higher precision and the analysis is more in-depth. Experiments focus on lasers, fiber-optic communication, spectroscopy, Faraday rotation, speed of light, semiconductor physics, Hall effect, fuel cells, and Fourier analysis of music and sound. Lab reports are assessed on organization, format, grammar, and style. Offers students an opportunity to significantly improve their abilities in written scientific communication.

Prerequisite(s): PHYS 2303 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Analyzing/Using Data, NUpath Natural/Designed World, NUpath Writing Intensive

PHYS 3601. Classical Dynamics. (4 Hours)

Covers advanced topics in classical mechanics including vector kinematics, harmonic oscillator and resonance, generalized coordinates, Lagrange's equations, central forces and the Kepler problem, rigid body motion, and mathematical methods in physics.

Prerequisite(s): (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-); (MATH 2341 (may be taken concurrently) with a minimum grade of D- or MATH 2351 (may be taken concurrently) with a minimum grade of D-)

Attribute(s): NUpath Natural/Designed World

PHYS 3602. Electricity and Magnetism 1. (4 Hours)

First course of a two-course sequence in electricity, magnetism, and electromagnetic theory. Covers electrostatics and dielectric materials, magnetostatics and magnetic materials, currents in conductors, induction, displacement currents, computer solutions of EM problems, and Maxwell's equations.

Prerequisite(s): (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-); MATH 2321 with a minimum grade of D- ; (MATH 2341 (may be taken concurrently) with a minimum grade of D- or MATH 2351 (may be taken concurrently) with a minimum grade of D-)

Attribute(s): NUpath Natural/Designed World

PHYS 3603. Electricity and Magnetism 2. (4 Hours)

Continues PHYS 3602. Focuses on electromagnetic waves in vacua and matter, electrodynamics and radiation, and computer visualization of electromagnetic fields. Also considers special relativity.

Prerequisite(s): PHYS 3602 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

PHYS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 4111. Multimessenger Astrophysics. (4 Hours)

Investigates the variety of astrophysical signals produced by galactic and extragalactic sources, in connection with and independently from the electromagnetic wave (EM) signals. Introduces the basic theory behind the production, transmission, and detection of astrophysical neutrinos, cosmic rays, dark matter, and gravitational waves. Topical in nature, the course offers a solid introduction to the newest discoveries in astrophysics.

Prerequisite(s): PHYS 2303 with a minimum grade of D-

PHYS 4115. Quantum Mechanics. (4 Hours)

Focuses on observations of macroscopic and microscopic bodies. Covers the uncertainty principle and wave-particle duality; probability amplitudes; Schrödinger wave theory and one-dimensional problems, Schrödinger equation in three dimensions; and angular momentum and the hydrogen atom.

Prerequisite(s): PHYS 2303 with a minimum grade of D-

Attribute(s): NUpath Formal/Quant Reasoning, NUpath Natural/Designed World

PHYS 4305. Thermodynamics and Statistical Mechanics. (4 Hours)

Focuses on first and second laws of thermodynamics, entropy and equilibrium, thermodynamic potentials, elementary kinetic theory, statistical mechanics, and the statistical interpretation of entropy. Utilizes the principles of quantum mechanics to describe the behavior of thermodynamic/statistically-large systems such as quantum gases.

Prerequisite(s): (PHYS 1155 with a minimum grade of D- or PHYS 1165 with a minimum grade of D- or PHYS 1175 with a minimum grade of D-); MATH 2321 (may be taken concurrently) with a minimum grade of D- ; PHYS 2303 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

PHYS 4606. Mathematical and Computational Methods for Physics. (4 Hours)

Covers advanced mathematical methods topics that are commonly used in the physical sciences, such as complex calculus, Fourier transforms, special functions, and the principles of variational calculus. Applies these methods to computational simulation and modeling exercises. Introduces basic computational techniques and numerical analysis, such as Newton's method, Monte Carlo integration, gradient descent, and least squares regression. Uses a simple programming language, such as MATLAB, for the exercises.

Prerequisite(s): PHYS 2303 with a minimum grade of D- ; MATH 2321 with a minimum grade of D- ; (MATH 2341 with a minimum grade of D- or MATH 2351 with a minimum grade of D-)

Attribute(s): NUpath Formal/Quant Reasoning

PHYS 4621. Biological Physics 1. (4 Hours)

Offers an introduction to biophysics focusing on development and implementation of physical models for various biophysical processes that occur in living organisms and in living cells. Topics covered, some of which are explored through computational examples, include thermodynamics of solutions and cells, randomness, diffusion, entropy, membranes, electrostatics, and electricity in cells.

Prerequisite(s): PHYS 2303 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

PHYS 4623. Medical Physics. (4 Hours)

Introduces the physical principles and basic mathematical methods underlying the various modalities of medical imaging. These include computed tomography (CT), magnetic resonance (MRI), positron emission tomography (PET), single-photon emission tomography (SPECT), and ultrasound. Covers nuclear physics and the interaction of radiation with biological matter with application to radiation therapy.

Prerequisite(s): MATH 2321 with a minimum grade of D-

PHYS 4651. Medical Physics Seminar 1. (4 Hours)

Offers the first part of a seminar series conducted by expert practitioners from Boston-area hospitals. Examines the clinical applications of medical imaging methods (CT, MRI, and PET), the clinical applications of radiation therapy, and the clinical applications of lasers and optical techniques. Includes site visits to local hospitals and medical instrumentation companies.

Prerequisite(s): PHYS 4623 with a minimum grade of D-

PHYS 4652. Medical Physics Seminar 2. (4 Hours)

Continues PHYS 4651. Further examines the clinical applications of medical imaging methods (CT, MRI, and PET), the clinical applications of radiation therapy, and the clinical applications of lasers and optical techniques.

Prerequisite(s): PHYS 4623 with a minimum grade of D-

PHYS 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PHYS 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): PHYS 4970 with a minimum grade of D-

PHYS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

PHYS 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of a member of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

PHYS 5113. Particle Physics. (4 Hours)

Introduces the physics of elementary particles and the fundamental interactions among them. Topics include classification of particles, electromagnetic interactions, strong and weak nuclear forces, mesons and nucleons, quarks and gluons, and unified theories of elementary particle interactions.

Prerequisite(s): (PHYS 2303 with a minimum grade of D- ; PHYS 4115 with a minimum grade of D-) or graduate program admission

Attribute(s): NUpath Natural/Designed World

PHYS 5114. Physics and Applications of Quantum Materials. (4 Hours)

Introduces students to the quantum materials, the nature and origins of their unique behaviors, and how these systems can be used to enable new quantum technologies. Beginning with a description of the electronic structure of solids, describes how interactions between electrons and spins can manifest electrical and magnetic properties that cannot be explained with a classical description and how isolated defects in solids can be utilized for quantum technologies.

Prerequisite(s): (PHYS 2303 with a minimum grade of D- ; PHYS 3602 with a minimum grade of D- ; (PHYS 2305 with a minimum grade of D- or PHYS 4305 with a minimum grade of D-); PHYS 4115 (may be taken concurrently) with a minimum grade of D-) or graduate program admission

Attribute(s): NUpath Natural/Designed World

PHYS 5116. Network Science 1. (4 Hours)

Introduces network science and the set of analytical, numerical, and modeling tools used to understand complex networks emerging in nature and technology. Focuses on the empirical study of real networks, with examples coming from biology (metabolic, protein interaction networks), computer science (World Wide Web, Internet), or social systems (e-mail, friendship networks). Shows the organizing principles that govern the emergence of networks and the set of tools necessary to characterize and model them. Covers elements of graph theory, statistical physics, biology, and social science as they pertain to the understanding of complex systems.

Prerequisite(s): PHYS 2303 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Natural/Designed World

PHYS 5117. Advanced Astrophysics Topics. (4 Hours)

Seeks to provide an understanding of our universe through the connection between cosmology and particle physics. Covers basic concepts of the modern universe, stellar structure and evolution, and dark matter theory while introducing recent astrophysical observations and experiments.

Prerequisite(s): (PHYS 2303 with a minimum grade of D- ; (PHYS 2305 with a minimum grade of D- or PHYS 4305 with a minimum grade of D-)) or graduate program admission

PHYS 5118. General Relativity and Cosmology. (4 Hours)

Introduces basic concepts in the general theory of relativity, including Riemannian geometry and Einstein's field equations. These concepts are applied in studying the standard model of cosmology. Topics include thermodynamics in an expanding universe, dark matter and dark energy, and modern theories of cosmology.

Prerequisite(s): (PHYS 2303 with a minimum grade of D- ; (PHYS 2305 with a minimum grade of D- or PHYS 4305 with a minimum grade of D-)) or graduate program admission

PHYS 5125. Advanced Quantum Mechanics. (4 Hours)

Introduces time-independent and time-dependent perturbation theory. Covers hydrogen fine structure, Zeeman effect, helium splitting, variational principle, adiabatic approximation, scattering theory, second quantization, and modern topics such as theory of quantum entanglement, quantum computing, and quantum biology.

Prerequisite(s): PHYS 4115 with a minimum grade of D- or graduate program admission

PHYS 5260. Introduction to Nanoscience and Nanotechnology. (4 Hours)

Focuses on reviewing the basic scientific concepts relevant to this field and also gives a broad overview of the current state-of-the-art in research and technology. Nanotechnology promises to transform twenty-first century technology by exploiting phenomena exhibited by nanoscaled materials. This technology is expected to have significant impact in diverse areas such as computers, electronics, health, etc. Successful technological advancement of this field requires that we have a fundamental understanding of the "science" of these materials. This course comprises a series of lectures on various topics: development of nanofabrication methods, advanced microscopy techniques, fabrication of novel nanomaterials, investigation of their fundamental properties and device applications. Provides a strong introduction for students interested in nanoscience and technology.

Prerequisite(s): PHYS 2303 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Natural/Designed World

PHYS 5318. Principles of Experimental Physics. (4 Hours)

Designed to introduce students to the techniques of modern experimental physics. Topics include communication and information physics, signal processing and noise physics, applied relativity physics, detector techniques, semiconductor and superconductor physics, nanoscale microscopy and manipulation, and lasers and quantum optics.

Prerequisite(s): PHYS 2303 with a minimum grade of D- or graduate program admission

Attribute(s): NUpath Analyzing/Using Data, NUpath Capstone Experience, NUpath Natural/Designed World, NUpath Writing Intensive

PHYS 5352. Quantum Computation and Information. (4 Hours)

Introduces the foundations of quantum computation and information, including finite dimensional quantum mechanics, gates and circuits, quantum algorithms, quantum noise, and error-correcting codes. Assumes a working knowledge of linear algebra and matrix analysis, but no prior experience with quantum theory or algorithms is required.

PHYS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 7200. Methods of Advanced Problem Solving. (4 Hours)

Designed to improve the ability of students to solve physics problems, which are of the same degree of difficulty as problems that often appear on the qualifying exam.

PHYS 7210. Introduction to Research in Physics. (0 Hours)

Offers a weekly seminar to introduce first- and second-year physics graduate students to research being done in the Physics department by advanced physics graduate students and faculty. May be repeated without limit.

PHYS 7220. Methods for Teaching in the Introductory Physics Laboratory 1. (0 Hours)

Introduces first-year physics graduate students to the role of teaching assistant (TA) in the laboratory. Designed to prepare TAs for the experiments they are required to teach undergraduate students. Focuses on improving their teaching and grading effectiveness.

PHYS 7230. Methods for Teaching Introductory Physics Laboratory 2. (0 Hours)

Continues PHYS 7220, offered to first-year graduate physics teaching assistants. Designed to prepare TAs for the experiments they teach to undergraduate students. Offers students an opportunity to improve their teaching and grading effectiveness.

Prerequisite(s): PHYS 7220 with a minimum grade of S

PHYS 7301. Classical Mechanics/Math Methods. (4 Hours)

Covers mathematical methods of physics and classical mechanics. Topics include differential equations, boundary value problems, functions of a complex variable, linear vector spaces, Green's functions, Lagrangian and Hamiltonian mechanics, linear oscillators, and scattering. May include additional topics as time permits.

PHYS 7302. Electromagnetic Theory. (4 Hours)

Analyzes Maxwell's equations in vacuum and special relativity. Topics include electric and magnetic fields due to known sources with boundary conditions, radiation fields, bremsstrahlung, synchrotron radiation, the energy-momentum tensor for the electromagnetic field, fields in material media, boundary conditions at the interface between two media, and scattering of radiation. May include additional topics as time permits.

PHYS 7305. Statistical Physics. (4 Hours)

Briefly reviews thermodynamics. Topics include the principles of statistical mechanics and statistical thermodynamics; density matrix; theory of ensembles; Fermi-Dirac and Bose-Einstein statistics, application to gases, liquids, and solids; theory of phase transitions; and thermodynamics of electric and magnetic systems, transport phenomena, random walks, and cooperative phenomena.

PHYS 7315. Quantum Theory 1. (4 Hours)

Explores the experimental basis of quantum theory, the Schrödinger equation, and probability interpretation of wave mechanics. Topics include the uncertainty principle, application to one-dimensional problems, the harmonic oscillator, orbital angular momentum, and the central force problem.

PHYS 7316. Quantum Theory 2. (4 Hours)

Continues PHYS 7315. Topics include quantum theory of scattering; Born approximation; phase-shift analysis; introduction to S-matrix theory; general formulation quantum mechanics in Hilbert space; spin; identical particles and symmetrization principle; time-independent and time-dependent perturbation theory; semiclassical theory of radiation and atomic spectra; addition of angular momentum; Wigner-Eckart theorem; quantum theory of radiation; and absorption, emission, and scattering of photons. Also introduces free particle Dirac equation.

Prerequisite(s): PHYS 7315 with a minimum grade of C-

PHYS 7321. Computational Physics. (4 Hours)

Covers basic numerical methods for differentiation, integration, and matrix operations used in linear algebra problems, discrete Fourier transforms, and standard and stochastic ordinary and partial differential equations. Specific applications of these methods may include classical chaos, computation of eigenstates of simple quantum systems, classical phase transitions, boundary value problems, pattern formation, and molecular dynamics and classical/quantum Monte Carlo methods to simulate the equilibrium and nonequilibrium properties of condensed phases.

PHYS 7322. Nonequilibrium Physics. (4 Hours)

Covers selected topics in nonequilibrium statistical mechanics and nonlinear physics to be selected by the instructor, with emphasis on classical theories of solids, fluids, and other more complex phases of matter. Topics may include Brownian motion, including Langevin and Fokker-Planck equations; linear response theory and transport phenomena; nonequilibrium phase transitions, including nucleation and phase-ordering kinetics; elasticity theory and fluid mechanics; and nonlinear dynamics and pattern formation.

Prerequisite(s): PHYS 7305 with a minimum grade of C

PHYS 7323. Elementary Particle Physics. (4 Hours)

Presents a survey of the present state of elementary particle physics, suitable for all graduate students. Topics include overview of strong interactions and their connection to nuclear physics; nonrelativistic quark structure of strongly interacting particles (hadrons); color and the SU(3) Yang-Mills theory of strong interactions; coupling constant renormalization and asymptotic freedom; and the parton model of scattering. Covers weak interactions including phenomenology of the Fermi V-A theory; universality; and neutrino scattering. Studies the Glashow-Weinberg-Salam theory including unification of weak and electromagnetic interaction, neutral currents, the Higgs mechanism, quark masses and mixing, neutrino masses, and neutrino oscillation. Offers experimental support for the standard model. Also examines supersymmetry including the hierarchy problem and broken supersymmetry; role of supersymmetry in cosmology.

PHYS 7324. Condensed Matter Physics. (4 Hours)

Explores condensed matter physics. Topics include Drude and Sommerfeld models of electrons in metals, crystal structure, one-electron states in crystal lattices, Bloch's theorem, semiclassical theory of conduction, semiconductors and semiconducting devices, effects of electron-electron interactions, lattice vibrations and the classical and quantum theories of specific heat, optical properties of solids, investigation of crystal structure and excited states of crystals by x-ray and neutron scattering, simple transport theory based on the Boltzmann equation, and magnetic properties of solids.

PHYS 7325. Quantum Field Theory 1. (4 Hours)

Introduces the principles of quantum field theory. Topics include canonical quantization of scalar and spinor fields, functional integral methods, perturbation theory, regularization and renormalization, and symmetry breaking. Emphasizes applications to particle physics and condensed matter phenomena.

PHYS 7332. Network Science Data 2. (4 Hours)

Focuses on practical exercises in real network data. Offers students an opportunity to learn how to retrieve network data from the real world, analyze network structures and properties, study dynamical processes on top of the networks, and visualize networks. The main programming language used in this course is the current industry standard. This is an interdisciplinary course.

Prerequisite(s): PHYS 5116 with a minimum grade of C ; PHYS 7331 with a minimum grade of C

PHYS 7335. Dynamical Processes in Complex Networks. (4 Hours)

Immerses students in the modeling of dynamical processes (contagion, diffusion, routing, consensus formation, etc.) in complex networks. Includes guest lectures from local and national experts working in process modeling on networks. Dynamical processes in complex networks provide a rationale for understanding the emerging tipping points and nonlinear properties that often underpin the most interesting characteristics of sociotechnical systems. Reviews the recent progress in modeling dynamical processes that integrates the complex features and heterogeneities of real-world systems.

Prerequisite(s): NETS 5116 with a minimum grade of C- or PHYS 5116 with a minimum grade of C-

PHYS 7731. Biological Physics 1. (4 Hours)

Introduces the major classes of biological macromolecules and the physics underlying their structure, interaction, and biological function. Emphasis is on physical techniques for characterizing the structure and dynamics of proteins. Students are required to present a written and oral report on a focused research topic in molecular biophysics, based on a critical review of current scientific literature. Topics may include introduction to biomolecular structure, aqueous solution physics and hydrophobic interactions, chemical thermodynamics and reaction dynamics, spectroscopic techniques, molecular force measurements, and protein dynamics.

PHYS 7733. Topics: Elementary Particle Physics and Cosmology. (4 Hours)

Covers unified theories including evidence for supersymmetric SU(5) unification of couplings, and the grand unified scale and proton decay. Discusses particle physics and cosmology including a brief introduction to Einstein's theory of general relativity, candidates for dark matter, inflation and the primordial fluctuations, and the problem of the cosmological constant. Examines developments leading to string theory including normal mode expansion; open and closed strings; deduction of D-26 for bosonic and D-10 for superstrings; scattering amplitudes in strings; heterotic string; compactifications on the torus, orbifolds, and Calabi-Yau manifolds; 4-D strings; and superstring phenomenology. Explores physics with extra dimensions including gravity at small distances, branes, and new approaches to the hierarchy problem. May be repeated without limit.

PHYS 7734. Topics: Condensed Matter Physics. (4 Hours)

Covers selected advanced topics in the theory of solids to be chosen each time by the interested students and instructor. Topics may include theory of normal metals, Hartree-Fock and random phase approximations, optical and transport properties, solid-state plasmas, Raman spectroscopy, quasiparticles and collective excitations, quantum solids, and amorphous solids. May be repeated without limit.

Prerequisite(s): PHYS 7324 with a minimum grade of C-

PHYS 7741. Biological Physics 2. (4 Hours)

Continues PHYS 7731. The first part of the course provides a foundation necessary to construct and implement models of neurons and networks of neurons. Topics include Hodgkin-Huxley form of the kinetical equations, single neuron models, dynamics of synapses, plasticity of synaptic strength, and neuromodulators. The second part covers nonlinear time series analysis and nonlinear dynamics in neuroscience. The goal is to provide a set of tools to analyze and model large multidimensional data sets encountered in many biological/neuroscience experiments. Topics include data testing of nonlinearity construction of linear and nonlinear models; spike sorting using independent component analysis and clustering algorithms; and analysis of continuous time series.

Prerequisite(s): PHYS 7731 with a minimum grade of C- ; PHYS 7321 with a minimum grade of C-

PHYS 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of a member of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 7990. Thesis. (1-4 Hours)

Undertakes a master's thesis in a selected topic in experimental or theoretical physics. Written thesis required. May be repeated without limit.

PHYS 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

PHYS 9984. Advanced Research. (1-8 Hours)

Provides an opportunity for advanced students to work with an individual instructor on a topic related to current research. The instructor and student negotiate a written agreement as to what topic(s) are covered and what written or laboratory work forms the basis for the grade. Viewed as a lead-in to thesis research. May be repeated without limit.

PHYS 9986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

PHYS 9990. Dissertation Term 1. (0 Hours)

Offers experimental and theoretical work for PhD candidates. Requires written thesis and final oral exam.

Prerequisite(s): PHYS 9000 with a minimum grade of S

PHYS 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): PHYS 9990 with a minimum grade of S

PHYS 9996. Dissertation Continuation. (0 Hours)

Offers experimental and theoretical work for PhD candidates. Requires written thesis and final oral exam.

Prerequisite(s): PHYS 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Physics - CPS (PHY)

Courses

PHY 1200. Physics 1. (3 Hours)

Offers the first semester of a two-semester introduction to algebra-based physics. Emphasizes the underlying concepts and principles of Newtonian physics and fluids. Introduces measurement, estimating, and Newtonian mechanics. Topics covered include kinematics, dynamics, translational motion, vectors, circular motion, gravitation, work, energy, power, momentum, and rotational motion. Further topics covered include static equilibrium, elasticity and fracture, fluids, vibrations, waves, and sound.

Prerequisite(s): MTH 1100 with a minimum grade of D-

Corequisite(s): PHY 1201

Attribute(s): NUpath Natural/Designed World

PHY 1201. Lab for PHY 1200. (1 Hour)

Accompanies PHY 1200. Covers topics from the course through various experiments.

Corequisite(s): PHY 1200

PHY 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHY 2200. Physics 2. (3 Hours)

Offers the second semester of a two-semester introduction to algebra-based physics. Emphasizes the underlying concepts and principles of electricity and thermodynamics. Introduces temperature, the kinetic theory of matter, heat, the laws of thermodynamics, electricity, and Coulomb's law. Topics covered include electric charge and fields, electric potential, electric current circuits, electric capacitance, magnetic forces and fields, and electromagnetic induction. Further topics covered include alternating current circuits, magnetism, electromagnetic waves, the nature of light, and geometric optics.

Prerequisite(s): PHY 1200 with a minimum grade of D- ; PHY 1201 with a minimum grade of D-

Corequisite(s): PHY 2201

Attribute(s): NUpath Natural/Designed World

PHY 2201. Lab for PHY 2200. (1 Hour)

Accompanies PHY 2200. Covers topics from the course through various experiments.

Prerequisite(s): PHY 1200 with a minimum grade of D- ; PHY 1201 with a minimum grade of D-

Corequisite(s): PHY 2200

PHY 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHY 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHY 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHY 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic.

PHY 4994. Internship. (1-4 Hours)

Provides students with an opportunity for internship work.

Attribute(s): NUpath Integration Experience

PHY 4995. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience.

PHY 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major.

Attribute(s): NUpath Integration Experience

PHY 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Political Science (POLS)

Courses

POLS 1000. Political Science at Northeastern. (1 Hour)

Introduces first-year political science majors to the discipline, the department, and the University as a whole; familiarizes students with the skills needed for success as a university student.

POLS 1150. American Government. (4 Hours)

Analyzes the system of politics and government in the United States. Topics include the philosophical basis, historical origins, design, and functioning of the Constitution as well as formal government institutions. Examines the influence of public opinion, political behavior and participation, parties, and interest groups.

Attribute(s): NUpath Societies/Institutions

POLS 1155. Comparative Politics. (4 Hours)

Presents a comparative study of political organization and behavior in a range of countries beyond the United States. Topics includes political culture, political economy, governing institutions, leadership, and political participation.

POLS 1160. International Relations. (4 Hours)

Introduces a broad study of international relations, encompassing both theoretical perspectives and empirical knowledge. Reviews the role of states as well as international and nongovernmental organizations in dealing with security and war, terrorism, human rights, trade, globalization, and environmental protection, among other important contemporary issues.

Attribute(s): NUpath Societies/Institutions

POLS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 2282. The Holocaust and Comparative Genocide. (4 Hours)

Examines the origins of the Holocaust, perpetrators and victims, and changing efforts to come to terms with this genocide. The Holocaust, the murder of 6 million Jews by Germans in Nazi-occupied Europe during World War II, is one of the crucial events of modern history. Investigates the uniqueness of the Holocaust relative to other acts of ethnic cleansing or genocide, including mass death in the New World and mass murder in Armenia, Bosnia, and Rwanda.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

POLS 2290. Asian American Politics. (4 Hours)

Explores the political developments that gave rise to the term "Asian America" in the 1960s and investigates theoretical questions about the complexities and pluralities of the contemporary Asian American experience. Examines Asian American political participation around current issues such as immigration and migration patterns, intragroup coalitions, racial stereotypes, data disaggregation, political representation, voting patterns, policy preferences, and more. Considers the role of American political institutions—including federal, state, and local governments—and how public policies at all levels shape the political lives of Asian Americans in the United States.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

POLS 2325. Ancient Philosophy and Political Thought. (4 Hours)

Examines the philosophers of classical Greece, primarily Socrates, Plato, and Aristotle. These philosophers examined the nature of the material world, of the city, and of the person. The course takes up both the moral and political writings as well as the metaphysical writings. Devotes considerable attention to major works such as Plato's *Republic*. Some time is given to early Greek philosophers, to the Sophists, and to later developments. Requires written analysis of philosophical texts. PHIL 2325 and POLS 2325 are cross-listed.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture, NUpath Writing Intensive

POLS 2328. Modern Political Thought. (4 Hours)

Introduces students to a range of authors who are considered to be most influential in shaping Western political thought and who remain highly relevant in informing contemporary political debate. Offers students an opportunity to think critically about some of the fundamental questions pertaining to political practice—the nature of ideas, institutions, and processes and how to understand and evaluate them.

POLS 2330. American Political Thought. (4 Hours)

Analyzes the fundamental ideas in U.S. political thought that have shaped U.S. political institutions and policies, including liberalism, neoliberalism, conservatism, and nationalism. Examines the historic roots of each viewpoint and their impact. Major topics may include Locke and the liberal tradition, republicanism, Puritan political thought, the American Revolution, the writing of the Constitution, the growth of federal power, executive power, judicial review, and the debate over slavery. Explores the ongoing interaction of political thought and the political process in contemporary U.S. society.

POLS 2332. Contemporary Political Thought. (4 Hours)

Introduces students to a range of positions in contemporary political theory, familiarizing them with key texts, authors, and debates, such as those concerning critiques of power, global justice, and pluralism. Explores a range of methodological and theoretical approaches associated with these texts and examines some of their implications in the assessment of modern societies, their values, and institutional arrangements. Offers students an opportunity to develop the ability to critically reflect on the nature and scope of political discourse.

POLS 2333. Politics and Film. (4 Hours)

Analyzes interconnections between politics and film. Considering film as a political tool, includes such topics as political satire, propaganda, war, censorship, and nationalism. Case examples emphasize current events and contemporary issues.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

POLS 2345. Urban Policies and Politics. (4 Hours)

Analyzes the political, administrative, economic, and social dynamics of urban areas. Highlights the diversity of political institutions and practices in American cities. Introduces key policy areas at the city level such as land use, economic development, and education.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 2350. State and Local Politics. (4 Hours)

Examines the political and administrative context of the state and local government in the United States; surveys the structure, function, and politics of states and localities within the context of the U.S. federal system; and highlights the diversity of political institutions and practices at the state and local levels.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 2356. Democratic Erosion. (4 Hours)

Presents the theoretical and empirical tools to critically and systematically address the urgent political question: Is democracy under threat in the United States and around the world, or are contemporary concerns about global democratic erosion overstated? By engaging in theories of democratic consolidation and backsliding, offers students an opportunity to build an understanding of the causes, symptoms, and consequences of democratic erosion. Examines a range of country cases in comparative perspective so that students can then evaluate the robustness of democratic institutions across regions including Eastern Europe, Latin America, and Sub-Saharan Africa, as well as the United States. Also explores the theme of democratic resilience by examining the case of India during the 1970s.

Attribute(s): NUpath Societies/Institutions

POLS 2358. Current Issues in Cities and Suburbs. (4 Hours)

Introduces students to pressing urban issues: urban sprawl, poverty, education, transportation, economic development, and housing, through an intensive analysis of the Boston metropolitan area. The course is cotaught by university faculty and practitioners in government, community, and nonprofit organizations throughout the metropolitan area. Offers students the opportunity to analyze Boston data, go on outings to see development in progress, talk with urban practitioners about what they do, and conduct research on an urban issue of their choice.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

POLS 2359. Immigration Politics. (4 Hours)

Offers an overview of immigration politics from a comparative perspective. Examines the history of immigration to the United States and Europe, focusing on migration, naturalization, assimilation, and integration policies. Details the political processes that have led to different policies over time and across countries.

POLS 2368. Music and Politics in America and Abroad. (4 Hours)

Explores the role of music in politics and the extent to which songs and their performers shape, frame, or otherwise influence political thought among audiences and listeners. Emphasizes contemporary themes and genres, with particular attention to protest songs. Examples are taken both from the United States and abroad.

POLS 2370. Religion and Politics. (4 Hours)

Explores the role of religion to domestic and international politics. Examines religion as a source of political tension and strife. Draws examples from the United States and the developing world. Covers Islamic fundamentalism in Africa and the Near East, Orthodox Jewish parties in Israel, Catholic liberation theology in Latin America, and Protestant fundamentalism and the religious right in the United States.

Prerequisite(s): POLS 1150 with a minimum grade of D- or POLS 1155 with a minimum grade of D- or INTL 1101 with a minimum grade of D-

POLS 2378. Race and Ethnic Politics in the United States. (4 Hours)

Explores how race and ethnicity influence American political institutions and the behaviors of their residents. Defines concepts like race and ethnicity and the impact that immigration has on diversifying the American polity. Investigates the three dominant ethno-racial minority groups (i.e., Black and African Americans, Asian Americans, and Latinos/as/x) and their political behaviors. Surveys topics such as the formation of partisan identification (i.e., Democrats and Republicans); political representation; policy preferences and public opinions; and mobilization and group-based participation.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

POLS 2385. U.S. Health and Welfare Policy. (4 Hours)

Introduces students to U.S. social welfare policy. Emphasizes contemporary debates over welfare, mental health, healthcare, education, and Social Security reform. Examines key issues and processes related to the politics, design, and implementation of public policy in the context of the American governmental system. Incorporates multiple media and methods of instruction into the course, including lectures, in-depth class discussions, and documentary films.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

POLS 2390. Science, Technology, and Public Policy. (4 Hours)

Considers the role of science and technology in the policymaking process, not only as a tool but also as a subject of policymaking. Cases include government involvement in innovation and economic growth, the role of the military in the development of science and technology, the governance and regulation of the effects of scientific and technological progress, public funding of science and technology, and ethical aspects of science and technology, including the emerging focus on anticipatory and participatory governance.

POLS 2395. Environmental Politics and Policy. (4 Hours)

Examines the political forces, governmental institutions, socioeconomic factors, and global trends that shape environmental policy at national and subnational levels in the United States. A spectrum of different environmental issues is discussed, with some comparison of policy activity in the U.S., other nations, and at the global level.

Attribute(s): NUpath Societies/Institutions

POLS 2396. The Psychology of Misinformation. (4 Hours)

Examines the psychological processes involved in the believing, sharing, and correcting of misinformation. Explores the cognitive and social factors that contribute to the spread of misinformation and its impact on individuals and society. Introduces methods of experiment design and opportunities to engage in experimental research for understanding misinformation.

Attribute(s): NUpath Societies/Institutions

POLS 2399. Research Methods in Political Science. (4 Hours)

Examines the range of research methods and designs used in political science, based on applying the logic of social scientific inquiry. Reviews experimental research, comparative methods, case studies, interviewing, surveys, program evaluation, and other topics relevant to the discipline, as well as questions related to the practice of research ethics. Course activities include intensive writing assignments by students. Requires prior completion of at least two of the following courses: POLS 1150, POLS 1155, and POLS 1160.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

POLS 2400. Quantitative Techniques. (4 Hours)

Studies methods of quantitative analysis including descriptive statistics, hypothesis testing, cross-tabulation, analysis of variance, bivariate regression and correlation, and multiple regression. Examines how to generate and interpret statistical findings through use of Excel, SPSS, and/or other software programs. Uses examples from political behavior, public policy analysis, public opinion, comparative and international politics, and other areas of political and social-science inquiry to emphasize practical applications.

Prerequisite(s): CS 1800 with a minimum grade of D- or MATH 1213 with a minimum grade of D- or MATH 1215 with a minimum grade of D- or MATH 1231 with a minimum grade of D- or MATH 1241 with a minimum grade of D- or MATH 1251 with a minimum grade of D- or MATH 1341 with a minimum grade of D- or MATH 1342 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

POLS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

POLS 3100. Gender, Social Justice, and Transnational Activism. (4 Hours)

Introduces key issues, themes, and debates in feminist transnational theory, practice, and activism in contemporary contexts and how it has changed under socioeconomic, political, and cultural processes of globalization. Examines differences among women relating to race, class, sexuality, national identity, and political economy in reckoning with possibilities for sustainable social justice. Students interrogate the relationship between the local and global; the production of knowledge in different regional spaces; the pragmatics of political mobilization; the varying contours of "social justice"; and other key issues. Offers students an opportunity to discuss the impact of globalization, neoliberalism, and state and intimate violence on gendered politics and relations and to contend with the politics of difference, to debate its challenges, and to imagine possible futures for transnational gender justice.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

POLS 3160. Campaign Strategy. (4 Hours)

Introduces students to the art of political campaigning in primary or general elections. Utilizes a case-study format to approach various aspects of campaign strategy by analyzing successful and unsuccessful campaigns.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3300. The U.S. Congress. (4 Hours)

Explores the structures, dynamics, and styles inherent in public policymaking within the U.S. Congress. Focuses on elections; representations of constituents' interests; the roles that participants play: the president, interest groups, and others; and how all of this is affected by the structure of Congress and the process embedded in the legislative body.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3302. Judicial Process and Behavior. (4 Hours)

Examines the nature of the judiciary in the United States. Focuses on courts and various aspects of the judicial process, including judicial selection, judicial decision making, the impact of judicial decisions on society, and public opinion of courts. After exploring, from various methodological perspectives, how and why courts behave as they do, the course turns its attention to questions about the role of courts in U.S. politics.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3304. Presidential Nominating Process. (4 Hours)

Offers students an in-depth examination of the process the two major American parties use to nominate their presidential candidates. Major topics include the history and evolution of the presidential nomination process; the contemporary rules regime; the behavior of candidates, voters, and the media; vice presidential selection; the role of the national conventions; and prospects for reform. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3305. The American Presidency. (4 Hours)

Examines the presidential nomination and election processes and the constitutional and extra-constitutional powers of the U.S. president. Focuses on psychological "character types" of presidents as well as the concept of "presidential power." Considers constitutional and extra-constitutional issues related to presidential disability and succession.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3307. Public Policy and Administration. (4 Hours)

Analyzes the structure of and dynamics inherent in public policymaking and public administration in the United States. Introduces such concepts as problem definition, agenda development, policy formation, program implementation, and policy evaluation. Covers key issues in public administration including budgeting, personnel, and organizational design.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3309. Lesbian, Gay, Bisexual, and Transgender Issues in Public Policy. (4 Hours)

Examines the politics and public policies of the movement for equality and social justice for lesbian, gay, bisexual, and transgender (LGBT) people in a wide range of state and federal policy areas such as same-sex marriage, military service, family adoption rights, and employment discrimination protection. Reviews the political history of LGBT communities and the treatment of LGBT people since the 1920s in the United States and globally. Analyzes the policy debates by considering voting behavior, trends in public opinion toward LGBT issues, and the political incorporation of LGBT people in the United States and around the world. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3310. Public Opinion, Voting, and Elections. (4 Hours)

Analyzes how Americans think about politics, how they vote, and how the rules of the U.S. electoral system affect electoral outcomes. Major topics include the nature and content of public opinion, mass partisanship, issues and issue voting, presidential and congressional elections, turnout and participation, campaign finance, and recent trends in U.S. electoral behavior.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3320. Politics and Mass Media. (4 Hours)

Analyzes several facets of the mass media: the role of newspapers, radio, television, and the Internet in public opinion formation; their use and effectiveness in political campaigns; their objectivity and/or bias in reporting the news; and their impact on public policymaking.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 3323. Race, Inequality, and the Law. (4 Hours)

Examines the relationship between and material impact of race, public policies, and the administration of justice in the United States. Explores the ways the American legal system and political institutions have constructed and reinvented racial categories and their legal and social implications over time. Emphasizes the legacy of this legal history by examining how race and racial inequities intersect with contemporary public policy and social justice issues, including educational equity, employment discrimination, policing, and technology.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

POLS 3324. Law and Society. (4 Hours)

Examines the sociological understanding of legal phenomena. Places special emphasis on the role of the law in cultural and social conflicts in American society.

POLS 3405. International Political Economy. (4 Hours)

Addresses international political economy and how we can understand the phenomenon of globalization. Introduces the interaction between international politics and international economics in industrial countries and in developing countries. Covers several theoretical approaches to international political economy. Then analyzes some of the classic issue areas of international trade relations; foreign direct investment and outsourcing; the international monetary and financial system and the role of international institutions; debt and financial crises; and poverty and inequality. Concludes with analysis of how international political economy issues relate to governance, development, and the politics of economic reform.

Prerequisite(s): POLS 1160 (may be taken concurrently) with a minimum grade of D-

POLS 3406. International Law. (4 Hours)

Introduces international law and how it redefines and shapes world politics. Offers students an opportunity to learn about the cornerstones of this area of the law: the state, organizations and their legal personality, diplomatic relations, treaties, extraterritorial jurisdiction, extradition, human rights and humanitarian law, the law of the sea trade/economic law, and international criminal law with a focus on the world courts. Considers the degree to which international law is pervasive in the life of individuals and states alike.

Prerequisite(s): POLS 1160 with a minimum grade of D-

POLS 3409. Global Governance. (4 Hours)

Introduces the concept of global governance, summarizes the core architectural elements of global governance, and examines the key policy purposes and processes, as well as the principal challenges that affect international security. Prior to the creation of the United Nations, global governance hardly existed—relations among states were largely characterized by power politics, and international cooperation was circumscribed to a few areas. Since the foundation of the United Nations, ever denser networks of international regimes were formed encompassing security policy, trade, finance, environment, human rights, the oceans, and diplomacy and covering all aspects of the life of states, which affects and alters international relations.

Prerequisite(s): POLS 1160 with a minimum grade of D-

POLS 3418. Nationalism. (4 Hours)

Explores contending theories of identity and nationalism—a powerful force in international and domestic politics. Examines topics such as the process of identity creation, the choice of national symbols, how group boundaries are established, the role of identity in conflict and state building, and the debate over nationalism's constructed or primordial nature. POLS 3418 and CLTR 3418 are cross-listed.

Prerequisite(s): POLS 1155 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

POLS 3420. U.S. National Security Policy. (4 Hours)

Analyzes U.S. national security policy, with an emphasis on traditional and nontraditional threats, including threats from state and nonstate actors. Studies the national security policy process with special attention to developing countermeasures as well as resilience.

Prerequisite(s): POLS 1155 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

POLS 3423. Terrorism and Counterterrorism. (4 Hours)

Examines some of the core debates over terrorism and counterterrorism. Topics include what constitutes terrorism, why people become terrorists, which targets they attack, whether nuclear terrorism is a serious threat, the extent to which terrorism helps the perpetrators, and their motives. From there, the course introduces the student to viable counterterrorism strategies. Permission of instructor required for students who do not meet prerequisite.

Prerequisite(s): POLS 1150 with a minimum grade of D- or POLS 1155 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

POLS 3425. U.S. Foreign Policy. (4 Hours)

Examines the formulation and conduct of U.S. foreign and national security policy, with major emphasis on the period following the end of the Cold War.

Prerequisite(s): POLS 1150 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

POLS 3430. Revolution, Civil War, and Insurrection. (4 Hours)

Explores various types of conflict settlements and their implications for peace and reconciliation. Why do civil wars break out in some places but not others? What does it take to start a revolution? Why do some conflicts last decades, and what can be done to mitigate their costs? Examines why civil conflicts begin, how they are fought, and how they end. Substantive topics include strategies of insurgency and counterinsurgency; the role of ethnicity, religion, and gender; and the relationship between economic factors and conflict. Students leverage fundamental concepts and theories in comparative politics to analyze civil conflicts in a wide range of country contexts.

Prerequisite(s): POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

POLS 3435. Politics and Governance of Europe and the European Union. (4 Hours)

Examines contemporary political and governance issues in Europe and their impact on Europe's present and future. In addition to considering the values and institutions underlying the European Union's regional structure, including political, economic, military, social, monetary, and financial issues, the course also examines the issue of European identity and the impact of globalization on Europe.

Prerequisite(s): POLS 1155 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

POLS 3455. Russian Foreign Policy. (4 Hours)

Presents an analysis of the goals, methods, and achievements of Russian policy in the post-Soviet era toward Eastern Europe, Western Europe, the Middle East, Central and East Asia, and the United States against the background of Soviet behavior toward these areas in the recent past.

Prerequisite(s): POLS 1155 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

POLS 3465. Government and Politics in the Middle East. (4 Hours)

Examines political, economic, military, and ideological factors within the Arab states and Israel, inter-Arab politics, pan-Arabism, the Arab-Israeli conflict, and the great power rivalry in the region.

Prerequisite(s): POLS 1155 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

POLS 3470. Arab-Israeli Conflict. (4 Hours)

Explores the history and politics of the Arab-Israeli conflict, examining the origins of the conflict, its development over time, the key events that have shaped it, and the different narratives and perceptions of these events. Offers students an opportunity to learn about the conflict from the emergence of Zionism and Arab nationalism up to present day. Emphasizes the Israeli-Palestinian dimension of the conflict.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

POLS 3482. East Asian Politics. (4 Hours)

Examines the politics of East Asian societies as they cope with a variety of challenges. Focuses on economic development, environment, energy, and security in Japan, China, and the Koreas.

Prerequisite(s): ASNS 1150 with a minimum grade of C or POLS 1155 with a minimum grade of C

POLS 3485. China: Governance and Foreign Policy. (4 Hours)

Focuses on China's political system and the major issues confronted: leadership recruitment and succession, economic policies and development, class and class struggle, political culture and socialization, human rights, civil society, the media, and both internal and external security concerns. Examines how ideology, development, culture, and the pursuit of China's national interest affect governance.

Prerequisite(s): POLS 1155 with a minimum grade of D-

POLS 3487. Politics of Developing Nations. (4 Hours)

Examines the political, governmental, social, economic, cultural, environmental, and geopolitical dimensions of change in nations regarded as "developing" by international standards. Covers a broad spectrum of types of nations including those in Eastern and Central Europe but pays particular attention to those in Asia, Africa, and Central and South America.

Prerequisite(s): POLS 1155 with a minimum grade of D- or INTL 1101 with a minimum grade of D-

POLS 3500. Sexuality, Gender, and the Law. (4 Hours)

Examines the legal regulation of gender and sexuality. Investigates concrete legal cases to study the history of constitutional interpretation and the current status of rights for women and sexual minorities. Focuses on important theoretical issues emerging in the writings of diverse feminist and queer legal scholars. Addresses debates over the value of conventional equality approaches in legal doctrine; equality vs. difference perspectives; ways in which legal language constructs gender and sexuality; the incorporation of sexuality and gender in ideologies of law; and the intersections of gender, sexuality, and race in legal doctrine and legal theory. PHIL 3500, POLS 3500, and WMNS 3500 are cross-listed.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

POLS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 4500. U.S. Constitutional Law. (4 Hours)

Uses U.S. Supreme Court decisions and other reading materials to analyze theoretical, structural, and substantive issues inherent in, and relevant to, the American constitutional system.

Prerequisite(s): POLS 1150 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

POLS 4505. U.S. Civil Liberties. (4 Hours)

Uses United States Supreme Court decisions and other reading material to examine the substantive and procedural guarantees of the Bill of Rights and the Fourteenth Amendment and their relation to a liberal democratic society.

Prerequisite(s): POLS 1150 with a minimum grade of D-

POLS 4701. Political Science Senior Capstone. (4 Hours)

Integrates and assesses the concepts and skills developed by students throughout the political science curriculum, including both experiential and classroom-based components. Requires extensive reflection by students on their various educational experiences as well as research projects involving individual and group presentations. Topics include contemporary political issues and relevant literature in the discipline of political science. Consideration is also given to career options for political science students. Required for political science majors and fulfills part of the experiential education requirement.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

POLS 4703. Senior Thesis. (4 Hours)

Offers students an opportunity to conduct a significant research project under faculty supervision on a topic within the discipline of political science. Research question is formulated and analyzed through data gathering and a review of relevant literature in political science and related fields.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

POLS 4910. Model United Nations. (4 Hours)

Introduces students to model simulations as a means of learning about international relations, diplomacy, and international organizations. Offers students an opportunity to conduct research and represent countries in current and historical simulations of the United Nations, U.N. organizations/agencies, regional international organizations, and joint cabinet crisis scenarios. Participating students have an opportunity to be selected for an off-campus competitive conference experience. May be repeated without limit.

Attribute(s): NUpath Difference/Diversity, NUpath Integration Experience

POLS 4915. Model Arab League. (4 Hours)

Offers students an opportunity to participate in teams that research assigned nations and represent those nations in a model Arab League role-playing exercise. Students may be selected to represent Northeastern University at the regional or national Model Arab League conferences in Washington, D.C., and different states. May be repeated twice.

Attribute(s): NUpath Integration Experience, NUpath Societies/Institutions

POLS 4918. Model NATO. (4 Hours)

Offers students an opportunity to participate in teams that research assigned nations and represent those nations in a model role-playing exercise of the North Atlantic Treaty Organization (NATO). Students may be selected to represent Northeastern University at the National Model NATO program in Washington, D.C. May be repeated up to two times.

Attribute(s): NUpath Integration Experience, NUpath Societies/Institutions

POLS 4937. Dialogue of Civilizations: Government and Politics Abroad. (4 Hours)

Examines government and politics in another country or region of the world through faculty-led travel to that country or region. Offers students an opportunity to enhance their knowledge of government and politics by attending and participating in various educational activities in the country of study. The course begins in the United States with an introduction to the country or region and concludes with activities that facilitate reflection and learning related to the experience abroad. May be repeated without limit.

Attribute(s): NUpath Integration Experience, NUpath Societies/Institutions

POLS 4938. Dialogue of Civilizations: International Politics Abroad. (4 Hours)

Examines issues in international politics through faculty-led travel outside the United States. Offers students an opportunity to enhance their knowledge of international politics by attending and participating in various educational activities in another country. Course topics cover a range of interconnected global issues that go beyond states' borders, possibly including armed conflict, terrorism, organized crime, poverty, environmental degradation, the spread of nuclear weapons, and others. The course begins in the United States with an introduction to the relevant topics in international politics and concludes with activities that facilitate reflection and learning related to the experience abroad. May be repeated without limit.

Attribute(s): NUpath Integration Experience, NUpath Societies/Institutions

POLS 4942. Internship in Politics. (4 Hours)

Gives students the opportunity to engage in a political or governmental internship under the supervision of a faculty member with departmental approval. Requires prior completion of 64 SH toward degree. May be repeated without limit.

Attribute(s): NUpath Integration Experience

POLS 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

Attribute(s): NUpath Writing Intensive

POLS 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): POLS 4970 with a minimum grade of D-

POLS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated once.

Attribute(s): NUpath Integration Experience

POLS 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

POLS 4996. Experiential Education Directed Study. (4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

Attribute(s): NUpath Integration Experience

POLS 5408. International Security. (4 Hours)

Exposes students to the foundational and contemporary theories in international security and offers opportunities for application. Topics include the role of different actors and institutions; the evolution of the international system; conventional and nonconventional warfare, strategy, and tactics; and conflict negotiation. Addresses several issue areas in international security, including civil war, ethnic conflict, terrorism, civil-military relations, cybersecurity, and the role of gender.

Prerequisite(s): POLS 1160 with a minimum grade of D- or graduate program admission

POLS 5544. Seminar in Black Leadership. (4 Hours)

Offers students an opportunity to conduct in-depth studies of significant black leaders—male and female—in a wide range of fields. Focuses on black leadership in the political arena as elected officials; leaders of pressure groups; leaders of protest organizations, black nationalist organizations, and feminist/womanist groups; and as advisers to political parties and presidential administrations.

POLS 5660. The Pandemic and the People: Lessons for American Democracy. (4 Hours)

Uses the pandemic and related issues as a case study to explore major public policy issues and challenges facing American democracy. Focuses on policies and challenges that have been placed in stark relief by the COVID-19 pandemic. Discusses the pandemic through the context of a range of themes in politics, public policy, and culture. Emphasizes the U.S. experience during the pandemic but does address some international aspects.

POLS 5976. Directed Study. (1-4 Hours)

Offers assigned reading under the supervision of a faculty member. May be repeated without limit.

POLS 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

POLS 6955. Co-op Work Experience Abroad - Half Time. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

POLS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

Corequisite(s): INSH 6864

POLS 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

POLS 7204. Seminar in Public Policy. (4 Hours)

Provides a comprehensive introduction to key theoretical perspectives in the study of public policy. Includes different perspectives on policy change, policy formation, policy design, and policy implementation. Seeks to prepare students to apply a policy theory to their own research question.

POLS 7205. Seminar in American Government and Politics. (4 Hours)

Focuses on major research approaches and corresponding academic literature in U.S. politics. Examines the scholarly analysis of key actors in U.S. politics, including the presidency, Congress, the judiciary, and political parties.

POLS 7206. Seminar in Comparative Politics. (4 Hours)

Focuses on major research paradigms within comparative politics, including political culture, structuralism, and rational choice. Examines major research fields in the discipline, including democratization, nationalism, ethnic politics, political economy, and political parties.

POLS 7207. Seminar in International Relations. (4 Hours)

Focuses on major research approaches and corresponding academic literature in international relations. Examines major fields of study, including international security, international regimes, international organizations, globalization, and international political economy.

POLS 7255. American Political Parties and Elections. (4 Hours)

Focuses on American political parties and includes analyses of party organizations and decision-making systems, leader/activist differences in policy and ideology, party reform, policy commitments, campaign finance, media, voting behavior, and an overview and assessment of contemporary elections and campaigns.

POLS 7257. The U.S. Judicial Process. (4 Hours)

Studies the judicial process in the United States, emphasizing federal courts. Focuses on theories and empirical research regarding judicial decision making, how and why judges decide what they do, and the resulting political effects.

POLS 7325. Contemporary Issues in Third World Development. (4 Hours)

Examines the major themes in development studies today. Explores approaches to the development and production, population growth, equity and poverty, rural and urban development, health and nutrition, education, and the international context of development assistance. Students considering a development administration concentration should try to take this course as their first in the field of development.

POLS 7334. Social Networks. (4 Hours)

Offers an overview of the literature on social networks, with literature from political science, sociology, economics, and physics. Analyzes the underlying topology of networks and how we visualize and analyze network data. Key topics include small-world literature and the spread of information and disease. Students who do not meet course prerequisites may seek permission of instructor.

POLS 7341. Security and Resilience Policy. (4 Hours)

Examines the post-9/11 evolution of security and the new emphasis on bolstering societal, infrastructure, system, and network resilience. Emphasizes the complex organizational; jurisdictional (international, federal, state, and local); private-sector; and civil-society issues associated with managing the risk of terrorism, cyber-attacks, and naturally occurring disasters. Topics include policy development and implementation of critical infrastructure protection, cybersecurity, supply chain security, disaster management, and community resilience.

POLS 7343. Counterterrorism. (4 Hours)

Examines the most important empirical and theoretical debates on counterterrorism. Analyzes the motives and strategies of key actors in the development of approaches to counterterrorism.

POLS 7344. Hard Power, Soft Power, and Smart Power. (4 Hours)

Examines different forms of power in an international context. Includes conceptual and empirical examinations of the various types of power, the actors who have power, and the contexts under which power is exercised.

POLS 7346. Resilient Cities. (4 Hours)

Examines the characteristics of resilient cities, especially those located in coastal regions. Investigates the capacity of cities to respond to major disruptions to their social and ecological systems. Includes extensive use of case studies, such as the 2004 Indian Ocean tsunami and Hurricane Katrina in 2005, as well as readings on cities and social systems. Offers students an opportunity to analyze an urban area and provide recommendations for improving its resilience. POLS 7346 and PPUA 7346 are cross-listed.

POLS 7362. Nationalism. (4 Hours)

Focuses on contending theories of nationalism and nationalist movements. Topics include cultural objectification and the establishment of group boundaries, ethnic elites and cultural hegemony, mass mobilization, intergroup socioeconomic disparities, nationalism and modernity, nationalist parties and their policy strategies, and the "constitution" of race, particularly in the Americas.

POLS 7366. Genocide in a Comparative Perspective. (4 Hours)

Takes an interdisciplinary approach (that is, history, political science, and sociology) to the study of genocide. Examines the meaning of the concept in historical and philosophical terms, the societal and psychological causes of genocide, and specific cases throughout history, with emphasis on more recent episodes.

POLS 7369. International Security. (4 Hours)

Examines key problems in international security that are faced by nation-states and international and nongovernment organizations. Examples include armed violence, terrorism, organized crime, nuclear proliferation, poverty, and energy security. Explores responses that include international cooperation and the establishment of international norms. Analyzes related literature and theoretical perspectives.

POLS 7387. Global Governance. (4 Hours)

Introduces the concept of global governance and the core architectural elements of the current system of global governance. Examines the key policy purposes and tasks carried out by global governance processes.

POLS 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 7976. Directed Study. (1-4 Hours)

Offers assigned reading under the supervision of a faculty member. May be repeated without limit.

POLS 7980. Capstone Project. (4 Hours)

Offers students an opportunity to complete a specialized research or applied project in political science or security studies as part of the master's degree. Designed to meet the specific learning and research interests of the student. Learning experience is based on activities that meet agreed-upon benchmarks with the instructor and may involve activities with government or nongovernment organizations.

POLS 7983. Topical Seminar in Political Science. (4 Hours)

Examines current issues in political science. May be repeated without limit.

POLS 7990. Thesis. (4-8 Hours)

Offers thesis supervision by individual members of the department. May be repeated without limit.

POLS 8407. Internship. (4,8 Hours)

Offers work experience (at least fifteen hours per week) that includes planning, research, policy development, and other administrative aspects in a government or nonprofit organization. May be repeated without limit.

POLS 8960. Exam Preparation—Doctoral. (0 Hours)

Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision. May be repeated three times.

POLS 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

POLS 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

POLS 9986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

POLS 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by individual members of the department.

Prerequisite(s): POLS 9000 with a minimum grade of S

POLS 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): POLS 9990 with a minimum grade of S

POLS 9996. Dissertation Continuation. (0 Hours)

Offers continued dissertation supervision by individual members of the department. May be repeated without limit.

Prerequisite(s): POLS 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Political Science - CPS (POL)

Courses

POL 1120. International Relations. (3 Hours)

Introduces students to the core ideologies and methodologies of the study of international relations. Examines critical topics in international relations, such as war and diplomacy, international cooperation, and the nature of the international system. Emphasizes the nature of the international sphere and key topics currently affecting politics among states.

Attribute(s): NUpath Societies/Institutions

POL 1200. Comparative Politics. (3 Hours)

Introduces students to the comparative study of political organization and behavior in a variety of political systems present in a range of countries around the world. Examines different structures of political systems, governing institutions, leadership, political participation, major issues in political change, and sources of instability.

Attribute(s): NUpath Societies/Institutions

POL 1300. American Government. (3 Hours)

Introduces students to the American system of government, how it functions, and its politics. Studies early American history and philosophy as the source of the American Declaration of Independence, the design of the U.S. Constitution, and major issues in the development of the American political system. Examines the roles of public opinion, political behavior and participation, political parties, and interest groups in shaping American politics and policy. Includes a detailed analysis of major governmental institutions, their structures, and their operation.

Attribute(s): NUpath Societies/Institutions

POL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

POL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 4996. Experiential Education Directed Study. (1-4 Hours)

Draws upon the student's approved experiential activity and integrates it with study in the academic major.

Attribute(s): NUpath Integration Experience

Political Science - CPS Specialty (PLSC)**Courses****PLSC 1420. Introduction to American Government. (4 Hours)**

Analyzes the system of politics and government in the United States. Topics include the philosophical basis, historical origins, design, and functioning of the Constitution as well as formal government institutions. Examines the influence of public opinion, political behavior and participation, parties, and interest groups.

Portuguese (PORT)**Courses****PORT 1101. Elementary Portuguese 1. (4 Hours)**

Begins the integrated development of elementary language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of daily life, social norms, and family structure in Portuguese-speaking countries. Designed for students with very little or no prior knowledge of Portuguese.

PORT 1102. Elementary Portuguese 2. (4 Hours)

Builds on PORT 1101 and continues the integrated development of elementary language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of the linguistic, cultural, and geographic diversity of the Portuguese-speaking world.

Prerequisite(s): PORT 1101 with a minimum grade of C- or PORT 1301 with a minimum grade of C-

PORT 1501. Accelerated Elementary Portuguese 1. (4 Hours)

Introduces Portuguese to native/heritage speakers of Spanish, beginner-level heritage speakers of Portuguese, and students who have completed at least two levels of intermediate Spanish. Focuses on fundamental communication skills—speaking, aural comprehension, reading, and writing. Also explores cultural elements of the Portuguese-speaking countries. Students who do not have the preparation described may seek permission of instructor. This course is the equivalent of completing two semesters of elementary Portuguese.

PORT 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PORT 2101. Intermediate Portuguese 1. (4 Hours)

Builds on PORT 1102 and begins the integrated development of intermediate language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of the changes to modern life in Portuguese-speaking countries and efforts to face societal challenges.

Prerequisite(s): PORT 1102 with a minimum grade of C- or PORT 1302 with a minimum grade of C- or PORT 1501 with a minimum grade of C-

PORT 2102. Intermediate Portuguese 2. (4 Hours)

Builds on PORT 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Portuguese materials.

Prerequisite(s): (PORT 2101 with a minimum grade of C- or PORT 2301 with a minimum grade of C-)

PORT 2900. Specialized Instruction in Portuguese. (1-4 Hours)

Designed for students whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated once.

PORT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PORT 3101. Advanced Portuguese 1. (4 Hours)

Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): PORT 2102 with a minimum grade of C- or PORT 2302 with a minimum grade of C-

PORT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PORT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PORT 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

PORT 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Project Management - CPS (PJM)

Courses

PJM 1100. Project Management Fundamentals - Project Initiation and Close. (3 Hours)

Explores topics including project management principles, project phases, project domains, project management process groups, and roles of the project manager. Offers students an opportunity to work specifically with tools, techniques, and processes throughout project initiation and project close. Utilizes case studies and real-world examples to demonstrate the inner workings of a project.

PJM 1400. Project Planning. (3 Hours)

Introduces the tools, techniques, and processes applied in project scope management, estimating, scheduling and resource allocation, and control. Offers students an opportunity to build a detailed work plan and integrate best practices resulting in a resource-balanced, time-sensitive schedule and project plan. Introduces additional topics, including estimating and scheduling tools, applied to student work.

Prerequisite(s): PJM 1100 with a minimum grade of D-

PJM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PJM 2000. Project Monitoring and Control. (3 Hours)

Explores the role of the project manager during project execution and the tools, techniques, and processes used to monitor and control the project. Offers students an opportunity to utilize project baselines to monitor progress, resolve issues, and manage changes. Applies analytics and earned value to determine the health of the project and identify and implement actions to continue, revise, or terminate the project. Addresses additional topics, including performance reporting and dashboards, to highlight best practices in providing project information to key stakeholders.

Prerequisite(s): PJM 1100 with a minimum grade of D- ; PJM 1400 with a minimum grade of D-

PJM 2100. Quality and Risk. (3 Hours)

Covers management planning, risk identification, risk analysis, risk response planning and implementation, and risk monitoring. Offers students an opportunity to work with quality management planning, quality assurance, and quality control tools and techniques to ensure the project solution meets the quality standards it is designed to achieve. The key to project success is to be prepared to address risk as well as ensure that the project solution is fit for use.

Prerequisite(s): PJM 1100 with a minimum grade of D- ; PJM 1400 with a minimum grade of D-

PJM 2200. Project Procurement and Contract Management. (3 Hours)

Offers an in-depth analysis of project procurement including resource identification (human, material, equipment); resource managing; control; and closing of procurement activities. Also covers key topics including how to work with different contract types and legal aspects of project management.

Prerequisite(s): PJM 1100 with a minimum grade of D- ; PJM 1400 with a minimum grade of D-

PJM 3000. Leading Agile Projects. (3 Hours)

Offers an overview of agile project methodologies. Introduces agile approaches, compares and contrasts these approaches to traditional project management, and considers how to tailor the two approaches to determine a project's best approach. Additionally, reviews agile-specific practices from an application perspective and investigates agile project management tools.

Prerequisite(s): (PJM 1100 with a minimum grade of D- ; PJM 1400 with a minimum grade of D-) or ITC 4500 with a minimum grade of D-

PJM 3100. Principles of Business Analysis Management. (3 Hours)

Offers a framework of business analysis and requirements management. Topics include the role of the business analyst in the current organizational environment, understanding the business need, working with key stakeholders to identify the benefits of the project, and strategies to lead the organizational change necessary to harvest that value. Offers students an opportunity to utilize case studies to focus on process improvement and writing requirements.

Prerequisite(s): PJM 1100 with a minimum grade of D-

PJM 4000. Program and Project Portfolio Management. (3 Hours)

Offers an overview of program and project portfolio management. Explores the role of project, program, and project portfolio management in supporting realization of an organization's strategy. Projects may be subsets of a program—reviews the role of the program manager and tools, techniques, and processes used to plan and manage a program. Projects and programs are subsets of a portfolio—discusses how the portfolio is selected and managed. Reviews case studies, current articles, and readings to reinforce student learning.

Prerequisite(s): PJM 1100 with a minimum grade of D-

PJM 4850. Capstone. (3 Hours)

Offers students an opportunity to utilize all the project management tools, techniques, and skills they have acquired. Students explore the integration of the curriculum throughout the entire project life cycle, applying applicable integration concepts to achieve desired project outcomes. Reviews case studies, current articles, and readings to reinforce learning. This is the final course in the project management BS program.

Prerequisite(s): PJM 1100 with a minimum grade of D- ; PJM 1400 with a minimum grade of D- ; PJM 2000 with a minimum grade of D- ; PJM 2100 with a minimum grade of D- ; PJM 2200 with a minimum grade of D- ; PJM 3000 with a minimum grade of D- ; PJM 3100 with a minimum grade of D- ; PJM 4000 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PJM 5000. Project Management Practices. (2.25 Hours)

Provides an overview of the project management process. Emphasizes project definition, identification of project scope, project life cycle, and project planning. Uses case studies to examine best practices and common project management pitfalls.

PJM 5001. Foundations of Project Management. (3 Hours)

Offers students an opportunity to learn foundational knowledge and concepts in project management. Analyzes various project management methodologies while presenting a structured approach to understanding key principles, models, and methods required to manage various project types through a complete project life cycle. Introduces project management software and emphasizes distinctions between project, program, and portfolio management. Strongly recommended for students with little or no formal project management experience.

PJM 5005. Project Scope Management. (2.25 Hours)

Offers insight into how projects are defined, evaluated, and ultimately translated into manageable project requirements and concrete deliverables. By learning how to identify stakeholder needs and convert those needs into viable, measurable project scope documentation, a project manager can successfully manage not only a project's scope but also make informed recommendations when trade-offs between project scope, cost, and schedule become necessary.

PJM 5015. Project Risk Management. (2.25 Hours)

Examines quantitative techniques for risk assessment and decision making, as well as the steps and elements of a risk management plan, including the ongoing monitoring of risk factors. The accurate identification of risks, and understanding of how to account for the potential impact of risks, can greatly impact the likelihood of project success.

PJM 5025. Project Scheduling and Cost Planning. (2.25 Hours)

Builds on the project schedule to explore cost estimation methods, break-even analysis, and earned value management. Studies effective tools and techniques that can allow project managers to translate specifications to realistic project plans that lead to a resource-loaded schedule and baseline budget. These tools and techniques can be used to minimize bottlenecks and downtime, identify and plan for resource needs, develop contingencies, and manage risk and scope creep. Topics include schedule development, cost estimating, and cost and schedule management through earned value management. A well-thought-out and well-managed schedule is critical to successful project management and is integral to the efficient management of project costs. Offers students an opportunity to learn to manage the project budget, revise cost estimates, and develop confidence levels.

PJM 5135. Project Quality Management. (2.25 Hours)

Designed to provide detailed instruction in Project Quality Management (PQM) processes, one of the ten knowledge areas outlined in the Project Management Institute's Project Management Body of Knowledge. Discusses how to integrate PQM processes into the overall project plan and how to prepare a PQM plan. Encourages students to work together in a team environment to complete a PQM plan for a project.

PJM 5205. Leading and Managing Technical Projects. (2.25 Hours)

Offers students an opportunity to learn about leadership and management skills and strategies needed to succeed in a demanding technical project environment. Many project managers understand the technical aspects of a particular project environment but lack these critical management and leadership skills. Topics covered include understanding the technical environment, managing and motivating team members, understanding organizational culture, interpersonal strategies, and developing a personal leadership approach.

PJM 5210. Communication Skills for Project Managers. (2.25 Hours)

Offers students an opportunity to learn strategies for communicating technical concepts in a clear, concise, and appropriate manner for both written and oral communication media. In all project environments, communication is critical for project success. The ability to craft project reports and to communicate with customers, clients, team members, and company executives is critical for anyone leading technical projects. Often, the project manager needs to communicate technical data to a nontechnical audience. Explores various communication models and approaches with a focus on applying those models in a real-world context.

PJM 5215. Leading Remote Project Teams. (2.25 Hours)

Offers students an opportunity to learn strategies for creating a cohesive, high-performing project team in a remote project environment. The challenges of leading a remote project team are apparent to anyone who has attempted it. The technological challenges are complicated by the reality that most teams have participants located around the world. Therefore, we face not only the standard fare of interpersonal challenges but also cultural challenges as well.

Prerequisite(s): PJM 5001 with a minimum grade of D-

PJM 5810. Principles of Agile Project Management. (2.25 Hours)

Provides an overview of the fundamentals of agile project management. Topics include agile vs. traditional approaches, the agile manifesto, and the development of agile as a value-added business practice. Introduces key agile project management practices, including communication management planning and risk-management planning. Reviews agile-specific practices and method tailoring from an application perspective. Investigates agile project management tools.

PJM 5900. Foundations of Project Management. (4 Hours)

Offers students an opportunity to learn foundational knowledge and concepts in project management. Analyzes various project management methodologies while presenting a structured approach to understanding key principles, models, and methods required to manage various project types through a complete project life cycle. Introduces project management software and emphasizes distinctions between project, program, and portfolio management. Strongly recommended for students with little or no formal project management experience.

PJM 6000. Project Management Practices. (3 Hours)

Provides an overview of the project management process. Emphasizes project definition, identification of project scope, project life cycle, and project planning. Uses case studies to examine best practices and common project management pitfalls.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6005. Project Scope Management. (3 Hours)

Offers insight into how projects are defined, evaluated, and ultimately translated into manageable project requirements and concrete deliverables. By learning how to identify stakeholder needs and convert those needs into viable, measurable project scope documentation, a project manager can successfully manage not only a project's scope but also make informed recommendations when trade-offs between project scope, cost, and schedule become necessary.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6015. Project Risk Management. (3 Hours)

Examines quantitative techniques for risk assessment and decision making, as well as the steps and elements of a risk management plan, including the ongoing monitoring of risk factors. The accurate identification of risks, and understanding of how to account for the potential impact of risks, can greatly impact the likelihood of project success.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6025. Project Scheduling and Cost Planning. (3 Hours)

Builds on the project schedule to explore cost estimation methods, break-even analysis, and earned value management. Studies effective tools and techniques that can allow project managers to translate specifications to realistic project plans that lead to a resource-loaded schedule and baseline budget. These tools and techniques can be used to minimize bottlenecks and downtime, identify and plan for resource needs, develop contingencies, and manage risk and scope creep. Topics include schedule development, cost estimating, and cost and schedule management through earned value management. A well-thought-out and well-managed schedule is critical to successful project management and is integral to the efficient management of project costs. Offers students an opportunity to learn to manage the project budget, revise cost estimates, and develop confidence levels.

Prerequisite(s): PJM 5900 with a minimum grade of C- ; PJM 6005 (may be taken concurrently) with a minimum grade of C-

PJM 6075. Project Finance. (3 Hours)

Explores real-world cases of project finance across industry sectors (e.g., energy, resource recovery, and mining) to examine how organizations structure their capital to mitigate various project risks and to secure scarce resources in the business environment. Topics include capital structure, discounted cash flow, financial instruments, capital budgeting, cost of capital, risk and return, project agreements, project cost accumulation, project cost allocation, and project investment ranking. Offers students an opportunity to develop a profound understanding of the principles of project finance.

Prerequisite(s): PJM 6025 with a minimum grade of C-

PJM 6125. Project Evaluation and Assessment. (3 Hours)

Offers students an opportunity to learn to develop metrics for determining and reporting project performance. Examines both quantitative and qualitative approaches of evaluation, with an emphasis on earned value management. Examines stakeholder analysis and techniques for reporting performance results.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6135. Project Quality Management. (3 Hours)

Introduces project quality management principles, processes, models, and methods necessary to deliver quality projects and products within organizations. Discusses how to integrate PQM processes into the overall project plan and how to prepare a PQM plan. Offers students an opportunity to work together in a team environment to complete a PQM plan for a project.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6140. Managing Troubled Projects. (3 Hours)

Examines how to prevent failed and troubled projects, how to perform a project assessment/audit, how to develop a troubled project recovery plan, and how to develop a failed project shutdown plan. Includes team presentations of case study assignments to gain experience in managing and avoiding failed and troubled projects, one of the most significant assignments for a project manager.

Prerequisite(s): PJM 6005 with a minimum grade of C- ; PJM 6015 with a minimum grade of C- ; PJM 6025 with a minimum grade of C- ; PJM 6135 with a minimum grade of C-

PJM 6145. Global Project Management. (3 Hours)

Expands the detailed treatment of project management into the global areas of environmental factors, national differences, cultural differences, outsourcing, and virtual project management. The state of the art in project management has advanced to heavy use of global project management. Addresses the Project Management Institute's Project Management Body of Knowledge practices as applied in the organization and the future of project management.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6175. Project Resource Management. (3 Hours)

Offers an overview of procurement management and human resource management and studies how these two knowledge areas are key to a project's success. Describes the processes necessary to effectively purchase or acquire products, services, or results for a given project through the lens of the project manager and procurement office. Examines how to effectively acquire, develop, and manage human resources in various organizational settings.

PJM 6180. Project Stakeholder Management. (3 Hours)

Offers students an opportunity to learn the mechanisms necessary to effectively identify all stakeholders, including the people, groups, or organizations that are impacted or may have an impact on the project. Examines how to analyze stakeholder expectations and how to develop management strategies for effective stakeholder engagement throughout the project.

PJM 6185. Managing Innovation Projects. (3 Hours)

Examines theories and practices in managing innovation projects, while emphasizing the project manager's role in product development, value proposition design, innovation experimentation, and business modeling. Offers students an opportunity to explore agile concepts in rapid prototyping and to develop skills in assessing innovations for feasibility, viability, desirability, and sustainability. Explores common impediments to innovation faced by project leaders.

PJM 6190. Emerging Research in Project Management. (3 Hours)

Introduces concepts related to research and analysis that are integral to scholarly learning. Also introduces research methods, along with their applications, benefits, challenges, and limitations in the context of conducting meaningful inquiry and research in project management. Offers students an opportunity to explore research design, data collection, and statistical and interpretive analysis by completing a research project under faculty supervision in which they examine a relevant problem of practice in project management, conduct a literature review, analyze data, and present their findings.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6205. Leading and Managing Technical Projects. (3 Hours)

Offers students an opportunity to learn about leadership and management skills and strategies needed to succeed in a demanding technical project environment. Many project managers understand the technical aspects of a particular project environment but lack these critical management and leadership skills. Topics covered include understanding the technical environment, managing and motivating team members, understanding organizational culture, interpersonal strategies, and developing a personal leadership approach.

PJM 6210. Communication Skills for Project Managers. (3 Hours)

Offers students an opportunity to learn strategies for communicating technical concepts in a clear, concise, and appropriate manner for both written and oral communication media. In all project environments, communication is critical for project success. The ability to craft project reports and to communicate with customers, clients, team members, and company executives is critical for anyone leading technical projects. Often, the project manager needs to communicate technical data to a nontechnical audience. Explores various communication models and approaches with a focus on applying those models in a real-world context.

PJM 6215. Leading Remote Project Teams. (3 Hours)

Offers students an opportunity to learn strategies for creating a cohesive, high-performing project team in a remote project environment. The challenges of leading a remote project team are apparent to anyone who has attempted it. The technological challenges are complicated by the reality that most teams have participants located around the world. Therefore, we face not only the standard fare of interpersonal challenges but also cultural challenges as well.

PJM 6610. Foundations of Project Business Analysis. (3 Hours)

Offers a framework of business analysis. Topics include the role of the business analyst in the current organizational environment, understanding the business need, working with key stakeholders to identify the benefits of the project, and strategies to lead the organizational change necessary to harvest value.

Prerequisite(s): PJM 5900 with a minimum grade of C-

PJM 6620. Strategy Analysis and Needs Assessment. (3 Hours)

Focuses on investigating needs and defining change strategy through quantitative and qualitative data collection and analysis techniques. Examines the design of data collection instruments and varied elicitation techniques. Applies theories and practices in strategy analysis using design thinking, agile analysis, behavior change design, and business architecture. Uses practical case studies to apply strategy analysis and needs assessments within a project, program, product, and organizational context.

Prerequisite(s): PJM 6610 with a minimum grade of C or PJM 6710 with a minimum grade of C

PJM 6630. Requirements Analysis and Design. (3 Hours)

Introduces techniques in requirements analysis, management, and design definition. Applies practices in the elicitation, analysis, and documentation of functional, nonfunctional, transitory, business, and stakeholder requirements. Applies tools and techniques in specifying, modeling, and prioritizing requirements. Evaluates strategies for determining design options and recommending solutions.

Prerequisite(s): PJM 6610 with a minimum grade of C or PJM 6825 with a minimum grade of C

PJM 6640. Leadership Strategies for the Business Analyst. (3 Hours)

Introduces the techniques applied by the business analyst to work with stakeholders in the requirements process. Emphasizes the processes of facilitation, communication, problem solving, consensus building, and negotiation. A central part of the course requires students to participate in and evaluate facilitated simulations.

Prerequisite(s): PJM 6610 with a minimum grade of C

PJM 6710. Introduction to Program and Portfolio Management. (3 Hours)

Examines project, program, and portfolio management with a primary focus on the similarities and distinctions between program management and portfolio management. Offers students an opportunity to develop and evidence a foundational understanding of program and portfolio management and the critical role these play within today's global environment.

Prerequisite(s): PJM 6005 with a minimum grade of C- ; PJM 6015 with a minimum grade of C- ; PJM 6025 with a minimum grade of C-

PJM 6810. Principles of Agile Project Management. (3 Hours)

Provides an overview of the fundamentals of agile project management. Topics include agile vs. traditional approaches, the agile manifesto, and the development of agile as a value-added business practice. Introduces key agile project management practices, including communication management planning and risk-management planning. Reviews agile-specific practices and method tailoring from an application perspective. Investigates agile project management tools.

PJM 6815. Advanced Agile Project Management. (3 Hours)

Constitutes an advanced offering focusing on specific approaches to executing projects in an agile environment. Seeks to provide the student with a firm grounding and an applied, experiential understanding of specific agile approaches. Offers students an opportunity to engage in real-world-oriented case studies to evidence a strong understanding of the methodologies in a practical, experiential manner by planning and simulating an agile project using a methodology taught in the course.

Prerequisite(s): PJM 6810 with a minimum grade of C-

PJM 6820. Agile Implementation and Governance. (3 Hours)

Explores the implementation of agile within an organization and the governance structure to support agile projects. Studies the use of change management techniques to address stakeholder needs as the organization moves from a traditional to agile or blended approach to projects. Reviews and applies advanced topics in program/ portfolio management in agile environments. Offers students an opportunity to develop an implementation strategy and governance plan.

Prerequisite(s): PJM 6810 with a minimum grade of C-

PJM 6825. Agile Lean Product Development. (3 Hours)

Offers a practical overview of modern lean/agile product exposure based on contemporary industry practice. To win in today's competitive market requires giving your business the ability to deliver highly profitable products faster than the competition. Covers the complete life cycle of product management, from identifying customers and users through to sales, marketing, and managing teams. Covers how to minimize investment and output while maximizing the information discovered in order to support effective decision making.

Prerequisite(s): PJM 6810 (may be taken concurrently) with a minimum grade of C

PJM 6910. Capstone. (3 Hours)

Offers students an opportunity to utilize project management methodologies, principles, and tools acquired in the master's program to develop plans that address stakeholder needs across the project life cycle.

Prerequisite(s): PJM 5900 with a minimum grade of C- ; PJM 6005 with a minimum grade of C- ; PJM 6015 with a minimum grade of C- ; PJM 6025 with a minimum grade of C- ; PJM 6135 with a minimum grade of C-

PJM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PJM 6983. Topics. (1-4 Hours)

Covers special topics in project management. May be repeated without limit.

PJM 6995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated up to five times.

Psychology (PSYC)**Courses****PSYC 1000. Psychology at Northeastern. (1 Hour)**

Introduces students to the major and to the professional and academic resources available to students at Northeastern University. Introduces students to their faculty, advisors, and fellow students; educates students about the cooperative education program; familiarizes students with undergraduate research and technological resources; and introduces problem-solving and leadership skills, which students need to succeed in school and in their professional endeavors. Students who do not meet course prerequisites may seek permission of instructor.

PSYC 1101. Foundations of Psychology. (4 Hours)

Surveys the fundamental principles, concepts, and issues in the major areas of basic and applied psychological science. Approaches the study of psychology as a method of inquiry as well as a body of knowledge. Introduces students to research methods and to psychological research on the biological bases of behavior, learning, sensation and perception, cognition and language, development, emotion, social psychology, personality, and psychological disorders.

Attribute(s): NUpath Natural/Designed World, NUpath Societies/Institutions

PSYC 1208. Psychology and the Law. (4 Hours)

Introduces the range of topics that are of concern both to psychologists and to members of the legal profession. Covers the legal and ethical issues inherent in the conduct and process of professional psychology. Topics include confidentiality, ethical competence, duty to warn, expert testimony, malpractice, and forensic matters, such as the insanity defense. Discusses professional practice issues revolving around ethical concerns as they relate to specific weekly topics. Specifically, discusses five ethical theories (egoism, utilitarianism, deontology, care ethics, virtue ethics) used in case analysis. Examines the role of ethical theory as it applies to the expert's self-interest and personal position, positive and negative consequences for the defendant and society at large, psychologist expert duties to themselves, and conflicts. Designed to help students think about the legal system and its role in society today through a psychological lens.

Attribute(s): NUpath Ethical Reasoning

PSYC 1210. Sports Psychology. (4 Hours)

Studies the physical, affective, and cognitive behaviors associated with sport participation and also examines the psychological theories and research related to sport and exercise behavior. Introduces students to the field of sport and exercise psychology by providing a broad overview of the major topics in the area, including the history of sport and exercise psychology, leadership, self-confidence, youth sports, aggression, moral development, team dynamics, anxiety and arousal, goal setting, imagery, and motivation. Covers the psychological makeup of athletes, how psychological factors influence involvement and performance in sport, and helps students acquire the skills and knowledge about sport and exercise psychology that they can apply to their everyday lives.

PSYC 1214. The Moral Mind: The Science Underlying Ethical Decision-Making and Virtuous Character. (4 Hours)

Offers a scientific lens through which to analyze the mental mechanisms and processes that guide moral and ethical decision making. Although the majority of the evidence and perspectives covered stem from psychological and neuroscientific work, the course is interdisciplinary in nature by incorporating relevant perspectives from behavioral economics, evolutionary biology, and philosophy. The primary goal is to offer insight, not only into how the human mind automatically parses ethical issues in given situations but also how control can be gained over such mechanisms, thereby allowing greater efficacy in guiding morality according to consciously embraced principles.

Attribute(s): NUpath Ethical Reasoning

PSYC 1250. Drugs and Behavior. (4 Hours)

Offers beginning students a general overview of the effects of drug use/abuse in many segments of society with particular attention placed on the collegiate population. Describes historical aspects of drug use for treatments of clinical disease states along with psychological theories of drug abuse and strategies for prevention of drug use/abuse. Covers biological effects emanating from several drug categories and the clinical use of drugs to promote positive therapeutic outcomes.

Attribute(s): NUpath Natural/Designed World

PSYC 1300. Emotion. (4 Hours)

Examines the empirical findings, theoretical approaches, and laboratory methods in the science of emotion. Emotion is integral to nearly every part of society, including legal and economic matters, health, and social relationships. But do we truly understand what emotions are and how they work? Offers students an opportunity to practice evaluating claims about emotion made in the popular press, to develop skills in communicating information in science effectively, and to examine the process by which scientists determine whether and how emotion plays a role in a wide range of phenomena (e.g., sports psychology, health, artificial intelligence, etc.).

PSYC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 2101. Love and Hate: Social, Psychological, and Literary Approaches. (4 Hours)

Studies materials that define and describe love and hate from the fields of literature and literary criticism, social psychology, and criminology and criminal justice. "Love" and "hate" are small words describing powerful emotions with profound effects on individuals and on social groups. Focusing largely on contemporary examples, offers students an opportunity to analyze the differences and areas of overlap in the above fields' approaches to love and hate, to discuss societal responses to these emotions, and to apply the methodologies of each field to research questions of their own. INSH 2101 and PSYC 2101 are cross-listed.

Prerequisite(s): ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

PSYC 2315. Statistics in Psychological Research Supplement. (1 Hour)

Covers basic principles of statistical analysis of research data, including descriptive statistics, probability, and hypothesis testing. Supplements AP statistics with more advanced statistical methods and the use of statistical software packages, including analysis of variance and the use of SPSS, which are foundational tools in psychological research but are not covered in the AP statistics curriculum.

PSYC 2320. Statistics in Psychological Research. (4 Hours)

Offers an overview of descriptive and inferential statistics with a focus on psychological applications. Covers standard material in undergraduate statistics including distributions, central tendency, variability, z-scores, the normal distributions, correlation, regression, probability, hypothesis testing (using the z, t, F, and chi-square statistics), and confidence intervals. Should be taken before the end of the sophomore year.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

PSYC 2370. Cross-Cultural Psychology. (4 Hours)

Introduces students to the role of culture in psychological science. Discusses the relationship of culture to psychological theories and research. Investigates psychological research in WEIRD (western, educated, industrialized, rich, democratic) populations compared to those less frequently studied. Demonstrates possible psychological universals while accounting for cultural influences on psychology and behavior. Critically considers theoretical and methodological issues, accurate interpretation of cross-cultural findings, and practical applications.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PSYC 2396. The Psychology of Misinformation. (4 Hours)

Examines the psychological processes involved in the believing, sharing, and correcting of misinformation. Explores the cognitive and social factors that contribute to the spread of misinformation and its impact on individuals and society. Introduces methods of experiment design and opportunities to engage in experimental research for understanding misinformation.

Attribute(s): NUpath Societies/Institutions

PSYC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 2991. Research in Psychology. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated seven times.

PSYC 3200. Clinical Neuroanatomy. (4 Hours)

Introduces students to the structure and function of the central nervous system (CNS) from spinal cord to cerebral cortex by using lesions of the human nervous system as a tool to reinforce and amplify learning of the structure and organization of the CNS. Assumes no prior knowledge of brain structures and begins with basic vocabulary, including directions, planes of dissection, and parts of brain cells. Seeks to provide the necessary anatomical foundation for further study in psychology and the neurosciences.

Prerequisite(s): PSYC 1101 with a minimum grade of D- or PSYC 2290 with a minimum grade of D-

PSYC 3400. Personality. (4 Hours)

Offers a systematic study of the normal personality and its development. Focuses on behavioral, dynamic, social, and cognitive determinants, assessment of personality, and current research topics; surveys the major theories of personality.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3402. Social Psychology. (4 Hours)

Provides an introductory survey of social psychology. Topics include aggression, attribution, attitude formation; and change, attraction, gender and culture, conformity, impression formation, and group processes.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3404. Developmental Psychology. (4 Hours)

Examines change throughout the life span in social relationships, emotional functioning, language, cognition, and other psychological domains, with emphasis on infancy through adolescence. Introduces major theories of development. Stresses the interaction of social and cognitive factors in development, and the interaction of the developing person with the environment. Also explores individual and cross-cultural differences in patterns of development, and research issues in developmental psychology.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3406. Clinical Psychology and Mental Health. (4 Hours)

Addresses diagnosis, theoretical perspectives, anxiety, and defense mechanisms. Examines the symptomatology, etiology, and treatment of a number of disorders including anxiety, dissociative, somatoform, affective (depression, mania), and schizophrenic disorders.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3450. Learning and Motivation. (4 Hours)

Offers an introduction to the basic learning and motivational principles that permit humans and animals to adapt effectively to a changing environment. Emphasizes research and theories of operant and Pavlovian conditioning, with discussions of discriminations and generalization, avoidance and punishment, acquired motivational states (for example, addiction), concept formation, biological constraints on learning and behavior, animal cognition, and other related topics. Relates learning and motivational principles to the understanding and treatment of behavioral, affective, cognitive, and motivational disorders.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3451. Learning Principles and Behavior Analysis. (4 Hours)

Introduces the basic concepts and theories of applied behavior analysis as they relate to learning and motivation. Topics include operant and classical conditioning, reinforcement, punishment, extinction, discrimination training, stimulus control, concept formation, and generalization. Throughout the course, offers students an opportunity to apply these principles to learning that occurs in their everyday lives as well as in the lives of individuals with developmental disabilities and other learning disorders.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3452. Sensation and Perception. (4 Hours)

Discusses how our five senses work to aid us in perceiving states of the body and of the world, how our perceptions are modified by what we know and expect, and how sensation and perception develop (especially in infancy). Includes discussion of neural and anatomical bases of sensation and perception. PSYC 3458 is highly recommended.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3458. Biological Psychology. (4 Hours)

Focuses on the relation between brain function and human behavior. Examines how nerve cells function individually and work together both in small networks and in the nervous system; the structure of the nervous system; how our sense organs provide the nervous system with information about the outside world; how the brain controls movement; and how psychological concepts from motivation to language and memory are represented in the brain.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3464. Psychology of Language. (4 Hours)

Provides a basic introduction to psycholinguistics. Topics include the nature and structure of languages, processes involved in the production and comprehension of language, the biological bases of language, and aspects of language acquisition. Examines current theories of language processing and related experimental findings.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3466. Cognition. (4 Hours)

Provides a basic introduction to human cognition. Topics include pattern recognition, attention, memory, categorization and concept formation, problem solving, and aspects of cognitive development. Examines current theories of cognitive processing and related experimental findings.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3506. Neuropsychology of Fear. (4 Hours)

Explores our understanding of the physiological and cognitive aspects of fear, from early theories of emotion to current research in both humans and animal models. Emphasizes linking brain structure to function—how do different brain regions contribute to fear processing and expression? Also focuses on psychiatric illnesses whose symptoms suggest a maladaptive fear response, such as post-traumatic stress disorder and phobias. What causes these illnesses, and how does our understanding of the neural basis of fear inform our treatment strategies for these disorders? Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

PSYC 3508. Behavioral Endocrinology. (4 Hours)

Presents an overview of the field of behavioral endocrinology from a psychological perspective. Examines how hormones influence brain structure and function; how hormones affect behavior and vice versa; sex differences in brain and behavior; and the role of hormones in mood disorders, cognition, and stress.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

PSYC 3510. Brain, Behavior, and Immunity. (4 Hours)

Explores how our behavior is affected by (and how it affects) our immune system. The brain and the immune system regulate our behavioral responses to the world around us, which helps explain why we feel “down” when we’re sick and why we often catch a cold when we’re stressed. Offers students an opportunity to better understand how we have evolved to psychologically adapt to environmental challenges—and, importantly, how this can sometimes backfire with mental illness as an outcome. Students who do not meet course prerequisites may seek permission of instructor.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

PSYC 3540. Environmental Psychology. (4 Hours)

Incorporates themes from cognitive psychology and environmental science to examine how people understand the environment and their place in it and how this understanding varies with culture, informal experience, and formal education. Examines relations between environmental cognition, environmental attitudes, values and norms, and sustainable behavior.

Prerequisite(s): ENVR 1101 with a minimum grade of D- or ENVR 1400 with a minimum grade of D- or PSYC 1101 with a minimum grade of D-

PSYC 3545. Ethics in Animal Research. (4 Hours)

Addresses ethical considerations for the treatment of animals in psychological research. Presents a comprehensive overview of animal ethical treatment policies at research institutes as well as animal research laboratory trainings and qualifications. Explores historical and current perspectives on animal healthcare and well-being, and discusses alternatives to animal research.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3973. Special Topics in Psychology. (4 Hours)

Examines selected topics in psychology. Topics vary each semester. May be repeated once.

Prerequisite(s): PSYC 1101 with a minimum grade of D-

PSYC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 4505. Industrial/Organizational Psychology. (4 Hours)

Surveys the psychological fundamentals underlying performance in work settings. Topics include psychological testing; performance evaluation; training, motivating, and leading employees; and the social psychology of organizations. Emphasizes ethical and affirmative action issues.

Prerequisite(s): PSYC 3402 with a minimum grade of D-

PSYC 4510. Psychopharmacology. (4 Hours)

Examines interactions between drugs, brain, and behavior. Focuses on such topics as synaptic transmission, behavioral functions of specific neurotransmitter systems, pharmacological treatment of mental and neurological disorders, and drug abuse.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

PSYC 4512. Neuropsychology. (4 Hours)

Examines the behavior of neurological patients and normal patients to develop an understanding of how the human brain works to produce higher mental functions. Topics include discussions of brain scans, human neuroanatomy, cerebral lateralization, language, memory, neurological disorders, and neural plasticity and recovery of function.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

PSYC 4514. Clinical Neuroscience. (4 Hours)

Explores the neurobiological, genetic, and neurochemical etiology of mental illness as described and categorized according to the DSM. Discusses how psychology, neuroscience, pharmacology, and medicine come together to manage mental illness. Investigates, for each specific mental illness covered, how changes in physiology and biology might manifest in the aberrant behaviors that define psychopathology. Lastly, examines how pharmacology is often used to treat these various mental illnesses and how genetic expression is involved in predisposing some people to these disorders while sparing others.

Prerequisite(s): BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-

PSYC 4522. Psychology of Reading. (4 Hours)

Provides an overview of issues in the psychology of reading. Topics include the nature of the reading process as a perceptual and cognitive activity, eye movement patterns in reading, stages of reading development, and dyslexia. Examines current theories of reading and text comprehension.

Prerequisite(s): PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-

PSYC 4524. Cognitive Development. (4 Hours)

Explores cognitive processes in infancy and childhood, how those processes change with age, and theoretical explanations for those changes. Topics may include understanding the physical world, memory, categorization, reasoning, problem solving, social cognition, language and conceptual development, and individual and/or group differences in cognitive development. Emphasis may vary by semester.

Prerequisite(s): PSYC 3404 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-

PSYC 4540. Quantitative Topics in Psychology and Behavioral Neuroscience. (4 Hours)

Surveys key quantitative topics in psychology and behavioral neuroscience. Emphasizes theory and modeling, not statistics. Specific topics vary, but all are drawn from domains in which mathematics and computation play a significant role. Topics may include Fourier analysis with applications to vision and hearing, neural circuit computation, signal detection theory applied to human and nonhuman animals' decisions, measurement of sensory magnitudes in vision and hearing, the linear algebraic theory of color matching in humans, and analysis and models of human response time. Students complete weekly readings and a final project, typically involving use of software for data analysis.

Prerequisite(s): (MATH 1341 with a minimum grade of D- or MATH 1241 with a minimum grade of D- or MATH 1251 with a minimum grade of D-); (PSYC 2320 with a minimum grade of D- or MATH 3081 with a minimum grade of D-); (BIOL 3405 with a minimum grade of D- or PSYC 3452 with a minimum grade of D- or PSYC 3458 with a minimum grade of D- or PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-)

PSYC 4570. Behavioral Genetics. (4 Hours)

Explores the genetic basis of behavior. Behavioral genetics is considered to lie at the intersection of psychology and genetics and is a dynamic field with plenty of possibility. Offers students an opportunity to hone and develop a stronger foundation in the principles of Mendelian, population, and quantitative genetics. Studies the genetic basis for sleep, social behavior, responses to environmental stimuli, learning, memory, addiction, and the etiology of neuropsychiatric disorders.

Prerequisite(s): BIOL 2301 with a minimum grade of D- ; (BIOL 3405 with a minimum grade of D- or PSYC 3458 with a minimum grade of D-)

PSYC 4600. Laboratory in Research Design. (4 Hours)

Addresses the theoretical concepts, design, execution, analysis, and communication of research in psychology. Provides students with various methods to acquire hands-on experience performing a research project of their own creation. Students move systematically through the research process, from refining their original idea in the context of existing literature to interpreting and communicating their results. Requires prior completion of research-area course.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUPath Writing Intensive

PSYC 4604. Laboratory in Learning and Motivation. (4 Hours)

Gives students the opportunity to gain proficiency, through direct experience, in lab analysis of behavior and in evaluating common generalizations about human behavior. Students design and perform experiments in animal and human learning, memory, decision processes, concept formation, and other topics of individual interest.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3450 with a minimum grade of D- or PSYC 3451 with a minimum grade of D-)

Attribute(s): NUpath Writing Intensive

PSYC 4606. Laboratory in Biological Psychology. (4 Hours)

Introduces the methods of research in psychobiology. Students work in small groups, conducting three to four hands-on laboratory exercises under supervised conditions. Students read selections of the relevant scientific literature, analyze the collected data, and write experimental reports.

Prerequisite(s): (MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); PSYC 3458 with a minimum grade of D- ; (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4610. Laboratory in Psycholinguistics. (4 Hours)

Provides students the opportunity to acquire firsthand experience in conducting research on issues in the psychology of language. Focuses on experiments and their implications for broader issues of language processing. Involves students in all aspects of each experiment including collecting and analyzing data and preparing lab reports.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4612. Laboratory in Cognition. (4 Hours)

Provides students the opportunity to acquire firsthand experience in conducting research on issues in human cognition. Focuses on experiments and their implications for broader issues of cognitive functioning. Involves students in all aspects of each experiment including collecting and analyzing data and preparing lab reports.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4614. Laboratory in Social Psychology. (4 Hours)

Provides an introduction to the methods of social-psychological research. Assists students in developing the ability to read published social research with a critical eye, to pose questions in a testable manner, to apply experimental methods to social research, and to express themselves in APA journal style.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); PSYC 3402 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4616. Laboratory in Personality. (4 Hours)

Provides an introduction to the methods and areas of personality research. Discusses problems of measurement, control, and interpretation. Critically examines representative published experiments. Students design, collect data for, assess, and write up several experiments.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); PSYC 3400 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4622. Laboratory in Sensation and Perception. (4 Hours)

Focuses on experiments using psychophysical methods in the various senses, typically including audition, vision, and others. Students collect data on themselves, analyze the data statistically, and write reports. Critical thinking is stressed.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); PSYC 3452 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4624. Laboratory in Affective Science. (4 Hours)

Provides instruction in the methods of affective science (i.e., the study of what emotions are and how they work). Students are expected to become members of a functioning lab team, which uses a multimethod approach combined with various theoretical frameworks to guide research in affective science. Offers students an opportunity to develop the ability to read the scientific literature; think critically about research questions; design, conduct, and analyze experiments; and write in APA journal style, as well as to gain valuable interpersonal and organizational skills that come from working on a team.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4626. Laboratory in Life-Span Emotional Development. (4 Hours)

Studies life-span development and how emotional experience, perception, and regulation changes across the life span. Lab teams use a multimethod approach and theoretical frameworks to guide research in emotional development. Offers students an opportunity to learn how to read the scientific literature; think critically about research questions; design, conduct, and analyze experiments; write in the journal style of the American Psychological Association; and gain interpersonal and organizational skills while working on a research team. PSYC 3402 highly recommended.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4628. Laboratory in Developmental Psychology. (4 Hours)

Offers students an opportunity to acquire firsthand experience in conducting research on issues in human development. Focuses on experimental and observational research across the life span. Involves students in all aspects of each research project, including designing original research, collecting and analyzing data, preparing lab reports, and presenting findings.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3404 with a minimum grade of D- or PSYC 4524 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4632. Laboratory in Psychophysiology. (4 Hours)

Introduces the principles and practice of psychophysiology. Psychophysiology is an interdisciplinary science that uses biological measures, typically those recorded via sensors on or imaging of the body, where the scientific goal is to understand psychological processes, psychological principles, or the effects of psychological interventions. Combines learning about the basic methods of psychophysiology (with an emphasis on peripheral psychophysiology), the principles underlying these methods, scientific evidence, and the current scientific questions that psychophysiological methods are used to answer.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

PSYC 4656. Seminar in Biological Psychology. (4 Hours)

Offers intensive study, discussion, and practice in lab studies of physiological variables. Covers evolution of the nervous system, neurological disorders, motivation and emotion, sleep, attention and perception, learning, and memory.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); PSYC 3458 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4658. Seminar in Psycholinguistics. (4 Hours)

Offers intensive study and discussion of issues in the psychology of language. Specific topics vary by semester.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4660. Seminar in Cognition. (4 Hours)

Offers intensive study and discussion of issues in cognitive psychology. Specific topics vary by semester.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4662. Seminar in Personality. (4 Hours)

Offers intensive study and discussion of issues in personality psychology. Allows students to examine selected topics and present their findings in class.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3400 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4664. Seminar in Social Psychology. (4 Hours)

Provides an in-depth analysis of specific topics in social psychology. Students read original research and theory papers involving these topics, make presentations, and write papers related to their readings.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3402 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4666. Seminar in Clinical Psychology. (4 Hours)

Focuses on psychotherapy: theory, methods, and outcome research. Provides an overview of clinical psychology: history, ethical and legal issues, the therapeutic relationship, cross-cultural counseling, the process of change. Students write and present papers on a topic of interest.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3406 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4668. Seminar in Sensation and Perception. (4 Hours)

Expects students to present in class on topics such as how perceptions are organized, formed, and modified by sensory, attentional, motivational, and cognitive factors, how our sensory systems extract information from the environment in a consistent and logical manner, despite large changes in environmental conditions, and how to account for this in physiological terms.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3452 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4674. Seminar in Cognitive Neuroscience. (4 Hours)

Offers intensive study and discussion of issues in cognitive neuroscience: the study of human cognitive processes, and their underlying neural substrates. Considers both theoretical and methodological issues, as well as applications to related fields of study. Specific topics vary by semester.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4676. Seminar in Developmental Psychology. (4 Hours)

Offers intensive study and discussion of issues in developmental psychology, the study of how social, emotional, cognitive, and other psychological processes emerge and change over different periods of the life span. Considers both theoretical and methodological issues, as well as applications to real-world contexts. Specific topics may vary by semester.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); PSYC 3404 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4678. Seminar in Social and Affective Neuroscience. (4 Hours)

Addresses fundamental questions about mind-brain mapping (e.g., distributed vs. modular processing, predictive coding, sensory integration, etc.), with a focus on social and affective processing. Offers intensive study and discusses issues in social and affective neuroscience. Considers both theoretical and methodological issues, as well as applications to real-world contexts. Specific topics may vary by semester.

Prerequisite(s): (ENVR 2500 with a minimum grade of D- or MGSC 2301 with a minimum grade of D- or PSYC 2315 with a minimum grade of D- or PSYC 2320 with a minimum grade of D-); (PSYC 3400 with a minimum grade of D- or PSYC 3402 with a minimum grade of D- or PSYC 3404 with a minimum grade of D- or PSYC 3406 with a minimum grade of D-); (PSYC 3450 with a minimum grade of D- or PSYC 3451 with a minimum grade of D- or PSYC 3452 with a minimum grade of D- or PSYC 3458 with a minimum grade of D- or PSYC 3464 with a minimum grade of D- or PSYC 3466 with a minimum grade of D-)

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSYC 4965. Undergraduate Teaching Experience. (4 Hours)

Offers undergraduate teaching assistantships in psychology courses under the close direction of the course instructor. Assignments may include holding office hours and recitation/tutorial and review sessions, answering students' emails, moderating discussion boards, helping to proctor exams and quizzes, (very) limited lecturing, or leading class discussions (only under faculty supervision). Requires minimum overall GPA of 3.333, and grade of A- or higher in the course for which the student will be an undergraduate teaching assistant; permission to enroll is further subject to the availability of an appropriate course assignment and instructor; prior arrangements must be made with the instructor at least one term before registration. May be repeated once, but may not be repeated for the same course.

Attribute(s): NUpath Integration Experience

PSYC 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PSYC 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): PSYC 4970 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Integration Experience, NUpath Writing Intensive

PSYC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 4991. Directed Study Research. (4 Hours)

Offers research experience on a chosen topic under the direction of a faculty member. Research content and requisites depend on the instructor. Prior arrangements must be made with the faculty member at least one term before registration. May be repeated up to three times.

Attribute(s): NUpath Integration Experience

PSYC 4992. Directed Study. (1-4 Hours)

Offers independent work on a chosen topic under the direction of a faculty member. Course content depends on instructor. May be repeated without limit.

PSYC 4994. Internship in Psychology. (4 Hours)

Offers supervised experiences in the application of psychology in instructional, clinical, or other applied settings. May be repeated without limit.

Attribute(s): NUpath Integration Experience

PSYC 5100. Proseminar in Psycholinguistics. (3 Hours)

Serves as first-level graduate course in psycholinguistics, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussions. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5110. Cognitive Science. (3 Hours)

Serves as a first-level graduate course in cognitive sciences, focusing on theoretical, experimental, and methodological issues. Presents the foundation of terminology, theoretical questions, and research skills in brain and cognition to support future study. Introduces strategies for reading, evaluating, and discussing papers dealing with the brain and cognition. Provides a working vocabulary of cognitive neuroscience approaches and neuroanatomy, along with tools for honing knowledge to match specific research interests. Requires permission of instructor for students who are not enrolled in the PhD program in psychology.

PSYC 5115. Colloquium. (3 Hours)

Aims to prepare students to be active and informed participants in presented talks from invited speakers from across a wide breadth of psychology and behavioral neuroscience fields. Requires participation in weekly departmental seminars. Faculty members who host weekly visiting seminar speakers lead students in discussions about each upcoming speaker to foster critical thinking about each research topic and to prepare questions and ideas for the invited speaker. Covers topics related to giving a successful scientific talk and communicating science in general. No writing component. May be repeated once.

PSYC 5120. Proseminar in Sensation. (3 Hours)

Serves as first-level graduate course in sensation, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5130. Proseminar in Perception. (3 Hours)

Serves as first-level graduate course in perception, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5140. Proseminar in Biology of Behavior. (3 Hours)

Serves as first-level graduate course in the biological basis of behavior, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5150. Proseminar in Clinical Neuroscience. (3 Hours)

Serves as first-level graduate course in clinical neuroscience, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5170. Social and Affective Science. (3 Hours)

Serves as a first-level graduate course in social and affective sciences. Focuses on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology.

PSYC 5180. Quantitative Methods 1. (3 Hours)

Presents first course in a two-course sequence that surveys a variety of quantitative methods used in experimental psychology. Requires permission of instructor for students who are not enrolled in the PhD program in psychology.

PSYC 5181. Quantitative Methods 2. (3 Hours)

Continues PSYC 5180. Presents second course in a two-course sequence that surveys a variety of quantitative methods used in experimental psychology. Requires permission of instructor for students who are not enrolled in the PhD program in psychology.

Prerequisite(s): PSYC 5180 with a minimum grade of C- or PSYC 5180 with a minimum grade of D-

PSYC 5301. Research Methods in Psychological Sciences. (3 Hours)

Offers students an opportunity to obtain an in-depth understanding of one of various clinical and preclinical methods in neuroscience, psychophysiology, and psychology, with the focus alternating with the expertise of each instructor. Pairs hands-on learning with group discussions and presentations. Studies EEG, fMRI, computational modeling, neurobiological assays, animal behavioral assays, and psychophysics. May be repeated once.

PSYC 5410. Human Behavior and Sustainability. (3 Hours)

Offers a graduate-level introduction to the interdisciplinary field of human behavior and sustainability sciences. Explores an emerging literature embracing the complexity of social-ecological systems to better engage with the processes that reinforce unsustainable pathways and those that might be leveraged toward more sustainable futures. Focuses on understanding how observations about the psychology of individuals and collectives, and their relationship to institutions, have been theorized in relation to the environment and the approaches and methodologies used to test and describe such relationships.

PSYC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 7210. Seminar in Cognition. (3 Hours)

Offers a graduate-level seminar in cognition, diving into the work of scientists actively engaged in the study of thoughts, feelings, and behaviors. Readings guide presentations, discussions, and debates. Surveys and debates historical foundations of cognition and cognitive processes. Covers topics about foundational and cutting-edge techniques applied in cognitive research.

PSYC 7250. Seminar in Clinical Neuroscience. (3 Hours)

Addresses current theoretical and empirical issues in clinical neuroscience. Specific topics vary by semester. May be repeated thrice.

PSYC 7300. Advanced Quantitative Analysis. (3 Hours)

Covers selected advanced methods of quantitative analysis used in experimental psychology. Specific topics vary by semester. May be repeated without limit.

PSYC 7301. Research Methodologies Psychology. (3 Hours)

Introduces students to a range of conceptual and methodological issues in the conduct of experimental psychology research by department faculty members. Specific course content depends on which faculty members conduct the course in a given semester. May be repeated without limit.

PSYC 7302. Ethics and Professional Issues. (3 Hours)

Identifies and investigates ethical issues (such as privacy, fairness, social responsibility, or animal use) that research psychologists face in acquiring and using scientific knowledge. Also addresses broader professional issues relevant to pursuing a career as a research psychologist in an academic, government, or industrial setting.

PSYC 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

PSYC 7990. Thesis. (3 Hours)

Conducts theoretical and experimental research for the master's degree. May be repeated without limit.

PSYC 7996. Thesis Continuation - Half-Time. (0 Hours)

Continues research for the master's degree.

PSYC 8401. Research Project. (3 Hours)

Conducts research project in selected area of experimental psychology. May be repeated without limit.

PSYC 8402. Special Topics in Psychology. (3 Hours)

Offers in-depth analysis of critical topics in psychology. Specific topics vary by semester. May be repeated without limit.

PSYC 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

PSYC 9986. Research. (0 Hours)

Offers the student the opportunity to conduct doctoral research. May be repeated without limit.

PSYC 9990. Dissertation Term 1. (0 Hours)

Conducts theoretical and experimental research for the PhD degree.

Prerequisite(s): PSYC 9000 with a minimum grade of S

PSYC 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): PSYC 9990 with a minimum grade of S

PSYC 9996. Dissertation Continuation. (0 Hours)

Continues research for the PhD degree.

Prerequisite(s): PSYC 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Psychology - CPS (PSY)

Courses

PSY 1050. Introduction to Behavioral Health Science Professions. (3 Hours)

Introduces students to the major and to the landscape of behavioral health professions. Offers students an opportunity to consider their professional track and to begin formulating goals. Acclimates students to the Northeastern network, including how to access the professional, interpersonal, and academic resources available. Introduces students to their faculty advisors and fellow students and describes available experiential learning opportunities. Familiarizes students with undergraduate research and technological resources. Introduces the mindsets, dispositions, and competencies to support academic, professional, and personal sustainability.

PSY 1100. Foundations of Psychology. (3 Hours)

Surveys the fundamental principles, concepts, and issues in the major areas of contemporary scientific psychology. Approaches the study of psychology as a method of inquiry as well as a body of knowledge. Offers students an opportunity to obtain a basis for more advanced study of the science of psychology. Examines origins and methods of psychology, including neuroscience, consciousness, cognition, development, nature and nurture debate, psychosocial development, learning and memory, language, motivation, personality, group dynamics, therapy, health psychology, and psychological disorders.

Attribute(s): NUpath Natural/Designed World

PSY 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSY 2110. Principles of Human Learning. (3 Hours)

Presents the basic learning principles that permit humans to adapt effectively to a changing environment. Covers the science of how humans learn and the research and techniques of classical and operant conditioning with discussions of discrimination and generalization, biological constraints on learning, and other related topics. Relates learning principles to the understanding and treatment of behavioral, affective, cognitive, and motivational disorders.

Prerequisite(s): PSY 1100 with a minimum grade of D-

PSY 2230. Stress, Resilience, and Behavior Change. (3 Hours)

Offers a research-experiential approach to understanding the benefits and negative consequences of stress and its effects on human behavior and physiology. Discusses the work of researchers and practitioners in stress response. Topics include the relation of stress to health, communication, relationships, and academic and work performance. Examines the behavioral strategies associated with leveraging the stress response in personal and professional arenas. Considers perspectives of resilience, coping, and behavioral change from various social and cultural standpoints.

PSY 2240. Human Sexuality and Love. (3 Hours)

Focuses on the historical, biological, psychological, developmental, and social/cultural influences on human sexuality and its expression. Sexuality lies at the core of our identities as human beings, yet many adults are uninformed of basic aspects of sexual anatomy and function. Topics include sexual anatomy and physiology, contraception and abortion, pregnancy and childbirth, gender identity, role and expression, romantic love, sexual minorities, media impact on sexuality, and attitudes toward contemporary issues.

PSY 2300. Human Behavior and Decision Making. (4 Hours)

Introduces learners to fundamentals of individual reasoning and decision making. Begins by introducing underlying factors that influence decision making, such as personality, emotions and emotional intelligence, perception, and attribution. Explores the impact of situational variables on human behavior and decision making. Applies these concepts to the study of human logic, decision-making processes, and common decision-making biases. Addresses the role of these topics in enabling organizational resilience.

PSY 2500. Applied Behavior Analysis 1. (3 Hours)

Focuses on how to facilitate significant behavior change in applied settings using foundational principles of behavior analysis to spur on effective, meaningful, and ethical change. Applied behavior analysis is a discipline that strives to understand and improve human behavior. Covers how to choose, identify, and effectively employ reinforcers, foundations of behavior assessment, and development of function-based interventions.

PSY 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSY 3150. The Opioid Crisis. (3 Hours)

Focuses on the complexities of addiction across the life span, including the associated biological, psychological, and social factors. The exorbitant rise in rates of opioid addiction and overdoses world-wide require effective, evidence-based interventions to support the millions of individuals, families, communities, and societies affected. Examines the continuum of care model including promotion, prevention, treatment, and recovery. Topics include key risk and protective factors; co-occurring disorders; and evidence-based practices and methods of engaging diverse constituents through outreach, education, service delivery, capacity building, and systems change.

Prerequisite(s): PSY 1100 with a minimum grade of D-

PSY 3200. Social Psychology. (3 Hours)

Surveys the socialization process, including social motives, interpersonal perception, group membership and structure, gender and culture, attitudes, prejudice, and leadership. Social psychology is embedded in our professional and personal roles. Identifies key theories and frameworks to apply in today's work and living arenas.

Prerequisite(s): PSY 1100 with a minimum grade of D- or SOC 1100 with a minimum grade of D- or (PSY 1010 with a minimum grade of D- ; PSY 1210 with a minimum grade of D-) or (PSY 1010 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-) or (PSY 1210 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-)

PSY 3210. Abnormal Psychology. (3 Hours)

Covers diagnosis, symptomatology, etiology, and therapy of anxiety, somatoform, and dissociative disorders. Introduces the major forms of psychotherapy, including psychoanalysis and client-centered, behavioral, and cognitive therapy.

Prerequisite(s): PSY 1100 with a minimum grade of D- or (PSY 1010 with a minimum grade of D- ; PSY 1210 with a minimum grade of D-) or (PSY 1010 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-) or (PSY 1210 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-)

PSY 3220. Cognition and Language. (3 Hours)

Offers an in-depth analysis of human cognition and language. Topics include pattern recognition, attention, memory, categorization and concept formation, problem solving, and aspects of cognitive development. Examines current theories of cognitive processing and related experimental findings. Introduces psycholinguistics, the nature and structure of language, its biological bases, acquisition, production, and perception.

Prerequisite(s): PSY 1100 with a minimum grade of D- or (PSY 1010 with a minimum grade of D- ; PSY 1210 with a minimum grade of D-) or (PSY 1010 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-) or (PSY 1210 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-)

PSY 3230. Development across the Life Span. (3 Hours)

Explores change throughout the life span. Focuses on the basic physical, perceptual, cognitive, and emotional capacities that develop from infancy through late adulthood. Emphasizes how biological inheritance interacts with the physical and social environment. Explores individual and cross-cultural differences in patterns of development.

Prerequisite(s): PSY 1100 with a minimum grade of D- or (PSY 1010 with a minimum grade of D- ; PSY 1210 with a minimum grade of D-) or (PSY 1010 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-) or (PSY 1210 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-)

PSY 3240. Sensation and Perception. (3 Hours)

Examines how our sensory organs—eyes, ears, skin, mouth, and nose—along with our sensory nervous system inform our awareness of the outside world and influence our internal perceptual world. Covers perception of light, space, form, motion, color, attention, speech, and music. Topics include visual and auditory perception, neural and anatomical bases, and early and ongoing influences on development of sensation and perception.

Prerequisite(s): PSY 1100 with a minimum grade of D- or (PSY 1010 with a minimum grade of D- ; PSY 1210 with a minimum grade of D-) or (PSY 1010 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-) or (PSY 1210 with a minimum grade of D- ; PSY 1410 with a minimum grade of D-)

PSY 3330. Autism Spectrum Disorders. (3 Hours)

Focuses on the characteristics, theory, and teaching and intervention applications for individuals with autism spectrum disorders (ASD). Discusses approaches, trends, and etiological and diagnostic issues. By embracing an inclusionary, strengths-based approach, educational and behavioral professionals are better able to engage families through responsive instructional and intervention strategies across the life span.

Prerequisite(s): PSY 1100 with a minimum grade of D- ; PSY 2500 with a minimum grade of D-

PSY 3450. Research in Psychology. (3 Hours)

Explores research methods in psychology including observational, correlational, survey, and experimental methods. Uses the scientific method in the design, execution, analysis, and communication of psychological investigations. Discusses the ethics of research and evaluation methods. Offers students an opportunity to conduct psychological studies using a variety of methods and to write a substantial research paper.

Prerequisite(s): (MTH 2300 with a minimum grade of D- or MTH 2310 with a minimum grade of D- or MTH 3300 with a minimum grade of D-); PSY 3200 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

PSY 3500. Applied Behavior Analysis 2. (3 Hours)

Builds upon the basic principles of applied behavior analysis presented in PSY 2500. Focuses on the necessary structures to build effective instruction and intervention for a wide range of clinical and school settings. Allows for varied applications for clients and students with addiction, developmental disabilities, autism, and related disabilities, as well as learning disabilities.

Prerequisite(s): PSY 2500 with a minimum grade of D-

PSY 3700. Behavior Measurement. (3 Hours)

Explores principles of quantitative behavior analysis with an emphasis on applying research to practice. Analyzing data and embarking upon experiential design are vital components of intervening with populations. Employs a variety of methods to explore different methodologies in behavior analysis in accordance with the current Behavior Analyst Certification Board task list.

Prerequisite(s): PSY 1100 with a minimum grade of D- ; PSY 3500 with a minimum grade of D-

PSY 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSY 4230. Physiological Psychology. (3 Hours)

Explores the relationship between brain function and human behavior. Introduces how nerve cells function. Topics include localization of function in the brain, perception, learning, eating behavior, motivation, and the relation of emotion to nervous system activity.

Prerequisite(s): PSY 3230 with a minimum grade of D- or (PSY 3420 with a minimum grade of D- ; PSY 3421 with a minimum grade of D-) or (PSY 3420 with a minimum grade of D- ; PSY 3422 with a minimum grade of D-) or (PSY 3421 with a minimum grade of D- ; PSY 3422 with a minimum grade of D-)

PSY 4310. Personality. (3 Hours)

Focuses on behavioral, dynamic, and constitutional determinants. Includes concepts such as environmental and genetic contributions, assessment of personality, research, and a survey of the major personality theories.

Prerequisite(s): PSY 1100 with a minimum grade of D-

PSY 4400. Behavior Assessment and Evaluation. (3 Hours)

Explores the methods used to identify, measure, and assess the behaviors of individuals using applied behavior analysis (ABA), including behaviors targeted for increase and decrease. In-depth topics include function-based assessment and treatment in behavior analysis; design and details of the assessment process, including selection of an appropriate assessment method; and the methodology, results, and recommendations derived from a functional behavior assessment. Explores assessments such as the DIBELS, ABLLS-R, and VB-MAPP, along with widely used instruments. The capacity to effectively analyze behavior and develop appropriate intervention strategies to bring about behavioral change is a fundamental competency for professionals.

Prerequisite(s): PSY 3500 (may be taken concurrently) with a minimum grade of D-

PSY 4600. Advanced Practicum 1. (3 Hours)

Offers students an opportunity to apply behavioral principles and methods within organizational settings. Students engage in agency settings to bolster and demonstrate professional competencies needed to serve individuals, groups, organizations, and communities in our global 21st century.

Prerequisite(s): PSY 1100 with a minimum grade of D-

PSY 4850. Senior Research Seminar in Psychology. (3 Hours)

Offers students an opportunity to independently investigate a topic of interest and present their findings to their peers. This capstone course for the undergraduate curriculum should be taken as close as possible to graduation.

Prerequisite(s): PSY 3450 with a minimum grade of D-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

PSY 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

PSY 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Public Health (PHTH)

Courses

PHTH 1260. The American Healthcare System. (4 Hours)

Introduces the organization and dynamics of the healthcare system and the role of consumers. Explores basic elements of healthcare including financing, personal insurance, high-risk status, and patient rights within the context of the U.S. system. Central to this exploration is an analysis of healthcare issues requiring informed consent from patients: patient bill of rights, healthcare directives, and the use of a proxy for decision making. Introduces the roles and responsibilities of various healthcare workers within the framework of an interdisciplinary model of healthcare.

Attribute(s): NUpath Societies/Institutions

PHTH 1261. Comparative Healthcare Systems. (4 Hours)

Designed to enable health profession students to develop a basic understanding of health-delivery systems and key issues confronting healthcare in the United States and in the study country in this study-abroad course. Explores issues such as the affordability of medical care, patient rights, health risks and behaviors, disease prevention, quality and access to care, the growth of managed care and corporate influence on healthcare, new medical technologies, the aging population, the impact of biotechnology, and trends in employment of health professionals. Incorporates self- and group-reflection exercises, Internet and contemporary media exploration, and in-class discussions. Compares and contrasts key healthcare issues in the study country with those in the United States using literature, Internet and contemporary media, observations in the study country, and discussions with guest speakers.

Attribute(s): NUpath Societies/Institutions

PHTH 1270. Introduction to Global Health. (4 Hours)

Introduces global health in the context of an interdependent and globalized world focusing on four main areas of analysis: infrastructure of global health; diseases; populations; and terms, concepts, and theories. While the focus is on lower-income countries, the course examines issues in a broader global context, underscoring the interconnections between global health disparities and global health policy response. Applies case studies describing interventions to improve healthcare in resource-poor settings in sub-Saharan Africa and elsewhere to help illuminate the actors, diseases, populations, and principles and frameworks for the design of effective global health interventions. AFRS 1270 and PHTH 1270 are cross-listed.

Attribute(s): NUpath Societies/Institutions

PHTH 2210. Foundations of Biostatistics. (4 Hours)

Introduces the fundamental concepts of biostatistics. Offers students an opportunity to learn to apply statistical thinking to practical problems across several health disciplines. Draws examples and readings from clinical and public health literature. Introduces R programming language.

Attribute(s): NUpath Analyzing/Using Data, NUpath Formal/Quant Reasoning

PHTH 2211. Recitation for PHTH 2210. (0 Hours)

Offers small group discussion format to cover material in PHTH 2210.

Corequisite(s): PHTH 2210

PHTH 2300. Communication Skills for the Health Professions. (4 Hours)

Offers students in the health professions an opportunity to learn how to communicate effectively with patients, colleagues, and other professionals. Covers interpersonal communication with patients and families from culturally diverse backgrounds, public speaking and presentations, and communicating as a leader. Requires students to create/prepare and deliver several presentations throughout the semester.

Attribute(s): NUpath Difference/Diversity, NUpath Creative Express/Innov

PHTH 2301. Communication Skills for the Health Professions—Global. (4 Hours)

Studies how to communicate effectively with patients, colleagues, and other professionals—regardless of race, culture, or ethnicity—on interpersonal, organizational, and global levels. Introduces traditional and new media health communication strategies, public speaking/presentation techniques, and communication as leaders in a global environment. Compares cultures and healthcare systems in the country of study with the American system by engaging with health professionals, patients, caregivers, and communications and other specialists. Introduces students to art and techniques of health communication for informing and influencing patients, caregivers, and the community-at-large. Offers students in the health professions an opportunity to learn interpersonal, organizational, mass media, and global communication skills to empower individuals to become health literate and participate in their own healthcare. May be repeated without limit.

Attribute(s): NUpath Difference/Diversity, NUpath Creative Express/Innov

PHTH 2350. Community and Public Health. (4 Hours)

Provides students with a basic familiarity with and appreciation of public health and community-based methods for improving the health of populations. Explores the purpose and structure of the U.S. public health system, contemporary public health issues such as prevention of communicable diseases, health education, social inequalities in health and healthcare, public health responses to terrorism, and control of unhealthy behaviors like smoking, drinking, drug abuse, and violence. Prior completion of PHTH 1260 is recommended but not required.

Attribute(s): NUpath Societies/Institutions

PHTH 2351. Community and Public Health - Global. (4 Hours)

Offers a basic familiarity with (and appreciation of) public health and community-based methods for improving the health of populations in a global context. Discusses the purposes and structures of the public health systems of the United States and the host country. Explores contemporary public health issues, including the global burden of disease; social determinants of inequalities in health and healthcare; communicable disease detection and management; environmental health risks; nutrition and physical activity; and unhealthy behaviors, such as substance use and violence. Analyzes the application of public health practices and principles to urban health concerns through the use of comparative case studies.

Attribute(s): NUpath Societies/Institutions

PHTH 2414. Environmental Health. (4 Hours)

Offers an overview of the field of environmental health, with focus on what the National Institute of Environmental Health Sciences terms "environmental public health." This broad field increasingly involves transdisciplinary approaches that use social science/environmental health collaborations, and it includes the physical, built, and social environments. Asks students to think critically about the economic, scientific, social, and political factors that shape environmental health and to consider how the field is relevant to other public health issues.

PHTH 2515. Healthcare Policy and Administration. (4 Hours)

Focuses on management and policy issues in healthcare. Discusses management and administrative structures in hospitals and other healthcare organizations, including community clinics and health organizations, both private and public. Introduces the financial systems, economic information, and payment mechanisms necessary to understand healthcare financing. Also explores the variety of factors that influence population health from a healthcare policy perspective. Offers students an opportunity to learn how to analyze, prepare, and write policy briefs based on understanding the various economic, legal, and political forces shaping healthcare in the United States.

Prerequisite(s): PHTH 1260 with a minimum grade of C or PHTH 1261 with a minimum grade of C

PHTH 2616. Rural Health: An Interdisciplinary Seminar. (4 Hours)

Addresses current issues in rural health. Maine, one of the nation's most rural states, is the primary case example. Highlights interdisciplinary approaches to identifying priority health concerns, addressing root causes of diseases and poor health and developing sustainable policy and programmatic interventions for improving health outcomes of individuals, families, and communities in rural areas. Reviews models of rural healthcare delivery, rural public health systems and practices, rural public policy and health reform, the role of health technologies in rural practice, and health disparities among vulnerable rural populations (including but not limited to immigrants, migrant workers, older people, people living with disabilities, LGBTQIA+ persons, and indigenous/first peoples). Critically analyzes the complex contextual factors that must be addressed to sustainably improve health outcomes in rural settings.

Attribute(s): NUpath Societies/Institutions

PHTH 2991. Research in Public Health. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

PHTH 3250. Fundamentals of Qualitative Research. (4 Hours)

Discusses the role of qualitative research in topics related to healthcare delivery and public health practice. Qualitative research aims to achieve in-depth and contextualized understanding of people, cultures, and societies and usually employs texts, interviews, archival materials, and focus group discussions as sources of data. Describes all stages of a research project, from the initial selection of a topic, through data collection, data analysis, and presentation of results. Surveys the research design approaches most commonly used in healthcare settings, public health agencies, and human service organizations. Students formulate a research question, develop an appropriate research plan, and describe how best to collect or access relevant data. Offers students an opportunity to learn how to assess the rigor and generalizability of qualitative research.

PHTH 4120. Global Perspectives on Discrimination and Health. (4 Hours)

Explores how discrimination can lead to population-level health disparities among marginalized groups globally. Topics include constructions of social categories, such as race and gender; differences in patterns of disease across populations, both intra- and internationally; how work from various disciplines, such as anthropology, medicine, and public health, inform understanding about how discrimination relates to health; and theoretical models from different disciplines that explain public health disparities.

Prerequisite(s): (PHTH 2350 with a minimum grade of C or PHTH 2351 with a minimum grade of C); (ENGW 3302 (may be taken concurrently) with a minimum grade of C or ENGW 3304 (may be taken concurrently) with a minimum grade of C or ENGW 3306 (may be taken concurrently) with a minimum grade of C or ENGW 3307 (may be taken concurrently) with a minimum grade of C or ENGW 3308 (may be taken concurrently) with a minimum grade of C or ENGW 3314 (may be taken concurrently) with a minimum grade of C or ENGW 3315 (may be taken concurrently) with a minimum grade of C)

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture, NUpath Writing Intensive

PHTH 4202. Principles of Epidemiology in Medicine and Public Health. (4 Hours)

Introduces the principles of epidemiology necessary to critically evaluate the published research in medicine, public health, and related fields. Through careful reading of literature, class discussion, and lectures, familiarizes students with the study of design-related considerations that are an indispensable part of interpreting scientific literature. Offers students an opportunity to learn how to recognize critical elements of research design and execution (e.g., loss to follow-up in randomized clinical trials and other cohort designs, selection bias in case control studies, etc.); identify the strengths and limitations of different approaches to research questions; deepen their understanding of causal inference; and recognize the provisional nature of scientific knowledge. Covers issues of statistical methods and data analysis; however, there are no computational requirements.

Prerequisite(s): (ENGW 3302 with a minimum grade of C or ENGW 3304 with a minimum grade of C or ENGW 3306 with a minimum grade of C or ENGW 3307 with a minimum grade of C or ENGW 3308 with a minimum grade of C or ENGW 3311 with a minimum grade of C or ENGW 3314 with a minimum grade of C or ENGW 3315 with a minimum grade of C); (CRIM 3700 with a minimum grade of C or ECON 2350 with a minimum grade of C or ENVR 2500 with a minimum grade of C or INSH 3102 with a minimum grade of C or MATH 2280 with a minimum grade of C or MATH 3081 with a minimum grade of C or MGSC 2301 with a minimum grade of C or NRSG 5120 with a minimum grade of C or PHTH 2210 with a minimum grade of C or POLS 2400 with a minimum grade of C or PSYC 2320 with a minimum grade of C or SOCL 2320 with a minimum grade of C)

Attribute(s): NUpath Natural/Designed World, NUpath Writing Intensive

PHTH 4511. Healthcare Management. (4 Hours)

Provides an opportunity to develop skills and abilities related to management within the context of interdisciplinary study. Students explore issues in healthcare management in small-group, case-based educational experiences or problem-solving approaches. Within the context of small groups, students explore complex problems frequently encountered in clinical practice. Group projects related to leadership, management, or administrative issues are pursued and developed as classroom or poster presentations.

Prerequisite(s): PHTH 1260 with a minimum grade of C or PHTH 1261 with a minimum grade of C

PHTH 4515. Critical Issues in Health and Public Health Policy. (4 Hours)

Explores current public health and healthcare policy issues. Uses a case-based format to analyze, explain, and address ongoing problems within the U.S. public health and healthcare systems. Assesses the status of U.S. healthcare reform. Evaluates alternative payment mechanisms. Reviews national and state drug pricing negotiations, implications for drug development and patient access, and other current issues in public health and healthcare.

Prerequisite(s): PHTH 2515 with a minimum grade of C ; (ENGW 3302 (may be taken concurrently) with a minimum grade of C or ENGW 3304 (may be taken concurrently) with a minimum grade of C or ENGW 3306 (may be taken concurrently) with a minimum grade of C or ENGW 3307 (may be taken concurrently) with a minimum grade of C or ENGW 3308 (may be taken concurrently) with a minimum grade of C or ENGW 3314 (may be taken concurrently) with a minimum grade of C or ENGW 3315 (may be taken concurrently) with a minimum grade of C)

Attribute(s): NUpath Capstone Experience, NUpath Societies/Institutions

PHTH 4540. Health Education and Program Planning. (4 Hours)

Offers a writing-intensive course that introduces concepts central to health education and the program-planning process. Examines current public health issues that require intervention through health education or other types of prevention programs. Studies and applies models and theories used in health education and program planning. Offers students an opportunity to conduct a needs assessment; design and plan a program for a public health issue; create a mission statement for the program as well as goals, objectives, and strategies; and design the intervention, develop an evaluation plan, and create a budget and marketing plan. Prior completion of PHTH 2300 and PHTH 2350 is recommended but not required.

Prerequisite(s): ENGW 3306 with a minimum grade of C or ENGW 3302 with a minimum grade of C or ENGW 3304 with a minimum grade of C or ENGW 3307 with a minimum grade of C or ENGW 3308 with a minimum grade of C or ENGW 3314 with a minimum grade of C or ENGW 3315 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

PHTH 4616. Addressing Rural Health Inequities. (4 Hours)

Presents an overview of health inequities among rural populations and seeks to facilitate understanding of the complex causes through a public health perspective. Investigates innovative approaches to addressing rural health challenges, and provides examples of evidence-based policy, program, and technological interventions that impact the health and well-being of rural communities. Explores public health and healthcare issues that have been at the core of the health sciences/public health curriculum. Offers students an opportunity to select a specific rural health inequity in a defined geographic area as the focus of a final capstone project.

Attribute(s): NUpath Capstone Experience

PHTH 5120. Race, Ethnicity, and Health in the United States. (3 Hours)

Explores the role of economic, social, and individual factors in explaining racial and ethnic health disparities and examines intervention approaches to eliminate them. Topics include genetic and social constructions of race and ethnicity, measuring race and ethnicity, and the differences in prevalence and patterns of disease across groups; cultural and structural factors that affect healthcare delivery, such as discrimination, racism, and health status; and public health approaches to prevention and improving healthcare delivery.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

PHTH 5202. Introduction to Epidemiology. (3 Hours)

Introduces the principles, concepts, and methods of population-based epidemiologic research. Offers students an opportunity to understand and critically review epidemiologic studies. Lectures and discussions aim to serve as a foundation for training in epidemiology, quantitative methods, and population-based health research. The course is a required introductory course for students in the Master of Public Health program and is appropriate for students who are interested in epidemiologic research. Students not meeting course restrictions may seek permission of instructor.

PHTH 5210. Biostatistics in Public Health. (3 Hours)

Offers public health students an opportunity to obtain the fundamental concepts and methods of biostatistics as applied predominantly to public health problems and the skills to perform basic statistical calculations. Emphasizes interpretation and comprehension of concepts. Topics include descriptive statistics, vital statistics, sampling, estimation and significance testing, sample size and power, correlation and regression, spatial and temporal trends, small area analysis, and statistical issues in policy development. Draws examples of statistical methods from the public health practice. Introduces use of computer statistical packages. Requires permission of instructor for students outside designated programs.

PHTH 5212. Public Health Administration and Policy. (3 Hours)

Offers students an opportunity to obtain practical knowledge concerning the planning, organization, administration, management, evaluation, and policy analysis of health programs. Surveys what we know and think about public health administration and policy and what we do in practice. Introduces the main components of public health policy and administration using notable conceptual frameworks and case studies. Requires permission of instructor for students outside designated programs.

PHTH 5214. Environmental Health. (3 Hours)

Introduces the field of environmental health, which encompasses concerns related to physical, built, and social environments. Discusses the tools used to study environmental exposures and diseases. Examines environmental health hazards, the routes by which humans are exposed to hazards, various media in which they are found, and disease outcomes associated with exposures. Offers students an opportunity to become familiar with methods used to conduct environmental health research and with the federal and state agencies responsible for protecting environmental health.

Attribute(s): NUpath Capstone Experience

PHTH 5222. Health Advocacy. (3 Hours)

Seeks to educate students about the role of advocacy in public health while providing tools and support to address current healthcare issues. Provides information and theory about advocacy, education, and community organizing in public health practice and skills geared toward direct application. Covers various techniques related to developing and conducting an advocacy project within a community setting. Offers students an opportunity to develop, communicate, and refine a community-based advocacy program. Requires permission of instructor for students outside designated programs.

PHTH 5226. Strategic Management and Leadership in Healthcare. (3 Hours)

Focuses on management challenges facing healthcare organizations, particularly community-based agencies and their role in the public healthcare delivery system. Introduces strategic thinking and leadership approaches that must be considered for managing a successful healthcare organization. Selected topics include strategic planning; organizational development and the barriers to organizational change; relationship management with key internal and external constituencies; marketing, financial management, and contract negotiation; evolving principles of health insurance and the changing role of the consumer; and the key elements for effective organizational leadership in today's evolving healthcare marketplace. When appropriate, outside experts are used to supplement readings, case studies, and lecture and discuss practical real-world challenges in leading various healthcare initiatives. Requires permission of instructor for students outside designated programs.

PHTH 5230. Global Health. (3 Hours)

Presents an overview of global health issues and focuses on less economically developed countries. Covers measures of disease burden; demography of disease and mortality; Millennium Development Goals (under the auspices of the United Nations); infectious diseases such as HIV/AIDS, tuberculosis, and malaria and their prevention; vaccine utilization and potential implications; chronic diseases; tobacco-associated disease; nutritional challenges; behavioral modification; mother and child health; health human resources; and ethical issues in global health.

Attribute(s): NUpath Capstone Experience

PHTH 5232. Evaluating Healthcare Quality. (3 Hours)

Focuses on the conceptual and methodological foundations for evaluating the quality of care of healthcare providers—both individual providers and healthcare organizations. Aimed at students pursuing careers in public health, public policy, healthcare management, and the various health professions in the growing field of quality evaluation and improvement. Also designed to give healthcare providers an appreciation for how they may be evaluated. Examines scientific issues in the measurement of quality of care as well as key quality evaluation methods. Also covers the use of risk adjustment and other methodologies for comparing the quality of healthcare providers. Focuses on mechanisms that assess quality, including licensure, accreditation, and board certification.

PHTH 5234. Economic Perspectives on Health Policy. (3 Hours)

Uses basic economic concepts to illuminate the many factors that shape health, healthcare, and the healthcare system in the United States. Examines the role of these concepts in explaining the challenges faced in achieving three core goals of the healthcare system: increasing access, limiting cost, and improving quality. Explores how policy makers, market participants, and others can remedy access, cost, and quality deficiencies. Illustrates how economic concepts can be applied to the study of health and health behaviors.

PHTH 5236. Food, Nutrition, and Health. (3 Hours)

Offers a capstone experience to explore public health nutrition issues among individuals, communities, and populations living in urban settings. Emphasizes planning, implementation, and evaluation of programs and policies to improve nutrition and reduce food insecurity among vulnerable populations. Complements familiarity with concepts of nutrition knowledge with real-world activities and experiences. Focuses on integrating and synthesizing information to analyze, explain, and address problems in healthcare, community, and public health.

Attribute(s): NUpath Capstone Experience

PHTH 5300. Project Management in Public Health. (1 Hour)

Presents principles of project management as applied to public health organizations and their programs. Offers students an opportunity to learn the components of the project management life cycle, including human resource components, material resources, and related components.

PHTH 5310. Budget Principles in Public Health. (1 Hour)

Details the public health revenue and funding environment, identifies key budget development functions, and describes the importance of utilizing the budget process for sound management of the programs. Public health programs in public agencies and nonprofit organizations require managerial skills to assure that programs are implemented efficiently and effectively. Funding for public health frequently comes from governmental revenue sources—federal and state budgets or grants from government or foundations. It is critical that the funds are utilized well and appropriate to the objectives of the agency and program. Advancing the environment for public health through effective budgeting and promotion of program impact is important to support the continued funding for public health. The course takes students through these topics and offers them the opportunity to gain the practical experience of developing a budget for a public health program as the central activity.

PHTH 5320. Grant Writing in Public Health. (1 Hour)

Explores the grant funding landscape, identifies different types of funders and grants, and identifies potential funders. Offers participants an opportunity to develop their skills in grant writing and in reviewing grants, to develop a grant proposal, and to understand the submission and peer review process.

PHTH 5350. Using SAS in Public Health Research. (1 Hour)

Introduces students to the SAS statistical software system to manage, report, summarize, and analyze public health data. The SAS suite can be used to provide a broad analysis of different types of data. Public health research often requires one to access, manipulate, and analyze data sets relating to individuals, groups, or healthcare systems. Explores approaches in SAS to accessing data sets, data manipulation, working with multiple data sets, summarizing and reporting data, and analytic results. Includes various statistical methods and testing procedures, such as t-tests, chi-square tests, and linear regression, to illustrate applications of SAS. The second part of the course explores more advanced programming methods including SAS macros, using the Output Delivery System (ODS), and data arrays.

Prerequisite(s): PHTH 5210 with a minimum grade of B- or PHTH 5210 with a minimum grade of B-

PHTH 5540. Health Education and Program Planning. (3 Hours)

Focuses on underlying concepts of health education and explores current health education issues that require intervention. Covers program planning models and theories used in health education. Offers students an opportunity to develop a working knowledge of the planning process for health education through the analysis of case studies and by creating a program plan to address a health issue of their choice.

Prerequisite(s): (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C) or graduate program admission

Attribute(s): NUpath Writing Intensive

PHTH 5603. Qualitative Methods. (4 Hours)

Introduces the principles and use of common qualitative methods with a particular focus on their application in the social sciences. Students practice designing qualitative research. Offers students an opportunity to gain experience using diverse analytic and theory building techniques, conducting field observations and interviews, and analyzing content. Examines the foundation of core concepts in research. Topics include objectivity, bias, empiricism, validity, triangulation, and ethical issues surrounding human subjects—such as confidentiality, anonymity, and vulnerable populations.

PHTH 6130. Public Health Technologies: Ethics and Equity. (3 Hours)

Offers students an opportunity to develop an understanding of the multiple forms of technology that are deployed to advance both healthcare and public health and the broad range of ethical challenges and individual and community-level disparities associated with these technologies. Examines theoretical and conceptual frameworks to address disparities associated with public health technologies. Explores case studies to understand how a social justice framework can be applied to the development, implementation, and evaluation of public health technologies.

PHTH 6200. Principles and History of Urban Health. (3 Hours)

Focuses on the aspects of urban development and life that impact the health and well-being of city residents. Offers students an opportunity to learn about the impact of migration patterns, built environments, occupational stratification, and other cultural and community contextual factors that impact health status and healthcare access. Examines the level of overall health and healthcare found in urban populations, particularly the urban poor, and the disproportionate impact on racial and ethnic minorities in the United States and elsewhere. Considers public policy approaches for addressing the unique health issues of urban areas. Examines urban health issues both from a national and international perspective. Requires permission of instructor for students outside designated programs.

Attribute(s): NUpath Capstone Experience

PHTH 6202. Intermediate Epidemiology. (3 Hours)

Offers an intermediate-level course covering key principles, concepts, and methods of population-based epidemiologic research. Topics include observational study designs, measures of disease occurrence and association, validity and bias, confounding, effect modification, multivariate analysis for stratification and adjustment, critical appraisal and meta-analysis, mediation analysis, missing data analysis, and concepts and methods for strengthening causal inference. Offers graduate students unique opportunities to engage in practical applications, including critical reviews of published epidemiologic journal articles, and to conduct hands-on analyses of empirical datasets using SAS statistical software. Designed to serve as a foundation for further advanced training in specialized branches of epidemiology, quantitative methods, and epidemiologic research.

Prerequisite(s): PHTH 5202 with a minimum grade of B-

PHTH 6204. Society, Behavior, and Health. (3 Hours)

Explores individual, interpersonal, and social influences on health. Offers students in public health an opportunity to learn the application of the social and behavioral sciences. Examines foundations of public health, including prevention and the prevention paradox, theories of disease causation, and public health ethics. In addition, multilevel influences on health are examined, including behavioral theories and social determinants of health. Throughout the semester, attention is paid to disparities in health. Finally, we examine strategies to reduce health disparities, such as education, interventions, and policy-level changes, and discuss their relative effectiveness. Requires permission of instructor for students outside designated programs.

PHTH 6208. Urban Community Health Assessment. (3 Hours)

Offers students an opportunity to develop a basic understanding of the complex public health issues confronting urban communities across the nation. Uses a community organization and development framework for public health practice. Seeks to provide skills, tools, and experiential learning opportunities that result in community assessments that may be used in public health planning, programming, and policy. Covers key principles and methods for conducting community health assessments utilizing a range of quantitative and qualitative methods, including community epidemiology, major data sets, surveillance data, behavioral risk and other population-based surveys, as well as other primary and secondary data sources. Includes collaborative and interactive exercises, including self- and group reflection, Internet and contemporary media exploration, and in-class discussions. Requires permission of instructor for students outside designated programs.

PHTH 6210. Applied Regression Analysis. (3 Hours)

Builds upon the fundamental concepts and methods of biostatistics with applications to health disciplines. Topics include hypothesis testing, analysis of variance, linear regression, multiple regression, and logistic regression. Examples and readings are drawn from the public health literature. The SAS statistical software package is introduced and used throughout the course.

Prerequisite(s): PHTH 5210 with a minimum grade of B-

PHTH 6224. Social Epidemiology. (3 Hours)

Focuses on social epidemiology, which is defined as the study of the distribution and determinants of health in populations as related to the social and economic determinants of health. Includes theories, patterns, and controversies, as well as programs and policies that can be applied to address health inequalities. Readings include articles that situate one dimension of social epidemiology with articles addressing the empirical patterns, address prevailing theories and controversies regarding the causes of the inequalities, as well as address interventions or policies that may be applied to address the inequalities.

Prerequisite(s): (PHTH 5202 with a minimum grade of B- or PHTH 5202 with a minimum grade of B-); (PHTH 5210 with a minimum grade of B- or PHTH 5210 with a minimum grade of B-)

PHTH 6320. Qualitative Methods in Health and Illness. (3 Hours)

Discusses qualitative inquiry in general and specifically in topics related to public health and experiences of self, health, illness, and the body. Qualitative research aims to achieve in-depth and contextual understanding of people, culture, and societies and usually employs texts, interviews, published materials, images, and focus group discussions as sources of data. The course integrates theoretical and methodological readings and discussions with designing and conducting a qualitative project. Offers students an opportunity to understand meanings of health, illness, and the body in a variety of "local worlds" and reflect on their importance for informing policy, public health, research, and practice. Requires prior completion of one undergraduate- or graduate-level course in research methods.

PHTH 6400. Principles of Population Health 1. (3 Hours)

Seeks to provide students with historical background and methodological and critical-thinking tools needed to perform high-quality, interdisciplinary research in population health. Using a problem-solving and interdisciplinary framework, offers students an opportunity to gain the skills to develop research hypotheses, design research strategies, analyze data to test study hypotheses, and communicate their findings both orally and in writing. Also offers students an opportunity to gain experience in research methodology and application of basic methods for population health research, including epidemiological and biostatistical concepts. Finally, students demonstrate their mastery of these skills through problem sets and through written proposals that include communication of preliminary data.

Prerequisite(s): PHTH 5210 with a minimum grade of C- or PHTH 5210 with a minimum grade of D-

PHTH 6410. Principles of Population Health 2. (3 Hours)

Continues PHTH 6400, exploring additional population health research topics and methods and applying more advanced biostatistical and epidemiological analysis methods.

Prerequisite(s): PHTH 6400 with a minimum grade of C-

PHTH 6440. Advanced Methods in Biostatistics. (3 Hours)

Explores in detail the analysis of complex survey design, including adjustments for cluster sampling, weighting, and stratification. Designs that incorporate clustering of data are common in health science research. These designs are characterized by data that capture nonindependent repeated measurements on primary sampling units or that collect data with schemes more complex than simple random sampling. The statistical analyses of these types of data need to include appropriate adjustments to provide proper estimates and accurate testing. The second part of the course investigates the use of mixed regression models to analyze repeated measurements on individuals, multilevel data, and growth models.

Prerequisite(s): PHTH 6210 with a minimum grade of C-

PHTH 6800. Causal Inference in Public Health Research. (3 Hours)

Exposes students to causal inference approaches, including causal diagrams and counterfactual theory. Students are also asked to draw upon their own research experiences and prior epidemiology training to evaluate public health studies. Covers how to apply the fundamental concepts of counterfactuals and causal diagrams; assess threats to validity in study designs and analysis, including confounding, selection bias, and measurement error/misclassification; evaluate the validity of a public health research study's design and analysis with respect to addressing causal questions; and critically analyze scientific literature and apply findings to clinical or policy decisions. Offers students an opportunity to think critically and rigorously about the implications of study design and analysis toward addressing public health questions.

Prerequisite(s): PHTH 6202 with a minimum grade of C-

PHTH 6801. Causal Inference 1. (4 Hours)

Introduces causal inference approaches, including causal diagrams and counterfactual theory. Draws upon personal research experiences and/or prior training. Covers insights on how to apply the fundamental concepts of counterfactuals and causal diagrams; assess threats to validity in study designs and analysis including confounding, selection bias, and measurement error/misclassification; evaluate the validity of a research study's design and analysis with respect to addressing causal questions; and critically analyze scientific literature and apply findings to decisions. Offers students an opportunity to think critically and rigorously about the implications of study design and analysis toward addressing questions.

PHTH 6802. Causal Inference 2. (4 Hours)

Continues PHTH 6801. Expands on foundational knowledge of causal inference by examining time-varying exposures, introducing the g-formula for estimating standardized outcome distributions, and unraveling the intricacies of marginal structural models. Navigates through key topics, including static and dynamic treatment regimes. Engages in discussions on sensitivity analysis, graphical models, identification algorithms, and the complex domain of causal discovery. Examines advanced techniques in causal inference, offering students an opportunity to apply theoretical principles to practical scenarios. Tackles challenging aspects such as time-varying exposures and sophisticated modeling techniques in the pursuit of accurate and meaningful outcomes.

Prerequisite(s): PHTH 6800 with a minimum grade of B or PHTH 6801 with a minimum grade of B

PHTH 6810. Survival Analysis. (4 Hours)

Focuses on the theoretical understanding and computational analysis of time-to-event data, which may or may not be censored or truncated through the course of their collection. Presents foundational nonparametric methods, such as the log-rank test and Kaplan-Meier curves and a deeper discussion of the Cox proportional hazards model. Discusses power and sample size techniques for methods. Reviews examples from public health, clinical trials, and large-scale observational health studies.

PHTH 6820. Design and Analysis of Clinical Trials. (4 Hours)

Presents theoretical and computational aspects of conducting clinical trials research. Covers topics such as phase 1, 2, 3, and 4 trials. Explores creation of a statistical analysis plan, adaptive study designs, randomization techniques, interim monitoring, and reporting. Offers students an opportunity to practice a programming language for regulatory decision making, a solid foundation in the theoretical and computational aspects of conducting clinical trials research, and exercising the skills needed for success in this critical field. Applies theoretical concepts through practical exercises.

PHTH 6830. Generalized Linear Models. (4 Hours)

Focuses on selecting, fitting, and evaluating the general class of generalized linear models. Emphasizes linear, logistic, Poisson, and proportional hazards regression in addition to time series analyses. Stresses proper construction of models through the evaluation of modeling assumptions and assessment of model diagnostics. Introduces concepts of confounding, effect modification, and methods for missing data. Offers students an opportunity to fit, evaluate, and appropriately communicate and visualize the results of modeling techniques using a programming language and statistical software packages, as well as practice on techniques for data cleaning on real examples of messy data.

PHTH 6880. Statistical Consultancy. (1 Hour)

Offers students an opportunity to demonstrate skills including problem solving, communication, visualization, and adaptability through a consultancy small group project. Students work in interdisciplinary groups in a consultancy role. Topics include problem solving, consulting session management, written and oral communication, research ethics, experiment design, data collection, and application of statistical and data visualization methods with real-world problems. May be repeated once.

Prerequisite(s): MATH 5010 with a minimum grade of B ; PHTH 6830 with a minimum grade of B

PHTH 6910. Public Health Capstone. (3 Hours)

Offers students an opportunity for scholarly work on-site in a range of diverse public health settings reflective of their particular urban health focus. Students have an opportunity to integrate their theory and practice experiences in a major research, program planning, program implementation, policy development, management, service delivery, or evaluation project. Student-led and designed in consultation with community partners and faculty advisors, seeks to support students in the implementation and completion of their projects.

Prerequisite(s): PHTH 6966 with a minimum grade of B-

PHTH 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHTH 6966. Practicum. (3 Hours)

Provides eligible students with an opportunity for practical experience.

PHTH 7101. Qualitative Research Design. (4 Hours)

Introduces the logic of qualitative inquiry and various qualitative data collection strategies including field observation, in-depth interviews, focus groups, and archival materials. Suitable for students in a range of social scientific disciplines including anthropology, sociology, political science, public policy, criminal justice, population health, nursing, and applied psychology. Offers students an opportunity to obtain a foundation for essential aspects of research design as well as hands-on experience in data collection techniques around a topic of the student's choosing.

PHTH 7102. Qualitative Data Analysis. (4 Hours)

The goal of this course is to introduce students to methods for analyzing different forms of qualitative data. The course will train students in developing coding strategies to analyze qualitative data and introduces them to qualitative data software. Students will learn how to apply deductive and inductive coding, how to develop coding structures appropriate for various genres (e.g., exploratory, descriptive, narrative), and how to theorize from qualitative data. Students will receive extensive training in writing up qualitative research findings, from analytic memos to a publishable paper or dissertation chapter.

Prerequisite(s): PHTH 5603 with a minimum grade of C or PHTH 7101 with a minimum grade of C

PHTH 7103. Mixed Methods Research. (4 Hours)

Introduces the theory and practice of mixed method inquiry in the social sciences, broadly defined. Presents an overview of historical roots of mixed methods research, the major paradigms driving contemporary mixed methods research, and the four most common research designs applied in mixed methods research (concurrent, sequential, embedded, and multiphase). Studies how to evaluate the validity and quality of mixed methods research. Offers students an opportunity to develop a research protocol for a mixed methods research project.

PHTH 7976. Directed Study. (1-3 Hours)

Offers the student the opportunity to bring individual, concentrated attention to a particular public health topic or competency area as arranged and agreed upon in advance by a faculty member and the student. This option is generally recommended when the student desires a more intensive analysis of a particular subject. May be repeated without limit.

PHTH 8960. Exam Preparation—Doctoral. (0 Hours)

Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision.

PHTH 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PHTH 8986. Research. (0 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PHTH 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of program requirements for PhD candidacy.

PHTH 9990. Dissertation Term 1. (0 Hours)

Offers doctoral students an opportunity to work with their advisors and doctoral research committees to perform their doctoral research and to write their dissertation.

Prerequisite(s): PHTH 9000 with a minimum grade of S

PHTH 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): PHTH 9990 with a minimum grade of S

PHTH 9996. Dissertation Continuation. (0 Hours)

Offers continuation of dissertation research to doctoral students.

Prerequisite(s): PHTH 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Public Policy and Urban Affairs (PPUA)

Courses

PPUA 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 5100. Climate and Development. (4 Hours)

Serves as an introduction to climate change and development processes in developing countries. Exposes students to key debates in the fields of climate change and international development. Offers students an opportunity to learn about the approaches to climate adaptation, the relationship between adaptation and development, and concepts of resilience and transformation. Using a comparative case study approach, explores the importance of the local context; the intersections of politics, economics, and culture; ecology and human-environment relationships; and the role (and challenges) of finance and development assistance. Climate impacts threaten to reverse many of the development gains of the last century, and the most vulnerable are likely to be the most impacted by climate change. At the same time, opportunities exist to ensure climate-compatible development pathways. Cross-listed with INTL 5100.

Attribute(s): NUpath Societies/Institutions

PPUA 5201. Urban Planning and the Law. (2 Hours)

Addresses the role of law in defining the powers of planning and the legal questions surrounding key urban planning debates. Studies specifically the powers that city governments have to adopt to implement policies; debates about whether such powers should be expanded or restricted; the legal basis of government's ability to intervene in housing, real estate development, land use and acquisition, and other planning issues, as well as debates about such powers; and the roles of federal and state governments in determining what cities can do. Examines these issues by analyzing legal structures, court decisions, and social research.

PPUA 5220. How Healthcare Works: Business and Policy Innovations. (4 Hours)

Offers a high-level introduction to the past, current, and future states of the U.S. healthcare system, including key business and policy innovations introduced over time to improve access, quality, and affordability. Emphasizes learning about how the business and policy of healthcare works in the United States, with comparisons drawn to other countries' healthcare systems. Analyzes the potential contributions to health system improvement made by healthcare reform, technologies such as artificial intelligence, and other disruptive innovations. Designed for students interested in learning more about healthcare industry operations and the business and policy innovations that drive performance improvements in this sector.

PPUA 5225. The Open Classroom: Public Debates on Public Policy. (4 Hours)

Offers special topics built around a series of public debates on selected issues of public policy. May be repeated without limit.

PPUA 5226. Open Classroom Recitation. (0 Hours)

Accompanies PPUA 5225. Provides a small-group discussion format. May be repeated without limit.

Corequisite(s): PPUA 5225

PPUA 5230. Housing Policy. (4 Hours)

Examines the economic, social, and legal underpinnings of housing policy in the United States across a variety of topics, including housing finance and production, public and affordable housing, home ownership, and fair housing. Housing is both an essential human need and a critical sector of the U.S. economy. Presents the complicated and evolving roles of all of those involved in housing policy, including federal, state, and local government, and the private and profit sectors. Guest speakers provide real-world insights into current housing policy challenges.

PPUA 5231. Transportation Policy. (4 Hours)

Examines the physical, technological, economic, social, cultural, and political underpinnings of transportation policy in the United States. Topics include intra- and interstate transportation, the comparative economics of different modes of transportation, the impacts of federal and state policies on transportation options, and the long-term effects of those choices on metropolitan development, housing, land use, energy, and the environment. Also involves comparisons with transportation systems in other countries.

PPUA 5232. Immigration and Urban America. (4 Hours)

Examines the policy impacts of legal and illegal immigration in the United States, emphasizing the ways immigration shapes urban America. Discusses trends in immigration; elements of U.S. immigration policy; impacts of immigration on labor markets, economic development, housing, education, healthcare, criminal justice, race relations, and social policy (e.g., welfare); and effects on broader mass culture. Also considers the range of policy tools available in addressing these impacts.

PPUA 5233. Contemporary Community Development. (4 Hours)

Explores the political and social dynamics of community development in urban America, with particular focus on the local politics of housing, economic development, jobs, healthcare, access to services, and community safety. Uses Boston and its region as a laboratory to examine the role of grassroots community groups in shaping their neighborhoods, set within the broader institutional contexts that affect their representation and impacts.

PPUA 5234. Land Use and Urban Growth Policy. (4 Hours)

Explores the evolution of land use and urban form in the United States and surveys different types of land-use and urban-growth management tools used by local, regional, and state governments. Examines the environmental, economic, spatial, and social impacts of different patterns of urban growth, including "sprawl" and "smart growth," and the different philosophies and legal and policy approaches employed to manage those impacts. Also explores how land-use and urban-growth policy interacts with related priorities, including housing, infrastructure, and fiscal policy. Focuses on current and emerging issues and debates in land-use and urban-growth management, such as New Urbanism, livable communities, and transit-oriented development.

PPUA 5235. Participatory Community Planning Methods. (4 Hours)

Examines the role of the participant as a fundamental aspect of most urban planning processes. Studies the range of strategies that contemporary urban planners employ to ensure buy-in from a project's stakeholders. Utilizes historical precedents to locate gaps between the "plan then present" model used in many planning processes and "co-design" processes that seek to redefine the role of the "technical expert." Offers students an opportunity to develop a toolkit of engagement methods from varied models of participatory planning processes. Engages in project-based work that enlists these methods. Assesses the efficacy of these methods when identifying the right stakeholders and when determining when/how to bring stakeholder participation into a planning process.

PPUA 5236. Introduction to Real Estate Development for Urban Policy Makers. (4 Hours)

Introduces the basic skills and knowledge of real estate development used within public-private partnerships to address policy and planning issues. Through a series of problem sets, offers students an opportunity to learn basic real estate finance and computation, including the fundamentals of pro forma modeling. Covers the entire real estate development process, from preliminary market and financial analysis through to construction management and property management using case studies and guest lecturers. Explores how public-private partnerships shape the outcomes of urban redevelopment within specific topics that may include affordable housing provision, brownfield redevelopment, transit-oriented development, sustainable urban development, and others.

PPUA 5238. Climate Change and Global Urbanization. (4 Hours)

Focuses on the climate-change-related challenges that confront rapidly urbanizing countries, particularly the low- and middle-income countries of Asia, Africa, and Latin America. Many of the largest and most rapidly growing cities in these regions are in low-lying coastal cities in river deltas and, consequently, face significant dangers of flooding and eventual inundation. Climate change also has implications for access to freshwater and for the incidence of heat waves. The impacts of climate-change-related hazards tend to fall most heavily on the poorest, raising new issues of social inequality. This course examines concepts of urban vulnerability and resilience and climate change adaptation, as well as case studies of policy approaches for addressing the impacts of climate change on cities.

PPUA 5239. Problems in Metropolitan Policymaking. (4 Hours)

Examines the broad challenges that confront metropolitan areas-defined as including the center city, its immediate suburbs, and the broader periphery-including economic development, land use, transportation, housing, and the provision of basic services. Considers the array of tools available to policymakers, including planning, tax policy, pooling of services, and zoning.

PPUA 5240. Health Policy and Politics. (4 Hours)

Examines contemporary healthcare policies, programs, and politics. Discusses the structure of the healthcare system and its costs, efforts to develop universal health coverage, the spread of managed care, and related topics.

PPUA 5244. Comparative Public Policy and Administration. (4 Hours)

Examines public policy and administration across nations through the lens of politics, policy, and bureaucracy, and with respect to the role of government in society. Focuses on global perspectives of governance, government, and state making. Examines specific countries and policies to point out structural and operational similarities and differences. Emphasizes the implementation of public management reform in various countries, the use and application of the comparative method, factors that determine global policy outcomes, and the bureaucratic organization of the world and its role in organizing the state.

PPUA 5245. Education Policy in the United States. (4 Hours)

Examines the major policies and political dynamics that shape the delivery of educational services in the United States. Reviews the historical role of public education in American society and examines the legal context and intergovernmental relationships that provide the political framework for public education. Explores school finance, accountability and assessment strategies, issues of race and poverty, as well as major reform initiatives. Focuses on elementary and secondary education.

PPUA 5246. Participatory Modeling for Collaborative Decision Making. (4 Hours)

Studies participatory modeling, a knowledge coproduction and collaborative approach to decision making. The collaborative approach strengthens relationship building, empathy, trust, systems thinking, and collective agency for decision making. Participatory modeling allows researchers and decision makers to coproduce knowledge and shared representations of a complex problem and design and test solutions to address it. Using various modeling techniques (e.g., spatial analysis, causal loop diagramming, fuzzy cognitive mapping), participatory modeling helps elicit diverse stakeholder knowledge and harnesses this diversity to move from conflict to solutions.

PPUA 5249. Sustainable Urban Coastal Policy. (4 Hours)

Focuses on the challenges facing coastal cities and the ecosystems on which they depend by exploring both threats such as climate change as well as adaptation measures that promote resilience. Aimed at students interested in the interface of science and public policy and those who wish to gain a deeper understanding of how coupled human-natural ecosystems operate.

PPUA 5260. Ecological Economics. (4 Hours)

Introduces methods and tools of ecological economics, an interdisciplinary field that draws on theories, concepts, and tools from the physical, life, and social sciences; unites the relevant aspects of different disciplines; and generates new knowledge that can serve as a basis for investment and policymaking that is responsive to biophysical constraints on economic processes. Illustrates the use of ecological economics with empirical applications. Offers students an opportunity to apply ecological economics to a variety of environmental issues.

PPUA 5261. Dynamic Modeling for Environmental Decision Making. (4 Hours)

Introduces the theory, methods, and tools of dynamic modeling for policy and investment decision making, with special focus on environmental issues. Makes use of state-of-the-art computing methods to translate theory and concepts into executable models and provides extensive hands-on modeling experience. Topics include discounting, intertemporal optimization, dynamic games, and treatment of uncertainty.

PPUA 5262. Big Data for Cities. (4 Hours)

Investigates the city and its spatial, social, and economic dynamics through the lens of data and visual analytics. Utilizes large public datasets to develop knowledge about visual methods for analyzing data and communicating results. Offers students an opportunity to develop a critical understanding of data structures, collection methodologies, and their inherent biases.

PPUA 5263. Geographic Information Systems for Urban and Regional Policy. (4 Hours)

Studies basic skills in spatial analytic methods. Introduces students to some of the urban social scientific and policy questions that have been answered with these methods. Covers introductory concepts and tools in geographic information systems (GIS). Offers students an opportunity to obtain the skills to develop and write an original policy-oriented spatial research project with an urban social science focus.

PPUA 5264. Energy Democracy and Climate Justice: Technology, Policy, and Social Change. (4 Hours)

Examines two interconnected concepts: energy democracy—a social movement that frames the transformation to a renewable-based society as an opportunity to advance social, racial, and economic justice—and climate justice—an intersectional, equity-focused framework to prioritize societal responses to the worsening climate crisis. Explores the economic injustices and racial disparities that are expanding climate vulnerabilities. Considers analytical frameworks such as antiracist, feminist principles. Examines fossil fuel phaseout and other changes to energy and climate systems as solutions to reducing fossil fuel reliance. Explores tensions associated with systemic vs. incremental change, individual vs. collective action, centralized vs. decentralized power, and concentrated vs. distributed wealth. Semester-long team projects provide opportunities to collaborate with organizations advancing energy democracy and climate justice.

Attribute(s): NUpath Integration Experience

PPUA 5265. Global Urbanization and Planning. (4 Hours)

Explores the issues facing rapidly growing cities in the developing world. By 2040, more than half of the world's population will live in cities. Analyzes the forces driving a country's economic development and social change. Focuses on urbanization in poorer countries by examining what causes rapid urbanization; why informal economies are so pervasive and how governments approach this issue; the implications increasing popular demands for involvement in decisions have for urban planning and policy; and how governments respond to globalization and with what distributional impacts. Addresses specific sectoral issues and approaches to urban planning and policy in such areas as housing, climate change and hazard preparedness, economic development, transportation, and urban design and public space.

PPUA 5266. Urban Theory and Science. (4 Hours)

Studies the evolution of urban science, looking at some seminal theories that seeded the field and the subsequent work they inspired, including the methodologies developed to examine them. For over a century, social scientists and policymakers have sought to better understand cities, asking important theoretical questions, such as: What is a neighborhood? How does a city grow? What is a city in the first place? Culminates in an examination of urban science in the digital age, exploring how modern technological trends, including "big data," are posing new questions and offering new ways to answer them.

PPUA 5267. Climate Policy and Justice. (4 Hours)

Discusses key climate policy approaches, including market-based and regulatory approaches, as well as intersectional approaches that address underlying drivers of climate change. Climate change is one of the most pressing challenges facing society and requires policy responses across scales: locally, nationally, and globally. Introduces frameworks and tools for climate policy design, implementation, and evaluation, with an emphasis on considering how policies can promote justice. Case studies from US and international contexts will be used throughout the semester to explore policy design and implementation in practice. In addition to considering national and sub-national climate policy, covers legal, political, and economic issues in the international negotiations and addresses the history and current issues in international climate diplomacy.

PPUA 5268. International Environmental Policy. (4 Hours)

Explores key environmental challenges and policy solutions from an international perspective. Emphasizes the complexity of human-natural systems for policy design, provides a history of international environmental politics, and discusses contemporary policy issues. Presents key paradigms for understanding environmental challenges and the analytical tools to look critically at important debates, understand the role of different actors, identify equity and justice considerations, and assess policy options from multiple perspectives. Focuses on global environmental governance and sustainable development diplomacy, natural resource management, and climate change policy. Addresses the role of science in policymaking, tensions between environment and development, the scale and complexity of international environmental governance, and equity and justice.

PPUA 5269. Social Policy: Design, Implementation, and Critique. (4 Hours)

Offers a deep dive into some of the content and much of the history, mechanics, and implementation of various types of social policy. Students prioritize a single social policy area, which they examine in greater depth over the course of the semester, in addition to the broad breadth of social policies presented as part of the course. Uses course readings, fieldwork, networking, and tandem teaching to offer insight into what social policy actually is, the mechanics of how social policy is accomplished, key skills needed to execute both design and implementation of social policy, and methods of critique regarding the implementation of social policy.

PPUA 5270. Food Systems and Public Policy. (4 Hours)

Explores the public policy dimensions of the contemporary food system. Utilizes scholarly readings and case studies to assess the role of governing institutions and political actors in shaping the food supply; the effects of energy, transportation, and urban policies on food access; the ecological dimensions of food production; impacts of international trade regimes on global food trade; and the potential impacts of climate change on food security. Compares the United States and other nations and explores alternatives to the dominant food system. Seeks to engage students in applied policy analysis of specific food system issues.

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

PPUA 5390. Special Topics in Public Policy and Urban Affairs. (4 Hours)

Covers special topics in public policy and urban affairs. Topics are selected by the instructor and vary from semester to semester. May be repeated up to three times for up to 12 total credits.

PPUA 5544. Seminar in Black Leadership. (4 Hours)

Offers students an opportunity to conduct in-depth studies of significant black leaders—male and female—in a wide range of fields. Focuses on black leadership in the political arena as elected officials; leaders of pressure groups; leaders of protest organizations, black nationalist organizations, and feminist/womanist groups; and as advisers to political parties and presidential administrations.

PPUA 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 5984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PPUA 6101. Environmental Science and Policy Seminar 1. (4 Hours)

Offers an integrated introduction to the intersection between environmental science and policy. Organized around the two central themes of sustainability transitions and climate resilience. Connects theoretical frameworks, including sociotechnical systems and coupled socioecological systems, to key science-policy issues related to transitioning to a more sustainable future and responding to a changing climate.

PPUA 6201. The 21st-Century City: Urban Opportunities and Challenges in a Global Context. (4 Hours)

Offers a multidisciplinary examination of the complexities of cities and urbanism in the 21st century. Focuses on U.S. cities, but in an international context. Considers forces that shaped the evolution of cities and metropolitan regions and global forces that are currently transforming cities and regions throughout the world. Explores key questions of urban well-being, rising racial and ethnic inequality, civic engagement, and sustainability. Focuses on the role of urban planning in creating conditions of racial segregation and environmental injustice in cities and its potential role in the current period in undoing this damage.

PPUA 6202. Research Toolkit for Python for Policy. (2 Hours)

Examines use of the Python programming language in public and nonprofit sector settings. Offers students an opportunity to write small programs and accomplish professional goals. Intended for graduate students in public policy and public administration who have little or no programming experience.

PPUA 6212. Research Toolkit for Urban and Regional Policy: Project Management. (2 Hours)

Introduces students to concepts of and tools used in project management as applied to urban and regional policy issues.

PPUA 6216. Research Toolkit for Urban and Regional Policy: Grant Writing. (2 Hours)

Seeks to prepare students to pursue grant-based funding from a variety of funding agencies and foundations. Offers students an opportunity to develop practical skills in proposal writing and budget development. Examines all aspects of the proposal-writing process, from identifying high-potential funding opportunities to writing and submitting proposals. Assignments offer students an opportunity to apply their learning to real-world interests.

PPUA 6219. Race, Justice, and Belonging in Planning Practice. (2 Hours)

Addresses issues of inclusion, citizenship, and social justice in urban planning, and explores issues of race, gender, and other forms of discrimination in planning practice. Examines how planners have interacted with historically marginalized communities in the United States and other contexts and the ways that these experiences have shaped community perspectives on the planning profession. Offers students an opportunity to analyze best practices in methods to engage communities in more just and equitable planning processes, explore experiences of race and other forms of difference within the planning profession, and examine practices for building and leading diverse and inclusive planning organizations.

PPUA 6232. Designing Global Economic and Social Policy. (4 Hours)

Examines economic challenges facing developing nations including poverty, inequality, low productivity, and limited access to human capital. Presents insights into theories like neoclassical growth models and dependency theory on spurring development. Explores policy options to promote growth such as increasing access to safety nets, human capital, and labor force participation. Offers students an opportunity to analyze data; evaluate policies to systematically understand developing world economic issues; and identify evidence-based, sustainable solutions tailored to individual countries' challenges.

PPUA 6410. Urban Informatics Portfolio. (1 Hour)

Guides urban informatics students through the process of developing a portfolio of professional-quality work. Requires students to submit a three-project portfolio developed from projects completed within courses taken as part of fulfilling the degree requirements. The projects must be presented in high-quality and concise visualizations and text.

PPUA 6500. Principles of Public Administration. (4 Hours)

Introduces students to concepts and approaches to analyzing significant factors and relationships in government agencies and public-oriented nongovernmental organizations as they function in their environments. Examines the legal and constitutional foundations of public administration, bureaucratic structure and administrative power, managerial accountability and ethics, human resource management, economics of organization, decision making, budgeting, implementation and "street-level" bureaucrats, and more recent developments in public administration such as performance management and public management networks.

PPUA 6502. Economic Analysis for Policy and Planning. (4 Hours)

Introduces the fundamentals of macroeconomics and microeconomics as well as the role of key economic institutions, such as the Federal Reserve. Includes analysis of government's role in a market economy and introduces methods of economic analysis.

PPUA 6503. Managing People in Public and Nonprofit Sectors. (4 Hours)

Introduces students to the human resources function from an individual and managerial standpoint. Studies various human resource management (HRM) activities, such as recruitment, selection, performance management, training and development, labor relations, and compensation. Applies the lens of strategic human resources management to foster a competent, motivated, and representative workforce.

PPUA 6505. Public Budgeting and Financial Management. (4 Hours)

Surveys governmental budgeting at the federal, state, and local levels. Surveys major revenue sources and expenditure responsibilities. Discusses budgetary processes and politics, as well as resulting policies. Considers both proposed and implemented reforms. Also introduces financial management practices including cash management, fund accounting, debt financing, endowment spending and control, cost allocation procedures, and tax expenditures.

PPUA 6506. Techniques of Policy Analysis. (4 Hours)

Provides a systematic approach to understanding the origins, formulation, implementation, and impact of government outputs. Reviews key analytical concepts and competing theoretical perspectives. Considers both the political dimensions of public policymaking and the technical aspects of program design within the natural history of the policymaking process. Draws on case materials from a spectrum of policy areas.

PPUA 6507. Institutional Leadership and the Public Manager. (4 Hours)

Examines the problems and techniques relevant to effective management of a public agency in a complicated and often turbulent political environment. Topics include legislative relations, media relations, role of the courts, unions and advocacy groups, policy implementation and evaluation, and setting and working with high standards of integrity.

PPUA 6509. Techniques of Program Evaluation. (4 Hours)

Reviews methodologies for assessing the impact of public policy. Includes experimental and quasi-experimental research design, the value and limits of case studies, political and organizational barriers to evaluation research, report writing, and procedures for instituting change.

PPUA 6522. Administrative Ethics and Public Management. (4 Hours)

Analyzes ethical problems in American public administration including discussion of ethical dilemmas frequently faced by public managers.

PPUA 6525. Institutions and Public Policy. (4 Hours)

Blends theoretical literature and case studies to examine problems of policymaking and governance in contemporary political systems, emphasizing the policy impacts of political institutions. Studies systematic variations across types of political institutions and regimes in developed and developing nations and extends beyond the nation-state to address policy dynamics (e.g., harmonization, multilevel governance) in supranational and international systems. Establishes the broader political system contexts within which policy formation and implementation reside. Offers students an opportunity to learn to analyze, synthesize, and apply a range of theoretical literatures relevant to policy design and impact.

PPUA 6530. State and Local Public Finance. (4 Hours)

Analyzes the fiscal dimensions of state and local governments in the United States. Examines the types and ranges of tax and nontax revenues available to local and state governments and factors shaping the types of revenue sources utilized. Also assesses local and state government spending trends, use of public funds for economic development and other goals, impacts of federal mandates on local and state budgets, distinctions between operating and capital budgets, and the overall legal and political factors shaping public finance.

PPUA 6532. Building Resilience into Local Government. (4 Hours)

Focuses on often-overlooked management challenges facing local governments: preparing for, responding to, and recovering from disasters, whether natural or human-caused. While disaster planning typically focuses on first responders in fire and police departments, or on federal government agencies like FEMA, much less attention is paid to those local government leaders, from town managers to elected mayors and councilors, who are responsible for how their municipalities handle disaster. Considers what public leaders need to know about building their own capabilities and draws on cases and lessons from local government to build resilience into local communities.

PPUA 6551. Nonprofit Organizations and Social Change. (4 Hours)

Offers an overview of fundamental principles and practice in the nonprofit sector as they relate to social change. Topics include systems change and stakeholder identification, design thinking and human-centered design, theory of change and logic models, program design and evaluation, strategic and business planning, organizational structure and capacity building, governance, and communications and social media.

PPUA 6552. The Nonprofit Sector in Civil Society and Public Affairs. (4 Hours)

Examines the challenges facing the nonprofit sector, particularly as it relates to civil society and public policy concerns. Emphasizes current controversies in which the nonprofit sector is involved, such as the impact of changes in government spending and tax policy, the nature and legitimacy of nonprofit advocacy, the role of faith-based organizations in providing public services, accountability and oversight of nonprofit organizations, the growth of social entrepreneurship, and the work of nonprofits in fostering social capital and supporting civic engagement.

PPUA 6553. Nonprofit Financial Management. (4 Hours)

Presents a comprehensive overview of resource development and financial management in nonprofit organizations. Topics include fundraising and development planning, donor identification, nonprofit budgeting and financial reporting, investments and earned income for nonprofits, government contracting and grants, and importance of ethics and accountability in nonprofit management.

PPUA 6554. NGO Management and International Development. (4 Hours)

Examines the structures and functions of different types of non-governmental organizations and their growing and changing role in maintaining international peace and security, protecting human rights, and promoting economic development. Delves into thematic questions on NGO strategies, funding, ethical issues, interaction with governments, intended beneficiaries, multinational corporations, and other NGOs. Raises issues relating to human rights, women's rights, international development, and the external environment.

PPUA 6861. Internship. (0 Hours)

Offers students an approved public- or nonprofit-sector internship that fulfills academic degree requirements. Students must complete minimum internship work hours as defined by academic program. Supervising faculty assign a final integrative or reflective project. May be repeated up to two times.

PPUA 6862. Internship with Research. (4 Hours)

Offers students who wish to pursue additional directed reading and independent research related to the internship placement an approved public- or nonprofit-sector internship. Students must complete minimum internship work hours as defined by academic program. Research project is determined in consultation with faculty. Supervising faculty assign a final integrative or reflective project. May be repeated once for up to 6 total credits.

PPUA 6954. Co-op Work Experience - Half-Time. (0 Hours)

Provides eligible students with the opportunity for work experience. May be repeated without limit.

PPUA 6955. Co-op Work Experience Abroad - Half-Time. (0 Hours)

Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

PPUA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PPUA 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

Corequisite(s): INSH 6864

PPUA 6965. Co-op Work Experience Abroad. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated without limit.

PPUA 6966. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience. May be repeated without limit.

PPUA 6983. Topics. (4 Hours)

Covers special topics in public policy and urban affairs. Topics are selected by the instructor and vary from semester to semester. May be repeated up to three times for up to 12 total credits.

PPUA 7204. Seminar on Policy Theory. (4 Hours)

Studies what it means to be a policy scientist, emphasizing a conceptual understanding of what policy is, how policies are designed, how they change over time, and the populations and institutions that the policies serve (or fail to serve). Examines how these and related questions have been explored both in classical theories and more recent extensions, focusing on how students can pursue a policy science rooted in theory.

PPUA 7237. Advanced Spatial Analysis of Urban Systems. (4 Hours)

Builds on skills covered in PPUA 5263. Offers students an opportunity to obtain greater depth in the analysis of urban spatial data focused on several urban systems (including social, built, and natural systems). Focuses on understanding the spatial relationships between various new and large urban datasets relevant to current policy challenges within cities. This is a project-based class.

Prerequisite(s): PPUA 5263 with a minimum grade of C- or PPUA 5263 with a minimum grade of D-

PPUA 7346. Resilient Cities. (4 Hours)

Examines the characteristics of resilient cities, especially those located in coastal regions. Investigates the capacity of cities to respond to major disruptions to their social and ecological systems. Includes extensive use of case studies, such as the 2004 Indian Ocean tsunami and Hurricane Katrina in 2005, as well as readings on cities and social systems. Offers students an opportunity to analyze an urban area and provide recommendations for improving its resilience. POLS 7346 and PPUA 7346 are cross-listed.

PPUA 7521. Seminar in Urban Theory. (4 Hours)

Introduces students to foundational debates in the study of cities, urbanization, and urban planning and policy. Presents a broad interdisciplinary understanding of cities and urbanization, addressing questions related to the spatial development of cities and regions, governance and politics, economics, and social change. Offers students an opportunity to understand the connections between urban policy research and social theory, including concepts from human geography, sociology, urban planning, economics, and political science. Students read and discuss seminal texts, including classical concepts in social theory and contemporary debates on topics such as globalization, segregation, gentrification, sustainability, inequality, and questions of race and gender in urban policy.

PPUA 7673. Capstone in Public Policy and Urban Affairs. (4 Hours)

Offers an opportunity for student teams, in partnership with a local, state, or federal agency or nonprofit institution, to assess an urban or regional problem, produce a thorough policy analysis, and present it and recommended solutions to the agency or institution. Course readings focus on materials needed to assess the problem and provide solutions. This is a faculty-guided team project for students completing course work in urban and regional policy studies. May be repeated without limit.

PPUA 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PPUA 7973. Special Topics in the Social Sciences. (4 Hours)

Examines selected topics in the social sciences and public policy. May be repeated up to two times.

PPUA 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 7990. Thesis. (1-6 Hours)

Offers thesis supervision by members of the department. May be repeated without limit.

PPUA 8960. Exam Preparation—Doctoral. (0 Hours)

Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision. May be repeated four times.

PPUA 8966. Practicum. (1-4 Hours)

Provides eligible students with an opportunity for practical experience. May be repeated without limit.

PPUA 8986. Research. (0 Hours)

Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

PPUA 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

PPUA 9980. Experiential PhD Research Residency. (0 Hours)

Comprises a research residency experience in an organization whose mission and activities are aligned within the School of Public Policy and Urban Affairs. The research residency is designed to help develop dissertation ideas or research papers or to obtain access to resources helpful to dissertation development or research. A faculty member serves as an advisor for the residency experience, but individuals within the organization in which the student is working are asked to serve as formal mentors for the student residency experience. May be repeated two times.

PPUA 9984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PPUA 9990. Dissertation Term 1. (0 Hours)

Offers dissertation supervision by individual members of the department.

Prerequisite(s): PPUA 9000 with a minimum grade of S

PPUA 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): PPUA 9990 with a minimum grade of S

PPUA 9996. Dissertation Continuation. (0 Hours)

Offers continued dissertation supervision by individual members of the department.

Prerequisite(s): PPUA 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Public Relations - CPS (PBR)**Courses****PBR 6001. Communications Technology Lab. (1 Hour)**

Focuses on the critical skill of using HubSpot to manage marketing communications. Marketing technology tools are the most in-demand skill set for marketers today. Introduces all key digital communications tools: content development, social media, PR, CRM, and email marketing. Offers students a weekly opportunity to build a comprehensive campaign that will become a portfolio piece, validating their experience with HubSpot to potential employers.

PBR 6100. Introduction to Public Relations. (3 Hours)

Introduces the ideas, skills, and principles that underlie the public relations craft. Designed for career changers and those new to public relations. Offers students an opportunity to study the role and contributions of public relations practitioners in contemporary society; to learn about potential legal and ethical aspects of the practice of public relations; to study the communication process and how persuasion is used with various audiences; and to learn how to develop a strategic communication plan to achieve specific goals and objectives. Also introduces students to specialized practice areas within the public relations field, such as business and industry, government, nonprofits and associations, and healthcare.

PBR 6125. Community Relations and Corporate Social Responsibility. (3 Hours)

Explores why corporate social responsibility and strong community relations are increasingly important elements of business strategy. Considers the factors that enable an organization to build relationships with the broader community within which it operates. Offers students an opportunity to develop a corporate social responsibility campaign as a signature assignment that incorporates ethical considerations and multimedia methods of delivery.

PBR 6130. Public Relations Content Development. (3 Hours)

Focuses on how to conceptualize and generate communications content in support of brand awareness and key organizational objectives. Offers students an opportunity to understand when and how to use different content approaches as part of communications outreach. Also offers them a chance to create common public relations products such as online display ads, media pitches, social media calendars and posts, and webpages and online videos.

PBR 6135. Public Relations Strategy and Planning. (3 Hours)

Examines the role and responsibilities of public relations professionals in promoting brand identity and organizational reputation as a key element in an organization's business strategy. Explores the skills and knowledge required for ensuring that strategic messages resonate with target audiences, both domestic and global. Offers students an opportunity to develop a strategic public relations strategy as a signature assignment.

PBR 6140. Advanced Public Relations Content Development. (3 Hours)

Constitutes an advanced course that offers students an opportunity to broaden and deepen their knowledge of different types of public relations content. Focuses on the characteristics of different PR products and how to use them to reach key audiences and prompt desired reactions. Offers students an opportunity to create such public relations products as an email promotion, an online news center, a blog, and event marketing materials.

PBR 6710. Public Relations Research: Understanding External Audiences. (3 Hours)

Focuses on the important role of market research and the use of existing data to gain insights into the attitudes of a wide range of external stakeholders, including journalists, investors, and customers, as well as the role environmental conditions play in the overall media campaign process. Offers students an opportunity to gain in-depth knowledge of research steps—including surveys, focus groups, and psychographic data—and to identify and analyze attitudinal patterns in target audiences as the foundation for effective public and media relations campaign strategies.

Prerequisite(s): PBR 6100 (may be taken concurrently) with a minimum grade of C-

PBR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PBR 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Public Relations (PREL)**PREL 1425. Public Relations Principles. (4 Hours)**

Presents the principles, history, and methods of public relations; processes of influencing public opinion; responsibilities of the public relations practitioner; and analyses of public relations programs. Through case studies and class discussions, offers students an opportunity to confront real-life ethical dilemmas and learn to apply ethical frameworks to evaluate and resolve them.

PREL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PREL 2325. Influencing the Influencers. (4 Hours)

Examines the evolving world of social media influencers and their impact on the practice of public relations. Explores how traditional media theories that shape public relations also apply when working with influencers; considers the pros and cons of working with influencers; and examines methods for assessing influencer audiences to determine how to use social media as part of communications programs. Studies how to engage directly with influencers of behalf of clients as well as examine the incentive structures that underpin influencer-client relationships.

Attribute(s): NUpath Creative Express/Innov, NUpath Writing Intensive

PREL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PREL 3625. Public Relations Practice. (4 Hours)

Demonstrates practices and techniques employed in the field including organization of events and functions. Studies campaign planning, research, and media relationships.

Prerequisite(s): JRNL 3425 with a minimum grade of D-

PREL 3627. Critical Thinking About Public Relations Strategies. (4 Hours)

Offers upper-level students from multiple disciplines an opportunity to take a microscopic view of how issues are purposefully driven by professionals interested in promoting causes, political candidates, public policy, and corporate image. Examines how corporations and others make decisions and which theories of institutional behavior best explain those choices. Are companies motivated solely by economics as Marx would argue, or do they approach their image in a more functional way? Are the messages of politicians determined by race and class, or do they respond to a different framework? Requires students to follow current issues and dissect significant past campaigns. Knowledge of public relations tactics is helpful but not necessary.

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

PREL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PREL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PREL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Regulatory Affairs - CPS (RGA)**Courses****RGA 5000. Introduction to Food and Drug Administration (FDA) Pharmaceutical Regulation. (1.5 Hours)**

Offers an overview of biopharmaceutical product formulation, development, and commercialization regulation by the U.S. Food and Drug Administration (FDA) and other regulatory agencies. Through course work and didactic technical instruction, offers students an opportunity to develop the foundations necessary to build a strong scientific and technical understanding of biopharmaceutical design and commercialization compliance. Topics include the dynamic progression of U.S. biopharmaceutical laws, differentiation between law vs. regulation, FDA and industry compliance functions, policy-guided science, and cases that shape the evolution of regulatory compliance.

RGA 5001. Introduction to Food and Drug Administration (FDA) Medical Device Regulation. (1.5 Hours)

Offers an overview of the medical device engineering, development, and commercialization process and its regulation by the U.S. Food and Drug Administration (FDA). Through course work and didactic technical instruction, offers students an opportunity to develop an understanding of fundamental medical device regulatory affairs from a U.S.-centric perspective. Reviews the historical development of significant U.S. medical device legislation, including the Medical Device Amendments of 1976. Introduces the subject of quality system regulation (QSR) as it relates to device product design, clinical development, operations management, and compliance.

RGA 5002. Introduction to Regulatory Compliance and Practice. (1.5 Hours)

Presents a detailed overview of critical scientific, technical, engineering design, manufacturing, and operational drivers for regulatory compliance. Offers students an opportunity to gain competencies in the areas of regulatory agency, advocacy, ethics, mitigation laws, and corporate compliance responsibility. A study of the various state, federal, and international agencies, their authorities, and how they became established is designed to enable students to understand the scientific and technical scope of the global regulatory compliance landscape.

RGA 5101. Therapeutic Product Development: A Regulatory Overview. (3 Hours)

Examines every step of the biotherapeutic development and regulation process within the U.S. FDA's Center for Biologic Evaluation and Research (CBER) and Center for Drug Evaluation and Research (CDER). Enrolled students receive didactic instruction from product formulation, product development, and preclinical testing perspectives through postmarketing adverse experience reporting. Offers students an opportunity to study FDA standards for nonclinical testing-quality assurance issues and good laboratory practice, investigational new drug (IND) applications, therapeutic market applications and review processes designed to speed therapeutic product review, as well as current good manufacturing practice and operations management regulations.

Prerequisite(s): RGA 5000 with a minimum grade of C-

RGA 5202. Medical Device Development: A Regulatory Overview. (3 Hours)

Analyzes U.S. medical device engineering development, marketing approval, and commercialization compliance requirements from scientific, technical, and engineering-based perspectives. Features analysis of quality assurance issues and recent regulatory reforms implemented under the Food and Drug Modernization Act (FDAMA). Provides a step-by-step guide through the Center for Devices and Radiological Health (CDRH). Covers CDRH's reengineering initiatives and evolving investigational device exemptions, premarket approval, 510(k) application process, and product development protocol and review processes. Offers practical, in-depth analyses and didactic instruction on how emerging technical trends and the application of statistical modeling to analyze product complaints are reshaping medical device regulation in the United States. Offers students an opportunity to learn how to think critically about the interaction between regulatory and development processes.

RGA 5203. Pharmaceutical and Medical Device Law: Topics and Cases. (3.75 Hours)

Analyzes current food, drug, and medical device laws. Reviews legislation and landmark cases, as well as laws governing formulation development, engineering design, manufacture, and commercial distribution of drugs, biologics, and medical device products. Studies how these variables relate to operations management in the biotechnology, pharmaceutical, and medical device industries.

RGA 5204. Legal Issues in International Food, Drug, and Medical Device Regulation. (3.75 Hours)

Explores international laws related to the regulation of food, drugs, and medical devices with a focus on the European Union. Draws comparisons between international laws and corresponding U.S. laws, as well as considerations necessary for international biotechnology, pharmaceutical, and medical device industries.

RGA 5212. Introduction to Safety Sciences. (3 Hours)

Introduces safety and surveillance regulations and principles for products developed and commercialized in regulated industries. Covers global safety regulations as well as related guidance from agencies such as the FDA, International Conference on Harmonization (ICH), the World Health Organization (WHO), and the European Commission (EC). Adopts a life-cycle perspective, beginning with use of precommercialization data to anticipate human safety issues, and continuing through prototype development and postmarketing issues. Offers students an opportunity to review combination products; safety information in regulatory documents (for example, INDs, clinical study reports, NDA submissions); safety data analysis; quality management and CAPAs; safety plans; and global safety initiatives (e.g., the General Data Protection Regulation).

RGA 5463. Regulatory Strategy for Product Development and Life-Cycle Management. (3 Hours)

Examines the preparation of regulatory strategies to support product development and life-cycle management while providing students the opportunity to examine domestic and international processes relevant to regulatory strategy. In developing target product profiles, strategic regulatory plans, and life-cycle management plans, students appraise key components of regulatory strategies, evaluate core elements of product life cycle in the generation of those strategies, and integrate business needs into regulatory planning. Upon completion of the course, successful students should possess the fundamentals to formulate regulatory strategies supporting product development and life-cycle management and be equipped with a stronger understanding of the high-visibility role regulatory professionals serve in developing sound regulatory strategy.

RGA 6000. Introduction to Food and Drug Administration (FDA) Pharmaceutical Regulation. (2 Hours)

Offers an overview of biopharmaceutical product formulation, development, and commercialization regulation by the U.S. Food and Drug Administration (FDA) and other regulatory agencies. Through course work and didactic technical instruction, offers students an opportunity to develop the foundations necessary to build a strong scientific and technical understanding of biopharmaceutical design and commercialization compliance. Topics include the dynamic progression of U.S. biopharmaceutical laws, differentiation between law vs. regulation, FDA and industry compliance functions, policy-guided science, and cases that shape the evolution of regulatory compliance.

RGA 6001. Introduction to Food and Drug Administration (FDA) Medical Device Regulation. (2 Hours)

Offers an overview of the medical device engineering, development, and commercialization process and its regulation by the U.S. Food and Drug Administration (FDA). Through course work and didactic technical instruction, offers students an opportunity to develop an understanding of fundamental medical device regulatory affairs from a U.S.-centric perspective. Reviews the historical development of significant U.S. medical device legislation, including the Medical Device Amendments of 1976. Introduces the subject of quality system regulation (QSR) as it relates to device product design, clinical development, operations management, and compliance.

RGA 6002. Introduction to Regulatory Compliance and Practice. (2 Hours)

Presents a detailed overview of critical scientific, technical, engineering design, manufacturing, and operational drivers for regulatory compliance. Offers students an opportunity to gain competencies in the areas of regulatory agency, advocacy, ethics, mitigation laws, and corporate compliance responsibility. A study of the various state, federal, and international agencies, their authorities, and how they became established is designed to enable students to understand the scientific and technical scope of the global regulatory compliance landscape.

RGA 6101. Therapeutic Product Development: A Regulatory Overview. (4 Hours)

Examines every step of the biotherapeutic development and regulation process within the U.S. FDA's Center for Biologic Evaluation and Research (CBER) and Center for Drug Evaluation and Research (CDER). Enrolled students receive didactic instruction from product formulation, product development, and preclinical testing perspectives through postmarketing adverse experience reporting. Offers students an opportunity to study FDA standards for nonclinical testing-quality assurance issues and good laboratory practice, investigational new drug (IND) applications, therapeutic market applications and review processes designed to speed therapeutic product review, as well as current good manufacturing practice and operations management regulations.

Prerequisite(s): RGA 6000 with a minimum grade of C- ; BTC 6210 with a minimum grade of C-

RGA 6202. Medical Device Development: A Regulatory Overview. (4 Hours)

Analyzes U.S. medical device engineering development, marketing approval, and commercialization compliance requirements from scientific, technical, and engineering-based perspectives. Features analysis of quality assurance issues and recent regulatory reforms implemented under the Food and Drug Modernization Act (FDAMA). Provides a step-by-step guide through the Center for Devices and Radiological Health (CDRH). Covers CDRH's reengineering initiatives and evolving investigational device exemptions, premarket approval, 510(k) application process, and product development protocol and review processes. Offers practical, in-depth analyses and didactic instruction on how emerging technical trends and the application of statistical modeling to analyze product complaints are reshaping medical device regulation in the United States. Offers students an opportunity to learn how to think critically about the interaction between regulatory and development processes.

Prerequisite(s): BTC 6210 (may be taken concurrently) with a minimum grade of C- ; RGA 6001 (may be taken concurrently) with a minimum grade of C-

RGA 6203. Pharmaceutical and Medical Device Law: Topics and Cases. (5 Hours)

Analyzes current food, drug, and medical device laws. Reviews legislation and landmark cases, as well as laws governing formulation development, engineering design, manufacture, and commercial distribution of drugs, biologics, and medical device products. Studies how these variables relate to operations management in the biotechnology, pharmaceutical, and medical device industries.

Prerequisite(s): RGA 6101 (may be taken concurrently) with a minimum grade of C- or RGA 6202 (may be taken concurrently) with a minimum grade of C-

RGA 6204. Legal Issues in International Food, Drug, and Medical Device Regulation. (5 Hours)

Explores international laws related to the regulation of food, drugs, and medical devices with a focus on the European Union. Draws comparisons between international laws and corresponding U.S. laws, as well as considerations necessary for international biotechnology, pharmaceutical, and medical device industries.

Prerequisite(s): RGA 6101 (may be taken concurrently) with a minimum grade of C- or RGA 6202 (may be taken concurrently) with a minimum grade of C-

RGA 6205. Emerging Trends and Issues in the Medical Device Industry. (4 Hours)

Focuses on trends expected to have a significant effect on the future of the medical device industry, including the aging population; the need for devices that treat chronic illnesses such as renal failure, congestive heart failure, heart abnormalities, arthritis, and diabetes; reimbursement issues arising from the huge financial burden placed on Medicare and insurance companies in picking up the increased cost of healthcare; lifestyle changes with an increased demand for devices that improve one's quality of life or appearance; reuse of single-use disposable devices to cut costs; group purchasing practices, outpatient treatment; telemedicine, regulatory/legal requirements; and the movement of devices into new areas, such as coating stents with pharmaceutical/biological agents and using patches to deliver pharmaceutical agents.

Prerequisite(s): RGA 6202 with a minimum grade of C-

RGA 6207. Global Impact of Electronic Common Technical Document (eCTD) Submissions. (4 Hours)

Examines the structure of the Common Technical Document (CTD) format through study of both regulatory requirements as well as example submissions. Offers students an opportunity to develop an understanding of FDA's geographically specific eCTD submission requirements. Students review and receive didactic instruction in the basic structure and technical format of an eCTD submission, the use of statistical models to present data, and the differences between the electronic format and former paper-based CTD submissions.

Prerequisite(s): RGA 6101 with a minimum grade of C- ; BTC 6210 with a minimum grade of C-

RGA 6210. Strategic Planning and Project Management for Regulatory Affairs. (4 Hours)

Introduces the core concepts of strategic planning and project management. Seeks to equip regulatory professionals with the skills needed to join upper corporate management in choosing which products to pursue and how best to pursue them. Offers students an opportunity to learn how to guide medical device teams through the design and development stages. Emphasizes the role of product classifications in demonstrating the safety, efficacy, and performance of medical devices for human use. The curriculum and assignments offer a chance to carefully study the function and format of presubmission meetings with U.S. and other global regulatory agencies, as well as understand their role in gaining regulatory approval for market sale.

Prerequisite(s): RGA 6202 with a minimum grade of C- or RGA 6101 with a minimum grade of C-

RGA 6212. Introduction to Safety Sciences. (4 Hours)

Introduces safety and surveillance regulations and principles for products developed and commercialized in regulated industries. Covers global safety regulations as well as related guidance from agencies such as the FDA, International Conference on Harmonization (ICH), the World Health Organization (WHO), and the European Commission (EC). Adopts a life-cycle perspective, beginning with use of precommercialization data to anticipate human safety issues, and continuing through prototype development and postmarketing issues. Offers students an opportunity to review combination products; safety information in regulatory documents (for example, INDs, clinical study reports, NDA submissions); safety data analysis; quality management and CAPAs; safety plans; and global safety initiatives (e.g., the General Data Protection Regulation).

Prerequisite(s): RGA 6002 with a minimum grade of C- ; RGA 6463 with a minimum grade of C-

RGA 6215. Project Management in Early Drug Discovery and Development. (4 Hours)

Provides an overview of the processes common to researching and developing a new drug. Focuses on the early stages of this progression, from identifying active molecules to completing Phase 1 safety trials. Surveys the predominant biological and chemical techniques used in these efforts. Offers students an opportunity to prepare standard operating procedures and a pre-IND package. The lectures and reading materials focus on how to incorporate key data in writing the IND. Examines the procedures used to execute a Phase 1 safety study and the strategies available to prepare a persuasive clinical study report. Throughout the term, course material highlights the applicability and utility of project management tools.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6217. Biomedical Product Development: From Biotech to Boardroom to Market. (4 Hours)

Examines the evolution of the medical device and pharmaceutical landscape from a technological, regulatory, and financial perspective, as well as from a societal and cultural framework. Begins by recognizing that significant differences exist between small and mid-to-large medical device and pharmaceutical companies with regard to key variables in the current business environment. These differences extend to the opportunities available as well as the limitations and challenges faced by each. Discusses the symbiotic and potentially synergistic relationship that has developed between small, yet established, biotechnology companies and large medical device and pharmaceutical firms, as well as the impact of these relationships on the general economic environment.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6219. Advanced Topics in Advertising and Promotion of Drugs and Medical Devices. (4 Hours)

Covers current trends, regulations, and issues in digital advertising, including mobile applications, social media, and Twitter; FDA's and FTC's role in the regulation of OTC products and certain mobile digital applications; patient engagement; FDA regulation of advertising and promotion of veterinary drugs; recent FDA and government enforcement actions and court cases; proactive communications about medical products between manufacturers and payers, including use of real-world evidence; global perspective on regulation of advertising and promotion, including Canada, Latin America, Asia, and the European Union; decision making and risk assessments in advertising and promotion.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6221. European Union Compliance Process and Regulatory Affairs. (4 Hours)

Provides a clear-cut picture of the European Union (EU) and how EU directives impact international business. By illustrating how companies need to approach compliance, offers students an opportunity to be guided through compliance issues and to gain an understanding of the relationship between compliance and CE marking. Discusses the risks and rewards of CE marking and an overview of liability laws in the EU.

Prerequisite(s): RGA 6203 with a minimum grade of C- or RGA 6204 with a minimum grade of C-

RGA 6222. European Medical Device Regulations. (4 Hours)

Covers European Commission directives and guidance documents; European Agency for the Evaluation of Medicinal Products, medical device guidance documents, and notified body guidelines and recommendations; Global Harmonization Task Force final reports; and mutual recognition agreements. Topics include biological and biotechnological products, CE marking, conformity assessment and notified bodies, the Global Harmonization Task Force, clinical trials, and standardization.

Prerequisite(s): RGA 6203 with a minimum grade of C- or RGA 6204 with a minimum grade of C-

RGA 6223. Introduction to Australian, Asian, and Latin American Regulatory Affairs. (4 Hours)

Covers the applicable regulatory agency guidance and GMPs associated with biopharmaceutical and medical device product design, quality assurance, and commercialization specifically in Australia, Asia, and Latin America. Examines multinational documents from Asia-Pacific Economic Cooperation (APEC), Association of Southeast Asian Nations (ASEAN), MERCOSUR, and Pan American and World Health Organizations. Discusses Latin American government regulations and guidance, as well as the guidance and regulations from the General Agreement on Tariffs and Trade (GATT/WTO).

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6224. Regulation of Biomedical Product Commercialization by Health Canada. (4 Hours)

Studies the regulatory requirements associated with all phases of biomedical product commercialization in the Canadian market by manufacturers. The Canadian market represents a significant opportunity for biomedical product manufacturers to export their goods into foreign geographies. Several factors have led patients in Canada to seek treatment modalities for their clinical symptoms and disease from both Canadian and non-Canadian sources. Reviews the Common Technical Document format for market approval applications, general Health Canada Guidances, good manufacturing practices (GMPs), and Global Harmonization Task Force documents. Examines multinational requirements and recommendations, including those issued by the North American Free Trade Agreement, the World Health Organization, and the U.S. Food and Drug Administration. Reviews the requirements of submissions to Health Canada by biomedical product manufacturers.

Prerequisite(s): RGA 6202 with a minimum grade of C- or RGA 6101 with a minimum grade of C-

RGA 6227. Emerging Medical Device Markets. (4 Hours)

Covers the Common Technical Documents, General Guidance, GMPs, and Global Harmonization Task Force (GHTF) documents for medical device requirements in emerging markets. The United States, European Union, Japan, Canada, and Australia comprise the five founding member countries of the GHTF. Yet, the most vibrant and challenging regulatory arenas of medical device development are those in emerging markets (e.g., the Pacific Rim, East Asia, the Middle East, and South America). Offers students an opportunity to practice putting together a medical device submission, identify two submission pathways per product classification, and outline the postmarket requirements. These practical lessons and regulatory skills are an asset to any regulatory professional in the global marketplace.

Prerequisite(s): RGA 6202 with a minimum grade of C-

RGA 6228. Managing International Clinical Trials. (4 Hours)

Focuses on initiating, collecting, and managing data from multicountry clinical trials. The assigned material documents the growing internationalization of clinical research in biomedicine. For example, even trials carried out under the aegis of the U.S. FDA are likely to involve investigators in the European Union, China, India, Africa, or Latin America. The global nature of this research is due to the advantages that certain countries offer, including lower costs, flexible health infrastructures, and the presence of treatment-naïve populations. Multisource studies, however, present their own practical, legal, and ethical challenges. Offers students an opportunity to study the steps needed to conduct regulatory-compliant international trials. Through case studies and group projects, examines strategies to integrate clinical sites along common protocols and deadlines.

Prerequisite(s): BTC 6210 with a minimum grade of C-

RGA 6233. Application of Quality System Regulation in Medical Device Design and Manufacturing. (4 Hours)

Introduces the Food and Drug Administration's (FDA) Quality System Regulations (QSRs) and describes how these regulations can improve the safety and efficacy of medical device products. Discusses the legislative origins of QSRs, their historical evolution, as well as the details of how they are implemented. Examines case studies and empirical examples of QSRs that have been employed by individual medical device manufacturers during the product commercialization process. Offers students an opportunity to develop an understanding of FDA's expectations for product design control; the structuring of quality system documentation; and principles of practical QSRs within the context of medical device manufacturing, packaging, and distribution. Encourages students to develop strategies for customizing QSRs to particular companies, device products, and manufacturing environments.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6234. Risk Management: Compliance and Processes. (4 Hours)

Seeks to provide a comprehensive overview of current risk-management practices, including supply chain management, as well as their impact on safety, product quality, and effectiveness. Analyzes regulatory oversight guidance documents, demonstrates how organizations in regulated sectors strive to ensure compliance, and discusses the responsibilities of regulatory professionals in supply chain risk-management systems. Studies the regulatory issues that originate from poor supplier performance and management. Using case-based investigations and real-world examples, analyzes how to evaluate risk-management systems as they relate to particular categories of regulated products manufactured in specific contexts. Offers students an opportunity to obtain the skills and knowledge they need to customize effective risk-management methods within various global settings.

Prerequisite(s): RGA 6000 with a minimum grade of C- or RGA 6001 with a minimum grade of C-

RGA 6235. Emerging Product Categories in the Regulation of Drugs and Biologics. (4 Hours)

Examines the development and commercialization pathways for several product categories, including new over-the-counter (OTC) products, neutraceuticals, nanotechnology products, and personalized medicine-based therapies. These emerging categories of drug and biologic products are not formally classified by FDA from a regulatory perspective. Evaluates the reasons why the regulatory paradigms for these products are not well established and analyzes how the relatively amorphous nature of these paradigms has impacted commercialization of these product categories in the U.S. market. Offers students an opportunity to gain a better understanding of how and why new product categories continue to emerge as existing regulatory classifications continue to evolve.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6243. Medical Device Product Development in Canada. (4 Hours)

Explores the general requirements for medical device regulation globally and the details of medical device regulation in Canada. Familiarizes students with the International Medical Device Regulatory Forum goals and objectives, and explores the medical device regulatory model developed by Global Harmonization Task Force that is in use in many countries today. Studies the Canadian medical device regulations, covering topics such as postmarket topics of adverse event reporting, recalls and inspections, classification, device licensing, establishment registration, design change, license amendments, and annual renewal processes. Explores the use of standards globally and in Canada related to the regulation of medical devices. Offers students a project-based learning opportunity to learn how to prepare portions of a sample submission for Canada.

Prerequisite(s): RGA 6001 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6244. Therapeutic Product Development in Canada. (4 Hours)

Examines every step of the Canadian drug development and regulation process, from preclinical testing through postmarketing drug adverse reaction (DAR) reporting. Considers Canadian standards for nonclinical testing-quality assurance issues and good laboratory practice, good clinical practices, GMP, and use of ICH guidelines. Examines various Canadian drug submissions and their timelines, including New Drug Submission (NDS), Abbreviated New Drug Submission (ANDS), and Clinical Trial Applications (CTA).

Prerequisite(s): RGA 6002 with a minimum grade of C-

RGA 6245. Regulation of Generic Pharmaceutical and Biosimilar Products. (4 Hours)

Describes the contrasting history and implementation of generic drug and biologic legislation in the U.S. market. Explores the specific technical differences between drug and biologic products and highlights areas where regulatory approval of generic products must differ between the two categories. Offers students an opportunity to better understand how the nonclinical and clinical development programs of generic drug and biologic products are constructed. Examines the relatively advanced state of the regulatory paradigm for biosimilars in the European Union.

Prerequisite(s): RGA 6200 with a minimum grade of C- or RGA 6101 with a minimum grade of C-

RGA 6255. Global Convergence of Regulatory Science and Reimbursement/Market Access. (2 Hours)

Studies the evolution of convergence drivers between global regulatory science and reimbursement/market access paradigms. Outlines the similarities and differences between "safety and efficacy" and "reasonable and necessary" and explores how cost-effectiveness variables can be evaluated concomitantly during the biomedical product marketing approval process. Students explore both the opportunities, as well as the mechanistic challenges, associated with the ongoing global requirement for biomedical product manufacturers to obtain marketing approvals from specific geographic regulators, along with associated payer organizations, to obtain full market access for new healthcare products.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6275. Product Development and Process Validation. (2 Hours)

Studies the compliance standards associated with commercializing new biopharmaceutical and medical device products. Focuses on U.S. regulations, although discusses compliance with standards in other major geographical areas as well, including those in Canada and the European Union. Offers practical instruction in the product design control process, setup of small-batch manufacturing processes, scale-up to large-scale manufacturing processes, as well as the regulatory requirements for manufacturing process validation. Includes a detailed analysis of process flow, incoming raw material and work-in-progress testing, stability testing, sterility testing, and handling requirements. Other topics include creation of design history files, establishment of master validation plans, and compliance with ongoing facility and manufacturing equipment standards.

Prerequisite(s): RGA 6002 with a minimum grade of C- ; (RGA 6000 with a minimum grade of C- or RGA 6001 with a minimum grade of C-)

RGA 6300. Practical Applications in Global Regulatory Affairs. (4 Hours)

Offers students an opportunity to exercise their ability to translate global regulatory requirements for globally regulated product commercialization into submission-ready documents and broadly applicable regulatory science solutions. Uses didactic instruction and a series of practical exercises and discussions. Topics include creating practical documents based on regulations and guidelines, formulation development, completing production batch records, conducting product testing, performing inspections, and effective utilization of GxP requirements. Incorporates both group and/or individual assignments that require students to research applicable regulatory and industry information, as well as activities designed to aid in the comprehension of global regulatory issues. Uses case-based methodologies to enable real-world scientific and technical application of topics and regulatory issues discussed during the course.

Prerequisite(s): RGA 6203 with a minimum grade of C- or RGA 6204 with a minimum grade of C-

RGA 6370. Advanced Regulatory Writing: Medical Device Submissions. (4 Hours)

Examines the process of writing medical device submissions for regulatory agencies both nationally and internationally. Topics include device regulations, the device development process, and clinical study documents. Offers students an opportunity to practice communicating complex scientific information in various documents, including investigators' brochures, clinical trial reports, and investigational device exemption (IDE) 510(k) submission components.

Prerequisite(s): RGA 6202 with a minimum grade of C-

RGA 6380. Advanced Regulatory Writing: New Drug Applications. (4 Hours)

Examines the process of writing drug submissions for regulatory agencies both nationally and internationally. Topics include drug regulations, the drug development process, and clinical study documents. Offers students an opportunity to practice communicating complex scientific information in various documents, including investigators' brochures, clinical trial reports, and Investigational New Drug (IND) application submission components.

Prerequisite(s): RGA 6101 with a minimum grade of C-

RGA 6405. Nonclinical Regulations in Biomedical Product Commercialization. (4 Hours)

Examines the nonclinical regulatory processes involved in commercializing biomedical products within FDA's CBER, CDER, and CDRH. Offers students an opportunity to conduct a comprehensive analysis of FDA's quality standards for biomedical products, including gene and cellular-based therapies, with respect to ICH Common Technical Document (CTD) Module 4. Provides an overview of preclinical investigational new drug (IND) requirements and good manufacturing practice (GMP) regulations that must be fulfilled by biomedical product manufacturers in support of CTD Module 3. Additionally, offers students an opportunity to study biocompatibility testing requirements for medical devices according to FDA guidance and ISO 10993 standards to support 510(k) and PMA submissions.

Prerequisite(s): RGA 6002 with a minimum grade of C- ; RGA 6463 with a minimum grade of C-

RGA 6410. Fundamentals of CMC Regulations and Methods. (4 Hours)

Discusses components of the Common Technical Document Module 3 and describes how regulatory affairs professionals support compliance with CMC regulation. Offers students an opportunity to design and evaluate core elements of an effective CMC compliance strategy, ensuring alignment with ICH guidelines, FDA Guidances, pharmacopeia, and 21 CFR. Chemistry, manufacturing, and controls (CMC) regulatory affairs professionals must use technical, analytical expertise and problem-solving abilities to ensure only quality product is distributed to patients.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6420. Global IVD Regulations and Submissions. (4 Hours)

Examines in-depth regulations governing in vitro diagnostic medical devices. Covers the IVD regulations for the four major economic markets—United States, European Union, Australia, and Canada—as well as other markets that have specific IVD regulations—these countries could include China, Brazil, Mexico, etc. Topics include IVD classification schemes, regulatory strategy, regulatory submission routes (including harmonization), regulatory review processes, performance evaluation, clinical trial requirements, labeling, and postmarketing. Also explores IVD testing methodologies. Covers emerging trends in IVDs, such as the advent of companion diagnostics and their relationship to personalized medicine.

Prerequisite(s): RGA 6202 with a minimum grade of C

RGA 6423. Medical Device Product Development in Canada. (4 Hours)

Explores the general requirements for medical device regulation globally and the details of medical device regulation in Canada. Familiarizes students with the International Medical Device Regulators Forum goals and objectives and explores the medical device regulatory model developed by the Global Harmonization Task Force that is in use in many countries today. Studies Canadian medical device regulations, covering topics such as postmarket topics of adverse event reporting, recalls and inspections, classification, device licensing, establishment registration, design change, license amendments, and annual renewal processes. Offers students an opportunity to participate in a project to learn how to prepare portions of a sample submission for Canada.

Prerequisite(s): RGA 6101 with a minimum grade of C or RGA 6202 with a minimum grade of C

RGA 6431. Clinical Trial Agreements and Other Key Contracts in the Life Sciences. (4 Hours)

Describes the legal principles involved with clinical trial agreements and contracts in the life sciences of all types. Clinical trial agreements address high-risk legal areas like subject injury, indemnification, confidentiality, ownership of data, patent rights, and publication rights. Other important contracts used in the life sciences industry include manufacturing and supply agreements, sponsored research agreements, services agreements, consulting agreements, and licensing agreements. Clinical trials typically involve a complex matrix of roles and responsibilities defined by the different contracts entered into by the sponsor, investigator, contract research organization, and clinical trial site. Explores the meaning of different clauses and reviews the key issues faced in negotiating these contracts. Discusses some of the pitfalls to look out for when structuring agreements with healthcare professionals and academic institutions.

Prerequisite(s): BTC 6210 with a minimum grade of C ; (RGA 6101 with a minimum grade of C or RGA 6000 with a minimum grade of C)

RGA 6432. Real-World Evidence in Biomedical Research. (2 Hours)

Provides an overview of real-world evidence (RWE), discusses challenges in implementing an effective RWE strategy, and reviews the implications of RWE on regulatory decision making. Topics include observational studies/pragmatic clinical trials, comparative effectiveness research, registries, patient reported outcomes, primary vs. secondary data collection, medical claims and electronic health record data, social media, wearable devices, and artificial intelligence.

Prerequisite(s): BTC 6210 with a minimum grade of C ; (RGA 6101 with a minimum grade of C or RGA 6000 with a minimum grade of C)

RGA 6461. Cybersecurity and Regulation of Digital Health Technologies by the FDA. (2 Hours)

Explores the increasing reliance on electronically based media to warehouse patient clinical data, as well as the need to protect it and maintain individual privacy with respect to patient healthcare data. Includes detailing the specifics of what types of patient clinical data new cybersecurity compliance regulations are designed to address, as well as a study of how these regulations impact the development of new biomedical products. Offers students an opportunity to study how these issues are addressed in other geographies, including the European Union, Canada, and the Asia-Pacific nations.

Prerequisite(s): RGA 6101 with a minimum grade of C- or RGA 6202 with a minimum grade of C-

RGA 6463. Regulatory Strategy for Product Development and Life-Cycle Management. (4 Hours)

Examines the preparation of regulatory strategies to support product development and life-cycle management while providing students the opportunity to examine domestic and international processes relevant to regulatory strategy. In developing target product profiles, strategic regulatory plans, and life-cycle management plans, students appraise key components of regulatory strategies, evaluate core elements of product life cycle in the generation of those strategies, and integrate business needs into regulatory planning. Upon completion of the course, successful students should possess the fundamentals to formulate regulatory strategies supporting product development and life-cycle management and be equipped with a stronger understanding of the high-visibility role regulatory professionals serve in developing sound regulatory strategy.

RGA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RGA 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

RGA 7983. Topics. (1-4 Hours)

Covers special topics in regulatory affairs. May be repeated without limit.

Regulatory Affairs of Food - CPS (RFA)**Courses****RFA 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RFA 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RFA 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RFA 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RFA 6210. Food Safety and Modernization. (3 Hours)

Examines the central provisions of the Food Safety Modernization Act (FSMA), noting where the Food and Drug Administration (FDA) has assumed new authority and activities in order to prevent food safety problems before they damage the health of consumers. Students evaluate multiple aspects of FSMA implementation, such as the challenges faced by states, mandatory registration of food production facilities, the requirement that food facilities adopt hazard analysis critical control point (HACCP) plans, third-party auditors, the creation of food product tracing systems, and increased produce inspection.

Prerequisite(s): RFA 6130 with a minimum grade of C- ; RFA 6235 with a minimum grade of C-

RFA 6220. Food Safety and Surveillance: Concepts and Applications. (3 Hours)

Examines concepts and methods for conducting surveillance of food-borne diseases, both in humans and in animals. Topics include methods from epidemiology and public health to address problems that have often been kept within the Food and Drug Administration's and U.S. Department of Agriculture's domains; ways to improve coordination among human health organizations and food regulatory professionals; the relationship between municipal, state, and federal agencies governing food-borne disease; and the best means to enlist the food industry as partners in health surveillance.

Prerequisite(s): RFA 6215 with a minimum grade of C- ; RFA 6235 with a minimum grade of C-

RFA 6350. Political, Social, and Economic Influences on Food Law, Regulation, and Policy. (3 Hours)

Analyzes the food legal landscape, specifically the political, social, and economic influences that shape food regulations, laws, and policies. Offers students an opportunity to apply current case law to contemporary situations with topics that intersect with various themes present throughout core and elective courses.

Prerequisite(s): RFA 6235 (may be taken concurrently) with a minimum grade of C-

RFA 6412. FDA Model Food Code: Implications for Industry. (3 Hours)

Examines the industry implications of the FDA model Food Code, used for safeguarding public health and ensuring food is unadulterated and honestly presented when offered to the consumer. It represents FDA's best advice for a uniform system of provisions that address the safety and protection of food offered at retail and in food service. This model is offered for adoption by local, state, and federal government jurisdictions for administration by the various departments, agencies, bureaus, divisions, and other units within each jurisdiction that have been delegated compliance responsibilities for food service, retail food stores, or food vending operations.

Prerequisite(s): RFA 6100 with a minimum grade of C ; RFA 6120 with a minimum grade of C

RFA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RFA 7995. Project. (1-4 Hours)

Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated up to five times for up to 24 total credits.

Remote Sensing - CPS (RMS)**Courses****RMS 5105. Fundamentals of Remote Sensing. (3 Hours)**

Introduces remote sensing principles, datasets, and basic interpretation/analysis. Covers four general categories: physical processes/theories involved in remote sensing, e.g., the nature and properties of electromagnetic radiation and how it is affected by interactions with the atmosphere and earth's surface; different sensor types and platforms, including optical, thermal, and microwave systems, from UAVs to environmental satellites; different applications of remote sensing such as land-use, land-change, vegetation, natural hazards, precision agriculture, and military; and starting methods of remote sensing to analyze images and extract desired information. Software used includes ArcGIS Pro, ArcGIS Online, GIMP, and FOSS.

RMS 5106. Fundamentals of Remote Sensing. (2.25 Hours)

Introduces remote sensing principles, datasets, and basic interpretation/analysis. Covers four general categories: physical processes/theories involved in remote sensing, e.g., the nature and properties of electromagnetic radiation and how it is affected by interactions with the atmosphere and earth's surface; different sensor types and platforms, including optical, thermal, and microwave systems, from UAVs to environmental satellites; different applications of remote sensing such as land-use, land-change, vegetation, natural hazards, precision agriculture, and military; and starting methods of remote sensing to analyze images and extract desired information. Software used includes ArcGIS Pro, ArcGIS Online, GIMP, and FOSS.

RMS 6110. Introduction to Machine Learning for Image Data. (3 Hours)

Explores a range of machine learning routines, including image classifications and clustering, PCAs, and data reduction. Students perform exercises corresponding to concepts introduced in weekly lessons. Focuses on computer thinking, algorithms involved in preprocessing, spectral and spatial enhancement, spatial analysis, and linear transformations. Utilizes a variety of data types and an opportunity to experience the journey of geospatial image data from its origin (raw data) to its end (transformation) in the context of the process, scope, and real-world scenarios. Examples provided with GBDX notebooks and customized work flows as entry to Python, cloud-based analytics, and web-based GUI software: ENVI, ArcGIS, and GBDX.

Prerequisite(s): RMS 5105 (may be taken concurrently) with a minimum grade of C-

RMS 6240. Introduction to Radar and LiDAR Remote Sensing. (3 Hours)

Introduces the techniques and methods of active imaging used in radar and Light Detection and Ranging (LiDAR). Covers the underlying principles of the measurement techniques and the interaction of microwaves and LiDAR signals with natural surfaces and the atmosphere. Regarding radar, the course focuses on the role of synthetic aperture radar (SAR) systems and their application to monitoring aspects of the Earth's surface, including 3-D. Regarding LiDAR, the course introduces the different airborne and satellite systems and applications in terrestrial surfaces, principally for urban applications. Students complete a weekly lab project related to the processing and analysis of these data. Software: ArcGIS; ENVI; LIDAR Analyst; ESA SNAP Toolbox; ASF MapReady; ASF SAR Training Processor; USDA FS FUSION; FugroViewer.

Prerequisite(s): RMS 5105 (may be taken concurrently) with a minimum grade of C-

RMS 6280. Automated Feature Extraction for the Geospatial Professional. (3 Hours)

Introduces machine learning and automated feature extraction software and how it is utilized for image interpretation. Explores a variety of techniques and work flows associated with collecting features of interest from multiple data sources, e.g., aerial and satellite imagery, LiDAR, and elevation data. Students use AFE software to solve real-world problems in exercises corresponding to concepts introduced in weekly lessons. Offers students an opportunity to learn how to use feature extraction to create industry-standard analytical products and develop processing models for automation. Discusses the fundamentals of machine learning, supervised and unsupervised classification, hierarchical learning, postprocessing, cleanup, automation, modeling, and publication. Software: Esri ArcGIS 10.5; Feature Analyst for ArcGIS; LIDAR Analyst; ENVI; ENVI LiDAR.

Prerequisite(s): RMS 5105 with a minimum grade of C-

RMS 6290. Spectroscopic Image Analysis. (3 Hours)

Explores the various techniques and work flows associated with nonliteral imagery analysis using hyperspectral data from numerous airborne and space-borne hyperspectral imaging (HSI) sensors. The course is divided into four modules: (1) basic theoretical concepts that underpin HSI analysis; (2) data preparation and other ancillary concepts such as spectral libraries and atmospheric correction that are critical to nonliteral analysis but are preprocessing steps; (3) nonliteral exploitation techniques, covered in sufficient depth to give the students an opportunity to understand the different methods and procedures used; (4) a final project where students are expected to conduct nonliteral analysis of a hyperspectral image from pre-through postprocessing. The ENVI software system is used extensively each week.

Prerequisite(s): RMS 5105 (may be taken concurrently) with a minimum grade of C- ; RMS 6110 with a minimum grade of C-

RMS 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RMS 6983. Topics. (1-4 Hours)

Covers special topics in remote sensing. May be repeated without limit.

Respiratory Therapy - CPS (RPT)

Courses

RPT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RPT 6970. Seminar. (1-4 Hours)

Offers an in-depth study of selected topics.

Prerequisite(s): RPT 7205 with a minimum grade of C- ; RPT 7210 with a minimum grade of C-

RPT 7200. Advanced Cardiopulmonary Physiology. (4 Hours)

Covers advanced in-depth integrated physiology of the cardiovascular, renal, and pulmonary systems. Discusses the physiological dynamics, control mechanisms, and system interrelationships of the cardiovascular, pulmonary, and renal systems. Offers students an opportunity to make applications of advanced cardiopulmonary and renal physiology concepts to the management of neonatal, pediatric, adult, and geriatric patients requiring cardiovascular, pulmonary, and renal diagnosis and treatment.

RPT 7205. The Evolving Roles of Respiratory Care Professionals. (4 Hours)

Presents current and projected trends in respiratory therapy. Focuses on elaborating traditional and emerging roles for respiratory therapists, thereby highlighting numerous career opportunities in education, management, research, and other areas. Provides in-depth study related to a quality improvement project in a respiratory care department or educational program. Offers students an opportunity to develop three, five, and 10-year career and professional service plans.

RPT 7210. Research Design. (4 Hours)

Covers different types of designs used in medical research. Emphasizes the evaluation of research designs in peer-reviewed medical journals. Discusses the quality of published research articles and evaluation of levels of evidence produced by clinical research. Attention is given to review of medical literature to identify evidence for current or new standards of practice. Discusses development of research protocols, proposals for research funding, and the management of research projects.

RPT 7215. Applied Research in Respiratory Care. (4 Hours)

Offers a review and discussion of student research protocols and data analysis. Discusses how to prepare research abstracts, posters, and manuscripts under the guidance of departmental faculty. Integrates research outcomes to support clinical practice.

Prerequisite(s): RPT 7210 with a minimum grade of C-

RPT 7300. Development of Clinical Practice Guidelines and Respiratory Care Protocols. (4 Hours)

Offers students an opportunity to gain the foundations necessary to build a strong understanding of how to complete systematic state-of-the-art reviews to summarize evidence based on a thorough literature search, critically appraise individual studies, and use statistical techniques to combine valid studies. Topics include meta-analysis, evidence-based clinical practice guidelines, and the GRADE (Grading of Recommendations, Assessment, Development, and Evaluation) approach to evaluate the supporting evidence and the strength of recommendations in healthcare. Also covers the criteria for establishing the scientific basis for protocol-directed respiratory care, evaluation of respiratory protocols efficacy in providing ICU care, and the use of respiratory protocols in providing non-ICU care.

RPT 7305. Development of Patient Management Plans. (4 Hours)

Offers students an opportunity to use previously acquired knowledge and assessment skills to prepare respiratory care plans for those experiencing respiratory and respiratory-related disorders commonly encountered by the respiratory therapist. Includes how to evaluate outpatient and emergency department patients for home treatment; care plan development, including for patients with rehospitalization; rapid response team activation; or admission to ICU. Topics include concepts of respiratory and respiratory-related illnesses. Offers students an opportunity to learn how to make informed decisions about diagnostic and therapeutic interventions based on patient information and preferences, up-to-date scientific evidence, and clinical judgment (evidence-based practice), which may lower the cost of healthcare delivery. Examines skills needed for future advanced practice respiratory therapist (APRT) roles.

RPT 7400. Pulmonary Diseases and Disorders. (4 Hours)

Offers students an opportunity to gain the foundations necessary to build a strong understanding of the pathophysiology of pulmonary diseases and disorders. Topics include obstructive airway diseases, infectious pulmonary diseases, pulmonary vascular diseases, chest and pleura trauma, disorders of the pleura and chest wall, environmental lung diseases, neoplastic disease, and chronic noninfectious parenchyma disease.

RPT 7401. Cardiopulmonary Assessment and Diagnostics. (4 Hours)

Describes patient evaluation and implementation of evidence-based respiratory care plans. Reviews and applies evidence-based practice and critical diagnostic thinking to the review of the medical record, patient interview, physical assessment, and evaluation of diagnostic studies. Reviews assessment of oxygenation, ventilation, and arterial blood gases. Discusses laboratory studies, imaging studies, and ECG monitoring and interpretation. Describes pulmonary function testing, diagnostic bronchoscopy, and other diagnostic studies. Also reviews acute- and critical-care monitoring, sleep studies, and maternal and perinatal/neonatal patient assessment.

RPT 7402. Adult Critical Care. (4 Hours)

Offers students an opportunity to gain the foundations necessary to build a strong understanding of how to manage airways, administer specialty gases, manage mechanical ventilation, and deliver pharmacologic agents. Topics include assessment of patient status and changes in status and anticipating care based on laboratory results and reports on imaging. Offers students an opportunity to build a strong understanding of the effects of pharmacologic agents, how to anticipate care needed based on nutritional status, how to prevent ventilator-associated pneumonia, recognize and manage patients with infections and sepsis, manage end-of-life care, and prepare for disasters.

RPT 7403. Neonatal and Pediatric Care. (4 Hours)

Covers evaluation of maternal history; neonatal assessment; patient history; physical examination; and results of laboratory studies, imaging, and other diagnostic tests. Topics include assessment and management of nine airways, administration and monitoring of specialty gases, management of ventilation and oxygenation, prevention of ventilator-associated pneumonia, and delivery of pharmacologic agents. Offers students an opportunity to build a strong understanding of how to assess patient status and to anticipate care based on laboratory results, nutritional status, and imaging reports. Other topics include anticipating the effects of pharmacologic agents, management of end-of-life care, preparing for disasters, and evaluating patient and family understanding of education on medications, equipment, and procedures.

RPT 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions.

Russian (RSSN)**Courses****RSSN 1101. Elementary Russian 1. (4 Hours)**

Explores the essentials of grammar, practice in pronunciation, acquisition of basic vocabulary, and idiomatic expressions of everyday Russian.

RSSN 1102. Elementary Russian 2. (4 Hours)

Continues RSSN 1101. Studies grammar and spoken and written forms of the language. Covers more advanced features of the language.

Prerequisite(s): RSSN 1101 with a minimum grade of C- or RSSN 1301 with a minimum grade of C-

RSSN 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 2101. Intermediate Russian 1. (4 Hours)

Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Russian materials.

Prerequisite(s): RSSN 1102 with a minimum grade of C- or RSSN 1302 with a minimum grade of C-

RSSN 2102. Intermediate Russian 2. (4 Hours)

Builds on RSSN 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Russian materials.

Prerequisite(s): (RSSN 2101 with a minimum grade of C- or RSSN 2301 with a minimum grade of C-)

RSSN 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 3101. Advanced Russian 1. (4 Hours)

Builds on RSSN 2102. Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): RSSN 2102 with a minimum grade of C- or RSSN 2302 with a minimum grade of C-

RSSN 3102. Advanced Russian 2. (4 Hours)

Builds on RSSN 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

Prerequisite(s): RSSN 3101 with a minimum grade of C- or RSSN 3301 with a minimum grade of C-

RSSN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

RSSN 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Sales Management - CPS (SMT)

Courses

SMT 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SMT 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SMT 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SMT 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SMT 6010. Building Business Acumen. (3 Hours)

Offers students an opportunity to develop business acumen by examining how a business achieves its goals, studying how to assess the critical interdependences across functions and divisions, and analyzing how financial and strategic decisions impact value creation. Emphasizes the short- and long-term trade-offs of business decisions; the role of marketing, sales, and customer service; and the tools to analyze and synthesize market and competitive data. Focuses on the assessment of key performance indicators that are most useful to appreciate the value of each customer to the organization.

SMT 6020. Managing the Customer Experience. (3 Hours)

Offers students a framework for managing the customer experience in the digital era. Examines ways to influence every stage of the customer-decision journey, from lead generation to building long-term customer relationships. Engages students in the application of best practices in sales and service management in both the business-to-consumer (B2C) and business-to-business (B2B) sectors. Emphasizes ethical standards and trust in the customer engagement process.

SMT 6060. Decision Support and Sales Analytics. (3 Hours)

Introduces current and emerging business analytical concepts and information technologies to support decision making and business intelligence for the sales industry. Discusses commercial decision support systems in various application areas using case studies, including CRM (customer relationship management), web analytics applications, sales force management systems, etc.

SMT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SMT 6980. Sales Management Capstone. (3 Hours)

Offers students, working as individuals or in groups, an opportunity to design and carry out an interdisciplinary project conducted with real-world clients. Applies strategic frameworks and best practices to help organizations shift from seller-centric models to buyer-centric sales approaches.

SMT 6983. Topics. (3 Hours)

Covers special topics relevant to the sales management industry. May be repeated up to four times.

School of the Museum of Fine Arts (SMFA)**Courses****SMFA 3000. Museum of Fine Arts Studio. (2-12 Hours)**

Offers course work at the School of the Museum of Fine Arts. May be repeated without limit.

SMFA 4000. Museum of Fine Arts Capstone. (2-12 Hours)

Offers capstone course work at the School of the Museum of Fine Arts. May be repeated without limit.

Attribute(s): NUpath Capstone Experience

SMFA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Sociology (SOCL)

Courses

SOCL 1000. Sociology at Northeastern. (1 Hour)

Intended for first-year students in the College of Social Sciences and Humanities. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

SOCL 1101. Introduction to Sociology. (4 Hours)

Explores diverse social phenomena, from how people try to look their best in face-to-face interactions; to how race, gender, and class shape identities and social conditions; to how industrial capitalism came to dominate the world. Offers students an opportunity to gain a grasp of key sociological theories and empirical research on topics such as social order, social conflict, and social change, as well as learn to identify social forces that shape human behavior, explain how these forces affect individuals and social groups, and make valid predictions about how they may shape future behavior or events.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 1102. Sex, Gender, and Popular Culture. (4 Hours)

Examines how femininities, masculinities, and different forms of sexual identity are produced and represented within popular culture. Using theories and concepts from both feminist/sexuality studies and popular culture studies, analyzes popular texts and media for their treatment of gender and sexuality and the intersection of those categories with racial and class identities. Explores the visual representation of women (and men) and analyzes how visual and textual media shape our attitudes and identities. Required reading and assignments include close readings of texts, film screenings, class discussions and activities, writing assignments, and creative projects.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

SOCL 1235. Social Psychology. (4 Hours)

Studies the relationship between society and the individual. Focuses on three theoretical perspectives—symbolic interactionism, social structure and personality, and group processes—in order to understand how human behavior is tied to social and cultural contexts and how individuals shape and are shaped by group interaction. Topics may include socialization and how people develop a “social sense of self”; cross-cultural differences in interactional styles; pressures to conform to roles and stereotypes; deviance and mental health; inequality based on race/ethnicity, social class, and gender; identity formation and change, attitudes, and behavior, including prejudice and discrimination; and collective behavior, including social movements.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 1245. Sociology of Poverty. (4 Hours)

Analyzes American poverty in historical perspective, drawing on comparisons with other countries. Critically evaluates sociological research and theories relating to poverty. Considers causes and effects of poverty as well as societal responses to poverty and its consequences. Suitable for students in applied fields, such as nursing, criminal justice, education, allied health, premed, and prelaw.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 1246. Environment and Society. (4 Hours)

Examines the social, political, and economic forces behind the global environmental crisis. Topics include such issues as global warming and climate disruption, world resource availability and the global economic crisis, environmental justice and social inequities in the exposure to ecological hazards, science and technology, environmental degradation in the Third World, globalization and unfair trade, state power and the role of the polluter-industrial complex in the United States, the history of the environmental movement, and exemplary environmental policies and programs. This theoretically oriented course also involves practical experience in environmental problem solving.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 1255. Sociology of the Family. (4 Hours)

Provides a comparative approach to the study of families as social institutions, with particular emphasis on the changing patterns of family life. Introduces questions such as what families need and how the family is affected by other social institutions, political and economic forces, or cultural concerns. Considers how inequality (broadly defined) affects contemporary families. Substantive topics may include dating and marriage, cohabitation, health, and housing. Critically evaluates the methods that sociologists use to study changing practices of cohabitation, marriage, and divorce; interracial relationships; and changes in household composition, including same-sex or gender-nonconforming households.

Attribute(s): NUpath Societies/Institutions

SOCL 1260. Sociology of Gender. (4 Hours)

Considers why and how gender is socially constructed in U.S. society and looks at different theories of gender. Explores gender as an institution as well as different (cultural) expressions of masculinities and femininities. Includes topics of gender in everyday life as well as gender as an organizing principle in the institutions of families, education, workplaces, sexualities, religion, the media, politics, and forms of gender violence. SOCL 1260 and WMNS 1260 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 1280. The Twenty-First-Century Workplace. (4 Hours)

Analyzes the transformation of work since the advent of industrial capitalism. Emphasizes the organization and experience of work since World War II and the contemporary shifts underway in the wake of deindustrialization, the rise of service work, the emergence of the internet, the platform revolution, and the globalization of business organizations. Topics include the shifting nature of authority relations at work; changing forms of labor control; types of workplace culture in traditional and high-tech settings; and efforts to identify and reduce bias against women, minorities, and members of the LGBTQ community. Addresses dilemmas arising from the introduction of advanced technologies.

Attribute(s): NUpath Societies/Institutions

SOCL 1295. Drugs and Society. (4 Hours)

Focuses on historical and contemporary drug issues through the lens of classic sociological concerns. Rather than looking at only the legal-illegal discourse or historical/contemporary production, distribution, and use of drugs, the course frames drug topics around issues of class, race and ethnicity, age, and gender, asking the question of which drugs are used by whom and why at certain life stages. Specific topics include the high incarceration rates for nonviolent drug offenders; the role of drugs in death and dying via death penalty drugs and/or hospice care; mental health and drug treatment; and the potential perfidy of global drug testing and management.

Attribute(s): NUpath Societies/Institutions

SOCL 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 2205. Law and Social Justice. (4 Hours)

Analyzes the impact of the legal system on the creation and perpetuation of criminality in contemporary American society. Devotes particular attention to the study of the creation of criminal law, the judicial process, and the role of law in the gap between crime and social justice. Suitable for students in prelaw, criminal justice, political science, and allied fields.

SOCL 2225. Sociology of Disability. (4 Hours)

Examines how the social model of disability has challenged the predominant medical model defining disability as simply biological impairment and abnormality. Offers students an opportunity to explore how the sociological perspective contributes to understanding lived experiences of disability and how disabilities are deeply interlinked to experiences of racial-ethnic, gender, and class inequality. According to the World Health Organization, some 15 percent of the world's population lives with disability. Yet what exactly is a disability? Successful students are expected to become conversant with theories of the social-historical construction of disabilities, the differences between visible and invisible impairments, the contributions of disability rights activism, and the bioethical questions about difference raised by medical technologies.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

SOCL 2270. Race, Ethnicity, and Inequality. (4 Hours)

Focuses on the social construction of race and ethnicity and the nature of dominant/minority relations in the United States. Emphasizes the peculiar evolution of race relations in U.S. history, the political and economic conditions that have transformed race relations, and the nature of contemporary racial and ethnic relations in the United States. Topics include immigration, ethnic and racial identity, discrimination, and race-based policies (e.g., residential restrictive codes, Jim Crow segregation). Offers students an opportunity to develop a critical lens from which to observe and interpret contemporary debates over structural racism.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 2280. Sociology of Mental Health. (4 Hours)

Explores how mental health and illness are socially constructed. Compares perspectives to illustrate how population mental health is shaped by social, political, and economic conditions. Substantive topics may include the medicalization of deviant behavior, changing definitions of mental illness across time and cultures, the social determinants of mental illness, and the responses by the mental health care system.

SOCL 2303. Gender and Reproductive Justice. (4 Hours)

Introduces the social, legal, and economic barriers to accessing reproductive healthcare domestically and internationally. Draws on various theoretical and analytic tools including critical race theory, critical legal theory, sociology of science, human rights, feminist theory, and a range of public health methods. Access to reproductive health services, including abortion, is one of the most contested political, social, cultural, and religious issues today. Covers domestic, regional, and international legal and regulatory frameworks on sexual reproductive health. HIST 2303, SOCL 2303, and WMNS 2303 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 2320. Statistical Analysis in Sociology. (4 Hours)

Offers students an opportunity to obtain knowledge and skills essential for understanding the theory and practice of social statistics commonly used in social research. Topics covered include the operationalization of abstract concepts; descriptive statistics; correlation; bivariate regression; central limit theorem; confidence intervals; hypothesis testing; and key concepts such as association, causation, and spurious relationships. Statistical software is used to complete assignments.

Prerequisite(s): SOCL 1101 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

SOCL 2321. Research Methods in Sociology. (4 Hours)

Introduces students to the range of research methods used by sociologists. Covers experimental research, field research, survey research, and historical-comparative research. Sampling, the rules of evidence in empirical research, research ethics, and the place of values are discussed.

Prerequisite(s): SOCL 1101 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

SOCL 2323. Ethnographic Methods. (4 Hours)

Focuses on the practical, ethical, and theoretical issues underlying qualitative field research. Emphasizes firsthand experience with participation, observation, interviewing, note-taking, data analysis, and ethnographic writing.

Prerequisite(s): ANTH 1101 with a minimum grade of D- ; SOCL 1101 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data, NUpath Integration Experience

SOCL 2355. Race, Identity, Social Change, and Empowerment. (4 Hours)

Introduces and sensitizes students to the forms, practices, and effects of racism and discrimination on the various populations in the United States and presents frameworks for understanding and working with people with histories of discrimination and different cultural identities. Pays special attention to human services with diverse populations in schools, prisons, and employment assistance programs.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity

SOCL 2358. Current Issues in Cities and Suburbs. (4 Hours)

Introduces students to pressing urban issues: urban sprawl, poverty, education, transportation, economic development, and housing, through an intensive analysis of the Boston metropolitan area. The course is cotaught by university faculty and practitioners in government, community, and nonprofit organizations throughout the metropolitan area. Offers students the opportunity to analyze Boston data, go on outings to see development in progress, talk with urban practitioners about what they do, and conduct research on an urban issue of their choice.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 2359. Current Issues in Cities and Suburbs Abroad. (4 Hours)

Introduces students to pressing urban issues—urban sprawl, poverty, education, transportation, economic development, and housing—through an intensive analysis of the metropolitan area. Taught by university faculty and local practitioners in government, community, and nonprofit organizations. Offers students an opportunity to analyze urban data, to go on outings to see development in progress, and to talk with urban practitioners about what they do in urban contexts outside of the United States. To be taken as part of a Dialogue of Civilizations. May be repeated without limit.

Attribute(s): NUpath Difference/Diversity, NUpath Integration Experience, NUpath Societies/Institutions

SOCL 2365. Latinx Youthhood in the United States. (4 Hours)

Surveys topics related to Latinx youthhood. Includes historical, social, and cultural roots of Latinx youthhoods in the United States and how Latinx youthhood has been shaped within colonial, transnational, and global contexts. Emphasizes understanding the ways in which social institutions found in and across the United States and Latin American sending communities have structured Latinx youthhoods in relation to race, gender, class, and citizenship, as well as how Latinx youths have exercised agency to contest the social inequalities resulting from the practices and policies of these social institutions.

Attribute(s): NUpath Societies/Institutions

SOCL 2485. Environment, Technology, and Society. (4 Hours)

Focuses on the connections between the development of modern nation-states and the control of nature. Explores the role human societies play in such events as climate change, tsunamis, and droughts. Asks how industrialization and the process of science and technology development are related to our transforming environmental conditions, as well as how the social sciences, the sciences, and engineering are transforming to address these issues. Draws on social theory, environmental history, anthropology/sociology, art/design, and open-source technologies to investigate theoretically and methodologically the sources, experiences of, and solutions for environmental health questions.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

SOCL 2500. Race and Global Human Mobility. (4 Hours)

Examines the relationship between race and the movement of people around the globe. Offers students an opportunity to acquire a concrete understanding of how race and ethnicity (as social constructions) have developed as people have migrated (under free will or forced circumstances) within and across geopolitical territories (e.g., colonies, countries) in the past (1400s) and through the present. Ethnoracial-related conflicts connected to migration (e.g., rebellions by the enslaved during the Atlantic slave trade, Rwandan genocide, Syrian civil war) may also be explored.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

SOCL 3200. Cities in Global Context. (4 Hours)

Examines the roots of the urbanization process, major ways of thinking about it, and the development of world cities and megacities. The twenty-first century will be a century in which urbanism is a central problem and opportunity. Considers the economic, political, cultural, and environmental dimensions of urbanism across the globe. Includes specific case studies from around the world. Encourages students to develop a knowledge of particular cities in order to examine the key themes of the course. INTL 3200, ANTH 3200, and SOCL 3200 are cross-listed.

SOCL 3241. Violence and Society. (4 Hours)

Examines the notion of violence and its pervasive presence in the social institutions we create and maintain every day. Addresses key debates and findings in sociological literature on violence, drawing on other disciplines as they prove helpful. Sociology tells us that the beliefs, values, and norms that characterize the United States legitimize the preference for violence, largely through the obvious venues of the mass media that glorify violence but also in the subtler structural arrangements collectively constructed and maintained in our everyday behaviors. Offers students an opportunity to understand how the structure of our society and its social institutions inhibit or facilitate violent behavior.

Attribute(s): NUpath Societies/Institutions

SOCL 3270. Race, Ethnicity, and Inequality. (4 Hours)

Focuses on the social construction of race and ethnicity and the nature of dominant/minority relations in the United States. Emphasizes the peculiar evolution of race relations in U.S. history, the political and economic conditions that have transformed race relations, and the nature of contemporary racial and ethnic relations in the United States. Topics include immigration, ethnic and racial identity, discrimination, and race-based policies (e.g., residential restrictive codes, Jim Crow segregation). Offers students an opportunity to develop a critical lens from which to observe and interpret contemporary debates over structural racism.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 3300. Social Theory. (4 Hours)

Reviews the dominant theoretical traditions in classical and contemporary sociology, showing the links between the social thought of the eighteenth and nineteenth centuries and current social thought.

Prerequisite(s): SOCL 1101 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

SOCL 3407. The Immigrant Experience: Ethnicity, Race, and Inequality in America. (4 Hours)

Presents the sociological study of immigration in the United States. Emphasizes the ways U.S. institutions (e.g., federal, state, and local governments; the legal system; the economy; schools; families) have shaped immigrant integration and incorporation and vice versa. Presents theories and concepts that explain how experiences of integration and incorporation differ for disparate groups of immigrants and their children due to their associated social categories including race, class, gender, sexuality, and citizenship. Examines how local and state institutions (Boston and Massachusetts, respectively) have shaped immigrant integration in recent years.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

SOCL 3441. Sociology of Health and Illness. (4 Hours)

Offers a substantial overview of the sociology of health and illness. Medical sociology is an important subfield of sociology with important links to public health, social psychology, psychology, and other medical fields. Emphasizes several critical areas: society and disease; theoretical understandings of health inequalities; medicalization and social control; healthcare professions and professionalization; and the American healthcare system. Offers students an opportunity to obtain analytical frameworks to explore other topics in medical sociology not covered in this course.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions, NUpath Writing Intensive

SOCL 3450. Class, Power, and Social Change. (4 Hours)

Explores theories and research on the institutionalized forms of inequality that have accompanied the rise of advanced capitalism in Western society. Major topics include the competing definitions of class that have developed among social scientists; the relation between class and race in the United States; how class and gender have intersected historically; and the link between workers' movements, political systems, and the forms that capitalist development has assumed in Western Europe and the United States. Students conduct projects in which they explore the conceptions of social justice held by members of subordinate groups.

Attribute(s): NUpath Societies/Institutions

SOCL 3468. Social Movements. (4 Hours)

Introduces the social, cultural, and political dynamics that surround social movements, both historically and in the contemporary world. Emphasizes theory and research on national and transnational social movements, including studies of revolutions and political upheavals, racial justice and demands for civil and human rights, movements for gender equality, and other instances of movements for social and political change. Focuses on how structural factors shape social movement emergence and development and how social movements in turn shape the structure of societies.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 3487. Applied Sociology: Practice and Theory. (4 Hours)

Offers the academic component of the experiential education requirement for sociology majors; to be taken after students have completed the experiential component. Provides a seminar format in which students will reflect upon their approved experience (that is, co-op, internship, community service, and so on) and integrate it into a research project. Students who have completed study abroad or a service-learning course in the department may not have to take this course.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

SOCL 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 4485. Sociology of Education. (4 Hours)

Examines the ways in which schools and societies are interconnected. More specifically, introduces the educational practices and policies that reproduce or challenge social stratification, social mobility, and adult socio-economic success. Explores the relationships among social actors including teachers, students, and parents, as well as educational policies and practices that shape educational equity and opportunity. Focuses on curriculum development and implementation, ability grouping and tracking, teacher preparation and professional development. Explores how these and other educational policies and practices may differ due to race, class, gender, and citizenship.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D-

Attribute(s): NUpath Societies/Institutions

SOCL 4520. Race, Class, and Gender. (4 Hours)

Considers the intersection of race, class, and gender in social structure, institutions, and people's lives. Utilizes an interdisciplinary approach to focus on the socially constructed nature of these concepts and how they shape and create meaning in individual lives. Difference with an emphasis on inequality and varying life chances is central for understanding our society and is central to our work. Requires a significant amount of reading. Class format is like a seminar; students are expected to participate, take responsibility, and write a paper. SOCL 4520 and WMNS 4520 are cross-listed.

Prerequisite(s): (SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-); (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C) or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Writing Intensive

SOCL 4522. Environmental Justice. (4 Hours)

Offers students an opportunity to engage in advanced social science research on topics relating to environmental justice, citizen science, and environmental health. Examines various environmental justice topics with the goal of producing a research project or paper. Case studies examined include the impacts of toxic waste dumping on human health and the environment, the role of global climate change in creating new waves of migration around the world, the rise of the Slow Food movement, and the relationship between environmental and data justice. Studies how to redesign research methods, tools, and processes to support environmental justice.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or HUSV 2400 with a minimum grade of D- or (HUSV 2401 with a minimum grade of D- or ENVR 2401 with a minimum grade of D-) or INTL 1101 with a minimum grade of D- or PHIL 1180 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or SOCL 1246 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- ; (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Societies/Institutions, NUpath Writing Intensive

SOCL 4523. Sexualities. (4 Hours)

Offers a primarily sociological overview of the field of sexuality studies. Explores how sexual behaviors and identities are shaped by social norms, values, and expectations; the meanings and statuses ascribed to sexual acts, behaviors, identities, and communities; and the processes by which sexualities are achieved. Applies an intersectional framework to understand how sexuality interacts with categories of gender, race, nation, and class. Substantive topics may include LGBTQ+ identities, power, sex work, socialization, pornography, and politics.

Prerequisite(s): (ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

SOCL 4526. Afro-Asian Relations in the Americas. (4 Hours)

Examines the comparative racialization of Blacks and Asians in the Americas and relations between these communities. Introduces sociological theories of race/ethnicity, a chronology of Afro-Asian relations in the United States, and the impact of 1970s deindustrialization and post-1965 Asian immigration. Covers the internationalism of Black and Asian leaders (e.g., W.E.B. du Bois and Mao Tse-Tung) in the developing nations and the overlapping Civil Rights, Black Power, and Asian American movements.

Prerequisite(s): SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 4528. Technology and Society. (4 Hours)

Focuses on the social and political context of technological change and development. Through readings, course assignments, and class discussions, offers students an opportunity to learn to analyze the ways that the internet, artificial intelligence, and other technological advances have required a reworking of every human institution—both to facilitate the development of these technologies and in response to their adoption.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOCL 4600. Senior Seminar. (4 Hours)

Offers students an opportunity to integrate and apply knowledge of the discipline by building on completed course work and conducting original research on a topic of their choice. Requires students to produce a research paper due at the end of the semester. This seminar operates as an intellectual workshop in which students share the process, as well as the results, of their research with the group. The class comes together to inform, guide, critique, and support one another's research efforts in a collaborative fashion. Students are expected to make constructive comments on the work of others and to freely exchange ideas.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

SOCL 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

SOCL 4971. Junior/Senior Honors Project 2. (4 Hours)

Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Prerequisite(s): SOCL 4970 with a minimum grade of D-

SOCL 4973. Special Topics in Sociology. (4 Hours)

Designed as a specialized themes course for students with experience in sociology and/or anthropology. Takes advantage of unique opportunities—visiting guests, special thematic interests—which are not part of the regular curriculum. May be repeated up to three times.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-

SOCL 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated once.

Attribute(s): NUpath Integration Experience

SOCL 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SOCL 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

SOCL 5240. Feminist Resistance. (4 Hours)

Engages students in the study of a variety of forms of feminist resistance in recent history, emphasizing the United States in the context of cross-cultural examples. Examines key feminist texts and manifestos and studies feminist activism in coalition with other social movements. Students identify and analyze unique features of gender-based activism in itself and in its intersections with other social movements, including movements and activism focused on race, class, sexuality, and physical ability.

Attribute(s): NUpath Societies/Institutions

SOCL 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 7001. Proseminar 1: Acclimating to Graduate School. (1 Hour)

Helps first-year students develop a firm understanding of the PhD Sociology program requirements and helps them develop beneficial skills and strategies to complete those requirements in a timely manner. Focus on relevant topics such as articulating learning expectations from the graduate program; developing individual timelines and time management strategies to meet those expectations; identifying resources on campus and beyond that are needed to meet learning expectations; and developing concrete goals for acquiring appropriate writing, reading skills, and research areas expertise in the PhD program.

SOCL 7002. Proseminar 2: Academic Planning. (1 Hour)

Helps first-year students further develop beneficial skills and strategies to complete program requirements by building on the first semester proseminal. Focuses on relevant topics such as networking, building, and developing a team of mentors and peer supports; writing and talking about research; getting research funded; and learning wellness strategies for surviving graduate school.

SOCL 7003. Proseminar 3: Committee, Topics, and Reading Lists. (1 Hour)

Helps students develop beneficial skills and strategies to complete program requirements and become more professionalized as sociologists. This third proseminal provides the structure and peer feedback designed to help students build and work through their first field statement reading list. Students produce an annotated bibliography. The weekly exercises are designed to help students create the reading list in collaboration with faculty mentors and other experts in the field.

SOCL 7004. Proseminar 4: Field Statement Writing. (1 Hour)

Offers students an opportunity to develop beneficial skills and strategies to complete program requirements and to become more professionalized as sociologists. Students share field statement drafts, participate in peer evaluations, and practice giving constructive criticism on others' work and address others' critical feedback. Students draft a field statement or publishable paper.

SOCL 7100. Queer Theory: Sexualities, Genders, Politics. (4 Hours)

Introduces the core texts and key debates that have shaped queer theory and examines the intersections between queer theory and feminism and critical race theory. Seeks to provide an understanding of expansive and radical contemporary queer politics by analyzing foundational queer and feminist texts, pushing beyond narrow constructions of identity politics, anti-discrimination policy, and rights-based reforms. Engages queer theory by means of a rich philosophical and political interrogation of the meaning and content of "queer." SOCL 7100 and WMNS 7100 are cross-listed.

SOCL 7200. Foundations of Social Theory 1. (4 Hours)

Studies the classic theorists including Durkheim, Weber, Marx, and others.

SOCL 7201. Foundations of Social Theory 2. (4 Hours)

Reviews the dominant theoretical traditions in contemporary sociology, examining the key assumptions, terminology, weaknesses, and strengths of the pluralist, managerialist, neo-Marxist, feminist, and postmodern paradigms. Strives not only to expose students to the giants in the field but, more important, to give students the intellectual tools to situate entire theoretical traditions vis-à-vis one another. Introduces students to various schools of thought. Offers students the opportunity to learn "how to think" sociologically and theoretically—that is, to go beyond simplistic and descriptive accounts of social phenomena to offer more systematic and insightful explanations.

SOCL 7221. Globalization, Development, and Social Justice. (4 Hours)

Explores the rise of neoliberal globalization and its impact on local and national communities around the world. Examines complex patterns of resistance, including place-based struggles and transnational social movements. Combines theoretical analysis of global capitalism, development, the politics of resistance, and reformist/radical alternatives with the study of concrete struggles in defense of land, labor and human rights, indigenous cultures and identities, and ecological sustainability.

SOCL 7226. Economy, Politics, and Social Change. (4 Hours)

Offers a broad survey of scholarly debates on the redistribution of political power, economic power, and social capital across the globe. Emphasizes an ethnographic analysis of how colonial and imperial legacies inform contemporary arrangements that structure inequality and how political imaginations are exercised through aesthetics, identities, and institutions. Considers how experiments with economic justice and juridical and political forms of justice find expression in contemporary grassroots movements and theories. Draws on interdisciplinary conversations from the social sciences and humanities to examine and compare radical forms of social change across various global contexts.

SOCL 7227. Race and Ethnic Relations. (4 Hours)

Offers a graduate-level seminar in the sociology of race and ethnic relations. Explores the key social, economic, political, and ideological forces shaping race and ethnic relations in the United States, past and present, and the main theoretical, methodological, and substantive debates in the "race and ethnicity" subfield of sociology. Course topics include, but are not limited to, the conceptual and intellectual foundations of the study of race and ethnic relations; the sources and consequences of ethnic and racial identities; urban poverty and dynamics of racial residential segregation; the role of wealth in creating and perpetuating racial inequality; the "new black middle class"; and contemporary debates regarding racial prejudice, discrimination, and redistributive public policies in the United States.

SOCL 7231. Sociology of Prejudice and Violence. (4 Hours)

Examines the roots and consequences of violent behavior in society and the individual. Topics vary from semester to semester, but will include serial murder, massacres, hate crimes, workplace murder, group violence including cults, and mass media portrayals of violence.

SOCL 7243. Sociology of Health and Illness. (4 Hours)

Studies social aspects of illness and medicine, historically and cross-culturally. Focuses on illness and the medical profession in modern society and their structural settings: the community, the hospital, the medical school. Critically examines research studies in the field and specifies problems for future research.

SOCL 7256. Contemporary Issues in Sociology. (4 Hours)

Discuss contemporary issues in sociology. Include supervised readings and written reports on special problems. May be repeated without limit.

SOCL 7263. Social Psychology of Stratification. (4 Hours)

Explores the social psychological dimensions of structured social inequality. Overviews the "social psychologies" embedded in the classical social theorists, then explores the literature on sociological social psychology (as opposed to its psychological cousin), identifying key theoretical frameworks and focusing on "social structure and personality" (or "social structure and attitudes") research. Explores relevant literatures on various "subjective" responses to stratification including the self-concept, stratum (that is, race, class, or gender) identification and consciousness, the process of legitimization, stratification beliefs (or stratification ideology), racial attitudes, and links between these phenomena and various policy attitudes and preferences (support for affirmative action, wealth redistribution, and so on). Also explores the ways in which such responses may contribute to the maintenance and reproduction of the status quo (social reproduction), and social change.

SOCL 7267. Environment, Health, and Society. (4 Hours)

Studies contested illnesses, which are diseases or conditions in which there is dispute over environmental causation. For many diseases and conditions attributed to environmental and occupational exposure, the disease or condition and/or its causes are discovered by laypeople in workplaces and communities, with considerable attention to chemical exposures. This seminar synthesizes a diverse set of fields, encompassing environmental sociology, medical sociology, medical anthropology, science studies, history of medicine, history of science, environmental health, community-based participatory research, environmental justice, and environmental public health. Emphasizes both political economic and ideological factors as determinants of contestation. Also examines issues of interdisciplinary collaboration between social scientists and environmental health scientists.

SOCL 7270. Sociology of Work and Employment. (4 Hours)

Examines the ways in which work organizations powerfully shape individual and social life. Traces such influences with particular emphasis on how organizations differentially affect the distribution of job rewards across class, gender and racial/ethnic lines. Topics include the historical evolution of the management/worker relationship, job segregation by both race and gender, the impact of new technologies on social inequality, the relation between gender and professional careers, governmental efforts to ensure equal opportunity, and the impact of workplace transformation on racial and gender inequalities at work.

SOCL 7273. Gender and Social Policy. (4 Hours)

Provides an introduction to gender and social policy, with emphasis on intersections of inequalities based on class, race, and sexuality. The focus is on equality policies in employment including family-friendly measures and antidiscrimination policies. Includes those focused on child care, poverty, reproduction, and sexuality. Examines the intersections of family, economy, sexuality, and state from a variety of perspectives including cross-national and comparative analysis.

SOCL 7287. Social Movements in Health. (4 Hours)

Offers a graduate seminar centering on health social movements. Also explores general social movement theory and research. Uses concepts from science and technology studies, and covers some core medical sociology concerns such as health inequalities; personal experience of illness; and lay-professional disputes over disease identification, causation, prevention, and treatment. Among the movements covered are disability rights, breast cancer activism, medical activism, Black health movements, environmental justice, community health centers, patients' rights, and health access movements.

SOCL 7962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 7976. Directed Study. (1-4 Hours)

Comprises reading and research directed by a faculty member. May be repeated without limit.

SOCL 7990. Thesis. (1-4 Hours)

Offers thesis supervision by members of the department. May be repeated without limit.

SOCL 8960. Exam Preparation—Doctoral. (0 Hours)

Taken while completing one of two PhD field statements under faculty supervision. May be repeated three times.

SOCL 8984. Research. (1-4 Hours)

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

SOCL 8986. Research. (0 Hours)

Offers the student the opportunity to conduct full-time research. May be repeated without limit.

SOCL 9000. PhD Candidacy Achieved. (0 Hours)

Indicates successful completion of the doctoral comprehensive exam.

SOCL 9986. Research. (0 Hours)

Offers the student the opportunity to conduct full-time research. May be repeated without limit.

SOCL 9990. Dissertation Term 1. (0 Hours)

Offers theoretical and experimental work conducted under the supervision of a departmental faculty.

Prerequisite(s): SOCL 9000 with a minimum grade of S

SOCL 9991. Dissertation Term 2. (0 Hours)

Offers dissertation supervision by members of the department.

Prerequisite(s): SOCL 9990 with a minimum grade of S

SOCL 9996. Dissertation Continuation. (0 Hours)

Offers continued thesis work conducted under the supervision of a departmental faculty.

Prerequisite(s): SOCL 9991 with a minimum grade of S or Dissertation Check with a score of REQ

Sociology - CPS (SOC)

Courses

SOC 1100. Introduction to Sociology. (3 Hours)

Examines the basic theoretical perspectives, research methods, and concepts of sociology, including society, culture, institutions, status and role, socialization, social groups, and the role of the individual within society. Considers a number of specific topics to help explore these concepts, including crime, deviance, sexualities, gender, education, and the environment.

Attribute(s): NUpath Societies/Institutions

SOC 1210. Sociology of Boston. (3 Hours)

Examines Boston from the perspective of environmental development, neighborhood and intergroup relations, institutional services, and symbolic meanings. The city is a laboratory for exploring the people's search for a lifestyle and the satisfaction of their needs. Offers students an opportunity to learn about urban sociology by using Boston as the case study. Examines the social history and historical development of contemporary Boston and analyzes selected current sociological issues.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

SOC 1220. Engaging Difference and Diversity. (3 Hours)

Introduces the issue of diversity in the United States and across the globe. All humans share the same basic capacity for thinking, feeling, and social and moral reasoning. This general capacity takes specific cultural shape as each group adapts to different environments and historical situations and over time constructs a cultural tradition. Offers students an opportunity to articulate this knowledge intellectually and to apply it to everyday living and practices.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

SOC 1230. Race and Ethnicity. (3 Hours)

Examines race and ethnicity as constructed differences. Explores the reasons for their existence, the power dynamics behind constructions of difference, the impact of difference on identity, and ways that visual and other presentations influence perceptions of self and others. Because human beings belong to different racial and ethnic groups, the study of these constructs is important to sociology. Explores the history of race and ethnicity and how history has influenced the study of these topics.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

SOC 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOC 2100. Popular Culture. (3 Hours)

Explores the significance of expressions of popular culture such as film, television, music, and literature. Examines media production, organization, technology, and audience consumption. Discusses countercultures and subcultures, moral and ethical considerations, high and low culture, independent and corporate business influences, and consumerism and consumption. Topics include the effects of popular culture on race, gender, and class. Covers the relationship between popular culture and existing socioeconomic institutions.

Attribute(s): NUpath Interpreting Culture

SOC 2200. Drugs and Society. (3 Hours)

Introduces the sociology of drugs. Examines social definitions of licit and illicit drugs, conditions of their use, and socialization into drug use. Surveys deviant drug use and the effects of social control on definitions and use of drugs. Applies the relevant sociological theories of deviance and social control.

SOC 2240. Death and Dying. (3 Hours)

Examines the treatment of death and dying, including problems faced by health-care professionals, family members, institutions, the funeral industry, and the dying themselves. Covers cross-cultural perspectives, the social distribution of mortality, the changing nature of death, and the ethical problems in determining life and death. Emphasizes abortion, suicide, and ceasing medical intervention.

SOC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOC 4955. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

SOC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOC 4991. Research. (1-4 Hours)

Offers students an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

SOC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Sociology - CPS Specialty (SCLY)

Courses

SCLY 1210. Sociology of Boston. (4 Hours)

Introduces students to American urban studies and urban theory, with a special focus on spatial expressions of intra-urban inequalities. Focuses on theories of formation of urban inequalities, social and immigrant segregation, segregation and integration, gentrification as a process and how it impacts displacement, and theories of formation of neighborhoods and the evolution of collective efficacy. The class tests theories discussed in class by exploring specific neighborhoods in Boston. Offers students an opportunity to learn about the Irish influence in Dorchester, the Italian influence on the West End, and the African-American influence in Roxbury. Concludes with a concentration on how globalization has fueled a new wave of immigrant communities to grow and evolve in the twenty-first century.

Spanish (SPNS)

Courses

SPNS 1101. Elementary Spanish 1. (4 Hours)

Begins the integrated development of elementary language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of daily life, social norms, and family structure in Spanish-speaking countries. Designed for students with little or no knowledge of Spanish.

Prerequisite(s): Placement in SPNS 1101 with a score of 1101

SPNS 1102. Elementary Spanish 2. (4 Hours)

Builds on SPNS 1101. Continues the integrated development of elementary language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of the linguistic, cultural, and geographic diversity of the Spanish-speaking world.

Prerequisite(s): SPNS 1101 with a minimum grade of C- or Placement in SPNS 1102 with a score of 1102

SPNS 1973. Special Topics in Hispanic Culture. (4 Hours)

Offers an in-depth exploration of a specific topic related to Hispanic culture, literature, and/or language. Taught in English. May be repeated twice.

SPNS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 2101. Intermediate Spanish 1. (4 Hours)

Builds on SPNS 1102 and begins the integrated development of intermediate language skills through cultural exploration. Includes class discussion and project-based learning. Offers students an opportunity to gain a deeper understanding of modern life in Spanish-speaking countries and efforts to preserve cultural heritage.

Prerequisite(s): SPNS 1102 with a minimum grade of C- or Placement in SPNS 2101 with a score of 2101

SPNS 2102. Intermediate Spanish 2: Becoming a Global Citizen. (4 Hours)

Builds on SPNS 2101 and continues the integrated development of intermediate language skills through cultural exploration. Includes class discussion, project-based learning, and one-on-one conversations with native speakers from around the Spanish-speaking world. Offers students an opportunity to prepare to travel, live, or work abroad and gain a deeper understanding of the social and political issues that have shaped daily life in Spanish-speaking countries.

Prerequisite(s): (SPNS 2101 with a minimum grade of C- or Placement in SPNS 2102 with a score of 2102)

SPNS 2900. Specialized Instruction in Spanish. (1-4 Hours)

Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated without limit.

SPNS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 3101. Advanced Spanish 1: Deconstructing Borders. (4 Hours)

Builds on SPNS 2102 and begins the integrated development of advanced language skills through cultural exploration. Includes class discussion, project-based learning, and one-on-one conversations with native speakers from around the Spanish-speaking world. Offers students an opportunity to gain a deeper understanding of the (de)construction of social, political, and interpersonal borders in the Spanish-speaking world.

Prerequisite(s): SPNS 2102 with a minimum grade of C- or Placement in SPNS 3101 with a score of 3101

SPNS 3102. Advanced Spanish 2: Hispanic and Latinx Identity. (4 Hours)

Builds on SPNS 3101 and continues the integrated development of advanced language skills through cultural exploration. Includes class discussion, project-based learning, and one-on-one conversations with native speakers from around the Spanish-speaking world. Offers students an opportunity to gain a deeper understanding of the diverse gender, ethnic, racial, religious, national, and linguistic identities of Hispanic and Latinx communities in Spanish-speaking countries and the United States.

Prerequisite(s): SPNS 3101 with a minimum grade of C- or Placement in SPNS 3102 with a score of 3102

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

SPNS 3401. Spanish for Healthcare Professionals 1. (4 Hours)

Designed to prepare students to interact with Spanish-speaking patients effectively and empathetically by exploring Hispanic cultural perspectives related to health and healthcare throughout the Spanish-speaking world, focusing on the Latino population in the United States. Offers students an opportunity to develop their linguistic skills tailored specifically to healthcare settings. Introduces a broad range of medical vocabulary and reviews the grammatical structures necessary to take a medical history, conduct a physical exam, discuss a diagnosis and treatment with patients, and perform other medical tasks in Spanish.

Prerequisite(s): SPNS 2102 with a minimum grade of C- or SPNS 3101 with a minimum grade of C- or SPNS 3102 with a minimum grade of C- or Placement in SPNS 3101 with a score of 3101 or Placement in SPNS 3102 with a score of 3102

SPNS 3402. Spanish for Healthcare Professionals 2. (4 Hours)

Builds on SPNS 3401. Continues to offer students an opportunity to prepare to interact effectively and empathetically with Spanish-speaking patients through the development of linguistic skills tailored to healthcare settings. Explores Hispanic cultural perspectives related to health and healthcare. Delves deeper into current topics in healthcare such as mental illness and its representation, gender-affirming care, reproductive care, and public health emergencies, among others.

Prerequisite(s): SPNS 3401 with a minimum grade of C-

SPNS 3403. Spanish for Global Professionals. (4 Hours)

Offers students an opportunity to learn how to communicate effectively with Spanish-speaking clients and colleagues in professional settings in the United States and abroad. Designed to develop students' formal language skills and intercultural competence. Explores a wide range of cultural perspectives such as workplace dynamics and diversity, the use of technology and social media, privacy and data protection, and personal finance, among others. Students build a portfolio website in Spanish that highlights their expertise in their own field.

Prerequisite(s): SPNS 2102 with a minimum grade of C- or Placement in SPNS 3101 with a score of 3101 or SPNS 3101 with a minimum grade of C- or Placement in SPNS 3102 with a score of 3102 or SPNS 3102 with a minimum grade of C-

SPNS 3502. Authentic Spanish Grammar. (4 Hours)

Explores the authentic use of advanced grammar, focusing on improving both speaking and writing skills. Presents advanced grammatical structures, analyzes their use in authentic cultural texts, and applies them to both spoken and written tasks. Offers students an opportunity to discuss cultural topics with peers and native speakers, as well as to develop an ePortfolio of written texts and engage in the peer-editing process.

Prerequisite(s): SPNS 3101 with a minimum grade of C- or SPNS 3102 with a minimum grade of C- or Placement in SPNS 3102 with a score of 3102; (ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

SPNS 3601. Exploring Spoken Spanish. (4 Hours)

Uses project-based learning to help students build their confidence to interact with native speakers throughout the Spanish-speaking world by improving their pronunciation and listening comprehension, as well as increasing their awareness of the variation that exists in spoken Spanish. Briefly introduces the history of the Spanish language and the many Spanish-speaking communities around the world. Explores the Spanish sound system as it relates to both students' own pronunciation and to the diversity of dialects in the Spanish-speaking world. Offers students an opportunity to examine their own pronunciation, participate in one-on-one conversations with native speakers, analyze real examples of spoken Spanish, and consider the role of Spanish in bilingual communities around the world.

Prerequisite(s): SPNS 2102 with a minimum grade of C- or SPNS 3101 with a minimum grade of C- or SPNS 3102 with a minimum grade of C- or Placement in SPNS 3101 with a score of 3101 or Placement in SPNS 3102 with a score of 3102

SPNS 3602. Introduction to Spanish Linguistics. (4 Hours)

Introduces students to the study of language and the analysis of the Spanish language and its structure. Through project-based learning, students apply their knowledge of the history of the language, the sound system, word meaning, variation, social use, and Spanish-language learning to real-world examples. No previous linguistics knowledge is required.

Prerequisite(s): SPNS 3101 with a minimum grade of C- or SPNS 3102 with a minimum grade of C- or SPNS 3601 with a minimum grade of C- or SPNS 3603 with a minimum grade of C- or Placement in SPNS 3102 with a score of 3102

SPNS 3603. Special Topics in Spanish Linguistics. (4 Hours)

Explores a particular topic in Spanish linguistics. Topics may include phonology, syntax, morphology, sociolinguistics, language contact, bilingualism, or applied linguistics, among others. May be repeated two times.

Prerequisite(s): SPNS 3101 with a minimum grade of C- or SPNS 3102 with a minimum grade of C- or SPNS 3601 with a minimum grade of C- or SPNS 3602 with a minimum grade of C- or Placement in SPNS 3102 with a score of 3102

SPNS 3800. Special Topics in Spanish. (1-4 Hours)

Focuses on a unique aspect of the Spanish language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

SPNS 3900. Specialized Instruction in Spanish. (1-4 Hours)

Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

SPNS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 4700. Capstone Seminar. (4 Hours)

Offers a summative research and writing experience for Spanish majors organized around an important critical question in the discipline. Explores practical applications of theories, methods, and practices of critical work on a particular topic while providing students opportunities for reflecting on the connections between their capstone and other work they have done as majors. Conducted in Spanish.

Prerequisite(s): SPNS 3102 with a minimum grade of C- or SPNS 3502 with a minimum grade of C-

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

SPNS 4944. Cultural Engagement: Dialogue of Civilizations. (4 Hours)

Offers an on-site opportunity for students to engage with the culture(s) of Spanish-speaking regions and/or communities. Emphasizes the complexity, transnationalism, and interdisciplinary nature of culture(s). Employs a range of methodological approaches to describe and analyze how cultural practices, objects, texts, and meanings are created, distributed, and exchanged within particular social groups or geographic areas. Students may explore questions of cultural identity, meaning, representation, policy formations, and ideologies. In addition to regular in-class lectures and activities, students have the opportunity to engage in a dialogue with members of the local communities about their perspectives on relevant cultural topics and everyday experiences. May be repeated once. Conducted in Spanish.

Prerequisite(s): Placement in SPNS 2101 with a score of 2101 or SPNS 2101 with a minimum grade of C- or Placement in SPNS 2102 with a score of 2102 or SPNS 2102 with a minimum grade of C- or Placement in SPNS 3101 with a score of 3101 or SPNS 3101 with a minimum grade of C- or Placement in SPNS 3102 with a score of 3102 or SPNS 3102 with a minimum grade of C-

SPNS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 4992. Directed Study. (1-4 Hours)

Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

SPNS 5976. Directed Study. (1 Hour)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

Speech-Language Pathology and Audiology (SLPA)**Courses****SLPA 1000. College: An Introduction. (1 Hour)**

Introduces the university, college, and the speech-language pathology and audiology major. Seeks to enhance students' understanding of self and the decisions they make personally, academically, and professionally as members of the university's diverse community. Designed to help students gain knowledge and experiences that will ease the transition to Northeastern University and assist in developing strategies for success in college and in life beyond. Group activities, individual assignments, and active participation in a learning community are designed to help students adjust to life on an urban campus; develop a better understanding of the learning process; acquire essential academic and co-curricular skills; and make connections with faculty, students, and across majors in Bouvé College.

SLPA 1101. Bridging Minds: Introduction to Speech, Language, and Hearing Sciences. (4 Hours)

Presents an overview of speech, language, and hearing disorders. Examines assessment and treatment of disorders including a review of normal speech, language, and hearing development. Requires clinical observations of persons with speech, language, and hearing disorders.

Attribute(s): NUpath Difference/Diversity, NUpath Natural/Designed World

SLPA 1102. Language Development. (4 Hours)

Provides an overview of the development of the language system from birth to adolescence. Students compare different theories of language acquisition and understand their implications for intervention approaches; become familiar with broad developmental stages in infancy and childhood in the domains of motor skills, cognition, social skills, and speech and language, and the connections among these domains; understand the social dynamics between parents and children from which early gestures and prespeech vocalizations emerge; utilize some informal measures of language development covering form, content, and use; and understand broad differences in development in multicultural populations including Asian, Hispanic, and African-American children.

SLPA 1103. Anatomy and Physiology of Speech and Hearing Mechanism. (4 Hours)

Offers an in-depth study of the static structure, musculature, and physiology of the speech and hearing mechanism. Emphasizes current research in speech and hearing physiology.

SLPA 1200. Phonetics. (4 Hours)

Introduces students to articulatory, perceptual, and linguistic aspects of speech sounds, and phonetic transcription of normal and disordered speech using the International Phonetic Alphabet. Utilizes lectures, discussions, laboratory exercises, demonstrations, readings, audiotape exercises, problem sets, quizzes, and examinations.

SLPA 1203. Introduction to Audiology. (4 Hours)

Offers the opportunity to gain knowledge of the physics of sound and the anatomy/physiology of the human hearing mechanism, and how these two areas are interrelated. Familiarizes students with some of the diagnostic tests performed by the audiologist in order to assess the integrity of the hearing mechanism. Concludes with a brief overview of amplification and the rehabilitation process for hearing-impaired individuals.

SLPA 1205. Speech and Hearing Science. (4 Hours)

Introduces facts and theories related to the physical bases of sound as relevant to speech acoustics; anatomy of the hearing mechanisms; psychoacoustics; and speech perception. While primarily concerned with normal communication, the course also includes discussion of communication disorders. Lab demonstrations and problem sets augment lectures and discussions.

SLPA 1555. Communication Disorders in Movies. (4 Hours)

Seeks to increase student understanding of communication disorders through film. By watching Oscar-awarded, Oscar-nominated, and other Hollywood movies, students are offered an opportunity to develop a heightened sensitivity for how society views specific communication disorders. Through related lectures, discussion, structured activities, and assignments, studies the etiology and diagnosis of a variety of communication disorders and how individuals with these disorders may be helped.

Attribute(s): NUpath Natural/Designed World

SLPA 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 2000. Introduction to Co-op. (1 Hour)

Designed to prepare students for all aspects of the cooperative education component of their curriculum by comparing the goals and expectations of the co-op employer, co-op faculty, and students themselves. Offers students an opportunity to obtain an understanding of the policies and procedures of the Department of Cooperative Education through professional goal exploration. Examines the spectrum of clinical settings for speech, language, and hearing professionals, as well as current trends in the job market. Focuses on job search strategies through developing resumés, preparing for interviews, and making informed choices. Examines on-the-job scenarios involving problem solving, ethical issues, and confidentiality and discusses appropriate ways to handle difficult workplace situations.

SLPA 2400. Neuroscience of Language. (4 Hours)

Offers an opportunity to examine language and its relation to other domains of science that have historically been studied in isolation, including memory, emotion, sensory processing, decision making, and motivation. Provides an overview of several areas of language, as well as what modern neuroscience teaches about how the brain processes language.

SLPA 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 2991. Research in Communication Sciences and Disorders. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision. May be repeated once.

SLPA 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 4500. Language Disorders across the Life Span. (4 Hours)

Offers students an opportunity to obtain the foundation needed to work with children and adults with frequently referred language disorders that are typical consequences of congenital and acquired central and peripheral nervous-system impairments. Emphasizes the anatomy/etiology/neurology/physiology of common disorders, characteristics of these disorders, and intervention approaches (diagnostic and therapeutic). Addresses prevention, outcome, efficacy, and service-delivery considerations.

Prerequisite(s): SLPA 1102 with a minimum grade of C

SLPA 4651. Speech Disorders across the Life Span. (4 Hours)

Offers students an opportunity to obtain the foundation needed to work with adults and children who demonstrate delays and disorders of speech production across the life span. Discusses articulation and phonological development and disorders, phonological differences, disorders of fluency of speech, and disorders of resonance and voice. Presents formal and informal diagnostic and therapeutic intervention for each disorder/difference and discusses the impact of these communication problems in relation to the individual and family.

Prerequisite(s): SLPA 1103 with a minimum grade of C ; SLPA 1200 with a minimum grade of C

SLPA 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 4991. Research. (4 Hours)

Offers an opportunity to conduct research under faculty supervision.

Attribute(s): NUpath Integration Experience

SLPA 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SLPA 5107. Clinical Procedures. (3-4 Hours)

Reviews principles and procedures of the functional analysis of behavior and focuses on the application of behavioral theory and research to speech, language, and hearing training. Emphasizes clinical investigation in the experimental analysis of the behavior of communication disorders and experiences in the application of experimental procedures in assessment and treatment programs.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

SLPA 5109. Neurology of Communication. (3 Hours)

Provides students with the opportunity to acquire a basic understanding of human neuroanatomy and neurophysiology as related to normal aspects of speech, hearing, and language. Reviews central and peripheral nervous system anatomy and physiology developmentally from embryologic through the life span perspectives. Neurology of common speech-language pathologies are similarly addressed.

SLPA 5152. Early Intervention: Planning and Evaluating Services. (3 Hours)

Comprises a systematic, family-centered, team approach to service delivery. Cases are used as a focal point for learning how to plan and evaluate individualized family services and group service plans. Covers important aspects of teamwork and leadership in early intervention with respect to service and coordination. Addresses practical approaches to assessing needs for group programs, and evaluating the implementation and outcomes of programs. Also considers the impact of legal and financial issues on service coordination and approaches to service delivery.

SLPA 5154. Early Intervention Practicum 1. (2 Hours)

Provides students from school psychology, special education, speech-language pathology and audiology, physical therapy, nursing, and related fields with supervised field work experience in team-oriented interventions for infants and toddlers with disabilities or at risk for developmental delays and their families from linguistically and culturally diverse backgrounds. The practicum class sessions are conceptualized as the linchpin training experience between what the theory addresses in didactic courses and the student's fieldwork. Students are expected to master early intervention and team participation core competencies to work effectively with infants and toddlers and their families, interdisciplinary team members, and administrative personnel.

SLPA 5155. Early Intervention Practicum 2. (2 Hours)

Provides students from school psychology, special education, speech-language pathology and audiology, physical therapy, nursing, and related fields with supervised field work experience in team-oriented interventions for infants and toddlers with disabilities or at risk for developmental delays and their families from linguistically and culturally diverse backgrounds. The practicum class sessions are conceptualized as the linchpin training experience between what the theory addresses in didactic courses and the student's fieldwork. Students are expected to master early intervention and team participation core competencies to work effectively with infants and toddlers and their families, interdisciplinary team members, and administrative personnel.

SLPA 5201. Diagnostic Testing in Speech-Language Pathology. (2 Hours)

Offers students an opportunity to review diagnostic tests and test manuals in the field of speech-language pathology and to practice their administration. Discusses information about test content, reliability, and validity. Principles of standardized testing, norm referencing, and test scoring are reviewed and practiced.

SLPA 5976. Directed Study. (1-4 Hours)

Allows students to pursue topics of individual interest beyond the scope of formal course work under the direction of faculty. May be repeated without limit.

SLPA 6211. Research and Evidence-Based Practice. (3 Hours)

Uses principles of evidence-based practice to prepare students primarily as consumers of clinically relevant research in the field of communication disorders. While consumers utilize research information in some shape or form in their daily practice, producers engage in the conduct of original or replicated research. Consumers and producers of research information should be concerned with internal and external validity of research. As consumers, for example, clinicians may consult research studies to determine suitable treatments for their clients. As producers, clinicians may document a treatment via the case study method or single-subject experimental research. Emphasizes the role of using research to guide practice, even though the role of clinicians as research producer is addressed as well.

SLPA 6219. Aural Rehabilitation. (3 Hours)

Provides a detailed examination of various approaches to speech reading and auditory training as they apply to children and adults. Offers an integrated approach to management of hearing-impaired individuals.

SLPA 6300. Speech Science. (2 Hours)

Focuses on the basics of acoustics and its relationship with speech production and speech perception. Highlights the relationship between physiological aspects of speech production and their influence on the resulting acoustics of speech. Considers both normative and disordered speech production and perception. Discusses acoustic analysis and clinical approaches to remediation.

SLPA 6301. Speech Science. (3 Hours)

Focuses on normative aspects of speech acoustics, speech production, and speech perception, but will also include exploration of disordered speech and remediation of speech disorders. Laboratory exercises and class projects are used to augment class lectures and discussions.

SLPA 6303. Stuttering. (3 Hours)

Provides students with the information base needed to work with individuals of all ages who present with any type of fluency disorder. Focuses on theoretical background and assessment/treatment techniques for dysfluent individuals. Emphasizes outcome and efficacy considerations.

SLPA 6304. Augmentative and Alternative Communication. (3 Hours)

Provides an overview of augmentative and alternative communication (AAC) approaches for individuals with severe communication impairments. Helps students gain the foundation knowledge and skills for further independent study, continuing education, further course work, and practicum experience. For student who seek additional study or experience in AAC, the course should provide an enabling foundation for providing direct services in AAC or to serve as a consultant to meet the needs of individuals with severe communication impairments. For those who will not seek additional study in AAC, the course should provide the basic knowledge for appropriate referral and collaboration.

SLPA 6305. Articulation and Phonology. (3 Hours)

Familiarizes students with theoretical, empirical, and practical views of the etiology, assessment, and treatment of disorders of the speech sound system. Focuses on disorders that are developmental in nature (as opposed to emerging after normal speech sound development has occurred). Includes a review of articulatory phonetics, discussion of relevant linguistic principles, and study of theory and data relevant to the course of normal speech sound system development.

SLPA 6307. Voice Disorders. (3 Hours)

Examines voice disorders, which are prevalent across the life span in both professional and lay voice users. Evaluation and treatment of organic and/ or functional vocal pathologies are key focuses of speech-language pathologists across clinical settings (educational and medical). Provides students with the information base needed to work with these interesting and rewarding populations. Emphasis is on anatomy and physiology of normal and impaired voice production, instrumental and noninstrumental assessment, and treatment techniques for remediation. Emphasizes prevention, outcome, and efficacy considerations.

SLPA 6308. Dysphagia. (3 Hours)

Evaluating and treating swallowing disorders are key focuses of the speech-language pathologies in most clinical work settings (educational and medical), with individuals of all ages. Provides students with the information base needed to work with these challenging and rewarding populations. Focuses on theoretical background and assessment/treatment techniques for dysphagia individuals. Emphasizes outcome and efficacy considerations.

SLPA 6310. Speech-Language Pathology in Medical Settings. (1 Hour)

Provides an overview to the adult and pediatric medical settings in which speech-language pathologists (SLPs) are employed. Offers students an opportunity to learn about the role(s) of the SLP in various settings (e.g., acute care, rehabilitation, outpatient services, private practice, home health, and day habilitation); the SLPs' scope of practice; the variety of patient populations/diagnoses; and the medical team approach to service delivery across the continuum of care and across the life span.

SLPA 6311. Counseling in SLP. (3 Hours)

Provides students with a theoretical framework from which specific counseling strategies may be implemented for individuals and their families with various communication disorders. Stresses conversational interactive strategies.

SLPA 6313. Counseling in Speech-Language Pathology. (2 Hours)

Offers a theoretical framework from which specific counseling strategies may be implemented for individuals and their families with various communication disorders. Stresses conversational interactive strategies. Emphasizes the role of cultural humility and cultural responsiveness in counseling strategies. Offers students an opportunity to role-play counseling issues with individuals across the life span.

SLPA 6320. Autism. (1 Hour)

Reviews the autism spectrum, including theories of causation, developmental aspects, descriptive and diagnostic characteristics, an overview of assessment and intervention, and legal and social issues as they relate to speech-language pathologists. Presents the most current research findings and best practices needed to gain a clear understanding of individuals diagnosed with autism and how to apply current research to treatment.

SLPA 6321. Motor Speech Disorders. (3 Hours)

Focuses on the neurology, SLP evaluation, and SLP treatment of individuals presenting with any type/types of anarthria/dysarthria and apraxia/dyspraxia of speech. Many of the neurologically impaired children and adults that speech-language pathologists work with present with motor speech disorders. Diagnostically, studies how to complete oral motor examinations (including an assessment of those cranial nerves involved in respiration, phonation, resonance, and articulation) and intelligibility testing. Therapeutically, studies a variety of therapy approaches for the range of motor speech disorders based on severity of impairment and prognosis for recovery/improvement including verbal, nonverbal, prosthetic, and pharmacologic.

SLPA 6325. Accent Modification for Speech-Language Pathology. (1 Hour)

Offers a professional-level introduction to content, processes, and practices associated with accent modification (AM) and "speech coaching" for clients who present with communication differences that are not considered pathologic. Seeks to facilitate consideration and discussion of cultural-linguistic, ethical, business, and other related factors. Offers student clinicians opportunities to observe and to practice various assessment and training approaches in accent modification and speech training and to demonstrate their knowledge and skills through the development of a practical training plan.

SLPA 6329. Diversity, Equity, and Inclusion in Speech-Language Pathology. (2 Hours)

Introduces intersectional thinking and cultural responsiveness for speech-language pathologists through topics related to diversity, equity, and inclusion. Offers students an opportunity to gain comfort in engaging with these topics and to develop actionable steps toward more reflective and accountable practices. Facilitates engagement in culturally responsive care through participation in the process of unlearning and understanding the needs of diverse populations.

SLPA 6330. Language Literacy 1. (0.5 Hours)

Designed to teach students in the field of communication disorders about early childhood literacy skill acquisition, use, and challenges. Offers students an opportunity to learn how to deliver language-based early literacy services to young children in a manner consistent with the American Speech-Language-Hearing Association (ASHA) position that speech-language pathologists can and should play a critical and direct role in literacy development/use for people with communication disorders across the life span.

SLPA 6332. Seminar in Communication Disorders. (1-3 Hours)

Allows for the advanced study of current diagnostic and intervention strategies, applications of theoretical and applied research, and exploration of current topics in speech-language pathology. Topics may range from the treatment of undeserved populations to the analysis of complex clinical cases requiring interdisciplinary management. May be repeated twice.

SLPA 6337. Language Literacy Experiential Program. (0.5 Hours)

Offers students in the field of communication disorders an opportunity to obtain supervised off-campus clinical experience delivering language-based early literacy services to young children in a manner consistent with the American Speech-Language-Hearing Association (ASHA) position that speech-language pathologists can and should play a critical and direct role in literacy development/use.

SLPA 6339. Language Literacy in Practice. (1 Hour)

Focuses on early literacy skill acquisition in the field of speech-language pathology. Introduces the historical framework of learning to read, elements of reading, reading assessment and intervention, and the integration of theoretical knowledge and clinical experience in school-based therapy settings. Offers students an opportunity for hands-on delivery of language-based early literacy services to young school-age children who may be at risk for delayed language and/or early reading difficulties.

SLPA 6340. Language Disorders in Children 1. (3 Hours)

Explores communication disorders from infancy through the preschool period. Considers at-risk populations, as well as those with known etiologies. Addresses information on incidence, characteristics, principles and methods of assessment and intervention, multicultural issues, service delivery models, and current issues in the research literature. Examines theoretical issues and their implication for language intervention.

SLPA 6341. Language Disorders in Children 2. (3 Hours)

Offers students an opportunity to obtain a foundation of knowledge about the etiology and characteristics of language disorders in school-age children. Addresses the evolving language demands children encounter as they progress through school, the impact of language disorders on academic performance and social interaction in the classroom, the relationship between oral and written language development, as well as the role of the speech-language pathologist in the assessment and treatment of written language disorders. Also designed to teach students in the field of communication disorders about literacy skill use and evaluation and treatment of literacy impairments beyond early childhood.

SLPA 6342. Speech-Language Disorders In Adults 1. (3 Hours)

Offers students an opportunity to obtain foundational skills needed to work with frequently referred adults with aphasia across clinical settings. Speech, language, and cognitive-communication disorders are typical consequences of acquired central and peripheral nervous system adult impairments. Emphasizes the anatomy, etiology, neurology, and physiology of different types of aphasia, characteristics of these, and intervention approaches (diagnostic and therapeutic). Addresses prevention, outcome, efficacy, and service-delivery considerations.

Prerequisite(s): SLPA 5109 with a minimum grade of B or SLPA 5109 with a minimum grade of B

SLPA 6343. Speech-Language Disorders in Adults 2. (3 Hours)

Offers students an opportunity to obtain foundational skills needed to work with frequently referred adults with acquired neurologic cognitive-communicative impairments across clinical settings. Speech, language, and cognitive-communication disorders are typical consequences of acquired central and peripheral nervous system adult impairments. Emphasizes the anatomy, etiology, neurology, and physiology of different types of cognitive-communicative impairments, characteristics of these, and intervention approaches (diagnostic and therapeutic). Addresses prevention, outcome, efficacy, and service-delivery considerations.

Prerequisite(s): SLPA 5109 with a minimum grade of B or SLPA 5109 with a minimum grade of B

SLPA 6350. Speech-Language Pathology in Medical Settings. (2 Hours)

Provides an overview to the adult and pediatric medical settings in which speech-language pathologists are employed. Offers students an opportunity to learn about the role(s) of the SLP in various settings (e.g., acute care, rehabilitation, outpatient services, private practice, home health, and day habilitation); the SLPs' scope of practice; the variety of patient populations/diagnoses; and the medical team approach to service delivery across the continuum of care and across the life span.

SLPA 6415. Speech-Language Pathology Advanced Clinical Practicum 1. (3 Hours)

Offers supervised clinical experience in speech pathology for beginning graduate students. Includes practicum sites at the Northeastern University on-campus clinical site, satellite clinics, and/or educational settings. Requires student to be available a minimum of twenty hours per week during the academic year. Requires attendance at on-campus seminar meetings held weekly. May be repeated without limit.

SLPA 6416. Speech-Language Pathology Advanced Clinical Practicum 2. (2 Hours)

Offers supervised clinical experience in speech pathology at the Northeastern University Hearing, Language, and Speech Center, medical settings, educational settings, and rehabilitation centers. Uses practical experience to emphasize advanced diagnostic and management techniques, stressing the application of theory to practice. Requires student to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

Prerequisite(s): SLPA 6415 with a minimum grade of B or SLPA 6415 with a minimum grade of B

SLPA 6417. Speech-Language Pathology Advanced Clinical Practicum 3. (2 Hours)

Offers supervised clinical experience in speech-language pathology for advanced graduate students, placing them in settings such as the Northeastern University Speech, Language, and Hearing Center, medical settings, educational settings, and rehabilitation centers. Uses practical experience to emphasize problem-solving techniques relevant to case management and continues to integrate theory and practice. Requires students to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

SLPA 6418. Speech-Language Pathology Advanced Clinical Practicum 4. (2 Hours)

Offers supervised clinical experience in speech-language management pathology for advanced graduate students, placing them in settings such as the Northeastern University Speech, Language, and Hearing Center, medical settings, educational settings, and rehabilitation centers. Uses practical experience to emphasize problem-solving techniques relevant to case management and continues to integrate theory and practice. Requires students to be available a minimum of twenty hours per week during the academic year. May be repeated once.

Prerequisite(s): SLPA 6417 with a minimum grade of B

SLPA 6420. Practical Statistics for Speech-Language Pathology. (3 Hours)

Introduces basic concepts in data collection, organization, and analysis using statistical methods with an overall focus on profession-specific application and interpretation.

SLPA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 6964. Co-op Work Experience. (0 Hours)

Provides eligible students with an opportunity for work experience. May be repeated once for a total of two completions.

SLPA 6990. Thesis. (3 Hours)

Offers a research activity that is the first of a two-course thesis sequence with the recommendation of the adviser. May be repeated without limit.

Strategic Intelligence and Analysis - CPS (SIA)**Courses****SIA 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SIA 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SIA 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SIA 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SIA 6000. Psychology of Intelligence Analysis. (4 Hours)

Offers an interdisciplinary viewpoint and approach to both security and intelligence analysis through the use of case studies as well as current research in psychology. Focuses on four sections: our mental machinery, involving cognition perception and memory; tools for thinking, which encompasses strategies for analytical judgment, the need for more information, keeping an open mind, structuring analytical problems, and analysis of competing hypotheses; cognitive biases, including biases in evaluation of evidence, perception of cause and effect, estimating probabilities, and evaluation of intelligence reporting; and improving intelligence analysis for homeland security and military applications.

SIA 6010. Intelligence Operations Management. (3 Hours)

Examines intensively case studies of intelligence operations engaged in by the United States and other countries. Uses several recent case studies, such as Operation Iraqi Freedom (OIF). Examines analysis and conceptual design of the operation, the strategic basis of the policy, as well as the operational- and tactical-level experiences. Offers students an opportunity to learn how intelligence fits in the strategic, operational, and tactical levels of OIF and the challenges in bringing the nation's intelligence assets together in a coherent and effective manner.

SIA 6020. Globalization and Intelligence Issues. (3 Hours)

Highlights the key themes that are currently developing within international intelligence liaison relationships. Explores the trend towards homogenization of intelligence and other law enforcement and security initiatives. Offers students an opportunity to discuss international standardization among a widening group of partners and how these processes may establish viable frameworks and operational parameters for the intelligence liaison arrangements, together with addressing counterintelligence and other security considerations. In short, a best-practice approach is defined and explored as becoming normalized operationally, facilitating the optimization of intelligence liaison arrangements.

SIA 6030. Intelligence Analysis and Policy Relationship. (3 Hours)

Describes how relationships are forged and fostered between policymakers and intelligence analysts. Policymakers need support from intelligence to help deal with uncertainty. Thus, policy officials come to respect and rely on analysts and managers who appreciate this aspect of the decision process. Analysts are deemed most useful when they clarify what is known by laying out the evidence and pointing to cause-and-effect patterns; carefully structure assumptions and argumentation about what is unknown and unknowable; and bring expertise to planning and action on important threats and opportunities. The heavily engaged policymaker has little use for intelligence products that emphasize prediction over explanation and opinion over evidence by assessments that trivialize the challenge of uncertainty by burying honest debate in compromise language and by ignoring high-impact contingencies.

SIA 6040. The Intelligence Community and Interagency Collaboration. (3 Hours)

Offers an overview of the disparate intelligence agencies in the intelligence community and describes their missions, responsibilities, and how agencies do or do not collaborate in today's environment. Given the dynamic nature of threats and sources in the 21st century, this course reflects the rapid changes taking place. Requires students to analyze the relative missions and develop policy recommendations for future collaborative efforts in keeping with relevant U.S. and international laws.

SIA 6050. All-Source Intelligence. (4 Hours)

Offers students an opportunity to examine several means of collecting and analyzing multidiscipline information but remain focused on the need and ability to filter all of this data into objective and cohesive all-source products with an unbiased viewpoint. To provide the current and thorough intelligence analysis required today by senior policymakers, military leadership, and corporate America, all-source analysts utilize many types of intelligence: human, imaginary, signals, electronic, telemetry, communications, measurement and signals, and open-source. Professional analysts also use a variety of linking, modeling, and data-manipulation or artificial intelligence software packages.

SIA 6060. Human Intelligence Operations. (4 Hours)

Introduces all aspects of human intelligence (HUMINT), from its basic role as part of the intelligence community to operational considerations as a tool of U.S. national security policy. Studies what HUMINT is, how it is conducted, its challenges, specific analytical and reporting considerations that make it a unique discipline, and some of its great successes. Explores contemporary challenges to conducting HUMINT operations, given technology and the ways different U.S. government intelligence agencies organize and operate their HUMINT capabilities. Offers students an opportunity to develop advanced analytical and writing skills and to obtain a basis for dissertation research and writing. Requires students to research information from other disciplines and integrate it into their current research and applied decision making on HUMINT operations supporting counterterrorism.

SIA 6070. Analysis for Counterterrorism. (4 Hours)

Explores how to create a unified, integrated, and multidisciplinary counterterrorism analysis program that makes the best use of all available resources. The task of counterterrorism is one that is particularly analysis intensive. It requires its practitioners to employ a melded set of analytical tools and interoperable capabilities. This objective can be complicated by the fact that many counterterrorism operations might involve several entities, including both the intelligence community and unclassified counterterrorism efforts.

SIA 6090. Intelligence Collection. (4 Hours)

Explores the many ways in which intelligence information is collected. Topics include the value of open-source information as well as nonclassified means of collection, which enhance the knowledge base and resources available for analysts. Examines nontraditional approaches of accessing and utilizing public records and documents to satisfy client needs.

SIA 6100. Leadership for Intelligence Professionals. (4 Hours)

Studies the core leadership and management qualities and approaches necessary to engage intelligence users; to develop, manage, and apply the right mix of people, process, and technology; and to measure the value and impact to the intelligence effort. For intelligence to be valuable to policymakers and business executives, it must incorporate a multidisciplinary approach that delivers unique insights. This requires leadership skills to manage the development and implementation of the intelligence process.

SIA 6140. Civil Liberties and Security. (3 Hours)

Examines and discusses important constitutional issues that affect U.S. citizens. Emphasizes the rights and civil liberties that the U.S. Constitution protects. Explores the history and makeup of the U.S. Supreme Court and the important role the court plays in ensuring democracy continues to function. Analyzes the distribution of powers among the three coordinate branches of government—legislative, executive, and judicial—and engages students in understanding the laws and policies that govern critical constitutional issues.

SIA 6150. Corporate Security and Investigations. (3 Hours)

Explores the essentials of private and public investigations in a corporate environment. Focuses on the comprehensive study of the investigative process, tools of investigations, and types of investigations. Includes an examination of fraud detection, risk assessment, employee theft, insider threat, embezzlement, accounting improprieties, compliance investigations, internal controls, and safeguards to prevent these threats.

SIA 6160. Information Systems Policy. (3 Hours)

Explores current threats to information security from internal and external actors, how organizations have reacted to such threats, and best practices in organizational design to minimize threats. Examines a systematic and practical approach for establishing, managing, and operating a comprehensive information assurance program and ensuring continuity of operations.

SIA 6170. Counterintelligence. (3 Hours)

Presents a comprehensive overview of counterintelligence (CI) and how intelligence agencies, organizations, and military units in the United States use both offensive and defensive CI to guard and protect U.S. national security interests from foreign intelligence entities. Explores multidisciplinary CI support to intelligence operations through historical analysis and case studies. Reviews and analyzes how cultural, social, and technological changes affect CI.

SIA 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SIA 6980. Capstone. (3 Hours)

Offers students an opportunity to increase their impact and effectiveness as a leader working on a real problem set for a real consumer of information in the security and intelligence studies field. Explores and analyzes global security and intelligence threats, such as threats to national security, homeland security, and cybersecurity. Culminates in a team-based experiential project.

SIA 6983. Topics in Strategic Intelligence and Analysis. (1-4 Hours)

Introduces selected and substantive issues in homeland security. Topics vary from one offering of the course to the next. May be repeated up to seven times for up to 8 total credits.

Prerequisite(s): SIA 6000 with a minimum grade of C ; SIA 6010 with a minimum grade of C ; SIA 6020 with a minimum grade of C ; SIA 6030 with a minimum grade of C

SIA 7990. Thesis. (1-4 Hours)

Offers thesis supervision by members of the department.

Prerequisite(s): SIA 6000 (may be taken concurrently) with a minimum grade of C- ; SIA 6010 (may be taken concurrently) with a minimum grade of C- ; SIA 6020 (may be taken concurrently) with a minimum grade of C- ; SIA 6030 (may be taken concurrently) with a minimum grade of C- ; GST 6109 (may be taken concurrently) with a minimum grade of C-

Strategy (STRT)**Courses****STRT 4301. Strategic Analysis and Decision Making. (4 Hours)**

Examines key components of strategic decision making in-depth. Strategic decision making involves solving complex business problems to achieve company objectives within a competitive context. Topics covered include understanding the competitive environment, managing uncertainty, identifying and evaluating resource allocation alternatives, and creating action plans to implement strategic decisions. Emphasizes critical thinking and making decisions with incomplete information in a competitive environment.

STRT 4501. Strategy in Action. (4 Hours)

Introduces and describes the tools necessary to analyze, formulate, and implement business strategy in today's uncertain and volatile world. Provides a dynamic, global, cross-functional perspective across traditional, platform, digital, and other cutting-edge businesses. Offers students an opportunity to sharpen their ability to think strategically at multiple levels, including overall strategies, major firm activities, and specific actions. Examines the drivers of sustained superior performance in the face of rapidly changing markets, technologies, societies, and geopolitics. Offers a capstone experience that translates into real-world strategic situations.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

STRT 4509. Strategic Management. (4 Hours)

Presents a general management perspective on business strategy, the "big picture." Illustrates how a well-thought-out strategy can lead to sustained, superior performance by firms in a dynamic business environment. Offers students an opportunity to obtain a broad understanding of the importance and complexity of strategic decisions from a practical and problem-oriented approach. Applies concepts, analytic frameworks, and intuition to the strategic issues that real-world companies face.

STRT 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times for a maximum of 8 semester hours.

STRT 6200. Strategic Decision Making in a Changing Environment. (3 Hours)

Focuses on strategy development and implementation for a line of business and for the corporation as a whole by adopting a top management perspective. Beginning with developing a mission statement and goals for the firm, focuses on environmental scanning, incorporating economic, technological, sociopolitical, and legal trends in conducting industry analysis, thus assessing opportunities and threats and the firm's capabilities before formulating strategy that represents a fit between the environment and the firm. Discusses how to develop competitive advantage and assess competitive positioning, and studies how organizational structure and systems contribute to implementing strategy. Stresses the role of leadership and motivation before moving on to feedback mechanisms to assess success in strategy implementation, leading to revision of strategic plans as needed.

STRT 6210. Workforce Metrics and Analytics. (3 Hours)

Introduces how to measure and manage a workforce strategically, including (1) identifying the strategic work that is truly necessary to execute firm strategy; (2) investing in differentiated management systems that support that work; and (3) designing and implementing targeted measurement systems, such as human resources function and workforce scorecards, designed to help to hold line managers accountable for strategic talent. Emphasizes helping students move from a focus on levels associated with a particular workforce attribute (e.g., what is our cost per hire?) to understanding the impact of the workforce on business-level outcomes (e.g., how might an increase in the quality of our project managers affect new product cycle time?).

STRT 6220. Strategic Management for Healthcare Organizations. (3 Hours)

Offers students an opportunity to understand general business strategy concepts as they relate to the healthcare industry. Explores how to analyze market opportunities and challenges as they apply to various healthcare organizations, such as hospitals, physician organizations, and nursing homes. Presents and discusses analytical frameworks for making strategic decisions, drawing on different disciplines, including economics, management, and psychology. Strategic issues include mergers and acquisitions, vertical integration, joint ventures and alliances, performance-control systems, and organizational design.

STRT 6224. Managing the Sustainable Global Enterprise. (3 Hours)

Examines the role of multinational companies and their business leaders in addressing the sustainability challenges of our time as well as the nature of these challenges. Analyzes the changing role of corporations in society and their potential for multistakeholder collaborations to bring about positive societal change. Explores best management practices for addressing sustainability issues in a global context and how different national rules, norms, and beliefs shape multinational companies' ability and willingness to take on the role of positive change agents in society.

STRT 6318. Strategic Planning for the Future. (2 Hours)

Provides the fundamental concepts for understanding and managing strategy in a competitive context. Focuses on analysis, critical thinking, and making strategic decisions. Discusses the analytical tools to understand the industry and firm context. Explores the design and execution of strategies to compete successfully. Investigates the strategic changes involved as firms grow and expand into new businesses and geographic markets.

STRT 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

STRT 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated once.

Study Abroad (ABRD)**Courses****ABRD 5100. International Study—Sweden. (20 Hours)**

Offers an opportunity to study in Sweden. May be repeated without limit.

ABRD 5101. International Study—Australia. (20 Hours)

Offers an opportunity to study in Australia. May be repeated without limit.

ABRD 5102. International Study—Belgium. (20 Hours)

Offers an opportunity to study in Belgium. May be repeated without limit.

ABRD 5103. International Study—Egypt. (20 Hours)

Offers an opportunity to study in Egypt. May be repeated without limit.

ABRD 5104. International Study—Israel. (20 Hours)

Offers an opportunity to study in Israel. May be repeated without limit.

ABRD 5105. International Study—England. (20 Hours)

Offers an opportunity to study in England. May be repeated without limit.

ABRD 5106. International Study—Ireland. (20 Hours)

Offers an opportunity to study in Ireland. May be repeated without limit.

ABRD 5107. International Study—Northern Ireland. (20 Hours)

Offers an opportunity to study in Northern Ireland. May be repeated without limit.

ABRD 5108. International Study—Ghana. (20 Hours)

Offers an opportunity to study in Ghana. May be repeated without limit.

ABRD 5109. International Study—Spain. (20 Hours)

Offers an opportunity to study in Spain. May be repeated without limit.

ABRD 5110. International Study—Canada. (20 Hours)

Offers an opportunity to study in Canada. May be repeated without limit.

ABRD 5111. International Study—Mexico. (20 Hours)

Offers an opportunity to study in Mexico. May be repeated without limit.

ABRD 5112. International Study—Czech Republic. (20 Hours)

Offers an opportunity to study in the Czech Republic. May be repeated without limit.

ABRD 5113. International Study—Italy. (20 Hours)

Offers an opportunity to study in Italy. May be repeated without limit.

ABRD 5114. International Study—South Africa. (20 Hours)

Offers an opportunity to study in South Africa. May be repeated without limit.

ABRD 5115. International Study—SEA Education. (20 Hours)

Offers an opportunity to study under the auspices of the Sea Education Association. May be repeated without limit.

ABRD 5116. International Study—Singapore. (20 Hours)

Offers an opportunity to study in Singapore. May be repeated without limit.

ABRD 5117. International Study—France. (20 Hours)

Offers an opportunity to study in France. May be repeated without limit.

ABRD 5118. International Study—New Zealand. (20 Hours)

Offers an opportunity to study in New Zealand. May be repeated without limit.

ABRD 5119. International Study—Vietnam. (20 Hours)

Offers an opportunity to study in Vietnam. May be repeated without limit.

ABRD 5140. International Study—Argentina. (20 Hours)

Offers an opportunity to study in Argentina. May be repeated without limit.

ABRD 5141. International Study—Chile. (20 Hours)

Offers an opportunity to study in Chile. May be repeated without limit.

ABRD 5142. International Study—China. (20 Hours)

Offers an opportunity to study in China. May be repeated without limit.

ABRD 5143. International Study—Costa Rica. (20 Hours)

Offers an opportunity to study in Costa Rica. May be repeated without limit.

ABRD 5144. International Study—Middle East. (20 Hours)

Offers an opportunity to study in the Middle East. May be repeated without limit.

ABRD 5145. International Study—Japan. (20 Hours)

Offers an opportunity to study in Japan. May be repeated without limit.

ABRD 5146. International Study—Scotland. (20 Hours)

Offers an opportunity to study in Scotland. May be repeated without limit.

ABRD 5147. International Study—Greece. (20 Hours)

Offers an opportunity to study in Greece. May be repeated without limit.

ABRD 5148. International Study—Dominican Republic. (20 Hours)

Offers an opportunity to study in the Dominican Republic. May be repeated without limit.

ABRD 5150. International Study—Denmark. (20 Hours)

Offers an opportunity to study in Denmark. May be repeated without limit.

ABRD 5151. International Study—Turkey. (20 Hours)

Offers an opportunity to study in Turkey. May be repeated without limit.

ABRD 5152. International Study—Thailand. (20 Hours)

Offers an opportunity to study in Thailand. May be repeated without limit.

ABRD 5153. International Study—Netherlands. (20 Hours)

Offers an opportunity to study in the Netherlands. May be repeated without limit.

ABRD 5154. International Study—Central Europe. (20 Hours)

Offers an opportunity to study in Central Europe. May be repeated without limit.

ABRD 5155. International Study—Switzerland. (20 Hours)

Offers an opportunity to study in Switzerland. May be repeated without limit.

ABRD 5156. International Study—Peru. (20 Hours)

Offers an opportunity to study in Peru. May be repeated without limit.

ABRD 5157. International Study—Hungary. (20 Hours)

Offers an opportunity to study in Hungary. May be repeated without limit.

ABRD 5158. International Study—Korea. (20 Hours)

Offers an opportunity to study in Korea. May be repeated without limit.

ABRD 5159. International Study—Russia. (20 Hours)

Offers an opportunity to study in Russia. May be repeated without limit.

ABRD 5160. International Study—Brazil. (20 Hours)

Offers an opportunity to study in Brazil. May be repeated without limit.

ABRD 5161. International Study—Iceland. (20 Hours)

Offers an opportunity to study in Iceland. May be repeated without limit.

ABRD 5162. International Study—Benin. (20 Hours)

Offers an opportunity to study in Benin. May be repeated without limit.

ABRD 5163. International Study—Cuba. (20 Hours)

Offers an opportunity to study in Cuba. May be repeated without limit.

ABRD 5164. International Study—India. (20 Hours)

Offers an opportunity to study in India. May be repeated without limit.

ABRD 5165. International Study—Caribbean. (20 Hours)

Offers an opportunity to study in the Caribbean. May be repeated without limit.

ABRD 5166. International Study—Armenia. (20 Hours)

Offers an opportunity to study in Armenia. May be repeated without limit.

ABRD 5167. International Study—Morocco. (20 Hours)

Offers an opportunity to study in Morocco. May be repeated without limit.

ABRD 5168. International Study—Germany. (20 Hours)

Offers an opportunity to study in Germany. May be repeated without limit.

ABRD 5169. International Study—Serbia. (20 Hours)

Offers an opportunity to study in Serbia. May be repeated without limit.

ABRD 5170. International Study—Austria. (20 Hours)

Offers an opportunity to study in Austria. May be repeated without limit.

ABRD 5171. International Study—Lebanon. (20 Hours)

Offers an opportunity to study in Lebanon. May be repeated without limit.

ABRD 5172. International Study—Senegal. (20 Hours)

Offers an opportunity to study in Senegal. May be repeated without limit.

ABRD 5173. International Study—South Korea. (20 Hours)

Offers an opportunity to study in South Korea. May be repeated without limit.

ABRD 5174. International Study—Kenya. (20 Hours)

Offers an opportunity to study in Kenya. May be repeated without limit.

ABRD 5175. International Study—Syria. (20 Hours)

Offers an opportunity to study in Syria. May be repeated without limit.

ABRD 5176. International Study—Balkans. (20 Hours)

Offers an opportunity to study in the Balkans. May be repeated without limit.

ABRD 5177. International Study—Uganda. (20 Hours)

Offers an opportunity to study in Uganda. May be repeated without limit.

ABRD 5178. International Study—Rwanda. (20 Hours)

Offers an opportunity to study in Rwanda. May be repeated without limit.

ABRD 5179. International Study—Wales. (20 Hours)

Offers an opportunity to study in Wales. May be repeated without limit.

ABRD 5180. International Study—Portugal. (20 Hours)

Offers an opportunity to study in Portugal. May be repeated without limit.

ABRD 5181. International Study—Indonesia. (20 Hours)

Offers an opportunity to study in Indonesia. May be repeated without limit.

ABRD 5182. International Study—Trinidad and Tobago. (20 Hours)

Offers an opportunity to study in Trinidad and Tobago. May be repeated without limit.

ABRD 5183. International Study—Jordan. (20 Hours)

Offers an opportunity to study in Jordan. May be repeated without limit.

ABRD 5184. International Study—Ecuador. (20 Hours)

Offers an opportunity to study in Ecuador. May be repeated without limit.

ABRD 5185. International Study—Tunisia. (20 Hours)

Offers an opportunity to study in Tunisia. May be repeated without limit.

ABRD 5186. International Study—Cameroon. (20 Hours)

Offers students an opportunity to study in Cameroon. May be repeated without limit.

ABRD 5187. International Study—Zambia. (20 Hours)

Offers students an opportunity to study in Zambia. May be repeated without limit.

ABRD 5188. International Study—Taiwan. (20 Hours)

Offers students an opportunity to study in Taiwan. May be repeated without limit.

ABRD 5189. International Study—Poland. (20 Hours)

Offers students an opportunity to study in Poland. May be repeated without limit.

ABRD 5190. International Study—Iran. (20 Hours)

Offers an opportunity to study in Iran. May be repeated without limit.

ABRD 5191. International Study—Bonaire. (20 Hours)

Offers students an opportunity to study in Bonaire. May be repeated without limit.

ABRD 5192. International Study—Grenada. (20 Hours)

Offers students an opportunity to study in Grenada. May be repeated without limit.

ABRD 5193. International Study—Tanzania. (20 Hours)

Offers students an opportunity to study in Tanzania. May be repeated without limit.

ABRD 5195. International Study—Lithuania. (20 Hours)

Offers students an opportunity to study in Lithuania. May be repeated without limit.

ABRD 5196. International Study—Oman. (20 Hours)

Offers students an opportunity to study in Oman. May be repeated without limit.

ABRD 5197. International Study—Bhutan. (20 Hours)

Offers students an opportunity to study in Bhutan. May be repeated without limit.

ABRD 5198. International Study—Jamaica. (20 Hours)

Offers students an opportunity to study in Jamaica. May be repeated without limit.

ABRD 5199. International Study—Finland. (20 Hours)

Offers students an opportunity to study in Finland. May be repeated without limit.

ABRD 5200. International Study—Norway. (20 Hours)

Offers students an opportunity to study in Norway. May be repeated without limit.

ABRD 5201. International Study—Kazakhstan. (20 Hours)

Offers students an opportunity to study in Kazakhstan. May be repeated without limit.

ABRD 5202. International Study—Botswana. (20 Hours)

Offers students an opportunity to study in Botswana. May be repeated without limit.

ABRD 5203. International Study—United States. (20 Hours)

Offers students an opportunity to study in the United States. May be repeated without limit.

ABRD 5204. International Study—Croatia. (20 Hours)

Offers students an opportunity to study in Croatia. May be repeated without limit.

ABRD 5205. International Study—Panama. (20 Hours)

Offers students an opportunity to study in Panama. May be repeated without limit.

ABRD 5206. International Study—Bolivia. (20 Hours)

Offers students an opportunity to study in Bolivia. May be repeated without limit.

ABRD 5207. International Study—Romania. (20 Hours)

Offers students an opportunity to study in Romania. May be repeated without limit.

ABRD 5208. International Study—Belize. (20 Hours)

Offers students an opportunity to study in Belize. May be repeated without limit.

ABRD 5209. International Study—Kuwait. (20 Hours)

Offers students an opportunity to study in Kuwait. May be repeated without limit.

ABRD 5210. International Study—French Polynesia. (20 Hours)

Offers an opportunity to study in French Polynesia. May be repeated without limit.

ABRD 5211. International Study—Georgia. (20 Hours)

Offers an opportunity to study in Georgia. May be repeated without limit.

ABRD 5212. International Study—Uzbekistan. (20 Hours)

Offers an opportunity to study in Uzbekistan. Maybe repeated without limit.

ABRD 5213. International Study: Cambodia. (20 Hours)

Offers an opportunity to study in Cambodia. Maybe repeated without limit.

ABRD 5214. International Study: Nepal. (20 Hours)

Offers an opportunity to study in Nepal. Maybe repeated without limit.

Study Abroad - Business (ABRB)

Courses

ABRB 5100. International Study—Argentina. (20 Hours)

Offers an opportunity to study in Argentina. May be repeated without limit.

ABRB 5101. International Study—Canada. (20 Hours)

Offers an opportunity to study in Canada. May be repeated without limit.

ABRB 5102. International Study—France. (20 Hours)

Offers an opportunity to study in France. May be repeated without limit.

ABRB 5103. International Study—Germany. (20 Hours)

Offers an opportunity to study in Germany. May be repeated without limit.

ABRB 5104. International Study—Ireland. (20 Hours)

Offers an opportunity to study in Ireland. May be repeated without limit.

ABRB 5105. International Study—Netherlands. (20 Hours)

Offers an opportunity to study in the Netherlands. May be repeated without limit.

ABRB 5106. International Study—Singapore. (20 Hours)

Offers an opportunity to study in Singapore. May be repeated without limit.

ABRB 5107. International Study—Spain. (20 Hours)

Offers an opportunity to study in Spain. May be repeated without limit.

ABRB 5108. International Study—Chile. (20 Hours)

Offers an opportunity to study in Chile. May be repeated without limit.

ABRB 5109. International Study—Mexico. (20 Hours)

Offers an opportunity to study in Mexico. May be repeated without limit.

ABRB 5110. International Study—China. (20 Hours)

Offers an opportunity to study in China. May be repeated without limit.

ABRB 5111. International Study—Italy. (20 Hours)

Offers an opportunity to study in Italy. May be repeated without limit.

ABRB 5112. International Study—Hong Kong. (20 Hours)

Offers an opportunity to study in Hong Kong. May be repeated without limit.

ABRB 5113. International Study—Greece. (20 Hours)

Offers an opportunity to study in Greece. May be repeated without limit.

ABRB 5114. International Study—England. (20 Hours)

Offers an opportunity to study in England. May be repeated without limit.

ABRB 5115. International Study—Costa Rica. (20 Hours)

Offers an opportunity to study in Costa Rica. May be repeated without limit.

ABRB 5116. International Study—Japan. (20 Hours)

Offers an opportunity to study in Japan. May be repeated without limit.

ABRB 5117. International Study—Brazil. (20 Hours)

Offers an opportunity to study in Brazil. May be repeated without limit.

Study Abroad - CPS Specialty (ABRC)

Courses

ABRC 5001. International Study: Australia. (0 Hours)

Offers an opportunity to study in Australia.

ABRC 5002. International Study: Belgium. (0 Hours)

Offers an opportunity to study in Belgium.

ABRC 5003. International Study: Egypt. (0 Hours)

Offers an opportunity to study in Egypt.

ABRC 5004. International Study: Israel. (0 Hours)

Offers an opportunity to study in Israel.

ABRC 5005. International Study: England. (0 Hours)

Offers an opportunity to study in England.

ABRC 5006. International Study: Ireland. (0 Hours)

Offers an opportunity to study in Ireland.

ABRC 5007. International Study: Northern Ireland. (0 Hours)

Offers an opportunity to study in Northern Ireland.

ABRC 5008. International Study: Ghana. (0 Hours)

Offers an opportunity to study in Ghana.

ABRC 5009. International Study: Spain. (0 Hours)

Offers an opportunity to study in Spain.

ABRC 5010. International Study: Canada. (0 Hours)

Offers an opportunity to study in Canada.

ABRC 5011. International Study: Mexico. (0 Hours)

Offers an opportunity to study in Mexico.

ABRC 5012. International Study: Czech Republic. (0 Hours)

Offers an opportunity to study in the Czech Republic.

ABRC 5013. International Study: Italy. (0 Hours)

Offers an opportunity to study in Italy.

ABRC 5014. International Study: South Africa. (0 Hours)

Offers an opportunity to study in South Africa.

ABRC 5015. International Study: Sea Education Association. (0 Hours)

Offers an opportunity to study under the auspices of the Sea Education Association.

ABRC 5016. International Study: Singapore. (0 Hours)

Offers an opportunity to study in Singapore.

ABRC 5017. International Study: France. (0 Hours)

Offers an opportunity to study in France.

ABRC 5018. International Study: New Zealand. (0 Hours)

Offers an opportunity to study in New Zealand.

ABRC 5019. International Study: Vietnam. (0 Hours)

Offers an opportunity to study in Vietnam.

ABRC 5040. International Study: Argentina. (0 Hours)

Offers an opportunity to study in Argentina.

ABRC 5041. International Study: Chile. (0 Hours)

Offers an opportunity to study in Chile.

ABRC 5042. International Study: China. (0 Hours)

Offers an opportunity to study in China.

ABRC 5043. International Study: Costa Rica. (0 Hours)

Offers an opportunity to study in Costa Rica.

ABRC 5044. International Study: Middle East. (0 Hours)

Offers an opportunity to study in the Middle East.

ABRC 5045. International Study: Japan. (0 Hours)

Offers an opportunity to study in Japan.

ABRC 5046. International Study: Scotland. (0 Hours)

Offers an opportunity to study in Scotland.

ABRC 5047. International Study: Greece. (0 Hours)

Offers an opportunity to study in Greece.

ABRC 5048. International Study: Dominican Republic. (0 Hours)

Offers an opportunity to study in the Dominican Republic.

ABRC 5050. International Study: Denmark. (0 Hours)

Offers an opportunity to study in Denmark.

ABRC 5051. International Study: Turkey. (0 Hours)

Offers an opportunity to study in Turkey.

ABRC 5052. International Study: Sweden. (0 Hours)

Offers an opportunity to study in Sweden.

ABRC 5053. International Study: Germany. (0 Hours)

Offers an opportunity to study in Germany.

ABRC 5054. International Study: Portugal. (0 Hours)

Offers an opportunity to study in Portugal.

Study Abroad - Law (ABRL)

Courses

ABRL 5100. International Study—Argentina. (0 Hours)

Offers an opportunity to study in Argentina. May be repeated without limit.

ABRL 5101. International Study—Chile. (0 Hours)

Offers an opportunity to study in Chile. May be repeated without limit.

ABRL 5102. International Study—Italy. (0 Hours)

Offers an opportunity to study in Italy. May be repeated without limit.

ABRL 5103. International Study—Mexico. (0 Hours)

Offers an opportunity to study in Mexico. May be repeated without limit.

ABRL 5104. International Study—Costa Rica. (0 Hours)

Offers an opportunity to study in Costa Rica. May be repeated without limit.

ABRL 5105. International Study—China. (0 Hours)

Offers an opportunity to study in China. May be repeated without limit.

ABRL 5106. International Study—Turkey. (0 Hours)

Offers an opportunity to study in Turkey. May be repeated without limit.

ABRL 5107. International Study—England. (0 Hours)

Offers an opportunity to study in England. May be repeated without limit.

ABRL 5108. International Study—France. (0 Hours)

Offers an opportunity to study in France. May be repeated without limit.

ABRL 5109. International Study—School of Law. (0 Hours)

Offers an opportunity to study off-campus with the School of Law. May be repeated without limit.

ABRL 5110. International Study—Colombia. (0 Hours)

Offers an opportunity to study in Colombia. May be repeated without limit.

ABRL 5111. International Study—Brazil. (0 Hours)

Offers students an opportunity to study in Brazil. May be repeated without limit.

ABRL 5112. International Study—South Africa. (0 Hours)

Offers students an opportunity to study in South Africa. May be repeated without limit.

ABRL 5113. International Study—Spain. (0 Hours)

Offers students an opportunity to study in Spain. May be repeated without limit.

Study Abroad - Science (ABRS)

Courses

ABRS 5120. International Study—Three Seas Program. (20 Hours)

Offers an opportunity to study in the Three Seas Program. May be repeated without limit.

Study Abroad - Social Sciences and Humanities (ABRH)

ABRH 5001. International Study—University of Amsterdam. (20 Hours)

Offers students an opportunity to study at the University of Amsterdam. May be repeated without limit.

ABRH 6000. Study Abroad. (1-12 Hours)

Offers students an opportunity to study abroad at a partner university. May be repeated up to 11 times for up to 12 total credits.

Study USA (ABRU)

Courses

ABRU 5100. Study in the United States of America. (20 Hours)

Offers an opportunity to study at an off-campus location in the United States of America. May be repeated without limit.

Supply Chain Management (SCHM)

Courses

SCHM 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 2301. Supply Chain and Operations Management. (4 Hours)

Focuses on the integrative management of business activities intrinsic to the smooth flow of goods or services, information, and financial transactions across firms from raw materials to the end customer. This collaborative approach creates competitive advantages for all members of a supply chain. Emphasizes the responsibilities of managers regarding decisions concerning the design, operation, and control of supply chains and operations. Considers customers, globalization, corporate strategy, resources, sustainability, ethics, and diversity. Topics covered include customer-centric management; supply chain and operations strategies; process structure and control; and supply, inventory, and quality management. Emphasizes the key role of information technology, logistics network design, supply chain relationships, and process evolution.

SCHM 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 3301. Global Supply Chain Strategy. (4 Hours)

Focuses on the managerial activities of those involved in supply chain management operations and planning for companies doing international commerce. Analyzes contemporary issues that affect the design of international supply chain systems, including sourcing, logistics, transactions, risk, sustainability, and ethical considerations. Examines the current status and future prospects of the modes of international transportation as well as international trade and development issues, not only from the corporate perspective but also in terms of government policy.

Prerequisite(s): SCHM 2301 with a minimum grade of D-

SCHM 3302. Supply Chain Management for Engineers. (4 Hours)

Focuses on the qualitative frameworks, processes, and activities involved in the planning, transformation, and delivery of goods and services in a context uniquely geared to engineering students, who likely have already studied many of the key quantitative aspects of modern supply chain management. Offers students an opportunity to obtain foundational knowledge in key areas such as project management, supplier selection, legal aspects of supply chain management, supplier relational management, global sourcing, and logistics.

SCHM 3303. Supply Chain Risk Management. (4 Hours)

Explores the critical realm of mitigating supply chain disruptions within the dynamic landscape of contemporary business. Examines the intricacies of global supply chains, emphasizing real-world scenarios and exploring proactive measures such as diversification, technology integration, and strategic partnerships. Discusses challenges ranging from geopolitical uncertainties to natural disasters. Analyzes risk identification, assessment, and response strategies. Offers students an opportunity to gain practical insights into crisis communication, scenario planning, and the implementation of robust risk mitigation frameworks.

SCHM 3305. Sourcing, Procurement, and Negotiation. (4 Hours)

Addresses the strategic and operational role of sourcing and procurement and its impact on the supply chain as it relates to the entire organization. The selection, contracting, development and monitoring/managing of the right supplier in the right location is more often a source of competitive advantage and a major contributor to a company's bottom line. The course focuses on a variety of aspects of this function—strategy development, organization, procedures, supplier selection, negotiations, buyer-supplier relationship management, quantity, quality, timeliness, and cost/price considerations for the purchase of goods and services.

Prerequisite(s): SCHM 2301 with a minimum grade of D-

SCHM 3308. Supply Chain Analytics and Emerging Technologies. (4 Hours)

Examines state-of-the-art in analytics capabilities and how they drive supply chains, from marketing to sourcing. Examines how organizations use analytics to meet their strategic objectives, provide value to the business, and make decisions. Offers students an opportunity to develop strategic supply chain decision-making skills using the latest analytics capabilities as an enabler. Focuses heavily on industry best practices, including looking at some of the leading companies.

Prerequisite(s): SCHM 3301 with a minimum grade of D- or SCHM 3305 with a minimum grade of D- or SCHM 3310 with a minimum grade of D-

SCHM 3310. Logistics and Transportation Management. (4 Hours)

Examines the logistics and transportation operations, including the structure, challenges, and potential of the major modes of domestic transportation. Focuses on the interaction between logistics providers and shippers in the marketplace. Explores the major dynamics of the logistics marketplace and their impact on supply chain management. Seeks to provide students with a managerial perspective on controlling what is typically the most expensive component of supply chain management, transportation expenditures.

Prerequisite(s): SCHM 2301 with a minimum grade of D-

SCHM 3315. Managing Healthcare Operations and Supply Chain. (4 Hours)

Focuses on concepts and topics related to the design and management of healthcare sector operations and supply chain. Offers students an opportunity to learn about practices and strategies for effective management of operations and supply chain in healthcare organizations, including management of inventory, operations processes, capacity, procurement, logistics, IT systems, and attendant relationships, as well as various optimization tools and techniques.

SCHM 3320. Forecasting and Sales and Operations Planning. (4 Hours)

Offers a practical introduction to demand (sales) planning and forecasting for business students. Focuses on the organizational processes in managing demand as well as generating a forecast, regression analysis, exponential smoothing, time-series analysis, judgmental forecasting methods, and evaluation of forecast quality. Uses real-life data and various software packages to illustrate basic concepts.

Prerequisite(s): SCHM 3301 with a minimum grade of D- or SCHM 3305 with a minimum grade of D- or SCHM 3310 with a minimum grade of D-

Attribute(s): NUpath Analyzing/Using Data

SCHM 3330. Sustainable Supply Chain Management. (4 Hours)

Focuses on how to create sustainable supply chains that profitably yield high-quality, safe products without supply interruption while creating a net benefit for the employees, community, and the environment. Studies how companies measure environmental performance and use the data to motivate associates, suppliers, customers, policymakers, and the public. Also addresses the impacts of global sustainability frameworks and measures.

Prerequisite(s): SCHM 3301 with a minimum grade of D- or SCHM 3305 with a minimum grade of D- or SCHM 3310 with a minimum grade of D-

SCHM 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 4401. Contemporary Topics in Supply Chain Management. (4 Hours)

Identifies and examines important issues that are of strategic importance to executives involved in supply chain management. Emphasizes the decision-making processes and tools employed by those executives in the context of corporate strategic management. While case studies are extensively employed, there is an important independent research component to the course, and research findings are discussed with the class and shared through presentations. Also involves companies and executives from supply chain service providers.

Prerequisite(s): (SCHM 3301 with a minimum grade of D- or SCHM 3305 with a minimum grade of D- or SCHM 3310 with a minimum grade of D-); (ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C)

SCHM 4970. Junior/Senior Honors Project 1. (4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

SCHM 4983. Special Topics in Supply Chain Management. (4 Hours)

Offers special topics in Supply Chain Management. May be repeated once.

SCHM 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of faculty members of the department on a chosen topic. Course content depends on instructor. May be repeated up to four times for a maximum of 8 semester hours.

SCHM 6201. Operations and Supply Chain Management. (3 Hours)

Focuses on the integrative management of processes and activities involved in transformation and delivery of goods and services. Offers students an opportunity to obtain foundational knowledge on operations and supply chain management concepts, techniques, and functions. Topics covered include sourcing and procurement, manufacturing and service operations, process design and control, quality management, capacity planning, demand planning and forecasting, inventory management, transportation and distribution management, interfirm relationship management, and attendant information flows.

SCHM 6211. Logistics and Transportation Management. (3 Hours)

Examines the logistics and transportation operations, including the structure, challenges, and potential of the major modes of domestic transportation. Focuses on the interaction between logistics providers and shippers in the marketplace. Explores the major dynamics of the logistics marketplace and their impact on supply chain management. Offers students a managerial perspective on controlling what is typically the most expensive component of supply chain management, transportation expenditures.

Prerequisite(s): SCHM 6201 (may be taken concurrently) with a minimum grade of C- or SCHM 6208 (may be taken concurrently) with a minimum grade of C- or SCHM 6210 (may be taken concurrently) with a minimum grade of C- or SCHM 6200 with a minimum grade of C- or IE 7200 with a minimum grade of C- or SCHM 6318 with a minimum grade of C-

SCHM 6213. Global Supply Chain Strategy. (3 Hours)

Focuses on the managerial activities of those involved in supply chain management operations and planning for companies involved in international commerce. Analyzes contemporary issues that affect the design of international supply chain systems and strategies, including sourcing, logistics, transactions, risk, and ethical considerations. Examines the current status and future prospects of the modes of international logistics operations as well as international trade and development issues, not only from the corporate perspective but also in terms of government policy.

Prerequisite(s): SCHM 6201 (may be taken concurrently) with a minimum grade of C- or SCHM 6208 (may be taken concurrently) with a minimum grade of C- or SCHM 6210 (may be taken concurrently) with a minimum grade of C- or SCHM 6200 with a minimum grade of C- or IE 7200 with a minimum grade of C- or SCHM 6318 with a minimum grade of C-

SCHM 6214. Sourcing and Procurement. (3 Hours)

Addresses the strategic and operational role of sourcing and procurement and its impact on the supply chain as it relates to the entire organization. The selection, contracting, development, and monitoring/managing of the right supplier in the right location is more often a source of competitive advantage and a major contributor to a company's bottom line. Focuses on a variety of aspects of this function—strategy development, organization, procedures, supplier selection, negotiations, buyer-supplier relationship management, quantity, quality, timeliness, and cost/price considerations for the purchase of goods and services. Emphasizes the perspective of the sourcing and procurement manager. The key questions addressed in this course are: What does the manager need to know to be effective? How do they apply key concepts?

Prerequisite(s): SCHM 6201 (may be taken concurrently) with a minimum grade of C- or SCHM 6208 (may be taken concurrently) with a minimum grade of C- or SCHM 6210 (may be taken concurrently) with a minimum grade of C- or SCHM 6200 with a minimum grade of C- or IE 7200 with a minimum grade of C- or SCHM 6318 with a minimum grade of C-

SCHM 6215. Supply Chain Analytics. (3 Hours)

Designed to develop strategic decision-making skills using the latest analytics capabilities and enabler. Examines the state of the art in analytics capabilities and how these drive supply chains, from marketing to sourcing. Also examines how organizations use analytics to meet their strategic objectives, provide value to the business, and make decisions. Focuses on industry best practices, including studying some of the leading companies.

Prerequisite(s): IE 7200 with a minimum grade of C- or SCHM 6200 with a minimum grade of C- or SCHM 6201 (may be taken concurrently) with a minimum grade of C- or SCHM 6208 (may be taken concurrently) with a minimum grade of C- or SCHM 6210 (may be taken concurrently) with a minimum grade of C- or SCHM 6318 with a minimum grade of C-

SCHM 6221. Sustainability and Supply Chain Management. (3 Hours)

Focuses on how to create sustainable supply chains that profitably yield high-quality, safe products without supply interruption while creating a net benefit for the employees, community, and the environment. Studies how companies measure environmental performance and use the data to motivate associates, suppliers, customers, policy makers, and the public. Also addresses the impacts of global sustainability frameworks and measures.

Prerequisite(s): SCHM 6201 (may be taken concurrently) with a minimum grade of C- or SCHM 6208 (may be taken concurrently) with a minimum grade of C- or SCHM 6210 (may be taken concurrently) with a minimum grade of C- or SCHM 6200 with a minimum grade of C- or IE 7200 with a minimum grade of C- or SCHM 6318 with a minimum grade of C-

SCHM 6223. Managing Healthcare Supply Chain Operations. (3 Hours)

Examines concepts and topics related to the design and management of supply chain operations in the healthcare sector. Focuses on activities and functions such as inventory control, order fulfillment, logistics, procurement, managing processes, relationship management, and information technology systems. Introduces various tools and techniques that enhance effective supply chain operations in healthcare organizations.

SCHM 6224. Demand Planning and Forecasting. (3 Hours)

Offers a practical introduction to demand (sales) forecasting for business students. Focuses on the organizational processes in generating a forecast, regression analysis, exponential smoothing, time-series analysis, judgmental forecasting methods, and evaluation of forecast quality. Uses real-life data and various software packages to illustrate basic concepts.

Prerequisite(s): SCHM 6201 (may be taken concurrently) with a minimum grade of C- or SCHM 6208 (may be taken concurrently) with a minimum grade of C- or SCHM 6210 (may be taken concurrently) with a minimum grade of C- or SCHM 6200 with a minimum grade of C- or IE 7200 with a minimum grade of C- or SCHM 6318 with a minimum grade of C-

SCHM 6318. Managing Operations and the Supply Chain. (2 Hours)

Focuses on the integrative management of processes and activities involved in transformation and delivery of goods and services. Emphasizes foundational knowledge on supply chain and operations management concepts, techniques, and functions. Topics covered include sourcing and procurement, manufacturing and service operations, logistics management, process design and control, inventory management, interfirm relationship management, and attendant information flows.

SCHM 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Sustainable Building Systems (SBSY)**Courses****SBSY 5100. Sustainable Design and Technologies in Construction. (4 Hours)**

Covers theory of sustainability and green building procedures; sustainable design and construction practices; use of appropriate materials and systems with low environmental impact for creating energy-efficient buildings; green construction practices, including reducing pollution, emissions, and construction waste; and U.S. Green Building Council's LEED rating system. May be helpful to students preparing for the LEED Green Associate examination.

SBSY 5200. Sustainable Engineering Systems for Buildings. (4 Hours)

Focuses on the design and construction of sustainable mechanical/electrical/plumbing (MEP) systems in buildings. Covers MEP documentation, plumbing water supply, HVAC systems, electrical power supply and distribution, lighting systems, low-voltage electrical systems, and estimating and planning for these specialty areas. Addresses sustainable design and construction practices for MEP, including minimization of energy consumption and carbon footprint. Requires one semester of building physics, environmental systems, or equivalent.

SBSY 5250. Building Performance Simulation. (4 Hours)

Studies principles of building performance simulations and the application of these tools to improve the design and operation of buildings. Covers the basic principles of simulation and uses a spectrum of available tools for early stage modeling, daylight estimation, analysis of comfort, and whole building validation. Introduces interpretation and validation of results and code-mandated protocols.

Prerequisite(s): SBSY 5200 with a minimum grade of C-

SBSY 5300. Information Systems for Integrated Project Delivery. (4 Hours)

Focuses on new software systems for increasing efficiency of project delivery and facilitating design and construction integration through the use of BIM (Building Information Modeling) and related technologies. Exposes students to various software systems, including hands-on cases of BIM use, 4D (construction drawings linked to schedule) modeling, and 5D models (4D + cost). Covers the impact of new technology on project delivery, including owner's perspective, advantages, and disadvantages. Also covers use and background of common industry systems to apply BIM concepts to construction projects.

SBSY 5400. Sustainable Building Systems Seminar. (0 Hours)

Features prominent speakers from the sustainable building design and construction industry to showcase new building technologies, tools, and projects and to discuss national and international trends in the industry. Offers students an opportunity to meet innovators and key players advancing the field of sustainable building systems. May be repeated without limit.

SBSY 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SBSY 7945. Master's Project. (4 Hours)

Offers students an opportunity for individual participation in an advanced research project in an area of sustainable building systems engineering. Topic is determined by the student and their advisor. Students complete individual laboratory, literature, and/or computational investigation; analysis of results; and preparation of a definitive report.

SBSY 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

SBSY 7990. Thesis. (4 Hours)

Offers analytical and/or experimental research conducted by arrangement with and under the supervision of the department. May be repeated up to a maximum of 8 SH.

SBSY 7996. Thesis Continuation - Half-Time. (0 Hours)

Offers continued thesis work conducted under the supervision of a departmental faculty member.

Sustainable Urban Environments (SUEN)**Courses****SUEN 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SUEN 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SUEN 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SUEN 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SUEN 6110. Graduate Studio 1: Sustainable Urban Sites. (6 Hours)

Offers a studio-based graduate-level introduction to design and management of sustainable urban sites. Core topics include fundamental site analysis, formal organization, spatial definition, and site operations. Emphasizes the contextual, programmatic, performative, aesthetic, and experiential aspects of waterfront and brownfield revitalization, with a focus on urban and landscape ecology best management practices (BMPs). Key tools and media are introduced and practiced in increasingly complex applications, including basic drawing, modeling, and design software.

SUEN 6120. Graduate Studio 2: Sustainable Urban Systems. (6 Hours)

Offers a graduate-level studio following SUEN 6110 and introducing fundamental landscape planning, design, and strategic management of environmental infrastructures at the urban and regional scale. Core topics include the spatial and operational role in the built landscape of living systems—such as constructed wetlands, urban forests, urban wilds, and managed habitats—and their dynamic relationship to recreation, transit, food, housing, and industrial networks. Emphasizes the integration of constructed ecologies into the cultural landscape around issues of environmental justice. Continues the introduction of key tools and media from SUEN 6110, including advanced digital drawing, modeling, and design communication.

Prerequisite(s): SUEN 6110 with a minimum grade of C-

SUEN 6210. Implementation and Visualization for Urban Environments 1. (4 Hours)

Offers an intensive introduction to site analysis and manipulation of earthworks, water, and vegetation, with a focus on disturbance regimes within waterfront and brownfield zones. Core topics emphasize the ecological services promoted by the urban environment, including urban soil structure; contouring the urban surface; regional plant communities; and storm water, surge, and tidal flux management. Supports development of implementation skills by training in vector, raster, and 3D modeling software. Constitutes the first half of a two-part sequence and provides the foundation for SUEN 6220.

SUEN 6220. Implementation and Visualization for Urban Environments 2. (4 Hours)

Constitutes the second half of a two-part sequence and builds upon material in SUEN 6210. Core topics include an introduction to regional landscape ecology in urbanized watersheds. Focuses on landscape-scale systems and soft infrastructure. Introduces GIS and geo-design software as a lens to learn about and visualize change in regional environments. Offers students an opportunity to advance landscape analysis and visualization skills through further training in vector, raster, and 3D modeling software.

Prerequisite(s): SUEN 6210 with a minimum grade of C-

SUEN 6310. Cities, Nature, and Design in Contemporary History and Theory. (4 Hours)

Offers a lecture course presenting a historical overview of evolving cultural, environmental, and technological influences on societal attitudes toward the relationship of cities, nature, and design. Core topics include the emergence of critical theories, aesthetic philosophies, and design typologies in the modern era of industrialization and the subsequent impact of information, participation, and globalization trends on twenty-first-century-designed urban environments.

SUEN 6340. Topics in Urban Environmental Design. (4 Hours)

Offers a lecture- and discussion-based course focusing on research themes relevant to the MDes-SUEN graduate program curriculum. Topics are developed based upon instructor's research relative to particular urban, ecological, sociological, landscape architectural, or technical subjects. Exposes students to cutting-edge methods of research and practice in designed urban environments. May be repeated up to two times.

SUEN 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SUEN 6964. Co-op Work Experience. (0 Hours)

Offers eligible students an opportunity for work experience. May be repeated up to two times.

SUEN 7130. Master's Research Studio: Design and the Resilient City. (6 Hours)

Offers an advanced graduate studio focusing on contemporary landscape and urbanism research strategies. Themes include ecological, economic, and social resiliency in urban environments. Offers students an opportunity to formulate original approaches to design research. Uses integrated analysis, visualization, and conceptualization skills to progress through group and individual exercises with a focus on design thinking for climate change, water rise, public health and security, and other issues of global relevance. Requires the formulation of a design thesis for resilient urban environments, presented and defended in written, oral, and digital formats, which provides the basis for development of individual design proposals in SUEN 7140. Requires permission of the Urban Landscape program for students without a BARCH, BLA, MARCH, MCP, MLA, MRP, MUD, or equivalent. May be repeated once.

SUEN 7140. Master's Research Studio: Master's Project. (6 Hours)

Constitutes the second half of the Master's Research Studio sequence. Using the design thesis established in SUEN 7130, offers students an opportunity to formulate proposals for intervention into a specific urbanized environment. Individual projects progress with instructor guidance from schematic phasing through design development, with a focus on change management and vitalization of the ecologic, economic, social, and aesthetic facets of contemporary cities and regions. Requires individual presentation and defense of master's projects in written, oral, and digital formats. May be repeated once.

Prerequisite(s): SUEN 7130 with a minimum grade of C-

SUEN 7230. Urban Ecologies and Technologies 1. (4 Hours)

Offers a workshop-based course as the first in a two-part sequence. Lectures, in-class exercises, and site-based investigation use case-study methods to document ecotechnologies operating in the built environment, with a focus on design and implementation metrics, material life cycle management, funding models, and aesthetic and cultural aspects. Potential topics include green roofs, green walls, bioswales, pervious pavements, constructed wetlands, "complete streets" elements, geosensor networks, alternative waste management, water detention and energy generation methods, and living infrastructure for coastal environments.

SUEN 7240. Urban Ecologies and Technologies 2. (4 Hours)

Offers a community outreach course as the second in a two-part sequence and builds upon SUEN 7230. The core theme is development of innovative, market-based ecotechnology prototypes for the urban landscape that contribute to the environmental and cultural life of the city. With instructor guidance, offers students an opportunity to identify a potential ecotechnology project to design through engagement with community members, public, or institutional clients. The course outcome includes site documentation; a schematic design proposal produced by students working in groups; and, if appropriate in terms of time, budget, and scale, implementation.

Prerequisite(s): SUEN 7230 with a minimum grade of C-

SUEN 7320. Pro-Seminar: Issues in Designed Urban Environments. (4 Hours)

Offers an advanced graduate seminar examining the forces shaping designed urban environments in contemporary global culture. A diverse range of material from published design criticism to open source social media engagement provides basis for discussion and written and oral presentations. Course themes determined by the instructor parallel the studio sequence SUEN 7130 and SUEN 7140, although discussion topics are broadly presented to engage graduate students from any background. May be repeated up to three times.

Technical Communications - CPS (TCC)**Courses****TCC 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 2200. Introduction to Technical Writing. (3 Hours)

Presents the elements of technical writing: performing audience analysis, conducting content-focused research, planning and structuring content, and designing documents/media for targeted audiences. Applies the output of content development, the results of information-gathering techniques, and the structure of content to a variety of media such as printed and electronic documents, Web content, and instructional materials. Offers students an opportunity to practice organizing, designing, researching, authenticating, formatting, writing, and editing content used in a variety of technical documents/media and for a variety of technical/nontechnical audiences; to examine a variety of technical documentation/media types; and to describe objects, mechanisms, or processes.

Attribute(s): NUpath Writing Intensive

TCC 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 3450. Writing for the Web. (3 Hours)

Compares and contrasts how readers/viewers scan rather than read Web pages and why Web writing differs from traditional text/prose writing. Describes writing styles and how to structure information for the Web. Defines human factors and how they affect writing for the Web. Describes Web navigation and labeling, examines visualization concepts and theory, and presents the processes of evaluation and usability testing. This writing-intensive course offers students an opportunity both for hands-on laboratory-type experiences through planning, designing, building, and testing Web sites and for collaborative work with classmates.

Prerequisite(s): ENG 1107 with a minimum grade of D-

Attribute(s): NUpath Writing Intensive

TCC 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 6110. Information Architecture. (4 Hours)

Introduces concepts important to the design of information architecture. Central to the course is an understanding of user-centered design principles. User-centered design requires that the information designer incorporate the end user into the design process. Offers students an opportunity to analyze and describe the design of an existing information appliance and then move on to the analysis of the design of an information architecture. Finally, students submit their own plans for an information architecture accompanied by a contextualizing document that describes the audience and circumstances for the use of the design.

TCC 6120. Usability and User Experience. (4 Hours)

Introduces and examines theories and practical application of research, evaluation, and design of information products, systems, user interfaces, and the wider user experience. Incorporates the user-centered design (UCD) process as the primary methodology. Reviews numerous usability methods in-depth, including usability testing; heuristic and expert evaluation; prototyping; user research (including surveys, user interviews, and the role of ethnography in this field); and the emerging methods in the field. Concludes with a look into the possible futures of usability.

TCC 6150. Writing Portfolio. (2 Hours)

Offers students an opportunity to complete a professional writing portfolio. Students are guided through critically evaluating their existing work and how best to present their work in a portfolio. Includes information regarding portfolio design, content, and delivery.

TCC 6410. Online Documentation. (4 Hours)

Introduces students to the types of online documentation written by technical writers, including help messages, online reference guides, and tutorials. Discussions and demonstrations cover the techniques as well as the principles of online documentation design, production, and evaluation, with emphasis on current technologies and software.

TCC 6420. Information Design for the Web. (4 Hours)

Introduces students to the skills necessary for Web-based information design. Topics include basic Web concepts, creating text-based Web pages, working with Web graphics, building usable navigation, building page templates, using cascading style sheets, authoring for the Web, designing a Web site, and multimedia considerations. Offers students an opportunity to code their own Web pages, critique existing Web sites, structure information for online presentation, and create a complete stand-alone Web site.

TCC 6430. Writing for the Computer Industry. (4 Hours)

Introduces students to writing and editing professional-quality computer user documentation. Focuses on techniques for creating usable documentation, including attention to text organization and visual elements. Offers students an opportunity to design and write a computer user manual and collateral technical documents, given a functional specification and software developed from that specification. To simulate a common work environment, class members may sometimes work in project teams.

TCC 6440. Advanced Writing for the Computer Industry. (4 Hours)

Seeks to prepare students to work as writers in the computer industry by building on fundamental skills in producing user documentation. Offers students an opportunity to use single-source techniques to create a variety of computer documentation pieces for technical audiences. Rather than doing a complete, hard-copy computer user manual, students focus on techniques for developing an information base and using that base to create different types of software documentation for different audiences. Topics include analyzing the needs of highly technical audiences, developing strategies for different types of documents (including specifications, reference manuals, and white papers), honing writing techniques (including single-sourcing, writing for impaired audiences, and internationalization/localization), working with engineering and marketing, and building a long-term career in the computer industry.

TCC 6470. Web Accessibility for Technical Communicators. (4 Hours)

Examines the key principles of Web accessibility and how it relates to documentation and content from the user's perspective. Making Web content and information available to the widest possible audience is important from a legal standpoint but also from a business standpoint. Covers accessibility concepts and universal design as well as the methods people use to access Web content. Discusses rules, standards, and guidelines and how they relate to accessible content. Also touches on the relationship between usability and accessibility.

TCC 6480. Instructional Design for Technical Communicators. (4 Hours)

Focuses on the concepts and overview of instructional design for technical writers. Offers students an opportunity to analyze, design, and develop relevant and useful content for an intended audience, with a particular focus on materials with technical content. Course goals include building a foundation and conceptual framework surrounding the instructional design process. Emphasizes instructional strategies and skills to facilitate adult learning. Additional topics include determining the needs of the learner, techniques for stimulating and sustaining learner motivation, developing learning materials, using multimedia, and how to reinforce learning.

TCC 6490. Usability Testing for Technical Communicators. (4 Hours)

Introduces and examines how to plan, create, run, and facilitate usability testing based on best practices and known testing methodologies. These concepts and methodologies can be used to test products, services, websites, and documentation. Includes an overview of how to construct a usability test, recruit participants, facilitate test sessions, analyze results, and report findings. Emphasizes the emerging use of remote and mobile usability testing.

TCC 6630. Introduction to XML. (2 Hours)

Presents an overview of the Extensible Markup Language (XML). In content-heavy technical communication workplaces, using structured XML content allows authors to produce consistent documentation. Offers students an opportunity to understand the basics of XML—including XML rules and syntax, structuring data with XML, and validating data with Document Type Definitions (DTDs) and schemas—and ample practice with XML. Also covers using cascading style sheets (CSS) and Extensible Stylesheet Language Transformations (XSLT).

TCC 6710. Content Strategy. (4 Hours)

Examines the emerging discipline of content strategy and its critical role and impact on design, creation, distribution, and governance of an organization's content. Explores a variety of issues relating to the life cycle of an organization's content, including strategy, audits, the role of legacy content, content migration, and content management systems (CMS). Reviews the role that staff, technical resources, and constraints play within content strategy and discusses the future role of content strategy within a variety of organizations.

TCC 6850. Technical Communications Capstone Project. (4 Hours)

Offers students an opportunity to use classroom learning to produce a final project, such as a technical manual, online help system, or Web-based assistance product. Offers practical advice and guidance on how to function effectively within the technical publications work environment. Seeks to prepare students for as many realistic situations as possible in the work environment, including how to deal with difficult people and situations. Reviews the most current research and trends in the profession. Students work both individually and within groups on various assignments and projects.

Prerequisite(s): TCC 6100 with a minimum grade of C- ; TCC 6102 with a minimum grade of C- ; TCC 6110 with a minimum grade of C- ; TCC 6120 with a minimum grade of C-

TCC 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 7983. Topics. (1-4 Hours)

Covers special topics in technical communications. May be repeated without limit.

TCC 7995. Project. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

Telecommunication Systems (TELE)**Courses****TELE 5330. Data Networking. (4 Hours)**

Provides the basics of data networking protocols and architectures. Topics include protocol architecture of the internet; application protocols such as FTP, SMTP and HTTP, web caching, DNS, CDNs, and P2P applications; use of TCP and UDP socket programming to develop network applications in Python; transport protocols, including TCP, UDP, and TCP congestion control; IP protocol, addressing, IPv4 and v6, NATs, ICMP, and tunnels; routing algorithms and OSPF; data link protocols, encoding, framing, error control, and PPP; switched LANs, ARP, Ethernet, and VLANs; wireless LANs and 802.11 protocols; and network security—encryption, message integrity, authentication protocols, key management, SSL/TLS, IPsec, and 802.11i.

Corequisite(s): TELE 5331

TELE 5331. Lab for TELE 5330. (0 Hours)

Addresses a range of networking components, including routers, switches, and Linux servers, and how they are configured to create a virtual environment. Covers the installation and configuration of networking concepts such as DNS, DHCP, and firewalls and the creation of virtual environments. Requires students, working in teams, to configure one or more components; the teams then must interconnect the components to form a small network. In the process of configuration and integration, students are exposed to troubleshooting at various protocol layers and have an opportunity to become familiarized with different operating systems and networking tools.

Corequisite(s): TELE 5330

TELE 5340. Telecommunications Public Policy and Business Management. (4 Hours)

Introduces students to business management issues, such as basic accounting, finance, marketing, and operations in the telecommunications field, and also topics such as the time value of money and decision making. Also includes issues of human relations, organizational behavior, and business strategy. Provides an understanding of the regulatory environment of the telecommunications industry. Topics include universal service, service quality tariffs, the Modified Final Judgment and Telecom Act of 1996, market restrictions and segmentation, the current competitive environment in the United States and internationally, interconnection including unbundling, collocation, economic issues, and global trends in market reform.

TELE 5350. Telecom and Network Infrastructure. (4 Hours)

Provides in-depth treatment of the wireline and wireless infrastructure of the network supporting all telecommunication, internet, and enterprise applications. Covers the basics of communications—source coding, baseband and broadband modulation and transmission, channel coding, spread-spectrum, multiuser radio communications, radio link analysis, and propagation. Also covers the wireline core network—digital and optical transmission, framing, network synchronization, asynchronous and synchronous multiplexing, cross connects, SONET/SDH, DWDM, OTN, protection switching, and network availability. Addresses wireline (DSL, digital cable, FTTx, PONs) and wireless access (cellular, Wi-Fi), frequency reuse, and handoff. Also addresses support of data transport (switched Ethernet, VLAN, IP, MPLS) and application networks (PSTN, mobile core, internet, IPTV, and virtual networks).

Prerequisite(s): TELE 5330 (may be taken concurrently) with a minimum grade of B- or TELE 5330 (may be taken concurrently) with a minimum grade of B-

TELE 5360. Internet Protocols and Architecture. (4 Hours)

Offers in-depth treatment of protocols used in the internet, wireless access, and enterprise networks. Topics include protocols for network layer QoS (including DiffServ, ECN, RSVP, MPLS); protocols for security, including both access control and network-level security (e.g., X.509, SSL/TLS, IPsec, IKE, EAP); protocols for interdomain routing (BGP); protocols to support multicast, broadcast, and streaming applications; protocols to support host mobility, large server deployments, content distribution, and enterprise networks (VLANs, etc); and protocols to support IPv6 (e.g., address assignment) and its interoperability with IPv4. Also covers network design architectures for cloud computing, data centers, content distribution, layer-2 networks, etc. Discusses general scaling issues for large networks.

Prerequisite(s): TELE 5330 with a minimum grade of B- or TELE 5330 with a minimum grade of B-

TELE 5600. Linux/UNIX Systems Management for Network Engineers. (4 Hours)

Introduces UNIX/Linux in a networking/Internet environment. Covers operating system concepts, tools, and utilities; networking and security issues; and data and text processing using scripts and filters. Addresses basic administrative tasks such as managing users, file systems, security, and software. Covers networking topics such as network configuration, daemon processes, SSH, DNS, DHCP, diagnostic tools, and the use of scripts and automation to manage applications and systems, as well as security topics such as name and authentication services, access control lists, file modification protections, and firewalls.

TELE 5976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

TELE 6100. Mobile Wireless Communications and Networking. (4 Hours)

Studies communications and networking issues in providing broadband wireless access to mobile applications. Discusses networking technologies required by converged IP-based applications. Covers converged network architectures and the interworking of different generations of access technologies with the Evolved Packet Core (EPC). Registration limited and by application only; it is expected that all students have prior knowledge of digital communications, radio propagation, cellular networks, and second-generation wireless standards.

Prerequisite(s): TELE 5330 with a minimum grade of B- or TELE 5330 with a minimum grade of B-

TELE 6300. Communication and Network Security. (4 Hours)

Studies the skills necessary to apply and implement network and communication security in enterprise environments. Covers various concepts related to computer security and network protection. Explores systems security, access control, network infrastructure, assessments and audits, cryptography, and organizational security, all of which help to protect enterprise networks' confidentiality, integrity, and availability. Covers common network attacks, cryptography basics, computer forensics, and operational/organizational security related to physical security, disaster recovery, and business continuity. Discusses recent trends in network security attacks and cyberattacks, analyzing worms and trojans, SSL/TLS session renegotiations/compression, DNS security, spam, and crypto-based countermeasures.

TELE 6350. Unified Communications and Collaboration. (4 Hours)

Explores the technologies that underlie unified communications and collaboration (UCC) applications and communications networks. With the migration of communications infrastructure to the cloud, a democratization of communications is underway that allows customers to build powerful UCC applications on top of networks managed by service providers. UCC applications integrate audio and video conferencing, messaging, virtual whiteboards, and enhanced call control capabilities. Major topics include architecture of communication networks, IP-based voice, video and messaging protocols, public cloud-based communications, browser-based communications, and Communications Platforms-as-a-Service (CPaaS). Uses class projects to offer students an opportunity to get hands-on experience in addressing real-world problems in UCC communications infrastructure, services, and applications.

Prerequisite(s): TELE 5330 with a minimum grade of B- ; TELE 5600 with a minimum grade of B-

TELE 6400. Software-Defined Networking. (4 Hours)

Introduces the foundational theories and technologies of software-defined networking (SDN), a new paradigm in computer networking that allows a logically centralized software program to control the behavior of an entire physical network. Discusses SDN technologies, such as the OpenFlow specification and OpenDaylight controller, and introduces students to SDN applications and network function virtualization (NFV). Offers hands-on exposure to popular open-source software and technologies through student projects. Requires good knowledge of Java or Python.

Prerequisite(s): TELE 5330 with a minimum grade of B- or TELE 5330 with a minimum grade of B-

TELE 6420. Infrastructure Automation Design and Tools. (4 Hours)

Exposes students to best practices for infrastructure automation, which is highly critical in the design and deployment of network and server infrastructure that supports microservices architecture applications on public cloud (IaaS) services. Provides hands-on experience with IaC (infrastructure as code) technologies for provisioning and deprovisioning, configuration, patching, security, monitoring, alerting, logging, etc., for infrastructure components ranging from network devices to servers to entire virtual data centers. Focuses on both individual and team projects involving the use of IaC tools such as Ansible, Puppet, Git, Selenium, Netmiko, Paramiko, CFEngine, Docker, and Kubernetes for infrastructure deployment and automation.

Prerequisite(s): TELE 5330 with a minimum grade of B- or TELE 5330 with a minimum grade of B-

TELE 6500. Machine Learning for IoT Systems. (4 Hours)

Studies the design, development, rollout, and maintenance of machine learning algorithms for IoT systems, which generate and process time series data under memory and timeliness constraints. Focuses on verticals like Industry 4.0, wearables, and smart grids/homes. Explores the nuances of handling IoT time series data in both edge and cloud computing settings including the preparation, exploration, and feature engineering for sensor data. Covers domain-specific problem classes like forecasting, change point detection, and temporal anomaly detection. Addresses customized performance metrics for time series algorithms. Analyzes deep learning architectures for time series problems using TinyML for embedded devices. Course projects focus on time series, going beyond traditional datasets used in conventional ML classes.

TELE 6510. Fundamentals of the Internet of Things. (4 Hours)

Explores the foundations of and technologies involved in the Internet of Things (IoT). Topics include machine-to-machine (M2M) communications and its relationship with IoT. Examines fundamental components of the IoT architecture reviewing industry standards. Presents a large array of case studies. Discusses the fundamentals of data networks with a focus on different wireless technologies relevant to IoT, including the latest developments in IEEE 802.11, IEEE 802.15.4, and BLE, as well as network layer protocols such as 6LoWPAN that are critical to the deployment of wireless IoT networks. Discusses a range of IoT application protocols, especially MQTT, CoAP, and AMQP. Also explores IoT security and privacy considerations and identification mechanisms for IoT devices. Introduces wireless sensor networks and routing protocols for wireless networks.

TELE 6530. Connected Devices. (4 Hours)

Offers an in-depth, software-intensive exploration of the Internet of Things (IoT)—from device to cloud—culminating in a semester-long project where each student designs, builds, and presents an end-to-end, integrated IoT solution. Covers IoT concepts and architectures, and incorporates significant software development activities through weekly modules. Includes testing, DevOps, and messaging protocols specific to the IoT; device integration; and cloud services designed for IoT ecosystems.

TELE 6550. IoT Embedded System Design. (4 Hours)

Explores the technologies and techniques behind the field of design and development of modern embedded devices in IoT systems. Specifically, focuses on a hands-on approach to software development on an embedded hardware platform. Through a final project, students have an opportunity to build and deploy an industrial-grade state-of-the-art embedded IoT solution. Presents C coding, but also reviews the ARM ISA as well as C++ development and debugging. Applies theoretical concepts to practical issues including pipelining, parallelism, concurrency, memory architectures, and I/O (GPIO, I2C, UART, SPI). Introduces bare-metal and OS-based development focusing on multitasking, scheduling, interrupts, threads, processes, tasks, IPC, drivers, contention resolution, and shared memory. Introduces state-of-the-art Google Cloud IoT and FreeRTOS APIs.

TELE 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TELE 6973. Special Topics—Networking. (1-4 Hours)

Offers topics of current interest in Networking. May be repeated seven times for a maximum of 8 total semester hours.

TELE 7374. Special Topics in the Internet of Things. (4 Hours)

Offers topics of current interest in the Internet of Things. Topics vary from semester to semester. May be repeated without limit.

TELE 7945. Master's Project. (4 Hours)

Supports a project in cyber-physical systems and the Internet of Things that may have both hardware and software elements. Project to be carried out under faculty supervision.

TELE 7976. Directed Study. (1-4 Hours)

Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to seven times for a maximum of 8 semester hours.

TELE 7986. Research. (0 Hours)

Offers students an opportunity to conduct full-time research under faculty supervision.

TELE 7990. Thesis. (4 Hours)

Offers students an opportunity to conduct theoretical and experimental work under the supervision of a departmental faculty.

Prerequisite(s): TELE 7945 with a minimum grade of C-

Technology Leadership (TELR)**Courses****TELR 1990. Elective. (1-4 Hours)**

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TELR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TELR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TELR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TELR 5121. Technology Leadership 1. (2 Hours)

Covers elements of technology practices such as technology engineering (system design and engineering, integration, and documentation); technology leadership (team building, communication, leadership styles, ethical behavior, and conflict resolution); market assessment (economics, business plans, intellectual property, risk assessment, and mitigation); and technology excellence (quality, reliability, serviceability, manufacturability, procurement, and problem solving). Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological depth and fostering the student's leadership development.

TELR 5122. Technology Leadership 2. (2 Hours)

Continues the examination of technology practices begun in TELR 5121. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological depth and fostering the student's leadership development.

Prerequisite(s): TELR 5121 with a minimum grade of B

TELR 5131. Scientific Foundations of Technology 1. (2 Hours)

Presents a review of the fundamental science underlying technology disciplines. Develops a conceptual framework to understand interdisciplinary engineering practice and to make informed, back-of-the-envelope, quantitative estimates. Provides a review of topics such as principles of mechanics and mechanics of materials, wave physics, quantum physics, statistical and thermal physics, fluid physics, Maxwell's equations and constitutive relations, and topics in chemistry and biology.

TELR 5132. Scientific Foundations of Technology 2. (2 Hours)

Continues the examination of fundamental science begun in TELR 5131.

Prerequisite(s): TELR 5131 with a minimum grade of B

TELR 6962. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TELR 7440. Technology Leadership Challenge Project 1. (4 Hours)

Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype. This course is the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological depth and fostering the student's leadership development.

TELR 7442. Technology Leadership Challenge Project 2. (4 Hours)

Continues TELR 7440, a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype and to produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological depth and fostering the student's leadership development.

Prerequisite(s): TELR 7440 with a minimum grade of B

Theatre (THTR)**Courses****THTR 1000. Theatre at Northeastern. (1 Hour)**

Introduces new students to the communities and procedures of Northeastern University; the College of Arts, Media and Design; and the Department of Theatre. Offers insights into the study of the liberal arts in general and the creative facets of theatre study, including the rehearsal and production process. Emphasizes the departmental values of generosity, respect, and rigor and seeks to familiarize students with the arts and culture of Greater Boston.

THTR 1100. Production Experience 1. (1 Hour)

Offers lab practice in technical production. May be repeated once.

THTR 1101. Introduction to Theatre. (4 Hours)

Reveals the dynamic world of theatre by exploring the artistry, ideas, and techniques of actors, designers, directors, and playwrights. Goes behind the scenes in the study of theory and literature with both in-depth discussions and in-class performances. Includes a survey of significant movements in theatre history and analysis of diverse plays from contemporary drama. No theatre experience required.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

THTR 1120. Acting 1. (4 Hours)

Focuses on the development of fundamental performance techniques and various significant acting methodologies needed by an actor to develop stage presence, strengthen the imagination, and increase freedom of expression. Studies, analyzes, and interprets contemporary texts through the performance of monologues and scenes.

Attribute(s): NUpath Creative Express/Innov

THTR 1125. Improvisation. (4 Hours)

Introduces theatre improvisation principles through games, exercises, and readings. Offers a playful and rigorous environment for students to respond to unexpected situations with confidence and agility. In this experiential studio course, students participate in group and individual exercises that explore and practice creative impulses, adaptability, risk taking, intuition, and teamwork. Culminates in a self-reflection paper.

Attribute(s): NUpath Creative Express/Innov

THTR 1130. Introduction to Acting. (4 Hours)

Introduces techniques that awaken the creative mind, body, and spirit of the actor. Through theatre games and voice/movement exercises, offers students an opportunity to explore and develop skills used by actors in preparation for a role. Students rehearse and perform scenes from contemporary plays. Designed for nontheatre majors; previous stage experience welcome but not required.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

HTHR 1131. Introduction to Technical Theatre. (4 Hours)

Surveys the technical and stagecraft skills that are essential knowledge for all theatre professionals. Offers students an opportunity to develop a hands-on understanding of the areas of scenery and costume construction, stage management, props, and lighting. Covers the practical skills needed to participate in the creation, evaluation, and revision of a theatrical production. Coursework includes laboratory-based classes in the department scene shop and costume shop.

Attribute(s): NUpath Creative Express/Innov

HTHR 1150. Dance Performance and History: Modern to Hip Hop. (4 Hours)

Explores dance as both performance and history, practice, and theory. Examines the ways in which diverse dance genres—such as modern, jazz, American ballet, African-American, and hip-hop—embody ideas about culture, politics, race, and gender. Offers students an opportunity to rehearse and perform dance techniques of various styles and by significant choreographers. Includes research and writing assignments.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

HTHR 1180. Dynamic Presence: Theatre Training for Effective Interpersonal Interactions. (4 Hours)

Offers students across disciplines an opportunity to enhance the quality of their spoken voice and improve clarity of expression. Emphasizes being a dynamic presenter across digital platforms. Focuses on physical and vocal exercises drawn from theatre training and practice, providing tools to release tensions that inhibit the clear communication of thoughts and ideas in professional and interpersonal interactions across in-person and digital modalities. Students apply these skills directly to various texts, circumstances, and settings through active participation in spoken, written, and performative work.

Attribute(s): NUpath Creative Express/Innov

HTHR 1215. Activism and Performance. (4 Hours)

Explores the intersection of theatre, politics, and social transformation by studying and experiencing the work of activist theatre artists in both traditional and nontraditional forms, such as docudrama, ritual, dance, street theatre, and community-generated performance. Examines the texts, theories, and practices of international theatre artists committed to ethical reasoning, social change, peace building, human rights, and community empowerment. Culminates in the creation of an original activist performance.

Attribute(s): NUpath Ethical Reasoning, NUpath Interpreting Culture

HTHR 1220. Race, Power, and Performance. (4 Hours)

Examines race, power, and privilege in global and national contexts by analyzing plays and theatrical performances as spaces of cultural representation. Analyzes performance as a communicative process for understanding and constituting identity. Students explore how they perform their own lives and racial identities and apply those theories to contemporary drama and performance texts that are read, watched, and created.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

HTHR 1230. The Evolution of Fashion and Costume. (4 Hours)

Traces the evolution of fashion and costume as a global cultural phenomenon. Focuses on the history and meaning of clothing design and the development of style using a non-chronological approach. Fashion does not occur only in Western capitals; it has existed for centuries in every region of the world. Clothing has been used to protect our bodies, establish relationships with others, indicate our status, and express our identities. Through readings, discussions, research, writings, and presentations, offers an opportunity to discover the extraordinary power of fashion and clothing.

Attribute(s): NUpath Interpreting Culture

HTHR 1233. Nineteenth- and Twentieth-Century Fashion in Europe. (4 Hours)

Traces the evolution of fashion and costume in Europe from the beginning of the nineteenth century to the twenty-first century. Illustrated lectures focus on the history and meaning of clothing design and the development of style. Examines trends in fashion for men and women within its historical, cultural, political, and economic contexts. By studying fashion history in cities such as London and Paris, students have access to primary sources of fashion history, including paintings, sculpture, and textiles and garments from the periods being studied. Emphasizes current trends in fashion, with in-depth studies of the work of designers such as Dior, Chanel, McQueen, Westwood, Dolce & Gabbana, Versace, McCartney, and more. Taught abroad.

THTR 1235. Fashion and Costume Design in Film and Television. (4 Hours)

Examines the role of costume and fashion design in media, from the movies of the Golden Age of Hollywood to the latest high-tech motion pictures to the most recent cable miniseries. Studies the history and social contexts of clothing in media, as well as the critical role of fashion in relation to the narrative, i.e., how it enhances the mood and propels the dramatic action of the production. Uses illustrated lectures, critical thinking and writing, and a major experiential component to focus on how/why clothing is worn, how fashion design and costume design intersect, and how we can understand the economic and cultural realities of the twentieth and twenty-first centuries through the shifting trends of fashion.

Attribute(s): NUpath Interpreting Culture

THTR 1236. Introduction to Global Fashion Studies: History, Theory, and Contemporary Practice. (4 Hours)

Offers students an overview of the most significant and relevant theories on fashion, focusing on the cultural significance of clothing and style. Examines the intersection of fashion and other areas of study including the arts, history, economics, business, sociology, and anthropology. Explores global issues of gender, race, class, identity, image, style, material culture, and sustainability. Examines how populations from several postindustrial nations think about fashion, how globalization impacts their cultures and identities, and how designers and trendsetters are emerging from the new capitals of fashion.

THTR 1237. Introduction to Global Fashion Studies Abroad: History, Theory, and Contemporary Practice. (4 Hours)

Covers the most significant and relevant theories on fashion and focuses on the cultural significance of clothing and style. Examines the intersection of fashion and other areas of study including the arts, history, economics, business, sociology, and anthropology. Explores global issues of gender, race, class, identity, image, style, material culture, and sustainability. Examines how populations from several postindustrial nations think about fashion, how globalization impacts their cultures and identities, and how designers and trendsetters are emerging from the new capitals of fashion. Taught abroad.

THTR 1240. Fashion Industry and Trend Forecasting in Europe. (4 Hours)

Examines the world of global fashion forecasting with industry professionals in European cities such as London and Paris. Studies how and why global fashion trends are designed, developed, and produced and how economic and cultural realities are revealed through the shifting trends of fashion. Recent developments in business, politics, economics, and culture all have a tremendous impact on trends in fashion. Examines the fashion industry in terms of the five basic pillars of the complex fashion system: cultures of design, production, representation, consumption, and disposal. The course includes illustrated lectures, site visits to couture fashion houses/studios, an experiential component (the global fashion trend presentation), and the development of a class blog dedicated to trends seen by the students on the streets of Europe. Taught abroad. May be repeated without limit.

Attribute(s): NUpath Interpreting Culture

THTR 1270. Introduction to Theatrical Design. (4 Hours)

Introduces the principles of contemporary theatrical design and how to apply the creative process to scenery, costumes, and lighting. Offers students an opportunity to discover how design concepts are developed and relate to each other through research, script analysis, color theory, and visual composition. Seeks to develop the student's capacity for collaboration and techniques for conceptualizing a play into a multidisciplinary work of art. No theatre experience required.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

THTR 1400. Documentary Theatre Project. (4 Hours)

Creates original theater from interviews conducted with individuals who have something to say about an issue relevant to their lives. It is of and for the community. Starts with acquainting students with the history of the project's theme and then determines, through theater games and acting exercises, an acting vernacular to use during rehearsals. From there, guides students in the collection of video interviews of the subjects. Students transcribe, edit, and collate the interviews into a script to be used for rehearsal. The second half of the semester is devoted to rehearsing and performing the script for a community presentation.

THTR 1500. Musical Theatre Performance. (4 Hours)

Develops an ensemble-based musical theatre showcase. Studies character development, movement and staging, acting, "acting a song" technique, and theatre terminology. Offers students an opportunity to work as directors and choreographers. Solo singing and prior experience are welcome but not required. Sessions consist of lectures; discussions; viewings; and, most importantly, studio work.

Attribute(s): NUpath Creative Express/Innov

THTR 1600. Movement: Embodied Approaches to Creativity. (4 Hours)

Emphasizes awareness of the body as an essential part of the actor's training. Focuses on individual and group training to strengthen and free the body, enliven the imagination, and maximize onstage physical presence. Explores various methods of established movement training techniques. Students synthesize what they learn from those explorations to create their own movement performance pieces.

THTR 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 2000. Production Experience 2. (1 Hour)

Offers lab practice in rehearsal and performance for production. May be repeated once.

THTR 2200. The American Black Theatre Experience. (4 Hours)

Introduces students to the art of Black theatre and cultivates an appreciation of the local Black theatre scene. Black theatre in the United States has a 200-year history that is important to understand for insight into contemporary Black theatre in the Boston area. Traces the growth of Black theatre from minstrel shows to James Brown's "King Shotaway" in 1823, to William Wells Brown's "The Escape" in 1858, to contemporary performances. Surveys the historical influence of the Harlem Renaissance, World War II, the Ethiopian Art Theatre, the Federal Theatre Project, the Civil Rights Movement, and the Black Arts Repertory Theatre to situate August Wilson, Suzan-Lori Parks, and George Wolfe as heirs to this rich heritage. Includes attendance at local theatre productions.

Attribute(s): NUpath Difference/Diversity

THTR 2242. Fashion Retailing. (4 Hours)

Introduces fashion retailing. Analyzes the different types and sizes of fashion retail operations; physical site location, including omnichannel; store layout and design; advertising and display; relation of the store to its intended target market; and store organization.

THTR 2310. History of Musical Theatre. (4 Hours)

Traces the creative evolution of the stage musical from its 19th-century origins to current Broadway hits; from popular entertainment to an important theatrical art. Offers students an opportunity to examine this unique and original art form from multiple perspectives—historical, cultural, political, and aesthetic—and to develop insights into the concepts and methods of such pioneering composers, lyricists, and theatre artists as Gilbert and Sullivan, Cole Porter, Rodgers and Hammerstein, Leonard Bernstein, and Stephen Sondheim.

Attribute(s): NUpath Interpreting Culture

THTR 2330. Playwriting. (4 Hours)

Offers a collaborative workshop environment for developing dialogue, scenes, and one-act plays. Analyzes the dramatic techniques of modern masters as well as acclaimed contemporary playwrights. Culminates in the development of original one-act plays and a presentation of workshop scripts by professional actors.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

THTR 2335. Boston Theatre Experience. (4 Hours)

Offers a comprehensive experiential survey of professional theatre today. Students attend Boston-area productions that reflect a diverse range of styles and aesthetics, with special emphasis on the creation of new plays. Through preparatory readings and lectures, combined with postplay critical assessments (oral and in writing) and interactions with theatre artists (playwrights, actors, directors), offers students an opportunity to examine and discover how to interpret the art of contemporary theatre in the United States, from fringe companies to Broadway, as audience members and aspiring artists. Requires attendance at plays outside of class time.

Attribute(s): NUpath Interpreting Culture

THTR 2340. Theatre and Society. (4 Hours)

Covers several great practitioners of theatre. Focuses on how social behavior influenced the thought and craft of playwrights, actors, directors, designers, and theorists as well as how society was influenced by drama and theatre. Emphasizes how the play's ideas are translated into performance. Uses video, discussion, and live performance, when possible, as integral elements to the course.

Attribute(s): NUpath Interpreting Culture, NUpath Societies/Institutions

THTR 2342. Acting 2. (4 Hours)

Continues THTR 1120. Focuses on developing the actor's sense of truth and emotional freedom. Emphasizes creating, developing, and sustaining character and developing ensemble. Includes monologues and scenes performed for classroom analysis.

Prerequisite(s): THTR 1120 with a minimum grade of D-

THTR 2345. Acting for the Camera. (4 Hours)

Explores the craft and methods used by actors while working in front of the camera through monologues, scenes, and group projects. Provides students with techniques to identify and free their performance energy with a foundation on relaxation and authenticity. Includes the study and analysis of acting styles in diverse genres of film and television from situation comedies to dramas. Offers students an opportunity to explore a range of on-camera skills and acting techniques and apply them in filmed final projects. Previous acting experience suggested but not required.

THTR 2346. Viewpoints. (4 Hours)

Engages actors with an innovative technique that draws upon rigorous physical training exercises and practice in the nine areas of actors' concentration known as Viewpoints. Creative improvisational sessions provide an intuitive and dynamic approach to acting. Culminates in the application of Viewpoints to new scripted works.

Prerequisite(s): THTR 1120 with a minimum grade of D- or THTR 1130 with a minimum grade of D-

THTR 2370. Lighting Design. (4 Hours)

Examines basic principles and practices of stage lighting, including the qualities and functions of light, lighting instruments and controls, use of color and directionality, and script analysis for lighting design elements. Offers students an opportunity to develop foundational skills and practice systematic reasoning in the programming and operation of lighting computer equipment. Through group projects and individual lab work, students create and execute lighting designs. Includes work on electrics crews for university productions.

Attribute(s): NUpath Creative Express/Innov, NUpath Formal/Quant Reasoning

THTR 2380. Costume Design. (4 Hours)

Introduces the fundamentals of costume design and the artistic roles and responsibilities of a costume designer. Working on classical and contemporary texts, students examine the creative steps of the design process, including script analysis, character development, research, and collaboration. Through lectures, discussions, and projects, students create a design concept and communicate it through language and images. Includes experience with drawing and other costume rendering techniques such as painting, collage, and Photoshop. Does not require prior art or design experience.

Attribute(s): NUpath Creative Express/Innov

THTR 2385. Fashion Construction and Pattern Making. (4 Hours)

Offers students an opportunity to develop the skills and techniques necessary for creating and using basic master patterns and dress forms to create skirts, dresses, trousers, and tops. Covers basic fashion construction, flat patterning, draping, and finishing techniques.

THTR 2400. Scenic Design. (4 Hours)

Introduces the theory and practice of theatrical design and the role of the designer in the production process. Through project work, examines the use of graphics tools—line, form, balance, color, rhythm, and so on—in the development of the design idea. Emphasizes understanding and utilizing spatial relationships; visually expressing conceptual themes; and understanding the various uses, problems, and practical considerations of proscenium, thrust, and arena staging.

Prerequisite(s): THTR 1270 with a minimum grade of D-

Attribute(s): NUpath Creative Express/Innov

THTR 2500. Breaking the Glass Ceiling: Women in Theatre. (4 Hours)

Surveys a wide range of dramatic forms, gender theories, and distinct theatrical techniques used by women artists to reveal larger social issues and encourage activism. Examines how the plays' sociocultural contexts represent female playwrights' diverse views of identity as well as their cultural, ethnic, racial, and geographical experiences. Identifies how women as artistic leaders are perceived and received by society and the industry. Analyzes why the issue of gender equity in theatre remains unresolved. THTR 2500 and WMNS 2501 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

THTR 2600. Voice and Speech Training. (4 Hours)

Offers students an opportunity to develop the skills to enhance the quality of the spoken voice –the clarity and vitality with which actors express themselves on the stage. Follows the pedagogy known as “Freeing the Natural Voice,” developed by Kristin Linklater. Includes learning and applying the International Phonetic Alphabet as a tool to clarify speech sounds.

Prerequisite(s): THTR 1120 with a minimum grade of C ; THTR 2342 with a minimum grade of C

THTR 2973. Topics in Fashion Design Studies. (4 Hours)

Offers students an opportunity for early undergraduate-level examination of a subject of particular significance in the fashion industry. May be repeated up to four times.

THTR 2983. Topics in Theatre History and Culture. (4 Hours)

Offers opportunity for early undergraduate examination of a subject of particular significance in the history of theatre. May be repeated up to four times.

THTR 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 2991. Research in Theatre. (1-4 Hours)

Offers an opportunity to conduct introductory-level research or creative endeavors under faculty supervision.

THTR 2993. Topics in Dance. (4 Hours)

Offers early undergraduates an opportunity to examine a subject of particular significance in the art, culture, history, or practice of dance. May be repeated four times.

THTR 3100. Creative Storytelling for Social Engagement. (4 Hours)

Explores the immersive learning process of creating a contemporary living newspaper play by critically examining important social issues or questions; identifying, synthesizing, applying, and revising ideas; and engaging in team-building performative activities. Explores innovative ways to address civic engagement through a culminating workshop production of a treatment for the play.

Attribute(s): NUpath Creative Express/Innov

THTR 3200. Queer Theatre and Performance. (4 Hours)

Explores significant dramatic texts that have shaped and expressed the changing nature of LGBTQ identity. Readings, viewings, lectures, and discussion focus on noteworthy queer plays as literature, history, cultural documents, and performance as seen through the lens of contemporary queer theories and knowledge. Analyzing these texts for their relevance to society and our lives, students evaluate and explore a range of topics including sexual identity, gender identity, religious and political views on queerness, the evolution of LGBTQ culture and communities, drag performance, homophobia, assimilation, appropriation, and coming out. Students who do not meet course restrictions may seek permission of instructor. THTR 3200 and WMNS 3200 are cross-listed.

Attribute(s): NUpath Difference/Diversity

THTR 3325. Dramaturgical Inquiry. (4 Hours)

Designed to develop the analytical skills needed to prepare a play for production. Seeks to help the actor, director, designer, playwright, or dramaturg to communicate what they learn through both artistic processes and discipline-specific writing conventions to make intellectual contributions to the field of theatre and performance studies. The creative practice research process develops the dramaturgical ability to mine a script with an enhanced understanding of its context. Offers students an opportunity to hone the writing skills that communicate research findings for multiple academic, professional, and public audiences.

Prerequisite(s): (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C); INAM 2000 with a minimum grade of C

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture

THTR 3350. Fashion Marketing and Merchandising in Europe. (4 Hours)

Examines the fundamentals of fashion marketing and merchandising in the established fashion capital of the world, Paris. Explores how basic marketing principles govern the fashion industry. Analyzes and evaluates the role and function of day-to-day industry professionals working and succeeding in Paris through site visits; lectures with industry professionals; and visits to fashion shows, collections, and museums. Taught abroad.

THTR 3400. Stage Combat. (4 Hours)

Studies basic techniques of unarmed and armed combat and employs these techniques to choreograph exciting fight sequences that are safe for actor combatants to perform and in line with the storytelling of the play. Analyzes the value of specific targeting and strategies to control time and space in a way that maximizes onstage storytelling, as well as how actors can participate in their own safety and the safety of their scene partners. Makes connections to the work done in class with the overarching principles of acting and storytelling. Offers students an opportunity to design, develop, notate, and film their own fight scenes. May culminate in a public sharing.

Attribute(s): NUpath Creative Express/Innov

THTR 3550. Directing for the Stage. (4 Hours)

Focuses on purposes and techniques of theatrical direction related to script analysis, production style, pictorial composition, rhythmic evolution, and empathetic responses.

Prerequisite(s): THTR 1120 with a minimum grade of D- ; THTR 1270 with a minimum grade of D-

THTR 3650. Performing Theory. (4 Hours)

Investigates performance as a method of analysis by examining foundational critical and performance theories and their relationship to contemporary performance practices. Performance studies as a field defines "performance" broadly, encompassing a wide range of live and digital performances within the contexts of everyday life, interpersonal communication, performance art, music, games, and theatre. Also includes performance installations, interactive events, mixed-media storytelling, digital performance, procedurally authored performance, mainstream and avant-garde theatre, etc. Students use theoretically grounded methods of creating original performance projects as research. Open to students with established generative storytelling skills in any discipline.

Attribute(s): NUpath Creative Express/Innov

THTR 3670. Mixed-Media Performance Lab. (4 Hours)

Focuses on multimedia performance design. Involves lectures and projects in different disciplines, with more advanced options for students with significant prior experience. Culminates in an immersive prototype conceived by the class in collaboration with the instructor with emphasis on mixed media, multi-camera shooting, the creation of 3D sets, and green screen technology in a low-fi VFX environment. Students work in groups, focusing on the specific design discipline they are most experienced in, to create sections of the performance.

THTR 3702. Rehearsal and Production. (1 Hour)

Offers students an opportunity to develop the experimental skills associated with dramatic interpretation and theatrical production by working on Department of Theatre productions under the supervision of faculty and staff. Most students enrolled in this course engage in the practices associated with one of the following areas: acting, design, stage management, or production crew head. Fulfills the experiential education requirement for theatre majors. May be repeated three times.

Attribute(s): NUpath Integration Experience

THTR 3973. Topics in Performance Studies. (4 Hours)

Examines at an undergraduate level a specific facet of particular significance in the interdisciplinary field of performance studies, which studies how embodied, digital, and nonhuman performance operates within a wide variety of contexts, such as everyday life, public events, interpersonal communications, performance art, games, and theatrical events. May be repeated thrice.

THTR 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 4345. Advanced Acting for the Camera. (4 Hours)

Offers students an opportunity to explore how to become an actor-entrepreneur—a reflective, resourceful, and resilient professional who can express a well-defined type that is received by industry professionals as humanized and effective. Requires actors to continually reflect on the course material through individual written assignments and performances. Identifying and marketing an industry type prior to a showcase includes developing a deep understanding of acting for the camera methods, applying industry standards of professional readiness, and constructing a set of core beliefs that inform the actor's choices and marketing strategies. The final project, a showcase for industry professionals, serves as an opportunity for actors to demonstrate their mastery of course material.

Prerequisite(s): THTR 2345 with a minimum grade of C

THTR 4702. Capstone: Creative Practice Research Project. (4 Hours)

Offers students an opportunity to conduct creative practice research, which is comprised of two components: the research, preparation, and execution of a substantial position of responsibility for a departmental production or a special creative practice project, under the supervision of a faculty member. Students write a capstone thesis paper, developing an original argument on a focused topic adjacent to their creative practice project. Students synthesize academic and experiential education through the paper, which requires research and analysis of focused evidence to make an original contribution to the current scholarly and/or professional conversation on their chosen topic.

Attribute(s): NUpath Capstone Experience, NUpath Writing Intensive

THTR 4882. Special Topics: Theatre Performance. (4 Hours)

Offers opportunity for in-depth examination of a subject of particular significance to the field. May be repeated up to four times.

THTR 4970. Junior/Senior Honors Project 1. (1-4 Hours)

Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

THTR 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

THTR 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

THTR 5300. Devised Theatre Project. (4 Hours)

Investigates innovative and experimental methods of making an original theatre performance in which the actors are also the creators. Functions as a collaborative ensemble of actors that train, rehearse, and perform together. Explores performance theories and rehearsal techniques using language, movement, music, images, and autobiography to create a performative event inspired by a central theme drawn from literature, art, politics, or history. May culminate in a public performance. Requires prior completion of theatre training.

Prerequisite(s): THTR 1120 with a minimum grade of D- or THTR 1130 with a minimum grade of D- or THTR 2342 with a minimum grade of D- or graduate program admission

THTR 5450. Acting 3. (4 Hours)

Offers advanced acting training by exploring a variety of approaches useful in bringing the heightened dramatic texts alive on stage. Demands a free and efficient actor instrument: body, intellect, voice, and imagination simultaneously engaged and able to be compellingly present, and impeccable listening skills. Expects a significant amount of preparation, practice, and rehearsal outside the studio. Requires prior completion of basic acting training.

Prerequisite(s): THTR 2342 with a minimum grade of C or graduate program admission

THTR 5700. Design for Immersive Performance. (4 Hours)

Functions as an upper level design course focusing on designing space and media for theatre performance, with an emphasis on non-traditional and immersive formats. Involves lectures and projects in each discipline, with options for specific student interests. Culminates in an immersive performance conceived, designed, and created by the students. Students work in groups to create sections of the performance, focusing on the specific design discipline that interests them or for which they have experience.

Attribute(s): NUpath Creative Express/Innov

THTR 5973. Topics in Fashion Design Studies. (4 Hours)

Offers students an opportunity for upper-undergraduate and graduate-level in-depth examination of a subject of particular significance in the fashion industry. May be repeated up to four times.

THTR 6100. Advanced Creative Storytelling for Social Engagement. (4 Hours)

Examines the ways people use creative storytelling to forge human connection in digital environments. Includes theoretical readings and critical analysis of digital performances in social and historical context, alongside experiential projects in which students create digital performance projects and curate collections of digital performances for particular audiences and purposes. This creative practice research course is open to advanced students with established storytelling skills in any discipline.

THTR 6650. Advanced Performing Theory. (4 Hours)

Investigates performance as a method of analysis by examining foundational critical and performance theories and their relationship to contemporary performance practices. Performance studies as a field defines "performance" broadly, encompassing a wide range of live and digital performances within the contexts of everyday life, interpersonal communication, performance art, music, games, and theater. Also includes performance installations, interactive events, mixed-media storytelling, digital performance, procedurally authored performance, mainstream and avant-garde theatre, etc. Students use theoretically grounded methods of creating original performance projects as research. Open to students with established generative storytelling skills in any discipline.

THTR 6670. Advanced Mixed Media Performance Lab. (4 Hours)

Focuses on multi-media performance design. Involves lectures and creative practice research projects in different disciplines, with options for specific student interests. Includes research and analysis of focused evidence to make an original contribution to the current scholarly and/or professional conversation on their chosen topic. Culminates in an immersive prototype conceived by the class in collaboration with the instructor with emphasis on mixed media, multi-camera shooting, the creation of 3D sets, and green screen technology in a low-fi visual effects (VFX) environment. Students work in groups to create sections of the performance, focusing on the specific design discipline in which they are interested or for which they have experience.

THTR 6973. Advanced Topics in Performance Studies. (4 Hours)

Examines at a graduate level a specific facet of particular significance in the interdisciplinary field of performance studies. The field examines how embodied, digital, and nonhuman performance operates within a wide variety of contexts such as everyday life, public events, interpersonal communications, performance art, games, and theatrical events. May culminate in the creation of original performance projects. May be repeated up to two times.

Women's, Gender, and Sexuality Studies (WMNS)**Courses****WMNS 1101. Sex, Gender, and Popular Culture. (4 Hours)**

Examines how femininities, masculinities, and different forms of sexual identity are produced and represented within popular culture. Using theories and concepts from both feminist/sexuality studies and popular culture studies, analyzes popular texts and media for their treatment of gender and sexuality and the intersection of those categories with racial and class identities. Explores the visual representation of women (and men) and analyzes how visual and textual media shape our attitudes and identities. Required reading and assignments include close readings of texts, film screenings, class discussions and activities, writing assignments, and creative projects.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 1103. Introduction to Women's, Gender, and Sexuality Studies. (4 Hours)

Offers an interdisciplinary course introducing key themes in gender and sexuality studies. Offers students an opportunity to learn core concepts that inform our understanding of how gender and sexuality are socially constructed and are experienced in everyday life. Drawing on women's studies, queer studies, masculinity studies, and allied areas, the course analyzes gender, sexuality, and other dimensions of identity; explores critical issues of gender, sex, and power; and studies gendered/sexed identities in both national and transnational contexts. Topics include the gendered conceptions of love, sexuality, and violence; biological arguments about gender and sexuality; the social construction of sexuality and gender; intersections of gender, race, class, and sexuality; masculinities and femininities; theories of sexual difference; gender and the state; and gender and popular culture.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 1104. Goddesses, Witches, Saints, and Sinners: Women and Religion. (4 Hours)

Introduces and examines the theory that Near Eastern and European religions were originally goddess centered through analyses of image, text, and ritual in the ancient world. Explores scholarship about the patriarchalization of these primal religions. Includes a consideration of scripture such as the Hebrew Bible, Greek Testament, and Qu'ran, as well as noncanonical texts.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 1105. Introduction to Trans Studies. (4 Hours)

Introduces students to the interdisciplinary field of transgender studies by focusing on the emergence of the field, key concepts, and pivotal debates.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 1225. Gender, Race, and Medicine. (4 Hours)

Examines the basic tenets of "scientific objectivity" and foundational scientific ideas about race, sex, and gender and what these have meant for marginalized groups in society, particularly when they seek medical care. Introduces feminist science theories and contemporary as well as historical examples to trace the evolution of "scientific truth" and its impact on the U.S. cultural landscape. Offers students the opportunity to question assumptions about science and view the scientific process as a site for critical analysis.

Attribute(s): NUpath Difference/Diversity

WMNS 1255. Sociology of the Family. (4 Hours)

Provides a comparative approach to the study of families as social institutions, with particular emphasis on the changing patterns of family life. Introduces questions such as what families need and how the family is affected by other social institutions, political and economic forces, or cultural concerns. Considers how inequality (broadly defined) affects contemporary families. Substantive topics may include dating and marriage, cohabitation, health, and housing. Critically evaluates the methods that sociologists use to study changing practices of cohabitation, marriage, and divorce; interracial relationships; and changes in household composition, including same-sex or gender-nonconforming households.

Attribute(s): NUpath Societies/Institutions

WMNS 1260. Sociology of Gender. (4 Hours)

Considers why and how gender is socially constructed in U.S. society and looks at different theories of gender. Explores gender as an institution as well as different (cultural) expressions of masculinities and femininities. Includes topics of gender in everyday life as well as gender as an organizing principle in the institutions of families, education, workplaces, sexualities, religion, the media, politics, and forms of gender violence. SOCL 1260 and WMNS 1260 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 1271. Sex in Judaism, Christianity, and Islam. (4 Hours)

Explores approaches to gender, social organization of sexuality and gender, sexual ethics, and marriage in Judaism, Christianity, and Islam. Explores various sources within each tradition that serve as normative foundations, contemporary cultural and sociological dynamics that challenge those foundations, and psychological/existential considerations for understanding the general nature of human sexuality. Addresses how these traditions understand gender and gender roles, seek to shape and control interactions between men and women, regulate sexual relations outside of and within marriage, view sexuality education, regard homosexuality, and examine historical and contemporary approaches to marriage, divorce, and parenting. PHIL 1271 and WMNS 1271 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Ethical Reasoning

WMNS 1990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 2259. Sex, Gender, and Judaism. (4 Hours)

Introduces the representation of sex and gender in Jewish culture and religion. Explores varied representations of masculinity and femininity over time and place within Jewish communities; the role of biblical texts in the construction of Western conceptions of gender and sexuality; and how contemporary feminist, queer, and other sexual identities have influenced Jewish practices. Readings draw from a range of primary sources (memoirs, fiction, religious texts, etc.) and critical literature.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 2302. Gender and Sexuality: A Cross-Cultural Perspective. (4 Hours)

Explores concepts of "sex" and "gender" in a cross-cultural framework as they pertain to social status, work, the body, intersexuality, third or alternative genders, and intersectionality. Problematises normative assumptions about femininity and masculinity; the relations between men and women; and the meanings and implications of being a woman, man, or an other-gendered person. Examines how social constructions of gender contribute and interact with other systems of categorization and structures of inequality such as race, class, and ethnicity.

Prerequisite(s): ANTH 1101 with a minimum grade of D- or SOCL 1101 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 2303. Gender and Reproductive Justice. (4 Hours)

Introduces the social, legal, and economic barriers to accessing reproductive healthcare domestically and internationally. Draws on various theoretical and analytic tools including critical race theory, critical legal theory, sociology of science, human rights, feminist theory, and a range of public health methods. Access to reproductive health services, including abortion, is one of the most contested political, social, cultural, and religious issues today. Covers domestic, regional, and international legal and regulatory frameworks on sexual reproductive health. HIST 2303, SOCL 2303, and WMNS 2303 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 2304. Communication and Gender. (4 Hours)

Presents a theoretical and practical examination of the ways in which communication is gendered in a variety of contexts. Integrates into this analysis how different institutions and interpersonal situations affect our understanding of gender roles. COMM 2304 and WMNS 2304 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 2325. Black Feminist Studies. (4 Hours)

Invites students to study the history and contemporary landscape of Black feminist scholarship. Covers a range of disciplines and historical periods to introduce students to important texts and theoretical developments in this vast and interdisciplinary field.

Prerequisite(s): ENGW 1102 (may be taken concurrently) with a minimum grade of C or ENGW 1111 (may be taken concurrently) with a minimum grade of C or ENGW 1113 (may be taken concurrently) with a minimum grade of C or ENGW 1114 (may be taken concurrently) with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 2373. Gender and Sexuality in World History. (4 Hours)

Introduces key concepts in the fields of gender and identity studies as they apply to world history since about 1800. Offers students an opportunity to understand the critical significance of gender, sex, sexuality, and identity to world events and how these contentious subjects influence the contemporary world. Surveys a series of major movements in geopolitics, labor, economics, culture, and society in order to analyze how individual and group identities, as well as mass assumptions about behavior and performance, have shaped these events. Gender, sex, and sexuality are integral to class discussions of work, welfare, art, culture, violence, war, and activism.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 2451. Postcolonial Women Writers. (4 Hours)

Examines the literature and cultures of postcolonial nations in the Caribbean, Africa, Asia, and elsewhere through the lens of gender. Designed to familiarize students with the relationships between cultural paradigms associated with gender and transnational experiences of colonialism. Focuses on the variety of artistic strategies employed by writers to communicate the impacts of gender and sexuality on contemporary postcolonial themes such as neocolonialism, nationalism, and diaspora. Writers may include Chimamanda Adichie, Nawal El Saadawi, Marjane Satrapi, Bessie Head, Arundhati Roy, Banana Yoshimoto, Sonia Singh, and Dionne Brand.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 2455. American Women Writers. (4 Hours)

Surveys the diversity of American women's writing to ask what it means to describe writers as disparate as Phillis Wheatley, Edith Wharton, Toni Morrison, and Alison Bechdel as part of the same "tradition." With attention to all genres of American women's writing, introduces issues of genre and gender; literary identification; canons; the politics of recuperation; silence and masquerade; gender and sexuality; intersectionality; sexual and literary politics, compulsory heterosexuality, and more.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 2480. Women and World Politics. (4 Hours)

Introduces a variety of issues facing women across the globe. Focuses on the gender dynamics of key issues in international affairs. These could include economic policy, conflict and war, human rights/women's rights, political power, and collective action. Draws on examples from various world regions since the twentieth century to analyze similarities and differences across cases around the globe. INTL 2480 and WMNS 2480 are cross-listed.

Prerequisite(s): INTL 1101 with a minimum grade of D-

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 2501. Breaking the Glass Ceiling: Women in Theatre. (4 Hours)

Surveys a wide range of dramatic forms, gender theories, and distinct theatrical techniques used by women artists to reveal larger social issues and encourage activism. Examines how the plays' sociocultural contexts represent female playwrights' diverse views of identity as well as their cultural, ethnic, racial, and geographical experiences. Identifies how women as artistic leaders are perceived and received by society and the industry. Analyzes why the issue of gender equity in theatre remains unresolved. THTR 2500 and WMNS 2501 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 2505. Digital Feminisms. (4 Hours)

Explores the unique ways that feminist activism and theory are impacted by the increasing digital nature of our world. From hashtags to Tumblr, feminists are using digital tools and platforms to aid in the pursuit of social justice. Offers students an opportunity to develop a timeline that traces feminists' engagement with the Internet, new media, and technological innovations from the late seventies to the present. Examines the strengths and challenges that the digital world creates for feminist engagement. MSCR 2505 and WMNS 2505 are cross-listed.

Attribute(s): NUpath Creative Express/Innov, NUpath Interpreting Culture, NUpath Writing Intensive

WMNS 2800. Sexual Orientation and Gender Expression. (4 Hours)

Introduces students to efforts among social and nonprofit organizations working to reduce heterosexism, homophobia, and transphobia in institutions, communities, and the society as a whole. Discusses practice across the life span for social professionals (social workers, counselors, advocates, and educators) in varied settings such as criminal justice, mental health, adoption, adult day health, and residential programs. Applying theories and current scholarship on LGBTQQ identity development, social movements, media, and advocacy, offers students an opportunity to evaluate contemporary issues of controversy for institutions, social practitioners, and policy. HUSV 2800 and WMNS 2800 are cross-listed.

Attribute(s): NUpath Difference/Diversity

WMNS 2990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 2991. Research Practicum. (2-4 Hours)

Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

WMNS 3100. Gender, Social Justice, and Transnational Activism. (4 Hours)

Introduces key issues, themes, and debates in feminist transnational theory, practice, and activism in contemporary contexts and how it has changed under socioeconomic, political, and cultural processes of globalization. Examines differences among women relating to race, class, sexuality, national identity, and political economy in reckoning with possibilities for sustainable social justice. Students interrogate the relationship between the local and global; the production of knowledge in different regional spaces; the pragmatics of political mobilization; the varying contours of "social justice"; and other key issues. Offers students an opportunity to discuss the impact of globalization, neoliberalism, and state and intimate violence on gendered politics and relations and to contend with the politics of difference, to debate its challenges, and to imagine possible futures for transnational gender justice.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 3110. Gender, Crime, and Justice. (4 Hours)

Examines the topics of femininities and masculinities and their influence on participants in the criminal justice system. Also explores topics such as gender and criminological theory; the notion of gender and offending; women and men as victims of violence; and women and men as professionals within the criminal justice system.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 3200. Queer Theatre and Performance. (4 Hours)

Explores significant dramatic texts that have shaped and expressed the changing nature of LGBTQ identity. Readings, viewings, lectures, and discussion focus on noteworthy queer plays as literature, history, cultural documents, and performance as seen through the lens of contemporary queer theories and knowledge. Analyzing these texts for their relevance to society and our lives, students evaluate and explore a range of topics including sexual identity, gender identity, religious and political views on queerness, the evolution of LGBTQ culture and communities, drag performance, homophobia, assimilation, appropriation, and coming out. Students who do not meet course restrictions may seek permission of instructor. THTR 3200 and WMNS 3200 are cross-listed.

Attribute(s): NUpath Difference/Diversity

WMNS 3305. Beyond the Binary: Race, Sex, and Science. (4 Hours)

Considers how gender, race, and sexuality have been treated in science, focusing primarily on the 19th and 20th centuries. Examines the history of ideas about gender, race, and sexuality as reflected in fields such as biology, psychology, endocrinology, and neuroscience. Discusses contraceptive and reproductive technologies, pharmaceutical trials, the gendering of scientific professions, and recent studies that use algorithmic predictions of sex or sexual orientation. Uses close reading techniques and discussions to advance student expertise.

Attribute(s): NUpath Difference/Diversity, NUpath Societies/Institutions

WMNS 3392. Gender and Film. (4 Hours)

Examines the representation of gender in film. Uses concepts and research from film and media studies to investigate the influences and consequences of gender representations in film. WMNS 3392 and MSCR 3392 are cross-listed.

Attribute(s): NUpath Difference/Diversity

WMNS 3500. Sexuality, Gender, and the Law. (4 Hours)

Examines the legal regulation of gender and sexuality. Investigates concrete legal cases to study the history of constitutional interpretation and the current status of rights for women and sexual minorities. Focuses on important theoretical issues emerging in the writings of diverse feminist and queer legal scholars. Addresses debates over the value of conventional equality approaches in legal doctrine; equality vs. difference perspectives; ways in which legal language constructs gender and sexuality; the incorporation of sexuality and gender in ideologies of law; and the intersections of gender, sexuality, and race in legal doctrine and legal theory. PHIL 3500, POLS 3500, and WMNS 3500 are cross-listed.

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions

WMNS 3678. Bedrooms and Battlefields: Hebrew Bible and the Origins of Sex, Gender, and Ethnicity. (4 Hours)

Considers stories from Hebrew Scripture in English translation, beginning with the Garden of Eden through the Book of Ruth, asking how these foundational narratives establish the categories that have come to define our humanity. Analyzes how the Bible's patterns of representation construct sexual and ethnic identities and naturalize ideas about such social institutions as "the family." ENGL 3678, JWSS 3678, and WMNS 3678 are cross-listed.

Prerequisite(s): ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C

Attribute(s): NUpath Interpreting Culture

WMNS 3900. Gender and Black World Literatures. (4 Hours)

Explores different aspects of the literary and cultural productions of black women throughout history. Examines writing by women in the United States—like Octavia Butler, Zora Neale Hurston, and Toni Morrison—in addition to writing by women across the global African diaspora—like Chimamanda Adichie and Jamaica Kincaid. Students may also engage with theories such as Black feminism, womanism, or intersectionality; consider issues of genre such as the novel, poetry, or science fiction; and explore key themes such as class, sexuality, and disability. AFRS 3900, WMNS 3900, and ENGL 3900 are cross-listed.

Attribute(s): NUpath Difference/Diversity, NUpath Interpreting Culture

WMNS 3990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 4520. Race, Class, and Gender. (4 Hours)

Considers the intersection of race, class, and gender in social structure, institutions, and people's lives. Utilizes an interdisciplinary approach to focus on the socially constructed nature of these concepts and how they shape and create meaning in individual lives. Difference with an emphasis on inequality and varying life chances is central for understanding our society and is central to our work. Requires a significant amount of reading. Class format is like a seminar; students are expected to participate, take responsibility, and write a paper. SOCL 4520 and WMNS 4520 are cross-listed.

Prerequisite(s): (SOCL 1101 with a minimum grade of D- or ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-); (ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

WMNS 4523. Sexualities. (4 Hours)

Offers a primarily sociological overview of the field of sexuality studies. Explores how sexual behaviors and identities are shaped by social norms, values, and expectations; the meanings and statuses ascribed to sexual acts, behaviors, identities, and communities; and the processes by which sexualities are achieved. Applies an intersectional framework to understand how sexuality interacts with categories of gender, race, nation, and class. Substantive topics may include LGBTQ+ identities, power, sex work, socialization, pornography, and politics.

Prerequisite(s): (ANTH 1101 with a minimum grade of D- or CRIM 1100 with a minimum grade of D- or HUSV 1101 with a minimum grade of D- or INTL 1101 with a minimum grade of D- or POLS 1140 with a minimum grade of D- or POLS 1160 with a minimum grade of D- or SOCL 1101 with a minimum grade of D- or WMNS 1103 with a minimum grade of D-); (ENGL 1102 with a minimum grade of C or ENGL 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1113 with a minimum grade of C or ENGW 1114 with a minimum grade of C)

Attribute(s): NUpath Writing Intensive

WMNS 4990. Elective. (1-4 Hours)

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 4992. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

WMNS 4994. Internship. (4 Hours)

Offers students an opportunity for internship work. May be repeated without limit.

Attribute(s): NUpath Integration Experience

WMNS 5240. Feminist Resistance. (4 Hours)

Engages students in the study of a variety of forms of feminist resistance in recent history, emphasizing the United States in the context of cross-cultural examples. Examines key feminist texts and manifestos and studies feminist activism in coalition with other social movements. Students identify and analyze unique features of gender-based activism in itself and in its intersections with other social movements, including movements and activism focused on race, class, sexuality, and physical ability.

Attribute(s): NUpath Societies/Institutions

WMNS 6100. Theorizing Gender and Sexuality. (4 Hours)

Seeks to challenge and expand our understanding of the relationship between biological sex; gendered identities; and sexual "preferences," practices, and life ways. This interdisciplinary course offers debates around sex, gender, sexuality, and the body that push beyond binary models reliant on a simple "nature/culture" distinction. Focuses on dynamic and variable aspects of sexuality, sex, and gender within and across cultures, representational forms, and historical periods, analyzing the circumstances in which they undergo significant challenge or transformation. Uses particular paradigmatic "case studies" to push hard at the boundaries of sex and gender and to dialogue around contesting conceptualizations of "the body," "sex," and "gender," particularly as they circulate in specific discourses of feminism, queer theory, and poststructuralism; ethnic studies; critical race theory; and cultural studies.

WMNS 7100. Queer Theory: Sexualities, Genders, Politics. (4 Hours)

Introduces the core texts and key debates that have shaped queer theory and examines the intersections between queer theory and feminism and critical race theory. Seeks to provide an understanding of expansive and radical contemporary queer politics by analyzing foundational queer and feminist texts, pushing beyond narrow constructions of identity politics, anti-discrimination policy, and rights-based reforms. Engages queer theory by means of a rich philosophical and political interrogation of the meaning and content of "queer." SOCL 7100 and WMNS 7100 are cross-listed.

WMNS 7900. Special Topics in Women's, Gender, and Sexuality Studies. (4 Hours)

Examines selected topics in women's, gender, and sexuality studies. May be repeated up to five times.

WMNS 7976. Directed Study. (1-4 Hours)

Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.
